Species 3 nobis notæ, una Australasica, cæteræ insularum Samœ incolæ.—Specierum Samœ exemplaria valde incompleta vidimus, a Rev. dom. Powell missa, altera pinnis apice bifidis, altera pinnis abrupte et late truncatis (an potius folium *Ptychospermatis* errore fructibus *Clinostigmati*s relatum). Species Australasica sectionem *Lepidorrhachis*, H. Wendl. in *Linnaea*, xxxix. 186, 218, t. 2, f. 5 efficit, spadice perbrevis, floribus omnibus 3-nis et caudice humili. *Benth. Fl. Austral.* vii. 139 (*Kentia*).

25. *Cyphokentia*, Brongn. in *Comptes Rend. Acad. Sc. Par.* lxxvii. 399, *partim*.—Flores in eodem spadice infrafoliaceo paniculatim ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, bracteati et minute bracteolati. Fl. ♂ . . . Stamina 6 v. 12. Fl. ♀ perianthio post anthesin immutato, . . . Fructus parvus, ellipsoideus v. subglobosus, rectus v. paullo incurvus, 1-spermus, stigmatibus subbasilaribus v. lateralibus, pericarpio grumoso, endocarpio crustaceo intus polito. Semen globosum v. ellipsoideum, subbasilare, suberectum, hilo orbiculari v. oblongo, rapheos ramis dorso a hilo ascendentibus liberis dein decurvis parce anastomosantibus ad situm embryonis convergentibus, albumine corneo æquabili; embryo basilaris.—Palmæ robustæ, inermes. Folia terminalia, pinnatisecta, segmentis coriaceis elongato-ensiformibus apice angustatis, marginibus basi recurvis. Spadices validi, glabri, ramis robustis; spathæ 2, deciduæ; bracteæ breves, cum spadice continuæ; bracteolæ parvæ, breves, in cupulam brevem imbricatæ.

Species 2, Novæ Caledoniæ incolæ; altera *C. robusta*, Brongn., ramis spadiceis simpliciter ramosis crassis elongatis cylindraceis, fructibus reniformi-ellipsoideis, stigmatibus paullo supra basin prominentibus, semine reniformi; altera, *C. macrostachya*, Brongn., ramis spadiceis longioribus flexuosis, fructibus subglobosis, stigmatibus lateralibus, semineque fere globoso.—Genus *Clinostigmati* arcte affine, imperfecte notum.

*Cyphokentia* species aliæ Brongnartii sunt: *C. Balanœ*, a Wendlandio ad genus suum *Cyphosperma* relata; species 6 caudicibus arundinaceis sub *Microkentia*, Wendl., descriptæ; *C. Humboldtiana* et *C. bractealis*, a nobis non visæ, verisimiliter ad typum generis novi Wendlandii referendæ; et *C. vaginalis*, spathis persistentibus, nobis ignota, vix congener.

26. *Cyphosporma*, *H. Wendl. in litt. (nomen tantum)*.—Flores in eodem spadice robusto infrafoliaceo paniculatum ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, bracteati et bracteolati. Fl. ♂ symmetrici, oblongo-cylindracei. Sepala crasse coriacea, orbicularia, concava, late imbricata. Petala subduplo longiora, elliptica, subacuta, coriacea, valvata. Stamina 6, filamentis filiformi-subulatis apicibus inflexis; antheræ lineari-oblongæ, dorsifixæ, versatiles. Ovarii rudimentum columnare, crassum, truncatum. Fl. ♀ masculis paullo minores, subglobosi, petalis post anthesin valde auctis. Sepala orbicularia v. subsphærica, crasse coriacea, latissime imbricata. Petala vix v. paullo longiora, orbicularia, late convolutivo-imbricata, apicibus breviter acutatis valvatis. Staminodia 3, brevia, linearia, membranacea, v. 0. Ovarium obovoideo-oblongum v. lageniforme, 1-loculare; stigma sessile, crassum, conoideum, 3-fidum, lobis trigonis; ovulum parietale, pendulum. Fructus parvus, globosus v. cubico-obovoideus, stigmatibus oblique terminali v. fere laterali, pericarpio tenui crustaceo granulato intus lævi. Semen grosse tuberculatum v. subhexagonum angulis acutis, faciebz undulatis, hilo angulo ventrali angusto a basi ad medium extenso, rapheos ramis radiantibus laxè reticulatis, albumine æquabili; embryo basilaris.—Palmæ inermes, caudice robusto? annulato. Folia terminalia, pinnatisecta, segmentis coriaceis elongato-ensiformibus apice angustato oblique præmorsodentatis basi plicatis marginibus incrassatis basi recurvis, costa nervisque validis furfuraceis v. demum glabris, rhachi robusta lata dorso leviter convexa facie canaliculata. Spadices glabri v. puberuli, ramis robustis elongatis subdistichis; spathæ . . . ; bracteæ breves; bracteolæ majusculæ, squamiformes. Flores et fructus brunnei, inter minores.

Species 2, Novæ Caledoniæ incolæ; altera *Cyphokentia Balansæ*, Brongn. in Comptes Rend. Acad. Sc. Par. lxxvii. 5, sepalis basi gibbosis fere calcaratis, fructu globoso, stigmatibus lateralibus, et semine profunde tuberculato-rugosa testa? tenui crustacea induto; altera *C. Vieillardii*, Brongn. l.c., sepalis basi rotundatis, fructu obtuse 4-5-gono, stigmatibus fere terminali, et semine acute angulato.

27. *Microkentia*, *Wendl. in litt. (nomen)*.—Flores minuti, in eodem spadice infrafoliaceo gracili simpliciter v. duplicatim ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, bracteati et bracteolati. Fl. ♂ subsymmetrici. Sepala parva, ovata v. oblonga, leviter imbricata. Petala brevia, ovata, concava, striata, valvata. Stamina 6, filamentis filiformi-subulatis, apicibus rectis; antheræ oblongæ, dorsifixæ, versatiles. Ovarii rudimentum columnare, stigmatibus disciformi. Fl. ♀ masculos subæquantes, perianthio post anthesin immutato. Sepala orbicularia, late imbricata. Petala ovata, sepalis longiora, convolutivo-imbricata, apicibus acutis conniventi-valvatis. Staminodia 3 v. 6?, subulata. Ovarium ovoideum, 1-loculare; stigmata 3, sessilia; ovulum parietale, pendulum. Fructus parvulus, globosus, plus minusve obliquus v. irregularis, 1-spermus, stigmatibus excentricis v. lateralibus, pericarpio tenui grumoso v. carnosulo, endocarpio tenui subcrustaceo intus lævi. Semen stigmatibus oppositum, subglobosum, hilo orbiculari, rapheos ramis ab hilo ascendentibus ramosis reticulatis, albumine æquabili; embryo hilo proximus.—Palmæ inermes, caudice gracili arundinaceo annulato. Folia terminalia, pinnatisecta, segmentis elongato-ensiformibus acuminatis distinctis v. superioribus in laminam latam 2-fidam confluentibus, costa nervisque prominulis, marginibus incrassatis basi recurvis, rhachi petioloque gracili glabris v. atro-furfuraceis, vagina elongata integra. Spadices graciles, glabri v. atro- v. castaneo-pubescentes, ramis gracilibus densifloris; spathæ 2; bracteæ breves, cum spadice continuæ; bracteolæ breves, cupulam efformantes. Flores inconspicui. Fructus inter minimos ordinis.

Species 6, sub *Cyphokentia* sua a Brongnartio in Comptes Rend. Acad. Sc. Par. lxxvii. 5, verbis paucissimis descriptis, nempe, *C. Pancheri*, *Deplanchei*, *eriostachys*, *Billardieri*, *surculosa* et *gracilis*, omnes Novæ Caledoniæ incolæ. Genus a Wendlendio in litteris nobis indicatum, certe habitu a ceteris *Cyphokentriis* valde distinctum.

28. *Oncosperma*, *Blume, Rumph. 96, t. 82, 103. (Keppleria, Meissn. Gen. Pl. 355; Comm. 266)*.—Flores in eodem spadice infrafoliaceo ramoso monoici, spiraliter dispositi, inferiores 3-ni intermedio ♀, superiores solitarii v. 2-ni ♂, bracteati et minute bracteo-

lati. Fl. ♂ asymmetrici, 3-gono-compressi. Sepala parva, triangulari-rotundata, acuta, basi imbricata. Petala oblique ovata; acuta v. acuminata, valvata. Stamina 6-12, filamentis brevibus rectis v. apicibus incurvis; antheræ lineares, basi longe bifida affixæ, erectæ. Ovarii rudimentum columnare, apice fissum. Fl. ♀ masculis multo minores, oblique globosi, perianthio post anthesin modice aucto. Sepala inæqualia, rotundata, basi gibba, late imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutatis subvalvatis. Stamina 6, minuta. Ovarium late et oblique ovoideum, 1- v. 3-loculare loculis 2 altius positis; stigmata minuta; ovulum parietale, pendulum. Fructus parvus, globosus, stigmatibus lateralibus v. basilaribus, pericarpio levi grumoso v. subfibroso, endocarpio tenuiter crustaceo. Semen globosum v. subglobosum, hilo dorsali v. subbasilari ovali v. suborbiculari marginibus incrassatis, rapheos ramis ab hilo radiantibus laxè reticulatis, albumine profunde ruminato; embryo hilo proximus.—Palmæ armatæ, stoloniferæ, caudice humili valde aculeato, aculeis elongatis rectis nigris. Folia terminalia, æqualiter pinnatisecta, segmentis æquidistantibus v. subfasciculatis ensiformibus acuminatis apice integerrimis, costa valida subtus paleacea, marginibus non incrassatis basi recurvis, rhachi furfuracea dorso convexa facie obtuse carinata, vagina elongata. Spadix breviter pedunculatus, simpliciter v. duplicato-ramosus, inermis v. aculeatus; spathæ 2 completæ, spadici æquilongæ, caducæ, ensiformes, coriaceæ, inermes v. aculeatæ, inferiore 2-cristata; bracteæ fossas spadiceis marginantes; bracteolæ minutæ. Flores inter minores. Fructus parvus v. mediocris.

Species 5 v. 6, Asiæ tropicæ incolæ. *Mart. Hist. Nat. Palm.* iii. 312, t. 150, 153, f. 4, 5 (*Areca horrida*). *Griff. Palm. Brit. Ind.* 146, 157, t. 233 B, C (*Areca, sect. Euoplus*). *Scheff. in Natuurk. Tijdschr. Ned. Ind.* xxxii. 189; *Ann. Jard. Bot. Buitenz.* i. 139, 159, t. 29, f. 3, et t. 30. Ovarium fide Blumei 3-loculare, fide Schefferi 1-loculare, in specie *Zeylanica* solum a nobis examinata 1-loculare est.

29. **Euterpe**, *Gærtn. Fruct.* i. 24 (excl. citat. *Rumphii*), t. 9, f. 3 (*E. pisifera*).—Flores in eodem spadice infrafoliaceo albo-furfuraceo fastigiatim ramoso monoici, cavis spiraliter dispositis, 3-ni intermedio ♀, v. superiores 2-ni ♂, bracteati et 2-bracteolati. Fl. ♂ sub-symmetrici v. asymmetrici, ovoidei. Sepala majuscula, orbicularia v. reniformia, scariosa, late imbricata v. minuta ovata acuta. Petala oblonga v. ovato-lanceolata, basi connata, sæpius inæqualia, valvata. Stamina 6, filamentis liberis v. basi connatis apicibus rectis; antheræ oblongæ v. lineares, basi longe 2-fidæ, dorsifixæ, versatiles. Ovarii rudimentum columnare v. 3-gonum, integrum v. 3-fidum. Fl. ♀ masculis minores, ovoidei, perianthio post anthesin parum aucto. Sepala orbicularia, obtusa, concava, late imbricata. Petala longiora, orbicularia, convolutivo-imbricata, apicibus acutatis conniventibus. Stamina 0. Ovarium ovoideum v. oblongum, basi sæpe gibbum, 3-loculare, loculis 2 minutis vacuis; stigmata minuta, sessilia, 3-gona; ovulum parietale, subglobosum, pendulum. Fructus pisiformis, stigmatibus lateralibus, pericarpio granulato tenuiter carnosulo parce fibroso, endocarpio membranaceo. Semen globosum, liberum v. endocarpio adhærens, hilo laterali lineari, rapheos ramis undique ab hilo radiantibus reticulatis, albumine æquabili v. ruminato; embryo hilo propinquus.—Palmæ graciles, elatæ, inermes, caudicibus solitariis v. fasciculatis annulatis. Folia terminalia, æqualiter pinnatisecta, segmentis anguste lineari-lanceolatis longe graciliterque acuminatis v. ensiformibus membranaceis plicatis, marginibus incrassatis basi recurvis, rhachi 3-gona inferne petioloque elongato dorso convexa facie concava, vagina valde elongata cylindracea integra. Spadix paniculatum ramosus, rhachi elongata, ramis gracilibus superioribus gradatim brevioribus sæpe furfuraceis basi incrassatis, floriferis erecto-patentibus; spathæ 2, coriaceæ v. membranaceæ, lanceolatæ, inferiore brevior apice fissa dorso 2-carinata, superiore completa, ventre fissa; bracteæ foveolas marginantes; bracteolæ ovatæ, acutæ. Flores parvi, albi, in fossis spadice sessiles. Fructus purpureus.

Species ad 8, Americæ tropicæ et insularum Indiæ occidentalis incolæ. *Mart. Hist. Nat. Palm.* ii. 28, t. 28 ad 30; iii. 165, 309 (excl. sp.); *Palm. Orbign.* 8, t. 2, 8, 15, 17, 18. *Kunth, Enum. Pl.* iii. 177. *Drude in Mart. F. Bras.* iii. ii. 461, t. 107. *Scheff. in Natuurk. Tijdschr. Ned. Ind.* xxxii

192; *Ann. Jard. Bot. Buitenz.* 128, 130, t. 29, f. 2. *Griseb. Fl. Brit. W. Ind.* 516; in *Pl. Wright Cub.* 530. (*Ert. Palm. Centr. Amer. (in Vid. Meddel. Nat. Foren. Kjobenh.* 1858) 30. *Engel in Linnæa*, xxxiii. 669. *Spruce in Journ. Linn. Soc.* xi. 136. *Barb. Rodr. Enum. Palm. Nov.* 15. *Trall in Trim. Journ. Bot.* 1877, 131. *Wallace, Palm. Amaz.* 22, t. 7, 8. Genus male definitum. Sepala floris ♂ in *E. oleracea*, Mart. t. 29, et in *E. Catinga* fere orbicularia et late imbricata; in *E. ensiformi*, Mart. t. 31, et *E. eduli*, t. 32, minuta, ovata, acuta. Pericarpium in *E. Ctinga*, Wallace, nullo modo fibrosum, sed in sicco tenuiter crustaceum, albumenque æquabile, dum in *E. oleracea* pericarpium carnosum et dense fibrosum est, albumenque ruminatum.

30. *Ænocarpus*, Mart. *Hist. Nat. Palm.* ii. 21, t. 22 ad 27; iii. 310, et *Palm. Orbign.* 12, t. 8, 18.—Flores in eodem spadice infrafoliaceo fastigiatim ramoso monoici, spiraliter dispositi, inferiores 3-ni intermedio ♀, superiores 2-ni ♂, obscure bracteati et bracteolati. Fl. ♂ asymmetrici. Sepala parva, ovata v. lanceolata, acuta, valvata v. basi tantum imbricata. Petala oblique ovata v. oblonga, acuta v. acuminata, valvata. Stamina 6, filamentis liberis v. basi connatis rectis v. apicibus incurvis; antheræ lineares, dorsifixæ, versatiles. Ovarii rudimentum 3-fidum. Fl. ♀ masculis minores, subgloboso-conoides, perianthio post anthesin aucto. Sepala crasse coriacea, reniformia v. orbicularia, late imbricata. Petala longiora v. sublongiora, orbicularia, obtusa, convolutivo-imbricata. Staminodia 0 v. pauca. Ovarium ovoideum v. turbinatum, 3-loculare loculis 2 effectis; stigmata minuta, sessilia; ovulum parietale. Fructus ovoideus ellipsoideus v. globosus, 1-locularis, stigmatibus terminalibus (v. excentricis?), pericarpio fibroso et grumoso v. carnosulo (endocarpio membranaceo?). Semen ellipsoideum v. globosum, liberum v. endocarpio adherens, hilo parvo elongato, rapheos ramis a basi ad apicem radiantibus reticulatis, albumine æquabili fibroso v. ruminato; embryo basilaris.—Palmæ sæpius inermes et elatæ, caudicibus solitariis v. cæspitosis annulatis medio interdum ventricosus. Folia terminalia, in una specie disticha, pinnatisecta, segmentis anguste v. latiuscule ensiformibus acuminatis rigidis plicatis plurinerviis, marginibus incrassatis basi recurvis, rhachi dorso convexa lateribus profunde sulcatis ventre carinata, petiolo brevi, vagina brevi ventricosa aperta, in una specie spinosa. Spadices breviter pedunculati, hippuriformes v. scopiformes, rhachi brevi, ramis simpliciusculis crassiusculis elongatis subæquilongis pendulis, areolis vix depressis; spathæ 2, lignosæ, caducæ, inferiore breviora 2-carinata apice fissa, superiore cylindracea rostrata, ventre rupta. Flores inter minores. Fructus sæpius purpureus v. niger.

Species ad 8, Americæ tropicæ incolæ. *Kunth, Enum. Pl.* iii. 179. *Drude in Mart. Fl. Bras.* iii. ii. 465, t. 108. *Wallace, Palm. Amaz.* 28, t. 9 ad 11. *Karst. Fl. Colomb.* i. 111, t. 55. *Spruce in Journ. Linn. Soc.* xi. 139. Genus sæpe cum *Euterpe* confusum, characteres diagnostici serius scrutandi. Fructus in *Æ. utili* globosus, pericarpio tenui non fibroso, omnino ut in *Euterpe Catinga*.

31. *Jessenia*, Karst. in *Linnæa*, xxviii. 387 (excl. citat. *Endlicheri*), xxxiii. 691, t. 3, f. 6. *Fl. Colomb.* i. 197, t. 98.—Flores in eodem spadice interfoliaceo fastigiatim ramoso monoici, spiraliter dispositi, inferiores 3-ni intermedio ♀, superiores 2-ni v. solitarii ♂, ebracteati et ebracteolati. Fl. ♂ subsymmetrici. Sepala minuta, semi-orbicularia, carnosula, marginibus membranaceis, imbricata. Petala multo longiora, ovato-oblonga v. lanceolata, cartilaginea, valvata. Stamina 9-20, filamentis brevibus subulatis; antheræ lineares, acutæ v. apiculatæ, basi longe 2-fida insertæ, versatiles. Ovarii rudimentum 3-fidum. Fl. ♀ masculis multo minores, depresso-globosi, perianthio post anthesin valde aucto. Sepala carnosula, orbicularia, late imbricata. Petala consimilia, tenera, convolutivo-imbricata. Staminodia 0. Ovarium 3-loculare, loculis 2 effectis; stylus brevis, stigmatibus validis; ovulum . . . Fructus ellipsoideus, stylo terminali, pericarpio carnosulo fibroso et oleoso. Semen ellipsoideum, hilo laterali elongato, rapheos ramis ab hilo divergentibus numerosis inconspicuis, albumine ruminato; embryo basilaris, elongatus.—Palmæ inermes; caudice elato robusto annulato. Folia terminalia, perplurima, æqualiter pinnatisecta, segmentis confertis oppositis ensiformibus acuminatis plicatis, marginibus basi recurvis, petiolo breviusculo, vagina brevi aperta marginibus fibrosis. Spadices penduli, breviter pedunculati,

floriferi interfoliacei, fructiferi infrafoliacei, rhachi brevi, ramis elongatis; spathæ 2, fusiformes, interiore multo longiore ventre fissa. Flores mediocres. Fructus fere *Ænocarpi*.

Species 3, Americæ australis cisequatoriensis incolæ. *Drude in Mart. Fl. Bras.* iii. ii. 472, t. 109. *Griseb. Fl. Brit. W. Ind.* 516. *Engel in Linnæa*, xxxiii. 691. Genus ut videtur *Ænocarpo* arctissime affine, differt spadicebus cum floriferi manent interfoliaceis. Speciei Trinitensis cujus fructus ignotus, exemplum valde imperfectum tantum vidimus *Ænocarpum* omnino referens.

32. *Acanthophoenix*, *H. Wendl. in Fl. des Serres*, t. 181.—Flores in eodem spadice infrafoliaceo laxè ramoso monoici, spiraliter dense conferti, inferiores 3-ni intermedio ♀, superiores solitarii v. 2-ni ♂, bracteati et bracteolati. Fl. ♂ asymmetrici, trigono-compressi. Sepala parva, orbicularia, carinata, imbricata. Petala oblique ovata v. ovato-lanceolata, acuminata, valvata. Stamina 6 v. plura, exserta, filamentis liberis elongatis cylindraceis apicibus acutis incurvis; antheræ lineari-oblongæ v. globosæ, dorsifixæ, versatiles. Ovarii rudimentum elongato-conicum v. 2-3-fidum. Fl. ♀ masculis minores, late ovoidei, perianthio post anthesin aucto. Sepala ovato-orbicularia, concava, late imbricata. Petala sepalis æquilonga, orbicularia, striato-nervosa, convolutivo-imbricata, apicibus acutatis conniventibus. Staminodia obscura. Ovarium obovoideo-oblongum, rectum v. curvum, 1- (v. 2-3-) locale; stigmata subapicalia; ovulum parietale, pendulum. Fructus parvulus, globosus v. oblongus, teres v. compressus, stigmatibus lateralibus v. subbasilaribus, pericarpio lævi carnosulo et tenuiter fibroso, endocarpio subcrustaceo. Semen oblongum, ascendens, hilo elliptico infra medium sito, testa brunnea, rapheos ramis paucis ab hilo radiatis et ascendentibus dein descendentibus et laxè reticulatis, albumine æquabili; embryo basilaris.—Palmæ elatæ, armatæ, caudice robusto annulato. Folia terminalia, æqualiter pinnatisecta, spinis elongatis gracilibus plus minusve armata, segmentis anguste lineari-lanceolatis acuminatis subtus paleaceis costa nervisque validis marginibus incrassatis basi recurvis, rhachi subtrigona, vagina elongata inermi v. spinosa. Spadix duplicato-ramosus, pendulus, breviter crasseque pedunculatus, glaber v. tomentosus, lævis v. spinosus, ramis gracilibus v. crassis tortuosis; spathæ 2, compressæ, deciduæ; bracteæ prominulæ margini areolæ adnatæ, crassæ, rigidæ; bracteolæ inconspicuæ. Flores rubri v. flavi. Fructus nunc grano Tritici vix longior, niger.

Species 3 v. 4, insularum Mascarenensium incolæ. *Balf. f. in Baker, Fl. Mauriti.* 384. *Mart. Hist. Nat. Palm.* iii. 174, t. 154, 155, f. 1 (*Areca crinita*) et 176, t. 154, 155, f. 2 (*A. rubra* excl. *descript. et ic. fructus*). Ovarium ex Martio 2-3-locale, loculis 2 abortivis, quod non vidimus.

*DECKENIA*, *H. Wendl. in Baker Fl. Mauriti.* 385, certe est *Acanthophœnix* species, fructibus oblongo-cylindraceis semi-pollicaribus.

33. *Hyospathæ*, *Mart. Hist. Nat. Palm.* ii. 1, t. 1, 2.—Flores minuti, in eodem spadice infrafoliaceo simpliciter ramoso monoici, laxè spiraliter dispositi, 3-ni intermedio ♀, v. superiores 2-ni et solitarii, bracteati et ebracteolati. Fl. ♂ asymmetrici, compressi. Sepala parva, submembranacea, ovato-rotundata, basi connata. Petala oblongo-lanceolata, acute valvata. Stamina 6, filamentis subulatis; antheræ lineari-oblongæ, basi longe bifidæ, dorsifixæ, versatiles. Ovarii rudimentum turbinatum v. columnare, obsolete 3-lobum. Fl. ♀ masculis minores, ovoidei, perianthio post anthesin vix aucto. Sepala parva, membranacea, ovata, acuta, imbricata. Petala membranacea, paullo longiora, orbicularia, subacuta, imbricata, apicibus acutatis conniventibus. Staminodia 6. Ovarium ovoideum, 3-locale, loculis 2 effectis; stigmata sessilia, acuta, recurva; ovulum subbasilare, erectum. Fructus parvulus, ellipsoideus v. obovoideus, stigmatibus basilaribus, pericarpio tenuiter grumoso, endocarpio membranaceo. Semen ellipsoideum, erectum, testa fusca, rapheos ramis obscuris, albumine æquabili; embryo basilaris.—Palma arundinacea, inermis, caudice annulato radicibus epigæis sustentato. Folia pauca, terminalia, irregulariter pinnatisecta, segmentis late oblique lanceolatis v. quadratis longissime acuminatis, marginibus non incrassatis basi recurvis, rhachi acuta bifaciali dorso convexa, petiolo subtereti facie canaliculata, vagina elongata. Spadices 2 v. 3, breviter pedunculati, primum erecti ramis gracilibus erectis rigidis basi incrassatis, demum penduli; spathæ

2, inferiore compressa 2-carinata, superiore fusiformi. Flores virides. Fructus purpureus.

Species 3, Brasilianæ.—*Drude in Mart. Fl. Bras.* iii. ii. 519. Sepala fl. ♂ ex Scheffero valvata, nobis potius imbricata apparent. *H. pubigera*, Griseb. et Wendl. (Fl. Brit. W. Ind. 516), minime hujus generis, differt pinnarum marginibus incrassatis, forma spadici, sepalis fl. ♀ orbiculatis latissime imbricatis, ovario 1-loculari, stigmatibus in fructu infra-apicalibus, et albumine ruminato. Vide *Prestocam*.

34. *Prestoea*, Hook. f., *Gen. Nov.*—Flores in eodem spadice infrafoliaceo simpliciter ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, v. superiores solitarii et 2-ni ♂, ebracteati, minute bracteolati. Fl. ♂ asymmetrici. Calyx minutus, 3-lobus, lobis rotundatis obtusis. Petala oblique ovata, subacuta, valvata. Stamina 6, filamentis filiformi-subulatis; antheræ magnæ, lineari-oblongæ, dorsifixæ, basi alte 2-fidæ, versatiles. Ovarii rudimentum columnare. Fl. ♀ masculis minores, globosi, perianthio post anthesin vix aucto. Sepala reniformi-rotundata, concava, imbricata. Petala haud longiora, late ovata, subacuta, convolutivo-imbricata. Ovarium obovoideo-oblongum, 1-loculare; stigma crassum, sessile, 3-lobum, lobis 3-gonis; ovulum basilare, erectum. Fructus pisiformis, stigmatibus excentrico v. laterali, pericarpium tegumento externo membranaceo fragili, interno e fibris tenuibus laxè reticulatis nucleo laxè adhærentibus, endocarpio? e membrana fragili irregulari alba ad basin tantum seminis. Semen globosum, hilo laterali, raphe elongata ramis radiantibus laxè reticulatis, albumine duro parèe ruminato; embryo hilo proximus.—Palma gracilis, humilis, caudice arundinaceo annulato. Folia longe graciliterque petiolata, basi pinnatisecta, segmentis superioribus in laminam oblongam 2-fidam apice laceram plicato-nervosam connatis, inferioribus angustis, costa nervisque validis, marginibus incrassatis basi recurvis, rhachi trigona puberula, petiolo dorso convexo facie sulcato, basi in vaginam fibroso-reticulatam brevem apertam dilatato. Spadices breviter pedunculati, erecto-patentes, fusco-pubescentes, rhachi crassa stricta, ramis strictis erecto-patentibus a basi incrassata ad apices graciles sensim attenuatis; spathæ 2, membranaceæ, demum laceræ, inferiore 2-dentata apice fissa, superiore longiore ventre hiantè; bracteolæ cupulares. Flores inter minores. Fructus intus viridis pericarpio tenero.

Species 1 bene nota, insulæ Trinidad incola, *Hyospathe pubigera*, Griseb. et Wendl. in Fl. Brit. W. Ind. 516. Ovulum certe basilare et erectum est. Membrana fragilis basi seminis adnatæ singularis est, et ulterius scrutanda. *Euterpe montana*, Grah. in Bot. Mag. t. 3874, insulæ Grenadæ incola, est verisimiliter congener (ut et species ab auctoribus *Euterpi* relatæ?).

35. *Oreodoxa*, Willd. in *Mem. Acad. Berl.* 1804, 34.—Flores in eodem spadice infrafoliaceo decomposito ramoso monoici, laxè spiraliter dispositi, inferiores 3-ni intermedio ♂, superiores solitarii v. 2-ni ♂, obscure bracteati et bracteolati. Fl. ♂ subsymmetrici. Sepala minuta, late ovata, scariosa, basi imbricata. Petala subæqualia, ovata, acuta, basi connata, tenuiter coriacea, valvata. Stamina 6, 9, 12, exserta, filamentis basi petalorum adnatis brevibus late subulatis, apicibus rectis acutis; antheræ magnæ, ovato-sagittatæ, dorsifixæ, versatiles. Ovarii rudimentum subglobosum v. 3-fidum. Fl. ♀ masculis minores, subconoides, perianthio post anthesin vix aucto. Sepala ovato- v. reniformi-rotundata, late imbricata. Corolla urceolaris, ad medium 3-loba, lobis triangularibus acutis valvatis. Staminodia 6, squamiformia, in cupulam ori corollæ adnatam connata. Ovarium subglobosum, basi gibbum, 2-loculare; stigmata sessilia, crassa, subulato-trigona; ovulum parietale, ascendens. Fructus obovoideus v. oblongo-ovoideus, curvus, 1-locularis, stigmatibus subbasilaribus, pericarpio carnosio et fibroso, endocarpio tenui. Semen oblongo-reniforme, testa endocarpio adnata, hilo latiusculo ventrali, rapheos ramis ab hilo radiantibus reticulatis, albumine æquali; embryo subbasilaris.—Palmæ inermes, caudice solitario elato robusto cylindræo v. medio incrassato. Folia terminalia, æqualiter pinnatisecta, segmentis anguste lineari-lanceolatis apice angustatis inæqualiter 2-fidis, costa crassiuscula subtus palacea, marginibus non incrassatis basi recurvis, rhachi dorso convexa facie inferiore sulcata superiore acuta, petiolo semicylindræo facie sulcato, vagina elongata. Spadix majusculus, ramulis elongatis gracilibus pendulis; spathæ 2

completæ, inferiore semicylindracea spadice æquante, sup. areole ensiformi ventre fissa; bracteæ et bracteolæ squamiformes. Flores parvi, albi, glomerulis sparsis. Fructus parvus, violaceus.

Species descriptæ 5, Americæ tropicæ incolæ. *Mart. Hist. Nat. Palm.* iii. 166, 310, t. 156, 163. *Kunth, Enum. Pl.* iii. 181. *Griseb. Fl. Brit. W. Ind.* 517; *Cat. Pl. Cub.* 222. *Jacq. Stirp. Sel.* t. 170.

36. *Iriarteæ*, Ruiz et Pav., *Prod. Fl. Per. et Chil.* 149, t. 32, *Syst.* 298. (*Deckeria*, *partim*, *Karst. in Linnaea*, xxviii. 258; *Fl. Colomb.* 107, t. 53.)—Flores in eodem spadice infrafoliaceo simpliciter ramoso monoici, spiraliter dispositi, inferiores 3-ni intermedio ♀, superiores 2-ni v. solitarii ♂, ebracteati et ebracteolati. Fl. ♂ subsymmetrici. Sepala minuta, rotundata, basi gibba, vix imbricata. Petala oblique ovoidea v. triangularia, obtusa, valvata. Stamina 9–15, filamentis brevibus subulatis basi connatis; antheræ lineari-elongatæ, basifixæ, erectæ. Ovarii rudimentum obsoletum. Fl. ♀ masculis multo minores, ovoidei, perianthio post anthesin aucto. Sepala orbicularia, late imbricata. Petala vix longiora, obtusa, convolutivo-imbricata. Staminodia numerosa v. 0. Ovarium 3-loculare, loculis 2 sæpius effectis; stigmata minuta, sessilia, 3-gona; ovula . . . Fructus oblongus v. depresso-ovoideus, 1- rarius 2-spermus, stigmatibus apicalibus v. subapicalibus, pericarpio crasso grumoso, endocarpio membranaceo. Semina solitaria et globosa, v. 2-na hemisphærica, hilo subbasilari, rapheos ramis ab hilo ascenduntibus ramosis reticulatis verticem attingentibus, albumine æquabili; embryo dorsalis.—Palmæ inermes, elatæ, caudice annulato cylindræo v. medio ventricoso, radicibus epigeis sustentato. Folia pauca, terminalia, inæqualiter pinnatisecta, segmentis quaquaversis cuneatis integris v. fissis apice erosio plicato-nervosis, marginibus basi recurvis, petiolo canaliculato, vagina cylindræa elongata. Spadices 1–3, ante anthesin corniformes et recurvæ, ramis paucis; spathæ numerosæ, inferiores minores incompletæ, superiores completæ, fissæ, coriacæ, deciduæ. Flores parvi. Fructus 1–2-pollicaris.

Species ad 5, Americæ tropicæ incolæ. *Mart. Hist. Nat. Palm.* 35, *partim*, t. 35, 36; *Palm. Orbign.* 14, *partim*, t. 5, f. 3, t. 19, *excl. f.* 2. *Drude in Mart. Fl. Bras.* iii. ii. 536 (*sect. Eu-iriarteæ*). *H. Wendl. in Bonpland.* 1860, 102, 106. *Spruce in Journ. Linn. Soc.* xi. 132, *excl. sp.* 2.

37. *Socrateæ*, *Karst. in Linnaea*, xxviii. 263.—Flores in eodem spadice infrafoliaceo simpliciter ramoso monoici, spiraliter dispositi, inferiores 3-ni intermedio ♀, superiores 2-ni v. solitarii ♂, ebracteati et ebracteolati. Fl. ♂ symmetrici. Sepala parva, triangularia. Petala late oblique ovata, acuta, valvata. Stamina ad 25, filamentis brevissimis subulatis basi connatis; antheræ lineari-elongatæ, basifixæ, erectæ. Ovarii rudimentum minutum. Fl. ♀ masculis minores, ovoidei, perianthio post anthesin aucto. Sepala late ovato-rotundata, imbricata. Staminodia 0. Ovarium ovoideum, 3-loculare, loculis 2 effectis; stigmata sessilia, minuta, recurva; ovulum . . . Fructus ellipsoideus v. oblongo-obovoideus, 1- rarius 2-spermus, stigmatibus subapicalibus, pericarpio crassiusculo. Semen oblongum v. oblongo-obovoideum, erectum, hilo basilari, rapheos ramis a basi ascenduntibus ramosis reticulatis, albumine æquabili; embryo subapicalis.—Palmæ inermes, caudice gracili remote annulato radicibus epigeis sustentato. Folia pauca, terminalia, æqualiter pinnatisecta, segmentis oblique cuneato-flabellatis profunde laciniatis, laciniis angustis sinuato-dentatis quaquaversis, nervis divaricatis. Spadices solitarii, ante anthesin corniformes, recurvi; spathæ 5–8, deciduæ, superiores completæ.

Species apud auctores 3 v. 5, Brasilæ borealis et Colombiæ incolæ. *Drude in Mart. Fl. Bras.* iii. ii. 537, 538, t. 126 (*Iriarteæ*, *sect. Haplophyllum et Schizophyllum*). Species sunt: 1. *S. elegans*, *Karst. l.c.* 2. *S. Orbigniana*, *Karst. l.c.*; *Mart. Palm. Orbign.* 14, t. 5, f. 1, t. 19, f. 2, t. 20 B (*excl. f.* 2, 3) (*Iriarteæ*). 3. *S. exorhiza*, *Mart. Hist. Nat. Palm.* ii. 36, t. 33, 34 (*Iriarteæ*, embryo errore basilari descripto et depicto). 4. *S. durissima*, *Erst. Palm. Cent. Amer.* (in *Vid. Meddel. Nat. Foren. Kjobenh.* 1858) 30 (*Iriarteæ*). 5. *S. philonotia*, *Barb. Rodr. Enum. Palm.* Nov. 131, *Protest. Append.* 35. *Traill in Trim. Journ. Bot.* 1877, 130, *S. exorhizan*, *Orbignianam et philonotium* pro formis unius speciei habet.

38. **Dictyocaryum**, H. Wendl. in *Bot. Zeit.* 1865, 131.—Flores in eodem spadice infrafoliaceo fasciculatim ramoso monoici, spiraliter dispositi, inferiores 3-ni intermedio ♀, superiores solitarii v. 2-ni ♂, ebracteati et ebracteolati. Fl. ♂ oblongi, curvi, cylindracei. Sepala minuta, rotundata, basi gibba, imbricata. Petala oblonga, obtusa, valvata. Stamina 6, filamentis brevibus subulatis; antheræ lineares, basifixæ, erectæ. Ovarii rudimentum minimum. Fl. ♀ masculis multo minores, perianthio post anthesin aucto. Sepala et petala 3, imbricata. Staminodia 0. Ovarium 3-loculare; ovulum . . . Fructus ovoideus v. subglobosus, stigmatibus subbasilaribus, pericarpio grumoso, endocarpio membranaceo fragili. Semen ovoideum v. subglobosum, hilo basilari, rapheos ramis ascendentibus ramosis copiose reticulatis in embryonis situm convergentibus, albumine æquabili; embryo subbasilaris.—Palmæ elate, inermes, caudice remote annulato radicibus epigeis suffulto. Folia pauca, æqualiter pinnatisecta, segmentis oblique flabellatim cuneatis in laciniis 8-10 angustas quaquaversas apice erosas fissis. Spadices ante anthesin corniformes, elongati, recurvi; spathæ 6-7, deciduæ. Flores flavi.

Species ex Wendlandio 2, Brasiliæ borealis et Nova Grenadæ incolæ, nempe: *D. Lamarkianum*, Mart. Palm. Orbign. 18, t. 12, et t. 20 A (*Iriartea*); Karst. in Linnaea, xxviii. 259 (*Deckeria*); et *D. fuscum*, Karst. Fl. Colomb. 109, t. 54, excl. f. 1, 9 ad 12 (*Socratea*).—Genus a nobis non visum, a Drude in Mart. Fl. Bras. iii. ii. 536. ad sectionem *Iriartea* relatum. In icono Martii *D. Lamarkianum*, Palm. Orbign. t. 20 A, f. 7, embryo bene medio inter hilum et verticem seminis situs.

39. **Iriartella**, H. Wendl. in *Bonpland.* 1862, 106.—Flores in eodem spadice infrafoliaceo monoici, spiraliter dispositi, inferiores 3-ni intermedio ♀, superiores solitarii v. 2-ni ♂, ebracteati et ebracteolati. Fl. ♂ asymmetrici. Sepala parva, rotundata, imbricata. Petala oblique ovato-oblonga, obtusa, valvata. Stamina numerosa (ad 15), filamentis brevibus subulatis basi fasciculatis et connatis; antheræ anguste lineares, basifixæ, erectæ. Ovarii rudimentum obsoletum. Fl. ♀ masculis minores, perianthio post anthesin immutato. Sepala orbicularia, late imbricata. Petala consimilia, convolutivo-imbricata. Staminodia 0. Ovarium ovoideo-oblongum, 3-loculare, loculis 2 sæpissime effectis; stigmata minuta, sessilia; ovula in loculis solitaria, erecta? Fructus parvulus, obovoideo-oblongus, basi sæpe gibbus v. 2-gibbus, rectus v. lente curvus, stigmatum cicatrice basilari, pericarpio tenuiter grumoso, endocarpio membranaceo. Semen ellipsoideum, erectum, hilo basilari, rapheos ramis a basi ad verticem ascendentibus parce reticulatis, albumine æquabili; embryo apicalis.—Palma humilis, gracilis, setosa, setis prurientibus, caudice arundinaceo griseo-tomentoso basi sobolifero remote annulato, radicibus hypogæis. Folia terminalia, pauca, inæqualiter pinnatisecta, segmentis in planum dispositis a basi lata anguste cuneatis oblique præmorsis plicato-venosis, marginibus basi recurvis, subtus tomentellis, petiolo setoso, vagina elongata cylindracea. Spadices pedunculo compresso tomentello, ramis pendulis; spathæ 4-5, deciduæ, planoconvexæ, tomentosæ, pedunculum arcte vestientes. Flores minuti. Fructus parvus.

Species 1, riparum fluminis Amazonum incolæ. Mart. Hist. Nat. Palm. ii. 39, t. 37. Traill in *Trim. Journ. Bot.* 1877, 130. Wallace, *Palm. Amaz.* t. 15, omnes sub *Iriartea*. Barb. Rodr. *Enum. Palm. Nov.*, *Protest. Append.* t. 2, f. 8, 9. Drude in Mart. Fl. Bras. iii. ii. 537, t. 127, f. 1 (*Iriartea*, sect. *Trachyphyllum*.)

40. **Catoblastus**, H. Wendl. in *Bonpland.* 1862, 104, 106.—Flores in diversis spadici-  
bus infrafoliaceis brevibus monoici, spiraliter dispositi, ♂ solitarii v. gemini, ♀ solitarii, bracteati et bracteolati. Fl. ♂ asymmetrici. Sepala minuta, ovato-triangularia, vix imbricata. Petala 3, anguste subulato-lanceolata, flexuosa, crasse coriacea, valvata. Stamina 9-15, filamentis brevibus subulatis; antheræ magnæ, lineari-oblongæ, obtusæ 4-gonæ, apiculatæ, basifixæ. Ovarii rudimentum minimum. Fl. ♀ masculis subæquales, perianthio post anthesin vix aucto. Sepala minuta, triangularia, hand imbricata. Petala multo majora, triangularia, crasse coriacea, basi imbricata, apicibus acutis liberis conniventibus valvatis. Staminodia 4-6, antheris parvis cassis. Ovarium ad basin 3-lobum, lobis inæqualibus stellatim patentibus subglobosis pubescentibus 1 v. 2 vacuis; stylus brevis, stigmatibus 3 lineari-elongatis crassis obtusis intus canaliculatis; ovula in loculis

basilaria, erecta. Fructus carpella 1-2, ellipsoideo- v. cylindraceo-oblonga, puberula v. rugosula, stigmatibus basilaribus, pericarpio grumoso, endocarpio membranaceo. Semen erectum, ovoideum ellipsoideum v. cylindraceum, liberum, hilo basilari, rapheos ramis ab hilo ad verticem ascendentibus reticulatis, albumine æquabili v. breviter ruminato; embryo basilaris.—Palmæ mediocres v. elatæ, inermes, caudice gracili remote annulato radicibus epigæis sustentato. Folia terminalia, inæqualiter pinnatisecta, segmentis basi cuneatis marginibus recurvis, dein dimidiato-lanceolatis oblique præmorsis, vagina elongata. Spadices subverticillati, ♂ et ♀ mixti, simpliciter ramosi; spathæ plures, coriaceæ, inferiores subcylindraceæ, compressæ, bicarinatæ, ore lobulato, superiores longiores immarginatæ bilabiatae.

Species 2 v. 3, Novæ Grenadæ, Venezuelæ et Brasilæ borealis incolæ. *Karst. Fl. Colomb.* i. 163, t. 81 (*Iriarteæ*). *Drude in Mart. Fl. Bras.* iii. ii. 541, t. 127, f. 2. *Traill in Trim. Journ. Bot.* 1876, 332 (*Iriarteæ*).

41. *Wettinia*, Poepp. in *Endl. Gen. Pl.* 243; Poepp. et *Endl. Nov. Gen. et Sp.* ii. 39, t. 153, 154.—Flores in diversis spadicebus infrafoliaceis simplicibus v. ramosis monoici, spiraliter densissime conferti, bracteati et bracteolati. Fl. ♂ asymmetrici. Sepala 3-5, parva, triangularia, crassa, rigida, valvata. Petala multo longiora, cornea, anguste subulata, flexuosa, demum torta. Stamina 12-16, petalis breviora, filamentis brevissimis subulatis; antheræ magnæ, lineari-oblongæ, basifixæ, pilosæ, mucronatæ. Ovarii rudimentum minutum. Fl. ♀ masculis multo majores, perianthio post anthesin paullo aucto. Sepala subæqualia, a basi dilatata triangularia. Petala multo longiora, late subulata, subflexuosa. Staminodia 0. Ovarium profunde 3-lobum, villosum, lobis ovoideis basi inter se et cum basi styli connatis, 1-2 vacuis; stylus basilaris, filiformis, stigmatibus 3 elongatis flexuosis; ovulum subbasilare. Fructus in spadice densissime compacti, carpella pressione mutua obpyramidata, vertice lato convexa villosa, styli residuo basilari, pericarpio molliter lignoso, endocarpio lignoso. Semina erecta, anguste obovoidea, testa tenui firma endocarpio adherente, hilo subbasilari, rapheos ramis complanatis ab hilo ad verticem seminis ascendentibus, albumine æquabili; embryo basilaris.—Palmæ graciles, inermes, elatæ, caudice annulato radicibus epigæis in conum densissime compactis sustentato. Folia pauca, terminalia, inæqualiter pinnatisecta, segmentis integris basi cuneatis marginibus recurvis, dein dimidiato-lanceolatis oblique præmorsis plicato-nervosis, nervis divergentibus, rhachi obtuse triquetra superne canaliculata, vagina prælonga. Spadices 3-nati verticillati, breves, crassi, intermedio ♀ decurvo; spathæ 6, 3 inferiores persistentes, tubulosæ, ♂ apice irregulariter ruptæ, ♀ bilabiatae; superiores caducæ, fusiformes, laceræ. Flores majusculi; bractæ et bracteolæ inter flores ♀ 3-4, squamiformes.

Species 1 v. 2, Andium Peruvizæ incolæ. *Kunth, Enum. Pl.* iii. 108, 589. *Gaud. Voy. Bonite, Bot. t.* 15, f. 7, 8. *Mart. Hist. Nat. Palm.* iii. 304, t. 166, f. 7 (*Areceæ* e Peru). *H. Wendl. in Bonpland.* 1860, 106. *Spruce in Journ. Linn. Soc.* iii. 194; ix. 128. *Wettiniæ* arcte affinis est palma Panamensis a Seemanno lecta, sepalis fl. ♀ subulato-lanceolatis, petalis consimilibus et æquilongis, fructibus compactis vix puberulis, carpellis vertice rotundatis.

42. *Calyptrocalyx*, Blume, *Rumph.* ii. 103, t. 102 D, 118, 161.—Flores in eodem spadice interfoliaceo longissimo simplici monoici, foveolis spiraliter dispositis immersi, 3-ni intermedio ♀, bracteati et bracteolati. Fl. ♂ symmetrici. Sepala orbicularia, cucullata, crasse coriaceæ, late imbricata. Petala paullo longiora, late ovata, obtusa, valvata. Stamina numerosa, basi perianthii conferta, interiora imperfecta, filamentis inæquilongis subulatis rectis basi connatis; antheræ lineares, basi longe 2-fidæ, basifixæ, versatiles. Ovarii rudimentum parvum. Fl. ♀ masculis minores, subglobosi, perianthio post anthesin aucto. Sepala orbicularia, late imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutatis conniventi-valvatis. Staminodia 6 v. plura. Ovarium oblongo-ovoideum, subtrigonum, 1-loculare; stigma crassum, conoideum, 3-fidum; ovulum parietale. Fructus ovoideus v. olivæformis, subrostratus, stigmate terminali umbonatus, pericarpio crasso fibroso et succoso, endocarpio fibroso semini adhærente. Semen ovoideum

v. subglobosum, hilo laterali elongato, rapheos ramis ab hilo radiantibus ramosis reticulatis semen involventibus, albumine profunde ruminato; embryo basilaris.—Palmæ inermes, caudice gracili annulato. Folia terminalia, æqualiter pinnatisecta, segmentis lineari-lanceolatis acuminatis, costa nervisque subtus prominentibus, marginibus incrassatis basi recurvis, petiolo breviusculo, vagina breviuscula. Spadices longissimi, penduli, crassiusculi, longe pedunculati, solitarii v. 2-ni; spatha 1 completa, spadice brevior, deciuua; bractea labio inferiori foveolæ adnata; bracteolæ squamiformes. Flores ♂ majusculi. Fructus mediocris v. majusculus.

Species 2; altera (*C. spicatus*, Blume) Amboinensis, bractea linguæformi protrusa, *Kunth, Enum. Pl.* iii. 642; *Miq. Fl. Ind. Bat.* iii. 44; *Palm. Archip. Ind.* 9; altera (*C. ausiralasicus*) Australiæ tropicæ incola, *Scheff. in Ann. Jard. Bot. Buitenz.* i. 131, 140. *Benth. Fl. Austral.* vii. 140 (*Ptychosperma*). *H. Wendl. et Drude in Linnaea*, xxxix. 178, 189, 205, t. 2, f. 3 (LACIOSPADIX).

43. **Bacularia**, *F. Muell. Fragm. Phyt. Austral.* vii. 103 (Linospadix, *H. Wendl. et Drude in Linnaea*, xxxix. 177, 188, 198, t. 2, f. 2.)—Flores in eodem spadice interfoliaceo simplici gracillimo monoici, spiraliter dispositi, 3-ni intermedio ♀, minute bracteati et bracteolati. Fl. ♂ symmetrici, teretiusculi. Sepala rotundata, obtusa, imbricata, chartaceo-coriacea. Petala ovata v. lineari-oblonga, acuta v. obtusa, coriacea, valvata. Stamina 6, v. 10–12, filamentis brevibus subulatis basi connatis; antheræ oblongæ v. lineari-sagittatæ, basifixæ, erectæ, connectivo dilatato. Ovarii rudimentum parvum v. 0. Fl. ♀ masculis multo minores, ovoidei, a dorso compressi, perianthio post anthesin aucto. Sepala orbicularia, chartaceo-coriacea, late imbricata. Petala sepalis æquilonga, orbicularia, convolutivo-imbricata, apicibus acutatis conniventibus. Staminodia dentiformia. Ovarium ovoideum v. subglobosum, basi abrupte contractum, 1-loculare; stigmata minuta, sessilia, 3-gona; ovulum parietale, horizontale. Fructus parvus, elongato-ovoideus, rectus, subacutus, stigmatibus terminalibus, pericarpio crasse coriaceo et fibroso, endocarpio tenui. Semen elongatum, teres, erectum, hilo lato basilari, rapheos ramis ab hilo ascendentibus obscuris parce ramosis, albumine æquabili; embryo basilaris.—Palmæ humiles, inermes, caudicibus arundinaceis annulatis solitariis v. fasciculatis. Folia terminalia, inæqualiter pinnatisecta, segmentis membranaceis latis v. angustis apicibus fissis v. dentatis, latioribus pluri-angustioribus 1-nerviis, terminalibus confluentibus, costis nervisque subtus epaleaceis, marginibus non incrassatis basi recurvis, petiolo rhachique gracilibus furfuraceis dorso convexis facie planis v. inferne concavis, vagina brevi aperta. Spadices numerosi, foliis longiores, patentim recurvi, pedunculo gracillimo furfuraceo basi compresso; spathæ 2, remotæ, inferiore basilari tubulosa, superiore lineari-membranacea torulosa ancipiti. Flores virides. Fructus virides,  $\frac{1}{4}$ – $\frac{1}{2}$ -poll. longi.

Species 2, Australiæ temperatæ et tropicæ incolæ. *Benth. Fl. Austral.* vii. 137 (*Kentia* sp. n. 1, 2). *Mart. Hist. Nat. Palm.* 178, t. 155, f. 4 (*Areca*). *Bot. Mag.* t. 6644.

44. **Linospadix**, *Beccari, Malesia*, i. 62, non *H. Wendl.*—Flores in eodem spadice interfoliaceo simplicissimo monoici, cavis spiraliter dispositis immersi, 3-ni intermedio ♀, bracteati et bracteolati. Fl. ♂ symmetrici. Sepala orbicularia, crasse coriacea, concava, basi gibba, imbricata. Petala oblonga v. ovata, valvata. Stamina 6 v. 9, filamentis filiformibus; antheræ lineari-oblongatæ, dorsifixæ, utrinque 2-fidæ, versatiles. Ovarii rudimentum minutum, v. angustum et apice 3-fidum. Fl. ♀ masculis minores, subglobosi, perianthio post anthesin aucto. Sepala reniformia, late imbricata. Petala longiora, late ovata, acuta, imbricata, apicibus conniventibus. Staminodia dentiformia. Ovarium ovoideum v. turbinatum, basi abrupte contractum, 1-loculare; stigmata 3, sessilia, majuscula, recurva; ovulum parietale, pendulum. Fructus parvus, ellipsoideus, stigmatibus apicalibus, pericarpio carnosio intus dense fibroso, fibris in laminas complanatas reticulatas dispositis, endocarpio tenui. Semen ellipsoideum v. subglobosum, erectum, raphe laterali elongato, ramis paucis reticulatis, albumine æquabili; embryo basilaris.—Palmæ humiles, inermes, caudicibus gracilibus arundinaceis annulatis. Folia terminalia, flabeliformia et profunde 2-fida, lobis apice acute laciniatis, v. pinnatisecta pinnis latis v.

angustis acuminatis plicato-nervosis, marginibus basi recurvis, rhachi petioloque gracili furfuraceis 3-gonis, vagina elongata aperta reticulatim fibrosa. Spadices suberecti, longe graciliterque pedunculati, rhachi stricta haud profunde alveolata; spathæ 2 completæ, coriaceæ, remotæ, angustæ, marcescentes, inferiore tubulosa 2-carinata, superiore spadice brevior; bracteæ et bracteolæ minutæ. Flores minuti, nitidi. Fructus rubri v. crocei.

Species 3, Novæ Guinæ incolæ. Genus *Baculariæ* arcte affine, differt spathis coriaceis spadicebus multoties brevioribus, antherisque dorsifixis.

45. **Howea**, *Beccari, Malesia*, i. 67 (Howiea). (*Grisebachia*, II. *Wendl. et Drude in Linnæa*, xxxix. 177, 188, 200, t. iv. f. 1, 2.)—Flores in eodem spadice interfoliaceo elongato simplicissimo monoici, cavis spiraliter dispositis inserti, 3-ni intermedio ♀, v. superiores solitarii et 2-ni ♂, bracteati et bracteolati. Fl. ♂ majusculi, symmetrici. Sepala orbicularia, concava, compresso-carinata, late imbricata. Petala late ovata, crasse coriacea, basi connata, valvata. Stamina 30-40, dense fasciculata, filamentis brevissimis v. 0; antheræ lineari-elongatæ, basifixæ, erectæ, basi et apice indivisæ. Ovarii rudimentum 0. Fl. ♀ masculis multo minores, subglobosi, perianthio toto post anthesin aucto. Sepala reniformia, latissime imbricata. Petala minora, orbicularia, convolutivo-imbricata, apicibus acutatis conniventi-valvatis. Staminodia 0. Ovarium ellipsoideum, 1-loculare; stigmata 3, sessilia; ovulum erectum. Fructus oliviformis, stigmatibus terminali umbonatus, pericarpio crasso fibroso, endocarpio tenuiter crustaceo separabili. Semen ellipsoideum, erectum, liberum, hilo parvo basilari, rapheos ramis ab hilo ascendentibus et ramosis dein descendentibus et laxè reticulatis, albumine æquabili; embryo basilaris.—Palmæ elatæ, inermes, caudice robusto annulato. Folia terminalia, numerosa, densa, æqualiter pinnatisecta, pinnis angustis acuminatis, petiolo et vagina . . . Spadices 2-3-pedales, solitarii v. 3-5 ex una spatha, crassi, cylindracei, nutantes v. penduli, pedunculo elongato basi compresso; spatha solitaria, spadicem æquans, cylindracea, apicem versus 2-carinata, longitudinaliter rupta; bracteæ cavos marginantes, bracteolæ squamiformes. Flores cavis spadice semi-immersi, ♂ fere semi-pollicares. Fructus sesquipollicaris.

Species 1 v. 2, insulæ Lord Howe incolæ. *Benth. Fl. Austral.* vii. 137 (*Kentia Belmoreana* et *Forsteriana*). *Drude in Bot. Zeit.* 1877, 636, t. 5, f. 14, 15.

46. **Gigillolia**, *Beccari, Malesia*, i. 171.—Flores in eodem spadice interfoliaceo subdigitatim ramoso monoici, subdistiche sparsi, ♀ basin versus ramorum solitarii v. masculis 1 v. 2 stipati, ♂ versus apices ramorum solitarii v. 2-ni, ebracteati et ebracteolati. Fl. ♂ subsymmetrici, elongati, 3-goni. Calyx breviter tubulosus, 3-gonus, truncatus, 3-dentatus. Petala lanceolata, acuminata, coriacea, valvata. Stamina 3-9, filamentis brevibus basi in columnam connatis; antheræ breves v. lineari-elongatæ, dorsifixæ. Ovarii rudimentum 3-lobum. Fl. ♀ masculis multo majores et crassiores, ovoidei, perianthio post anthesin aucto. Sepala ovato-rotundata, late imbricata. Petala paullo longiora, ovata v. ovato-rotundata, basi concava imbricata, supra medium incrassata valvata. Staminodia 3-6, minutissima. Ovarium ovoideum, basi abrupte contractum, 1-loculare; stigma crassum, conoideum, sessile, 3-fidum, segmentis crassis 3-gonis; ovulum subbasilare, horizontale. Fructus immaturus cylindraceo-ovoides, stigmatibus crassis erectis terminatus, pericarpio crasse coriaceo. Semen erectum, elongatum, hilo basilari . . .—Palmæ humiles, inermes, caudice arundinaceo annulato v. subnullo. Folia terminalia, lamina 2-fida, lobis apice crenato-dentatis, v. æqualiter pinnatisecta, segmentis oppositis lineari-lanceolatis caudato-acuminatis flaccidis, costa nervisque gracilibus, marginibus basi recurvis, rhachi teretiuscula antice canaliculata, petiolo gracili, vagina fissa. Spadices longe graciliterque pedunculati, ramis rigidis strictis v. flexuosis; spatha 1 completa, longissima, ensiformis, compressa, bicarinata, longitudinaliter fissa. Flores majusculi, sessiles. Fructus immaturus parvus.

Species 2, Borneenses, habitu toto cælo diversæ, et probabiliter subgenera distincta efformantes. Genus nulli affine. 1. *G. subacaulis*, folii lamina cuneato-oblanceolata, plicato-nervosa, ad medium

2-fida, segmentis apice crenato-dentatis, spadiceis ramis ad apicem pedunculi subdigittatis suberectis strictis rigidis, filamentis breviter connatis, antheris elongatis. 2. *G. insignis*, Becc., caudice arundinaceo, foliis pinnatisectis, segmentorum margine inferiore basi in auriculam acuminatam rhachi appressam producto (ut in *Arenga*), spadiceis rhachi elongata flexuosa, ramis alternis patentibus flexuosis gradatim decrescentibus, filamentis in columnam crassam solidam cylindraceam coadunatis, apicibus liberis, antheris minutis.

47. *Ceroxylo*, Humb. et Bonpl. Pl. *Æquin.* 1, t. 1, 1 b. (Kloppstockia, Karst. in *Linnaea*, xxviii. 251; Fl. Colomb. 1, t. 1. Beethovenia, Engel in *Linnaea*, xxxiii. 677, t. 3, f. 4.)—Flores in diversis spadiceis interfoliaceis paniculatim ramosis monoici v. polygami, cum pedicello brevi articulati, minute bracteati, ebracteolati. Fl. ♂ asymmetrici. Sepala minuta, in cupulam crassam 3-lobam lobis acutis connata. Petala subulato-lanceolata, acuminata, ima basi connata, valvata. Stamina 9–15, uniseriata, filamentis brevibus subulatis inter se et cum petalis connatis; antheræ magnæ, lineares, basi longe bifida insertæ, erectæ. Ovarii rudimentum conicum. Fl. ♀ masculos subæquantes, perianthio post anthesin vix aucto. Sepala in anulum carnosum 3-lobum basi intrusum connata, lobis triangularibus acutis. Petala ovato-lanceolata, acuminata, carnosula, basi in tubum brevem connata, valvata. Staminodia numerosa, basi petalorum inserta, antheris parvis linearibus cassis. Ovarium profunde 3-lobum, tuberculatum, lobis 1–2 vacuis basi inter se et cum styli basi connatis; stylus brevis, crassus, erectus, 3-sulcatus, stigmatibus crassis subulatis recurvis; ovula supra basin anguli interioris loculorum inserta, ascendunt. Fructus globosus v. didymus, styli residuo basilari, pericarpio grumoso lævi v. grosse granulato, endocarpio membranaceo. Semen erectum, globosum, hilo basilari, rapheos ramis a basi ascendentibus ramosis ad situm embryonis convergentibus et reticulatis, albumine æquabili; embryo basilaris.—Palmæ præaltæ, inermes, caudice robusto annulato interdum ceram scatente. Folia numerosa, terminalia, æqualiter pinnatisecta, pinnis ensiformibus acuminatis rigide crasseque coriaceis subtus tenuiter lanatis marginibus basi recurvis, costa tenui, nervis obscuris, vagina fibrosa. Spadices elongati, ramosissimi, ramulis gracilibus flexuosis, floribus ad nodos insertis; spathæ ad 5, inferiores complete, coriaceæ, sericeo-tomentosæ, ♀ elongatæ; bracteæ sub floribus minutæ, ovatæ, acutæ. Flores majusculi. Baccæ rubræ v. violacæ, diametro nucis avellanæ.

Species 2, Andium Novæ Grenadæ et Venezuelæ incolæ. Mart. Hist. Nat. Palm. iii. 314 (excl. *C. australi*) et 188 (*Iriarteia andicola*). H. Wendl. in Bonpland. 1860, 106. Drude in Mart. Fl. Bras. iii. ii. 545. Engel in *Linnaea*, xxxiii. 673 (Kloppstockia).

48. *Juania*, Drude in Bot. Zeit. 1878, 189, nomen tantum.—Flores ♀ in spadice simpliciter ramoso subsolitarii, breviter pedicellati, bracteati, ebracteolati. Fl. ♂ . . . —Fl. ♀: Perianthium post anthesin immutatum. Calyx brevis, 3-lobus, lobis triangularibus acutis, coriaceus, basi intrusus. Petala ovata, acuta, coriacea, striata, basi in tubum breviter connata, imbricata apicibus valvatis. Staminodia 6, filiformia, basi corollæ inserta. Discus 0. Ovarium oblongum, 3-loculare, loculis 2 effectis; stigmata 3, breviter recurva; ovula angulo interiori loculorum affixa, pendula. Fructus globosus, stigmatibus subterminalibus, pericarpio crassiusculo grumoso v. carnosulo, endocarpio subcrustaceo intus subrugoso. Semen globosum, basilare, testa pallide brunnea, raphe laterali elevata verticem acutatum seminis attingente, ramis paucis descenduntibus, albumine corneo æquabili; embryo subbasilaris.—Palma elegans, gracilis, inermis. Folia terminalia, pinnatisecta, segmentis elongatis anguste ensiformibus acuminatis striato-nervosis subtus argentatis, costa valida, marginibus incrassatis basi recurvis, petiolo gracili furfuraceo-squamoso. Spadix glaber, rhachii valida compressa, ramis strictis crassiusculis flexuosis erectis superioribus gradatim brevioribus, pedunculo basi squamis paucis membranaceis longe acuminatis; spathæ . . . ; bracteæ breves, cum spadice confluentes. Flores parvi, solitarii. Fructus magnitudine *Cerasi*.

Species 1, insulæ Juan Fernandez incola. Genus evidenter *Ceroxylo* affine et forte idem ac *C. ? australe*, Mart. Hist. Nat. Palm. iii. 315, et *Morcuia Chonta*, Philippi, in Bot. Zeit. 1856, 648.

49. *Malortica*, *H. Wendl. Ind. Palm.* 28, *nomen*; et in *Bot. Zeit.* 1859, 5.—Flores in eodem spadice interfoliaceo subdigitatim ramoso monoici, in areolis spiraliter sparsis sessiles, 3-ni intermedio ♀, v. superiores solitarii et 2-ni ♂, bracteati et bracteolati. Fl. ♂ symmetrici, conico-ovoidei. Sepala late orbiculata, dure coriacea, imbricata. Petala ovata v. lanceolata, acuta, rigida, valvata. Stamina 6 v. 12, filamentis brevibus subulatis; antheræ lineares, obtusæ, dorsifixæ, basi 2-fidæ. Ovarii rudimentum 3-fidum. Fl. ♀ masculis minores, ovoideæ, acutæ, perianthio post anthesin valde aucto. Sepala orbicularia, concava, dorso rotundata, imbricata. Petala longiora, basi orbicularia, imbricata, apicibus lanceolatis acutis crasse coriaceis valvatis. Staminodia 6, setiformia, basi ovarii adnata. Ovarium ovoideo-trigonum, acutum, incomplete 3-loculare; stigmata subulata, erecta; ovula 3, columnæ centrali basilari late adnata. Fructus parvus, ovoideus v. elongato-ovoideus, apiculatus v. umbonatus, stigmatibus terminalibus, 1-locularis, 1-spermus, pericarpio coriaceo. Semen ellipsoideum, erectum, hilo basilari, raphe ad verticem attingente ramis . . .—Palmæ nanæ, inermes, caudicibus cæspitosis vaginis elongatis foliorum tectis. Folia alterna, suberecta, nunc simplicia apice 2-fida plicato-nervosa marginibus basi cuneata integerrimis superne grosse crenato-dentata sinibus erosio, v. fenestrata v. in segmenta basi angusta marginem versus confluentia fissa, v. in segmenta lata apice præmorsa et crenata divisa, petiolo gracili trigono basi in vaginam reticulatam marginibus fibrosis sensim angustato. Spadix longe graciliterque pedunculatus, erectus, simpliciter ramosus, pedunculo compresso, ramis paucis strictis rigidis angulato-compressis basi bractea rigida lanceolata v. subulata auctis; spathæ 2, pedunculo multo breviores, graciles, membranaceæ; bracteæ bracteolæque rigidæ. Florum glomeruli subremoti. Fructus parvus.

Species 5, Americæ centralis incolæ. *Bot. Mag. t.* 5247, 5291.

50. *Reinhardtia*, *Lieb. in Overs. K. Dansk. Selsk.* 1845, 99, *nomen*; *Mart. Hist. Nat. Palm.* iii. 311.—Flores in eodem spadice interfoliaceo subdigitatim ramoso monoici, in areolis spiraliter sparsis 3-ni intermedio ♀, v. superiores solitarii et 2-ni, bracteati et bracteolati. Fl. ♂ symmetrici, conico-ovoidei. Sepala rotundata, coriacea, nervosa, concava, late imbricata. Petala ovata, acuta, rigida, valvata. Stamina numerosa, in capitulum conferta, filamentis brevibus filiformibus; antheræ lineares, basi bifida affixæ, erectæ. Ovarii rudimentum 0. Fl. ♀ masculis minores, ovoidei, perianthio post anthesin valde aucto. Sepala orbicularia, dorso rotundata, imbricata. Petala multo longiora, basi rotundata, imbricata, supra medium lanceolata acuminata, rigida, valvata. Staminodia 0. Ovarium lanceolatum, 3-gonum, acutum, incomplete 3-loculare; stigmata 3, minuta, erecta; ovula 3, columnæ centrali basilari late adnata. Fructus parvus, ellipsoideus, apiculatus, stigmatibus terminalibus, 1-locularis, 1-spermus, pericarpio coriaceo et fibroso, endocarpio membranaceo. Semen ellipsoideum, erectum, liberum, hilo basilari, raphe ad verticem attingente exsculpto, ramis reticulatis, albumine ruminato; embryo basilaris.—Palmæ inermes, caudice gracili stricto annulato. Folia æqualiter pinnatisecta, segmentis numerosis elongatis anguste lineari-lanceolatis longe gracillimeque acuminatis, costa gracili, nervis plurimis, marginibus basi recurvis, rhachi gracili 3-gona. Spadices longe pedunculati, erecti, simpliciter ramosi, pedunculo rigido compresso stricto, ramis strictis rigidis erecto-patentibus compresso-angulatis, basi bractea rigida lanceolata auctis; spatha (una tantum visa) elongata, angusta, compressa, 2-carinata, ventre fissa, coriacea, spadicem æquans; bracteæ et bracteolæ rigidæ. Florum glomeruli subremoti.

Species nobis notis 3, omnes Mexicanæ, quarum 2 a Liebmannio missæ fl. ♀ carent, tertia (coll. Jurgensen, n. 760) fl. ♀ immaturos præbet.—Genus *Malorticeæ* valde affine, differt staminibus, habitu, et foliis pinnatisectis segmentis longe acuminatis.

51. *Heterospatha*, *Scheff. in Ann. Jard. Bot. Buitenz.* i. 141, 162.—Flores in eodem spadice interfoliaceo ramosissimo monoici, spiraliter dispositi, 3-ni intermedio ♀ v. superiores 2-ni ♂, obscure bracteati et bracteolati. Fl. ♂ asymmetrici, compressi. Sepala parva, subrotunda, basi gibba, imbricata. Petala ovata, subacuta, valvata.

Stamina 6, filamentis filiformibus ima basi connatis apicibus inflexis; antheræ lineares, dorsifixæ, utrinque 2-fidæ, versatiles. Ovarii rudimentum columnare, 3-gonum. Fl. ♀ masculos subæquantes, ovoidei, perianthio post anthesin parum aucto. Sepala reniformia, late imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutatis conniventibus. Staminodia 6, setiformia. Ovarium oblongum, 1-loculare; stigmata parva, recurva; ovulum parietale, pendulum. Fructus pisiformis, stigmatibus excentricis, pericarpio grumoso non fibroso intus lævi. Semen globosum, erectum, liberum, hilo basilari, raphe elongata, ramis a chalaza descendentibus reticulatis, albumine modice ruminato; embryo basilaris.—Palma elata, inermis. Folia terminalia, longe petiolata, æqualiter pinnatisecta, segmentis numerosis lanceolatis utrinque attenuatis acuminatis 1-nerviis, marginibus incrassatis basi recurvis, rhachi dorso rotundata facie angusta plana, vagina brevi fibrosa basi tumida. Spadix decompositus, ramis crassis, ramulis divaricatis; spathæ 2, inferiore 2-cristata, supericre multo longiore. Flores mediocres.

Species 1, Amboynensis.

52. *Nephrosperma*, Balf. fil. in Baker Fl. Maurit. 386.—Flores in eodem spadice interfoliaceo simpliciter ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, obscure bracteati et bracteolati. Fl. ♂ symmetrici. Sepala crassa, orbicularia, concava, basi gibba, late imbricata. Petala sepalis vix duplo longiora, ovato-oblonga, obtusa, crassiuscula, valvata. Stamina perplurima, in capitulum densum coacervata, filamentis crassiusculis interioribus longioribus; antheræ breves, apici filamenti dilatato late adnatæ, subhorizontales. Ovarii rudimenta 1-2, minuta, ovoidea. Fl. ♀ masculis minores, subglobosi, perianthio post anthesin modice aucto. Sepala orbiculata, coriacea, late imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutatis conniventi-valvatis. Staminodia minuta, squamiformia. Ovarium ellipsoideum, 1-loculare; stigma crassum, sessile, conoideum, 3-fidum; ovulum parietale, pendulum. Fructus globosus, lævis, stigmatate laterali, pericarpio tenuiter carnosus et fibroso, endocarpio tenuiter crustaceo. Semen globosum, suberectum, liberum, hilo oblongo subbasilari, rapheos ramis a margine hili ascendentibus liberis demum laxè reticulatis semen amplectentibus, albumine profunde ruminato; embryo supra-basilaris.—Palma mediocris, armata, caudice annulato et longe spinoso. Folia terminalia, inæqualiter pinnatisecta, segmentis acuminatis, aliis latioribus plurinerviis cum angustioribus 1-nerviis alternantibus, terminalibus confluentibus, nervis subtus paleaceis, petiolo lævi rachique spinosis, vagina late fissa spinosa, marginibus membranaceis. Spadix elongatus, pedunculo elongato erecto compresso, basi bracteis 2-3 tomentosis aucto, ramis cernuis; spathæ 2, inferiore spinosa persistente, superiore decidua. Flores majusculi. Fructus semipollicares, rubri.

Species 1, insularum Seychelles incola.

53. *Iguanura*, Blume, Rumph. ii. 105, t. 117. (Slackia, Griff. Notul. iii. 162; Ic. Pl. Asiat. t. 243; Palm. Brit. Ind. 161, t. 234.)—Flores in eodem spadice interfoliaceo simplici v. paniculatim ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, v. superiores solitarii et 2-ni ♂, bracteati et bracteolati. Fl. ♂ symmetrici. Sepala orbicularia, crasse coriacea, basi gibba v. carinata, late imbricata. Petala ovata v. lanceolata, acuta, ima basi connata, valvata. Stamina 6, rarius 9, filamentis subulatis basi connatis apice rectis v. inflexis; antheræ oblongæ v. sagittatæ, dorsifixæ, versatiles. Ovarii rudimentum 3-gonum. Fl. ♀ masculis minores, subglobosi, perianthio post anthesin paullo aucto. Sepala orbicularia, concava, basi gibba, late imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutatis conniventibus. Staminodia 6, dentiformia. Ovarium ovoideum v. oblongum, teres v. gibbum, obtuse 3-gonum, 1-loculare, v. 2-3-loculare loculis 2 effectis; stigmata 3, sessilia, trigona; ovulum parietale. Fructus obovoideus v. oblongus, stigmatibus subbasilaribus, pericarpio carnosus et fibroso, endocarpio chartaceo. Semen oblongum v. obovoideum, suberectum, hilo laterali, rapheos ramis ab

hilo ascendentibus dein decurvis reticulatis, albumine ruminato v. æquabili; embryo basilaris.—Palmæ humiles, inermes, caudicibus arundinaceis annulatis. Folia terminalia, integra demum æqualiter pinnatisecta, segmentis membranaceis latis acuminatis præmorsodentatis v. fissis plurinerviis, summis confluentibus, marginibus tenuibus basi recurvis, petiolo gracili rhachique glabris v. furfuraceis, vagina aperta v. basi integra. Spadices longe pedunculati, ramis paucis gracilibus patentibus; spathæ 2, spadice multo breviores, persistentes, tubulosæ, inferiore 2-cristata, superiore supra medium aperta; bracteæ foveolas marginantes, bracteolæ squamiformes. Flores et fructus parvi.

Species 4 v. 5, Archipelagi Malayani incolæ. *Mart. Hist. Nat. Palm.* iii. 229, 317, t. 178. *Kunth, Enum. Pl.* iii. 643. *Miq. Fl. Ind. Bat.* iii. 43, 749. *H. Wendl. in Bot. Zeit.* 1859, 63. *Scheff. in Ann. Jard. Bot. Buitenz.* i. 141, 161. Huc pertinet *Areca Wallichiana*, *Mart. in Wall. Cat.* n. 8600.

54. **Stevensonia**, *Duncan, Cat. Hort. Maurit.* 87, nomen. (*Phœnicophorium*, *Wendl. in Ill. Hort.* xii. t. 433; *Misc.* 5.)—Flores in eodem spadice interfoliaceo duplicato-ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, v. superiores 2-ni ♂, ebracteati et ebracteolati. Fl. ♂ asymmetrici, ovoideo-3-goni. Sepala 3, brevissima, reniformia, imbricata. Petala ovata, acuta, coriacea, valvata. Stamina 15–20, basi perianthii inserta, filamentis subulatis; antheræ lineari-oblongæ, utrinque longe 2-fidæ, dorsifixæ, demum versatiles. Ovarii rudimentum varium. Fl. ♀ masculis minores, globosi, perianthio post anthesin paullo aucto. Sepala 3, orbicularia, concava, crasse coriacea, late imbricata. Petala paullo longiora, rotundata, convolutivo-imbricata, apicibus acutatis subvalvatis. Stamina 0 (in cupulam dentatam connata, *Balf.*). Ovarium ovoideum, 1-loculare; stigma mitriforme, 3-fidum, sessile; ovulum parietale. Fructus parvus, ellipsoideus, ventre planiusculo, dorso subcarinato, stigmate subbasilari, pericarpio crasse fibroso, endocarpio crustaceo. Semen suberectum, liberum, ovoideum, hilo lato subbasilari, rapheos ramis ab hilo ascendentibus ramosis gracillimis laxè reticulatis, albumine profunde ruminato; embryo subbasilaris.—Palma elata, tota aculeata v. demum fere inermis, caudice annulato. Folia terminalia, patenti-recurva, lamina cuneato-obovata convexa 2-fida basi obliqua plicato-nervosa, margine fissa, segmentis incis, costis validis nervisque subtus paleaceis, petiolo plano-convexo, vagina alte fissa squamosa et aculeata. Spadix erectus, pedunculo elongato basi compresso, ramis crassiusculis; spathæ 2, inferiore persistente aculeata, superiore clavata inermi lignosa decidua. Flores mediocres. Fructus parvus, croceus.

Species 1, insularum Seychelles incola. *Balf. fil. in Baker Fl. Maurit.* 388.

55. **Verschaffeltia**, *Wendl. in Ill. Hort.* xii. *Misc.* 5. (*Regelia*, *Hort.*)—Flores minuti, in eodem spadice interfoliaceo decomposite ramoso monoici, spiraliter dispositi, sparsi v. 3-ni intermedio ♀, ebracteati et ebracteolati. Fl. ♂ globosi. Sepala orbicularia, concava, late imbricata. Petala vix longiora, late ovata, acuta, valvata. Stamina 6, filamentis brevissimis crasse subulatis; antheræ medio dorso affixæ, didymæ, loculis medio tantum connatis, rimis lateralibus. Ovarii rudimentum breve, clavatum, vertice dilatato truncato 3-gono. Fl. ♀ masculis majores, globosi, perianthio post anthesin fere immutato. Sepala orbicularia, concava, crasse coriacea, basi gibba, late imbricata. Petala paullo longiora, subæqualia, crasse coriacea, imbricata. Stamina 6, triangulari-subulata, antheris minutis cassis. Ovarium ovoideum, denum oblique globosum; stigma laterale; ovulum parietale. Fructus globosus, lævis, stigmate subbasilari, pericarpio dure carnoso, endocarpio crustaceo carinis percurso. Semen erectum, globosum, sulcatum, hilo basilari orbiculari, rapheos ramis ab hilo ascendentibus reticulatis semen circumdantibus, albumine duro profunde ruminato; embryo subbasilaris.—Palma elata, tota armata v. demum inermis, caudice gracili annulato radicibus epigæis sustentata. Folia terminalia, recurva, lamina oblonga v. cuneato-obovata 2-fida plicato-nervosa, interdum fere ad rhachin laciniata segmentis incis, costa nervisque validis subtus paleaceis, petiolo semitereti, vagina elongata alte fissa furfuracea. Spadix 3–6-pedalis, paniculatim ramosus, longe

pedunculatus, decurvus, furfuraceus, rhachi elongata, ramis patentibus ramulisque gracilibus; spathæ 2-3, elongatæ, vaginantes, inferiore persistente, superioribus deciduis. Flores perpusilli. Fructus pollicaris.

Species 1, insularum Seychelles incola. *Balf. fil. in Baker Fl. Maurit.* 387.

56. **Dypsis**, *Noronh. in Thou. Prod. Phytol.* 2, nomen; *Mart. Hist. Nat. Palm.* iii. 180, 312, t. 143, 158, f. 1, 2, 161, f. 5.—Flores minuti, in eodem spadice paniculatim ramoso monoici, 3-ni intermedio ♀ v. solitarii et 2-ni ♂, bracteati et bracteolati. Fl. ♂ asymmetrici. Sepala membranacea, orbicularia, late rotundata. Petala ovata, acuta, valvata. Stamina 6, filamentis linearibus basi connatis; antheræ didymæ, dorsifixæ, loculis subdistinctis. Ovarii rudimentum 0. Fl. ♀ masculis minores, subglobosi, perianthio post anthesin vix aucto. Sepala membranacea, orbicularia, cucullata, late imbricata. Petala paullo longiora, rotundata, convolutivo-imbricata, apicibus acutatis conniventi-valvatis. Staminodia 6, dentiformia. Ovarium obliquum, 1- v. 2-3-loculare, loculo unico fertili; stigmata sublateralia, subsessilia, recurva; ovulum parietale. Fructus parvus, oblongus v. ovoideus, rectus v. curvus, basi obliquus, stigmatibus basilaribus, pericarpio grumoso tenui, endocarpio fibroso testæ adherente. Semen obovoideum, basi acutum, hilo laterali, testa fusca, rapheos ramis obscuris, albumine ruminato; embryo dorsalis.—Palmæ parvule, inermes, caudice arundinaceo. Folia terminalia, integra, apice 2-fida, v. demum findenda, v. pinnatisecta, segmentis apice fissis v. præmorso-dentatis, terminalibus sæpe confluentibus, vagina brevi. Spadices elongati, laxè florigeri; spathæ 2, inferiore compresso-ancipiti, superiore longiore apice fissa; bractæ rhachi adnatæ, bracteolæ membranaceæ.

Species enumeratæ 5 v. 6, omnes Madagascarienses, quarum una tantum bene descripta. Descriptio pro maxima parte ex Martio.

57. **Phloga**, *Noronh. in Thou. Prod. Phytol.* 2 (nomen).—Flores minuti, in eodem spadice paniculatim ramoso interfoliaceo? monoici, spiraliter dispositi, 3-ni intermedio ♀ v. superiores solitarii et 2-ni ♂, minute bracteati et bracteolati. Fl. ♂ subsymmetrici. Sepala orbicularia, crasse coriacea, concava, imbricata. Petala paullo longiora, elliptica, subacuta, coriacea, valvata. Stamina 6, filamentis in columnam crassam apice 6-dentatam basi petalorum adnatam confluentibus; antheræ minutæ, didymæ, loculis subglobosis, connectivo crassiusculo. Ovarii rudimentum 0. Fl. ♀ masculis minores, ovoidei, perianthio post anthesin paullo aucto. Sepala rotundata v. reniformia, concava, coriacea, late imbricata. Petala paullo longiora, basi lata convolutivo-imbricata, apicibus triangularibus valvatis. Staminodia 0. Ovarium oblongum, 1-loculare; stigma sessile, 3-fidum; ovulum . . . Fructus immaturus oblongus, incurvus, vertice rotundato, stigmate basilari, pericarpio crasso. Semen . . .—Palma inermis, densa, fruticosa. Folia pinnatisecta, segmentis distichis fasciculatis, fasciculis distantibus v. oppositis quaquaversis et quasi verticillatis, v. solitariis, oblanceolatis longe acuminatis plurinerviis, marginibus basi forte recurvis et in tuberculum in sicco lobulatum desinentibus, rhachi gracili teretiuscula furfuracea. Spadix patens, pedunculo brevi compresso angulato, rhachi breviuscula, ramis fructiferis gracilibus patentibus; spathæ . . .; bractæ et bracteolæ squamiformes. Flores inter minimos. Fructus ut videtur parvulus.

Species 1, Madagascariensis. *Dypsis nodifera*, Mart. Hist. Nat. Palm. iii. 312.

58. **Sommiera**, *Beccari, Malesia* i. 66.—Flores minuti, in eodem spadice interfoliaceo digitatim ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, bracteati et bracteolati. Fl. ♂ symmetrici, globosi. Sepala rotundata, acute carinata, subscariosa, imbricata. Petala breviora, ovata, acuta, tenuia, valvata. Stamina 6, filamentis brevibus subulatis basi connatis; antheræ oblongæ, dorsifixæ, versatiles. Ovarii rudimentum minutum. Fl. ♀ masculis multo minores, perianthio post anthesin parum aucto. Sepala reniformia, late imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutatis conniventi-valvatis. Staminodia minuta. Ovarium ovoideum?; stigmata crassiuscula, reflexa; ovulum basilare? Fructus parvus, globosus, stigmatibus basilaribus, pericarpio corticato cortice suberoso angulato-echinato, endocarpio crustaceo

fragili, intus rapheos ramis notato. Semen globosum, erectum, liberum, testa brunnea, hilo basilari, rapheos ramis ab hilo ad verticem seminis ascendentibus dein descendentibus ramosis et reticulatis, albumine æquabili; embryo basilaris.—Palmæ humiles, inermes, caudice brevi annulato. Folia terminalia, elongato-cuneato-oblonga, profunde bifida, plicato-nervosa, loborum apicibus crenatis, rhachi dorso convexa facie acuta, petiolo elongato furfuraceo dorso convexo facie concavo marginibus acutis, vagina aperta marginibus fibrosis. Spadix longe graciliterque pedunculatus, ramis simplicibus gracilibus densifloris furfuraceis; spathæ completæ 2, membranaceæ, inferiore longe tubulosa, superiore sub ramis inserta 2-partita, lacera; bracteæ breves, spadici adnatæ, bracteolæ squamiformes, in cupulam brevem dispositæ. Flores ♂ exacte spherici. Fructus piso majores, pallidi.

Species 2, Papuanæ. Fructus pericarpium *Manicariam* simulat.

59. *Chamedorea*, Willd. *Sp. Pl.* iv. 638. (Nunnezharia, Ruiz et Pav. *Prod. Fl. Per. et Chil.* 147, t. 31. Nunnezia, Willd. *Sp. Pl.* iv. 1154.)—Flores dioici (rarissime in spadicebus diversis monoici), in spadicebus simplicibus v. ramis spadiceis paniculatis ramosi inter- v. infra-foliacei sessiles v. subimmersi, parvi v. minuti, ebracteati et ebracteolati, carnosuli. Fl. ♂: Calyx pateriformis v. cupularis, integer 3-lobus v. rarius 3-partitus. Petala 3, libera v. in cupulam v. urceolum connata, v. basi in stipitem solidum contracta, lobis segmentisve valvatis. Stamina 6, basi corollæ inserta, filamentis brevibus latiusculis v. subulatis; antheræ dorsifixæ, inclusæ, didymæ v. oblongæ. Ovarii rudimentum columnare v. obsoletum. Fl. ♀: Calyx maris. Petala sæpius in corollam gamopetalam connata, valvata v. imbricata. Staminodia 6, minuta v. 0. Ovarium obovoideum, globosum v. depressum, 3-loculare; stigmata minuta, recurva; ovula in loculis solitaria, basilaria, erecta. Fructus parvus, e carpellis 1-3 globosis v. oblongis obtusis, stigmatum residuis basilariibus, pericarpio coriaceo v. carnosio intus lævi vix fibroso. Semen erectum, globosum v. ellipsoideum, hilo parvo basilari, raphe exsculpta ramis obscuris, albumine cartilagineo æquabili; embryo basilaris v. dorsalis.—Palmæ inermes, erectæ v. procumbentes, rarius ope pinnarum scandentes, caudicibus solitariis v. cæspitosis annulatis gracilibus v. arundinaceis. Folia simplicia et apice 2-fida v. varie æqualiter pinnatisecta, laciniis latis v. angustis rectis v. obliquis acuminatis plicato-nervosis, basi sæpe callosis, marginibus basi reduplicatis v. recurvis, petiolo sæpe cylindraceo, vagina tubulosa brevi v. elongata, ore obliquo. Spadices inter- v. infra-foliacei, simplices v. paniculatis ramosi, erecti v. patentes, pedunculo brevi v. elongato, ramis laxi- v. densifloris. Spathæ 3 v. plures, sæpius alternæ, pedunculum vaginantes, elongatæ, apice fissæ, membranaceæ v. coriaceæ, plus minusve persistentes. Flores ♀ non raro minutissimi.

Species ad 60, sylvis montium Americæ tropicæ occidentalis a Mexico ad Panama incolæ. Mart. *Nat. Hist. Palm.* ii. 3, t. 3, iii. 157, 307, t. 126 ad 138; *Palm. Folia pinnata. Spadices ♂, ramis declinatis; ♀ simplices, longe pedunculati. *C. cataractarum*, H. Wendl. *C. oreophila*, Mart. *C. pygmæa*, H. Wendl. *C. montana*, Liebm.

4. *Chamædorea*, Willd. (Char. reform.), CErst. l. c. t. 10. Fl. ♂: Calyx patelliformis, 3-lobus. Corolla multo major, globosa v. oblonga, 3-partita, stipitata, segmentis liberis v. connatis. Fl. ♀: Calyx cupularis v. patelliformis, 3-lobus, virescens. Corolla 3-partita, segmentis imbricatis. Folia pinnata, rarissime integra. Spadices inter-v. infra-foliacei, ramosi, longe pedunculati; flores minuti, ♀ minutissimi.

a. *Euchamædorea*, CErst. l. c. 11. Fl. ♀ immersi, depresso-conici, calycis lobis conniventibus, petalis sæpius subreniformibus ovarium amplectentibus. Spadices infrafoliacei, erecto-patentes. *C. pinnatifrons*, Jacq. (*Borassus*). *C. Bartlingiana*, H. Wendl. *C. lanceolata*, Ruiz et Pav. (*Nunnezharia*), &c.

β. *Chamædoropsis*, CErst. l. c. 15. Fl. ♀ non immersi. Petala rotundata, ovarium amplectentia. Folia pinnata, pinnis basi callosis. Spadices infrafoliacei. *C. elatior*, Mart. *C. desmoncoides*, H. Wendl. *C. montana*, Liebm. *C. lunata*, Liebm. &c.

γ. *Chamædorella*, CErst. l. c. 23. Fl. ♀ ovoidei, non immersi. Calyx virescens. Petala ovata, laxa. Spadices ♂ simpliciter ramosi, ramis pendulis; ♀ duplicato-ramosi, ramis tenuissimis patentibus. Folia glaucescentia. *C. lepidota*, H. Wendl. *C. brachyclada*, H. Wendl.

δ. *Psilostachys*, CErst. l. c. 24, t. 5. Fl. ♂: Calyx minutissimus, membranaceus. Corolla stipitata, segmentis apice coadunatis. Fl. ♀ scrobiculis subimmersi, masculis 2-3-plo minores. Folia simplicia, furcata, brevissime petiolata. Spadices inter-v. infra-foliacei, longe pedunculati, ♂ ramosi ramis pendulis, ♀ simplices v. pauci-ramosi, ramis erectis carnosiss. *C. geomorphaformis*, H. Wendl.

e. *Nunnezharia*, CErst. l. c. 24. Fl. ♂ globosi. Calyx cupularis, 3-partitus. Corolla obovoideo-globosa, vix stipitata, segmentis apice liberis. Antherarum loculi sejuncti. Fl. ♀ masculis subæquales. Calyx maris. Petala 3, orbicularia. Staminodia 0. Folia simplicia furcata. Spadices ♂ et ♀ subsimiles, ramosi, pedunculis brevibus. *C. fragrans*, Mart. (*Nunnezharia*, R. et P.).

ζ. *Dasytachys*, CErst. l. c. 25, t. 6. STACHYOPHORBE, Klotzsch in Allgemein. Gartenz. 1853, 363. Flores hexagoni, scrobiculis 8-seriatis congesti; ♂: Calyx annularis, 3-lobus, membranaceus. Petala carnosula, conniventia. Antheræ minutæ, filamentis planiusculis. Fl. ♀: Calyx cupularis, membranaceus, crenulatus, multilobus. Petala subreniformia, convolutivo-imbricata. Staminodia 5-6. Ovarium elongato-ovoideum. Folia simplicia, furcata. Spadices 1-3-ni, erecti, inter- et infra-foliacei. *C. Deckeriana*, Kl.

η. *Stephanostachys*, Klotzsch in Allg. Gartenzeit. 1852, 363; CErst. l. c. 26, t. 7, f. 1-28. Flores depressi v. subglobosi; ♂ 4-goni. Calyx minutissimus. Corolla 3-partita, segmentis subcarnosis conniventibus. Fl. ♀: Calyx 3-partitus. Petala 3, rotundata, convolutivo-imbricata. Ovarium subglobosum. Folia pinnata. Spadices simpliciter ramosi, densiflori, ramis ♂ pendulis, ♀ erectis, pedunculo brevi. *C. Caspariana*, Kl. *C. Martiana*, H. Wendl., &c.

θ. *Spathoscaphe*, CErst. l. c. 29, t. 7, f. 29-37. Fl. ♂ oblongo-obovoidei, basi compressi. Calyx breviter tubulosus, membranaceus. Corolla stipitata, segmentis oblongis. Fl. ♀ . . . Folia maxima, pinnata. Spadices infrafoliacei, densiflori, pedunculo brevi; ♂ ramis subumbellatis simplicibus pendulis, ♀ simplices v. ramis paucis erectis crassis. Spathæ coriaceo-chartaceæ, summa cymbæformi ventre aperta. *C. Arenbergiana*, H. Wendl.

MORENIA, Ruiz et Pav. Prod. Fl. Per. et Chil. 150, t. 32, a *Chamædorea* separata fuit ob calycem in fl. ♂ planum 3-dentatum et petala late ovata. Kunth, Enum. Pl. iii. 174. Mart. Hist. Nat. Palm. iii. 161, t. 140, 141; Palm. Orbign. 6, t. 3, 16 C. Karst. in Linnæa, xxviii. 274; Fl. Colomb. ii. 135, t. 171. Traill in Trim. Journ. Bot. 1876, 331.

KUNTHIA, Humb. et Bonpl. Pl. Equin. ii. 128, t. 122 (quæ *C. Lindeniana*, H. Wendl.), non a *Chamædorea* differt nisi floribus in distinctis spadicebus monoicis, aliis ♀, aliis ♂ ovario rudimentario præditis. Kunth, Enum. Pl. iii. 175. Mart. Hist. Nat. Palm. ii. t. 101, f. 6, 7, iii. 163, t. 142.

Wendland, Ind. Palm. 57, subgenera *Chamædoreæ* 4 agnoscit:—

1. *Collinia*, Mart. l. c. Corolla ♂ et ♀ apice 3-dentata, dentibus valvatis.

2. *Eleutheropetalum*, H. Wendl. l. c. 58. Corolla ♂ 3-partita, ♀ 3-partita, utraque valvata.

3. *Euchamædorea*, Mart. l. c. 58. Corolla ♂ 3-partita, valvata; ♀ 3-petala, convolutivo-imbricata.

4. *Stephanostachys*, Klotzsch in Allg. Gartenzeit. 1852, 363. Corolla ♂ 3-partita, ♀ 3-petala, utraque convolutivo-imbricata.

Nomine generico Pavoniano jure prioritatis gaudet, sed Willdenowianum, jam diu ab omnibus botanicis hortulanisque acceptum, non hodie rejiciendum. Confer etiam de his nominibus Drude in Mart. Fl. Bras. iii. ii. 528.

60. *Synechanthus*, *H. Wendl. in Bot. Zeit.* 1858, 145. (*Reineckia*, *Karst. in Koch, Wochenschr.* i. 349. *Rathea*, *Karst. l.c.* i. 377, ii. 15.)—Flores minuti, in ramis gracillimis ejusdem spadiceis interfoliaceis monoici, in acervulos elongatos alternos 1-2-seriatim dispositi, superiores in acervulo ♂ infimo ♀, ebracteati et ebracteolati. Fl. ♂ trigono-hemisphærici. Calyx cupularis, carnosulus, 3-lobus. Petala 3, basi connata, late ovata, concava, patula, valvata. Stamina 3 v. 6, basi corollæ inserta, filamentis brevibus subulatis; antheræ globoso-didymæ, dorsifixæ. Ovarii rudimentum subglobosum. Fl. ♀ masculos subæquantes, hemisphærici; perianthio post anthesin immutato. Calyx maris. Petala 3, orbicularia, convolutivo-imbricata. Staminodia 0, v. 3 minutissima. Ovarium globosum, 3-loculare; stigmata sessilia, minutissima; ovula in loculis erecta. Fructus ellipsoideus, 1-spermus, stigmatibus basilaribus, pericarpio tenuiter carnosus et fibroso, endocarpio membranaceo. Semen erectum, liberum, ellipsoideum, hilo parvo basilari, raphe sigmoidea ramis obscuris, albumine æquabili; embryo infra-apicalis.—Palmæ inermes, gregarie, caudice gracili annulato sæpe stolonifero. Folia terminalia, æqualiter pinnatisecta, segmentis latis v. angustis membranaceis acuminatis plicato-nervosis sæpe interruptis, marginibus basi recurvis, rhachi dorso convexa facie alte carinata, petiolo supra canaliculato, vagina brevi aperta. Spadices plures, longe graciliterque pedunculati, floriferi erecti, ramis strictis compressis v. ancipitibus; spathæ plures, tubulosæ, membranaceæ, persistentes. Flores virides v. ♂ purpurascens. Fructus rubro-croceus v. vitellinus, nitidus.

Species 2, Americæ centralis incolæ, et tertia Columbiana. *Bot. Mag. t.* 6572. Spadices ex Wendlandio infrafoliacei, et albumen ruminatum, sed in *S. fibroso* solo nobis noto certe spadices interfoliacei et albumen æquabile.

61. *Gaussia*, *H. Wendl. in Gætt. Nachricht.* 1805, 327.—Flores minuti, in ramis filiformibus ejusdem spadiceis interfoliaceis duplicatim ramosi monoici, in acervulos elongatos alternos distichos 1-seriatim dispositi, superiores in acervulis ♂ infimo ♀. Fl. ♂ . . . Fl. ♀ perianthio post anthesin fere immutato. Sepala 3, transverse oblonga, imbricata. Petala 3, late ovata, marginibus late valvatis. Ovarium . . . Fructus carpella 1-3, parva, ellipsoidea v. obovoidea, paullo curva, stigmatibus basilaribus, pericarpio carnosulo et parce fibroso. Semen subglobosum v. ellipsoideum, erectum, hilo basilari, rapheos ramis perpaucis arcuatis subramosis descendentibus, albumine æquabili; embryo supra-basilaris.—Palma mediocri, inermis, caudice inferne incrassato, superne valde attenuato. Folia pinnatisecta, pinnis confertis anguste linearibus rectis acutis apicibus incrassatis integerimis v. 2-fidis rigidulis striatis marginibus incrassatis basi recurvis, costa valida striato-nervosa, rhachi tomentosa superne acuta. Spadix longe pedunculatus, patentem ramosus, recurvo-patens, ramis elongatis; spathæ plures, cylindraceæ, pedunculum vaginantes, fissæ, coriaceæ. Fructus parvus, purpureus.

Species 1, Cubæ incola.—Genus imperfecte notum, ex Wendlandio a *Synechantho* differt albumine æquabili, sed albumen in hoc certe æquabile est.

62. *Eyophorbe*, *Gærtn. Fruct.* ii. 186, t. 120. (*Sublimia*, *Comm. mss.*)—Flores minuti, in eodem spadice infrafoliaceo paniculatim ramoso monoici, in acervulos elongatos uniseriatim dispositi, ♂ in acervulis plurimi, ♀ ad basin acervuli pauci, ebracteati et ebracteolati. Fl. ♂ symmetrici. Sepala 3, membranacea, in cupulam 3-lobam connata, basi gibba, leviter imbricata. Petala brevina, late ovata, concava, crassiuscula, basi connata, valvata. Stamina 6, filamentis brevibus subulatis, basi inter se et basi corollæ adherentibus; antheræ oblongæ, dorsifixæ, versatiles, loculis medio tantum connatis. Ovarii rudimentum columnare. Fl. ♀ masculis minores, perianthio post anthesin paullo aucto. Sepala orbicularia, breviter connata, imbricata. Petala paullo longiora, late ovata, valvata. Staminodia 6, minuta. Ovarium ovoideum, 3-loculare, loculis 2 effertis; stigmata late trigona, erecta; ovulum parietale, pendulum. Fructus pyriformis v. oliviformis, rectus v. curvus, basi gibbus v. 2-gibbus, stigmatibus subbasilaribus, pericarpio coriaceo v. subcarnoso et fibroso, endocarpio membranaceo. Semen ellipsoideum, ascendens, hilo minuto basilari, rapheos ramis paucis ascendentibus furcatis divaricatis, albumine æquabili; embryo

lateralis v. infra apicalis.—Palmæ inermes, robustæ, caudice cylindraceo v. infra medium v. interrupte incrassato, annulato. Folia terminalia, æqualiter pinnatisecta, pinnis suboppositis lineari-lanceolatis acuminatis plicato-nervosis, marginibus incrassatis basi recurvis, petiolo subcylindraceo facie leviter canaliculato, basi 3-gono, vagina magna ventricosa integra. Spadices breviter pedunculati, vage duplicatim ramosi, ramis gracilibus patulis; spathæ numerosæ, distiche imbricatæ. Flores pallidi, flavidi v. virides. Fructus parvus, croceus v. cæruleus.

Species 3, insularum Mascarensium incolæ. *Balf. fil. in Baker, Fl. Maurit.* 382. *Mart. Hist. Nat. Palm.* iii. 164, 309, t. 143, f. 1, 154. *Kunth, Enum. Pl.* iii. 175. *H. Wendl. in Ill. Hort.* xiii. t. 462, 463.

63. *Roscheria*, *H. Wendl. in Baker, Fl. Maurit.* 386.—Flores minuti, in ramis gracillimis ejusdem spadiciis interfoliacei decomposite ramosi monoici, sparsi, solitarii] v. 2-ni altero ♂ altero ♀, ebracteati et ebracteolati. Fl. ♂ symmetrici, teretiusculi. Sepala suborbicularia, obtusa, concava, crassiuscula, imbricata. Petala late ovata, subacuta, valvata. Stamina 6, filamentis brevibus triangularibus acutis in tubum brevem connatis; antheræ late didymæ, dorsifixæ. Ovarii rudimentum obconico-clavatum, vertice dilatato trigono plano. Fl. ♀ masculis majores, subglobosi, perianthio post anthesin aucto. Sepala subreniformia, arcte late imbricata. Petala longiora, orbicularia, convolutivo-imbricata. Staminodia obscura v. 0. Ovarium ovoideum v. ellipsoideum, in stigma conoideum 3-fidum sensim attenuatum, 1- rarius 2 3-loculare; ovulum parietale, pendulum. Fructus fusiformis, 1-rarissime 2-spermus, stigmatibus subbasilari; pericarpio tenuiter carnosum et fibroso, endocarpio crustaceo intus nitido. Semen oblique ascendens, globosum v. ellipsoideum (in fructibus 2-spermis hemisphaericum), hilo parvo orbiculari basilari, rapheos ramis ab hilo divaricatis laxè reticulatis, albumine profunde ruminato; embryo hilo proximus.—Palma gracilis, erecta, caudice ad nodos spinoso radicibus epigeis sustentato. Folia terminalia, longe petiolata, primum 2-fida, demum inæqualiter pinnatisecta, segmentis numerosis lineari-lanceolatis apice 2-fidis, nervis numerosis subtile paleaceis, petiolo inermi subtrigono antice sulcato, vagina elongata aculeata. Spadix 2-6-pedalis, pedunculo elongato gracili compresso, ramis gracilibus subsimplicibus divaricatis; spathæ plures, completæ, angustæ, compressæ, inermes, 2 inferiores persistentes, superiore decidua. Flores pallidi. Fructus parvulus, niger.

Species 1, insularum Seychelles incola. *H. Wendl. in Ill. Hort.* 1871, t. 54 (*Verschaffeltia*). *Mart. Hist. Nat. Palm.* iii. 181 (*Dypsis gracilis* in nota sub *D. hirtula*) et t. 161, f. 5.

64. *Geonoma*, *Willd. in Mem. Acad. Berl.* 1804, 37; *Sp. Pl.* iv. 593. (*Gynestum*, *Poit. in Mém. Mus. Par.* ix. 387, t. 16 ad 20. *Youay, Aubl. Pl. Gu.* ii. App. 99.)—Flores minuti, glumacei, in cavis spiraliter dispositis immersis, dioici v. in diversis spadiciis infrafoliaceis rarius interfoliaceis monoici, v. in eodem spadice monoici inferiores 3-ni intermedio ♀, superiores solitarii, bracteati et bracteolati, perianthio glumaceo. Fl. ♂ asymmetrici. Sepala obovato-oblonga, carinata, imbricata. Petala obovato-oblonga, concava, libera v. basi connata, valvata. Stamina 6, filamentis in cupulam urceolum v. tubum exsertum connatis, apicibus recurvis; antheræ didymæ, primum introflexæ, loculis discretis divaricatis sæpius pendulis. Ovarii rudimentum minutum v. 0. Fl. ♀ masculis paullo majores, compressi, perianthio post anthesin immutato. Sepala oblonga v. ovato-lanceolata, carinata, imbricata, interiore planiusculo. Petala lanceolata, in corollam 3-fidam connata, imbricata. Discus urceolaris, dentatus, liber. Ovarium disco inclusum, 3-loculare, loculis 2 effectis v. rudimentariis; stylus lateralis v. basilaris, elongatus, stigmatibus 3 revolutis exsertis; ovulum subbasilare v. laterale et peltatum. Fructus parvus, globosus v. subglobosus, styli cicatrice basilari, 1-spermus, pericarpio coriaceo crustaceo v. subspongioso, intus parce fibroso, fibris endocarpio fragili non adherentibus. Semen globosum, erectum, testa tenui, hilo basilari, raphe semen cingente interdum exsculpto, ramis obscuris, albumine æquabili; embryo subbasilaris v. dorsalis.—Palmæ graciles, inermes, caudice arundinaceo annulato. Folia terminalia, v. alterna, lamina integra apice 2-fida, v. plus minusve pinnatisecta, segmentis ultimis acuminatis 1-nerviis marginibus basi lata recurvis,

rhachi supra acuta dorso convexa, petiolo teretiusculo basi antice concavo, vagina tubulosa brevi v. elongata. Spadices suberecti v. decurvi, simplices furcati v. paniculati ramosi, graciles v. robusti, interdum colorati; spathæ 2, sæpius ante anthesin caducæ v. oblitteratæ, inferiore incompleta truncata concava, superiore compressa v. fusiformi. Flores cavis spadiceis enati, demum semi-exserti, si 3-ni ♀ superiore, antherarum loculi interdum torti. Fructus parvus, sæpius niger.

65. *Asterogyne*, *H. Wendl. in litt.*—Flores parvuli, glumacei, dioici? v. in diversis spadicebus interfoliaceis simpliciter v. duplicatim ramosi monoici, in cavis spiraliter dispositis solitarii immersi, bracteati et bracteolati, perianthio glumaceo. Fl. ♂ asymmetrici. Sepala obovato-oblonga, carinata, imbricata. Petala concava, valvata. Stamina 6, filamentis connatis, apicibus liberis recurvis; antherarum loculi discreti, penduli. Fl. ♀ compressi, perianthio post anthesin immutato. Sepala oblonga, carinata, imbricata, interiore planiusculo. Corolla trifida, lobis stellatim recurvis imbricatis, tubo disco adnato et cum eo supra basin circumscisso. Staminodia in discum urceolarem connata. Ovarium 3-loculare, loculis 2 effortis; stylus apicalis, elongatus, stigmatibus exsertis; ovulum . . . Fructus ellipsoideo-oblongus, rectus v. decurvus, subcompressus, utrinque attenuatus, 1-spermus, styli cicatrice basilari, pericarpio tenui succoso intus fibroso fibris tenuibus endocarpio adherentibus. Semen oblongum, erectum, testa lævi brunnea, hilo basilari, raphe verticem attingente et semen circumambiente ramis 0, albumine æquabili; embryo basilaris.—Palmæ inermes, caudicibus gracilibus dense annulatis. Folia simplicia, oblonga, 2-fida, integra fissa v. fenestrata segmentis acuminatis plicato-nervosis, petiolo superne concavo. Spadix longiuscule pedunculatus, ramis strictis rigidis; spathæ 2-4, subpersistentes; bracteæ cum ore alveoli continuæ; bracteolæ squamiformes. Flores in cavis profundis enati, apicibus emersis. Fructus parvus.

Species paucæ, Americæ centralis incolæ, quarum una tantum (*Chontales, Seemann, n. 163*) floribus delapsis nobis nota est.

66. *Calyptogyne*, *H. Wendl. in Bot. Zeit.* 1859, 72. (*Calyptronoma, Griseb. Fl. Brit. W. Ind.* 518.)—Flores in alveolis profundis spiraliter dispositis ejusdem spadiceis interfoliacei simplicis v. simpliciter ramosi monoici, 3-ni intermedio ♀, rarius solitarii v. superiores 2-ni ♂, perianthio glumaceo. Fl. ♂ subsymmetrici, compressi. Sepala 3, oblonga v. lanceolata, concava, 2 v. omnia dorso carinata v. alata. Petala basi in stipitem solidum subcylindraceum connata, ovata v. spathulata, concava, valvata. Stamina 6, filamentis in tubum stipiti impositum connatis, apicibus liberis; antheræ basifixæ, sagittatæ, connectivo lato apice mucronato, primum introflexæ demum erectæ v. reflexæ. Ovarii rudimentum parvum. Fl. ♀ masculos subæquantes, late ovoidei, valde compressi, perianthio post anthesin immutato. Sepala ovato-lanceolata, 2-lateralialia cymbiformia dorso acuta v. alata, dorsali angustiore, imbricata. Petala late ovata, brevialia, dorso carinata v. subalata, basi in tubum cylindraceum demum circumscissum connata, strictè valvata. Staminodia in membranam conoideam 6-dentatam ovarium superantem calyptratim deciduam connata. Ovarium conicum, 3-loculare, loculis 2 effortis; stylus centralis, elongatus v. brevis, stigmatibus recurvis; ovulum . . . Fructus oblongus v. obovoideus 1-spermus, styli cicatrice basilari, pericarpio carnosio et fibroso, fibris endocarpio tenui adherentibus. Semen oblongum v. subglobosum, lente compressum, hilo basilari, raphe semen cingens ramis inconspicuis, albumine æquabili; embryo basilaris.—Palmæ inermes, interdum stoloniferae, caudice brevi v. elongato inferne annulato. Folia terminalia, inæqualiter pinnatisecta, segmentis paucijugis angustis v. latis falcatis longissime acuminatis plicatis marginibus

basi recurvis, nervis numerosis, petiolo brevissimo, vagina brevi aperta. Spadices simplices v. a basi ramosi, longe pedunculati. Spathæ 2, angustæ, inferiore pedunculo multo brevior apice fissa, superiore decidua elongata per totam longitudinem fissa; bracteæ labium inferius alveolæ marginantes, connatæ; bracteolæ minutæ. Fructus parvus.

Species 6 v. 8, Americæ tropicæ incolæ. Griseb. *Cat. Pl. Cub.* 222 (*Calyptronoma*). Traill in *Trim. Journ. Bot.* 1876, 330, t. 112, f. 3. Mart. *Hist. Nat. Palm.* ii. 137, t. 13 (*Geonoma synantherum*).

PHOLIDOSTACHYS, H. Wendl. in litt. a *Calyptrogyne* differt spadice infrafoliaceo breviter pedunculato, stylo 0, fructu oblique oblongo-turbinato, pericarpio fibris crassissimis reticulatis basi liberis percurso, et raphe apice dilatata. Species 1, Costaricensis (*Geonoma pulchrum*, Wendl. ms.). Foliorum segmenta caudato-acuminata. Spadix crassus.

67. *Weina*, H. Wendl. nomen.—Flores cavis profundis hexastiche dispositis ejusdem spadicis interfoliacei simpliciter ramosi monoici, 3-ni intermedio ♀, bracteati et bracteolati, perianthio glumaceo. Fl. ♂ asymmetrici. Sepala lanceolata, concava, acute carinata, imbricata. Petala late ovata, obtusa, basi in columnam cylindraceam connata, valvata. Stamina numerosa, inclusa, filamentis in columnam cylindraceam connatis, apicibus subulatis liberis; antheræ elongato-subulatæ, acuminatæ, basi breviter 2-lobo insertæ. Ovarii rudimentum 0, v. minimum 3-fidum. Fl. ♀ masculos subæquantes, compressi, perianthio post anthesin immutato. Sepala libera, cymbiformi-lanceolata, acuminata, imbricata. Petala multo majora, 2 lateralia cymbiformia alato-carinata, dorsali angustiore planiusculo, imbricata. Staminodia in urceolum conicum compressum apice dentatum dentibus obtusis valvatis demum patulis ovarium cingentem connata. Ovarium conico-subulatum, 3-loculare; stigmata sessilia, erecta, conniventia; ovulum basilare, erectum, elongatum. Fructus oblongus, compressus, apicem versus acutum complanatus et anceps, stigmatibus basilari, pericarpio crasse coriaceo lævi castaneo intus fibroso, endocarpio crustaceo intus lævi. Semen cylindraceo-oblongum, hilo laterali elongato, raphe semen cingens ramis paucis descendentibus, albumine æquabili; embryo basilaris.—Palmæ inermes, caudice elato crasse arundinaceo. Folia terminalia, pinnatisecta, segmentis coriaceis basi valde angustatis apice integris v. acuminatis fissis plurinerviis plicatis, marginibus basi recurvis, petiolo brevi planiusculo, vagina brevi fissa. Spadices crassi, penduli, cavis magnis hiantibus; spathæ 2, deciduæ . . .; bracteæ labio superiore adnatæ, linguiformes, crasse coriæ, primum cavum claudentes, demum protrusæ. Flores majusculi, pallide ochroleuci. Fructus 2-pollicaris, atro-violaceus.

Species 2, Americæ centralis incolæ. Spathæ a nobis non visæ.

68. *Podococcus*, Mann et H. Wendl. in *Trans. Linn. Soc.* xxiv. 426, t. 38 A, 40 B, 43 A.—Flores in cavis orthostichis v. spiraliter dispositis ejusdem spadicis interfoliacei simplicis longissimi monoici, 3-ni intermedio ♀, v. 2-ni ♂, bracteati et bracteolati, perianthio membranaceo v. glumaceo. Fl. ♂ symmetrici. Sepala elliptico-oblonga, subfalcata, sæpe 2-fida, carinata, imbricata. Petala infra medium in tubum infundibularem connata, ovata, acuta, valvata. Stamina 6, filamentis filiformibus alternis paullo longioribus; antheræ breves, subdidymæ, dorsifixæ. Ovarii rudimentum 3-lobum. Fl. ♀ masculis subæquales, oblongi, perianthio post anthesin immutato. Sepala lineari-oblonga, membranacea, late imbricata. Petala infra medium in tubum infundibularem connata, ovata, acuta, marginibus tenuiter imbricatis. Staminodia 6, minima. Ovarium fusiforme, stipitatum, apice attenuatum, 3-loculare, loculis 1-2 effertis; stigmata sessilia, breviter recurva; ovulum parietale, pendulum. Fructus oblongo-cylindraceus, rectus v. lente curvus, infra stipitem brevem geniculatim deflexus, 1- rarius 2-3-spermus, stigmatibus basilariibus, pericarpio baccato. Semen erectum, elongato-ellipsoideum, hilo basilari, rapheos ramis ab hilo ascendentibus ramosis superne reticulatis, albumine æquabili; embryo dorsalis.—Palma humilis, inermis, rufo-furfuraceus, caudicibus arundinaceis annulatis. Folia alterna, inæqualiter pinnatisecta, segmentis 8-10 remotis membranaceis rhombeo-lanceolatis acutis plurinerviis a basi lata ad medium integerrimis dein lobulatis et eroso-dentatis, marginibus basi recurvis, terminalibus confluentibus, petiolo teretius-

culo, vagina elongata fissa. Spadices longe graciliterque pedunculati, penduli; spathæ 4, tubulosæ, marcescentes, 2 inferiores incomplete, superiores oblique apertæ et fissæ; bracteæ breves, spadici adnatæ; bracteolæ minutæ, glumacæ.

Species 1, Africæ tropicæ occidentalis incola.

69. *Bentinckia*, *Berry in Roxb. Fl. Ind.* iii. 621. (*Keppleria*, *Mart. mss. ex Endl. Gen. Pl.* 261.)—Flores in cavis spiraliter dispositis spadiceis interfoliacei ramosi monoici v. dioici, solitarii v. 3-ni intermedio ♀, bracteati et bracteolati, perianthio glumaceo. Fl. ♂ subsymmetrici. Sepala late ovato-oblonga, obtusa, basi connata, imbricata. Petala longiora, ellipsoidea, basi in stipitem connata, valvata. Stamina 6, filamentis filiformi-subulatis apicibus inflexis; antheræ late oblongæ, dorsifixæ, versatiles. Ovarii rudimentum conicum. Fl. ♀ masculos subæquantes, ovoidei, perianthio post anthesin parum aucto. Sepala ovato-rotundata, obtusa, basi connata, imbricata. Petala longiora, late ovata, convolutivo-imbricata. Staminodia 6, minuta. Ovarium conico-trigonum, 3-loculare, loculis 2 effoetis; stigmata minuta, 3-gona; ovulum . . . Fructus parvus, sphaericus, subcompressus, stigmatibus subbasilaribus protrusis, pericarpio carnosio et fibroso, endocarpio crustaceo. Semen basi et apice endocarpio adnatum, profunde et late sinuato-sulcatum, hilo basilari, rapheos ramis ab hilo ad verticem seminis ascendentibus dein descendentibus et reticulatis, albumine æquabili; embryo basilaris.—Palma inermis, caudice mediocri arundinaceo. Folia æqualiter pinnatisecta, segmentis angustis longe acuminatis et in lacinias graciles fissis, marginibus basi recurvis. Spadices erecto-patentes, duplicato-ramosi, pedunculo brevi, ramis crassiusculis teretibus basi bracteatis, ♂ coccineis, ♀ violaceis: spathæ 2 inferiores breves, incomplete, papyraceæ, superiores infra apices 2-fidæ; bracteæ os bilabiatum cavorum efformantes; bracteolæ squamiformes. Flores minuti, ♂ sæpe ad squamas ciliatas reducti.

Species 1, *Tranvancorica*. *Mart. Hist. Nat. Palm.* iii. 165, 228, t. 139. *Kunth, Enum. Pl.* iii. 227. *Griff. in Calc. Journ. Nat. Hist.* v. 467; *Palm. Brit. 70. *Wallichia*, *Roxb. Cor. Pl.* iii. t. 295. (*Harina*, *Ham. in Trans. Wern. Soc.* v. 317. *Wrightia*, *Roxb. Fl. Ind.* iii. 621.)—Flores in diversis spadiceis interfoliaceis simpliciter ramosi monoici v. rarissime polygami, bracteati et 2-bracteolati. Fl. ♂ symmetrici. Calyx membranaceus, cylindraceus, truncatus. Corollæ profunde 3-lobæ tubus cylindraceus, lobis lineari-oblongis obtusis coriaceis valvatis. Stamina 6, tubo corollæ inserta, filamentis brevibus subulatis; antheræ magnæ, lineari-oblongæ, obtusæ, basi 2-fida insertæ, erectæ. Ovarii vestigia 0. Fl. ♀ masculis multo minores, subglobosi, perianthio post anthesin immutato. Sepala crassa, orbicularia, concava, imbricata. Corolla coriacea, 3-loba, lobis triangulari-ovatis acutis ovario appressis valvatis. Staminodia pauca v. 0. Ovarium depresso-globosum, 2-3-loculare, in stipitem brevem contractum; stigmata conica, sessilia; ovula subbasilaria, compressa. Fructus ovoideo-oblongus, 1- rarius 2-locularis et -spermus, stigmatibus terminalibus, pericarpio crasse coriaceo. Semina erecta, libera, lineari-oblonga, plano-convexa, hilo minuto basilari, testa tenuissima fasciulis appressis pilorum (raphidibus) instructa, rapheos ramis paucis arcuatis, albumine corneo æquabili solido; embryo medio dorso seminis.—Palmæ humiles, cæspitosæ, caudicibus brevibus soboliferis v. caudice (in *W. disticha*) elato. Folia dense fasciculata, in *W. disticha* terminalia disticha, furfuracea, inæqualiter pinnatisecta, segmentis solitariis v. infimis fasciculatis a basi cuneata oblongis obovatis v. oblanceolatis eroso-dentatis, terminali cuneata, costa distincta, nervis flabellatis, marginibus basi recurvis, petiolo gracili a latere compresso, vagina brevi fissa marginibus longe crinitis. Spadices breviter pedunculati, ♂ cernui v. decurvi, ovoidei, ramosissimi, densiflori, ♀ laxiores, erecti; spathæ perplurimæ, tenuiter coriaceæ, inferiores angustiores, tubulosæ; superiores cymbiformes, completæ, imbricatæ. Flores mediocres, flavescentes. Fructus rufus v. purpureus.

Species 2 v. 3, Indiæ transgangeticæ et Himalayæ subtropicæ incolæ. *Mart. Hist. Nat. Palm.* iii. 189 (*exol. sp.* 3), 315 (*Wallichia* sect. *Harina*) et t. 136 (*Harina*). *Kunth, Enum. Pl.* iii. 193

(*Harina*). Griff. in Calc. Journ. Nat. Hist. v. 482, sp. 1; *Palm. Brit. Ind.* 174, 175, 237, 237 A, B, C (*H. caryotoïdes* et *oblongifolia*). Brandis, *For. Fl.* 549. Kurz, *For. Fl.* ii. 531 (excl. sp. 3). T. Anders. in Journ. Linn. Soc. xi. 6. Bot. Mag. t. 4584. W. Yomæ, Kurz, l. c. 533, species nobis ignota, differt calyce ♂ minuto cupulari.

71. **Didymosperma**, H. Wendl. et Drude. (Blancoa, Blume, Rumph. ii. 128, in nota partim, nomen tantum).—Flores in diversis (rarius in eodem) spadicebus interfoliaceis monoici (interdum dioici?) bracteati et 2-bracteolati. Fl. ♂ symmetrici. Calyx cupularis, 3-lobus v. 3-partitus, segmentis rotundatis marginibus membranaceis imbricatis. Petala ovato-oblonga, crasse coriacea, intus costata, libera v. basi connata, post anthesin incurva. Stamina 10–30, filamentis brevibus subulatis basi connatis; antheræ lineares, basi bifida insertæ, erectæ. Ovarii rudimentum 0. Fl. ♀ masculis minores, subglobosi, perianthio post anthesin paullo aucto. Sepala rotundata, coriacea. Corolla 3-partita, segmentis triangulari-ovatis acutis incurvis crasse coriaceis valvatis. Staminodia 0. Ovarium depresso-3-gonum, 2–3-loculare, basi contractum; stigmata sessilia, conica, conniventia; ovula basilaria, erecta, compressa. Fructus ovoideus v. oblongus, 1–2-locularis et -spermus, stigmatibus apicali v. subapicali, pericarpio crasse coriaceo. Semina erecta, oblonga, plano-convexa, libera, hilo minuto basilari, testa tenuissima, rapheos ramis paucis arcuatis, albumine æquabili corneo solido; embryo medio dorso seminis.—Palmæ humiles, caudicibus solitariis v. caudice solitario erecto. Folia terminalia, inæqualiter pinnatisecta, subtus argenteo-furfuracea, segmentis oppositis et alternis solitariis v. inferioribus fasciculatis e basi cuneata obovato-oblongis v. oblanceolatis sinuato-lobatis et erosis terminali cuneata, marginibus basi recurvis, costa distincta, nervis flabellatis, vagina brevi fibrosa. Spadices breviter crasseque pedunculati, ramis crassis. Spathæ numerosæ, spadicem vaginantes. Flores majusculi.

Species ad 6, Indiæ transgangeticæ et Archipelagi Malayani incolæ. Genus *Wallichia* arcte affine et vix non separabile; species includit sequentes: *Wallichia porphyrocarpa*, Mart. Hist. Nat. Palm. 190, t. 157 (quæ *W. Orani*, Blume, Rumph. ii. 195, et *Orania regalis*, t. 85, 95); *Wallichia*, sect. *Orania*, Mart. l. c. 315; *Wallichia species variae*, Miq. Fl. Ind. Bat. iii. 32, et Pl. Jungh. 157; et *Harina nana*, Griff. Palm. Brit. Ind. 176, t. 238 A, B.

72. **Arenga**, Labill. in Mém. Inst. Par. iv. 209. (Saguerus, Roxb. Fl. Ind. iii. 626. Gomutus, Spreng. Gen. n. 2222).—Flores in distinctis (rarius in eodem) spadicebus interfoliaceis simpliciter ramosis monoici, solitarii, rarius 3-ni intermedio ♀, v. 2-ni ♂, bracteati et bracteolati. Fl. ♂ symmetrici. Sepala rotundata, concava, late imbricata. Petala elongato-oblonga, obtusa, valvata. Stamina perplurima, filamentis brevibus subulatis; antheræ lineares, basifixæ, connectivo apice producto. Ovarii rudimentum 0. Fl. ♀ masculis minores, subglobosi, perianthio post anthesin aucto. Petala 3, triangulari-ovata, acuta, incurva, valvata. Staminodia plurima v. obsoleta. Ovarium subglobosum, 3-loculare; stigmata sessilia, conica; ovula solitaria, basilaria, erecta. Fructus globoso-obovoideus, obscure 3-gonus, vertice depressus, 2–3-spermus, stigmatibus terminalibus, pericarpio carnoso raphidibus onusto. Semina obovoidea, in fructibus 2-spermis plano-convexa, in 3-spermis dorso convexa ventre bifacialia, hilo parvo basilari, testa lævi atra, raphe 0, albumine testæ adhærente æquabili corneo solido; embryo infra medium seminis dorsalis.—Palmæ monocarpicæ?, inermes, caudice crasso superne vaginis vetustis fibrosis vestito, interdum sobolifero. Folia terminalia, elongata, inæqualiter pinnatisecta, segmentis linearibus v. cuneatis petiolulatis præmorsis v. apice oblique fissis, costis validis, nervis parallelis, marginibus supra medium erosio-denticulatis basi recurvis uno v. utroque latere basi auriculatis subtus pallidis, petiolo plano-convexo marginibus in una specie spinosis, vagina brevi fibroso-reticulata marginibus crinitis. Spadices magni, deorsum evoluti, pedunculo brevi decurvo, ramis elongatis gracilibus pendulis; spathæ numerosæ, pedunculo insertæ, membranaceæ, deciduæ; bractæ et bracteolæ latæ. Flores pro ordine magni, fusco- v. flavo-vides, v. purpurascens. Fructus flavescens, carne pruriens.

Species ad 5, Asiæ tropicæ, Archipelagi Malayani, Novæ Guinæe et Australiæ tropicæ incolæ. Mart. Hist. Nat. Palm. iii. 191, t. 108, 147, 148 (excl. citat. t. 161, f. 4, quæ vix *Arenga species*).

74. *Orania*, *Zipp. in Algem. Konst. en letter-bode*, 1829, 294, ex *Mart. Hist. Nat. Palm.* iii. 186, t. 177, f. 1. (*Macrocladus*, *Griff. in Calc. Journ. Nat. Hist.* v. 489; *Palm. Brit. Ind.* 177, t. 239 A, B.)—Flores minuti, in eodem spadice interfoliaceo duplicatim ramoso monoici, distiche dispositi, 3-ni intermedio ♀, v. superiores solitarii et 2-ni ♂, bracteati et 2-bracteolati. Fl. ♂ subsymmetrici. Calyx minimus, 3-fidus. Petala oblonga v. lanceolata, concava, coriacea, valvata. Stamina 3 v. 6, fundo peranthii inserta, filamentis crassiusculis subulatis; antheræ lineari-oblongæ, basi bifida affixæ, erectæ, extrorsum dehiscentes. Ovarii rudimentum conicum. Fl. ♀ masculis crassiores, ovoidei, perianthio post anthesin modice aucto. Calyx membranaceus, 3-fidus, lobis ovatis cuspidatis. Petala late ovata, obtusa, valvata. Staminodia 3 v. 6. Ovarium obtusè 3-gonum, v. fere 3-partitum, 3-loculare; stigmata 3, sessilia, recurva; ovula in loculis solitaria, pendula. Fructus globosus, 1- rarius 2-locularis, basi loculis 1 v. 2 abortivis auctis, stigmatibus basilariibus, pericarpio spongioso-carnoso et fibroso, endocarpio tenuiter crustaceo. Semen globosum v. depressoglobosum, testa spongiosa brunnea endocarpio adhærente, hilo basilari, rapheos ramis creberrime reticulatis semen circumambientibus, albumine æquabili solido v. medio cavo; embryo medio (v. infra medium) dorso situs.—Palmæ elatæ, inermes, caudice annulato robusto. Folia terminalia, æqualiter et regulariter pinnatisecta, segmentis linearibus apice oblique laceris v. lobatis subtus albo-lepidotis, marginibus recurvis, costa valida, nervis prominulis, rhachi robusta dorso convexa facie acuta, petiolo valido, vagina brevi aperta marginibus fibrosis. Spadices elongati, pedunculo brevi crasso compresso basi semilunari, ramis secundariis gracillimis fastigiatis; spathe 2,

inferior brevis, coriacea, compressa, anceps, apice pervia; superior completa, clavato-fusiformis; cuspidata, sublignosa, longitudinaliter fissa; bracteæ et bracteolæ delitescentes. Fructus majusculus.

Species 3 v. 4, Archipelagi Malayani et Papuæ incolæ. *Miq. Fl. Ind. Bat.* iii. 16; *Palm. Archip. Ind.* 4. *Blume, Rumph.* ii. 115 (*O. regalis*), et *Præfat.* viii. t. 119, 122 (ARAUCASIA excelsa). *A. nicobarica*, Kurz in Trim. Journ. Bot. 1875, 331, t. 171 certe non hujus generis, differt stigmatibus fructu basilari; in icone citata fig. 22 ad 25, omnino falsæ, nam semen ellipsoideum est et teres, rapheos ramis ab hilo adscendentibus gracilibus dein descendentes ramosis et reticulatis, verisimiliter genus novum efficit, sed fl. ♂ desunt et insertio spadice ignota est.

75. *Sclerosperma*, Mann et H. Wendl. in *Trans. Linn. Soc.* xxiv. 427, t. 38 C; 40 A. —Flores in eodem spadice interfoliaceo fusiformi monoici, densissime compacti, inferiores 3-ni intermedio ♀, superiores solitarii ♂, bracteati et bracteolati. Fl. ♂ valde asymmetrici. Sepala membranacea, libera v. connata, imbricata, in fl. inferioribus (cum ♀ consociatis) oblique ovata acuta, in fl. superioribus obcuneata truncata dorso carinata. Petala crasse coriacea, valvata, in fl. inferioribus falcato-ovata acuta, in fl. superioribus obcuneata basi connata, apicibus crassis 3-gonis incurvis. Stamina ad 25, filamentis brevissimis fasciculatis; antheræ anguste lineares, basifixæ, erectæ, extrorsum dehiscentes. Ovarii rudimentum 0. Fl. ♀ masculis majores, ovoidei, perianthio post anthesin aucto. Sepala falcato-ovata, acuta, coriacea, imbricata. Petala crasse coriacea, oblique lineari-oblonga, ima basi imbricata, superne valvata. Staminodia minuta. Ovarium anguste ovoideum, 1-loculare; stigma crassum, conicum, obscure 3-dentatum; ovulum parietale, pendulum. Fructus depresso-globosus, 1-spermus, stigmate supra medium laterali, pericarpio carnoso intus fibroso fibris tenuissimis, endocarpio tenuissimo lapideo membrana brunnea induto. Semen subglobosum, hilo excentrico, rapheos ramis ab hilo adscendentibus ramosis reticulatis ad embryonis situm convergentibus, albumine æquabili denso; embryo hilo oppositus.—Palma humilis, gregaria, inermis, caudicibus dense fastigiatis brevissimis. Folia fasciculata, erecto-patentia, inæqualiter pinnatisecta, segmentis suboppositis e basi lata lineari-oblongis v. quadratis oblique præmorsis subtus albicantibus, nervis alternis validis, marginibus basi recurvis, petiolo teretiusculo, vagina fissa fibrosa. Spadices 8–10-pollicares, inter folia reconditi, pedunculati, erecti; spathæ 2, dure coriaceæ, inferior compressa, apice fibroso-laciniata; superior longior, fusiformis, longitudinaliter rupta; bracteæ ad basin fl. ♀ membranaceæ. Flores parvi. Fructus diametro pomi minoris.

Species 1, Africam occidentalem, locis inundatis ad flumen Gaboon incolens.

76. *Manicaria*, Gærtn. *Fruct.* ii. 468, t. 176. (*Pilophora*, Jacq. *Fragm.* 32, t. 35, f. B, G, et t. 36.)—Flores in eodem spadice interfoliaceo simpliciter ramoso monoici, cavis spiraliter dispositis basi immersis, superiores in ramos conferti ♂, inferiores sparsi ♀, bracteati et bracteolati. Fl. ♂ oblongi, obtuse trigoni. Sepala ovato-rotundata, coriacea, marginibus scariosis, imbricata. Petala crasse coriacea, obovato-oblonga, valvata. Stamina 24–30, in basi perianthii conferta, filamentis filiformibus basi connatis; antheræ anguste lineares, erectæ, basi longe bifida insertæ, apice emarginatæ. Ovarii rudimentum 0. Fl. ♀ masculis majores, ovoidei; perianthio post anthesin paulo aucto. Sepala rotundata, marginibus siccis demum laceris, late imbricata. Petala longiora, basi convolutivo-imbricata, superne acuta forte valvata. Staminodia ad 12. Ovarium 3-gono-turbinatum v. globosum, sulcatum, 3-loculare; stigmata 3, sessilia, trigona, demum patula; ovula in loculis erecta? Fructus globosus et 1-spermus, v. depresso 2–3-lobus et 2–3-spermus, stigmatibus terminalibus, pericarpio corticato, cortice suberoso angulato-echinato, endocarpio vitreo-crustaceo intus fibroso basi oblique pervio. Semina globosa, erecta, hilo oblongo, testa durissima, rapheos ramis crebre reticulatis semen amplexentibus, albumine corneo æquabili cavo; embryo basilaris.—Palmæ robustæ, inermes, caudice mediocri annulato curvo v. flexuoso, toto vaginis vetustis induto. Folia terminalia, maxima, rigida, suberecta, lanceolata, acuta, plicato-nervosa, serrata, demum pinnatisecta, costis crassis, nervis tenuibus, rhachi canaliculata, petiolo gracili compresso

dorso acuto facie canaliculato, vagina fissa marginibus fibrosis. Spadices plures, erecto-patentes, tomentosi, ramis strictis crassiusculis foveolatis, fructiferi nutantes; spathæ 2, superior fusiformis, teretiuscula, mucronata, fibrosa, tarde rupta; bracteæ subulatæ; bracteolæ obscuræ. Flores majusculi, roseo-ochroleuci, gravissime odori. Fructus diametro pomi minoris.

Species 2 v. 3, Americæ tropicæ a Brasilia boreali ad Novam Grenadam incolæ. *Mart. Hist. Nat. Palm.* ii. 139, t. 98, 99, iii. 230. *Kunth, Enum. Pl.* iii. 234. *Lam. Illustr. t.* 774. *Griseb. Fl. Brit. W. Ind.* 518. *Wallace, Palm. Amaz.* 68, t. 2, f. 2, 3, t. 26. *Traill in Trim. Journ. Bot.* 1876, 332.

77. *Leopoldinia*, *Mart. Hist. Nat. Palm.* ii. 58, t. 52, 53, 100, f. 1, 2, iii. 165.—Flores in eodem v. diversis spadicebus interfoliaceis paniculatim ramosis monoici, sparsi, ♂ in ramos superiores, v. dioici, bracteati et bracteolati. Fl. ♂ symmetrici. Sepala 3, sub-orbicularia v. oblata, membranacea, ciliata, imbricata. Petala brevina, ovata, coriacea, valvata. Stamina 6, filamentis brevissimis basi connatis complanatis; antheræ late ovatæ v. didymæ, erectæ, dorsifixæ, basi 2-lobæ, ovarii rudimentum ovoideum, v. 3, minuta. Fl. ♀ masculis paullo majores, subglobosi, perianthio post anthesin modice aucto. Sepala reniformia, imbricata. Petala longiora, late ovata, imbricata. Staminodia 0, v. minuta. Ovarium turbinatum, subtrigonum, 3-loculare, loculis 2 minimis effortis; stigmata 3, sessilia, excentrica; ovulum parietale. Fructus subglobosus, v. ovoideus, paullo compressus, ima basi gibbus, stigmatibus basilaribus, pericarpio carnosus, endocarpio crasso dense fibroso, fibris latis multiseriatis ramosis lignescentibus. Semen globosum, sub-erectum, testa tenui, hilo basilari, rapheos ramis latis obscuris, albumine corneo æquabili cavo; embryo suprabasilaris.—Palmæ inermes, caudicibus solitariis v. cæspitosis, fibrillis reticulatis petiolorum vetustorum tectis. Folia terminalia, longe petiolata, æqualiter pinnatisecta, segmentis angustis longe acuminatis integris v. apice inæqualiter 2-fidis plicato-nervosis, costa superne prominula, marginibus basi recurvis, petiolo dorso convexo facie concavo superne semitereti marginibus acutis, vagina fissa marginibus fibris reticulatis longe barbata. Spadices arcuato-penduli, pluries divisi, tomentosi, pedunculo basi compresso, ramis ramulisque subpinnatis divaricatis, ultimis brevibus; spathæ 2, truncato-lacerae, caducæ; bracteæ triangulares ad basin ramorum. Flores inter minimos. Fructus mediocris.

Species 4, Brasiliæ borealis incolæ. *Kunth, Enum. Pl.* iii. 176. *Wallace, Palm. Amaz.* 12, t. 2, f. 6, t. 4, 5, 6. *Spruce in Journ. Linn. Soc.* iv. 58. Fl. ♀ a nobis non visi.

78. *Nipa*, *Wurmb. in Verhandl. Batav. Genootsh.* 1779, i. 349, ex *Blume, Rumph.* ii. 72.—Flores in eodem spadice interfoliaceo divaricatim ramoso monoici, ♂ in ramulis amentiformibus ramos laterales terminantibus dense congesti, ♀ in capitulum spadicem terminans agglomerati, bracteati et bracteolati; perianthium glumaceum. Fl. ♂ parvi, bracteolis setiformibus interspersi. Sepala lineari-cuneata, apicibus truncatis inflexis, læviter imbricata. Petala consimilia sed paullo minor, leviter imbricata. Stamina 3, in columnam cylindraceam connata; antheræ lineari-elongatæ, basifixæ, loculis adnatis; pollen subglobosum, hispidulum. Ovarii rudimentum 0. Fl. ♀ masculis multo majores, perianthii foliolis 6 rudimentariis dissitis. Staminodia 0. Ovarii carpella 3, cuneato-obovoidea, præssione mutua angulata, vertice libero, curvo-pyramidata, infra apicem obliquum rima stigmatosa exarata; ovulum erectum. Syncarpium globosi carpella magna, obovoidea, compressa, obtuse hexagona, vertice pyramidata, 1-locularia, stigmate infra-apicali, pericarpio crasse carnosio densissime fibroso, endocarpio spongioso et farinoso venoso, uno latere longitudinaliter carinato. Semen erectum, hinc ob endocarpium carinam intrusam sulcatum, hilo basilari lato, testa coriacea intus viscosa endocarpio arcte adhærente, raphe lata semi-completa ramis semen circumdantibus, albumine corneo æquabili cavo; embryo basilaris, obconicus.—Palma humilis, inermis, caudicibus horizontalibus elongatis robustis radicantibus vaginis vetustis tectis, apicibus breviter ramosis. Folia terminalia, pinnatisecta, segmentis lanceolatis acuminatis plicato-nervosis subtus glaucis

paleaceis, marginibus basi recurvis, petiolo plano-convexo, vagina brevi. Spadices inter folia summa terminales, primum erectæ, demum nutantes, ramulis floriferis basi bracteatis; spathæ plurimæ, vaginantes, supremis cucullatis rostratis. Syncarpium magnitudine capitis humani.

Species 1, æstuariis fluviorum Asiæ tropicæ a Zeylanïa et Ostia Ganges ad ins. Philippinas Nov. Guineam et Australiam tropicam extensa. *Mart. Hist. Nat. Palm.* iii. 305, t. 108. *Kunth, Enum. Pl.* iii. 110, 589. *Lam. Illustr. t.* 897. *Blume, Rumph.* ii. 72, iii. t. 164, 165. *Labill. in Mém. Mus. Par. v. t.* 21, 22. *Gaud. Voy. Bonite, t.* 67. *Griff. Notul.* iii. 168; *lc. Pl. Asiat.* 244 ad 247. Genus polline hispidulo ab omnibus inter Palmas diversum. Carpella suadente Griffithio et Blumeo obscure ternatim disposita, ovarium tri-carpellare indicantia. Flores ♂ iis *Borassi* conformes, petalis fide Griffithii leviter imbricatis, a Blumeo contra, valvatis descriptis. Spadix ex Blumeo terminalis.

79. **Phytelephas**, Ruiz et Pav. *Syst. Veg. Fl. Per.* 299. (*Elephantusia*, Willd. *Sp. Pl.* iv. 1158.)—Flores dioici, in spadicebus interfoliaceis densissime compacti; spadices ♂ amantiformes, simplices, elongati, cylindracei v. capitati, ♀ capitati. Fl. ♂ minute bracteati. Perianthium obsoletum, v. minutum patelliforme dentatum dentibus numerosis inæqualibus acutis. Stamina numerosa, toro inserta, filamentis filiformibus liberis; antheræ lineari-elongatæ, mucronatæ, basifixæ. Ovarii rudimenta 0. Fl. ♀ præmagni, masculis multo majores, bractea magna elongato-lanceolata stipati, perianthio post anthesin aucto. Sepala 3, chartacea, triangularia, acuminata, imbricata. Petala 5–10, carnosula, elongato-lineari-oblonga, acuminata, imbricata. Staminodia perplurima, antheris cassis. Ovarium subglobosum, 4–9-sulcatum et -loculare; stylus terminalis, elongatus, columnaris, crassus, stigmatibus 4–9 filiformibus intus papillois; ovula basi anguli interioris loculorum adscendentia. Syncarpium ponderosum, globosum, e fructibus 4–6-spermis obpyramidalis coadunatis constans, stylis terminalibus, pericarpio corticato intus carnosum, cortice tessellatim tuberculato, tuberculis sursum incrassatis fibrosis, endocarpio crustaceo fragili extus farinaceo albo, intus nitido. Semina in loculis solitaria, suberecta, ovoidea obovoidea v. subglobosa, obtuse angulata, hilo magno, rapheos ramis impressis, albimine duro æquabili solido; embryo subbasilaris.—*Palmæ* humiles, inermes, caudice robusto erecto v. prostrato et radicante. Folia terminalia, elongata, pinnatisecta, segmentis numerosis superioribus oppositis inferioribus alternis v. fasciculatis lineari-lanceolatis acuminatis, costa valida, marginibus basin recurvis. Spadices pedunculati, pedunculo squamoso, ♂ penduli, ♀ erecti; spathæ 2 completæ, elongatæ, ventre fissæ, crasse coriaceæ v. lignosæ. Flores ♀ inter Palmas longe maximi, petalis 2–3-pollicaribus; ♂ parvuli. Syncarpium magnitudine fere capitis humani.

Species 3 v. plures, Peruvix et Novæ Grenadæ incolæ. *Mart. Hist. Nat. Palm.* iii. 306. *Kunth, Enum. Pl.* iii. 109. *Gaud. Voy. Bonite, t.* 14 ad 16, 29, 30. *Karst. in Linneæ, xxviii.* 275; *Fl. Colomb.* i. 165, t. 82. *Hook. Kew Journ.* i. 204, t. 6, 7 (*in Fl. des Serres, t.* 496, 497 *iteratæ*). *Seemann in Hook. Kew Journ.* iii. 303; *Bot. Her.* 205, t. 45 ad 47; *Bonpland.* 1855, 270, t. 1, 2. *Spruce in Journ. Linn. Soc. iv.* 186. *Bot. Mag. t.* 4913, 4914. *P. aquatorialis*, Spruce mss. a congeneribus insigniter differt caudice medioeri erecto, foliorum segmentis fastigiatis, et fl. ♂ pedunculo elongato racemoso. In *P. microcarpo* perianthium cupulare fide Karstenii adest, quod in *P. macrocarpo* et *aquatoriali* frustra quæsimus.

## TRIBUS II. PHENICEÆ.

80. **Phoenix**, Linn. *Gen. n.* 1224. (*Elate*, Linn. *Mus. Cliff.* 12. *Fulchironia*, Lesch. in Desf. *Cat. Hort. Par.* 1829, 29. *Phoniphora*, Neck. *Elem.* iii. 302.)—Flores dioici, in ramis spadiceis interfoliaceis fastigiatis ramosi sessiles, minute bracteati, ebracteolati, perianthio coriaceo. Fl. ♂ oblongi v. ovoidei. Calyx cupularis, 3-dentatus. Petala 3, oblique oblonga v. ovata, basi subconnata, valvata. Stamina 6, rarissime 3 v. 9, basi corollæ inserta, filamentis subulatis basi connatis; antheræ lineari-oblongæ, erectæ, dorso affixæ. Ovarii rudimenta minuta v. 0. Fl. ♀ masculis subæquales, globosi, perianthio post anthesin aucto. Calyx maris. Petala 3, rotundata, concava, late imbricata. Staminodia 6, squamæformia v. in cupulam connata. Ovarii carpella 3, distincta, ovoidea v. globosa,

conniventia; stigmata sessilia, uncinata; ovula erecta. Fructus oblongus, teres, 1-spermus, stigmatibus terminalibus, pericarpio carnosio, endocarpio tenuiter membranaceo. Semen erectum, lineari-oblongum, teretiusculum v. plano-convexum, ventre profunde longitudinaliter sulcatum, hilo basilari, albumine corneo; embryo dorsalis v. subbasilaris.—Palmæ inermes, subcaules v. caudicibus gracilibus v. robustis sæpius cæspitosis brevibus v. elongatis, erectis v. declinatis, superne basibus persistentibus foliorum tectis. Folia terminalia, patenti-recurva, inæqualiter pinnata, segmentis subfasciculatis v. subæquidistantibus, elongato-lanceolatis v. ensiformibus acuminatis rigidis basi lata insertis marginibus integerrimis basi v. per totam longitudinem induplicatis, rhachi lateraliter compressa bifaciali dorso convexa, petiolo plano-convexo sæpissime pinnis abbreviatis rigidis spinescente, vagina brevi fibrosa. Spadices sæpius plures, erecti, v. fructiferi nutantes v. penduli, pedunculo valde compresso, ramis interdum subumbellatis; spatha completa, elongata, basilaris, compressa, anceps, coriacea, ventre et demum dorso fissa; bracteæ interdum obsoletæ. Flores mediocres, flavi. Baccæ croceæ, brunneæ v. atræ.

Species ad 12, Asiæ et Africæ tropicæ et subtropicæ incolæ. *Mart. Hist. Nat. Palm.* iii. 257, 320, t. 120, 124, 136, 164. *Kunth, Enum. Pl.* iii. 254. *Gærtn. Fruct.* 1, t. 9. *Lam. Illustr.* t. 893 (*Phœnix et Elate*). *Dict. Sc. Nat.* t. 25, 26. *Roxb. Cor. Pl.* i. t. 74, iii. t. 273. *Griff. in Calc. Journ. Nat. Hist.* v. 344; *Palm. Brit. Ind.* 136, t. 128, 128 A, 129 A, B. *Miq. Fl. Ind. Bat.* iii. 62; *Palm. Archip. Ind.* 14, 26. *Brandis, For. Fl.* 553. *Del. Fl. Egypt.* t. 62. *Turpin in Mém. Mus. Par.* iii. t. 15. *Jacq. Collect. Suppl.* t. 15; *Fragm.* t. 24. *T. Anders. in Journ. Linn. Soc.* xi. 13. *Drude in Bot. Zeit.* 1877, 638, t. vi. f. 27 ad 33.

### TRIBUS III. CORYPHEÆ.

81. *Corypha*, *Linn. Gen.* n. 1221. (*Taliera*, *Mart. Progr. Palm. Fam. et Gen.* 10. *Gembanga*, *Blume in Flora*, 1825, 580, 678.)—Flores parvi, hermaphroditi, in ramis spadiceis terminalis pyramidalis paniculatim ramosi sessiles v. breviter pedicellati, minute bracteati. Calyx cupularis, 3-dentatus v. 3-lobus. Petala 3, basi in stipitem solidum contracta, late ovata, acuta, incurva, subvalvata v. imbricata. Stamina 6, filamentis dilatato-subulatis basi petalorum late adnatis; antheræ ovato-cordatæ, dorsifixæ. Ovarium trigono-ovoideum, 3-lobum, 3-loculare, in stylum brevem subulatum contractum, stigmatibus simplicibus v. 3-denticulatis; ovula in loculis basilaria, erecta. Fructus e carpellis 1-3-globosis 1-spermis, stylo basilari, pericarpio carnosio. Semen globosum v. oblongum, erectum, hilo basilari, testa membranacea, rapheos ramis ab hilo divergentibus ad situm embryonis convergentibus, albumine æquabili solido v. cavo; embryo verticem versus seminis.—Palmæ elatæ, inermes, monocarpicæ, caudice robusto annulato. Folia terminalia, maxima, orbicularia, ad medium in lacinias perplurimas lineari-lanceolatas flabellatim fissa, laciniis vervatione induplicatis, rhachi 0, ligula parva, petiolo elongato robusto superne concavo marginibus spinosis, vagina fissa. Spadix solitarius, ingens, erectus, paniculatim ramosissimus. Spathæ plures, tubulosæ, pedunculum et ramos vaginantes; bracteolæ obsoletæ. Flores virides. Fructus diametro cerasi.

Species ad 6 enumeratæ, Asiæ tropicæ et Archipelagi Malayani incolæ. *Mart. Hist. Nat. Palm.* iii. 231, 318, t. 108, 127. *Kunth, Enum. Pl.* iii. 235. *Gærtn. Fruct.* i. t. 7 (*semen inversum depictum*). *Lam. Illustr.* t. 899. *Blume, Rumph.* ii. 57, t. 97, 98, 105. *Roxb. Cor. Pl.* t. 255, 256. *Griff. in Calc. Journ. Nat. Hist.* v. 313; *Palm. Brit. Ind.* iii. t. 220 D, E, F, *App.* xxiii. *Miq. Fl. Ind. Bat.* iii. 49. *Kurz, For. Fl.* ii. 524. *H. Wendl. et Drude in Linnæa*, xxxix. 226.

82. *Sabal*, *Adans. Fam. Nat.* ii. 495.—Flores hermaphroditi, ramis spadiceis elongati paniculatim ramosi solitarii, sessiles, bracteati et 2-bracteolati, perianthio post anthesin immutato. Calyx cupularis, inæqualiter 3-lobus, basi truncatus. Corolla profunde 3-loba, tubo brevi, lobis ovato-oblongis acutis concavis marginibus infra apices valvatos tenuibus imbricatis. Stamina 6, filamentis subulatis basi dilatatis in annulum tubo corollæ adnatum connatis; antheræ late ovato-cordatæ, dorsifixæ. Ovarium 3-gonum, 3-loculare, in stylum columnarem validum 3-gonum attenuatum, stigmatibus truncatis; ovula in loculis

basilaria, erecta. Fructus 6 carpellis 1, rarius 2-3, globosis 1-spermis, stylo basilari, pericarpio carnosio ab epicarpio membranaceo soluto. Semina depresso-globosa, erecta, libera, hilo parvo basilari, testa atro-brunnea nitida, rapheos ramis obsoletis, albumine dure corneo æquabili umbilico intruso, fossa intus spongiosa marginibus rugosis; embryo dorsalis.—Palmæ inermes, humiles elatæ v. subacaules, caudice sæpe robusto annulato basi oblique ascendente superne vestigiis vaginarum onusto. Folia terminalia, orbicularia v. basi cuneata, flabellatim multifida, segmentis linearibus 2-fidis filis sæpissime interjectis, vernatione induplicatis, rhachi brevi v. elongata, ligula brevi rhachi adnata, petiolo antice concavo marginibus acutis inermibus, vagina breviuscula. Spadices magni, elongati, decompositi, primum erecti, ramis ramulisque decurvis v. pendulis gracilibus; spathæ pedunculum ramosque longe vaginantes, tubulosæ, ore obliquo; bractæ et bracteolæ minutæ. Flores parvi, glabri, albi v. virides. Fructus parvus v. mediocris, niger.

Species 6, Americæ tropicæ et subtropicæ a Florida et insulis Bermudianis ad Venezuelam et insulam Trinitatis extensæ. *Mart. Hist. Nat. Palm.* iii. 245 (*excl. sp.*), t. 103, 130. *Kunth, Enum. Pl.* iii. 245 (*excl. sp.* 4). *Karst. Fl. Colomb.* ii. 137, t. 172 (*Trithrinax*). *Chapm. Fl. S. U. States* 438 (*excl. sp.* 2). *Griseb. Fl. Brit. W. Ind.* 514. *Guerseent in Bull. Soc. Philom.* iii. 205, t. 25. *Jacq. Hort. Vindob.* iii. t. 8. *Bot. Mag. t.* 1434.

83. **Washingtonia**, *H. Wendl. in Bot. Zeit.* 1879, 68.—Flores hermaphroditi, in ramis spadiceis interfoliacei paniculatum ramosi sparsi, sessiles, scarioso-coriacei, bracteolati; perianthium post anthesin immutatum. Calyx tubulosus, basi solidus, ore lente dilatato breviter 3-lobo, lobis scariosis erosio retusis imbricatis. Corolla infundibularis, tubo carnosio calyce incluso; lobi lanceolati, acuminati, striati, patuli, basi intus callo 2-lobo aucti. Stamina 6, fauci corollæ inserta, filamentis magnis crassis elongato-fusiformibus exsertis, apicibus attenuatis; antheræ magnæ, lineares, utrinque 2-fidæ, dorsifixæ, versatiles. Ovarium disco parvo insertum, depresso-obovoideum, 3-lobum, 3-loculare; stylus filiformis, flexuosus, longe exsertus, rigidus, persistens, stigmatibus minutis; ovula basilaria, erecta. Fructus parvus, ellipsoideus, 1-locularis, 1-spermus, reliquiis minutis carpellorum abortientium styloque coronatus, pericarpio carnosio. Semen oblongo-ovoideum v. globosum, dorso convexum, ventre planiusculum, testa brunnea nitida tenui, hilo parvo subbasilari, raphe inconspicua ramis 0, albumine corneo æquabili; embryo basin versus seminis dorsalis.—Palma elata, caudice robusto vaginarum et petiolorum vestigiis superne tecto. Folia terminalia, ampla, patentia, orbicularia, flabellatim plicata, ad medium fere fissa, laciniis induplicatis margine filiferis, rhachi brevi, ligula magna appressa, petiolo elongato robusto plano-convexo marginibus valide spinosis. Spadices elongati, copiose paniculatum ramosi, glabri, ramis gracilibus flexuosis; spathæ elongatæ, membranacæ, fissæ, glabræ. Flores albi. Fructus niger.

Species 1 v. 2, Californiæ australis et Arizonæ incolæ. *S. Wats. in Bot. Calif.* ii. 211, 485. *Fenzl in Bull. Soc. Tosc. Ort.* i. 116, *cum ic* (*Prichardia*).

84. **Nannorhops**, *H. Wendl. in Bot. Zeit.* 1879, 147.—Flores in spadice interfoliaceo paniculatum ramoso polygamo-monoici, per paria spathella membranacea inclusi, altero sessili bracteato, altero breviter pedicellato ebracteato, perianthium post anthesin fere immutatum. Calyx breviter tubulosus, inæqualiter 3-lobus, membranaceus. Corolla 3-partita, tubo brevi, segmentis ovatis acutis valvatis. Stamina in fl. ♂ 6, filamentis tubo corollæ insertis, in fl. ♂ ad 9 filamentis basi lata fauci corollæ insertis; antheræ oblongæ v. oblongo-sagittatæ, intrusæ. Ovarium ovoideum, 3-gonum, in stylum brevem subulatum attenuatum, stigmate 3-denticulato; ovula basilaria, erecta. Fructus globosus ellipsoideus v. oblongus, 1-spermus, stylo basilari, pericarpio carnosio, endocarpio tenuiter crustaceo. Semen pericarpio conforme, liberum, hilo parvo basilare, ventre ad axin excavatum, fossa materia spongiosa farta, testa tenuiter membranacea, raphe brevi ramis indistinctis laxè reticulatis, albumine corneo æquabili; embryo medio dorso situs v. subbasilaris.—Palma inermis, gregaria, humilis, pallida, caudicibus cæspitosis repentibus

*ramosis vaginis vetustis foliorum opertis. Folia terminalia, rigida, cuneato-flabellata, in lacinias curvas 2-fidas induplicatim plicatas fissa, rhachi brevi, ligula 0, petiolo brevi concavo-convexo marginibus subserrulatis, vagina brevi fissa marginibus membranaceis. Spadices elongati, patentim ramosi, ramis ramulisque gracilibus; spathæ tubulosæ, pedunculum et ramos spadiceis vestientes, ore obliquo in acumen producto; spathellæ flores 2-nos vaginantes, breviter tubulosæ, 2-nerves, ocreas *Polygoni* simulates. Flores parvi, pallidi, Fructus pisiformis.*

Species 1, montium Indiæ trans flumen Indus, Afghanistaniæ, Beluchistanæ et Persiæ austro-orientalis incola. *Griff. in Calc. Journ. Nat. Hist.* v. 342; *Palm. Brit. Ind.* 135. *Brandis, For. Fl.* 547 (*omnes sub Chamæropside Ritchieana, Griff.*). *Aitchison in Journ. Linn. Soc.* xix. 140, t. 26.

85. ? *Teyssmannia*, *Reichb. f. et Zolling. in Linnaea*, xxviii. 657 (*Teyssmania*).—Flores hermaphroditi, minuti, in ramis spadiceis interfoliacei 2–3-plicatim ramosi sparsi, breviter pedicellati, solitarii v. fasciculati, bracteati et 2-bracteolati, perianthio post anthesin immutato. Calyx cupularis, 3-dentatus, basi carnosus. Petala crassa, e basi lata triangulari-lanceolata, acuta, valvata. Stamina 6, filamentis subulatis basi in cupulam hypogynam connatis; antheræ ovatæ, basifixæ. Ovarii carpella 3, rarius 1 v. 2, libera v. leviter cohærentia; stylus subulatus, 3-gonus, stigmatibus punctiformi; ovula in loculis erecta. Fructus globosus v. depresso-globosus, 1-locularis, 1-spermus, basi carpellis abortivis 1–2 auctus, stylo basilari, pericarpio corticato suberoso tessellatim verrucoso, verrucis 3–6-gonis, endocarpio tenui. Semen subdepresso-globosum, liberum, erectum, hilo basilari, testa tenui rugulosa, raphe brevi ramis obsoletis, albumine æquabili ventre profunde intruso, fossa materia spongiosa farcta; embryo lateralis.—Palma humilis, inermis, caudice subterraneo annulato apice emerso. Folia erecta, elongato-rhombea, obtusa, basi acuta, induplicatim plicata, marginibus laciniatis, laciniis obtuse 2-fidis, rhachi elongata, petiolo dorso carinato facie obsoiete concavo, angulis rotundatis uncinato-aculeatis, vagina brevi. Spadix breviusculus, ramis basi divisus superne reflexis, pedunculo fusco-tomentoso; spathæ papyraceo-coriaceæ, pedunculum et ramos vaginantes, inferiores biserialis, imbricato-equitantes, superiores sparsæ; bracteæ lanceolatæ; bracteolæ inconspiciuæ. Fructus diametro pomi.

Species 1, Sumatrensis. *Miq. Fl. Ind. Bat.* iii. 749. Descriptio pro maxima parte ex auctoribus citatis. Genus a Wendlandio inter ea stigmatibus terminali inclusum, sed nobis basilare apparet. In descriptione Zollingeri albumen ruminatum est et embryo basilaris, in exemplaribus nostris albumen certe æquabile et embryo lateralis.

86. *Chamærops*, *Lin. Gen.* n. 1219. (*Chamæriphe*s, *Ponted. Anthol.* 147, t. 8, 10, *ex Gartn. Fruct.* i. 26, t. 9).—Flores in ramis spadiceis interfoliaceis paniculatim ramosi sessiles, polygamo-monoici v. dioici, ♂ et ♀ in eodem v. in diversis spadiceis, bracteati; perianthium post anthesin immutatum. Calyx 3-partitus, segmentis subulato-lanceolatis. Petala libera, ovata, acuta, imbricata. Stamina 6–9, filamentis brevibus latis basi calycis insertis v. in cupulam hypogynam connatis; antheræ majusculæ, ovato-oblongæ v. cordatæ, dorsifixæ. Ovarii carpella 3 (rarius plura), distincta; stigmata subsessilia; ovula basilaria, erecta. Fructus carpella 1–3, globosa v. ovoidea, basin versus trigona, 1-sperma, stigmatibus terminalibus, pericarpio carnosio intus fibroso, endocarpio membranaceo. Semina ellipsoidea v. globosa, erecta, hilo parvo basilari, raphe indistincta laxè ramosa, albumine dure corneo laxè ruminato; embryo infra medium dorsalis.—Palma inermis, gregariæ, humiles v. mediocres, caudicibus caespitosis basi ramosis vaginis vetustis foliorum opertis. Folia terminalia, rigida, semi-orbicularia v. cuneato-flabellata, profunde laciniata, laciniis angustis bifidis induplicatim plicatis, rhachi 0, ligula brevissima, petiolo gracili biconvexo marginibus lævibus v. asperis, vagina fissa reticulatim fibrosa. Spadices breves, erecti, compressi, ramis brevibus densifloris; spathæ 2–4, latæ, crasse coriaceæ, inferiores fissæ, superiore completa; bracteæ parvæ, subulatæ; bracteolæ 0. Flores parvi, flavidi. Fructus rufescens v. flavescens.

Species 2, regionis Mediterraneæ incolæ. *Mart. Hist. Nat. Palm.* 248 (*Chamærops* sp. 1), t. 120, 124. *Kunth, Enum. Pl.* iii. 248, sp. 1. *Lam. Illustr.* t. 900. *Lamb. in Trans. Linn. Soc.* x. t. 8. *Cav. Ic.* ii. t. 115 (*Phoenix*). *Nees, Gen. Fl. Germ. Monocot.* iii. n. 36. *H. Wendl. in Bull. Soc. Bot. Fr.* viii. 429. *Drude in Bot. Zeit.* 1877, 638, t. 6, f. 34, 35. *Andr. Bot. Rep.* t. 599. *Bot. Mag.* t. 2152. *C. conduplicata*, Kickx in Bull. Acad. Sc. Bruxelles, v. 60; Walp. Ann. i. 752, patria ignota, omnino dubia est.

87. **Rhapidophyllum**, *H. Wendl. et Drude in Bot. Zeit.* 1876, 803.—Flores globosi, in ramis spadiceis brevis crassi interfoliacei paniculatim ramosi sessiles, hermaphroditi v. polygamo-dioici, bracteati et bracteolati; perianthium crasse coriaceum, post anthesin fere immutatum. Sepala 3, triangulari-ovata, basi incrassata gibba. Petala 3, ovato-rotundata, imbricata. Stamina 6, filamentis filiformi-subulatis alternis basi petalorum insertis; antheræ magnæ, lineares, basi bifida affixæ, versatiles, breviter exsertæ. Ovarii carpella 3, rarius 4-5, libera, ovoidea, primum basi tantum denu in toto lanata, in stigmata parva recurva breviter attenuata; ovula subbasilaria, erecta. Carpella matura solitaria, rarius 2-3, ovoidea v. obovoidea, lana detergibili induta, 1-sperma, stigmate subterminali, pericarpio tenui fibroso, endocarpio crustaceo. Semen ellipsoideum, erectum, hilo magno, raphe lata endocarpio adnata ramis 0, albumine solido æquabili; embryo medio dorso.—Palma humilis, caudice brevi erecto v. repente et sobolifero vaginis foliorum vetustis in opus fibrosum solutis spinis elongatis erectis intermixtis tecto. Folia terminalia, orbicularia in sinu aperta v. transverse oblonga, profunde inæqualiter plicata et fissa, subtus argentea, laciniis integris v. 2-4-fidis induplicatis, rhachi 0, ligula brevissima rotundata, petiolo 3-gono superne planiusculo marginibus denticulatis subtus floscoso, vagina e fibris aliis crispis aliis rigidis intertextis. Spadices breviter pedunculati; spathæ 2-5, completæ, tubulosæ, compressæ, 2-fidæ, floccosæ. Flores minuti, crocei. Fructus parvus.

Species 1, Floridæ et Carolinæ australis incola. *Mart. Hist. Nat. Palm.* 250, t. 125, f. 4. *Chapm. Fl. S. U. States*, 439 (utraq sub *Chamæropside Hystrix*).

88. **Acanthorhiza**, *Wendl. in Bot. Zeit.* 1879, 147.—Flores hermaphroditi, in ramis spadiceis interfoliacei triplicato-ramosi subsessiles, solitarii, minute bracteati; perianthium post anthesin . . . Calyx cupularis, 3-lobus, basi rotundato carnosus, lobis oblongis obtusis. Petala orbicularia, concava, coriacea, late convolutivo-imbricata. Stamina 6, filamentis in tubum membranaceum connatis, apicibus liberis exsertis; antheræ oblongæ, dorso prope basin affixæ, patenti-recurvæ. Ovarii carpella 3, distincta, erecta; styli elongati, erecti, stigmatibus terminalibus; ovula basilaria, erecta. Fructus . . .—Palmæ inermes, caudice mediocri robusto vestigiis vaginalium vetustarum dense obsito, basi radicibus spinescentibus onusto. Folia terminalia, lamina orbiculari in segmenta cuneiformia plicata apice 3-∞-fida profunde fissa, subtus glauca, rhachi 0, petiolo superne planiusculo v. convexo marginibus lævibus, vagina brevi fibrosa. Spadices compressi, pedunculo brevi ramisque patentibus crassis albis; bractææ spathææ ad basin ramorum elongatæ, coriaceæ, deciduæ; bracteolæ setiformes, deciduæ.

Species 2 v. 3, Americæ centralis incolæ. *Mart. Hist. Nat. Palm.* iii. 252 (*Chamærops Mocinni*). *Ill. Hort.* xxvi. t. 367 (sine fl. et fruct.). Flores ad exemplaria *A. Warcevitzi* in Hort. Herrenhausen culta a Wendlandio benevole missa descripti.

89. **Trithrinax**, *Mart. Hist. Nat. Palm.* 149, 247, 320, et t. 104 (*Thrinax*); *Palm. Orbign.* 43, t. 10, 25 A (excl. f. 5, 6).—Flores hermaphroditi, in ramis spadiceis interfoliacei triplicato-ramosi subsessiles, solitarii, ebracteati v. obscure bracteati; perianthium post anthesin immutatum. Calyx tubulosus v. cupularis, 3-fidus, basi truncato carnosulo. Petala ovata v. fere orbicularia, erecta, late convolutivo-imbricata, marginibus tenuibus. Stamina 6, hypogyna, filamentis filiformi-subulatis basi liberis v. connatis exsertis; antheræ lineari-oblongæ, dorsifixæ, basi 2-fida insertæ. Ovarii carpella 3, distincta; styli elongati, erecti v. recurvi, stigmatibus capitellatis; ovula basilaria, erecta. Fructus

baccatus, 1-spermus, stylo terminali. Semen . . . albumine æquabili?; embryo verticem versus seminis dorsalis.—Palmæ inermes, caudice mediocri cicatricato. Folia terminalia, orbiculari-ovata, flabellatim multifida, glabra, laciniis lanceolatis acuminatis 2-fidis induplicatis, petiolo biconvexo marginibus acutis integerrimis, ligula dura cordata, vagina fibrosa et spinis erectis v. reflexis horrida. Spadices patentes, pedunculo crasso, ramis flexuosis; spathæ plures, inferiores pedunculo insertæ, oblongæ, oblique fissæ, superiores ocreiformes, oblique truncatæ; bracteæ valde inconspicuæ. Flores parvi.

Species 2 v. 3, Brasilienses, et una Chilina. *Kunth, Enum. Pl. iii. 247.*—*T. compacta*, Griseb. *Cat. Pl. Cub. 221*, est genus *Hemithrinax*, nob.; *T. mauritiiformis*, Karst., est *Sabal* species.

90. *Brahea*, *Mart. Hist. Nat. Palm. iii. 243, 319, t. 137, 162.* Flores minuti, hermaphroditi, in ramis tomentosis spadicis interfoliacei paniculatim ramosi sparsi, sessiles, coriaceo-carnosi, bracteati et 2-bracteolati; perianthium post anthesin immutatum. Sepala orbicularia, concava, imbricata. Petala brevina, basi carinata, late ovata, crassiuscula, valvata. Stamina 6, filamentis subulatis basi dilatatis in cupulam hypogynam connatis; antheræ breves, ovato-cordatæ, dorsifixæ. Ovarii carpella 3, breviter connata; stylus terminalis, brevis, 3-gonus, stigmate minuto; ovula basilaria, erecta. Fructus e carpellis 1-3 monospermis oblique ellipsoideis paullulum compressis puberulis lateribus carinatis, stylo terminali, pericarpio tenuiter carnoso, endocarpio crustaceo. Semen basilare, erectum, pericarpio conforme, testa a basi ad apicem facie ventrali ad axin intrusa, raphe diffusa, albumine corneo æquabili; embryo in medio seminis dorsalis.—Palmæ inermes, caudice mediocri inferne annulato, superne reliquiis fibrosis vaginarum tecto. Folia terminalia, orbicularia subpeltata, flabellatim plicata, ad medium fissæ, laciniis bifidis filis interjectis induplicatis, rachi brevi angusta, ligula subtriangulari, petiolo patente marginibus subdentatis, vagina fibrosa. Spadices elongati, penduli, paniculatim ramosissimi, ramulis ultimis elongatis vermiformibus patentibus rigidis obtusis densissime velutino-tomentosis; spathæ plures, pedunculo insertæ, lineari-elongatæ, rigide coriaceæ, glabræ, fissæ; bracteæ et bracteolæ minutæ. Flores diametro ramulorum multo minores, indumento immersi. Carpella matura semi-pollicaria, sicca pallida.

Species 4 enumeratæ, quarum unam Texano-mexicanam et montium Mexici indigenam, tantum vidimus; cæteræ verisimiliter Mexicanæ et Andium incolæ. *Kunth, Enum. Pl. iii. 244. H. Wendl. in Bot. Zeit. 1879, 147.*

91. *Serenoa*, *Hook. f. nov. gen.*—Flores parvi, hermaphroditi, in ramis gracilibus spadicis interfoliacei paniculatim ramosissimi sparsi, sessiles, bracteati et 2-bracteolati; perianthium post anthesin immutatum. Calyx cupularis, inæqualiter 3-fidus, basi truncatus. Corolla 3-partita, tubo brevi, segmentis ovato-oblongis acutis valvatis intus 2-carinatis carinis irregularibus crasse carnosissimis. Stamina 6, filamentis filiformibus basi dilatatis in anulum tubo corollæ adnatum connatis; antheræ breviter oblongæ, dorsifixæ. Ovarium 3-gono-ovoideum, acutum, e carpellis 3 basi liberis, superne in stylum elongatum erectum gracilem attenuatis, stigmate minuto; ovula basilaria, erecta. Fructus ovoideus, 1-spermus, stylo terminali, pericarpio crasse carnoso intus parce fibroso, endocarpio molli. Semen erectum, liberum, oblongum, fere cylindraceum, facie ventrali paullo complanatum, hilo parvo basilari, raphe ventrali incrassata elongata ramis 0, albumine solido æquabili; embryo basin versus seminis dorsalis.—Palma humilis, inermis, cæspitosa, caudice repente ramoso rete fibroso e vaginis foliorum induto. Folia terminalia, orbicularia, coriacea, profunde plicato-multifida, subtus glauca, segmentis angustis induplicatis 2-fidis, rhachi 0, ligula brevi, petiolo plano-convexo marginibus dentatis. Spadix elongatus, tomentosus, rhachi flexuosa vaginis tubulosis oblique fissis induta, ramis patentibus patentim ramosis, ramulis alternis gracillimis; spathæ plures, pedunculum vaginantes; bracteolæ minutæ. Flores albi. Fructus niger, pollicaria.

Species 1, Floridæ et Carolinæ incola. *Chapm. Fl. S. U. States 438 (Sabal serrulata, R. & S.).* Genus ad exemplaria a Sereno Watson communicata descriptum, unde nomen genericum.

92. *Colpothrinax*, Griseb. et H. Wendl. in Bot. Zeit. 1879, 147.—Flores hermaphroditi, ramis spadiciis interfoliacei subduplicato-ramosi sparsi, solitarii, sessiles, minute bracteati; perianthium post anthesin immutatum. Calyx tubuloso-campanulatus, basi intrusa, ore membranaceo 3-denticulato. Corollæ tubus cylindraceus, coriaceus, persistens, lobis ovatis subacutis coriaceis valvatis deciduis. Stamina 6, filamentis brevibus triangulari-subulatis basi in coronam 6-lobam tubo corollæ impositam connatis; antheræ lineari-oblongæ, dorsifixæ, utrinque profunde 2-lobæ. Ovarium trapezio-obovoideum, e carpellis 3 liberis vertice exsculptis in stylis erectos crassos subcoherentes attenuatis, stigmatibus punctiformibus; ovula basilaria, erecta. Fructus globosus, 1-locularis, stylo terminali, pericarpio carnoso intus parce fibroso, endocarpio crustaceo. Semen globosum, liberum, erectum, hilo basilari, raphe ab hilo ad verticem extensa incrassata lobulata nitida ramis 0, albumine æquabili solido; embryo medio-dorsalis.—Palma inermis. Folia terminalia, dure coriacea, orbicularia, flabellatim plicato-multifida, laciniis numerosissimis rigidis longe acuminatis 2-fidis induplicatis, costa valida, nervis perplurimis, rhachi elongata, ligula semicirculari libera. Spadices breviusculi, decurvi, rhachi valida, ramis laxifloris validis patentibus elongatis, inferioribus basi ramosis; spathæ plures, crasse coriaceæ, castaneæ, furfuraceæ, inferiore magna ad basin fissa, superiores tubulosæ superne fissæ; bracteæ minutæ, setiformes. Flores majusculi, in tuberculis ramorum spadiciis sessiles. Fructus diametro cerasi.

Species 1, Cubæ incolæ.

93. *Erythea*, S. Wats. Bot. Calif. ii. 211, 485.—Flores hermaphroditi, in ramis spadiciis interfoliacei paniculatim ramosi sessiles, solitarii v. fasciculati, bracteati et 2-bracteolati; perianthium coriaceum, post anthesin immutatum. Calyx cupularis, 3-lobus. Corolla brevis, late campanulata, 3-loba, lobis late ovatis acutis valvatis. Stamina 6, fauci corollæ inserta, filamentis brevibus subulatis basi in anulum connatis; antheræ parvæ, ovato-cordatæ, dorsifixæ. Ovarium obovoideum, trigonum, e carpellis 3 ventre connatis; stylus brevis, subulatus, 3-canaliculatus, stigmate 3-dentato; ovula basilaria, erecta. Fructus globosus, 1-spermus, stigmatibus terminalibus, pericarpio carnoso intus molli. Semen erectum, liberum v. pericarpio adhærens, globosum v. subplano-convexum, ventre ad axin sulcatum, sulco testa spongiosa farcto, hilo basilari, raphe valde inconspicua ramis obsoletis, albumine corneo æquabili; embryo subbasilaris.—Palma inermis, caudice robusto solitario basi annulato, superne vestigiis vaginarum foliorum tecto. Folia terminalia, juniora tomentosa, orbicularia, flabellatim multifida, laciniis apice laceris filis interjectis induplicatis, rhachi brevi, ligula elongata, petiolo valido marginibus lævibus v. spinosis. Spadices elongati, albo-tomentosi, ramis robustis; spathæ plures, pedunculum vaginantes, crasse coriaceæ, dense tomentosæ; bracteæ bracteolæque distinctæ. Flores pallidi. Fructus parvus.

Species 2, austro-Californicæ. Genus *Copernicia* proximum, an distinctum? Semen in *E. eduli* pericarpio adhærens, in *E. armata* liberum.

94. *Copernicia*, Mart. Hist. Nat. Palm. ii. 56, t. 49, 50 (*Corypha*), 50 A, 51, f. 5, iii. 242, 319; *Palm. Orbig.* 41, t. 1, f. 3, et t. 24.—Flores hermaphroditi, in ramis spadiciis interfoliacei paniculatim ramosi sessiles, subsolitarii v. conferti, bracteati et 2-bracteolati; perianthium coriaceum, post anthesin immutatum. Calyx cupularis v. breviter cylindraceus, truncatus, 3-fidus v. 3-dentatus. Corolla late campanulata, lobis late ovatis acutis intus sulcatis valvatis. Stamina 6, fauci corollæ inserta, filamentis brevibus subulatis basi in anulum connatis; antheræ parvæ, dorsifixæ, ovato-cordatæ, inclusæ. Ovarium 3-gono-obovoideum, e carpellis 3 basi distinctis vertice exsculptis constans; stylus brevis, 3-sulcatus, stigmate 3-denticulato; ovula basilaria, erecta. Fructus globosus v. ellipsoideus, 1-locularis, styli cicatrice apicali, pericarpio coriaceo non fibroso. Semen erectum, globosum v. ellipsoideum, hilo lato subbasilari, raphe elongata ramis laxis descendentibus, albumine laxè ruminato; embryo subbasilaris.—Palma inermis,

caudice elato robusto solitario inferne annulato, superne vestigiis vaginarum induto. Folia terminalia, orbicularia, flabellatim plicata, in lacinias apice integras v. laceras induplicatas fissa, marginibus interdum filiferis, rhachi brevi, ligula brevi, petioli validi marginibus lævibus v. spinosis, vagina superne utrinque late patentim 2-auriculata. Spadices elongati, sæpe decurvi, glabri v. tomentosi, ramis divaricatis v. recurvis, rhachi vaginata; spathæ plures, incompletæ. Flores parvi, glabri v. tomentosi. Fructus parvus, lutescens.

Species ad 8, Novæ Grenadæ, ins. Indiæ Occidentalis et Brasilæ incolæ. *Kunth, Enum. Pl. iii. 242. Griseb. Fl. Brit. W. Ind. 514; Cat. Pl. Cub. 220.*

*CRYSOPHILA*, *Blume*, est fide *Wendlandii* (in *Kerch. Denterg. Palm. 242*) *Copernicia? nana*, planta Mexicana, nobis non nisi foliis nota.

95. *Pritchardia*, *Seem. et H. Wendl. in Bonpland. ix. 260, x. 197, 310, t. 15.*—Flores hermaphroditi, in ramis spadiceis interfoliacei 2-3-plicato-ramosi sessiles, sparsi, solitarii; perianthium post anthesin immutatum. Calyx tubuloso-campanulatus, 3-dentatus v. -lobus. Corolla 3-partita, tubo brevi; segmenta ovata, acuta, crasse coriacea, valvata, demum a tubo persistente soluta. Stamina 6, filamentis brevibus subulatis basi in cupulam tubumve corollæ adnatum connatis; antheræ lineari-oblongæ, dorsifixæ. Ovarium subglobosum v. obovoideum, 3-gonum v. 3-lobum, 3-loculare, in stylum validum 3-sulcatum elongatum attenuatum, stigmatibus minutis; ovula basilaria, erecta. Fructus globosus v. ellipsoideus, 1-spermus, stylo terminali, pericarpio tenui v. crassiusculo fibroso, endocarpio tenui. Semen globosum, erectum, hilo parvo basilari, raphe levissime impressa, ramis 0, albumine æquabili solido; embryo supra basin dorsalis.—Palmæ inermes, elatæ, caudice solitario inferne annulato, superne vestigiis vaginarum vestito. Folia terminalia, ampla, sæpe albo-furfuracea, orbicularia v. basi cuneata, non profunde plicato-multifida, segmentis angustis apice 2-fidis induplicatis, marginibus filiferis, rhachi elongata, ligula brevi, petiolo superne concavo inermi, vagina brevi. Spadices longe pedunculati, rami ramulisque validis ascendentibus, rhachi vaginata; spathæ amplæ, crasse coriaceæ, pedunculo affixæ, basi tubulosæ, superne fissæ, sæpe argenteo-furfuraceæ. Flores majusculi. Fructus parvus v. majusculus.

Species 3-4, insularum Americorum et Sandwicensium incolæ. *Mart. Hist. Nat. Palm. iii. 242 (Livistona sp. 7, 8). Gaud. Voy. Bonite Bot. t. 58, 59 (Livistona?). H. Mann in Proc. Amer. Acad. vii. 204. Seem. Flor. Viti, 273, t. 79.*

96. *Licuala*, *Thunb. in Act. Holm. 1782, 84. (Pericycla, Blume, Rumph. ii. 47, t. 94.)*—Flores hermaphroditi, in ramis spadiceis interfoliacei paniculatim ramosi sessiles v. pedicellati, sparsi v. 2-3-ni, minuto bracteati v. ebracteati; perianthium post anthesin fere immutatum. Calyx cupularis v. breviter tubulosus, ore 3-fido. Corolla crasse coriacea, profunde 3-loba, lobis late ovatis acutis valvatis. Stamina 6, filamentis brevibus subulatis basi dilatatis in anulum fauci corollæ insertum demum liberum connatis; antheræ cordato-ovate, dorsifixæ. Ovarii carpella 3, vertice truncata exsculpta, ventre coherentia; stylus filiformis, stigmatibus 3-dentato; ovula subbasilaria, erecta. Carpella matura solitaria, parva, globosa ovoidea obovoidea v. ellipsoidea, stylo apicali, pericarpio tenui carnoso v. succulento, endocarpio crustaceo v. coriaceo. Semen globosum, erectum, liberum, læve, facie ventrali ad centrum perfossum, hilo basilari, raphe inconspicua, albumine corneo æquabili; embryo dorsalis.—Palmæ humiles, frutescentes, caudicibus solitariis v. cæspitosis inferne annulatis, supra sæpe longe vestigiis vaginarum et petiolorum tectis. Folia terminalia, in lacinias elongato-cuneatas plicatas truncatas apice lobatas v. laceras flabellatim sæpissime profunde divisas irregulariter fissa, rhachi brevissima, ligula brevi, petiolo gracili v. robusto inermi v. marginibus spinosis, vagina fibrosa. Spadices plerumque graciles, glabri v. furfuracei, rhachi vaginata; spathæ plures, pedunculum vaginantes, tubulosæ, ore oblique 2-fido, coriaceæ, persistentes; bracteæ et bracteolæ obsoletæ. Flores sparsi v. densi, interdum magni, semi-pollicares.

Species ad 30, Asiæ orientalis tropicæ, Archipelagi Malayani, Novæ Guinææ et Australiæ borealis

incolæ. *Mart. Hist. Nat. Palm.* iii. 234, t. 134, 135, 162. *Kunth, Enum. Pl.* iii. 238. *Gært. Fruct.* ii. t. 139. *Blume, Rumph.* ii. 37, t. 82, 88 ad 93. *Griff. in Calc. Journ. Nat. Hist.* v. 321; *Palm. Brit. Ind.* 117, t. 221 A, B, C, 222, 222 A, B, 223, 224 A, B, 225. *Kurz, For. Fl.* ii. 527. *Beccari, Malesia* 1, 80. *H. 97. **Livistona**, *R. Br. Prod.* iii. 123. (Saribus, *Blume, Rumph.* ii. 48, t. 95, 96.)—Flores hermaphroditi, minuti, in ramis gracilibus spadiceis interfoliacei paniculatim ramosissimi sessiles v. pedicellati, sparsi v. fasciculati, ebracteati v. minute bracteati; perianthium post anthesin fere immutatum. Sepala 3, rotundata, concava, basi connata, imbricata. Corolla crasse coriacea, profunde 3-loba, lobis late ovatis acutis valvatis. Stamina 6, filamentis brevibus subulatis basi dilatatis in annulum fauci corollæ insertum connatis; antheræ cordato-ovate, dorsifixæ. Ovarii carpella 3, ventre coherentia; styli breves, subulati, distincti v. coherentes, stigmatibus minuto; ovula basilaria, erecta. Carpella matura 1-3, globosa oblonga v. ellipsoidea, recta v. subincurva, stylo subterminali; pericarpio extus coriaceo v. tenuiter carnoso, endocarpio crustaceo. Semen erectum, pericarpio conforme, convexum, facie ventrali medio ad centrum excavatum, hilo parvo basilari, testa membranacea, raphe diffusa, ramis obscuris, albumine æquabili corneo; embryo dorsalis.—Palmæ inermes, caudice sæpe robusto et elato, inferne annulato, superne vestigiis vaginarum induto. Folia terminalia, ampla, patentia, orbicularia, flabellatim plicata, ad medium v. infra fissa, laciniis 2-fidis induplicatis margine nudis v. filiferis, rhachi brevi, ligula parva cordiformi libera, petiolo elongato robusto plano-convexo v. biconvexo marginibus spinosis, vagina in fibras reticulatas soluta. Spadices elongati, primum suberecti, demum fructiferi penduli, longe pedunculati, laxè ramosi, ramis gracilibus; spathæ plures, elongatæ, tubulosæ, compressæ, pedunculum vaginantes, crasse coriaceæ, 2-fidæ v. 2-labiatae, 2-carinatae v. ancipites; bractæ et bracteolæ obsoletæ. Flores viriduli. Fructus nitidus, ater cærulescens flavus v. brunneus.

Species ad 14, Asiæ orientalis tropicæ, Archipelagi Malayani, Novæ Guineæ et Australiæ orientalis incolæ. *Mart. Hist. Nat. Palm.* iii. 239, 319, t. 109, 110, 111, 135, 145, 146, et t. 102 (*Corypha*). *Kunth, Enum. Pl.* iii. 241. *Griff. in Calc. Journ. Nat. Hist.* v. 333; *Palm. Brit. Ind.* 127, t. 226 A, B, C, D, *App.* xxiii. *Miq. Fl. Ind. Bat.* iii. 57; *Suppl.* 591; *Pl. Jungh.* 165; *Palm. Archip. Ind.* 12. *Beccari, Males.* i. 84. *Kurz, For. Fl.* ii. 525. *Benth. Fl. Austral.* vii. 145. *F. Muell. Fragm. Phyt. Austral.* viii. 221. *H. Wendl. et Drude in Linnaea*, xxxix. 192, 226. *H. Wendl. in Bull. Bot. Soc. Fr.* viii. 439. *Jacq. Fragm.* t. 11, f. 1 (*Latania*). *Bot. Mag.* t. 6274. Spathæ in speciebus Asiaticis quam in Australianis multo majores et crassiores.

98. **Trachycarpus**, *H. Wendl. in Bull. Soc. Bot. Fr.* viii. 429.—Flores in ramis spadiceis interfoliacei paniculati sessiles, polygamo-monoici, solitarii v. 2-ni, bracteati et 2-bracteulati; perianthium post anthesin immutatum. Calyx 3-partitus, segmentis ovatis acutis. Corolla 3-partita, segmentis late ovatis obtusis v. acutis, valvatis. Stamina 6, basi corollæ inserta, filamentis liberis subulatis; antheræ ovate, dorsifixæ, in fl. ♀ imperfectæ. Ovarii carpella 3, basi connata, 3-gono-ovoidea, acuta, glabra v. tomentosa, in fl. ♂ imperfecta; stigmata brevina, recurva; ovula basilaria, erecta. Fructus globosus ellipsoideus v. subreniformis, 1-spermus, stigmatibus terminali, pericarpio tenuiter carnoso, endocarpio tenui v. crustaceo. Semen pericarpio conforme, erectum, liberum, ventre longitudinaliter sulcatum, hilo parvo basilari, raphe diffusa ramis obscuris, albumine corneo æquabili; embryo medio dorso situs.—Palmæ inermes, caudicibus solitariis et elatis v. humilibus et cespitosus, superne rete fibrosa e vestigiis vaginarum confecta dense obtectis. Folia terminalia, orbicularia v. seniorebicularia, profunde plicato-multifida, laciniis angustis 2-fidis induplicatis, rhachi 0, ligula brevissima, petiolo 2-convexo, vagina integra strato interiore e fibris dense intertextis. Spadices plures, breves v. elongati, robusti, densi v. laxiflori; spathæ plures, majusculæ, compressæ, oblique fissæ, crasse coriaceæ, tomentosæ, pedunculum ramosque primarios spadiceis vaginantes; bractæ et bracteolæ minutæ. Flores parvi, flavescentes. Fructus cæruleus v. croceus, glaber v. tomentosus.

Species 4, 2 montium Indiæ borealis et Burmæ incolæ, una Chinensis, quarta Japonica. *Mart. Hist. Nat. Palm.* iii. 251 (sp. 3, 4, 7), t. 125. *Griff. in Calc. Journ. Nat. Hist.* v. 339 (sp. 1); *Palm. Brit. Ind.* 133, t. 227 A, B. *Wall. Pl. As. Rar.* iii. t. 211. *Kurz, For. Fl.* ii. 526. *Brand. For. Fl.* 546. *Bot. Mag. t.* 5221 (excl. f. 6, 7) (omnes sub *Chamæropside*).

99. **Rhapis**, *Linn. f. in Ait. Hort. Kew.* iii. 473.—Flores dioici v. polygamo-dioici, in ramis gracilibus spadiciis interfoliacei patentim paniculato-ramosi sessiles, solitarii, 1-bracteati, perianthio crasse coriaceo post anthesin immutato. Fl. ♂ : Calyx cupularis, 3-dentatus. Corolla obovoidea v. clavata, 3-fida, lobis brevibus late ovatis acutis valvatis. Stamina 6, filamentis tubo corollæ adnatis, apicibus liberis; antheræ didymæ, dorsifixæ, extrorsum dehiscentes, demum versatiles. Ovarii rudimenta obsoleta. Fl. ♀ : Perianthium maris, sed brevius. Staminodia 6. Ovarii carpella 3, distincta, carpophoro elongato imposita, dorso convexa, ventre bifacialia; styli breves, stigmatibus acutis; ovula globosa, oblique lateraliter appensa. Fructus e carpellis 1-3 parvis obovoideis 1-spermis, styliis terminalibus, pericarpio carnoso intus fibroso, endocarpio molli. Semen depressoglobosum, liberum, ventre profunde excavatum, cavo materie spongiosa farcto, hilo suprabasilar, raphe inconspicua, albumine æquabili; embryo dorsalis.—Palmæ humiles, caudicibus dense cæspitosis arundinaceis longe foliosis vestigiis reticulatis vaginarum tectis. Folia alterna et terminalia, submembranacea, connata v. semiorbicularia, digitatim irregulariter inter nervos 3-∞-partita, segmentis linearibus cuneatis v. ellipticis truncatis integris dentatis v. fissis, nervis 3-∞, nervulis transversis conspicuis, rhachi 0, ligula brevissima semicirculari, petiolo gracili biconvexo marginibus lævibus v. serrulatis, vagina elongata in rete laxum soluta. Spadices foliis breviores, graciliter pedunculati, rhachi bracteis deciduis vaginata, ramis patentibus; spathæ 2-3, incompletæ, membranaceæ. Flores flavescentes.

Species 4 v. 5, Chinæ et Japoniæ incolæ. *Mart. Hist. Nat. Palm.* iii. 253, t. 144. *Kunth, Enum. Pl.* iii. 251. *Miq. Fl. Ind. Bat.* iii. 61. *Jacq. Hort. Schænb.* t. 316. *Bot. Mag. t.* 1371. Flores ♀ non visi. Fructus in una specie tantum scrutatus a nobis.

100. **Thrinax**, *Linn. f. in Swartz, Prod.* 57; *Fl. Ind. Occ.* 613, t. 13.—Flores hermaphroditi, in ramis gracilibus spadiciis interfoliacei paniculatim ramosi sparsi, pedicellati, pedicello basi bracteato; perianthium post anthesin immutatum. Calyx et corolla in cupulam brevem 6-fidam confluentes. Stamina 6-12, basi perianthii inserta, filamentis filiformi-subulatis basi breviter connatis; antheræ oblongæ v. lineari-oblongæ, dorsifixæ, utrinque 2-fidæ, connectivo tenui. Ovarium ovoideum v. globosum, 1-loculare, in stylum cylindraceum attenuatum, stigmata infundibulari; ovulum basilare, erectum. Fructus pisiformis, stylo apiculatus, pericarpio tenui. Semen liberum, erectum, globosum v. depressoglobosum, sulcis sinuatis verticalibus exsculptum, hilo basilar, rapheos ramis in sulcis reconditis, albumine corneo æquabili v. subruminato; embryo apicalis.—Palmæ inermes, mediocres v. humiles, caudicibus solitariis v. cæspitosis inferne annulatis superne vaginis foliorum in rete solutis longe vestitis. Folia terminalia, orbicularia v. basi truncata, flabellatim plicata et multifida, laciniiis 2-fidis induplicatis, rhachi brevi v. 0, ligula libera erecta concava, petiolo gracili biconvexo, marginibus lævibus, vagina sæpius elongata rete pulcherrimum efformante. Spadices elongati, rhachi vaginis tubulosis vestita, ramis primariis alternis paniculatim ramosis, ramulis gracilibus; spathæ plures, pedunculo insertæ, papyraceo-coriaceæ, fissæ. Flores interdum longiuscule graciliterque pedicellati, pedicello basi bractea caduca stipato; bracteolæ minutæ v. obsoletæ. Fructus parvus.

Species ad 10, una Floridana, ceteræ Insularum Antillarum incolæ. *Mart. Hist. Nat. Palm.* iii. 254, 320, t. 103, 163. *Kunth, Enum. Pl.* iii. 252. *Griseb. Cat. Pl. Cub.* 221. *T. ? Chuco, Mart. Palm. Orbign.* 45, t. viii. f. 1 et 25 B, floribus ignotis, versimiliter non hujus generis.

101. **Memithrinax**, *Hook. f. gen. nov.*—Flores hermaphroditi, minuti, in ramis spadiciis interfoliacei duplicato-ramosi sparsi, sessiles v. breviter stipitati, solitarii v. 2-3-ni, ebrac-

teati et ebracteolati; perianthium obsoletum, ad stipitem brevissimum basi truncatum setulis 6 minutissimis coronatum reductum. Antheræ 6, sessiles, breves, latæ, in annulum ovarium cingentem dispositæ, medio dorso affixæ, reversæ, loculis discretis ellipsoideis extus dehiscentibus, connectivo crassissimo subquadrato sicco rugoso. Ovarium ovoideum, 1- rarius 2-3-loculare, in stylum crassum curvum antheras superantem attenuatum, stigmatibus subinfundibulari flabellatim expanso obscure 3-lobato; ovula basilaria, erecta. Fructus pisiformis, breviter stipitatus, stylo apicali, pericarpio tenuiter crustaceo. Semen depresso-globosum, erectum, liberum, ad hilum late et profunde intrusum in fossam testa suberosa farctam, testa atra, hilo parvo basilari, raphe subbasilari indistincta, albumine corneo æquabili; embryo fere apicalis.—Palma . . . Folia terminalia, coriacea, orbicularia, plicato-multifida, subtus glauca, laciniis latis acuminatis induplicatis breviter 2-fidis, costa valida, nervis utrinque ad 8. Spadices breves, rhachi evaginata, ramulis crassiusculis curvis pubescentibus; spathæ plures, papyraceo-coriaceæ, elongatæ, acuminatæ, longe fissæ. Flores diametro ramulis minores. Fructus pallidus.

Species 1, Cubensis. *Griseb. Cat. Pl. Cub.* 221 (*Trithrinæ compacta*).

#### TRIBUS IV. LEPIDOCARYÆ.

102. *Calamus*, *Linu. Gen. n.* 436.—Flores polygamo-monoici v. dioici, in ramis spadiceis interfoliaceis paniculatim ramosi vaginati bifariam inserti, solitarii 2-ni v. rarissime glomerati, bracteati et bracteolati; perianthium coriaceum. Fl. ♂: Calyx cupularis, 3-dentatus v. 3-fidus. Petala 3, libera v. basi connata, oblonga v. lanceolata, acuta, valvata. Stamina 6, rarissime pauciora, fundo v. faucibus corollæ inserta, filamentis brevibus v. subulatis basi liberis v. connatis, apicibus rectis v. infractis interdum incrassatis; antheræ lineares sagittatæ v. oblongæ, dorsifixæ. Ovarii rudimentum minutum v. 0. Fl. ♀ masculos subæquantes; perianthio post anthesin paullo aucto. Calyx maris. Corolla basi tubulosa, 3-fida, laciniis ovatis acutis valvatis. Staminodia 6, in cupulam liberam v. tubo corollæ adnatam connata. Ovarium ovoideum v. globosum, retrorsum squamatum, incomplete 3-loculare; stylus brevis v. elongatus, stigmatibus brevibus v. elongatis; ovula 3, basilaria, erecta. Fructus globosus v. ellipsoideus, 1- rarissime 2-3-spermus, stylo terminali, pericarpio tenui squamis deorsum imbricatis tessellatim loricato. Semen globosum ellipsoideum plano-convexum v. deforme, læve v. sinuato-sulcatum, suberectum, extus molliter carnosulum, chalaza laterali, rapheos ramis a chalaza ad situm embryonis decurrentibus, albumine æquabili v. leviter ruminato; embryo subbasilaris v. ventralis.—Palme armatæ, sæpissime debiles, scandentes, rarius erectæ, caudicibus cæspitosis longissimis remote annulatis. Folia alterna, remota, æqualiter pinnatisecta, segmentis æquidistantibus interruptis v. fasciculatis lanceolatis ensiformibus v. ellipticis, apicibus integris, costa nervis marginibusque basi recurvis sæpe setosis, rhachi dorso convexa facie acuta sæpe in funem aculeatum foliolatum producta, petiolo brevi v. elongato obtuse 3-gono, vagina aculeata sæpe in ligulam concavam rarissime in ocream brevem producto, non raro flagello elongato aculeato uno latere instructa. Spadices breves v. elongati, dense v. laxè paniculatim ramosi, ramis sæpius gracillimis, floriferis brevibus v. elongatis rectis v. scorpioides interdum crassis et complanatis, bracteis dense imbricatis quasi articulatis, rhachi non raro in funem producta, pedunculo gracili v. robusto libero v. vaginæ folii insequentis longe adnato; spathæ numerosæ, pedunculum ramosque vaginantes, tubulosæ, incomplete, v. 1-2 inferiores majores et completæ, coriaceæ inermes v. aculeatæ. Flores parvi, sæpissime virides, rarissime pubescentes, intra bractæas spathaceas solitarii v. bini, altero sæpe abortivo aut sexu distincto; bracteolæ liberæ v. connatæ. Fructus parvus v. mediocris.

Species ad 200, omnes tropicæ v. subtropicæ, pleræque oriento-Asiaticæ paucae Australienses et Africa tropicæ incolæ. *Mart. Hist. Nat. Palm.* iii. 207, 331, t. 112, 113, 116, 128, 160, 175, 176. *Gertn. Fruct.* ii. t. 139. *Lam. Illustr.* t. 770. *Blume, Rumph.* iii. 28, t. 146 ad 154, 163, 163 B. *Griff. in Calc. Journ. Nat. Hist.* v. 26, cum ic.; *Palm. Brit. Ind.* 33, t. 185 ad 216 C et 216 B (*Dæmonorops*), *Append. xx.* *Miq. Fl. Ind. Bat.* iii. 103 749; *Suppl.* 90, 256, 594; *Palm. Archip.*

*Ind.* 17. *Kurz, For. Fl.* ii. 515. *Thwaites, Enum. Pl. Zeyl.* 330, 431. *Benth. Fl. Austral.* vii. 134. *Mann et H. Wendl. in Trans. Linn. Soc.* xxiv. 429, t. 41 F. *H. Wendl. in Bot. Zeit.* 1859, 158. *Drude in Bot. Zeit.* 1877, 637, t. 5, f. 1, 2. *T. Anders. in Journ. Linn. Soc.* xi. 8.

Genus in sectiones sequentes subnaturales a Griffithio divisum est :—

1. *Coleospathæ*. Spadices diffusi ; spathæ omnes sub anthesin persistentes, tubulosæ, limbo parvo v. obsoleto.

2. *Piptospathæ*. Spadices diffusi ; spathæ 1 v. 2 inferiores persistentes, ramorum deciduæ.

3. *Platyspathæ*. Spadices contracti ; spathæ omnes sub anthesin persistentes, planæ, vaginis parvis v. 0.

4. *Cymbospathæ*. Spadices contracti ; spathæ cymbiformes, rostratæ, diu persistentes, 2 inferiores ceteras involucentes, vaginis obsoletis. *DEMONOROPS*, *Blume in Ram. et Schult. Syst.* vii. 1322 ; *Rumph.* ii. t. 131 ad 137 ; iii. 2, t. 138 ad 145, 163 B. *Mart. Hist. Nat. Palm.* iii. 203, 326, t. 117, 125, 175 ad 177. *Kunth, Enum. Pl.* iii. 204. *Miq. Fl. Ind. Bat.* iii. 81 ; *Suppl.* 90, 255, 592.

103. *Zalacca*, *Reinw. in Syll. Pl. Soc. Bot. Ratisb.* ii. 3 (Salacca).—Flores poly gamo-monoici v. dioici, in ramulis amentiformibus spadices interfoliacei elongati dense multifariam conferti, bracteati et 2-bracteolati ; ♂ 2-ni, ♀ solitarii v. 2-ni altero sterili ; perianthium coriaceum. Fl. ♂ : Calyx tubulosus et 3-fidus v. 3-partitus. Corolla tubulosa, 3-fida, laciniis valvatis. Stamina 6, tubo corollæ inserta, filamentis brevibus basi connatis ; antheræ breves, oblongæ v. lineari-sagittatæ, subbasifixæ. Ovarii rudimenta minuta v. 0. Fl. ♀ masculis majores, perianthio post anthesin aucto. Calyx 3-fidus v. 3-partitus. Corolla tubulosa, 3-fida, laciniis lanceolatis valvatis. Staminodia 3 v. 6, libera v. in cupulam connata. Ovarium 3-loculare, setosum v. squamosum ; stigmata 3, subulata ; ovula basilaria, erecta. Fructus globosus turbinatus v. obovoideus, 1-3-spermus, septis fere evanidis, stigmatibus terminalibus, pericarpio tenui squamis deorsum imbricatis interdum longe spinescentibus tessellatim loricato. Semina solitaria et globosa v. 2-3 et obtuse angulata, hilo basilari, vertice profunde excavata, testa crustacea extus molliter carnosæ, chalaza apicali, albumine osseo æquabili ; embryo basilaris.—Palmæ acaules, radicibus soboliferis. Folia elongata, æqualiter pinnatisecta, segmentis alternis fastigiatis v. æquidistantibus lanceolatis v. oblanceolatis rectis v. falcatis acuminatis, nervis parallelis supremis interdum connatis, marginibus setosis ima basi recurvis, rhachii obtuse 3-gona aculeata non producta, petiolo valido teretiusculo aculeis sæpe spiraliter dispositis palmatisve armato, vagina valide armata aculeis compressis, ligula 0. Spadices simplices v. fastigiatim ramosi, penduli, ramulis floriferis breviusculis remotis v. confertis sessilibus v. pedunculatis ; spathæ persistentes, inferiores pedunculum ramosque vaginantes, incompletæ ; partiales ramulos floriferos subtendentes, primum clausæ, papyraceæ ; bracteolæ in cupulam glabram v. villosam 2-locularem connatæ. Flores sæpius rosei. Fructus sæpissime rostratus.

Species ad 8, Archipelagi Malayani incolæ et una Assamica. *Mart. Hist. Nat. Palm.* iii. 199, 325, t. 118, 119, 123, 136, 159, f. 3, 173, 174. *Kunth, Enum. Pl.* iii. 102. *Gartn. Fruct.* t. 139 (*Calamus*). *Blume, Rumph.* ii. 158. *Griff. in Calc. Journ. Nat. Hist.* v. 6 ; *Palm. Brit. Ind.* 9, t. 175 ad 180 C ; *App.* xix. *Miq. Fl. Ind. Bat.* iii. 80. *Kurz, For. Fl.* ii. 511. *Wall. Pl. As. Rar.* iii. t. 222.

104. *Xorthalsia*, *Blume, Rumph.* ii. 166, t. 130, f. 2. (*Ceratolobus*, *Blume, ibid.* iii. t. 157, 157 B. *Calamosagus*, *Griff. in Calc. Journ. Nat. Hist.* v. 22 ; *Palm. Brit. Ind.* 26, t. 183, 184, 184 A).—Flores dioici (hermaphroditi, *Griff.*) in ramulis amentiformibus spadices vaginati interfoliacei dense multifariam conferti, bracteati et bracteolati ; perianthium coriaceum. Fl. ♂ : Sepala orbicularia v. late oblonga. Petala oblongo-lanceolata, valvata. Stamina 6, basi petalorum inserta, filamentis brevibus basi connatis ; antheræ lineares, subsagittatæ, dorsifixæ. Ovarii rudimentum oblongum. Fl. ♀ masculos subæquant. Sepala maris. Corolla basi tubulosa, 3-fida, laciniis ovatis acutis valvatis. Staminodia 6 v. plura, fauci corollæ inserta. Ovarium imperfecte 3-loculare, squamis recurvis obtectum ; stylus brevis v. elongatus, stigmatibus 3 brevibus recurvis ; ovula 3, basilaria, erecta. Fructus globosus v. ovoideus, 1-locularis, 1-spermus, stylo terminali, pericarpio tenui squamis deorsum imbricatis tessellatim loricato. Semen erectum, obovoideum v. globosum,

vertice profunde foveolatum, chalaza laterali, albumine ruminato; embryo ventralis, vagus.—Palmæ graciles, caudice elongato scandente flexuoso. Folia alterna, pinnatisecta, segmentis alternis trapeziformibus basi cuneatis in petiolum brevem angustatis flabellatim venosis, supra medium erosis, marginibus ima basi recurvis, rhachi trigona in funem aculeatum producta, petiolo brevi teretiusculo, vagina cylindracea in ligulam scaphoideam producta. Spadices laxè ramosi, penduli, pedunculo ramisque primariis spathis tubulosis elongatis persistentibus vaginatis, ramulis floriferis omnino exsertis; bracteæ latiores quam longæ, membranaceæ, bracteolæ ad villos reductæ. Flores parvi. Fructus parvus.

Species ad 16, Archipelagi Malayani et Novæ Guineæ incolæ. *Mart. Hist. Nat. Palm.* iii, 210, 343, t. 172, f. 1. *Miq. Fl. Ind. Bat.* iii, 74, 750; *Suppl.* 591; *Pl. Jungh.* 162. *Kurz, For. Fl.* ii, 512. *H. Wendl. in Bot. Zeit.* 1859, 174. *Beccari, Malesia*, i, 87.

105. **Ceratolobus**, *Blume in Schult. Syst.* vii, 1334; *Rumph.* ii, 163, t. 129, 137 A.—Flores polyagmo-monoici, in ramis gracillimis spadiceis exigui interfoliacei longe gracillime pedunculati sæpissime 2-ni, inferiore sessili ♀, superiore stipitato ♂ v. neutro, bracteati; perianthium coriaceum. Fl. ♂: Calyx parvus, 3-fidus, lobis triangularibus patulis. Petala lanceolata, acuta, valvata. Stamina 6, basi petalorum inserta, filamentis ima basi connatis; antheræ lineares, dorsifixæ. Ovarii rudimentum minutum. Fl. ♀ masculos subæquantes. Calyx maris. Corolla 3-fida, laciniis valvatis. Stamina 6, tubo corollæ inserta, antheræ lineares, dorsifixæ. Ovarium ovoideum, imperfecte 3-loculare, squamis reversis onustum; stigmata 3, majuscula, recurva; ovula 3, basilaria, erecta. Fructus globosus v. ellipsoideus, 1-ocularis, 1-spermus, stigmatibus terminalibus, pericarpio tenui squamis deorsum imbricatis tessellatim loricato. Semen globosum, erectum, testa rugulosa extus molliter carnosâ, chalaza laterali, albumine ruminato; embryo basilaris.—Palma gracilis, caudice elongato erecto v. scandente vaginis aculeatis foliorum tecto. Folia alterna, æqualiter pinnatisecta, segmentis oppositis et alternis sessilibus cuneato-rhombeis longe acuminate plicatis antice crenato-erosis marginibus ima basi recurvis, costa distincta, rhachi trigona aculeata et in funem aculeatum producta, petiolo brevi teretiusculo, vagina tubulosa in ligulam brevem producta. Spadix 4-6-pollicaris, exilis, laxè paniculatus, complanatus, rhachi ramisque basi squama instructis filiformibus flexuosis, pedunculo pedunculato pedulo aculeato vaginæ folii insequentis longe adnato; spatha solitaria, siliquiformis, completa, lineari-oblonga, complanata, longe rostrata, anceps, marginibus basi aculeolatis, membranacea, secus margines tarde dehiscens. Flos superior ebracteatus, inferior bracteis bracteolisque vaginantibus instructus. Fructus parvus.

Species 2, Javanica et Sumatrana. *Mart. Hist. Nat. Palm.* iii, 196, 325, t. 115. *Kunth, Enum. Pl.* iii, 200. *Miq. Fl. Ind. Bat.* iii, 73.

106. **Pigafetta**, *Beccari, Males.* i, 89.—Flores polygamo-monoici, in ramulis amentiformibus spadiceis axillaribus laxè paniculatis ramosi dense conferti, bracteati; perianthium coriaceum. Fl. ♂: Calyx obconicus, truncatus v. obscure 3-dentatus. Petala 3, libera, lanceolata, valvata. Stamina 6, filamentis brevibus crassis; antheræ erectæ, ovato-lanceolatae, basi sagittata affixæ, cuspidatæ. Ovarii rudimentum inconspicuum. Fl. ♀ . . . Fructus globosus v. oblongus, 1-ocularis, 1-spermus, stigmatibus terminalibus; pericarpio squamis retrorsum imbricatis tessellatim loricato. Semen oblongum v. globosum, subrugosum v. irregulariter costatum, carne molli indutum, hilo basilari, chalaza dorsali, albumine æquabili; embryo dorsalis.—Palmæ elatæ, caudice robusto superne aculeato, basi sobolifero, inferne remote annulato. Folia terminalia, pinnatisecta, segmentis oppositis et alternis lanceolatis acuminate, marginibus basi recurvis, petiolo teretiusculo inermi v. aculeato. Spadices paniculati ramosissimi, penduli, pedunculo ramisque primariis spathis tubulosis truncatis incompletis vaginatis, ramulis amentiformibus graciliter pedunculatis basi vaginatis; bracteæ lanceolatae. Flores lana immersi, spiraliter dispositi.

Species 3, Archipelagi Malayani et Novæ Guineæ incolæ. *Mart. Hist. Nat. Palm.* iii, 215, 343 (*Metroxylon sect. Pigafetta*), et t. 102 (*Sagus*). *Blume, Rumph.* ii, 154, t. 128 (*Sagus*). Genus imperfecte notum, a nobis haud scrutatum.

107. *Plectocomia*, Mart. et Blume in Schult. Syst. vii. 2, 1333.—Flores dioici, in spiculis brevibus spadiceis axillaris (v. terminalis) spathellis conchiformibus imbricatis velatis inserti, secundi, minute bracteati et bracteolati; perianthium coriaceum. Fl. ♂: Calyx cupularis v. obconicus, 3-fidus v. 3-dentatus. Petala 3, oblique lanceolata, acuminata, basi breviter connata, valvata. Stamina 6, basi perianthii inserta, filamentis subulatis basi in columnam brevem connatis; antheræ lineares, erectæ, dorsifixæ. Ovarii rudimentum 0. Fl. ♀ masculis majores, perianthio post anthesin aucto. Calyx cupularis, 3-dentatus. Corolla 3-fida, basi ventricosa, lobis ovato-lanceolatis acuminatis valvatis. Staminodia 6, in anulum fauci corollæ insertum connata, antheris cassis. Ovarium subglobosum, 3-loculare, squamis fimbriatis nudisve reversis operta; stigmata 3, sessilia, linearia, erecta; ovula basilaria, erecta. Fructus globosus, 1- rarius 3-spermus, breviter rostratus, stigmatibus terminalibus, pericarpio tenui squamis retrorsum imbricatis tessellatim loricato, intus carnosulus. Semen erectum, subglobosum angulatum v. subplanoconvexum marginibus grosse crenatis, hilo basilari, chalaza apicali, raphe distincta, albumine æquabili; embryo basilaris.—Palmæ scandentes, monocarpicæ?, aculeis recurvis armatæ, caudicibus gracilibus v. robustis longissimis annulatis superne longe vaginatis. Folia alterna, æqualiter pinnatisecta, segmentis remotis v. fasciculatis anguste elliptico-lanceolatis, longe graciliterque acuminatis, basi contracta marginibus recurvis, rhachi obtuse trigona in funem elongatum aculeatum producta, petiolo teretiusculo vaginaque tubulosa aculeatis, ligula 0. Spadices simpliciter ramosi, ramis secundis pluripedalibus pendulis; spathellæ arcte imbricatæ, subcylindrææ v. leviter compressæ, oblongæ v. cuneatæ, basi contractæ et rhachin spadiceis amplectentes, apicibus rotundatis v. acutis, coriææ, siccæ, persistentes; spiculæ ♂ pollicares, multifloræ, ♀ breviores paucifloræ; bractæ et bracteolæ subulatae. Fructus inter minores tribus.

Species ad 6, montium Indiæ transgangeticæ et Archipelagi Malayani incolæ. Mart. Hist. Nat. Palm. iii. 198, 325, t. 114, 116, f. 1, 176, f. 11, 12. Kunth, Enum. Pl. iii. 202. Blume, Rumph. iii. 68, t. 158, 159, 163. Griff. Palm. Brit. Ind. 103, App. xxi. t. 217 ad 219. Mig. Fl. Ind. Bat. iii. 78; Suppl. 592. Kurz, For. Fl. ii. 514. T. Anders. in Journ. Linn. Soc. xi. 11. H. Wendl. in Bot. Zeit. 1859, 165. Bot. Mag. t. 5105. Spadix in *P. himalayana* terminalis fide T. Anderssonii, l. c., in aliis certe axillaris est. Planta culta monocarpica videtur.

108. *Eugeissonia*, Griff. in Calc. Journ. Nat. Hist. v. 101, cum ic.; Palm. Brit. Ind. 109, App. xxii. t. 220, 220 A, B, C.—Flores elongati, dioici, ad apices ramulorum spadiceis terminalis contracti erecti, longe pedunculati, solitarii v. 2-3-ni, bracteati et bracteolati; perianthium crasse coriaceum. Fl. ♂: Calyx campanulatus, 3-fidus. Corolla 3-gona, basi breviter contracta et solida, segmentis elongato-lanceolatis acuminatis pungentibus valvatis. Stamina ad 12, filamentis brevibus basi connatis; antheræ elongato-lineares, acutæ, loculis a latere dehiscentibus. Ovarii rudimentum 0. Flores ♀ masculis majores, perianthio post anthesin valde aucto. Calyx maris. Petala unguiculata, ungue dilatato, lamina elongato-lanceolata acuminata pungente, basi intus crista transversa pilorum aucta, valvata. Staminodia 0 nisi cristæ petalorum. Ovarium oblongum, squamis reversis tectum, 3-loculare; stigmata sessilia, oblonga, complanata; ovula basilaria, erecta. Fructus ovoideus, in rostrum crassum obtusum attenuatus, 1-locularis, 1-spermus, stigmatibus terminalibus, pericarpio squamis parvis retrorsum imbricatis tessellatim loricato, endocarpio lignoso intus septis 6 imperfectis in longitudinem percurso. Semen ovoideum, erectum, extus subcellulosum, in longitudinem profunde 6-sulcatum, hilo basilari, chalaza rapheque inconspicuis, albumine æquabili solido; embryo basilaris.—Palmæ monocarpicæ, armatæ, caudicibus cæspitosis. Folia elongata, suberecta, æqualiter pinnatisecta, segmentis æquidistantibus anguste lanceolatis caudato-acuminatis, costa gracili setosa marginibus basi recurvis, rhachi trigona inermi apice non producta, petiolo elongato teretiusculo aculeis complanatis armato, ligula 0, vagina brevi. Spadices stricti, thyosoideo-ramosi, ramis erectis, inferne foliis parvis ad vaginas flagelliferas reductis aucti, ramulis crassitie pollicis cylindræis erectis vaginis obtusis dense subdistiche imbricatis tectis, vaginis

supremis in bracteas bracteolasque desinentibus, inferioribus carinatis. Flores 1-4-pollicares, teretes, curvi, longe exserti. Fructus majusculus.

Species 2 v. plures, Archipelagi Malayani incolæ. *Mart. Hist. Nat. Palm.* iii. 212, 343, t. 179, 180. *Miq. Fl. Ind. Bat.* iii. 77. *Beccari in Nuov. Giorn. Bot. Ital.* iii. 18.

109. **Metroxylon**, Rottb. in *Nye Saml. Dansk. Videns. Selsk. Skrift.* ii. 525, t. 1. (*Sagus*, Blume, *Rumph.* ii. 146 (excl. sect. 2), t. 86, 126, 127.)—Flores polygamo-monoici v. hermaphroditi, in ramulis amentiformibus spadiceis terminalis dense multifariam conferti, 2-ni v. solitarii, bracteati et bracteolati; perianthium coriaceum. Fl. ♂: Calyx infundibularis, 3-fidus v. 3-dentatus, nervosus. Corolla 3-fida, laciniis oblongis valvatis. Stamina 6, basi v. faucis corollæ inserta, filamentis basi connatis; antheræ lineares v. sagittatæ, dorsifixæ. Ovarii rudimentum 3-partitum. Fl. ♀ masculis consimiles, perianthio post anthesin fere immutato. Staminodia in urceolum membranaceum connata, antheris cassis v. 0. Ovarium oblongum, retrorsus squamosum, imperfecte 3-loculare; stylus conicus, stigmatibus 3 dentiformibus; ovula 3, basilaria, erecta. Fructus ellipsoideus v. subglobosus, 1-locularis, 1-spermus, stylo terminali, pericarpio squamis deorsum imbricatis tessellatim loricato, endocarpio spongioso. Semen erectum, globosum v. depresso-globosum, rugulosum, testa tenui, carne 0, hilo et chalaza subbasilaribus, rapheos ramis inconspicuis, albumine duro ruminato; embryo ventralis.—Palmæ monocarpicæ, erectæ, caudicibus sæpe cæspitosis robustis mediocribus v. elatis basi soboliferis, inferne annulatis. Folia terminalia, suberecta, æqualiter pinnatisecta, segmentis oppositis lineari-lanceolatis, acuminatis, costa subtus setosa, marginibus basi recurvis, rhachi inferne convexa superne obtusa v. acuta, petiolo dorso convexo antice sulcato longe denseque armato, vagina coriacea aperta, ligula 0. Spadix amplus, laxè paniculato-ramosus, totus spathis tubulosis vaginatus, ramulis floriferis alternis distichis elongatis patenti-recurvis; spathæ coriaceæ, aculeatæ; bractæ latiores quam longæ, bracteolæ in cupulam campanulatam connatæ. Flores lana immersi.

Species ad 6, Archipelagi Malayani, Novæ Guineæ et insularum Fiji incolæ. *Mart. Hist. Nat. Palm.* iii. 213, 343 (excl. sect. *Pigafetta*), t. 102, 159. *Kunth, Enum. Pl.* iii. 213 (excl. sp.). *Dict. Sc. Nat.* t. 32, 33 (*Sagus*). *Kæn. in Kæn. et Sims Ann. Bot.* i. 193, t. 4. *Griff. Palm. Brit. Ind.* 21, t. 181; *Append. xx.* (*Sagus*). *Miq. Fl. Ind. Bat.* iii. 139 (excl. sect. 2). *Beccari, Males.* 91; et in *Nuov. Giorn. Bot. Ital.* iii. 29. *Cœlococcus*, *H. Wendl. in Seem. Fl. Vit.* est *Sagus vitiensis*, *H. Wendl.*

110. **Raphia**, Beauv. *Fl. Ov. et Ben.* i. 75, t. 44, f. 1, 45, 46. (*Metroxylon*, *Spreng. Gen. Pl.* 283, non Rottb.)—Flores in ramulis pectinatis compressis ejusdem spadiceis maximi terminalis fastigiatim ramosi monoici, distichi, bracteati et bracteolati; perianthium crasse coriaceum. Fl. ♂: Calyx tubulosus, ore truncato integerrimo v. minute denticulato. Corolla curva, basi contracta trigona solida, segmentis 3 lineari-lanceolatis valvatis. Stamina 6-16, filamentis subulatis v. incrassatis basi connatis et basibus segmentorum insertis; antheræ erectæ, lineares, basin versus affixæ, obtusæ v. mucronatæ, loculis a latere dehiscentibus. Ovarii rudimentum 0. Fl. ♀ masculis majores, perianthio post anthesin immutato. Calyx et corolla maris. Staminodia in urceolum 6-∞-dentatum, corollæ tubo basi insertum connata. Ovarium ovoideum, 3-loculare, retrorsus squamosum; stigmata sessilia, subulata, recurva; ovula supra basin loculorum inserta. Fructus magnus, oblongus ovoideus v. ellipsoideus, rostratus, 1-locularis, 1-spermus, stigmatibus terminalibus, pericarpio crasso squamis retrorsum imbricatis tessellatim loricato, endocarpio fungoso. Semen latere affixum, oblongum, utrinque obtusum v. acutum, sulcatum, hilo laterali, raphe lineari ramis reticulatis, albumine osseo solido ruminato; embryo ventralis.—Palmæ monocarpicæ, inermes v. vaginis armatis, caudicibus mediocribus v. elatis simplicibus v. dichotome divisis dense annulatis. Folia terminalia, longissima, suberecta, æqualiter pinnatisecta, segmentis lineari-lanceolatis acuminatis crasse coriaceis, costa valida, marginibusque basi recurvis setosis v. aculeolatis, rhachi bifaciali antice acuta apice non producta, petiolo cylindraceo v. dorso convexo facie planiusculo, vagina brevi, marginibus longe fibrosis. Spadices maximi, penduli, cylindracei, dense ramosis-

simi, ramis brevibus imbricatis flabelliformibus pectinatim ramosis ramulisque crassiusculis compressis bracteis floriferis vaginantibus densissime vaginatis quasi articulatis; spatha communis 0, partiales numerosæ, ramos incomplete vaginantes; bracteæ cyathiformes, compressæ, arcte imbricatæ; bracteolæ dorso in vaginulam 2-fidam connatæ. Flores elongati, sæpius decurvi, longe exserti, inferiores in ramulis ultimis spadiceis ♀. Fructus magnus, squamis amplis.

Species 6 v. 7, Africæ tropicæ et Madagascariæ incolæ, et una Americana ab Amazonum ostia ad Nicaraguam extensa. *Mart. Hist. Nat. Palm.* ii. 53, t. 45, 47, f. 5, 48 (*Sagus*), iii. 216, 343. *Kunth, Enum. Pl.* iii. 216. *Lam. Illustr. t.* 771 (*Sagus*). *Dict. Sc. Nat. t.* 30, 31 (*Sagus*). *Gærtn. Fruct. t.* 10, f. 1 (*Sagus*). *Griff. Palm. Brit. Ind. t.* 182 (*Sagus*). *Drude in Mart. Fl. Bras.* iii. ii. 286, t. 61, 62. *Wallace, Palm. Amaz.* 42, t. 2, 16. *Mann et H. Wendl. in Trans. Linn.-Soc.* xxiv. 437, t. 39 A, B, 42 A, B, C, D.

111. **Oncocalamus**, *Mann et H. Wendl. in Kerch. de Dentergh. Palm.* 252; et in *Trans. Linn. Soc.* xxiv. 436, t. 41 E, 43 E (*Calami subgenus*).—Flores monoici, in ramis spadiceis axillaris simpliciter ramosi vaginati distiche glomerati, bracteati et bracteolati, glomerulis polygamo-monoicis; perianthium coriaceum. Fl. ♂ glomeruli numerosi. Calyx oblongus, 3-dentatus v. breviter 3-fidus, lobis fimbriatis valvatis. Petala calyce inclusa, ima basi connata, ovata, acuta, concava, chartaceo-coriacea, marginibus tenuibus valvatis. Stamina 6, filamentis in tubum carnosum oblongum truncatum petalis æquilongum connatis; antheræ minutæ, didymæ, ad os tubi sessiles, 3 alternæ paullo altius insertæ. Ovarii rudimentum styliforme. Fl. ♀ in glomerulo solitarii, centrales, perianthio post anthesin immutato. Calyx maris. Petala maris sed basi altius connata. Staminodia andrœcio maris similia sed antheris orbata, et tubo calycis adnata. Ovarium elongato-ovoideum, 3-loculare, superne squamis reversis opertum, in stylum strictum elongatum attenuatum, stigmatibus 3 brevissimis; ovula basilaria, erecta. Fructus immaturus globosus, stylo terminali. Semen . . .—Palma scandens, caudice elongato gracili. Folia elongata, æqualiter pinnatisecta, segmentis oppositis et alternis elongato-lanceolatis acutis, marginibus remote aculeatis basi recurvis, rhachi inermi obtuse 3-gona in funem gracilem 3-gonum segmentis in spinas alternas reversas mutatis producta, petiolo brevissimo, vagina in ocream truncatam producta. Spadices penduli, distiche ramosi, inermes, basi nudi, superne spathis tubulosis truncatis vaginati, ramis longissimis gracilibus pendulis; bracteæ imbricatæ, infundibulari-campanulatæ, spathelliformes, 5–11-flores; bracteolæ in corpus faviforme confertæ.

Species 1, Africæ occidentalis ad Sierra del Crystal incola. Flores ut nobis videtur pro maxima parte ♂, uno in glomerulo fructum maturante.

112. **Eremospatha**, *Mann et H. Wendl. in Kerch. de Dentergh. Palm.* 252; et in *Trans. Linn. Soc.* xxiv. 433, t. 41 A, B, C, 43 B (*Calami subgenus*).—Flores hermaphroditi v. polygami, in ramis spadiceis axillaris evaginatis simpliciter ramosi gemini, distichi, minute bracteati, ebracteolati; perianthium crasse coriaceum, post anthesin immutatum. Calyx campanulatus v. cupularis, truncatus v. 3-dentatus. Corolla oblonga, 3-loba, lobis brevibus ovatis acutis valvatis. Stamina 6, fauci corollæ inserta, filamentis brevissimis in anulum crassum 6-dentatum connatis; antheræ minutæ, cordatæ, dorso affixæ. Ovarium columnare, squamis reversis onustum; stigmata lingulata; ovula subbasilaria, erecta. Fructus oblongus ellipsoideus v. subcylindraceus, 1- rarius 2–3-locularis et -spermus, pericarpio tenui squamis deorsum imbricatis tessellatim loricato. Semen peltatum, oblongum, a dorso compressum, subrugosum, hilo supra-basiliari lineari, chalaza dorsali, rapheos ramis ab hilo radiantibus, albumine æquabili; embryo ventralis.—Palmæ scandentes, caudicibus elongatis gracilibus flexuosis annulatis. Folia alterna, æqualiter pinnatisecta, segmentis alternis et oppositis lineari-lanceolatis nervis in apicem acuminatum convergentibus, v. obovatis obtusis nervis flabellatim dispositis, marginibus basi recurvis nudis v. aculeolatis integerrimis v. supra medium erosis, rhachi obtuse 3-gona marginibus spinosis apice in funem elongatum 3-gonum segmentis in spinas oppositas crassas rigidas deflexas mutatis producta, petiolo sub 0, vagina tubulosa aculeata in ocream truncatam producta. Spadices

breves, breviter pedunculati, pedunculo ramisque compressis distichis robustis patentibus; spathæ ad squamas brevissimas basin ramorum stipantes reductæ; bracteæ e squamis minutis.

Species 3 v. 4, Africæ tropicæ occidentalis incolæ. Genus spadice evaginato et floribus fere ebracteatis singulare; nervi segmentorum in *E. Hookeri* illos *Korthalsiæ* revocant; in *E. cuspidato* contra, nervi in apicem convolutum spinescentem segmenti terminantur.

113. *Ancistrophyllum*, Mann et H. Wendl. in Kerch. de Denterg. Palm. 230; et in Trans. Linn. Soc. xxiv. 432, t. 38 D, 41 G, 43 C (*Calami subgenus*).—Flores hermaphroditi, in ramis elongatis spadice erecti terminalis distiche inserti, spathaceo-bracteati et bracteolati; perianthium crasse coriaceum, post anthesin auctum. Calyx campanulatus, breviter 3-lobus. Corolla oblongo-cylindracea, 3-partita, segmentis lineari-oblongis acutis erecto-patentibus valvatis. Stamina 6, basi segmentorum inserta, filamentis lingulatis v. clavatis; antheræ lineari-oblongæ, basi 2-fidæ, dorsifixæ, erectæ. Ovarium ovoideum, squamulis reversis fimbriatis onustum, 3-loculare, in stylum gracile elongatum attenuatum, stigmatibus 3 minutis oblongis; ovula basilaria v. subbasilaria, erecta. Fructus parvus, ovoideo-globosus, rostratus, 1-spermus, stylo terminali, pericarpio tenui squamis deorsum imbricatis tessellatim loricato. Semen erectum v. suberectum, globosum v. dorso compressum, hilo basilari v. supra-basilari, chalaza dorsali, raphe lineari, albumine æquabili v. extus lacunoso; embryo ventralis.—Palmæ monocarpicæ, cæspitosæ, alte scandentes, caudicibus gracilibus elongatis flexuosis. Folia remota, alterna, æqualiter pinnatisecta, segmentis subaggregatis v. alternis lineari-lanceolatis v. oblongo-falcatis acuminatis nervis costisque lævibus, marginibus aculeolatis basi recurvis, rhachi valida antice planiuscula dorso convexa marginibusque lævibus v. aculeatis, apice in funem elongatum crassum 3-gonum segmentis deflexis ensiformibus auctum producta, vagina clausa spinosa in ocream elongatam producta. Spadix pyramidatus, 4–6-pedalis, distiche duplicato-ramosus, ramis pendulis, ramulis alternis longissimis flexuosis; spathæ tubulosæ, pedunculum ramosque spadiceis vaginantes; bracteæ spathelleformes, 2-flores; bracteolæ in cupulam 2-cuspidatam 2-alatam obliquam connatæ. Flores mediocres. Fructus parvus.

Species 3 v. 4, Africæ occidentalis incolæ. Genus in sectiones 2 dividendum:—

1. *Ancistrophyllum*, Mann et H. Wendl. l. c. *Calami* subgen. Folia segmenta basi angusta inserta, anguste lineari-lanceolata. Semen compressum, læve, hilo basilari. Species 1: *Calamus secundiflorus*, Beauv. Fl. Ow. et Ben. t. 9, 10. Mart. Hist. Nat. Palma. iii. 341.

2. *Laccosperma*, Mann et H. Wendl. l. c. 430, t. 38 B, 41 D, 43 D, *Calami* subgen.; Drude in Bot. Zeit. 1877, 635, t. 5, f. 45. Folia segmenta basi late inserta, late falcato-elliptica v. lanceolata. Semen globosum, foreolatum, peltatum. Species 2 v. 3. *LACCOSPERMA*, Mann et H. Wendl. in Kerch. de Denterg. Palm. 249.

114. *Mauritia*, Linn. f. Suppl. 70.—Flores monoici v. polygamo-dioici, in ramulis brevibus distichis spadice interfoliacei paniculato-ramosi inserti, bracteati et bracteolati, ramulis ♂ amentiformibus floribus confertissimis, ♀ brevibus paucifloris; perianthium coriaceum. Fl. ♂: Calyx cyathiformis v. infundibularis, indivisus v. e sepalis 3 cuneatis. Petala 3, lanceolata, erecta, basi in stipitem brevem contracta, valvata. Stamina 6, basi petalorum inserta, filamentis brevibus v. subelongatis liberis v. in columnam brevem connatis, 3 petalis oppositis longioribus; antheræ oblongæ v. lineari-oblongæ, erectæ, dorsifixæ. Ovarii rudimentum parvum. Fl. ♀ v. ♂ masculis multo majores. Calyx cupularis v. ovoideus. Petala 3, unguiculata, unguibus tenuibus liberis v. connatis, lamina lanceolata acuminata erecta intus basi cristata v. appendiculata, valvata, post anthesin valde aucta. Staminodia 0 nisi appendices petalorum. Ovarium retrorsum squamosum, 3-loculare; stigmata sessilia, subulata; ovula basilaria, erecta. Fructus ellipsoideus v. globosus, 1-locularis, 1-spermus, pericarpio tenui squamis retrorsum imbricatis tessellatim loricato, endocarpio? tenuiter carnosus. Semen globosum v. ovoideum, testa lævi, raphe umbilicali laterali, chalaza elongata verticali mamillari v. calcarata, albumine æquabili solido osseo; embryo ventralis.—Palmæ elegantissimæ, subinermes, caudice gracili

elato v. mediocri obscure annulato, annulis v. internodiis interdum spinis conicis armatis. Folia terminalia, lamina pinnatim flabelliformi semicirculari v. circulari, v. cuneata multifida, segmentis lanceolatis acuminatis, costis marginibusque inermibus v. spinulosis, rhachi brevi v. elongata, petiolo gracili v. robusto teretiusculo, vagina brevi v. elongata in una specie in fibras densissime contextas soluta. Spadices magni, pedunculo elongato, ramis crassis distichis flexuosis spathis incompletis vaginatis, ramulis amentiformibus numerosis basi spatha brevi cochleato-infundibulari crasse coriacea stipatis; bracteæ et bracteolæ vaginantes, latæ, truncatæ, crasse coriaceæ, marginibus incrassatis rugulosis. Flores parvi v. majusculi, inferiores in ramulis sæpe ♀ pauci. Fructus mediocris.

Species 6 v. 7, *Brasilæ borealis*, *Guianæ* et insularum *Indiæ occidentalis* incolæ. *Mart. Hist. Nat. Palm.* ii. 41, t. 38 ad 44, iii. 344; *Palm. Orbign.* 19, t. 13, f. 1, 14, f. 1, 21 A, B. *Kunth. Enum. Pl.* iii. 217. *Drude in Mart. Fl. Bras.* iii. ii. 287, t. 61 ad 65, 67. *Wallace, Palm. Amaz.* 46, t. 2, f. 2, et t. 17 ad 21. *Griseb. Fl. Brit. W. Ind.* 515. *Barb. Rodr. Enum. Palm. Nov.* 18. *Spruce in Journ. Linn. Soc.* xi. 167. *Trail in Trim. Journ. Bot.* 1877, 129.

Genus a *Drudeo* in *Mart. Fl. Bras.* l. c. in sectiones sequentes divisum:—

1. *Moriche*. Caudex estolonifer, lævis. Folia radiatim flabellata, lævia. Spadices breviter pedunculati, pedunculo valido quam rami pluries brevior. Includit 1. *M. flexuosa*, *Linn.*; *Mart. Hist. Nat. Palm.* t. 40; *Wallace, Palm. Amaz.* t. 2, f. 2 et 17. 2. *M. vinifera*, *Mart. l. c.* t. 38, 39; *Palm. Orbign.* t. 13, 21.

2. *Diplorhipis*. Caudex stolonifer, basi armatus. Folia plerumque mediane bisecta, aculeata v. inermia. Spadices longius pedunculati, pedunculo gracili ramos subæquante. 1. *M. aculeata*, *H. B. K.*; *Wallace, Palm. Amaz.* t. 20 (*M. gracilis*). 2. *M. Martiana*, *Spruce*; *Wallace, l. c.* t. 19 (*M. aculeata*); *Mart. l. c.* t. 39, 44 (*M. aculeata*). 3. *M. armata*, *Mart. l. c.* t. 41 ad 43; *Palm. Orbign.* t. 14, 21. 4. *M. pusilla*, *Wallace l. c.* t. 21. *LEPIDOCOCCTUS*, *H. Wendl. et Drude in Kerch. d. Dentergh. Palm.* 249.

*OROPHOMA*, *Drude in Mart. Fl. Bras.* iii. ii. 294, t. 66 (*Mauritiæ* subgen. *Orophoma*, *Spruce in Journ. Linn. Soc.* xi. 171. *M. carana*, *Wallace, Palm. Amaz.* t. 18) differt caudice solitario robusto, superne reliquiis vetustis vaginarum onusto, et corollæ fl. ♂ basi elongata. Fl. ♀ ignoti.

115. *Lepidocaryum*, *Mart. Gen. et Sp. Palm.* ii. 49, t. 47, f. 1-3, iii. 344.—Flores dioici, in ramulis brevibus compressis spadiceis interfoliacei secundi v. distiche conferti, bracteati et bracteolati; perianthium coriaceum. Fl. ♂: Calyx campanulatus v. cupularis, subtrigonus, 3-denticulatus. Petala 3, ima basi connata, erecta, lanceolata, valvata. Stamina 6, basi petalorum inserta, filamentis subclavatis, 3 petalis oppositis longioribus; antheræ lineari-oblongæ, dorsifixæ, basi longe 2-fidæ. Ovarii rudimentum minimum v. 0. Fl. ♀ masculis majores. Calyx maris. Corolla 3-fida, basi ventricosa, segmentis 3 ovato-lanceolatis acuminatis valvatis, post anthesin auctis. Staminodia in annulum fauci corollæ insertum connata, brevina, antheris 0 v. cassis. Ovarium ovoideum, 3-loculare, squamis reversis opertum; stigmata 3, erecta, lineari-subulata; ovula erecta, basilaria. Fructus obovoideus, rostratus, 1-locularis, 1-spermus, pericarpio tenui squamis retrorsum imbricatis tessellatim loricato. Semen erectum, oblongum, hilo basilari, dorso verticaliter late exsculptum, chalaza apicali, rapheos ramis subtiliter reticulatis, albumine æquabili solido; embryo infra apicem ventralis.—Palmæ inermes, mediocres, caudice gracili erecto v. flexuoso. Folia flabelliformia, lamina palmatipartita, basi cuneata v. sinu lato, segmentis linearibus acuminatis integris v. fissis glabris v. secus costam marginibusque ciliato-setosis, rhachi brevi, petiolo gracili obtuse trigono superne a latere compresso basin versus canaliculato, vagina elongata inflata convoluta. Spadices graciles, patentes, subdistiche paniculato-ramosi, pedunculo ramisque spathis tubulosis vaginatis, ramulis floriferis brevibus, basi spathellis late infundibularibus involucriatis; bracteæ late ovatæ; bracteolæ in cupulam obliquam 2-fidam dorso 2-carinatas v. 2-alatas connatæ. Flores rosei. Fructus inter minores, squamis parvis.

Species 5, *Brasilæ borealis* et *Guianæ* incolæ. *Kunth, Enum. Pl.* iii. 220. *Drude in Mart. Fl. Bras.* iii. ii. 296, t. 62, 67, 68. *Spruce in Journ. Linn. Soc.* xi. 172 (*Mauritiæ* sect. *Lepidocaryum*). *Trail in Trim. Journ. Bot.* 1877, 129. *Barb. Rod. Enum. Palm. Nov.* 19. *Wallace, Palm. Amaz.* 60, t. 2, f. 4, 22.

## TRIBUS V. BORASSEÆ.

116. **Borassus**, Linn. *Gen. n.* 1220. (Lontanus, *Gærtn. Fruct. i.* 21, t. 8.)—Flores dioici; ♂ parvi, in foveolis ramorum amentiformium spadiceis simpliciter ramosi interfoliacei dense congesti, receptaculo basi foveoli adnato 2-seriatim secundi, bracteis squamosis immixti; fl. ♀ magni, in ramis spadiceis simpliciusculi robusti sparsi, solitarii v. 2-ni, bracteis latissimis involuti. Fl. ♂: Perianthium glumaceum. Sepala 3, anguste lineari-cuneiformia, apice inflexa truncata, libera, imbricata. Petala sepalis inclusa, basi in stipitem elongatum connata, obovato-spathulata, concava, patentia, imbricata. Stamina 6, filamentis brevissimis subulatis; antheræ magnæ, oblongæ, basi bifida affixæ. Ovarii rudimenta e setis 3. Fl. ♀ masculis multoties majores, globosi, perianthio crasse carnosio post anthesin inordinate aucto. Sepala reniformia, imbricata. Petala consimilia sed minora, convolutivo-imbricata. Staminodia 6-9, basi petalorum inserta. Ovarium 3-gonolobosum, 3- (rarius 2-4-) locale, integrum v. 3-4-partitum; stigmata sessilia, recurva; ovula basilaria, erecta (ab apice placentæ basilaris erecta antitropa, *Griff.*). Fructus magnus, subglobosus, stigmatibus apiculatus, 1-3-pyrenus, pericarpio tenuiter carnosio, pyrenis obcordatis a dorso compressis osseis extus densissime fibrosis, intus processibus 2 intrusis, apice pertusis. Semen pyreno conforme, late oblongum, vertice 3-lobo, testa endocarpio adhærente, albumine æquabili corneo cavo; embryo apicem versus seminis. —Palma elata, inermis, caudice robusto annulato medio v. altius incrassato, interdum apicem versus furcato v. pauci-ramoso. Folia terminalia, ampla, palmatim flabelliformia, plicato-multifida, laciniis induplicatis apice 2-fidis, marginibus lævibus, rhachi brevi, ligula abbreviata rigida, petiolo spinoso, vagina brevi. Spadices magni, ad basin ramorum spathis incompletis vaginati, ♂ ramis floriferis solitariis v. 2-3-nis crassis cylindraceis bracteis multiseriatis dense imbricatis foveolas floriferas efficientibus vestitis; ♀ crassi, subortuosi, pauciflori. Flores ♂ receptaculo subreniformi inserti, circinnatim evoluti, uno post alterum e foveola egredientes. Fructus brunneus.

Species 1, Africæ tropicæ incola, in India late culta, v. in provinciis ostia versus fluminis Indus forsân spontanea. *Mart. Hist. Nat. Palm. iii.* 219, 318, t. 108, 121, 162. *Kunth, Enum. Pl. iii.* 221. *Lam. Illustr. t.* 898. *Brandis, For. Fl. 544.* *Kurz, For. Fl. ii.* 531. *Roxb. Cor. Pl. i.* t. 71, 72. *Griffith, Notul. iii.* 167. *Drude in Bot. Zeit. 1877, 635, t. 5, f. 6 ad 9.*

117. **Lodoicea**, Labill. in *Ann. Mus. Par. ix.* 140, t. 13.—Flores dioici, ♂ parvi, in foveolis spadiceis interfoliacei amentiformis conferti, bracteolis squamosis immixti; fl. ♀ magni, in ramis spadiceis robusti sparsi, solitarii v. bini, bracteis latissimis cincti. Fl. ♂: Perianthium glumaceum. Sepala 3, lineari-cuneiformia, apice truncata inflexa, imbricata. Petala sepalis inclusa, in stipitem elongatum basi connata, obovato-spathulata, concava, patentia, imbricata. Stamina 24-36, filamentis in columnam brevem connatis; antheræ lineares, basi bifida affixæ, erectæ, apice incrassatæ, obtusæ. Ovarii rudimenta 0? Fl. ♀ globosi. Perianthium crasse coriaceum, post anthesin inordinate auctum. Sepala orbiculata, crenulata, latissime imbricata. Petala consimilia sed minora, convolutivo-imbricata. Ovarium ovoideum, 3- rarius 2-4-locale; stigmata 3, sessilia; ovula . . . Fructus maximus, oblique obovoideus, 1- v. imperfecte 2-3-locularis, pericarpio crasso dure carnosio, putamine crasso osseo extus fibroso in longitudinem profunde 3- rarius 4-6-lobo. Semen endocarpio arcte adhærens, testa tenui, albumine corneo æquabili late cavo; embryo basilaris, sinum spectans.—Palma elata, inermis, caudice solitario robusto annulato. Folia terminalia, ampla, ovato-cordata, palmato-flabelliformia, plicato-multifida, laciniis induplicatis, rhachi valde elongata, petiolo supra concavo, marginibus inermibus, vaginis brevibus demum ad medium fissis. Spadices pluripedales, e fissuris vaginalium extrusi, basi ramisque spathis incompletis vaginati; ♂ rami floriferi maximi, cylindracei, trunciformes, e bracteis latis connectis densissime imbricatis constantes; ♀ crassus, subortuosus. Flores ♂ in receptaculo subreniformi basi foveolæ adnato circinnatim evoluti, uno post alterum e foveola egredientes. Fructus pedalis et ultra, olivaceus, endocarpio aterrimo.

Species 1, insularum Seychellarum incolæ. *Mart. Hist. Nat. Palm.* iii. 221, t. 109, 122. *Kunth, Enum. Pl.* iii. 225. *Baker, Fl. Maurit.* 379. *Bot. Mag.* t. 2734 ad 2738 (in *Fl. des Serres*, 523 ad 526 iteratæ). Genus non nisi staminibus numerosis et fructu magno a *Borasso* distinguendum.

118. **Latania**, *Comm.*; *Juss. Gen.* 39. (*Cleophora*, *Gærtn. Fruct.* ii. 185, t. 120.)—Flores dioici, in foveolis ramulorum amentiformium spadicis interfoliacei duplicatim ramosi solitarii, bracteati. Fl. ♂ obovoidei, perianthio glumaceo. Sepala 3, spatulata, imbricata. Petala 3, spatulata, basi in stipitem brevem connata, imbricata. Stamina 15–32, filamentis brevibus subulatis plus minus in columnam connatis; antheræ lineari-oblongæ, basi bifida insertæ. Ovarii rudimentum columnare v. e setis 3. Fl. ♀ magni, subglobosi, bracteis latis crassis per paria connatis inclusi, perianthio crasse carnosio post anthesin valde aucto. Sepala reniformia, late imbricata. Petala vix longiora, orbicularia, convolutivo-imbricata. Staminodia in cupulam dentatam connata. Ovarium 3-loculare, globosum; stigmata 3, sessilia, recurva; ovula basilaria, erecta. Drupa globosa, obovoidea v. pyriformis, teres v. 3-gona, 1–3-pyrena, stigmatibus terminali, pericarpio succulento, pyrenis obovoideis v. oblongis crustaceo-lignosis obtuse 3-gonis lævibus v. varie insculptis. Semina obovoidea, erecta, libera, testa brunnea endocarpio adhærente, albumine corneo æquabili solido; embryo in vertice seminis.—Palmæ inermes, elatæ, caudice solitario robusto annulato. Folia ampla, terminalia, longe petiolata, suborbicularia, palmato-flabelliformia, plicato-multifida, laciniis induplicatis marginibus lævibus v. spinulosis, rhachi brevi. petiolo 3-gono supra concavo, ligula conchoidea, vagina brevi. Spadices pluripedales, basi et ad ramos compressos spathis incompletis vaginati; ramuli floriferi ♂ cylindracei, ad apices ramorum spadicis digitatim dispositi, bracteis densissime imbricatis velati; ♀ subtortuosi, pauciflori, bracteis latissimis dentatis vaginati. Flores ♂ e bracteis semi-exserti, perianthio nitido; ♀ multo majores. Drupe majusculæ, flavæ.

Species 3, insularum Mascarensium incolæ. *Mart. Hist. Nat. Palm.* iii. 223, t. 148, f. 4, 154, 161, t. 2. *Baker Fl. Maurit.* 380. *Jacq. Fragm.* t. 8. *Lemaire, Ill. Hort.* t. 229.

119. **Hyphaene**, *Gærtn. Fruct.* ii. 13, t. 82. (*Cucifera*, *Del. Fl. Ægypt.* i. 57, t. 1, 2. *Douma, Poir. Dict. Suppl.* ii. 519; *Lam. Illustr.* t. 900.)—Flores dioici, in ramulis amentiformibus spadiciis interfoliaceorum immersi, ♂ 2-ni, superpositi, ♀ solitarii, bracteati et bracteolati. Fl. ♂: Perianthium glumaceum. Sepala lineari-oblonga, basi connata, imbricata. Petala late ovata, obtusa, concava, basi in stipitem brevem connata, imbricata. Stamina 6, rarius 7, toro inserta, filamentis brevibus subulatis; antheræ lineares, basi 2-fida insertæ. Ovarii rudimentum 0. Fl. ♀ brevissime stipitati, masculis majores, perianthio crasse coriaceo post anthesin paullo aucto. Sepala 3, ovato-orbicularia, obtusa, imbricata. Petala paullo minora, late ovata, obtusa, imbricata. Staminodia 6, in anulum membranaceum connata, antheris effoetis. Ovarium subglobosum, obscure 3-lobum, 3-loculare: stigmata 3, minuta, sessilia, terminalia, dein excentrica; ovula basi lata lateri locali affixa. Fructus sessilis v. stipitatus, sphericus oblongus ovoideus v. obovoideus, teres v. obscure lobatus v. medio constrictus, basi et apice saepe intrusus, 1-locularis, stigmatibus basilaribus, pericarpio grumoso et fibroso epidermide nitido, endocarpio lignoso intus carnosus. Semen endocarpio adnatum, erectum, ovoideum v. obovoideum, basi intrusum, testa durissima fusca, rapheos ramis planis reticulatis, albumine osseo æquabili late cavo; embryo apicalis.—Palmæ inermes, mediocres v. elatæ, caudice robusto cylindraceo ventricosus v. pyriformi simplici v. dichotome ramoso cicatricato. Folia terminalia, orbicularia v. ovato-orbicularia, palmato-flabelliformia, plicato-multifida, laciniis ensiformibus acutis v. 2-fidis marginibus induplicatis fibris interpositis, rhachi brevi, petiolo valido biconvexo v. supra planiusculo marginibus spinulosis, ligula brevi rotundata, vagina brevi aperta. Spadices spathis incompletis cylindraceis vaginati, ♂ ramis alternis, ramulis floriferis subfastigiatis cylindraceis; bracteæ semicirculares, densissime imbricatæ; bracteolæ membranaceæ, barbatae, spadiciis ♀ masculis subsimiles. Fructus diametro pugilli parvi v. minor.

Species 9 enumeratæ, Africæ tropicæ, Arabiæ et ins. Madagascariæ incolæ. *Mart. Hist. Nat. Palm.* iii. 225, t. 131 ad 133. *Kunth, Enum. Pl.* iii. 226. *Dict. Sc. Nat.* t. 28, 29 (*Douma*). *Kirk in Journ. Linn. Soc.* ix. 234. *Jacq. Fragm.* t. 133 (*Palma Thebaica*). *H. Wendl. in Bot. Zeit.* 1881, 91.

TRIBUS VI. COCOINÆ.

120. *Bactris*, *Jacq. Stirp. Amer.* t. 256.—Flores in eodem spadice interfoliaceo simplici v. simpliciter ramoso monoici, sparsi, sessiles, inferiores in ramulis 3 ni intermedio ♀, bracteati. Fl. ♂: Calyx annularis urceolaris v. 3-partitus, segmentis lanceolatis v. subulatis basi connatis carinatis. Petala multo majora, ovata v. lanceolata, planiuscula, ima basi connata, valvata. Stamina 6, 9, v. 12, basi perianthii toro parvo v. basi petalorum affixa, inclusa, filamentis subulatis; antheræ lineares, basi bifida affixæ, erectæ. Ovarii rudimentum 0, v. minutum. Fl. ♀ in parte inferiori ramorum masculis immixti, iis minores, perianthio post anthesin immutato v. aucto. Calyx varius, cylindraceus urceolaris v. rarius annularis v. tripartitus, ore truncato integerrimo v. dentato. Corolla calyce longior v. æquilonga, urceolaris v. cylindracea, ore truncato 3-denticulato. Discus cupularis, membranaceus, v. obsoletus. Ovarium ovoideum v. prismatico-trigonum, 3-loculare, loculis 2 effœtis v. obsoletis; stigmata 3, sessilia, brevia, pyramidata, demum recurva; ovulum loculum implens. Fructus ovoideus v. globosus, 1-locularis, 1-spermus, stigmatibus terminalibus, pericarpio carnosio, endocarpio osseo verticem versus v. supra medium 3-poroso. Semen infra apicem loculi pendulum, raphe reticulata, albumine æquabili corneo; embryo poro uni oppositus.—Palmæ sæpius humiles, rarissime omnino inermes, caudicibus solitariis v. fasciculatis annulatis aculeatis v. inermibus, radicibus soboliferis. Folia terminalia v. sparsa, æqualiter v. inæqualiter pinnatisecta, glabra v. pubescentia, segmentis sparsis v. aggregatis v. in laminam bifidam plus minusve imperfecte confluentibus, apicibus acutis rarius obtusis, marginibus ciliatis basi recurvis, petiolo brevi v. elongato, vagina elongata aculeata. Spadices sessiles v. pedunculati, vaginas foliorum perforantes; spathæ 2, inferiore brevi apice pervia, superiore coriacea v. lignosa spadicem excedente cymbiformi v. fusiformi ventre dehiscente, inermis setosa v. aculeata; bractæ persistentes. Flores parvi v. mediocres, ochroleuci v. virescentes. Fructus parvus, colore varius.

Species enumeratæ ad 100, Americæ tropicæ incolæ. *Mart. Hist. Nat. Palm.* ii. 92, t. 60, 70, 72 ad 74, iii. 279, 321; *Palm. Orbign.* 53, t. 6, f. 2, 7, 14, f. 2, 26 B, 27, 28 A, B. *Kunth, Enum. Pl.* iii. 261. *Gærtn. Fruct.* i. t. 9. *Lam. Illustr.* t. 895. *Drude in Mart. Fl. Bras.* iii. ii. 316, t. 73 ad 80. *Griseb. Fl. Brit. W. Ind.* 519. *Karst. in Linnæa*, xxviii. 405, et 397 (*Gulielma*); *Fl. Colomb.* ii. 139, t. 173, et 127, t. 63 (*Gulielma*). *Wallace, Palm. Amaz.* 76, t. 28 ad 35, et 45 (*Bactris*). *Erst. Palm. Centro-Amer. (in Vid. Meddel. Nat. Foren. Kjobenh.* 1858) 40, t. 8, 9, f. 32 ad 35, 50 ad 52. *Barb. Rodrig. Enum. Palm.* Nov. 26, t. 1, f. 3 ad 7, 2, t. 4 ad 6, et *Protest. Append.* 19, 42. *Spruce in Journ. Linn. Soc.* xi. 143, ubi auctor species 17 Amazonicas enumerat, sub sectionibus sequentibus:—

1. *Isochlamys*. Fl. ♀: Calyx et corolla subæquilongi, glabri, ovoideo-urceolati, ore 3-dentato, in fructu 3-fido v. 3-partiti. Palmæ humiles, tenues, plerumque inermes, foliis sæpissime simplicibus, spadicebus simplicibus, spathis inermibus.

2. *Anisochlamys*. Fl. ♀: Calyx tenuis, brevis, 3-partitus. Corolla coriacea, ovoideo-urceolata, 3-loba, fructu aucta. Palmæ humiles, tenues, inermes, foliis sæpe interrupte pinnatisectis, spadicebus simplicibus, spathis inermibus.

3. *Cyathochlamys*. Fl. ♀: Calyx annularis, ore 3-gono v. 3-fido. Corolla cupularis, coriacea v. lignosa, villosa, in fructu aucta. Palmæ humiles v. mediocres, foliorum segmentis aggregatis (in *B. bifida* confluentibus) spadicebus (*B. bifida* excepta) ramosis, spatha superiore armata.

4. *Endochlamys*. Fl. ♀: Calyx globoso-urceolaris. Corolla brevior, lanata. Palmæ subhumiles, aculeatæ, foliis æqualiter pinnatisectis, spadicebus simplicibus, spatha superiore armata.

Traill in *Trim. Journ. Bot.* 1876, 354; 1877, 1, 40, 75, 132, t. 184, species 27 Amazonicas descripsit in sectiones duas a Martio stabilitas, nempe *Sphærocarpæ* fructu globoso, et *Oocarpæ* fructu ellipsoideo. Denique Drude in *Mart. Fl. Bras.* species omnes brasilianas in sectiones 8 distribuit, ad habitum, folia, ramificationem spadicis pro maxima parte constitutas.

AUGUSTINÆ, *Karst. in Linnæa*, xxviii. 395 (*Pyrenoglyphis*, *Karst. Fl. Colomb.* ii. 141, t. 174.

(*Erst. Palm. Amer. Cent. l. c.* 37), est. *B. major*, Jacq. *Stirp. Sel. t.* 263, nullo caractere a speciebus cæteris disco instructis differt; ad sectionem *Oocarppearum*, Mart., pertinet.

GULIELMA, *Mart. Hist. Nat. Palm. ii.* 81, *t.* 66, 67, *iii.* 283, 322; *Palm. Orbign. 71, t.* 10, *f.* 3, 29 A (*non Karst.*), est *Bactridis* species elata, per regiones tropicas Americæ australis culta, a Spruceo ad sectionem suam *Cyathochlamys* relata. *Kunth, Enum. Pl. iii.* 268. *Erst. Palm. Centr. Amer. l. c.* 45, *t.* 9, *f.* 40 ad 49. *Wallace, Palm. Amaz. 92, t.* 3, *f.* 4, 36. *Barb. Rodr. Enum. Palm. Nov. 23.*

121. **Desmoncus**, *Mart. Hist. Nat. Palm. ii.* 84, *t.* 68, 69, *iii.* 32, 277, 321, *t.* 165; *Palm. Orbign. 47, t.* 14, *f.* 3, 26 A.—Flores in eodem spadice interfoliaceo simpliciter ramoso monoici, bracteati et bracteolati; ♂ in ramis superiores numerosi, inferiores ♀ solitarii v. utrinque floribus ♂ stipati. Fl. ♂: Calyx minutus, membranaceus, 3-fidus v. 3-gonus, lobis acutis carinatis. Petala 3, crassiora, oblique ovata, acuta v. acuminata, valvata. Stamina 6, in fundo perianthii toro parvo inserta, inclusa, filamentis subulatis v. filiformibus; antheræ lineares, basi 2-fida insertæ, erectæ. Ovarii rudimentum minutum v. 0. Fl. ♀ masculis multo minores, coriacei, perianthio post anthesin paullo aucto. Calyx cupularis, ore 3-5-denticulato. Corolla urceolaris, ore truncato 3-fido v. 3-dentato. Discus 0. Ovarium ovoideum, 3-loculare, loculis 2 sæpissime effortis; stylus brevis, stigmatibus 3 acutis revolutis; ovulum lata basi affixum. Fructus parvus, ovoideus obovoideus v. subglobosus, 1-locularis, 1-spermus, pericarpio tenui carnosulo, endocarpio crustaceo v. osseo reticulatim venoso supra medium v. vertice 3-poroso, poris circumcirca stellatim fibrosis. Semen endocarpio conforme, testa tenera, albumine cartilagineo æquabili; embryo poro uni oppositus.—Palmæ gregarie, ubique aculeatae, aculeis rectis v. hamatis, decumbentes v. scandentes, caudicibus fasciculatis flexuosis annulatis. Folia sparsa, sæpe refracta, subsessilia, pinnatisecta, segmentis oppositis et alternis v. sparsis acuminatis, basi in petiolum angustatis, marginibus haud ciliatis basi recurvis, rhachi in cirrhum validum segmentis deformatis deflexis armatum producta, petiolo brevi, vagina elongata superne in ocream producta. Spadices solitarii, parvi, ramis fastigiatis gracilibus flexuosis; spathæ 2, inferiore brevi coriacea apice aperta, superiore sublignosa, cylindræa, ventre fissa; bracteæ breves. Flores virescentes, perianthio basi pervio. Fructus pisiformis, ruber.

Species ad 25. Americæ tropicæ incolæ. *Kunth, Enum. Pl. iii.* 258. *Drude in Mart. Fl. Bras. iii.* ii. 301, *t.* 69 ad 72. *Griseb. Fl. Brit. W. Ind.* 519. *Spruce in Journ. Linn. Soc. xi.* 155. *Traill in Trim. Journ. Bot. 1876, 353, t.* 183, *f.* 4. *Wallace, Palm. Amaz. 72, t.* 27. *Barb. Rodr. Enum. Palm. Nov. 24.*

Genus a Drudeo in sectiones 2 divisum:—

1. *Eudesmoncus*. Spadicis rhachis gracilis, elongata, ramos graciles pauciores distichos (v. in majoribus tristichos) intermediis longis separatos exserens; spatha interior fusiformis. Petala fl. ♂ cuspidata. Fructus minores, endocarpio tenui.

2. *Bactridopsis*. Spadicis rhachis crassa, ramos rigidos multos v. plurimos undique patentes dense exserens; spatha interior ovato-ventricosa. Petala fl. ♂ acuta. Fructus majores, endocarpio firmo. Sectio *Bactridi* proxima.

122. **Astrocaryum**, *G. W. Mey. Prim. Fl. Esseq. 265.*—Flores in eodem spadice interfoliaceo simpliciter ramoso monoici, bracteati et bracteolati, ♂ numerosi minuti apicibus elongatis amentiformibus ramorum immersis (rarius emersi), ebracteati; ♀ pauci, magni, ad basin ramorum sessiles. Fl. ♂: Sepala parva, triangularia, libera v. connata, acuta, haud imbricata. Petala ovata obovata v. lanceolata, basi connata, valvata. Stamina 6, raro plura, inclusa, filamentis crassis v. filiformibus; antheræ lineares, basi 2-fida v. dorso affixæ, versatiles v. erectæ. Ovarii rudimentum minutum v. 0. Fl. ♀ masculis multo majores, ovoidei, perianthio post anthesin aucto. Calyx urceolaris v. cupularis, truncatus v. 3-dentatus. Corolla urceolaris, carnosæ, ore contracto 3-dentato demum irregulariter fisso. Discus annularis, membranaceus, corollæ tubo adnatus v. obsoletus. Ovarium ovoideum, 3-loculare, loculis 2 effortis v. obsoletis; stylus conicus, stigmatibus confluenti-

bus; ovulum . . . Fructus ovoideus v. subglobosus, rostratus, lævis v. aculeatus, 1-spermus, stylo terminali, pericarpio carnosio intus fibroso, endocarpio osseo vertice 3-poroso, poris circumcirca stellatim fibrosis. Semen ovoideum, testa brunnea, rapheos ramis reticulatis, albumine æquabili corneo cavo; embryo poro uni oppositus.—Palmæ armatæ, acaules v. caudice humili v. elato annulato annulis spinosis. Folia terminalia, pinnatisecta, segmentis approximatis æquidistantibus v. fasciculatis lanceolatis acuminatis v. apice attenuato oblique truncato plicatis subtus albicantibus, terminalibus liberis v. confluentibus, marginibus aculeatis basi recurvis, petiolo breviusculo, vagina brevi aperta. Spadices breves v. elongati, ramis effusis pendulis basi incrassatis dein (*A. rostrato* excepto) gracillimis longe nudis, parte amentiformi basi nuda quasi pedunculata; spathæ 2, inferiore membranacea decidua, superiore fusiformi v. scaphoidea coriacea v. lignosa ventre aperta persistente; bracteæ fl. ♀ latæ, imbricatæ, bracteolæ consumiles. Fl. ♀ interdum utrinque flore masculo stipati. Fructus majusculus, ruber v. croceus.

Species enumeratæ ad 30 (an omnes congeneres). Americæ tropicæ præcipue Brasiliæ incolæ. *Mart. Hist. Nat. Palm.* ii. 69, t. 52, 58, 59, 65, iii. 287, 323; *Palm. Orbign.* 84, t. 4, f. 1, 2, 13, f. 3, 29 C, 30 A. *Kunth, Enum. Pl.* iii. 271. *Drude in Mart. Fl. Bras.* iii. ii. 364, t. 81 ad 83. *Griseb. Fl. Brit. W. Ind.* 521. *Karst. in Linnæa*, xxviii. 245; *Fl. Colomb.* ii. 167, t. 83. *Barb. Rodr. Enum. Palm. Nov. 20 et Protest. Append.* 27. *Spruce in Journ. Linn. Soc.* xi. 157. *Trall in Trim. Journ. Bot.* 1877, 77. *Wallace, Palm. Amaz.* 100, t. 2, f. 5, 38 ad 44.

Typus generis, *A. rostratum* Meyer (Bot. Mag. t. 4773) a congeneribus differt parte superiore ramorum spadici non amentiformi nec quasi pedunculata, floribus ♂ majoribus foveolis rhacheos vix immersis et disco in fl. ♀ 0. Pericarpium carnosum in *A. Munbaca*, Mart., *A. gymnacantho*, Mart., aliisque paucis ab apice ad basin in lacinias 6 stellatim patentes dehiscit.

TOXOPHÉNIX, *Schott, Nachr. K.K. Österr. Naturf. in Brasil.* ii. *App.* (ex Martio), est fide Drudei *A. Ayri*, Mart.

123. **Acrocomia**, *Mart. Hist. Nat. Palm.* ii. 66, t. 56, 57; iii. 285, 322; *Palm. Orbign.* 78, t. 9, f. 1 (*Cocos*) et 29 B.—Flores in eodem spadice interfoliaceo simpliciter ramoso monoici; ♂ numerosi, parvi, in apicibus elongatis amentiformibus ramorum immersis densissime conferti; ♀ pauci, magni, ad basin ramorum sessiles, bracteati. Fl. ♂: Sepala minuta, scariosa, ovato-oblonga, obtusa, marginibus integris v. laceris, vix imbricatis. Corolla subcylindracea, basi carnosae, obtuse 3-gona, segmentis oblongis valvatis. Stamina 6, filamentis filiformibus segmentorum basibus adnatis compressis; antheræ exsertæ, lineari-oblongæ, dorsifixæ, versatiles. Ovarii rudimentum 0 v. minimum. Fl. ♀ masculis multo majores, ovoidei, perianthio post anthesin paullo aucto. Sepala minuta, ovato-orbicularia v. reniformia, imbricata. Petala longiora, crasse coriacea, libera v. basi connata et ovarii basi adnata, convolutivo-imbricata. Discus cupularis, liber v. corollæ adnatus, 3-fidus v. 6-dentatus. Ovarium ovoideum, 3-loculare, loculis 2 effectis; stigmata 3, sessilia, subulato-lanceolata, revoluta; ovulum horizontale.—Fructus globosus v. oblongus, glaber v. setulosus, 1-spermus, stigmatibus terminalibus, pericarpio mucilaginoso intus fibroso, endocarpio crasso medio 3-poroso. Semen globosum v. 3-lobum, lateri loculi affixum, testa rapheos ramis reticulata, albumine duro æquabili; embryo poro uni oppositus.—Palmæ armatæ, caudice elato solitario sæpius medio ventricosus annulato, dense aculeato. Folia terminalia, pinnatisecta, segmentis anguste lineari-lanceolatis longe oblique acuminatis, marginibus nudis basi recurvis, costa petiolo et rhachi longe spinosis, vagina breviuscula aperta. Spadices pedunculati, aculeati, ramis crassiusculis effusis, parte ♀ flexuosa floribus remotis, ♂ elongata cylindracea; spathæ 2, inferiore apice aperta, superiore fusiformi lignosa aculeata; bracteæ fl. ♂ in opus foveatum confluentes, in fl. ♀ membranaceæ. Flores inter minores, ochroleuci, ♀ interdum utrinque flore masculo stipati. Fructus niger v. fuscus.

Species enumeratæ ad 8, Americæ tropicæ incolæ, inter se quam maxime affines et forsân pro varietatibus unius habendæ. *Kunth, Enum. Pl.* iii. 270. *Drude in Mart. Fl. Bras.* iii. ii. 388, t. 84. *Griseb. Fl. Brit. W. Ind.* 521. *Ærst. Palm. Centro-Amer.* (in *Vid. Meddel. Nat. Förén. Kjöbenhavn.*) 47.

124. *Martinezia*, Ruiz et Pav. *Fl. Per. et Chil. Prod.* 148, t. 32. (Aiphanes, Willd. in *Mem. Acad. Berl.* 1804, 32.)—Flores in eodem spadice interfoliaceo simpliciter ramoso monoici, bracteati, ♂ in parte superiore præcipue ramorum sparsi, sessiles, ♀ in parte inferiore solitarii v. fl. masculis 2 stipati. Fl. ♂ : Sepala parva, triangulari-ovata, imbricata. Petala ovato- v. oblongo-lanceolata, planiuscula, basi connata, valvata. Stamina 6, inclusa, filamentis brevissimis subulatis ; antheræ lineares v. oblongæ, basi bifida affixæ, erectæ. Ovarii rudimentum minutum. Fl. ♀ ovoidei, masculis majores, perianthio post anthesin paullo aucto. Sepala membranacea, reniformia, concava, late imbricata. Petala paullo longiora, ovata, acuta, valvata v. subimbricata. Discus urceolaris, truncatus v. 6-dentatus, liber v. petalis adhærens. Ovarium ovoideum, 3-loculare, loculis 2 effectis ; stigmata 3, trigona, conniventia ; ovulum adscendens. Fructus globosus, 1-spermus, stigmatibus terminalibus, pericarpio carnosio, endocarpio osseo glabro extus et intus ruguloso medio 3-poroso poris radiatim fibrosis. Semen globosum, rugulosum, ad hilum basilare intrusum, testa brunnea rapheos rami sparum ramosis percursa, albumine æquabili solido ; embryo poro uni oppositus.—Palmæ armatæ, humiles v. elatæ, caudicibus solitariis v. cæspitosis annulatis aculeatis. Folia terminalia, pinnatisecta, segmentis alternis v. fasciculatis cuneatis late præmorsis 3-multifidis plicato-nervosis marginibus nudis v. ciliolatis basi planis v. recurvis, petiolo rhachique teretiusculis obtuse angulatis aculeatis, vagina brevi aperta. Spadices pedunculati, aculeati, ramis gracilibus erectis ; spathæ 2, inferiore incompleta apice fissa, superiore fusiformi aculeata ventre fissa ; bractæe membranaceæ. Flores inter minores, pallidi. Fructus croceus coccineus v. roseus.

Species enumeratæ 7, Americæ tropicæ incolæ. *Mart. Hist. Nat. Palm.* ii. 283, 322, t. 161, f. 1 ; *Palm. Orign.* 74, t. 2, 28 C. *Kunth, Enum. Pl.* iii. 269 et 275 (*Aiphanes*). *Gartn. Fruct.* ii. t. 139, f. 5 (*Bactris*). *Griseb. Fl. Brit. W. Ind.* 521 (*Aiphanes*). *Wendl. in Linnæa*, xxviii. 349. *Karst. in Linnæa*, xxviii. 397. *Drude in Mart. Fl. Bras.* iii. ii. 392, t. 85 ; in *Bot. Zeit.* 1877, 636, t. 5, f. 10 (*Aiphanes*).

*MARARA*, *Karst. in Linnæa*, xxviii. 389 ; *Fl. Colomb.* ii. 133, t. 170, et 143, t. 175, ad *Aiphanes* a Wendlanio relata ex descriptione et iconibus auctoris a *Martinezia* differt petalis fl. ♀ valvatis (characterè in tribu anomalo).

125. *Elæis*, Jacq. *Stirp. Amer.* 280, t. 172. (Alfonsia, H. B. et K. *Nov. Gen. et Sp.* i. 306.)—Flores in diversis spadiceis interfoliaceis ramosis monoici, bracteati et bracteolati, ♂ solitarii v. 2-ni, alveolis racheos immersis tandem emersi, ♀ ad basin ramulorum ♂ v. in diversis spadicebus sessiles, bracteis lanceolatis involuti. Fl. ♂ : Perianthium glumaceum. Sepala oblonga v. lanceolata, concava, imbricata. Petala sepalis inclusa, tenuiora, oblonga, marginibus tenuibus valvatis. Stamina 6, filamentis in tubum cylindraceum crassum carnosum connatis apicibus liberis demum reflexo-patentibus ; antheræ lineari-oblongæ, exsertæ, basi 2-loba insertæ. Ovarii rudimentum minutum. Fl. ♀ masculis multo majores, ovoidei, perianthio coriaceo v. chartaceo post anthesin accrescente. Sepala ovata v. ovato-lanceolata, basi imbricata. Petala consimilia, paullo longiora, erecta, convolutivo-imbricata, apice integra v. fissa. Discus annularis. Ovarium ovoideum v. subcylindraceum, 3-loculare, loculis 1 v. 2 sæpius effectis ; stylus crassiusculus, pyramidatus, stigmatibus magnis linearibus revolutis ; ovula loculos explentia, micropyle subapicali. Fructus ovoideus v. obovoideus, 1-3-spermus, basi intrusus, apice umbilicatus, stigmatibus terminalibus, pericarpio fungoso et oleoso intus fibroso, endocarpio crasso osseo angulato extus fibroso vertice v. supra medium 3-poroso. Semen infra verticem loculi adnatum, testa tenui, rapheos ramis reticulatis, albumine cartilagineo æquabili cavo, embryo poro uni oppositus.—Palmæ humiles v. elatæ, inermes, caudice solitario erecto v. decumbente annulato, petiolorum basibus onusto. Folia terminalia, numerosa, ampla, pinnatisecta, segmentis ensiformibus acuminatis basi recurvis, petiolo brevi crasso marginibus spinosis v. inermibus, vagina brevi aperta. Spadices breves, crassi, pedunculo brevi bracteis acutis laxè induto ; rami densi, ♂ apice spinescentes, ♀ robustiores ; spathæ 2 completæ, demum in fibras solutæ ; bractæe fl. ♂ densissime imbricatæ, connatæ, inter se foveolos racheos efformantes, bracteolæ squamæformes ; fl. ♀ bractæe magnæ lanceolatæ

spinescentes flores superantes; bracteolæ sepalis conformes, florem vaginantes. Flores ♀ sparsi, stigmatibus magnis protrusis. Fructus pollicaris.

Species 3 v. 4, Africae et Americae orientalis tropicæ incolæ. Genus in subgenera 2 divisum:—

1. *Eulæis*. Flores in diversis spadicebus monoici. Spadix breviter pedunculatus, ovoideus, densissime ramosus, spatha interiore coriacea. Endocarpium vertice 3-porosum. Caulescens; pinnis infimis spinescentibus. *Mart. Hist. Nat. Palm.* ii. 61, t. 33, 55, 56, iii. 323; *Palm. Orbign.* 91. *Kunth, Enum. Pl.* iii. 278. *Gærtn. Fruct.* i. t. 6. *Lam. Illustr.* t. 896. *Karst. in Linnæa*, xxviii. 241. *Erst. Palm. Centro-Amer.* (in *Vid. Meddel. Nat. Foren. Kjöbenh.* 1858), 51. *Drude in Mart. Fl. Bras.* iii. ii. 455, t. 105.

2. *Barcella*, Traill in *Trim. Journ. Bot.* 1877, 80 (subgen.). Flores in ramis ejusdem spadicis monoici. Spadix longe pedunculatus, laxè ramosus, spatha interiore lignosæ. Endocarpium supra medium 3-porosum. Acaulis, pinnis omnibus flaccidis. *BARCELLA*, *Drude in Mart. Fl. Bras.* iii. ii. 459, t. 106, ubi stamina (nondum rite evoluta) perperam fere libera et inclusa depicta.

126. *Diplothemium*, *Mart. Hist. Nat. Palm.* ii. 107, t. 51, f. 7, 70, 75 ad 78, iii. 293, 324; *Palm. Orbign.* 103, t. 9, f. 3, 15, f. 3, 28 D. (Allagoptera, *Nees in Max Neuw. Reise*, ed. min. ii. 332, ex *Martio*).—Flores dioici v. in eodem spadice interfoliaceo simplici monoici, dense spiraliter conferti, bracteati et bracteolati; ♂ in parte superiore sessiles, ♀ in parte inferiore masculis 2 stipati et tecti. Fl. ♂: Sepala ovata v. subulato-lanceolata, ima basi connata. Petala paullo longiora, late ovata, acuta, valvata. Stamina 6 v. plura (ad 60), basi perianthii inserta, inclusa, filamentis subulatis liberis v. connatis; antheræ lineari-oblongæ v. subulato-lanceolatae, basi 2-fida affixæ, erectæ. Ovarii rudimentum minutum v. 0. Fl. ♀ masculis majores v. minores, globoso-ovoidei, perianthio post anthesin aucto. Sepala late ovata, coriacea, imbricata. Petala sepalis inclusa, ovato-rotundata, convolutivo-imbricata, apicibus acutatis conniventibus. Discus 0. Ovarium ovoideum, 3-loculare, loculis 2 effectis; stigmata sessilia, erecta, demum recurva; ovulum angulo interiori affixum. Fructus ovoideus v. obovoideus, 1-spermus, stigmatibus terminalibus, pericarpio fibroso, endocarpio osseo extus fibroso, basin versus 3-poroso. Semen endocarpio conforme, albumine æquabili solido; embryo poro uni oppositus.—Palmæ inermes, humiles v. acaules, caudicibus interdum robustis solitariis v. fasciculatis annulatis. Folia terminalia, pinnatisecta, segmentis aggregatis lanceolatis v. ensiformibus acuminatis subtus glaucis v. argentatis, marginibus basi recurvis, costa distincta, rhachi bifaciali a latere valde compressa, petiolo antice concavo, vagina aperta fibrosa. Spadices erecti, breviter v. longe pedunculati, stricti, crassiusculi; spathæ 2, inferiore coriacea, superiore crassiore cymbiformi rostrata ventre dehiscente; bracteæ breves, coriaceæ. Flores majusculi, ochroleuci v. flavi. Fructus parvus.

Species 4, Brasiliæ mediæ et australis incolæ. *Drude in Mart. Fl. Bras.* iii. ii. 428, t. 98. *Kunth, Enum. Pl.* iii. 289. *Hook. Bot. Mag.* t. 4861. Species heteromorphæ; flores ♂ in *D. littorali* polyandri, antheris lineari-oblongis obtusis; in *D. campestri* 6-andri v. 9-andri, antheris lineari-oblongis; in *D. caudescente* polyandri, antheris angustis subulatis acuminatis (an genus diversum? fructu adhuc ignoto).

127. *Cocos*, *Linn. Gen. n.* 1223.—Flores in eodem spadice interfoliaceo simpliciter ramoso monoici, bracteati, ♂ in parte superiore ramorum numerosi solitarii v. 2-ni, conferti v. sparsi; ♀ in parte inferiore sparsi, sessiles v. pedunculati, solitarii v. flore masculo utrinque stipati. Fl. ♂ asymmetrici. Sepala parva, triangularia v. lanceolata, acuta, erecta, valvata. Petala oblique oblonga, acuta, erecta v. patula, valvata. Stamina 6, inclusa, filamentis subulatis; antheræ lineares, acutæ v. obtusæ, basi 2-fida affixæ, erectæ. Ovarii rudimentum minutum v. 0. Fl. ♀ masculis sæpiissime multo majores, ovoidei, perianthio post anthesin aucto. Sepala ovata v. ovato-lanceolata, crasse coriacea, erecta, imbricata. Petala sepalis inclusa, coriacea, basi dilatata, convolutivo-imbricata, apicibus brevibus v. elongatis acutis conniventi-valvatis. Discus annularis v. obscurus. Ovarium ovoideum v. depresso-globosum, 3-loculare, loculis 2 sæpius effectis, in stylum brevem attenuatum, stigmatibus subulatis erectis demum recurvis; ovula subbasilaria, adscendens.

Fructus ovoideus v. ellipsoideus, teres v. obtuse 3-gonus, vertice rostrato rotundato v. intruso, 1-spermus, stylo terminali, pericarpio crasso fibroso, endocarpio osseo extus fibroso basin versus 3-poroso. Semen loculo conforme, testa fusca rapheos ramis reticulata, albumine æquabili cavo v. solido radiatim fibroso; embryo poro uni oppositus.—Palmæ humiles v. elatæ, inermes, caudice gracili v. robusto annulato sæpe basibus foliorum tecto. Folia terminalia, pinnatisecta, segmentis ensiformibus v. lanceolatis æquidistantibus v. aggregatis 1-plurinerviis apice integris v. uno latere dentatis v. plus minus profunde laciniatis, marginibus lævibus basi recurvis, rhachi subtrigona superne acuta, dorso convexa, petiolo antice concavo marginibus lævibus v. spinosis, vagina brevi aperta fibrosa. Spadices erecti, demum cernui, ramis erectis v. cernuis; spatha inferior brevior apice fissa, superior fusiformis v. clavata, lignosa, dorso sulcata; bractee variæ. Flores albi v. flavidi. Fructus magnus v. mediocris.

Species enumeratæ ad 30, Americæ tropicæ et subtropicæ australis incolæ, una in tropicis amphigæa. *Mart. Hist. Nat. Palm.* ii. 113 (*excl. sp.*), t. 62, 64, 75, 78 ad 82, 84 *fig. dext. ad 86, 87, f. 1, 88, f. 3, ad 7*; iii. 289, 323; *Palm. Orbign.* 92 (*excl. sp. 4*), t. 1, f. 1, 2, 3, f. 2, 9, f. 2, 30 B, C. *Kunth, Enum. Pl.* iii. 281. *Lam. Illustr. t.* 894. *Gærtn. Fruct. t.* 4, 5. *Spach, Suites Buff. t.* 100. *Drude in Mart. Fl. Mag. t.* 5180 (*Cocos*). *LANGSDORFFIA*, *Raddi in Mem. Soc. Ital. Mod.* xvii. 349, t. 1; ægre a *Coco* distincta est floribus ♀ sæpissime masculis minoribus, disco urceolari bene evoluto, endocarpio intus fasciis lævibus cum totidem fibrosis alternantibus a poris ad verticem ducentibus instructo, et albumine interdum ubi fasciis opposito sulcato. *S. Sancoana*, *Karst. in Linnæa*, xxviii. 247; *Fl. Colomb.* ii. 147, t. 177 ex icone et descriptione auctoris a congeneribus differt floribus ebracteatis solitariis v. rariis binis.

*PLATENIA*, *Karst. in Linnæa*, xxviii. 250, a *Syagro* differt defectu disci urceolaris et spathæ inferioris.

*GLAZIOVA*, *Mart. mss. ex Drude in Mart. Fl. Bras.* iii. ii. 395, t. 83, 86, includit species 2 brasilianas (*Cocos Weddelliana* et *G. insignis*, *Hort.*) humiles, gracillimas, floribus ♂ longius pedicellatis et endocarpio tenuiore.

*LITHOCARPUS*, *Targ. Tozzet. in Steud. Nom. Bot.* i. 170, ii. 56, nomen, est *Cocos lapidea*, *Gærtn. Fruct. t.* 6.

128. *Maximiliana*, *Mart. Hist. Nat. Palm.* i. 131, sp. 1, t. 91 ad 93, iii. 295, *excl. sp. 1* et 3; *Palm. Orbign.* 109, sp. 1, t. 15 f. 2, 31 A.—Flores dioici v. in eodem spadice crasso interfloaliaceo ovoideo densissime simpliciterque ramoso monoici, sessiles, bracteati et bracteolati, ramis brevissimis dense imbricatis aliis ♂ aliis androgynis floribus masculis superioribus confertis, foemineorum superioribus masculis 2 sæpe stipatis. *Fl. ♂*: Sepala minima, triangulari-ovata. Petala parvula, subcoriacea, oblongo-lanceolata, plana, erecta, valvata. Stamina 6, basi perianthii inserta, exserta, filamentis filiformi-subulatis petala æquantibus v. superantibus; antheræ perianthio longiores, lineares, graciles, curvæ, basi 2-fida affixæ, pendulæ. Ovarii rudimentum minutum. *Fl. ♀* masculis multo majores, ovoidei, perianthio post anthesin valde aucto. Sepala 3, ovato-orbicularia, coriacea, late imbricata. Petala paullo longiora, consimilia, convolutivo-imbricata, apicibus abrupte contractis conniventi-valvatis. Discus cupularis, ovarii basin cingens. Ovarium ovoideum, 3-loculare, loculis 2 effectis; stylus brevis, stigmatibus demum revolutis; ovulum basilare, erectum. Fructus ovoideus, 1-spermus, stylo terminali, pericarpio fibroso et subcarneo, endocarpio osseo acuminato basin versus 3-poroso. Semen ovoideum, testa helvola rapheos lateralis ramis reticulata, albumine æquabili solido; embryo poro uni oppositus.—Palmæ inermes, caudice erecto mediocri v. elato annulato, superne vaginarum vestigiis onusto. Folia terminalia, interrupte pinnatisecta, segmentis aggregatis linearibus acuminatis v.

apicibus erosis, costa distincta venis transversis conspicuis, marginibus lævibus basi recurvis, rhachi bifaciali a latere valde compressa, petiolo plano-convexo, vagina aperta fibrosa. Spadices magni, breves, claviformes, crasse pedunculati, ramis innumeris densissime imbricatis et densifloris; spathæ 2, inferiore bicarinata apice aperta, superiore cymbiformi crasse lignosa longe rostrata persistente; bracteæ parvæ, membranaceæ; bracteolæ minutæ. Flores mediocres. Fructus flavescens v. fulvus.

Species 3, fluminis Amazonum et Maranon et ins. St. Kitts et Trinidad incolæ. *Drude in Mart. Fl. Bras.* iii. ii. 450 (excl. sect. *Scheelea*), t. 104. *Kunth, Enum. Pl.* iii. 291, sp. 1. *Karst. in Linnæa*, xxviii. 271. *Griseb. Fl. Brit. W. Ind.* 522. *Barb. Rodr. Enum. Palm.* Nov. 41. *Spruce in Journ. Linn. Soc.* xi. 162. *Wallace, Palm. Amaz.* 120, t. 3, f. 2, 3, et t. 47.

129. *Scheelea*, *Karst. in Linnæa*, xxviii. 264; *Fl. Colomb.* i. 135, t. 67, ii. 145, t. 176.—Flores dioici v. in eodem spadice interfoliaceo simpliciter ramoso monoici, bracteati, ♂ numerosissimi in parte superiore ramorum sessiles, conferti, ♀ in parte inferiore pauci solitarii v. fl. masculo utrinque stipati, sessiles v. valide pedunculati. Fl. ♂: Sepala minuta, triangularia, acuta. Petala sepalis multo longiora, elongato-claviformia v. cylindracea, acuta, carnosula, valvata. Stamina 6, petalis multo breviora, filamentis filiformibus inæquolongis; antheræ lineares, basi 2-fida affixæ, erectæ. Ovarii rudimentum 0 v. minimum. Fl. ♀ masculis multo majores, ovoidei, perianthio post anthesin valde aucto. Sepala magna, coriacea, ovata, nervosa, imbricata. Petala consimilia sed paullo majora, convolutivo-imbricata. Discus cupularis, ovarii basin cingens. Ovarium ovoideum, 3-loculare, loculis 1-2 interdum effœtis; stylus brevis, teres, stigmatibus majusculis patulis; ovula basilaria, erecta. Fructus oblongus v. ovoideus, 1-3-spermus, stylo terminali, pericarpio fibroso, endocarpio crasso osseo extus fibroso supra basin 3-poroso. Semina ellipsoidea, testa rapheos ramis venosa, albumine corneo æquabili solido; embryo poro uni oppositus.—Palmæ inermes, humiles v. elatæ, caudice solitario inermi. Folia terminalia, pinnatisecta, segmentis seriatis v. aggregatis linearibus in plantis junioribus apice obtuse inæqualiter 2-fidis lobis incurvis in adultis integris? 1-nerviis marginibus basi recurvis, rhachi dorso convexa facie acuta, petiolo antice concavo, vagina brevi aperta. Spadices longe v. breviuscule pedunculati, ramis breviusculis suberectis; spathæ 2, superiore fusiformi lignosa acuminata; bracteæ minimæ. Flores ochroleuci. Fructus majusculus.

Species enumeratæ ad 7, Americæ tropicæ incolæ. *Mart. Hist. Nat. Palm.* 131, t. 94 (*Maximiliana*, sp. 2) et iii. 296 (*Maximiliana*, sp. 1 et 3), et t. 169, f. 2 (*Attalea*); *Palm. Orbign.* 31 B (*Attalea*); t. 4, f. 3 (*Maximiliana*). Genus inter *Cocon* et *Maximilianam* quasi medium, ab utroque diversum petalis fl. ♂, sed medius pro subgenere *Cocoi*s habendum. A *Drude in Mart. Fl. Bras.*, *Scheelea* species inter *Maximilianam* et *Attaleam* distributæ sunt, ut nobis videtur infauste.

130. *Attalea*, *H. B. et K. Nov. Gen. et Sp.* i. 309, t. 95, 96.—Flores dioici v. in eodem spadice v. in diversis spadicibus interfoliaceis simpliciter ramosis monoici, bracteati, ramis omnibus androgynis v. aliis ♂ aliis ♀ floribus masculis superioribus. Fl. ♂: Sepala parva, libera, v. basi connata. Petala oblongo v. lineari-lanceolata, erecta, valvata. Stamina 6-24, ad basin corollæ in toro parvo conferta, inclusa, filamentis subulatis; antheræ lineares, basi 2-fida affixæ, erectæ. Ovarii rudimentum 0 v. minimum. Fl. ♀ masculis multo majores, ovoidei v. subglobosi, perianthio post anthesin valde aucto. Sepala coriacea, ovata, imbricata. Petala consimilia, basi convolutivo-imbricata, apicibus acutatis conniventi-valvatis. Discus cupularis v. urceolaris. Ovarium 3- rarius 2- v. 4-6-loculare, loculis aliis sæpissime effœtis; stylus brevis v. stigmata sessilia recurva; ovula basilaria, erecta. Fructus ovoideus v. ellipsoideus, apice rotundatus attenuatus v. rostratus, 2-5-spermus, stylo terminali, pericarpio fibroso v. lignoso, endocarpio osseo v. lapideo, extus undique fibroso, basin versus 2-6-poroso. Semina elongata, raphe latiuscula, ramis reticulatis, albumine æquabili sæpius solido; embryo poro uni oppositus.—Palmæ inermes, humiles v. elatæ, caudice solitario crassiusculo annulato v. cicatricato. Folia terminalia, pinnatisecta, segmentis æquidistantibus linearibus v. lineari-lanceolatis acuminatis, marginibus basi recurvis, rhachi bifaciali a latere valde compressa, petiolo facie concavo marginibus acutis,

vagina aperta fibrosa. Spadices sæpe magni, crasse v. longe pedunculati, rarius mediocres; spatha unica (superiore) fusiformis, lignosa; bracteæ et bracteolæ parvæ. Flores ochroleuci v. flavescentes. Fructus majusculus.

Species enumeratæ ad 20, Americæ tropicæ incolæ. *Mart. Hist. Nat. Palm.* ii. 135, t. 41, 75, 95 ad 97, iii. 296, 326, t. 167, f. 1-6, 168, 169, f. 3, 4, 5; *Palm. Orbign.* 112 (excl. sp.), t. 5, f. 2, 31 C. *Drude in Mart. Fl. Bras.* iii. ii. 434, t. 99 ad 101, excl. sect. *Pseudoscheelea*. *Kunth, Enum. Pl.* iii. 275. *Karst. in Linnæa*, xxviii. 255, 273; *Fl. Colomb.* i. 137, t. 68. *Erst. Palm. Centro-Amer. in Vid. Meddel. Nat. Foren. Kjöbenhavn.* 1858, 49. *Barb. Rodrig. Enum. Palm. 131. *Jubæa*, *H. B. et K. Nov. Gen. et Sp.* i. 308, t. 96.—Flores in eodem spadice interfoliaceo simpliciter ramoso monoici, bracteati. Fl. ♂ superiores, breviter pedicellati. Sepala lineari-lanceolata, acuta, carinata. Petala multo majora, ovata v. oblonga, acuta, coriacea, concava, costata. Stamina 27-30, basi perianthii inserta, inclusa, filamentis capillaribus antheris longioribus liberis; antheræ lineares, dorsifixæ, erectæ. Ovarii rudimentum. . . . Fl. ♀: Sepala late imbricata. Petala convolutivo-imbricata. Urceolus parvus, membranaceus. Ovarium ovoideum, 3-loculare, loculis 2 rudimentariis; stigmata 3, subulata, patula; ovula . . . Fructus obovoideus, 1-spermus, stigmatibus terminalibus, pericarpio dense fibroso, endocarpio osseo globoso utrinque acuto leviter 3-carinato medio v. supra medium 3-poroso. Semen globosum, albumine cartilagineo æquabili cavo; embryo poro uni oppositus.—Palma elata, inermis, caudice crasso basibus vaginarum tecto. Folia terminalia, pinnatisecta, segmentis patentibus quaquaversis lineari-lanceolatis acuminatis rigidis glabris v. pulverulentis, marginibus recurvis, rhachi a latere compressa dorso convexa ventre acuta, petiolo inermi, vagina brevi aperta. Spadices plures; spatha superiore completa fusiformi lignosa ventre aperta demum bipartita. Flores ochroleuci. Fructus flavescons.

Species 1, Chilensis. *Mart. Hist. Nat. Palm.* iii. 294, t. 161, f. 3; *Palm. Orbign.* 106 (excl. sp.). *Kunth, Enum. Pl.* iii. 293. *Gaud. Voy. Bonite*, t. 51. Inflorescentia a nobis non visa.

*MICROCOCOS*, *Philippi in Bot. Zeit.* 1859, 362, quæ *MOLINÆA*, *Bertero in Mercur. Chilen, anglie in Sülim. Amer. Journ.* xx. 152, et germanice in *Linnæa*, vii. *Litteraturb.* 36, reddita, a Martio et Wendlandio ad *Jubæam spectabilem* relata, ex descriptione auctoris differt perianthio fl. ♀ e squamis variis imbricatis ovatis obtusis ovario arcte appressis, ovario 1-loculari, et embryo.

132. *Orbignya*, *Mart. in Endl. Gen. Pl.* 257; *Hist. Nat. Palm.* iii. 302, 325, t. 169, f. 1, 6, 170; *Palm. Orbign.* 125, t. 10, f. 2, 13, f. 2, 32 (*Orbignia*).—Flores in diversis spadicebus interfoliaceis simpliciter ramosis aliis ♂ aliis ♀ monoici, bracteati et bracteolati, ramis androgynis cum fl. ♂ superioribus. Fl. ♂: Sepala minuta, late ovato-triangularia. Petala 2-5, ovata v. ovato-lanceolata, integra v. dentata, basi libera v. connata, valvata. Stamina 12-24, basi petalorum inserta, inclusa, filamentis filiformibus; antheræ lineares, loculis discretis spiraliter tortis. Ovarii rudimentum 0 v. minimum. Fl. ♀ masculis multo majores, subglobosi v. a basi lata trigono-ovoidei, perianthio post anthesin valde aucto. Sepala crasse coriacea, ovata v. oblongo-lanceolata, imbricata. Petala consimilia sed minora, convolutivo-imbricata, apicibus acutis interdum dentatis. Discus cupularis. Ovarium ovoideum, 2-7-loculare; stylus brevis, crassus, stigmatibus 2-7 magnis linearibus erectis; ovula basilaria, suberecta.—Fructus globosus v. ovoideus, rostratus, 2-6-spermus, stylo terminali; pericarpio fibroso, endocarpio osseo extus fibroso basin versus 3-6-poroso. Semina angusta, oblonga v. obovoidea, testa brunnea rapheos ramis reticulata, albumine æquabili cartilagineo solido; embryo poro uni oppositus.—Palmæ inermes, humiles v. elatæ, caudice solitario irregulariter cicatricato. Folia terminalia, pinnatisecta, segmentis alternis lineari-lanceolatis acuminatis, marginibus basi recurvis, petiolo margine serrato?, vagina aperta. Spadices elongati, rhachi robusta recta, ramis breviusculis alternis erectis, ♀ crassiores quam masculi; spathæ plures, fusiformes; bracteæ et bracteolæ connatæ, membranaceæ. Flores ♂ parvi, ♀ pollicares, flavi. Fructus mediocris.

Species 5 v. 6, Bolivianæ et Brasilianæ. *Kunth, Enum. Pl.* iii. 293. *Drude in Mart. Fl. Bras.* iii. ii. 446, t. 102, 103.

ORDO CLXXXVIII. **PANDANEE.**

Endl. Gen. Pl. 242. Lindl. Veg. Kingd. 132.

*Flores* dioici, utriusque sexus in spadice simplici v. composito dense conferti. *Perianthium* 0. Fl. ♂ : *Stamina* numerosa ; filamenta filiformia v. brevina et conica, libera v. connata. *Antheræ* basifixæ, erectæ, oblongæ, obtusæ, 2-loculares, loculis interdum 2-locellatis, in longitudinem dehiscentibus ; pollen globosum v. ellipsoideum. *Ovarii* rudimenta 0 v. minuta, rarius discus depressus. Fl. ♀ : *Staminodia* 0 v. brevina, hypogyna v. basi ovarii adnata. *Ovarium* 1-loculare, liberum, v. cum ovarii contiguis in phalanges 2-∞-loculares stigmatibus distinctis v. confluentibus connatum ; stylus 0 v. brevissimus et obconicus ; stigma sessile et subulatum uno latere papillosum, v. furcatum, v. depressum et hippocrepiforme. *Ovula* anatropa, nunc solitaria et subbasilaria funiculo brevi, nunc plurima placentis 1-∞ parietalibus funiculis elongatis affixa ascendencia v. pendula. *Syncarpium* v. syncarpiorum capitulum e carpellis (fructibus) singulis v. syncarpiis minoribus concretis compositum, ellipsoideum oblongum cylindraceum v. globosum ; carpella singula 1-locularia, v. syncarpia minora ∞-locularia, matura lignosa drupacea v. baccata intusque pulposa, teretiuscula v. angulata, vertice tumido hemisphærico v. pyramidato-prismatico integro v. lobato solido v. cavo stigmatibus coronato. *Semina* minuta, ellipsoidea v. fusiformia, subsessilia v. funiculis ascendentibus appensa ; testa membranacea v. crustacea, striolata ; raphe prominula ; albumen dense carnosum. *Embryo* minutus, hilo proximus.

Frutices v. arbores erecti v. ope radicum scandentes, di-tri-chotome ramosi, trunco ramisque annulatis radices æreas emittentibus. Folia apices versus ramorum conferta, spiraliter trifariam disposita, a basi vaginante longissime linearia, sensim acuminata, recurva, carinata, concava, rigide coriacea, marginibus et carina spinulosis v. serratis rarissime inermibus, demum tota decidua, aculeis sæpe recurvis, v. inferioribus recurvis superioribus incurvis. Spadices axillares et terminales, fasciculati v. paniculati, sessiles v. pedunculati, foliis spathaceo-bracteati. Flores sessiles, parvi, ebracteati et ebracteolati.

Species enumeratæ ad 80, omnes tropicæ v. subtropicæ, pleræque insularum Africæ orientalis, Archipelagi Indici, et maris Pacifici incolæ, in Asia et Africa continentali pauciores, una in India Occidentali inquilina, altera in Nova Zelandia indigena.

Ordo *Aroideis*, *Typhaceis* et *Cyclanthaceis* proximus, habitu proprio diversus.

## CONSPECTUS GENERUM.

1. **PANDANUS**. Staminodia in fl. ♀ 0. Ovula in carpellis solitaria.—*Archip. Malay., Asia, Africa, Australasia et Oceania.*
2. **FREYCINETIA**. Staminodia in fl. ♀ hypogyna. Ovula in loculis numerosa.—*Archip. Malay., Australasia, Oceania.*

## GENERA EXCLUSA V. DUBIA.

CARLUDOVICA, Ruiz et Pav. et CYCLANTHUS, Poit., ad **Cyclanthaceas** pertinent.

NIPA, Thunb., PHYTELEPHAS, Ruiz et Pav., et WETTINIA, Poepp. et Endl., inter **Palmas** querendæ.

SOLLEYETIA, Gaud. Bot. Voy. Bonite, t. 19, sine descriptione ; Solms-Laub. in Linnæa, xlii. 107, cum habitu *Pandani* ovarium uniloculare cum ovulis 3 basilaribus erectis orthotropis gaudet.

1. **Pandanus**, Linn. f. *Suppl.* 64.—Flores dioici ; ♂ in spadicibus thyrsoides conferti. Stamina numerosa, sessilia, v. in columna interdum peltata inserta, filamentis liberis v. connatis ; antheræ lineares v. oblongæ, basifixæ, erectæ. Fl. ♀ in spadice simplici dense conferti. Staminodia 0. Ovaria libera, 1-locularia, v. in phalanges 1-∞-loculares connata, vertice incrassato solido v. cavo truncato tumido v. prismatico ; stigmata

simplicia, subulata, nunc unguiformia uno latere papillosa, nunc bilamellata v. furcata, nunc depressa reniformia aut hippocrepica cruribus involutis; ovula in loculis solitaria, funiculis brevibus adscendentibus basi placentæ parietalis affixa. Syncarpium globosum ellipsoideum oblongum v. cylindraceum, sæpe ponderosum; carpella lignosa v. drupacea, infra medium connata, v. in phalanges induratas confluentia, singulatim v. in greges ab axi persistente decidua. Semen erectum, fusiforme, testa membranacea v. subcrustacea. —Frutices v. arbores erecti, rarius herbæ acaules v. caule prostrato radicante, trunco gracili v. robusto simpliciusculo v. patentim ramoso, ramis radices aereas validas emittentibus. Folia longissima v. mediocria. Spadices terminales, ♀ solitarii v. paniculati, fructiferi sæpius penduli, foliis floralibus non raro coloratis spathaceo-bracteati.

Species bene cognitæ ad 50, perplurimæ Archipelagi Malayani et insularum Mascarensium et Seychellarum incolæ, paucæ in Asia et Africa continentali v. in Australia tropica et Oceania vigentes, una insulis Indiæ occidentalis inquilina. *Kunth, Enum. Pl.* iii. 94, 583. *Solms-Laub. in Bot. Zeit.* 1878, 321, 352, t. 10, f. 3 ad 7, 10 ad 12, 14 ad 28; et in *Linnaea*, xlii. 1. *Balf. fil. in Journ. Linn. Soc.* xvii. 33; et in *Baker, Fl. Mauriti.* 395. *Benth. Fl. Austral.* vii. 148. *Lam. Illustr.* t. 798. *Hance in Trim. Journ. Bot.* 1875, 67. *Kurz in Journ. As. Soc. Beng.* xxxviii. 146; in *Seem. Journ. Bot.* v. 93, 125, t. 62 ad 65; *For. Fl.* ii. 505. *Miq. Fl. Ind. Bat.* iii. 153, t. 37; *Analect. Bot.* ii. 10, t. 2. *Roxb. Corom. Pl.* t. 94 ad 96. *Griff. Ic. Pl. Asiat.* t. 174. *Beauv. Fl. Ov. et Ben.* t. 21, 22. *Gaud. Bot. Voy. Bonite*, t. 22. *Bot. Mag. t.* 4736, 5014, 6347. *Illustr. Hort.* 1860, t. 265; 1872, t. 55; 1877, t. 288. *Regel, Gartenfl.* t. 48, 297. *Rev. Hort.* 1862, 406, fig. 36, 37; 1866, 271, cum ic.; 1868, 210, fig. 23; 1878, 405, fig. 84; 1879, 290 cum ic.; 1881, 174, fig. 40 ad 45.

Species omnes a Solms-Laubachio ad typos sequentes relatæ sunt:—

1. Stamina subumbellata. Carpella distincta, sursum vergentia, stigmate sessili. *Pandani* sect. *Microstigma*, Kurz in *Seem. Journ. Bot.* v. 104. JEANNERETIA, *Gaud. l. c. t.* 25. Typus est *P. Kurzianus*, Solms-Laub., species Javanica.

2. Stamina simplicia. Carpella distincta, deorsum vergentia, vertice subulato ad latus stigmatifero. *Pandani* sect. *Acrostigma*, Kurz l. c. 100. Huc pertinet ex Solms-Laub., FISQUETIA, *Gaud. l. c. t.* 4, 5, in qua ex icone carpella certe sursum vergent, ut et *P. ornatus* ex descriptione Solms-Laub. Typus est *P. fatidus*, Roxb. Species Australiana et Archipelagi Malayani.

3. Stamina umbellata. Carpella distincta, sursum vergentia, vertice subulato ad latus stigmatifero. *Pandani* sect. *Ryckia*, Kurz l. c. 101. RYKIA, de Vriese in *Verh. K. Akad. Wetensk.* 1854; in *Tuinb. Fl.* i. 161; et in *Hook. Kew Journ.* vi. 268. BARROTTIA, *Gaud. l. c. t.* 13, f. 15–24; *Brongn. in Ann. Sc. Nat. Ser. vi. i.* 277, partim. Typus est *P. furcatus*, Roxb. Species Asiæ tropicæ et Archipelagi Malayani.

4. Fl. ♀: Carpella distincta, deorsum vergentia, stigmate lamelliformi 2-lobo. Fl. ♂: Stamina pauca, filamentis basi connatis. Huc includitur FOUILLOYA, *Gaud. l. c. t.* 26, f. 1 ad 9, et 21 ad 24. Typus est *P. racemosus*, Gaud. l. c. Species Africanæ et insularum Mascarensium.

5. Fl. ♀: Carpella distincta v. 2–3 confluentia, stigmata varia. Fl. ♂ stipitati. Stamina umbellata. TUCKEYA, *Gaud. l. c.* 26, fig. 10 ad 20. Typus est *P. Candelabrum*, Beauv. (non Hook.). Species Africana.

6. Fl. ♀: Carpella in greges circulares confluentia. Fl. ♂ stipitati. Stamina subumbellata. *Pandani* sect. *Keura*, Kurz in *Journ. As. Soc. Beng.* 1869, 147 partim. MARQUARTIA, *Hassk. in Flora*, 1842, *Beibl.* ii. 14; *Cat. Hort. Bogor.* 61. HASSKARLIA, *Walp. Ann.* i. 753 partim. VINSONIA, *Gaud. l. c. t.* 17, 23, 31. Typus est *P. utilis*, Bory, Kurz in *Seem. Journ. Bot.* v. 131, t. 64, f. 4. Species insularum Mascarensium.

7. Fl. ♀: Carpella in greges circulares confluentia. Fl. ♂ stipitati. Stamina subverticillatim spicata. *Pandani* sect. *Keura*, Kurz in *Seem. Journ. Bot.* v. 105 partim. HASSKARLIA, *Walp. Ann.* i. 753 partim. *Pandani* sp. *Gaud. l. c. t.* 22. *Brongn. in Ann. Sc. Nat. Ser. vi. i.* 269, t. 15, f. 10. ATHERODACTYLIS, *Forst. Char. Gen. n.* 75. KEURA, *Forek. Fl. Æg. Arab.* 95, 122, 172. Typus est *P. fascicularis*, Lam. Roxb. *Cor. Pl.* t. 94 ad 96 (*P. odoratissimus*). *Griff. Ic. Pl. Asiat.* t. 147. Species Asiaticæ.

8. Fl. ♀: Carpella in greges transversas confluentia, sursum vergentia. Fl. ♂ stipite obconico truncato lateribus antheriferis. BARROTTIA, *Brongn. in Ann. Sc. Nat. Ser. 6, i.* 277, t. 14, 15. Typus est *P. altissimus*, Solms-Laub. Species Nova-Caledonica.

Genera sequentia certe ad *Pandanium* referenda sunt, sed dubitanter quoad ejus sectiones. BRYANTIA, *Brongn. in Ann. Sc. Nat. Ser. 6, i.* 287, t. 15; *Solms-Laub. l. c.* 54. DOORNIA, de Vriese

in *Twinkl. Fl.* 1855, 174; *Solms-Laub. l. c.* 49. DORYSTIGMA, *Gaud. l. c.* 13; *Solms-Laub. l. c.* 64. EYDOUXIA, *Gaud. l. c. t.* 18; *Solms-Laub. l. c.* 45. HETEROSTIGMA, *Gaud. l. c. t.* 25; *Solms-Laub. l. c.* 66. HOMERONIA, *Gaud. l. c. t.* 22; et in *Hombr. et Jacquinot, Bot. Voy. Astrol. Monocot. t.* 2; *Walp. Ann. v.* 862; *Solms-Laub. l. c.* 48. ROUSSINIA, *Gaud. l. c. t.* 21; *Solms-Laub. l. c.* 57. SUSSEA, *Gaud. l. c. t.* 24, 25, 38; *Solms-Laub. l. c.* 66.

Species nonnullæ a *Brongniartio* ad *Barroetiam* v. *Bryantiam* v. a *Gaudichaudio* ad *Fisquetium* v. *Vinsoniam* relatæ, quoad affinitates omnino dubiæ remanent.

2. **Freycinetia**, *Gaud. in Bot. Voy. Freycin.* 431, t. 41 ad 43, et in *Bot. Voy. Bonite*, t. 27, 35, 36, 37, 38, 52, 60. (Jezabel, Banks, ex *Salisb. Gen. Pl. Frugm.* 5. *Vicitoriperrea*, *Gaud. in Hombr. et Jacquinot, Bot. Voy. Astrol. Monocot. t.* 1.)—Flores dioici, in spadicibus simplicibus conferti. Fl. ♂: Stamina numerosa, filamentis brevissimis conicis v. filiformibus flexuosis; antheræ lineari-oblongæ, basifixæ, erectæ, apice obtusæ apiculatæ v. cuspidatæ. Ovarii rudimentum oblongum depressum v. obsoletum. Fl. ♀: Staminodia brevina, hypogyna, linearia, basi ovario adnata. Ovaria distincta v. in phalanges connata, 1-locularia, vertice incrassata truncata crenulata; stigmata depressa crenis respondentia; ovula numerosissima, rarius pauca, sæpius filis immixta, placentis 3-∞ parietalibus 2-seriatim affixa, funiculis elongatis ascendentibus. Fructus syncarpicus, baccatus, 1-multilocularis, rarius septis evanidis 1-locularis, loculis polyspermis mucilagine repletis; carpellis vertice induratis. Semina fusiformia v. ellipsoideo-oblonga, testa crustacea v. membranacea striolata, raphe prominula, albumine carnoso; embryo minutus v. elongatus, axilis.—Frutices v. fruticuli scandentes, caudice simpliciusculo v. ramoso radicante annulato. Folia lineari-elongata, basi vaginantia, carinata, integerrima v. serrulata. Spadices terminales, fasciculati v. subumbellati, foliis floralibus abbreviatis sæpius coloratis interdum carnosus spathaceo-involucrati, ♀ post anthesin decidui v. diu persistentes.

Species ad 30, Asiæ tropicæ orientalis, Archipelagi Malayani, Australiæ tropicæ et insularum Pacificarum incolæ; una in regionibus calidioribus Novæ Zelandiæ indigena. *Kunth, Enum. Pl.* iii. 101, 585. *Walp. Ann.* iii. 494; v. 858. *Solms-Laub. in Linnaea*, xlii. 81, et in *Bot. Zeit.* 1878, t. 10, f. 1, 2, 8, 9, 13. *Miq. Fl. Ind. Bat.* iii. 167. *Kurz in Journ. As. Soc. Beng.* xxxviii. 133. *For. Fl.* ii. 508. *Benth. Fl. Austral.* vii. 150. *Blume, Rumph.* t. 40 ad 43. *Bennett, Pl. Jav. Rar.* t. 9. *A. Rich. Bot. Voy. Astrol.* t. 2. *Homb. et Jacquinot, Bot. Voy. Astrol.* t. 2. *Hook. f. Fl. Nov. Zel.* t. 54, 55. *Seem. Fl. Vit.* t. 83 ad 86. *Rev. Hort.* 1872, t. 193. *Bot. Mag.* t. 6028.

## ORDO CLXXXIX. CYCLANTHACEÆ.

Endl. Gen. Pl. 243. PANDANACEARUM tribus, Lindl. Veg. Kingd. 132.

Flores monoici, utriusque sexus in spadicibus dense spiraliter v. verticillatim conferti. Fl. ♂: *Perianthium* 0, v. stipitatum obliquum, ore multi-dentato. *Stamina* numerosa; filamenta inter se et cum tubo perianthii confluentia, apicibus liberis. *Antheræ* filamentis adnatæ, ovoideæ v. lineares, loculis rimis longitudinalibus dehiscentibus; pollen ellipsoideum, læve. *Ovarii* rudimenta 0. Fl. ♀: *Perianthium* 0, v. segmenta 4, brevina, distincta v. connata, interdum cum iis florum vicinorum confusa et in anulum multi-dentatum confluentia, persistentia, non raro post anthesin accrescentia et in fructu indurata. *Staminodia* sæpius 4, perianthii segmentis dum adsint basi adnata, brevina v. longissima et flexuosa, apicibus nudis v. antheris effortis terminatis. *Ovarium* liberum v. inferne rhachi spadicis immersum et ei adnatum, depresso-quadratum, vertice truncato v. 4-lobo, 1-loculare. *Stylus* 0, v. crassus et pyramidatus; stigmata solitaria v. 4 in verticem ovarii v. stylum brevem prona, horizontalia, stellatim patentia. *Ovula* numerosa, patentia v. pendula, anatropa, placentis parietalibus v. ab apice loculi pendulis et stigmatibus

respondentibus funiculis crassis affixa. *Fructus* syncarpium carnosum e baccis distinctis v. confluentibus depressis stigmatibus coronatis polyspermis, placentis tumidis carnosis. *Semina* parva, sessilia v. pendula, funiculo brevi; testa extus carnosae; albumen carnosum et oleosum v. corneum. *Embryo* minutus, axilis, hilo proximus, rectus v. curvus.

Herbæ perennes, sparsim cellulis spiculiformibus instructæ, acaules v. rhizomate articulo, v. frutices inermes caule annulato vaginato erecto decumbente v. ope radicum scandente, interdum lignoso. Folia disticha v. in spiram disposita, petiolata, flabellata, integra 2-fida v. 2-partita, nervis parallelis, vernatione complicata; petiolus brevis v. elongatus, basi vaginans, vagina fissa. Spadices axillares, solitarii, pedunculati, simplices, breviusculi, cylindracei v. oblongi, pedunculo brevi v. elongato basi vagina (cataphyllo) 2-carinata folio opposito instructo. Spathæ 2-6, pedunculo insertæ, spadicem immaturum tantum includentes, caducæ. Flores in cyclis superpositis v. in spiram continuam dispositi, ♂ et ♀ in cyclis alternantes v. in cyclis distinctis, v. ♀ solitarii cum ♂ consociati.

Species ad 35, sed multæ imperfecte cognitæ, omnes Americæ tropicæ incolæ.

Ordo *Aroideis* et *Pandaneis* quam maxime affinis, et non nisi habitu foliisque vernatione plicatis facile distinguendus.

#### CONSPECTUS GENERUM.

**Tribus I. Carludovicæ.** Flores ♂ 4-natim aggregati, singulum ♀ stipantes. Perianthium multidentatum. Stamina numerosa. Fl. ♀: Staminodia 4-6, filiformia, longissima. Stigmata 4. Succus aquosus.

1. *Stelestylis*. Fl. ♀ e spadice emersi. Perianthii segmenta 2 cæteris latiora. Stylus pyramidatus; ovula pendula, funiculis elongatis. Folia 2-fida.—*Brasil*.

2. *Carludovica*. Fl. ♀ in spadice immersa. Perianthii segmenta æqualia. Stigmata sessilia; ovula subsessilia. Folia 2-fida v. 2-4-partita.—*Amer. trop.*

3. *Ludovia*. Fl. ♀ in spadice immersa. Perianthium 0. Stigmata sessilia; ovula subsessilia. Folia carnosae, integra.—*Guian. Gall.*

**Tribus II. Cyclanthæ.** Flores in annulos v. spiras alternatim ♂ et ♀ confluentes. Perianthium fl. ♂ 0; fl. ♀ multidentatum. Folia 2-partita, segmento utroque 1-costato. Succus lactescens.

4. *Cyclanthus*.—*Amer. trop.*

#### GENERA EXCLUSA.

*Nipa*, *Thunb.*, et *Wettinia*, *Poepp.* et *Endl.* inter *Palmas* inveniuntur.

#### TRIBUS I. CARLUDOVICÆ.

1. *Stelestylis*, *Drude in Mart. Fl. Bras.* iii. ii. 230, t. 53.—Flores in spiras densas dispositi, ♂ 4 singulum ♀ stipantes. Fl. ♂: Perianthium compresso-globosum, in stipitem attenuatum, vertice concavum, ambitu multidentato. Stamina numerosa, filamentis inter se et cum perianthio confluentibus, apicibus liberis brevibus attenuatis; antheræ breviter oblongæ, didymæ, exsertæ, dorso affixæ. Fl. ♀: Perianthii foliola 4, inæqualia, 2 majora subquadrato-ovata, 2 minora lineari-oblonga, apice 2-fida. Staminodia 4, longissima, inferne perianthii foliolis adnata, superne filiformia, caduca. Ovarium ovoideum, in stylum 4-gonum attenuatum; stigmata 4, corniformia, horizontaliter stellatim patentia; ovula numerosissima, pendula, funiculis elongatis placentis 4 parietalibus affixa, chalaza appendiculata. Syncarpium carnosum, oblongum, stigmatibus prominentibus. Semina ellipsoidea, funiculis elongatis suspensa, testa firma apice in appendicem filiformem funiculo subæquilongum producta, albumine copioso; embryo minutus.—Folia ampla, bifida, segmentis fissis, costa simplici, nervis pinnatis, petiolo brevi canaliculato vaginante. Pedunculus elongatus. Spadix gracilis; spathæ 3.

Species 1, *Brasilæ* orientalis incolæ, a nobis non visa.

2. **Carludovica**, Ruiz et Pav. *Fl. Per. et Chil. Prod.* 146, t. 31. (*Ludovia*, Pers. *Syn.* ii. 576. *Salmia*, Willd. in *Gesellsch. Naturf. Fr. Berl. Mag.* v. 399.)—Flores in spiras densas dispositi, ♂ 4 singulum ♀ stipantes. Fl. ♂ : Perianthium stipitatum, obliquum, carnosum, margine 1-2-seriatim multidentatum. Stamina numerosa, filamentis inter se et cum perianthio confluentibus, apicibus liberis breviter attenuatis; antheræ oblongæ, didymæ, exsertæ, dorso affixæ. Fl. ♀ liberi v. rhachi spadiceis immersi et adnati. Perianthium 4-gonum, 4-fidum, v. 4-partitum, segmentis lobisve obtusè quadratis demum accrescentibus induratis persistentibus. Staminodia 4, longissima, filiformia, basi faciei segmentorum adnata, decidua, apicibus interdum antheras imperfectas gerentibus. Ovarium perianthio immersum, liberum v. tubo adnatum, 1-loculare; stigmata 4, sessilia, stellatim patentia, demum tumida et indurata; ovulâ perplurima, placentis 4 crassis parietalibus loculo intrusis v. ab apice loculi pendulis funiculis brevibus affixa, inappendiculata. Syncarpium carnosum, perianthii segmentis induratis stigmata tumida stipantibus opertum. Semina ellipsoidea, subsessilia, inappendiculata, testa coriacea extus carnosâ, albumine copioso carnosio corneo; embryo minutus.—Herbæ v. suffrutices, caudice brevi humili v. elongato erecto decumbente v. scandente annulato. Folia alterna v. fasciculata, rarius disticha, 2-fida palmatisecta v. rarissime integra, segmentis multicostatis integris v. dentatis, petiolo brevi v. elongato basi vaginante. Spadix simplex, oblongus v. cylindraceus, axillaris, breviter v. longe pedunculatus. Spathæ 2 v. plures, cymbiformes, caducæ.

Species ad 30, Americæ tropicæ et insularum Indiæ occidentalis incolæ. Kunth, *Enum. Pl.* iii. 104, 588. *H. Wendl. Ind. Palm.* 43. *Poit. in Mém. Mus. Par. ix.* 27, t. 1 (*Ludovia*). *Drude in Mart. Fl. Bras.* iii. ii. 231, t. 54 ad 59. *Lodd. Bot. Cab.* t. 1068. *Hook. Journ. Bot.* 1840, t. 3, 4. *Pæpp. et Endl. Nov. Gen. et Sp.* t. 151, 154. *Bot. Mag. t.* 2950-1 (*Ludovia*), 6418. *Regel, Gartenfl.* t. 992, 1046. *Il. Hort.* t. 165. *Rev. Hort.* 1861, t. 10, 11; 1869, f. 71. *Ærst. in Vidensk. Meddel. Natur. Foren. Kjöbenh.* 1857, 196. *Gard. Chron.* 1877, ii. 715, f. 136; 1879, ii. 278, f. 46.

EVODIANTHUS, *Ærst. in Vidensk. Meddel. Natur. Foren. Kjöb.* 1875, 194; *Amer. Centr. t.* 1. *Walp. Ann.* v. 860, ex descriptione auctoris a *Carludovica* non differt nisi staminibus dentibusque perianthii in fl. ♂ 2-seriatis et ovario libero. *SARCINANTHUS*, *Ærst. l. c.* 196; *Amer. Cent. t.* 2. *Walp. l. c.* 861, differt ovario supero et staminibus cavum totum perianthii implentibus.

3. **Ludovia**, Brongn. in *Ann. Sc. Nat. Ser.* 4, xv. 361, t. 1; et in *Fl. des Serres*, xv. 33, t. 1515-6.—Flores in spiras densas dispositi, ♂ 4 singulum ♀ stipantes. Fl. ♂ : Perianthium disciforme, crassum, breviter pedicellatum, multidentatum. Stamina numerosa, filamentis inter se et cum perianthio confluentibus, apicibus breviter liberis attenuatis; antheræ oblongæ, didymæ, exsertæ, dorso affixæ. Fl. ♀ : Perianthium 0. Staminodia 4, longissima, filiformia, basi ovario adnata, apicibus uncinatis anthera imperfecta instructis. Ovaria inter se et cum pedicellis florum ♂ confluentia, 1-locularia; stigmata 4, sessilia, ovato-linearia, stellatim patentia; ovula numerosa, placentis 4 ab apice loculi pendulis funiculis brevibus affixa, inappendiculata. Syncarpium . . .—Caudex radicans, crassus, oblique assurgens, annulatus. Folia disticha, maxima, crassa, rigida, basi breviter vaginantia, subpetiolata, lanceolata v. subspathulata, acuta, apicem versus crenato-dentata, nervis obliquis subimmersis. Spadices axillares, breviter pedunculati, oblongo-cylindracei; spathæ 3-5, distichæ.

Species 2, Guianæ gallicæ et Brasilæ incolæ. *Drude in Mart. Fl. Bras.* iii. ii. 242, t. 60, f. 1. Genus a nobis non visum, ex auctore a *Carludovica* differt perianthio in fl. ♀ 0, staminodiis basi ovarii accretis, habitu subrepente, et foliis distichis crassis, haud plicatis, contextura solida.

## TRIBUS II. CYCLANTHÆ.

4. **Cyclanthus**, *Poit. in Mém. Mus. Paris*, ix. 35, t. 2, 3. (*Cyclosanthes*, *Pæpp. in Froriep. Notiz.* xxxi. 312. *Discanthus*, *Spruce in Journ. Linn. Soc.* iii. 196.)—Flores in annulos alternatim ♂ et ♀ superpositos, v. in spiram confluentes dispositi. Fl. ♂ : Perianthium 0. Stamina 6, filamentis brevibus mono- v. diadelphis; antheræ lineari-oblongæ, basifixæ. Fl. ♀ inter se per totum cyclum v. spiram confluentes. Perianthii

segmenta in seriem duplicem multidentatam connata, alia basin alia apicem rhacheos spectantia. Staminodia brevia, inter se et cum perianthio confluentia, antheris imperfectis instructa. Ovaria rhachi immersa, inter se confluentia et cavernam continuam efformantia; stylus crassus, stigmatibus emarginatis; ovula numerosa, placentis 2 parietalibus funiculis elongatis affixa, inappendiculata. Fructus syncarpium discis distinctis tumidis sulcatis opertum. Semina ovoidea, funiculo elongato, testa extus pellucida intus sulcata, rhaphe angusta, albumine carnoso; embryo rectus, cylindraceus.—Herbæ acaules, lactescentes. Folia conferta, longe petiolata, bifurcata, segmentis lanceolatis 1-costatis plicatis nervis parallelis, nervulis transversis distinctis, petiolo tereti basi vaginante. Pedunculus longissimus, nudus v. bracteatus, cylindraceus; spathæ plures, apicem versus pedunculi completæ. Flores odori.

Species 3 v. 4? Americæ tropicæ incolæ. *Kunth, Enum. Pl.* iii. 107, 589. *Diet. Sc. Nat. Bot. Monocot. t.* 5, 6. *Pæpp. et Endl. Nov. Gen. et Sp.* ii. 38, t. 152, 154. *Drude in Mart. Fl. Bras.* iii. ii. 215, t. 60.

## ORDO CXC. **TYPHACEÆ.**

Endl. Gen. Pl. 241. Lindl. Veg. Kingd. 126.

*Flores* in diversis spadicibus monoici, v. abortu dioici. *Perianthium* e squamulis paleisve membranaceis v. e filis tenuissimis constans. Fl. ♂: *Stamina* 6 v. plura, sæpius squamis paleisve perianthii dense confertis sine ordine immixta, filamenta distincta v. connata, filiformia v. capillaria, perianthium longe superantia, flaccida. *Antheræ* basifixæ, erectæ, lineares oblongæ v. cuneatæ, loculis in longitudinem dehiscentibus, connectivo interdum in acumen conicum producto; pollen globosum v. conglobatum. *Ovarii* rudimenta 0. Fl. ♀: *Ovarium* superum, 1-2-loculare, sessile v. stipitatum, loculis 1-ovulatis. *Styli* tot quot loculi, breves v. elongati, terminales, persistentes, lineares v. linguæformes, introrsum in longitudinem stigmatosi. *Ovula* ab apice loculi pendula, anatropa, funiculo brevi v. 0. *Fructus* membranaceus v. subdrupaceus, 1- rarius 2-locularis, teres v. pressione angulatus, sessilis v. stipitatus, stylo persistente terminatus; pericarpium v. membranaceum et dehiscens, v. carnosum intus induratum indehiscens. *Semen* loculo conforme, pendulum, testa membranacea interdum ope chalazæ incrassatæ pericarpio adhærens, funiculo 0, rhaphe obsoleta; albumen copiosum, farinaceum v. subcarnosum. *Embryo* axilis, cylindraceus, extremitate radiculari incrassata, plumula fissura laterali latente.

Herbæ aquaticæ v. paludosæ, rhizomate perennante repente ramos annuos foliaque proferente; caules enodes, farcti, simplices v. ramosi. Folia alterna, linearia, integerrima, erecta et emersa v. natantia, basi vaginantia, vagina aperta, enervia v. 1-costata, nervis parallelis. Flores parvi v. minuti, in spadicibus globosis v. cylindraceis nudis v. basi foliaceo-bracteatis sessiles, densissime conferti, ebracteati et ebracteolati; spadices ♂ in caulo superiores.

Species ad 16, in aquis paludibusque dulcibus Europæ, Asiæ temperatæ et tropicæ, Australiæ, et Americæ borealis temperatæ vigentes.

Ordo *Pandaneis* proximus, differt caulibus annuis foliisque inermibus, perianthio evoluti, stylo elongato, ovulo ab apice loculi pendulo, funiculo obsoleto et embryone elongato.

### CONSPECTUS GENERUM.

1. **TYPHA.** Perianthium e filis tenuissimis. Antheræ lineares. Ovarium stipitatum. Fructus siccus, demum unilateraliter fissus.—*Reg. temp. et. trop.*

2. **SPARGANIUM.** Perianthium e squamis hyalinis. Antheræ oblongæ v. cuneatæ. Ovarium sessile, 1- rarius 2-loculare. Fructus extus spongiosus, indehiscens.—*Reg. bor. temp. et frigid., Australasia.*

1. *Typha*, Linn. Gen. n. 1040.—Flores in spadicibus terminalibus cylindraceis densissime conferti. Perianthium e filis tenuissimis articulatis sæpius paleis elongatis apice anguste spathulatis ovarii staminibusve imperfectis immixtis. Fl. ♂ : Stamina numerosa, filamentis filiformibus brevibus v. elongatis flaccidis distinctis v. varie connatis brevibus v. elongatis ; antheræ lineares v. lineari-oblongæ, basifixæ, loculis oppositis 2-locellatis, rimis lateralibus dehiscentibus, connectivo simplici v. in conum productum, polline conglobato 4-dymo. Fl. ♀ : Ovarium angustum, basi attenuatum in stipitem brevem v. elongatum productum, superne in stylum gracilem erectum brevem v. elongatum productum, stigmatibus lingui-formi v. lineari. Fructus minutus, subsessilis v. longe stipitatus, ellipsoideus v. cylindraceus, siccus, demum fissus. Semen pericarpio conforme, testa striata, albumine farinaceo ; embryo axilis, angustus, cylindraceus, albumini fere æquilongus.—Herbæ paludosæ v. lacustres, gregarie, graciles v. robustæ, interdum elatæ, glaberrimæ, rhizomate valido repente, caulibus erectis simplicibus basi submersis. Folia radicalia, lineari-elongata, crassiuscule spongiosa, costata v. ecostata ; caulina pauca, breviora. Pedunculus erectus, teres, strictus, gracilis v. robustus, indivisus. Spadices ♂ et ♀ consimiles, superpositi, pedunculum fere terminantes, contigui v. remoti, nudi v. spathis caducis-simis stipati. Flores in cylindrum ob copia filorum perianthii velutinum densissime conferti. Fructus minutus, ob fila pappiformia vento deflatus.

Species ad 10, paludibus aquæ dulcis regionum tropicarum et temperatarum incolæ. Kunth, Enum. Pl. iii. 90, 583. Rohrb. in Verhandl. Bot. Verein. Brandenb. xi. 67. Walp. Ann. iii. 495, v. 862. Gertn. Fruct. 1, t. 2. Nees, Gen. Pl. Germ. Monocot. iii. n. 41. L. C. Rich. in Ann. Mus. Par. xvii. t. 5, f. 8, 9. L. C. Rich. in Guill. Archiv. i. 193, t. 5. Spach, Suites Buff. t. 93. 2. *Sparganium*, Linn. Gen. n. 1041. (Platanaria, S. F. Gray, Nat. Arr. Brit. Pl. ii. 39.)—Flores in spadicibus globosis axillaribus conferti. Perianthium e squamis paucis irregularibus membranaceis elongato-cuneatis. Stamina plurima, filamentis distinctis ; antheræ oblongæ v. cuneatæ, basifixæ, loculis oppositis rimis lateralibus dehiscentibus, connectivo non productum ; polline globoso. Ovarium solitarium, sessile, turbinatum v. cuneiforme, 1-2-loculare, vertice solido subconico in stylos 1 v. 2 breves v. elongatos productum, stigmatibus unilaterali subulato v. lingulato. Fructus sessilis, obovoideus cuneiformis v. fusiformis, angulatus, pericarpio extus spongioso, endocarpio 1-2-loculari duro apice pertuso, indehiscens. Semen pericarpio conforme, testa tenuissima, albumine farinaceo ; embryo axilis, cylindraceus.—Herbæ aquaticæ, rhizomate gracili v. mediocri, caulibus simplicibus v. ramosis foliosis erectis v. in aquam pronis. Folia alterna, lineari-elongata, stricta v. flaccida, erecta v. natantia, integerrima, costata v. ecostata, subspongiosa, basi vaginantia. Pedunculi simplices v. ramosi, ramis sæpius basi foliaceo-bracteatis. Spadices parvi v. mediocres, ♂ terminales, sæpe in ramis superpositi, sessiles v. rhachin amplectentes ; inferiores ♀, in ramis sessiles v. pedunculati.

Species ad 6, regionibus temperatis et subfrigidis hemisphæræ borealis et Australasiæ incolæ. Kunth, Enum. Pl. iii. 88. Gertn. Fruct. i. t. 19. Nees, Gen. Fl. Germ. Monocot. iii. n. 40. Reichb. Ic. Fl. Germ. ix. t. 324 ad 326. Schkuhr, Handb. t. 282. Griff. Ic. Pl. Asiat. t. 166, 168.

## ORDO CXCI. AROIDEÆ.

Endl. Gen. 232. Lindl. Veg. Kingd. 127. Schott, Aroidæ, 1853, cum tabb. 60 ; Icones Aroidæarum, 1857, cum tabb. 40 ; Genera Aroidæarum, 1858, cum tabb. 98 ; Prodr. Syst. Aroid. 1860. Engler, Araceæ (DC. Monogr. Phanerog. ii.), 1879. ORONTIACEÆ, Lindl. Veg. Kingd. 193.

Flores in spadice simplicem dispositi, nunc hermaphroditi et omnes conformes, nunc nonoici ♂ in parte superiore spadici, rarissime dioici, distincti v. varie confluentes, ♂ et ♀

non raro in laminam spadicem involventem demum solutam confluentes. *Perianthium* in floribus monoicis 0, v. rarissime cupuliforme; in hermaphroditis hypogynum, e segmentis 4-6 cuneatis v. obovatis apicibus truncatis v. incurvis imbricatis, v. rarius in urceolum lobatum v. truncatum connatis. *Stamina* in fl. hermaphroditis 4-8, distincta, hypogyna, foliolis perianthii opposita, filamentis dilatatis, antheris terminalibus loculis juxtapositis poris v. rimulis dorso dehiscentibus; in fl. monoicis stamina 1-∞, distincta v. in corpus peltatum prismaticum v. sinuatum vertice deplanatum confluentia. *Antheræ* distinctæ v. in staminibus confluentibus ope connectivi incrassati connatæ, loculis discretis v. juxtapositis liberis v. connectivo immersis et apice poro dehiscentibus v. dorso ejus adnatis et poris terminalibus v. rimis dorsalibus dehiscentibus, rarissime in tubulos apice pervios productis; connectivum polymorphum, sæpe loculos superans; pollen globosum v. ellipsoideum, lævigatum, pulvereum v. in farciminula conglomeratum (pollen vermiforme). *Staminodia* vera subulata v. clavata inter fl. ♀ et infra fl. ♂ occurrunt, et præterea organa multiformia, tam ♂ quam ♀, staminodia simulantia, quæ organa neutra nuncupamus, non raro adsunt. *Ovarium* globosum ovoideum oblongum v. lageniforme, integrum, rarissime lobatum, basi lata sessile v. inferne spadici immersum, 1-∞-loculare, septis perfectis v. imperfectis, vertice in stylum attenuato v. tumido v. dilatato deplanato et loculo multo latiore. *Stylus* 0, v. brevis v. elongatus, semper terminalis et indivisus, rectus, rarissime curvus: stigma terminale, discoideum pulvinare v. capitatum, sæpe guttam mucosam distillans, interdum in vertice ovarii sessile, lineari-oblongum rima medio exsculpta, in paucis lobatum v. stellatum. *Ovula* in loculis solitaria v. plura, basilaria v. placentis parietalibus et axilibus v. aciebus semiseptorum affixa, v. ab apice loculi pendula, brevia v. elongata, sessilia v. funiculo brevi v. elongato interdum cristato affixa, orthotropa micropyle tholum loculi spectante nunc anatropa v. semi-anatropa, rarius campylotropa v. amphitropa, micropyle sæpe magno hianti fundum loculi spectante. *Fructus* in spadice plures, liberi v. connati, baccati v. membranacei, indehiscentes v. verticibus crasse coriaceis suboperculatim solutis, loculis sæpiissime pulpa glutinosa v. mucilaginosa repletis, 1-∞-spermi. *Semina* parva v. magna, globosa ellipsoidea v. oblonga, recta v. curva, umbilico laterali v. basali poculiformi v. exsculpta; testa membranacea coriacea v. crustacea, lævis striata punctata scrobiculata v. cristata, rhaphe varia, endopleura membranacea; albumen sæpius copiosum, carnosum, rarius farinaceum corneum parcum v. 0. *Embryo* axilis, elongatus, rarius parvus v. minutus, in semine exalbuminoso hippocrepicus et macropodus.

*Plantæ* glaberrimæ, rarissime pubescentes v. aculeatæ, succo aqueo v. caustico v. lacteo, herbacæ et acaules v. caulescentes, rhizomate tuberoso v. elongato rarissime repente, nunc fruticosæ caulibus sympodialibus ope radicum scandentibus. Folia in speciebus tuberiferis solitaria v. pauca, proteranthera hysteranthera v. floribus coætanea, in caulescentibus alterna disticha v. spiraliter disposita, integra pertusa lobata pinnatifida pinnatisecta v. pedatisecta, in perplurimis hastata v. sagittata; præter folia normalia, cataphylla membranacea sæpe 2-carinata pedunculum v. folia vaginantia adsunt. Pedunculus simplex, rarissime ramosus, in speciebus herbaceis sæpiissime terminalis, in frutescentibus axillaris. Spatha forma varia, in plerisque generibus colorata, colore viridi atro flavescente rubescente v. purpurascente, nunquam cærulescente. Flores parvi v. minuti, interdum foetidis-simi.

Species fere 900, per regiones tropicas utriusque orbis maxima copia dispersæ, in regionibus temperatis rariores, in frigidis omnino desunt.

Ordo valde naturalis, vix tamen nisi habitu a *Naiadeis*, *Cyclanthaceis*, et *Typhaccis* facile distinguendus, nec a *Pandaneis* nisi habitu, et (Van Tieghemo ducente, Ann. Sc. Nat. Ser. 7, vi. 196) stipitis morphologia. Cum *Palmis* quibus per *Pandaneas* auctores quidam putaverunt associandum esse, nulla vera affinitas. Ordo assidue elaboratus est per Schottium, qui multo acumine species ordinavit et tribus, subtribus, et genera, sumpta pro maxima parte de exemplaribus vivis, fundavit: nimia tamen genera proposuit secundum singulos characteres. Engler multa genera Schottiana sagaciter redegit; nobis tamen iudicibus infelicitè pro systemate Schottiano novum proposuit ad characteres histologicos axis incrementi conditum, quod nobis videtur mancum quoad explicationem

affinitatum naturalium, ut et modum generum determinandorum; nec possumus habere tribus 33 in quas ordinem distribuit adoptione dignas.

In hoc ordine magis quam in ullo alio, opus est nobis, sine arcta confirmatione, characteres alii auctoribus propositos (imprimis Schottianos) secundum exemplaria viva, accipere, cum sub exsiccatione omnes evanescunt, quo statu solum, tot genera nobis accedunt. Contra autem, ex laboribus N. E. Brownei multum utilitatis percepimus, qui in Herbario Kewensi concorporavit seriem pretiosam observationum et analyses de die in diem sumpta ex exemplaribus quæ in Horto Kewensi alibique flores exhibuerunt.

## FORMÆ ABNORMES.

Habitus abnormis est in *Pistia*, etsi inflorescentia floresque fere *Ambrosiniæ* exhibet.

Flores ♂ et ♀ in seriebus parallelis longitudinalibus ordinati sunt in *Spathicarpa* et *Spathantheo*.

Inter genera perianthio donata, in *Lamioculcade* solo flores superiores etsi revera masculi ovarii bene evolutis instructi sunt.

## CONSPECTUS GENERUM.

Series A. Flores monoici (in *Arisæmate* interdum dioici). Perianthium 0.

**Tribus I. Arineæ.** Spadix (*Pistia* excepta) appendiculatus. Flores superiores ♂. Perianthium 0. Stamina libera, antherarum loculis connectivo majoribus. Fl. ♀: Staminodia 0. Ovarium 1-loculare, ovulis orthotropis.—*Herbæ acaules*.

Subtribus 1. Alleluchieæ. *Tubus spathe ope dilatationis spadicis clausus v. in loculos 2 divisus*.

1. CRYPTOCORYNE. Spathæ faux clausa, inflorescentia tota tubo inclusa. Fl. ♀: Ovaria monocycla, inter se connata. Fructus syncarpium valvatim dehiscens. *Herbæ paludosæ v. aquaticæ*.—*Ind. or., ins. Malay*

2. LAGENANDRA. Spathæ faux clausa, inflorescentia tota tubo inclusa. Fl. ♀: Ovaria polycycla. Fructus baccatus. *Herbæ paludosæ*.—*Ind. or.*

3. PINELLIA. Spathæ faux clausa; inflorescentia ♀ tubo inclusa; ♂ exserta. *Herbæ foliis 3- v. pedati-sectis*.—*China, Japon.*

4. AMBROSINIA. Spathæ tubus 2-locularis; inflorescentia ♂ in loculo postico, ♀ uniflora in antico inclusa. *Herba foliis integris*.—*Reg. Mediterr.*

Subtribus 2. Pistieæ. *Spadix inappendiculatus, spathe dorso adnatus*. Fl. ♂: Stamina 2, connata, spadicis apice inserta; fl. ♀ solitarius, dorso tubo spathe basi lata longe adnatus, ovulis orthotropis.

5. PISTIA. *Herba natans, acaulis, stolonifera, foliis rosulatis cuneato-obovatis*.—*Aquæ dulces tropicarum*.

Subtribus 3. Arisareæ. *Spadix appendiculatus, liber v. basi spadicis adnatus*. Fl. ♂ sparsi; antheræ in processibus spadicis sessiles. *Folia et flores coætanei*.

6. ARISABUM. Spathæ tubus marginibus connatis. Fl. ♂ monandri, antheris hippocrepicis. —*Reg. Mediterr.*

7. ARISÆMA. Spathæ tubus convolutus. Flores sæpissime dioici, ♂ 2-5-andri.—*As. temp. et subtrop., Am. bor., Abyssinia*.

Subtribus 4. Euarineæ. *Spadix liber, appendiculatus*. Fl. ♂ densi; antheræ sessiles v. subsessiles. *Folia sæpe proteranthia*.

\* *Spathæ tubus marginibus connatis*.

8. BIARUM. Ovulum solitarium. *Folia integra*.—*Reg. Mediterr.*

9. SAUROMATUM. Ovula 2-4. *Folia pedatisecta*.—*As. trop., Afr. trop.*

\*\* *Spathæ tubus convolutus*.

10. ARUM. Ovula ∞, parietalia, 2-seriata. *Bacca polysperma*. *Folia hastata v. sagittata*. *Europ., As. occid.*

11. TYPHONIUM. Ovula 1-2, basilaria. *Bacca 1-2-sperma*. *Folia sagittata, 3-5-loba v. pedatisecta*.—*As. trop., Austral., ins. Pacific.*

12. **THERIOPHONUM.** Ovula numerosa, basi et apici loculi inserta. Bacca oligosperma. Folia sagittata v. hastata.—*Ind. or.*

13. **HELICOPHYLLUM.** Ovula 2, basilaria. Bacca 1-2-sperma. Folia pedatisecta, segmentis lateralibus convolutis.—*As. occid.*

14. **HELICODICEROS.** Ovula pauca, basi et apici loculi inserta. *Spadicis appendix crinita.* Fl. ♂ et ♀ remoti, organis neutris interpositis. Folia pedatisecta, segmentis lateralibus convolutis.—*Ins. Balear.*

15. **DRACUNCULUS.** Ovula pauca, basi et apice loculi inserta. Fl. ♂ et ♀ contigui. Folia pedatisecta, segmentis lateralibus convolutis.—*Europ. austr., ins. Canar.*

**Tribus II. Stilochitonese.** Spadix inappendiculatus. Flores superiores ♂, inferiores ♀. Perianthium fl. ♂ annulare, fl. ♀ cupulare. Stamina distincta, filamentis brevibus v. elongatis, loculis connectivo latioribus. Ovarium 1-loculare, ovulis anatropis. Herbæ foliis simplicibus.

16. **STYLOCHITON.** Spathæ tubus marginibus connatis.—*Afr. trop. et austr.*

**Tribus III. Zomicarpeæ.** Spadix appendiculatus. Perianthium 0. Fl. ♂: Stamina distincta, antheris didymis. Fl. ♀: Ovarium 1-loculare, ovulis anatropis.—Herbæ tuberosæ.

17. **ZOMICARPA.** Ovarium 1-loculare, ovulis 6-9 elongatis. Herbæ, foliis proterantheris 3- v. pedati-sectis.—*Brasil.*

18. **ZOMICARPELLA.** Ovarium 1-loculare, ovulo solitario. Herba parvula, foliis ovatis cordatis v. sagittatis.—*Nov. Grenada.*

**Tribus IV. Pythoniceæ.** Spadix appendiculatus v. inappendiculatus. Perianthium 0. Fl. ♂: Stamina distincta, sessilia v. stipitata, antherarum loculis connectivo latioribus. Fl. ♀: Ovarium 1-∞-loculare, ovulis anatropis v. semi-anatropis, micropyle infera. Herbæ acaules, tubere magno, foliis sæpissime proterantheris pedatisectis et pinnatifidis.

\* *Spadix appendiculatus, inflorescentiis ♂ et ♀ contiguis, organis neutris 0.*

19. **AMORPHOPHALLUS.** Spadicis appendix lævis, floribus omnibus perfectis, ♂ et ♀ arcte contiguis.—*As. trop., ins. Malay. et Pacific.*

20. **THOMSONIA.** Spadicis appendix processibus conicis onusta, floribus ♂ superioribus sterilibus, ♂ et ♀ arcte contiguis.—*Himalaya.*

21. **PSEUDODRACONTIUM.** Spadicis appendix processibus verrucosis onusta, floribus ♂ omnibus perfectis sparsis.—*Cochinchina.*

\*\* *Spadix appendiculatus; inflorescentia ♂ a ♀ remota, organis neutris interpositis.*

22. **SYNANTHERIAS.** Spadicis appendix gracilis. Stamina circa discum disposita. Ovarium 2-loculare, ovulis septo affixis.—*Penins. Ind. or.*

23. **RHAPHIOPHALLUS.** Spadicis appendix gracilis. Stamina sine ordine conferta. Ovarium 3-loculare, ovulis basilaribus.—*Penins. Ind. or.*

24. ? **XENOPHYA.** Spadicis appendix elongata. Ovarium 1-loculare, ovulis 6 basilaribus.—*Nov. Guinea.*

\*\*\* *Spadix inappendiculatus.*

25. **PLESMONIUM.** Fl. ♂ et ♀ remoti, organis neutris magnis margaritiforribus interpositis. Ovarium 2-3-loculare.—*Bengal.*

26. **ANCHOMANES.** Fl. ♂ et ♀ contigui, organis neutris 0. Ovarium decurvum, tuberculatum, 1-loculare.—*Afr. trop.*

**Tribus V. Colocasieæ.** Spadix (*Schizocasia* excepta) inappendiculatus. Flores superiores ♂, inferiores ♀. Perianthium 0 (urceolo in fl. ♀ *Peltandra* excepto). Stamina in corpus sæpissime prismaticum sessile v. peltatum connata. Ovarium 1-∞-loculare.

\* *Ovula orthotropa v. fere orthotropa, micropyle supera.*

† *Spathæ tubus apertus. Fructus tubo non involutus.*

27. **ARIOPSIS.** Stamina omnia inter se connata. Ovarium 1-loculare, placentis 4-6 multiovulatis, stigmate 4-6-fido. Herbæ pusillæ, tuberosæ, foliis peltatis.—*Ind. or.*

†† *Spathæ tubo convolutus. Fructus tubo involutus.*

28. *REMUSATIA*. Ovarium basi 1-loculare, apice 2-4-loculare, ovulis numerosis placentis 3-4-parietalibus 2-seriatim affixis. Herbæ tuberosæ annis alternis foliiferi et floriferi; spathæ lamina aperta.—*Ind. or., Java.*

29. *GONATANTHUS*. Ovarium 1-loculare, v. apice 2-3-loculare, ovulis numerosis basilaribus. Herbæ tuberosæ, spathæ tubo medio constricto, lamina anguste elongata convoluta.—*Mont. Himal.*

30. *COLOCASIA*. Ovarium 1-loculare, ovulis numerosis placentis 3-5 parietalibus 2-seriatim affixis. Herbæ magnæ, tuberosæ v. caudice crasso, spathæ lamina aperta.—*As. trop., una amphigæa culta.*

31. *ALOCASIA*. Ovarium 1-loculare, v. apice 3-4-loculare, ovulis paucis basilaribus. Herbæ elatæ, caudice crasso subrecto, foliis sagittatis cordatis.—*As. trop.*

32. *ANUBIAS*. Ovarium imperfecte 2-loculare, ovulis numerosis placentis latis basilaribus. affixis. Herbæ rhizomate prorepente, foliorum nervis tenuissimis parallelis.—*Afr. trop.*

33. *PELTANDRA*. Ovarium cupulæ immersum, 1-loculare, ovulis 1-paucis subparietalibus. Embryo exalbuminosus. Herba paludosa, rhizomate crasso, foliis hastatis nervis tenuissimis densis.—*Amer. bor.*

\*\* *Ovula anatropa v. semianatropa, micropyle infera.*

† *Baccæ tubo spathæ incluse.*

34. *CALADIUM*. Ovaria distincta v. leviter cohærentia, 2-3-locularia, ovulis in loculis numerosis septo adnatis. Herbæ tuberosæ, foliis membranaceis annuis cordatis v. sagittatis.—*Amer. trop.*

35. *XANTHOSOMA*. Ovaria inferne distincta superne crasse dilatata et coadunata, 2-3-locularia, ovulis in loculis plurimis septo affixis. Herbæ tuberosæ v. caudice elongato, foliis coriaceis sagittatis v. pedatisectis.—*Amer. trop.*

36. *TYPHONODORUM*. Ovarium 1-loculare, ovulo solitario basilari. Herbæ robustæ, caudice crasso, foliis triangulari-hastatis v. cordatis.—*Madagasc.*

37. ? *CHLOROSPATA*. Ovaria distincta, 2-3-locularia, ovulis in loculis pluribus, placentis subventralibus. Herba tuberosa, foliis pedatisectis.—*Nov. Grenada.*

†† *Spatha aperta. Baccæ tubo non incluse.*

38. ? *HAPALINE*. Pelta staminum elongato-hexagona, tenuissima. Ovarium 1-loculare, 1-ovulatum. Herba gracilis, tuberosa, foliis peltatis cordato-sagittatis.—*Burma.*

39. ? *SCAPHISPATHA*. Staminum filamenta in columnam 4-sulcatam antheris æquilongam connata. Ovarium 1-loculare, ovulis 4 basilaribus.—*Bolivia.*

40. ? *SCHIZOCASIA*. Stamina in columnam prismaticam connata. Ovarium 1-loculare, ovulis plurimis.—*Nov. Guinea, ins. Philipp.*

**Tribus VI. Philodendreæ.** Spadix inappendiculatus (v. rarius appendice nuda v. organis neutris induta). Flores superiores ♂, inferiores ♀. Perianthium 0. Stamina distincta v. rarius in corpus prismaticum connata, connectivo sæpius loculis latiore. Herbæ v. frutices, foliis floribusque coætaneis. Spadix sæpiissime spatha brevior, rarissime medio nudus.

EXCEPTA: Stamina in *Syngonio* dorso cohærentia.

\* *Fructus tubo spathæ non inclusus. Spatha tota decidua, marcescens. Stamina in generibus paucis connata.*

† *Frutices scandentes. Fl. ♂ steriles inter fertiles ♂ et ♀ (Rhektophylo excepto). (Stamina distincta v. connata.)*

41. *PHILODENDRON*. Stamina in corpus prismaticum connata. Ovaria distincta, 2-10-locularia, ovulis orthotropis angulo interiori loculorum affixis. Semina albuminosa. Folia varia.—*Amer. trop.*

42. *THAUMATOPHYLLUM*. Spadix appendiculatus. Stamina distincta antheris angustis stipitata. Ovaria distincta, ovulis orthotropis numerosissimis. Folia pedato-pinnatisecta.—*Brazil. bor.*

43. *SYNGONIUM*. Stamina in corpus prismaticum connata. Ovaria cohærentia, 1-2-locularia.

ovulis in loculis solitariis anatrois basilariibus. Semina exalbuminosa, embryo macropodo. Folia pedatisecta.—*Amer. trop.*

44. PORPHYROSPATHA. Stamina connata. Ovaria distincta, 2-locularia, ovulis in loculis 1-2 anatrois, placentis centralibus. Folia sagittata v. 3-secta.—*Costa-Rica.*

45. CULCASIA. Stamina distincta. Ovaria sparsa, 1-2-locularia, ovulis in loculis solitariis anatrois basilariibus. Semina albuminosa. Folia ovata v. lanceolata.—*Afr. trop.*

46. CERCESTIS. Stamina distincta. Ovarium 1-loculare, ovulo solitario anatrois supra-basiliari. Semen exalbuminosum, embryo macropodo. Folia sagittato-v. hastato-cordata.—*Afr. trop.*

47. RHEKTOPHYLLUM. Stamina distincta. Ovarium 1-loculare, ovulo solitario anatrois parietali. Folia ampla, pertusa v. paucipinnatisecta.—*Afr. trop.*

†† *Herbæ acaules v. caudice erecto. Stamina distincta.*

48. AGLAONEMA. Fl. ♂ et ♀ contigui. Ovarium 1-2-loculare; ovula in loculis solitaria, anatropa, placentis intrusis affixa. Semina exalbuminosa, embryo macropodo. Folia ovata v. ovato-lanceolata.—*Amer. trop., Afr. trop.*

49. PHILONOTON. Fl. ♂ et ♀ longe remoti. Ovarium 1-loculare; ovulum 1, anatrois, parietale. Folia lanceolata.—*Fl. Amazon.*

50. MONTRICHARDIA. Fl. ♂ et ♀ contigui. Ovarium 1-loculare; ovula gemina, anatropa, subbasilaria. Semen exalbuminosum, embryo macropodo. Folia sagittata.—*Amer. trop.*

51. NEPHTHYTIS. Fl. ♂ et ♀ contigui. Ovarium 1-loculare; ovulum 1, sub apice loculi pendulum, anatrois. Semina exalbuminosa, embryo macropodo. Folia late sagittata.—*Afr. trop.*

\*\* *Fructus tubo accrescente spathæ inclusus, lamina marcescente decidua. Herbæ acaules, staminibus distinctis.*

52. RICHARDIA. Fl. ♂ et ♀ contigui. Ovarium staminodiis instructum, 2-5-loculare; ovula anatropa, angulo interiori affixa. Semina albuminosa. Folia sagittata.—*Afr. aust.*

\*\*\* *Fructus spatha tota persistente inclusus. Herbæ acaules v. caudice erecto, staminibus distinctis.*

53. HOMALONEMA. Fl. ♂ et ♀ contigui. Ovarium staminodiis instructum, 3-4-loculare; ovula anatropa, septis adnata. Semina albuminosa. Folia lanceolata v. cordata.—*As. trop., Amer. trop.*

54. CHAMÆCLADON. Fl. ♂ et ♀ contigui. Ovarium staminodiis instructum; ovula in loculis plura, anatropa, angulo interiori adnata. Semina albuminosa. Folia ovata v. lanceolata.—*Asia trop.*

\*\*\* *Fructus tubo turbinato spathæ cinctus, lamina circumscissa decidua. Herbæ sæpius parvulæ, acaules, foliis lanceolatis ellipticis v. cordatis, staminibus distinctis. Ovarium 1-loculare; ovula parietalia.*

† *Ovula anatropa.*

55. SCHISMATOGLOTTIS. Spadix inappendiculatus, floribus ♂ perpaucis superioribus omnibus sterilibus. Stamina truncata.—*Archip. Malay.*

56. APATEMONE. Spadicis appendix tuberculata. Stamina truncata.—*Archip. Malay.*

57. BUCKPHALANDRA. Spadix inappendiculatus. Antheræ 2-cornutæ.—*Borneo.*

58. RHYNCHOPYLE. Spadix inappendiculatus. Fl. ♂ v. fere omnes perfecti. Stamina truncata.—*Borneo.*

†† *Ovula orthotropa.*

59. PIPTOSPATHA. Spadix inappendiculatus. Antheræ connectivum longe productum. Ovaria distincta.—*Borneo.*

60. GAMOGYNE. Spadix inappendiculatus. Antheræ truncatæ. Ovaria omnia connata.—*Borneo.*

61. MICROCASIA. Spadix appendice subglobosa lævi coronatus. Antheræ 2-aristatæ. Ovaria pauca, distincta.—*Borneo.*

**Tribus VII. Dieffenbachieæ.** Spadix inappendiculatus. Flores superiores ♂, inferiores ♀. Perianthium 0. Fl. ♂: Stamina in corpus sessile v. stipitatum connata. Fl. ♀: Staminodia ovarium cingentia 2-8, distincta v. in cupulam connata. Ovarium 2-5-loculare; ovula angulo interiori loculorum affixa, orthotropa v. anatropa.

\* *Stigma sessile, pulvinare. Semina exalbuminosa, embryo macropodo.*

62. DIEFFENBACHIA. Stamina in corpus sessile connata. Ovarium 1-3-loculare, loculis 1-ovulatis; ovula anatropa. Folia oblonga.—*Amer. trop.*

\*\* *Stigma sæpius stylum terminans, lobatum v. capitatum. Semina albuminosa. Stamina (Gearo excepto) in corpus peltatum connata.*

63. TACCARUM. Ovarium 3-6-loculare, loculis 1-ovulatis, stigmate capitato; ovula anatropa. Folia pinnatisecta.—*Brasil.*

64. ANDROMYCTIA. Ovarium 3-loculare, loculis 1-ovulatis, stigmate 3-crure; ovula anatropa. Folia pedatisecta.—*Cuba.*

65. STAUISTIGMA. Ovarium 3-5-loculare, loculis 1-ovulatis, stigmate radiatim 3-5-lobo; ovula anatropa. Folia pinnatisecta.—*Amer. trop.*

66. GEARUM. Ovarium 3-4-loculare, loculis 1-ovulatis, stigmate subsessili 3-4-lobo; ovula orthotropa. Folia pedata.—*Brasil.*

67. MANGONIA. Ovarium 3-loculare, loculis 2-ovulatis, stigmate 3-lobo; ovula anatropa. Folia sagittata.—*Prov. Argent.*

68. STEUDNERA. Ovarium 1-loculare, loculis  $\infty$ -ovulatis, stigmate stellatim 3-5-lobo; ovula orthotropa. Folia ovato-oblonga, peltata.—*Burma.*

69. GORGONIDIUM. Ovarium 4-loculare, loculis 1-ovulatis, stigmate depresso 4-lobo; ovula orthotropa.—*Sualia.*

**Tribus VIII. Spathicarpææ.** Spadix per totam longitudinem spathæ adnatus. Flores in serie longitudinali ordinati, seriebus exterioribus (spathæ contiguas) ♀, intermedia ♂. Perianthium 0. Fl. ♂: Stamina in corpus peltatum connata. Fl. ♀: Ovarium staminodiis instructum; ovula orthotropa. Herbæ acaules.

70. SPATHICARPA. Ovarium 1-loculare, ovulo solitario basilari.—*Brasil.*

71. SPATHANTHEUM. Ovarium 4- $\infty$ -loculare, loculis 1-ovulatis.—*Bolivia.*

Series B. Flores hermaphroditi, perianthio 0.

**Tribus IX. Calleeæ.** Spadix inappendiculatus. Flores omnes fertiles v. pauci ad basin v. apicem spadicis abortu unisexuales. Stamina 4- $\infty$ , distincta, filamentis complanatis linearibus; antheræ terminales, loculis connectivum superantibus. Ovarium obpyramidatum v. prismaticum, vertice dilatato deplanato; stigma in centro verticis sessile v. subsessile, in directione spadicis elongatum, depressum, medio sulcatum; ovula anatropa v. campylotropa.—Frutices scandentes, foliis simplicibus, rarius herbæ.

\* *Herba aquatica, rhizomate repente. Spatha accrescens, persistens.*

72. CALLA. Spadix stipitatus. Ovarium 1-loculare; ovula 6-9 basilaria. Semina albuminosa.—*Europ., Amer. bor.*

\*\* *Frutices, rarius herbæ, scandentes. Spatha decidua.*

† *Spadix stipitatus.*

73. STENOSPERMATION. Ovarium 2-loculare; ovula in loculis 4-6, basi septi affixa. Semina albuminosa.—*Amer. trop.*

74. RHODOSPATHE. Ovarium 2-loculare; ovula in loculis plura, a basi ad apicem septi affixa. Semina compressa, reniformia, cristata, albumine parco.—*Amer. trop.*

75. HETEROPSIS. Ovarium perfecte v. imperfecte 2-loculare; ovula in loculis 2, basi septi affixa.—*Brasil., Guiana.*

76. ANADENDRUM. Ovarium 1-loculare; ovulum solitarium, basilare. Semen exalbuminosum, embryo macropodo.—*Archip. Malay.*

†† *Spadix sessilis.*

77. MONSTERA. Ovarium 2-loculare; ovula in loculis 2, basi septi affixa. Bacce coherentes. Semina exalbuminosa, embryo macropodo.—*Amer. trop.*

78. SCINDAPSUS. Ovarium 1-loculare; ovulum solitarium, basilare. Semina exalbuminosa, embryo macropodo.—*Asia trop., ins. Pacific.*

79. RHAPHIDOPHORA. Ovarium 1- v. imperfecte 2-loculare; ovula numerosa, placentis ad apicem loculi productis affixa. Baccæ coherentes, polyspermæ. Semina teretiuscula, albuminosa. —*As. trop., ins. Pacific.*

80. EPIPREMNUM. Ovarium 1- v. imperfecte 2-loculare; ovula in loculis 2 v. plura. Baccæ 1-spermæ. Semen reniforme, albuminosum. —*Archipel. Malay., ins. Pacific.*

81.? AMYDRIMUM. Ovarium 2-loculare, *stigmatē capitato*; ovula in loculis solitaria, basi septi affixa. —*Archip. Malay.*

Series C. Flores omnes hermaphroditi (*Zamioculcade* excepto). Perianthium e segmentis 4-8 distinctis.

**Tribus X. Zamioculcasieæ.** Flores in spadice inappendiculato abortu unisexuales, superiores ♂ ovarii effatis, inferiores ♀ antheris effatis. Perianthii segmenta 4. Herbæ acaules, foliis 1-3-pinnatisectis.

82. ZAMIOCULCAS. Ovarium 2-loculare; ovula in loculis solitaria, antropa. —*Afr. trop. or.*

**Tribus XI. Orontieæ.** Flores in spadice inappendiculato hermaphroditi. Perianthii segmenta 4, 6, v. 8.

Subtribus 1. Euorontieæ. *Spatha stipitem longissimum pedunculiformem spadicis vaginans, lamina incompleta* v. 0. *Spadix sursum florens.* Ovarium 1-2-loculare.

83. ORONTIUM. Ovarium 1-loculare; ovulum solitarium, semi-anatropum. Herba aquatica. —*Amer. bor.*

84. LYSICHTUM. Ovarium 2-loculare ovula in loculis 1-2, orthotropa, ab apice funiculi basilaris pendula. Herba paludosa. —*Asia bor. orient., Amer. bor. occ.*

Subtribus 2. Dracontieæ. *Spatha fornicata, diu persistens. Spadix sursum florens.* Ovarium 2-3-loculare; ovula in loculis solitaria, semi-anatropa v. campylotropa.

85. SYMPLOCARPUS. Spadix globosus. Ovarium 1-2-loculare; ovula sub apice loculorum pendula. Rhizoma prorepens, foliis cordatis. —*As. bor., Amer. bor.*

86. DRACONTIUM. Spadix cylindraceus. Ovarium incomplete 2-3-loculare; ovula angulo interiori loculorum affixa. Herba tuberosa, foliis 3-sectis v. pinnatifidis. —*Amer. trop.*

Subtribus 3. Lasieæ. *Spatha elongata, sæpe torta, rarius breviuscula, diu persistens. Spadix deorsum florens.* Ovarium 1-5-loculare; ovula in loculis solitaria, anatropa v. semi-anatropa.

87. LASIA. Ovarium 1-loculare, stylo crasso; ovulum ab apice loculi pendulum. Herba aculeata, foliis pedato-pinnatifidis, spatha elongata torta. —*As. trop.*

88. PODOLASIA. Ovarium 1-loculare, stigmatē sessili; ovulum subbasilare. Herba caudice erecto, foliis hastatis, spatha cymbiformi obtusa. —*Borneo.*

89. UROSPATHA. Ovarium 2-loculare; stigma sessile; ovula in loculis 2-∞. Herbæ caudice erecto, foliis hastatis, spatha elongata acuminata. —*Amer. trop.*

90. ANAPHYLLUM. Ovarium 1-loculare, stigmatē sessili; ovulum parietale. Herba caudice prorepente, foliis pedato-pinnatisectis, spatha lanceolata longe acuminata. —*Ind. or.*

91. OPHIONE. Ovarium 4-5-loculare, stylo crasso; ovula angulo interiori loculorum affixa. Herba tuberosa, spatha lanceolata. —*Nov. Grenada.*

92. CYTOSPERMA. Ovarium 1-loculare; ovula placentis parietalibus 2-seriatim inserta. Herbæ rhizomate tuberoso v. prorepente, foliis hastatis. —*Asia, Africa, et Amer. trop.*

Subtribus 4. Spathiphyllæ. *Spatha tandem foliacea, accrescens, persistens, tota explanata. Spadix sursum florens.* Ovarium 3-4-loculare; ovula anatropa.

93. SPATHIPHYLLUM. Stigma 3-4-lobum; ovula in loculis 2-8, angulo interiori loculorum affixa. —Herbæ subacaulis, foliis oblongis v. lanceolatis. —*Amer. trop., Archip. Malay.*

Subtribus 5. Anthurieæ. *Spatha accrescens, persistens, aperta, recurva v. reflexa. Spadix sursum florens.* Ovarium 2-loculare.

94. ANTHURIUM. Ovarii loculi 1-2-ovulati. —Herbæ v. frutices acaules v. scandentes, foliis variis. —*Amer. trop.*

Subtribus 6. Pothoineæ. *Spatha accrescens, persistens v. obsoletus. Spadix sursum florens. Ovarium 1-3-loculare. Semina exalbuminosa, embryo macropodo.*

95. POTROS. Ovarium 3-loculare, loculis 1-ovulatis. Frutices scandentes, lamina folii cum petiolo dilatato articulata.—*As. trop., Austral., ins. Pacif., Madagasc.*

96. POTHOIDIUM. Ovarium 1-loculare, 1-ovulatum. Frutex scandens, petiolo dilatato cum lamina angustiore articulato.—*Archip. Malay.*

Subtribus 7. Acoreæ. *Spatha obsoleta v. obscura. Spadix sursum florens. Ovarium 1-3-loculare, ovula orthotropa.*

97. ACORUS. Spadix solitarius, in margine pedunculi ensiformis sessilis. Ovarium 2-3-loculare; ovula ab apice loculi pendula. Herbæ aromaticæ, foliis ensiformibus.—*Reg. temp. bor.*

98. GYMNOTACHYS. Spadices racemosi, longe pedunculati. Ovarium 1-loculare; ovulum solitarium, ab apice loculi pendulum. Herba tuberosa, foliis gramineis.—*Australia.*

#### GENERA DUBIA.

ANTHELIA, Schott in Miq. Ann. Mus. Lugd. Bat. i. 127, genus imperfecte descriptum, insularum Celebes incola, est ut nobis videtur planta *Raphidophoræ* affinis, sed stigmate punctiformi, ovario imperfecte biloculari loculis 2-ovulatis, et ovulis funiculis brevibus semianatropis placentis septifixis peltatim affixis.

ARISACONTIS, Schott, Prod. 415, genus ab Englero prætermisum, ad folium tantum in insula Radaek a Chamisso detectum conditum, omnino dubium est.

#### TRIBUS I. ARINEÆ.

1. **Cryptocoryne**, Fisch. ex Wydl. in *Linnaea*, v. 428. (Myrioblastus, Wall. mss.)—Flores in spadice tenuissimo apice fauci spathæ accreto monoici, ♂ et ♀ longe distantes. Perianthium 0. Fl. ♂: Stamina 1-2, distincta; antheræ breves, sessiles, truncatæ, loculis contiguis oppositis apice processibus conicis perforatis dehiscentibus; pollen vermiforme. Fl. ♀ ad basin spadicis monocycli, rarius cyclo addito superposito abortivo, inter se et cum spadice connati, in stylis breves recurvos liberos attenuati, 1-loculares, stigmatibus discoideis v. oblongis retrorsum spectantibus; ovula in loculis numerosa, orthotropa, erecta, funiculis brevissimis dense pilosis angulo interiori loculi 2-4-seriatim affixa, micropyle supera. Baccæ in syncarpium carnosum pluriloculare connatæ, pericarpio disrupto valvatim dehiscentes, valvis stellatim expansis, polyspermæ. Semina obovoidea v. oblonga, testa haud crassa rugosa, albumine copioso; embryo axilis, plumula interdum polyphylla, in bacca germinans.—Herbæ aquaticæ v. paludosæ, rhizomate repente stolonifero, caudice epigeo. Folia oblongo- v. lineari- v. cordato-lanceolata v. ovata, costa valida, nervis gracilibus, transversis tenuissimis. Pedunculus brevis elongatus v. 0. Spathæ tubus brevis v. elongatus, marginibus connatis, fauce plica reflexa spadicis apice dilatati accreta clausa; lamina angusta, recta plicata v. torta. Spadix inter flores ♂ et ♀ nudus, tenuis v. incrassatus; inflorescentia ♂ cylindræa, multiflora, ♀ pauciflora.

Species ad 25, Asiæ tropicæ et Archipelagi Malayani incolæ. *Engl. Arac.* 623, et in *Bull. Soc. Tosc. Orf.* 1879, 301. *N. E. Brown in Journ. Linn. Soc.* xviii. 242, t. 4. *Schott, Gen. Aroid.* t. 1; *Aroid.* t. 12, 13. *Blume, Rumph.* 1, t. 36. *Griff. in Trans. Linn. Soc.* xx. t. 10 ad 12; *lc. Pl. Asiat.* t. 170 ad 172. *Wight, Ic.* t. 773. *Roxb. Cor. Pl.* iii. t. 294 (*Ambrosinia*). *Lodd. Bot. Cab.* t. 525 (*Arum*). *Bot. Mag.* t. 2220 (*Arum*).

2. **Lagenandra**, Daltzell in *Hook. Kew Journ.* iv. 289.—Flores in spadice tenuissimo sub apice fauci spathæ accreto monoici, ♂ et ♀ longe distantes. Perianthium 0. Fl. ♂: Stamina 1-2, sessilia, distincta; antheræ didymæ, truncatæ, loculis contiguis oppositis cornubus perforatis dehiscentibus; pollen vermiforme. Fl. ♀ numerosi, spiraliter dispositi, organis paucis neutris tuberculiformibus superpositis. Ovaria inter se libera v. connata, obpyramidata, 1-locularia; stigma peltatum v. discoideum; ovula 1-∞, orthotropa, erecta, funiculis brevibus placentæ basilari affixa, micropyle supera. Baccæ liberæ v. connatæ, stigmate coronatæ, 1-6-spermæ. Semina oblonga v. cylindræa,

testa haud crassa rugoso-costata, albumine copioso corneo; embryo axilis.—Herbæ aquaticæ v. paludosæ, rhizomate repente stolonifero, caudice epigæo diviso. Folia longe v. breviter petiolata, ovata v. lanceolata, costa valida, nervis tenuibus. Pedunculus elongatus. Spathæ tubus marginibus connatis, fauce plica reflexa spadiceis apici dilatati accreta clausa, lamina lanceolata v. subulata, convoluta v. torta. Spadix brevissime appendiculatus; inflorescentia ♂ et ♀ cylindracea.

Species 4, Indiæ orientalis incolæ. *Engl. Arac.* 620. *Schott, Gen. Aroid. t. 2.*

3. **Pinellia**, Tenore in *Atti R. Acad. Sc. Nap.* iv. 57, cum ic. ex ejusd. *Cat. Ort. Bot. Nap.* 91, et in *Atti Riun. Scienz. Ital.* iii. 522. (Hemicarpurus, Nees, *Del. Sem. Hort. Bot. Vratisl.* 1839, 4, et in *Linnaea*, xiv. *Litterat-ber.* 167. *Atherurus*, Blume, *Rumph.* i. 136, t. 31 et 37.)—Flores in spadice appendiculato monoici, omnes fertiles, ♀ spathæ tubo apice clauso inclusi, ♂ lamina involuti. Perianthium 0. Fl. ♂ monandri. Anthera sessilis, quadrata, loculis contiguis obovoideis truncatis rima continua dehiscentibus; pollen amorphum. Fl. ♀ unilaterales. Ovarium ovoideum, 1-loculare, in stylum brevem, attenuatum, stigmatē parvo capitellato; ovulum solitarium, orthotropum, erectum, funiculo brevissimo placentæ basilari affixum, micropyle supera. Baccæ ovoideo-oblongæ. Semen globosum v. obovoideum, apiculatum, testa rugosula, albumine copioso; embryo axilis.—Herbæ tuberosæ, foliis floribusque cœtaneis. Folia 3- v. pedati-secta, membranacea, segmentis oblongo-lanceolatis ellipticisve acutis, nervis tenuibus, petiolo elongato apice interdum gemmifero. Pedunculus solitarius. Spatha marcescens, tubo convoluta, fauce ope dilatationis spadiceis clausa, lamina oblonga, concava. Spadix basi nudus, appendice elongata vermiformi exserta, parte ♀ spathæ adnata, floribus confertis; inflorescentia ♂ brevis, libera, cylindracea, densiflora.

Species 3 v. 4, Chinæ borealis et Japoniæ incolæ. *Eng. Arac.* 565. *N. E. Brown in Journ. Linn. Soc.* xviii. 246. *Schott, Gen. Aroid. t. 4.*

4. **Ambrosinia**, Linn. *Gen. n.* 1238.—Flores in spadice breviter appendiculato monoici, ♂ et ♀ in loculis distinctis spathæ longitudinaliter 2-localaris inclusi, omnes fertiles. Perianthium 0. Fl. ♂ in loculo postico 8-10, diandri, 2-seriatim superpositi; antheræ sessiles, loculis transversis contiguis elongato-reniformibus rima continua dehiscentibus, connectivo obsolete; pollen in massas irregulares emissum. Fl. ♀ in loculo antico spathæ solitarius. Ovarium depresso-globosum, 1-loculare, in stylum curvum crassiusculum attenuatum, stigmatē discoideo dilatato; ovula numerosa, cylindracea, orthotropa, erecta, placentæ latæ basilari funiculis elongatis affixa. Bacca globosa, stylo coronata, polysperma. Semina subglobosa, apiculata, testa striata strophilata. . . —Herba parvula, tuberosa, foliis floribusque cœtaneis. Folia ovata v. oblonga, obtusa, membranacea, nervis utrinque 2-3 arcuatis, nervulis inconspicuis, petiolo basi vaginante. Pedunculus brevissimus, hypogæus, fructifer elongatus. Spatha oblique terræ accumbens, delitescens, navicularis, apice in rostrum procurvum concavum producta, tubo indistincto, marginibus connatis, fauce aperta. Spadix fere inclusus, ope dilatationis longitudinalis spathæ utrinque accretus, appendice minuta exserta.

Species 1, Italiæ et Algeriæ incolæ. *Engl. Arac.* 618. *Bassi in Comm. Acad. Bologn.* v. i. 83 cum ic. *Blume, Rumph.* i. t. 36. *Cesati in Linnaea*, xi. t. 5. *Schott, Gen. Aroid. t. 3; Aroid. t. 11. Lam. Illustr. t. 737. Bot. Mag. t. 6360.*

Ucræa, a nonnullis perperam pro synonymo *Ambrosinia* data, nomen est auctoris tractatus (*Rœm. Archiv. i.* 67, 70) a Targionio citati, nec genus ei dicatum.

5. **Pistia**, Linn. *Fl. Zeyl.* 152; *Gen. Pl. n.* 1023. (*Zara, Lour. Fl. Coch.* 405. *Apiospermum et Limnonesis, Klotzsch in Abhandl. K. Akad. Wiss. Berlin.* 1853, 351, 352, t. 1, 2, 3.)—Flores in spadice cum spathæ dorso confluyente monoici; ♂ spadiceis apice libero organis neutris suffulto verticillati; ♀ solitarius, axi tubi spathæ basi lata adnatus. Perianthium 0. Fl. ♂: Stamina 2, in corpus sessile oblongum lateraliter compressum leviter 4-lobum connata, loculis utriusque antheræ sibi invicem oppositis rimulis verticalibus dehiscentibus, connectivo non producto. Fl. ♀: Ovarium oblique globosum,

1-loculare, in stylum incurvum latiusculum attenuatum, stigmate obtuso pulvinare; ovula numerosa, orthotropa, oblonga, funiculis brevissimis in placenta lata parietali axi spathæ parallelæ 4-6-seriatim conferta, micropyle supera. Bacca tenera, oligo- v. poly-sperma. Semina erecta, oblonga v. basin versus attenuata, obscure angulata, micropyle umbonata, testa crustacea irregulariter punctulata, endopleura membranacea, albumine copioso farinaceo; embryo in apice albuminis minutus, obovoideus.—Herba natans, acaulis, pubescens, stolonifera, radicibus fibrosis. Folia rosulata, sessilia, obovato-cuneata, nervis flabellatim radiantibus subtus prominulis. Spathæ parvæ, albæ, puberulæ, medio utrinque plicatæ, basi ovarium semi-amplexante, lamina cucullata aperta. Spadix spatha brevior, parte ♂ brevi libera apice staminifera, basi organis neutris dilatatis et squamula decidua instructa.

Species 1, in aquis dulcibus tropicis, Australia et ins. maris Pacifici exceptis, obvia. *Engl. Arac.* 631, et in *Mart. Fl. Bras.* iii. ii. t. 52 (ovario *perperam* spathæ tubo ambitu adnato depicto). *Roxb. Corom. Pl.* iii. t. 268. *Jacq. Stirp. Amor.* t. 148. *Dict. Sc. Nat. t.* 7, 8. *Griff. Ic. Pl. Asiat.* t. 161 A, 161 B, 260, 261. *Bot. Mag.* t. 4564, tcon. in *Fl. des Serres*, i. t. 625, et in *Jard. Fleur.* t. 137 iterata. Genus floribus certe *Ambrosiniæ* quam maxime affine.

6. *Arisarum*, Targ. Tozzet. in *Anal. Mus. Fis. Firenz.* ii. ii. 617.—Flores in spadice appendiculato monoici, omnes fertiles, ♂ sparsi, ♀ pauci unilaterales. Perianthium 0. Fl. ♂ monandri; anthera in processu spadicis sessilis, reniformis, peltata, loculis confluentibus rima continua dehiscentibus; pollen amorphum. Fl. ♀: Ovarium depressum, 1-loculare; stylus crassus, conoideus v. columnaris, stigmate pulvinari; ovula plura, orthotropa, erecta, funiculis brevissimis placentæ latæ basilari affixa, micropyle supera. Baccæ turbinatæ, angulatæ, vertice plano marginibus elevatis. Semina ad 6, ovoidea, acuta, testa rugoso-striata, stropholiolo funiculo obconico longiore et crassiore, albumine carnosio basi intruso; embryo axilis, radícula crassiore.—Herba tuberosa, foliis floribusque cœtaneis. Folia rotundato-hastata v. sagittata, nervis tenuibus, petiolo elongato, vagina brevi. Pedunculus elongatus. Spatha demum evanescens, tubo subventricosso marginibus connatis, fauce subconstricta, lamina brevi fornicata procurva. Spadix parte ♀ spathæ adnatus; appendix stipitata, decurva, apice clavata v. in filum producta.

Species 3, *Mediterranææ*. *Engl. Arac.* 560. *N. E. Brown in Journ. Linn. Soc.* xviii. 246. *Schott, Gen. Aroid.* t. 5. *L. C. Rich. in Guill. Archiv.* i. t. 2. *Jacq. Hort. Schænb.* ii. t. 192 (*Arum*). *Dunal, Bouq. Méditerr.* t. 5. *Sibth. Fl. Græc.* t. 948. *Moggr. Contrib. Fl. Menton.* t. 47. *Durieu, Fl. Alger.* t. 44. *Caruel in Nuov. Giorn. Bot. Ital.* xi. t. 1. *Reichb. Ic. Fl. Germ.* vii. t. 7. *Bot. Mag.* t. 6023. *Gard. Chron.* 1871, 301 (*Arum*).

7. *Arisæma*, Mart. in *Flora*, 1831, ii. 459.—Flores dioici, rarius monoici, in spadice appendiculato inserti, ♂ sparsi, ♀ densi, organa neutra subulata interdum supra flores ♀ et ♂. Perianthium 0. Fl. ♂ 2-5-andri; antheræ subsessiles v. processu spadicis peltatim insertæ, loculis contiguis ovoideis v. didymis distinctis v. confluentibus poris v. rimulis dehiscentibus. Fl. ♀: Ovarium ovoideum oblongum v. globosum, 1-loculare, loculo intus apice processu spongioso prædito; stylus brevis v. sub 0, stigmate pulvinari; ovula 1-∞, orthotropa, erecta, funiculis brevibus placentæ basilari sessili v. elevatæ affixa, micropyle supera. Baccæ turbinatæ obovoideæ v. globosæ, 1-oligospermæ. Semina ovoidea v. globosa, apice breviter producta, testa crassiuscula, albumine copioso; embryo axilis.—Herbæ tuberosæ, foliis floribusque cœtaneis. Folia 1-3, 3-secta v. pedatim aut verticillatim 5-∞-secta, segmentis latis v. angustis acuminatis marginibus integerrimis v. crenulatis, petiolo gracili v. robusto basi vaginante. Spatha decidua; tubus oblongus v. ventricosus, convolutus, non raro multicostatus, fauce aperta v. contracta, lamina sæpis-sime ampla et fornicata acuminata v. caudata. Pedunculus solitarius, brevis v. elongatus. Spadix inclusus v. exsertus, sæpius conoideus; appendix e basi dilatata brevis obtusa v. acuta v. in filum longissimum exsertum in vernatione segmentis folii involutum demum terræ protrusum desinens.

Species ad 50, pleraque Asiæ temperatæ et subtropicæ incolæ, paucæ in America boreali et una in Abyssinia rigentes. *Engl. Arac.* 533. *N. E. Brown in Journ. Linn. Soc.* xviii. 246, t. 5, 6. *Schott, Gen. Aroid. t. 6.* *Blume, Rumph. i. t. 27, 28, 37 E. Wall. Tent. Fl. Nep. t. 18 ad 20 (Arum); Pl. As. Rar. ii. t. 135, 136.* *Dcne. in Jacquem. Voy. Bot. t. 168.* *Griff. Ic. Pl. Asiæ. iii. t. 163 (Pythonium).* *Wight, Ic. t. 784 et 788 (Arum).* *Morren in Ann. Gand. 1846, t. 58.* *Miq. in Ann. Mus. Lugd. Bat. iii. t. 3.* *Lodd. Bot. Cab. t. 320 (Arum); Fl. des Serres, t. 1322.* *Regel, Gartenfl. 1861, t. 313.* *Bot. Reg. t. 668 (Arum).* *Bot. Mag. t. 950 (Arum), 4388, 5267, 5496, 5507, 5914, 5931, 5964, 6446, 6457, 6474, 6491.*

8. *Biarum*, *Schott, Melet. i. 17.*—Flores in spadice longe appendiculato monoici, ♂ et ♀ remoti, organa neutra conica subulata v. furcata, inter sexus et interdum supra ♂ posita. Perianthium 0. Fl. ♂: Stamina 1–2, distincta; antheræ sessiles, loculis contiguus ovoideis rimulis porisve distinctis v. confluentibus dehiscentibus, connectivo sæpe apiculato. Fl. ♀: Ovarium ovoideum v. oblongum, 1-loculare; stylus brevis v. elongatus, stigmatē discoideo v. hemisphærico; ovulum solitarium, orthotropum, erectum, funiculo brevissimo placentæ basilari affixum, micropyle supera. Baccæ obovoideæ. Semen obovoideum, testa crassiuscula rugosa, strophiole conico, albumine copioso; embryo axilis.—Herbæ tuberosæ, sæpissime annis alternis foliiferæ et floriferæ. Folia linearia oblonga v. lanceolata, in petiolum elongatum angustata. Pedunculus brevis v. sub 0. Spatha marcescens v. evanescens, tubo hypogæo v. epigæo cylindraceo v. ventricosos, marginibus alte v. basi tantum connatis, lamina angusta aperta. Spadix gracilis, sessilis, spatham æquans v. superans, appendice sæpius vermiformi interdum longe exserta; inflorescentia ♂ breviuscula, cylindracea; ♀ pauciflora, conica v. hemisphærica.

Species ad 12, regionis Mediterraneæ incolæ, plurimæ orientales. *Engl. Arac.* 571. *N. E. Brown in Journ. Linn. Soc.* xviii. 254. Genera sequentia rite pro sectionibus ab Englero habita sunt:—

1. *Eubiarum*, *Engl. l. c. 572.* Antheræ breves, rimis fere basin attingentibus. Organæ neutra subulato-conica, supra et infra fl. ♂ posita. Spathæ lamina erecta. *BIARUM*, *Schott, l. c.; Gen. Aroid. t. 7.* *Blume, Rumph. i. t. 29.* *Bot. Reg. t. 512 (Arum).* *Reichb. Ic. Fl. Germ. vii. t. 6.* *Gard. Chron. 1871, f. 133.* *STENURUS, Salisb. Gen. Pl. Fragm. t. 5.*

2. *Cyllenium*, *Engl. l. c. 574.* Antherarum loculi obliqui, rimis lateralibus medium attingentibus demum superne confluentibus. Organæ neutra infra fl. ♂ positi. *CYLLENIUM*, *Schott, Gen. Aroid. t. 9.*

3. *Ischarum*, *Engl. l. c. 575.* Antherarum loculi oppositi, rimis medium vix attingentibus. Organæ neutra supra fl. ♂ pauca. Ovarium abrupte in stylum attenuatum. *ISCHARUM*, *Blume, Rumph. i. 144, t. 29.* *Schott, Gen. Aroid. t. 10.* *Bot. Mag. t. 5324, 6355.*

*LAPTOPETION*, *Schott, Gen. Aroid. t. 8*, species Ægyptiaca, ad sect. *Ischarum* ab Englero relata, conspicue differt floribus cum foliis coætaneis, pedunculo elongato, antherarum loculis poris dehiscentibus, stigmatē conoideo, et organis neutris perpaucis, an genus proprium?

9. *Sauromatum*, *Schott, Melet. i. 17; Gen. Aroid. t. 11.*—Flores in spadice longe appendiculato monoici, ♂ et ♀ longe remoti, organibus neutris clavatis interpositis. Perianthium 0. Fl. ♂: Antheræ sessiles, subcompressæ, 4-lobæ, loculis contiguus oppositis obovato-oblongis poris apicalibus dehiscentibus, connectivo demum prominulo. Fl. ♀: Ovarium oblongum, 1-loculare, vertice rotundato; stylus brevis, demum in vertice ovarii retractus, stigmatē pulvinari; ovula 1–2, orthotropa, erecta, placentæ basilari papilloso funiculis brevissimis affixa, micropyle supera. Baccæ obpyramidatae, 1-spermæ, substipitatae, vertice rugosæ. Semen globosum v. subplano-convexum, testa tenui levī, strophiole obconico, albumine copioso; embryo axilis.—Herbæ tuberosæ, annis alternis foliiferæ et floriferæ. Folia solitaria, pedatipartita, petiolo elongato tereti. Spatha marcescens, demum evanida, tubo ventricosos, marginibus plus minus connatis, fauce aperta, lamina lanceolata elongata. Spadix sessilis, spatha brevior, appendice teretiuscula elongata; inflorescentiæ ♂ et ♀ breves.

Species ad 6, Asiæ et Africæ tropicæ incolæ. *Engl. Arac.* 568. *N. E. Brown in Journ. Linn. Soc.* xviii. 255. *Wall. Pl. As. Rar. ii. t. 115 (Arum).* *Wight, Ic. t. 800 (Arum).* *Link et Otto, Ic. Pl. Rar. i. t. 8 (Arum).* *Regel, Gartenfl. 1866, t. 495.* *Fl. des Serres, t. 1334.* *Lemaire, Jard. Fleur. i. t. 12.* *Bot. Mag. t. 4465.*

10. *Arum*, Linn. Gen. n. 1028, partim.—Flores in spadice appendiculato monoici, ♂ et ♀ remoti v. approximati, organis neutris e basi tumida subulatis interpositis et supra ♂ confertis. Perianthium 0. Fl. ♂: Stamina 3–4; antheræ sessiles, brevissimæ, loculis oppositis obovoideis rimulis apicalibus dehiscentibus, connectivo vix producto; pollen vermiforme. Fl. ♀: Ovarium oblongum, obtusum, 1-loculare; stigma subsessile, pulvinare; ovula 6 v. plura, orthotropa, erecta, funiculis brevibus placentæ parietali 2–3-seriatim affixa, micropyle supera. Baccæ obovoideæ, polyspermæ. Semina globosa, vertice apiculato v. producto, testa inferne rugosa, strophiole tumido, albumine copioso; embryo axilis.—Herbæ rhizomate tuberoso v. deformi, foliis proterantheris v. floribus coætaneis. Folia sagittata v. hastata, petiolo basi vaginante. Pedunculus sæpissime solitarius, brevis v. elongatus. Spatha marcescens v. evanida, tubo convoluto, lamina ovata v. ovato-lanceolata. Spadix sessilis, spatha brevior, appendice sæpissime stipitata et cylindræa, rarius clavata; inflorescentia ♀ cylindræa, quam ♂ sæpissime longior; organa neutra superiora deorsum, inferiora sursum spectantia.

Species ad 20, Europam, regiones Mediterraneas et Asiam occidentalem usque ad Afghanistan habitantes. *Engl. Arac.* 580. *N. E. Brown in Journ. Linn. Soc.* xviii. 257. *Schott, Gen. Aroid.* t. 13; *Id. Aroid.* t. 31 ad 40. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 39. *Reichb. Ic. Fl. Germ.* vii. t. 8, 9, 10, 12. *L. C. Rich. in Guillem. Archiv.* i. t. 1. *Fl. GYMNOMESUM, Schott in *Estr. Bot. Wochenbl.* 1855, 17; *Gen. Aroid.* t. 12, ab Englero ad *Arum* reductum, est *A. pictum*, L., Sardiniae incola, interspatio sexibus nudo, spatha marcescente et foliis subhystranthiis.

DOCHAEA, Schott, *Syn. Aroid.* 24; *Gen. Aroid. Append.*, quæ *Arum flavum*, Schott, *Prodr.* 40, ab *Aro* nullo caractere differt.

11. *Typhonium*, Schott in *Wiener Zeitschr.* iii. 72.—Flores in spadice appendiculato monoici, ♂ et ♀ remoti, organa neutra infra fl. ♀ subulata v. 0, supra fl. ♂ clavata. Perianthium 0. Fl. ♂: Stamina 1–3; antheræ subsessiles, loculis elongato-ovoideis contiguis rimulis porisve apicalibus dehiscentibus, connectivo inconspicuo v. demum paulo producto; pollen globosum. Fl. ♀: Ovarium ovoideum v. oblongo-obovoideum, 1-loculare; stigma sessile, pulvinare v. hemisphæricum; ovula 1–2, orthotropa, erecta, funiculis brevissimis placentæ basilari affixa, micropyle supera. Baccæ ovoideæ, 1–2-spermæ. Semen globosum, subacutum, testa tenui rugulosa, strophiole cum funiculo confluyente, albumine copioso; embryo axilis.—Herbæ tuberosæ, foliis floribusque coætaneis. Folia sagittata v. hastata, 3–5-loba v. partita v. pedatisecta, petiolo elongato. Pedunculus sæpius brevis. Spathæ tubus convolutus, accrescens, persistens, fauce constricta; lamina ovata v. lanceolata, acuta v. acuminata, aperta v. subaperta, erecta v. recurva, decidua. Spadix sessilis v. stipitatus, inclusus, appendice varia sæpius stipitata; inflorescentia ♂ cylindræa, ♀ brevis; organa neutra supra fl. ♂ 0, infra fl. ♂ 0 v. subulata, supra fl. ♀ clavata, dense conferta, elongata, adscendentia v. recurva.

Species ad 13, Asiæ tropicæ, Australasiæ, et insularum maris Pacifici incolæ. *Engl. Arac.* 609. *N. E. Brown in Journ. Linn. Soc.* xviii. 260. Genera sequentia a Schottio distincta, rite pro subgeneribus ab Englero habenda:—

TYPHONIUM, Schott, *Aroid.* t. 15 ad 18; *Gen. Aroid.* t. 17. Organæ neutra infra fl. ♂ 0, supra ♀ clavata. *Blume, Rumph.* i. t. 36. *Wight, Ic.* t. 790, 793, 801, 803. *Miq. in Ann. Mus. Lugd. Bat.* iii. t. 3, f. B. *Lodd. Bot. Cab.* t. 422 et 516 (*Arum*). *Andr. Bot. Rep.* t. 356 (*Arum*). *Saund. Ref. Bot.* t. 283. *Griff. Ic. Pl. Asiat.* t. 50 (*Arum*). *Bot. Reg.* t. 450 (*Arum*). *Bot. Mag.* t. 330 et 2324 (*Arum*), 6180.

HETEROSTALIS, Schott in *Estr. Bot. Wochenbl.* 1857, 261; *Gen. Aroid.* t. 18. Organæ neutra infra fl. ♂ subulata, decurva v. ascendente, supra ♀ magna clavata ascendente. *Lodd. Bot. Cab.* t. 396 (*Arum*). *Wight, Ic.* t. 791 (*Arum*). *Blume, Rumph.* i. t. 30 (*Typhonium*).

12. *Theriophonum*, Blume, *Rumph.* i. 127.—Flores in spadice appendiculato monoici, ♂ et ♀ remoti, organis neutris simpliciter subulatis v. filiformibus interpositis et interdum supra ♂ positis. Perianthium 0. Fl. ♂: Stamina 1–2; antheræ sessiles,

subcompressæ, didymæ, loculis oblongis v. globosis contiguis poris rimulisque subapicalibus dehiscentibus, connectivo emarginato v. breviter v. longe producto. Fl. ♀: Ovarium oblongum v. cuneatum, 1-loculare; stigma sessile, pulvinare, demum evanidum; ovula pauca v. plurima, orthotropa, alia ab apice loculi pendula, alia a basi erecta, funiculis brevibus affixa. Baccæ oligospermæ. Semina ovoidea, funiculo brevi tumido, albumine copioso; embryo axilis.—Herbæ tuberosæ, foliis cum floribus cœtaneis. Folia cordato-sagittata v. hastata, petiolo elongato gracili. Pedunculus sœpius brevis. Spatha marcescens, demum evanescens, tubo convoluto, fauce subconstricta, lamina erecta oblonga v. lanceolata acuminata. Spadix spatha brevior, appendice erecta tenui filiformi v. clavata; inflorescentia ♂ angusta, cylindracea, elongata; ♀ brevissima, pauciflora; organa neutra sursum curvata.

Species 5, Indiæ Orientalis incolæ. *Engl. Arac.* 605. *N. E. Brown in Journ. Linn. Soc.* xviii. 258. Genus in sectiones 2 ab Englero divisum:—

1. *Eutheriophonium*, *Engl.* l. c. 606. Antherarum loculi rimulis apicalibus dehiscentes, connectivo longe producto. *Schott, Gen. Aroid. t.* 14; *Aroid. t.* 21. *Hook. Bot. Misc. Suppl. t.* 3 (*Arum*).

2. *Calyptrocoryne*, *Engl.* l. c. 608. Antherarum loculi poris apicalibus dehiscentes, connectivo non producto. Organa neutra inferiora ad fl. ♀ approximata, superiora pauca v. 0. CALYPTROCORYNE, *Schott, Gen. Aroid. t.* 16. TAPINOCARPUS, *Dalzell in Hook. Kew Journ.* iii. 345. *Schott, Gen. Aroid. t.* 15.

13. *Helicophyllum*, *Schott, Aroid. t.* 28 ad 30; *Gen. Aroid. t.* 20.—Flores in spadice appendiculato monoici, ♂ et ♀ remoti, organis neutris subulatis interpositis. Perianthium 0. Fl. ♂: Stamina 2; antheræ sessiles, subcompressæ, loculis oblongis contiguis rimulis apicalibus v. lateralibus dehiscentibus, connectivo haud producto. Fl. ♀: Ovarium obovoideum v. subglobosum, 1-loculare, vertice truncato v. depresso; stylus brevis v. 0, stigmatē pulvinari v. capitato; ovula 2, orthotropa, erecta, funiculis brevissimis placentæ basilari affixa, micropyle supera. Baccæ obovoideæ v. globosæ, 1–2-spermæ. Semina depresso-globosa, apiculata, testa crassa rugosa, albumine copioso basi intruso; embryo axilis.—Herbæ tuberosæ, foliis cum floribus cœtaneis. Folia longe petiolata, crassæ coriacea, hastata v. sagittata, v. juniora hastata, et seniores pedatisecta segmentis basi confluentibus lateralibus sæpe spiraliter volutis. Pedunculus foliis brevior. Spatha marcescens, tubo oblongo subventricosso persistente, lamina oblonga erecta. Spadix spatha multo brevior, tenuis v. robustus, appendice clavata et rugosa, v. tenuiter cylindracea, rarius brevi crassa conoidea; inflorescentia ♂ et ♀ breves, cylindraceæ; organa neutra sparsa, elongata, sursum curva.

Species 4 v. 5, Asiæ occidentalis incolæ. *Engl. Arac.* 597.

EMINIUM, *Schott, Syn. Aroid. t.* 16; *Gen. Aroid. t.* 19; *Aroid. t.* 22 (*Ari sect. Eminium, Blume, Rumph. i.* 121), a *Helicophyllo* differt foliis integris et fide Schottii sed errore foliis proterantheris; sententia Engleri sectionem tantum efficit.

14. *Helicodiceros*, *Schott in Østr. Wochenbl.* 1853, 369; *Aroid. t.* 26, 27; *Gen. Aroid. t.* 20.—Flores in spadice longo setoso-appendiculato monoici, ♂ et ♀ remoti, organibus neutris subulatis interpositis et supra ♂ positis. Perianthium 0. Fl. ♂: Stamina 2–3; antheræ sessiles v. subsessiles, subglobosæ, loculis contiguis obovoideis v. oblongis rimis demum confluentibus dehiscentibus, connectivo tenui non producto. Fl. ♀: Ovarium obovoideum, 1-loculare, vertice subtrilobo; stigma sessile, pulvinare; ovula 4–6, orthotropa, alia ab apice loculi pendula, alia a basi erecta, funiculis brevibus crassis affixa. Baccæ . . .—Herba tuberosa, foliis cum floribus cœtaneis. Folia longe petiolata, pedatisecta, segmentis lanceolatis lateralibus pinnatifidis circa costam spiraliter volutis, sursum porrectis, petiolo longe vaginante. Pedunculus crassus, elongatus. Spatha crassa, persistens, tubo convoluto tessellato, fauce constricta, lamina ovato-oblonga v. lanceolata retroversa, disco setoso. Spadix crassus, stipitatus, spatha brevior; appendix stipitata, lamina spathæ incumbens, grosse vermiformis, medio incrassata, ad apicem usque attenuatam crinita; inflorescentiæ ♂ et ♀ breves, crassæ, cylindraceæ, densæ; organa neutra

inter sexus magna, porrecta et incurva, quæ supra fl. ♀ ad apicem stipitis posita, fere pollicaria, in appendicem producta, et gradatim ad setas reducta.

Species 1, in insula Sardinie vicinisque indigena. *Engl. Arac.* 604. *Bot. Reg. t.* 831 (*Arum*). *Fl. des Serres*, t. 445 (*Dracunculus*). *Geelink, Serq. Bot. t.* 49 (*Arum*). Genus forte melius pro subgenere *Dracunculi* habendum.

15. *Dracunculus*, *Schott, Melct.* i. 17; *Gen. Aroid. t.* 22; *Aroid. t.* 23, 24.—Flores in spadice longe appendiculato monoici, ♂ et ♀ arcte contigui v. subremoti; organa neutra supra fl. ♂ pauca, parva, conica. Perianthium 0. Fl. ♂: Stamina 3–4; antheræ breviter stipitatæ, reniformes, loculis ellipsoideis v. obovoideis contiguis poris v. rimulis apicalibus dehiscentibus, connectivo tenui demum loculos superante; pollen vermiforme. Fl. ♀: Ovarium oblongum, in stylum conicum attenuatum, stigmatem hemisphærico; ovula 2–4, orthotropa, omnia basilaria v. alia ab apice loculi pendula, funiculis brevibus affixa. Baccæ obovoideæ, oligospermæ. Semina ovoidea obovoidea v. subglobosa v. plano-convexa, testa crassa rugosa, albumine copioso basi intruso; embryo axilis.—Herbæ tuberosæ, foliis cum floribus coæstaneis. Folia petiolata, pedatisecta, segmentis lanceolatis convolutis demum arrectis, petiolo longe vaginante. Pedunculus folia superans. Spatha marcescens, persistens, tubo recto convoluto, lamina ovato-lanceolata aperta recurva. Spadix spatha brevior, sessilis, appendice longe stipitata erecta elongata conoidea demum fungosa; inflorescentiæ ♂ et ♀ cylindraceæ, densifloræ; organa neutra sparsa, inconspicua.

Species 2, altera Europæ australis incola, altera Canariensis. *Engl. Arac.* 601. *Gertn. Fruct. t.* 84 (*Arum*). *Blume, Rumph. i. t.* 37. *Reichb. Ic. Fl. Germ.* vii. t. 11. *Sibth. Fl. Gr. t.* 946 (*Arum*). *Bot. Reg. t.* 831.

ANÆMODIUM, *Schott in Bonplandia*, ix. 368 (*D. canariensis*, *Schott, Aroid. t.* 25. *Webb. Phytogr. Canar. t.* 219), a typo generis differt floribus ♂ et ♀ subremotis, antheris stipitatis et connectivo haud producto.

#### TRIBUS II. STILOCHITONÆ.

16. *Stylochiton*, *Leprieur in Ann. Sc. Nat. Ser.* 2, ii. 184, t. 5 (*Stylochæton*).—Flores in spadice inappendiculato monoici, omnes fertiles, ♂ et ♀ remoti. Fl. ♂: Perianthium brevissimum, urceolare v. annulare. Stamina 4–6, distincta, ovarii rudimentum cingentia, filamentis filiformibus; antheræ oblongæ v. cuneato-obovatæ, truncatæ, loculis contiguis lineari-oblongis rimis elongatis lateralibus dehiscentibus, connectivo angusto haud producto. Fl. ♀ liberi v. arcte connati. Perianthium cupulare. Ovarium perianthio inclusum, obovoideum angulatum v. oblongum, 1-loculare v. inferne 2–4-loculare; stylus elongatus, stigmatem capitato v. dilatato pulvinari; ovula in loculis 2–∞, anatropa, elongata, placentis a basi ascendentibus funiculis brevibus v. elongatis affixa, micropyle infera. Baccæ liberæ v. in syncarpium connatæ, stylo coronatæ, 1–4-loculares, loculis 2–∞-spermis. Semina ovoidea, leviter compressa, testa membranacea striata atra, micropyle prominula, albumine copioso; embryo axilis.—Herbæ rhizomate articulo, articulis disciformibus annotinis. Folia cordata, sagittata v. hastata, petiolo elongato longe et late vaginante. Pedunculus brevissimus. Spatha persistens?, tubo elongato marginibus connatis, fauce aperta, lamina brevi ovata v. elongato-lanceolata acuminata concava hiant. Spadix sessilis, totus inclusus; inflorescentia ♂ elongata, cylindracea, densiflora; ♀ brevior, nunc densiflora, floribus spiraliter dispositis, nunc monocycla et pauciflora floribus infimis inter se et cum spadice confluentibus.

Species 3, Africæ tropicæ et australis incolæ. *Engl. Arac.* 522. Genus ab Englero in sectiones duas divisum:—

1. *Cyclogyne*, *Engl. l. c.* 522. Filamenta antheris haud longiora. Fl. ♀ monocycli, connati. Ovarium 1-loculare; ovula in loculis plura, placentis ultra septa productis funiculis longiusculis affixa. Rhizoma folia anno priore, pedunculum hypogæum anno posteriore gerens, vel folia cum floribus coæstaneæ. Spathæ tubus elongatus, terra absconditus, lamina emersa valde incrassata. *Kotschy et Peyr. Pl. Tinn. t.* 20.

2. *Spirogyne*, *Engl. l. c.* 523. Filamenta antheris triplo longiora. Fl. ♀ spiraliter conferta. Ovarium 2–4-loculare; ovula in loculis 2 v. plura, placentis medio loculi funiculis brevibus affixa. Folia cum floribus coæstaneæ. Pedunculi 1–2, petiolo multo breviores. Spathæ tubus lamina brevior. *Schott, Gen. Aroid. t.* 68; *Aroid. t.* 14. GUIENZIA, *Sonder in Sched.*

## TRIBUS III. ZOMICARPEÆ.

17. *Zomicarpa*, Schott, *Synops. Aroid.* 33 ; *Gen. Aroid. t.* 23.—Flores in spadice appendiculato dorso basi spatha adnato monoici, ♂ numerosi ♀ unilateralibus contigui ; organa neutra supra fl. ♂ perpauca, minuta, conica. Perianthium 0. Fl. ♂ : Stamina 1-2, distincta ; antheræ subsessiles, depressæ, didymæ, loculis oppositis contiguis poris rimulivæ apicalibus dehiscentibus, connectivo haud producto ; pollen pulvereum. Fl. ♀ : Ovarium oblongum v. subglobosum, basi lata sessile, 1-loculare ; stylus brevissimus, stigmatate dilatato discoideo ; ovula 6-9, anatropa, erecta, elongata, funiculis brevissimis placentæ basilari affixa, micropyle infera. Baccæ subglobosæ, sub-6-spermæ, basi circumscissæ. Semina erecta, ellipsoidea v. oblonga, testa crassiuscula chartacea, strophiliolo conico, albumine copioso ; embryo axilis.—Herbæ tuberosæ. Folia proteranthia, longe petiolata, reniformia, 3-pedatisecta, segmentis elliptico-oblongis lateralibus minoribus, petiolo ima basi vaginante. Pedunculus gracilis, folia æquans. Spatha carnosula, persistens, tubo convoluta basi cucullata marginibus connatis, fauce constricta, lamina lanceolata acuminata aperta reticulatim venosa. Spadix spatha brevior, appendice gracili basi organis neutris paucis sparsis ; inflorescentia ♂ cylindracea, densiflora ; ♀ pauciflora.

Species 3, Brasilienses. *Engl. Arac.* 524, et in *Mart. Fl. Bras.* iii. ii. t. 50. *Saund. Ref. Bot. t.* 15. *Peyritsch, Aroid. Maximil. t.* 1, 2, 3.

18. *Zomicarpella*, N. E. Brown in *Gard. Chron.* 1881, ii. 266 ; et in *Ill. Hort.* xxviii. 144.—Flores in spadice gracile appendiculato dorso basi spathæ adnato monoici, ♂ et ♀ subremoti ; organa neutra 0. Perianthium 0. Fl. ♂ : Stamina distincta, filamentis brevibus v. subelongatis compressis ; antheræ terminales, loculis didymis subglobosis connectivo latioribus poris apicalibus dehiscentibus ; pollen vermiforme. Ovarium ovoideo-oblongum, 1-loculare ; stigmatate subsessili discoideo ; ovulum solitarium, breve, anatropum, funiculo brevissimo basifixum, erectum ; micropyle infera. Fructus . . .—Herbæ parvula, gracilis, tuberosa, foliis cum floribus cœtaneis. Folia graciliter petiolata, late ovato-cordata v. sagittata, acuta, maculata, membranacea, lobis posticis deltoideo-ovatis obtusis, nervis ad 9 digitatis v. subpedatis, petiolo crassiusculo basi vaginante. Pedunculus petiolo longior, crassiusculus. Spatha pollicaris, membranacea, lanceolata, ad basin aperta. Spadix spatha duplo longior, gracilis, appendice tenui gracili substipitata, longe exserta erecta ; inflorescentia ♂ et ♀ subæquilongæ, graciles.

Species 1, Novæ Grenadæ incola.

## TRIBUS IV. PYTHONIÆ.

19. *Amorphophallus*, Blume in *Batav. Diar.* 1825, ex Dcne. in *Nov. Ann. Mus. Par.* iii. 366. (Python, *Mart. in Bot. Zeit.* 1831, 479.)—Flores in spadice crasse appendiculato monoici, ♂ et ♀ contigui, omnes perfecti ; organa neutra 0. Perianthium 0. Fl. ♂ : Stamina 2-4 ; antheræ sessiles, loculis contiguis oblongis poris apicalibus dehiscentibus, connectivo tenui haud v. brevissime producto. Fl. ♀ : Ovarium globosum, 1-4-loculare ; stylus brevis v. elongatus, stigmatate integro v. 2-4-lobo ; ovula in loculis solitaria, anatropa v. semi-anatropa, decurva, funiculis brevibus v. subelongatis placentis basilariibus v. angulo interiore adnatis affixa, micropyle infera. Baccæ subglobosæ, oligospermæ. Semina ellipsoidea v. plano-compressa, testa tenui lævi, albumine 0 ; embryo macropodus.—Herbæ, interdum giganteæ, tubere maximo oblato. Folia hysteroanthia, ampla, 3-secta, segmentis varie sectis et 1-2-pinnatifidis, pinnis oblongis acutis, petiolo valido interdum apice bulbifero. Pedunculus brevis v. elongatus. Spatha erecta, basi convoluta, campanulata late infundibularis v. fornicata, marcescens. Spadix erectus, crassus, spatham longe superans, appendice fusiformi v. incrassata et fungosa ; inflorescentiæ ♂ et ♀ cylindraceæ, densifloræ.

Species ad 25, Asiæ et Africæ tropicæ, Archipelagi Malayani et insularum maris Pacifici incolæ. *Engler Arac.* 308, 643, et in *Bot. Jahrb.* i. 183. *Rumph. Herb. Amb.* i. t. 32 ad 34. Sectiones sequentes pro generibus propriis ab auctoribus pluribus habentur:—

1. *Candarum*, Engl. l. c. 309. Spatha maxima, campanulata, pedunculo brevissimo. Spadicis appendix inflorescentiæ æquilonga. Ovarium globosum, 2–4-loculare, stylo elongato, placenta basilari. India. *Schott, Gen. Aroid.* t. 31. *Gaud. in Freyc. Voy. Bot.* t. 39 (*Arum*). *Roxb. Cor. Pl.* iii. t. 272 (*Arum*). *Wight, Ic.* t. 782 et 785 (*Arum*). *Bot. Mag.* t. 2182 (*Arum*), 5187. *Blume, Rumph.* i. 39, t. 32, 33. *CANDARUM, Reichb. ex Schott. Melet.* i. 17.

2. *Brachyspatha*, Engl. l. c. 311, excl. sp. Spatha brevis, acuminata, pedunculo elongato. Spadicis appendix elongata, longe attenuata, spatham superans. Ovarium subglobosum, 2-loculare, stylo brevi, placentis basilaribus. India. *Blume, Rumph.* i. t. 35, 37. *Regel, Gartenfl.* t. 845 (errore 842). *Gard. Chron.* 1878, ii. f. 127 (*Conophallus*). *BRACHYSPATHA, Schott, Syn. Aroid.* 35; *Gen. Aroid.* t. 29; *Gard. Chron.* 1876, ii. fig. 129, 130.

3. *Conophallus*, Engl. l. c. 315. Spatha erecta, concava, basi convoluta, lamina concava. Spadix spatham paullo superans, appendice crassa fungosa. Ovarium subglobosum, 2–3-loculare, stylo brevi, stigmate discoideo, placentis basilaribus. India. *Bot. Mag.* 2072 et 2508 (*Arum*). *Blume, Rumph.* i. t. 34. *CONOPHALLUS, Schott, Syn. Aroid.* 34; *Gen. Aroid.* t. 30.

4. *Corynophallus*. Spatha oblique campanulata, tubo dilatato, fauce aperta, lamina late ovata arrecta. Spadix sublonge stipitatus, a basi in appendicem crassissimam pyriformem sensim auctus. Ovarium globosum, 1-loculare, stylo elongato, stigmate discoideo, placenta basilari. Africa. *Lemaire in Fl. des Serres*, 1846, t. 161. *CORYNOPHALLUS, Schott in Estr. Bot. Wochenb.* 1857, 389; *Gen. Aroid.* t. 32. *Engl. Arac.* 325. *Masters in Gard. Chron.* 1872, fig. 343.

5. *Hydrosme*. Spathæ tubus convolutus, lamina explanata margine undulata. Spadix breviter stipitatus, appendice elongata cylindracea elongato-conoidea v. clavata. Ovarium oblongum 1–3-loculare, stigmate discoideo v. 2–3-lobo, ovulis subbasilaribus. Africa. *HYDROSME, Schott in Estr. Bot. Wochenb.* 1857, 389; *Gen. Aroid.* t. 33, et in *Peters Mozamb. Reise.* t. 56. *Engl. Arac.* 321, et in *Bot. Jahrb.* i. 187. *HANSALIA, Schott in Estr. Bot. Zeitschr.* 1856, 82. *Syn. Aroid.* 133. In *H. Hildebrandtia*, specie Madagascariensi, stylus elongatus, basi annulatim incrassatus, stigma obliquum, et semina exalbuminosa ab Englero descripta sunt.

6. *Proteinophallus*. Spatha oblique late infundibularis, tubo convuluto, fauce aperta; spadix elongatus, sessilis, appendice longe exserta elongato-conoidea longitudinaliter sinuatim sulcata. Ovarium globosum 2–3-loculare, stylo columnari, stigmate 3-lobo, placentis angulo interiori adnatis. Cochinchina. *Masters in Gard. Chron.* 1873, p. 610, cum ic. *PROTEINOPHALLUS, Hook. f., Bot. Mag.* t. 6195. *TAPHEINOPHALLUS, Baill. Dict. Bot. Ic.* sine descr.

20. *Thomsonia*, Wall. *Pl. As. Rar.* i. 83, t. 99. (*Pythonium, Schott, Meletem.* i. 17; *Gen. Aroid.* t. 25.)—Flores in spadice appendiculato monoici, ♂ et ♀ arcte contigui; superiores ♂ imperfecti deplanati, basin appendicis vestientes. Perianthium 0. Fl. ♂: Stamina 3–5, distincta, brevissime stipitata; antheræ quadratæ, loculis obovoideis contiguis poris apicalibus tandem confluentibus dehiscentibus, connectivo tenui obsoleto v. prominulo. Fl. ♀: Ovarium globosum, 1-loculare; stylus subcylindraceus, stigmate majusculo dilatato 4-gono; ovulum solitarium, anatropum, erectum, funiculo brevi placentæ basilari affixum, micropyle infera. Fructus . . . —Herbæ tuberosa, annis alternis? foliiferæ et floriferæ. Folia longe petiolata, 3-pedatisecta, segmentis pinnatipartitis, pinnis oblongo-lanceolatis acuminatis. Pedunculus elongatus. Spatha coriacea, decidua, oblonga, cymbiformis, tubo indistincto. Spadix sessilis, spatham subæquans, appendice inferne organis neutris superne tuberculis conicis operata; inflorescentia ♂ cylindracea v. subclavata quam ♀ cylindraceam robustior.

Species 2, Himalayæ et Mont. Khasiæ incolæ. *Engl. Arac.* 306.

*ALLOPYTHON, Schott, Gen. Aroid.* t. 24, a *Thomsonia* non nisi tuberculis perpaucis conicis inter fl. ♂ et ♀ differre videtur.

21. *Pseudodracontium*, N. E. Brown in *Trim. Journ. Bot.* 1881, 193, t. 231, f. 2.—Flores in spadice appendiculato monoici, ♂ sparsi, ♀ dense congesti; appendix stipitata, fl. ♂ imperfectis operata. Perianthium 0. Fl. ♂: Stamina 3–6, clavata, distincta v. filamentis ima basi v. altius connatis superne in antheram obcordatam v. subglobosam sensim

desinentibus, loculis contiguis poris v. rimulis subapicalibus extrorsum dehiscentibus, connectivo inter loculos minute producto. Fl. ♀ : Ovarium globosum v. oblongum, 1-loculare, in stylum brevissimum attenuatum, stigmatē minuto pulvinari; ovulum solitarium, breve, anatropum, funiculo brevissimo placentæ basilari v. in loculo intrusæ affixum, micropyle infera. Fructus . . .—Herbæ tuberosæ, foliis floribusque cœtaneis. Folia 3-secta, segmentis fissis v. pinnatis, pinnis lanceolatis acuminatis superioribus confluentibus decurrentibus, inferioribus remotis sessilibus, petiolo elongato crasso basi vaginato. Pedunculus petiolis multo brevior. Spatha erecta, cymbiformis, acuta, basi breviter convoluta, superne aperta, submembranacea, demum marcescens?. Spadix spatha brevior, crassus, sessilis; inflorescentia ♂ floribus longe distantibus quam ♀ densiflora longior et angustior; appendix brevis, cylindraceo-conoidea, obtusa, floribus ♂ imperfectis stipitatis apicibus corrugatis quasi verrucosis operta.

Species 2, Cochinchinenses. *Lind. et André, Illustr. Hortic.* 1878, 90, t. 316 (*Amorphophallus*).

22. *Synantherias*, Schott, *Gen. Aroid.* t. 28.—Flores in spadice longe appendiculato monoici, ♂ et ♀ remoti, organibus neutris paucis conicis interjectis. Perianthium 0. Fl. ♂ : Stamina 4–6, distincta, circa discum nudum posita; antheræ subsessiles, didymo-quadratæ, loculis obovoideis contiguis poris apicalibus demum confluentibus dehiscentibus, connectivo vix prominulo. Fl. ♀ : Ovarium 2-loculare, oblongum v. globosum; stigma subsessile, magnum, hemisphæricum, 2–4-lobum; ovula in loculis solitaria, anatropa v. semi-anatropa, decurva, funiculis brevibus placentis septo adnatis affixa, micropyle infera. Fructus . . .—Herba tuberosa. Folia hysteroanthia, pedatisecta, segmentis pinnatifidis, pinnis lineari-lanceolatis. Pedunculus gracilis. Spatha brevis, erecta, ventricosa, tubo obscuro aperto in laminam latam acutam abrupte desinente. Spadix spatha multo longior, gracilis, erecta, substipitata, appendice gracili elongato-subulata inflorescentia multoties longiore; organa neutra depresso-conoidea, elongato-quadrata.

Species 1, Peninsulæ Indiæ orientalis incola. *Engl. Arac.* 319. *Wight, Ic.* t. 802 (*Arum*). Genus fructu ignoto non nisi organis neutris inter inflorescentias ♂ et ♀ positis ab *Amorphophalli* sectione *Brachyspatha* distinguendum.

23. *Rhaphiophallus*, Schott, *Gen. Aroid.* t. 27.—Flores in spadice appendiculato monoici, ♂ et ♀ remoti, organis neutris paucis gibberiformibus interpositis. Perianthium 0. Fl. ♂ : Stamina distincta; antheræ subsessiles, loculis obovoideis contiguis poris apicalibus demum confluentibus dehiscentibus, connectivo prominulo. Fl. ♀ : Ovarium obpyramidatum, 3-loculare; stigma subsessile, discoideum, dilatatum, sub-4-lobum; ovula in loculis solitaria, anatropa, erecta, funiculis brevibus placentis basilariibus affixa. Fructus . . .—Herba tubere parvo. Folia hysteroanthia, solitaria, 3-secta, segmentis dichotomis cruribus pinnatisectis, pinnis oblongis acutis decurrentibus. Pedunculus gracilis. Spathæ tubus convolutus, fauce aperta, lamina paullo longiore erecta lanceolata acuta. Spadix stipitatus, appendice elongata gracili subulata; inflorescentia cylindracea, ♂ brevior et tenuior.

Species 1, Peninsulæ Indiæ orientalis ad Mangalor incola. *Engl. Arac.* 320. Genus a nobis non visum.

24. ? *Xenophya*, Schott in *Ann. Mus. Lugd. Bat.* i. 124.—Flores in spadice appendiculato monoici, ♂ et ♀ remoti, organis neutris gibbosis interjectis. Perianthium 0. Fl. ♂ : Stamina 2?, distincta, filamentis dilatatis; antheræ breves, loculis ad apicem connectivi oppositis poris apicalibus dehiscentibus. Fl. ♀ : Ovarium 1-loculare; stigma sessile, sub-4-lobum; ovula ad 6, anatropa, basilaria, funiculis brevibus affixa. Fructus . . .—Herba tuberosa, foliis floribus cœtaneis. Folia ovata, pinnatipartita, segmentis lanceolatis acuminatis, infimis ex pedato 2-fidis. Spatha convoluta. Spadix stipitatus, appendice nuda; inflorescentia ♂ elongata, ♀ multo brevior.

Species 1, Novæ Guineæ incola. *Engl. Arac.* 526. Genus a nobis non visum.

25. *Plesmonium*, Schott, *Synops. Aroid.* 34 ; *Gen. Aroid.* t. 26.—Flores in spadice inappendiculato monoici, ♂ et ♀ remoti, organis neutris numerosis crassis globosis interpositis. Perianthium 0. Fl. ♂ : Stamina distincta ; antheræ sessiles, quadratæ, loculis obovoideis contiguis brevibus poris confluentibus dehiscentibus, connectivo prominulo. Fl. ♀ sparsi. Ovarium ovoideum v. globosum, 2-3-loculare, in stylum conicum attenuatum, stigmatē majusculo pulvinare ; ovula in loculis solitaria, anatropa, erecta, funiculis brevibus angulo interiori affixa. Baccæ ovoideæ, vertice intruso, 2-3-loculares, 2-3-spermæ. Semina ellipsoidea plano-convexa v. obtuse 3-gona, testa rugosula, albumine 0 ; embryo macropodus.—Herba, tubere maximo depresso. Folia proteranthia, 3-secta, segmento medio pinnatipartito, lateralibus furcatis pinnatisectis, pinnis lineari-lanceolatis, petiolo elongato. Spatha erecta, ovata, marcescens, inferne campanulato-convoluta, superne aperta. Spadix stipitatus, validus, rectus, spatha brevior ; inflorescentia mascula elongato-cylindracea, densiflora, ♀ multo brevior ; organa neutra pisiformia, margaritacea.

Species 1, Bengalie incolæ. *Engl. Arac.* 302. *Wight, Ic.* t. 795 (*Arum*).

26. *Anchomanes*, Schott in *Æstr. Bot. Wochenbl.* 1853, 313 ; *Gen. Aroid.* t. 34.—Flores in spadice inappendiculato monoici, ♂ et ♀ contigui ; organa neutra 0. Perianthium 0. Fl. ♂ : Stamina 2, distincta ; antheræ sessiles, quadratæ, lobulis oblongis contiguis basi confluentibus vertice connectivo crasso dilatato truncato separatis, rimulis verticalibus dehiscentibus. Fl. ♀ : Ovarium 1-loculare, sublageniforme, in stylum conicum decurvum tuberculatum sensim productum, stigmatē parvo ; ovulum breve, solitarium, anatropum, erectum, funiculo brevi placentæ basilari affixum, micropyle oblique infera. Baccæ ovoideæ, stylo coronatæ, 1-spermæ. Semen oblongo-ovoideum, testa tenuissima, albumine 0 ; embryo macropodus.—Herbæ tuberosæ. Folia hysternanthia, solitaria, primaria sagittata, secundaria 3-secta segmentis cuneatis v. trapezoideis, tertiaria 3-secta segmentis dichotomis v. pinnatifidis, petiolo elongato aspero. Pedunculus asper, petiolo brevior. Spatha marcescens, aperta, erecta, cymbiformis v. lanceolata, acuminata, carnosa, ima basi convoluta. Spadix spatha multo brevior, obtusa ; inflorescentia ♂ elongato-conoidea, obtusa ; ♀ æquilonga v. brevior, cylindracea, ovariis baccisque decurvis.

Species 1 v. 2, Africæ tropicæ occidentalis incolæ. *Engl. Arac.* 303. *Bot. Mag.* t. 3728 (*Caladium*), 5394.

#### TRIBUS V. COLOCASIEÆ.

27. *Ariopsis*, *Grah. Cat. Bomb. Pl.* ; *Addend.* 252.—Flores in spadice inappendiculato monoici, ♂ et ♀ remoti ; organa neutra 0. Perianthium 0. Fl. ♂ : Stamina 3, in corpus peltatum connata ; connectiva florum omnium confluentia, stratum foveolatum spadiceis parti superiori adnatum formantia ; antherarum loculi globosi, connectivo immersi, poris foveolis respondentibus dehiscentes et pollen in cavitatem emittentes. Fl. ♀ quam masculis multo majores. Ovarium oblongum, 1-loculare ; stigma sessile, 4-6-fidum, lobis subulatis incurvis demum patulis placentis superpositis ; ovula numerosa, orthotropa, patentia, placentis 4-6 parietalibus funiculis longiusculis 2-seriatim affixa, micropyle supera. Baccæ 3-6-gonæ, ope stigmatum connatæ, polyspermæ. Semina lineari-oblonga, pendula, testa crassula sulcata, strophiole obsoleto, albumine copioso ; embryo axilis.—Herbæ parvulæ, tuberosæ, annis alternis v. post intervalla varia folia et flores proferentes, tuberibus glomeratis. Folia graciliter petiolata, peltata, ovato-cordata, v. basi emarginata. Pedunculus brevis, gracillimus. Spatha parva, erecta, cymbiformis, apiculata, aperta, basi vix convoluta, persistens. Spadix spatha brevior, dorso basi spathæ accretus, graciliter stipitatus ; inflorescentia ♂ appendiciformis, cylindracea, obtusa, poris connectivi foveolata ; ♀ multo minor, pauciflora.

Species 2, montium subtropicorum Indiæ orientalis incolæ. *Engl. Arac.* 527. *Schott, Gen. Aroid.* t. 35. *Wight, Ic.* t. 900 (*Remusatia*). *Bot. Mag.* t. 4222.

28. **Remusatia**, Schott, *Melet.* i. 18; *Gen. Aroid.* t. 36; et in *Ann. Gand.* 1846, t. 66. —Flores in spadice inappendiculato monoici, ♂ et ♀ remoti, masculis sterilibus deplanatis compactis interjectis. Perianthium 0. Fl. ♂: Stamina 2–3, in corpus cuneato-clavatum vertice depresso-deplanatum ambitu sinuato-lobatum connata; antherarum loculi oblongi rimulis apicalibus dehiscente, connectivo crasso. Fl. ♀: Ovarium ovoideum v. obovoideum, 1-loculare v. superne 2–4-loculare; stigma sessile, pulvinare; ovula numerosa, orthotropa, patentia, funiculis brevibus placentis 3–4 parietalibus 2-seriatim affixa, micropyle supra. Baccæ tubo spathæ inclusæ, parvæ, globosæ v. obovoideæ, polyspermæ. Semina ovoidea, apice retusa, testa crassa extus succulenta, albumine copioso; embryo axilis. —Herbæ tuberosæ, annis alternis folium sæpius solitarium et pedunculum proferentes; tubera turiones elongatas nudas vaginatas gemmiferas emittentia. Folia longe graciliterque petiolata, peltata, ovato-cordata v. lanceolata. Pedunculus brevis. Spathæ tubus convolutus, accrescens, persistens, fauce constricta, lamina explanata patente v. refracta demum disrupta et decidua. Spadix spatha brevior, sessilis, medio constrictus; inflorescentia ♂ clavata, stipitata, stipite floribus sterilibus operata; ♀ angustior, subcylindracea.

Species 3 v. 4, montium subtropicorum Indiæ orientalis et Javæ incolæ. *Engl. Arac.* 495. *Loëd. Bot. Cab.* t. 281 (*Caladium*). *Wight, Ic.* t. 798 (*Arum*).

29. **Conatanthus**, Klotzsch in *Link. Kl. et Otto, Ic. Pl. Rar.* i. 33, t. 14. —Flores in spadice inappendiculato monoici, ♂ inferiores steriles ♀ contigui; organa neutra 0. Perianthium 0. Fl. ♂: Stamina 2–3, in corpus crassum pyramidatum vertice depresso-deplanatum ambitu sinuato-lobatum connata, loculis verticem versus corporis oblongis poris apicalibus dehiscentibus, connectivo crasso. Fl. ♀: Ovarium globosum, 1-loculare v. apice sub-2–3-loculare; stigma sessile, capitatum; ovula numerosa, suberecta, orthotropa, funiculis curvis brevibus placentæ basilari affixa, micropyle supra. Baccæ tubo spathæ inclusæ, subglobosæ, polyspermæ. Semina oblonga, testa verruculosa, extus succulenta . . . —Herbæ tuberosæ, foliis floribusque cœtaneis, e tuberibus turiones graciles vaginatas ramosissimas gemmiferas emittentes. Folia longe graciliterque petiolata, peltata, ovato-cordata v. lanceolata. Pedunculus brevis. Spathæ tubus convolutus, medio constrictus et geniculatim flexus, accrescens, persistens, fauce constricta, lamina longissima angusta convoluta refracta. Spadix tubo spathæ inclusus; inflorescentia ♂ clavata, longe stipitata, stipite fl. ♂ imperfectis elongato-hexagonis deplanatis operata; ♀ brevis, subcylindracea, pauciflora.

Species 1 v. 2, montium Himalayæ et Khasiæ incolæ. *Engl. Arac.* 510. *Schott, Gen. Aroid.* t. 39. *Bot. Mag.* t. 5275.

30. **Colocasia**, Schott, *Meletem.* i. 18; *Gen. Aroid.* t. 37. —Flores in spadice appendiculato rarius inappendiculato monoici, ♂ et ♀ remoti, masculis imperfectis deplanatis compactis interjectis; ♀ steriles cum fertilibus intermixti. Perianthium 0. Fl. ♂: Stamina 3–5, in corpus crassum obpyramidatum vertice dilatato deplanatum ambitu sinuato-sulcatum, connata; antherarum loculi lineares, ad basin fere connectivi extensi, poris apicalibus dehiscentes. Fl. ♀: Ovarium obovoideum v. oblongum, 1-loculare; stigma sessile v. subsessile, depresso-capitatum; ovula numerosa, orthotropa, patentia, funiculis elongatis placentis 3–5 parietalibus 2-seriatim affixa, micropyle supra infera v. transversa. Baccæ oblongæ v. obconicæ, tubo spathæ inclusæ, polyspermæ. Semina oblonga, strophio cum funiculo elongato confluenta, testa crassa sulcata epidermide diaphana, albumine copioso; embryo axilis. —Herbæ elatæ, caudice tuberoso v. crasso adscendente, foliis floribusque cœtaneis. Folia longe petiolata, peltata, ovato-cordata v. sagittata. Pedunculi solitarii v. plures. Spathæ tubus ovoideus v. oblongus, crassus, accrescens et persistens, demum ruptus, fauce constricta; lamina oblonga v. lanceolata, demum soluta. Spadix spatha brevior, robustus, appendice erecta oblonga fusiformi v. conoidea sæpius elongata rarius obsoleta; inflorescentia ♂ cylindracea, elongata; ♀ brevis v. elongata.

Species 5, Asiæ tropicæ incolæ, una per regiones omnes calidas culta. *Engl. Arac.* 490; in *Bot. Jahrb.* i. 185. *Wight, Ic.* t. 786 (*Arum*), 808 (*Calla*).

LEUCOCASIA, *Schott in Æstr. Bot. Wochenbl.* 1857, t. 34; *Gen. Aroid.* t. 38, non nisi caudice erecto a *Colocasia* distinguenda est.

31. *Alocasia*, *Schott in Æstr. Bot. Wochenbl.* 1852, 29; *Gen. Aroid.* t. 60.—Flores in spadice appendiculato monoici, ♂ et ♀ remoti, masculis imperfectis deplanatis compactis interjectis. Perianthium 0. Fl. ♂: Stamina 3–8, in corpus obpyramidatum vertice dilatato deplanatum ambitu hexagonum connata; antherarum loculi lineari-oblongi, ad basin fere connectivi extensi, poris apicalibus dehiscentes. Fl. ♀: Ovarium obovoideum v. oblongum, 1-loculare v. apice sub-3–4-loculare; stylus elongatus brevis v. 0, stigmatē pulvinari 3–6-lobo; ovula pauca, orthotropa, erecta, funiculis brevibus placentæ basilari affixa, micropyle supra. Baccæ obovoideæ v. ellipsoideæ, tubo spathæ inclusæ, oligospermæ. Semina subglobosa, funiculo brevi, testa crassa lævi, albumine copioso basi intruso; embryo axilis.—Herbæ elatæ, caudice crasso cicatricato. Folia juniora v. omnia peltata, seniores sagittato-cordata, petiolo elongato longè vaginante. Pedunculi plures, sæpe fastigiati. Spathæ tubus ovoideus v. oblongus, convolutus, accrescens, persistens, demum crassus laceratus, lamina oblonga cymbiformis v. cucullata, demum soluta. Spadix spatha brevior, crassus, erectus, appendice crassa cylindracea v. conoidea sinuato-rugosa basi truncata; inflorescentia ♂ perfecta cylindracea, imperfecta angustata, ♀ brevis, conico-cylindracea.

Species ad 20, Asiæ tropicæ et Archipelagi Malayani incolæ. *Engl. Arac.* 497, et in *Mart. Fl. Bras.* iii. ii. t. 47. *N. E. Brown in Gard. Chron.* 1879, 296. *Brongn. in Nouv. Ann. Mus. Par.* iii. 145, t. 7 (*Colocasia*). *Lodd. Bot. Cab.* t. 416 (*Caladium*). *Griff. Ic. Pl. Asiat.* t. 167 (*Arum*). *Wight, Ic.* t. 787, 789, 792, 794, 796, 797 (*Arum*). *Lemaire, Il. EUSOLENANTHER, *Schott in Bonpland.* ix. 368, includit species nonnullas *Alocasiæ* stigmatē sessili 5-fido, segmentis conoideis erectis.

32. *Anubias*, *Schott in Æstr. Bot. Wochenbl.* 1857, 398; *Gen. Aroid.* t. 42.—Flores in spadice inappendiculato monoici, ♂ et ♀ remoti, masculis imperfectis deplanatis interjectis. Perianthium 0. Fl. ♂: Stamina 4–5, in corpus obpyramidatum vertice dilatato deplanatum ambitu hexagonum connata; antherarum loculi oblongi, ad basin fere attingentes, contigui, rima hiantē dehiscentes. Fl. ♀: Ovarium hemisphæricum v. ovoideum, imperfecte 2-loculare; stylus brevis, stigmatē pulvinari; ovula in loculis numerosa, semianatropa v. fere orthotropa, funiculis elongatis placentis latis basilariibus affixa, micropyle supra. Baccæ tubo incrassato spathæ inclusæ, obovoideæ, umbilicatæ, 2-loculares, polyspermæ. Semina ovoidea, funiculo elongato, testa crassiuscula, raphe basi dilatata, albumine copioso; embryo axilis.—Herbæ rhizomate prorepente, caudice brevi, foliis floribusque coetaneis. Folia lanceolata, basi acuta v. sagittato-cordata, costa valida, nervis tenuissimis crebris parallelis, nervulis transversis exilibus, petiolo gracili elongato longè vaginante apice geniculato. Pedunculi elongati. Spatha crassa, viridis, inferne convoluta, accrescens et persistens, superne hians, fauce non constricta, lamina oblonga acuta decidua. Spadix stipitatus, spatham superans, gracilis, totus cylindraceus; inflorescentia ♂ quam ♀ multo longior.

Species 3 v. 4, Africæ tropicæ occidentalis incolæ. *Engl. Arac.* 433.

33. *Peltandra*, *Rafin. in Journ. Phys.* lxxxix. 102. (*Lecontia*, *Torr. Compend.* 358. *Rensselaeria*, *Beck, Bot. U. States*, 382.)—Flores in spadice obsolete appendiculato monoici, ♂ et ♀ arcte contigui; organa neutra 0. Perianthium 0. Fl. ♂: Stamina 4–5 in corpus prismaticum 4–6-gonum vertice dilatato deplanatum connata; antherarum loculi contigui, basi attingentes, lineari-oblongi, poris apicalibus dehiscentes. Fl. ♀: Staminodia 4–5, in urceolum truncatum connata. Ovarium urceolo fere immersum, ovoideum, 1-loculare, in stylum brevem conoideum angustatum; stigma pulvinare; ovula solitaria v. pauca, ortho-

tropa, erecta, funiculis brevissimis placentæ suprabasilaris affixa, micropyle supera. Utriculi subglobosi, tubo carnoso spathæ inclusi, 1-oligospermi. Semina obovoidea, testa gelatinosa intus basi vacua, albumine 0; embryo globosus, macropodus.—Herbæ paludosæ, rhizomate crasso, foliis floribusque cœtaneis. Folia subpeltata, hastata, costa valida, nervis densis tenuissimis, petiolo elongato longe vaginante. Spatha tota convoluta, tubo elongato accrescente persistente, fauce leviter constricta, lamina elongato-lanceolata recurva decidua, marginibus undulatis. Spadix spatha multo brevior, gracilis, erectus, totus cylindræus, appendice brevi ovoidea v. obsoleta; inflorescentia densa, ♂ quam ♀ multo longior; fl. ♂ interdum ovario imperfecto comitati, inferiores casu imperfecti.

Species 2, Americæ boreali-orientalis incolæ. *Engl. Arac.* 329. *Schott, Gen. Aroid. t.* 41. *Hook. Exot. Fl. t.* 182 (*Caladium*).

34. *Caladium*, *Vent. in Rœm. Archiv.* ii. 347; *Jard. Cels. t.* 30.—Flores in spadice inappendiculato monoici, ♂ perfecti a ♀ remoti, masculis imperfectis elongatis compactis deplanatis interjectis. Perianthium 0. Fl. ♂: Stamina 3-8, in corpus sessile depressum vertice dilatato deplanatum ambitu hexagonum connata; antherarum loculi contigui, elongati, rimulis apicalibus dehiscentes, connectivo crasso. Fl. ♀: Ovaria omnia apice leviter cohærentia, obovoidea v. oblonga, 2- rarissime 3-locularia; stigma sessile, subhemisphæricum, integrum v. 2-4-lobum; ovula in loculis numerosa, anatropa v. semi-anatropa, patentia, funiculis brevibus placentis septo adnatis affixa, micropyle infera. Baccæ tubo spathæ inclusæ, pyriformes v. clavatæ, polyspermæ, stigmatibus coronatæ, pericarpio tenui. Semina ovoidea v. subglobosa, testa crassa sulcata extus succulenta, funiculo laterali, albumine copioso; embryo axilis.—Herbæ lactescentes, rhizomate perennante tuberoso, foliis annuis floribusque cœtaneis, rarius alternatim provenientes. Folia longe petiolata, sæpius peltata, oblonga v. sagittata, membranacea, nervosa et reticulatim venosa. Pedunculus sæpius solitarius. Spathæ tubus convolutus, accrescens, persistens, fructifer irregulariter ruptus, fauce constricta, lamina cymbiformi erecta alba. Spadix spatha brevior, stipitatus, erectus, dorso basi spathæ adnatus; inflorescentia ♂ subclavata, densiflora, quam ♀ cylindræa v. conoidea multiflora longior.

Species omnes Americam tropicam incolentes, ab auctoribus inordinate multiplicatæ, nuperrime ab Englero ad 7 reductæ. *Engl. Arac.* 452, ubi sectiones 2 ægre distinguendæ propositæ sunt:—

1. *Cyrtospadix*. Stigma ovarii vertice immersum, breviter 2-3-lobum. *Engl. in Mart. Fl. Bras.* iii. ii. t. 40. *CYRTOSPADIX*, *C. Koch, Ind. Sem. Hort. Berol.* 1853, *Art.* 3.

2. *Eucaladium*. Stigma vix immersum, sub 3-4-sulcatum. *Engl. in Mart. Fl. Bras.* iii. ii. t. 41, 42. *Schott, Gen. Aroid. t.* 45. *Jacq. Hort. Schanb.* ii. t. 186 (*Arum*). *Bot. Mag. t.* 2543, 5109, 5255, 5263. *Peyritsch, Aroid. Maximil. t.* 28.

35. *Xanthosoma*, *Schott, Melet.* i. 19; *Gen. Aroid. t.* 46.—Flores in spadice inappendiculato monoici, ♂ perfecti a ♀ remoti, masculis imperfectis compactis deplanatis interjectis. Perianthium 0. Fl. ♂: Stamina 4-6, in corpus sessile obpyramidatum hexagonum vertice dilatato deplanatum connata; antherarum loculi lineares v. cuneati, contigui, connectivo æquilongis, rimulis brevibus apicalibus infra verticem connectivi dehiscentes. Fl. ♀: Ovaria obovoidea v. oblonga, 2-3-locularia, vertice supra collum brevem in discum placentiformem dilatata et ibidem inter se confluentia, inferne distincta; stigma in centro disci sessile, pulvinare v. hemisphæricum; ovula in loculis plura, anatropa v. semi-anatropa, patentia et loculo transversa, funiculis elongatis placentis septo adnatis affixa, micropyle sæpius infera. Baccæ tubo spathæ inclusæ, cylindrææ, superne connatæ, stigmatibus coronatæ, 3-4-loculares, loculis polyspermis. Semina ovoidea, funiculo breviusculo, testa sulcata epidermide diaphana, raphe incrassata, albumine copioso; embryo axilis.—Herbæ lactescentes, rhizomate tuberoso v. in caudicem crassum elongato, interdum elato, foliis perennantibus cum floribus cœtaneis. Folia longe crassæ petiolata, sagittata hastata v. pedatisecta. Pedunculi 1-∞, rarius elongati. Spathæ tubus oblongus v. ovoideus, convolutus, accrescens, persistens, demum irregulariter ruptus, fauce constricta, lamina cymbiformi. Spadix spatha brevior, basi spathæ adnatus; inflorescentia

♂ elongata, cylindracea v. clavata, parte imperfecta constricta; ♀ brevior, densiflora, superne attenuata.

Species 25, Americæ tropicæ incolæ. *Engl. Arac.* 468. Genus in sectiones 2 admodum naturales divisum:—

1. *Euzanthosoma*, *Engl.* l. c. 469, et in *Mart. Fl. Bras.* iii. ii. t. 43. Stigma depressum, breviter lobatum. Folii nervi laterales in unum margini parallelum confluentes. Caudex brevis v. elongatus. *Jacq. Hort. Vind.* t. 157, et *Hort. Schænb.* t. 188 (*Arum*). *Vell. Fl. Flum. Ic.* ix. t. 107 (*Arum*). *Regel, Gartenfl.* t. 603. *Bot. Mag.* t. 4989. *Peyritsch, Aroid. Maximil.* t. 31 ad 33.

2. *Acontias*, *Engl.* l. c. 481, et in *Mart.* l. c. t. 44, 45. Stigma discoideum, tumidum. Folii nervi laterales margines versus arcuati in unum undulatum confluentes. Rhizoma tuberosum. *Vell. Fl. Flum. Ic.* ix. t. 104 (*Arum*). *Jacq. Ic.* t. 613 (*Arum*). *ACONTIAS*, *Schott, Melet.* i. 19; *Gen. Aroid.* t. 47. ? *PHYLOTÆNIUM*, *André in Ill. Hort.* xix. t. 88. X. ? m. rubile, *Masters in Gard. Chron.* 1874, 258, f. 53, vix hujus generis, nobis ignotum est.

36. *Typhonodorum*, *Schott in Æstr. Wochenbl.* 1857, 70; *Gen. Aroid.* t. 43.—Flores in spadice elongato subappendiculato monoici, ♂ et ♀ remoti, floribus masculis imperfectis deplanatis compactis interjectis. Perianthium 0. Fl. ♂ (inferiores et superiores imperfecti): Stamina 4–8, in corpus obpyramidatum vertice dilatato deplanatum ambitu sinuato-angulatum connata; antherarum loculi lineares, contigui, connectivo æquilongi, rimulis apicalibus dehiscentes. Fl. ♀: Ovarium ovoideum v. subglobosum, 1-loculare; stigma subsessile, discoideum, 3–6-lobum, lobis recurvis; ovulum solitarium, breve, anatropum, funiculo brevi placente basilari affixum, micropyle infera. Baccæ tubo spathæ inclusæ, magnæ, compressæ, orbiculares, basi exsculptæ . . .—Herbæ robustæ, caudice crasso 4–10-pedali, vaginis vetustis onusto. Folia crasse petiolata, triangulari-ovata v. hastata, acuminata, crassissime costata et nervosa, creberrime venosa. Pedunculus crassus, petiolo brevior. Spathæ tubus oblongus, utrinque attenuatus, accrescens, persistens, fauce constricta, lamina tubo triplo longiore oblongo-lanceolata caudato-acuminata concava aperta. Spadix spatha brevior v. eam subæquans, rectus, strictus, totus cylindraceus; inflorescentia ♂ elongata, parte imperfecta inferiore perfecta æquilonga, superiore imperfecta multo longiore in formam appendicis conoideæ attenuatæ producta; ♀ brevis, cylindracea. Fructus magnitudine castanæe, edulis.

Species 2, Madagascariæ incolæ quarum una in ins. Mauritio inquilina. *Engl. Arac.* 331, et in *Bot. Jahrb.* i. 188. Baccæ exemplaribus nostris nuculam crassam intus suberosam continent, embryo 0.

37. ? *Chlorospatha*, *Engl. in Regel, Gartenfl.* 1878, 97, t. 933; *Arac.* 487.—Flores in spadice inappendiculato monoici, ♂ a ♀ remoti, masculis imperfectis paucis 3–4-lobis interjectis. Perianthium 0. Fl. ♂: Stamina 3–5, in corpus obpyramidatum 3–5-gonum vertice planiusculum connata; antherarum loculi oblongi, ad basin connectivi crassi producti, sub vertice rimulis dehiscentes; pollen pulverereum. Fl. ♀: Ovaria brevia, distincta, dimidiato-ovoides v. hemisphærica, 2–3-locularia; stigma sessile, discoideum, ultra ovarii marginem non exsertum. Ovula in loculis plura, anatropa, funiculis placentis subcentralibus 2-seriatim affixa; micropyle infera. Fructus . . .—Herba lactescens, rhizomate tuberoso. Folia pedatisecta, marginibus crispato-undulatis, costis in sinu denudatis, petiolo tereti. Pedunculi plures, petiolo breviores. Spathæ tubus elongatus, convolutus, fauce haud constricta in laminam lanceolatam apicem versus compressam sensim desinens. Spadix spatha brevior, stipite dorso spathæ adnato; inflorescentia ♂ perfecta conoidea, densiflora, parte imperfecta laxa pauciflora; ♀ laxiflora, ovariis irregulariter in verticillos 4–5 remotiusculos dispositis.

Species 1, Novæ Granatæ incola. Folia tantum a nobis visa. Genus ex *Englero Xanthosomati* proxime affine. Septa ovarii in icone vix non axin attingent.

38. ? *Hapaline*, *Schott in Æstr. Bot. Wochenbl.* 1857, 85. (*Hapale*, *Schott, Gen. Aroid.* t. 44).—Flores in spadice inferne spathæ adnato inappendiculato monoici, ♂ et ♀ remoti, t. 44).—Flores in spadice inferne spathæ adnato inappendiculato monoici, ♂ et ♀ remoti, organis neutris perpaucis apiculatis interjectis. Perianthium 0. Fl. ♂: Stamina 3, in

corpus peltatum pelta tenuissima elongato-hexagona connata; antherarum loculi minutissimi, subglobosi, margini peltæ appensi, remoti, poris obovatis dehiscentes. Fl. ♀ pauci, unilaterales, 2-seriati. Ovarium 1-loculare, ovoideo-oblongum, sub apice constrictum; stigma latum, pulvinare; ovulum solitarium, erectum, anatropum, funiculo brevi placentæ parietali affixum, micropyle infera. Fructus . . .—Herba parvula, tenerrima. Folia hysteroanthia, graciliter petiolata, sagittato-cordata, membranacea. Pedunculus gracillimus, petiolum superans. Spathæ tubus brevis, cylindraceus, convolutus, fauce vix constricta, lamina lanceolata acuminata demum recurva. Spadix elongatus, gracilis, spatham subæquans; inflorescentia ♂ libera, teretiuscula, quam ♀ robustior et quadruplo longior, peltis pro spadice maximis ter longioribus quam latis, 3-4 tantum in spira; ♀ 6-8-flora, ovariis remotis suberectis.

Species 1, Burmæ incola. *Engl. Arac.* 489.

39. ? *Scaphispatha*, Brongn. mss. ex Schott, *Prod. Syst. Aroid.* 214.—Flores in spadice inappendiculato monoici, ♂ et ♀ contigui. Perianthium 0. Fl. ♂: Stamina 4, filamentis in columnam antheris æquilongam 4-sulcatam connatis; antherarum loculi contigui, obovoidei, poris apicalibus dehiscentes, connectivo haud producto. Fl. ♀: Ovarium oblongum, 1-loculare; stylus brevis, stigmate capitato; ovula 4, anatropa, elongata, funiculis brevibus placentæ basilari affixa.—Fructus . . .—Herba. Folia ignota. Pedunculus gracilis, elongatus. Spathæ tubus laminam oblongam acutam æquans, inferne infundibularis, superne leviter constrictus. Spadix breviter stipitatus, basi spathæ oblique adnatus; inflorescentia ♂ densiflora, gracilis, cylindræa, quam ♀ oblongo-ovoidea duplo longior.

Species 1, Bolivæ incola. *Engl. Arac.* 526. Genus a nobis non visum, ex icone in Herb. Mus. Par. conservata spatha tota aperta est, nullibi convoluta, et spadix longe graciliterque stipitatus.

40. ? *Schizocasia*, Schott in *Bonplandia* x. 148.—Flores in spadice appendiculato monoici, ♂ et ♀ remoti, masculis imperfectis elongatis depressis et compressis interjectis. Perianthium 0. Fl. ♂: Stamina 4-7, in corpus subhexagonum ambitu profunde sulcatum vertice deplanato medio leviter excavato connata; antherarum loculi cylindracei, connectivo crasso fere æquilongi, poris apicalibus dehiscentes; pollen vermiforme. Fl. ♀: Ovarium depresso-globosum, 1-loculare; stigma sessile, depressum, sub-3-4-lobum; ovula plura, anatropa, funiculis brevibus placentæ basilari affixa. Bacca subglobosæ, 2-6-spermeæ. Semina obovoidea, subtrigona, funiculo brevissimo, albumine copioso duro; embryo subaxilis.—Herba caudice crasso. Folia ovato-cordata, pinnatipartita, petiolo elongato tereti. Pedunculus brevis, vaginatus. Spathæ tubus convolutus, lamina lineari-oblonga obtusa tubo triplo longiore, fauce constricta. Spadix appendice sursum attenuata; inflorescentia ♂ cum appendice æquilonga, dimidio inferiore constricto floribus imperfectis; ♀ multo brevior.

Species 2, Novæ Guineæ et insularum Philippinarum incolæ. Genus a nobis non visum, ab Englerio (*Arac.* 645) ad *Alocasiam* reductum, serius (*Bot. Jahrb.* i. 185) reformatum et restitutum. An spathæ tubus persistens fructum involvens?, auctor silet.

#### TRIBUS VI. PHILODENDRÆ.

41. *Philodendron*, Schott, *Meletem.* i. 19; *Gen. Aroid.* t. i. 53; *Ik. Aroid.* t. i. ad 10.—Flores in spadice inappendiculato monoici, ♂ et ♀ remoti, masculis imperfectis compactis interjectis. Perianthium 0. Fl. ♂: Stamina 2-6, in corpus sessile obpyramidatum tetragonum v. 4-sulcatum vertice dilatato deplanatum connata; antherarum loculi oblongi v. lineares, connectivo crasso breviores, contigui, poris rimulise apicalibus dehiscentes; pollen vermiforme. Fl. ♀ staminodiis clavatis interdum immixti. Ovarium ovoideum oblongum v. obovoideum, 2-10-loculare; stigma sessile, pulvinare v. hemisphæricum, integrum v. lobatum; ovula in loculis pauca v. numerosa, orthotropa, brevissima.

v. subelongata, funiculis elongatis placentis angulo interiori adnatis 2-seriatim affixa, micropyle supera. Baccæ in tubo spathæ involutæ, dense confertæ, 1-10-loculares, 1-10-spermae. Semina ovoidea oblonga v. ellipsoidea, erecta, funiculo erecto v. curvo, testa crassa lævi v. costata integumento succulento induta, albumine copioso; embryo axilis.—Frutices et arbusculi scandentes, rarius herbæ acaules, caudicibus foliosis ad nodos radices æreas emittentibus. Folia vaginis opposita, coriacea, oblonga ovata cordata v. sagittato-hastata, integra lobata pinnatifida v. 1-2-pinnatisecta, nervis variis, nervulis tenuissimis; petiolus teres v. in foliis junioribus antice concavus canaliculatus v. excavatus, apice rarissime tumidus v. geniculatus, vagina persistente. Pedunculi terminales et axillares, sæpius breves, plerumque fasciculati. Spatha crassa, alba rubra v. flavida, tota persistens, tubo convulso accrescente demum rupto, lamina cymbiformi post anthesin reconvoluta, demum succulenta, suaveolens. Spadix spatham subæquans v. brevior, sessilis v. breviter stipitatus; inflorescentiæ densifloræ, ♀ brevior quam ♂, in fructu dejecta.

Species ad 120, Americæ tropicæ incolæ. *Engl. Arac.* 355, et in *Mart. Fl. Bras.* iii. ii. t. 28 ad 37. *Jacq. Stirp. Amer. t.* 152 (*Arum*); *Hort. Schænb. t.* 187, 189, 190 et 468 (*Arum*). *Rudge, Pl. Guian. t.* 33 (*Pothos*). *Hook. Exot. Fl. t.* 206 (*Caladium*). *Vell. Fl. Flum. ELOPIUM, Schott in *Östr. Bot. Zeit.* 1865, 35, est *P. surinamensis*, *Engl. Arac.* 361, species seminibus prælongis.

42. **Thaumatophyllum**, Schott in *Bonplandia*, 1859, 31.—Flores in spadice appendiculato monoici, ♂ et ♀ contigui. Perianthium 0. Fl. ♂: Stamina distincta, filamento stipitiformi; anthera lineari-elongata v. subclavata, obtusa, obtuse hexagona, loculis angustis contiguis poris apicalibus? dehiscentibus. Fl. ♀: Ovarium prismaticum v. obpyramidatum, vertice rotundato, 4-loculare?; stigma sessile, hemisphæricum; ovula numerosissima, orthotropa, funiculis elongatis supra basin ovuli insertis placentis elongatis 2-seriatim affixa, micropyle supera. Fructus . . .—Frutex alte scandens, caudice tereti ramoso lævi haud annulato. Folia longe petiolata, ampla, pinnatim pedatisecta, cruribus membranaceo-marginatis cum petiolo articulatis recurvis pinnas remotas gerentibus, pinnis sessilibus oblongo-lanceolatis acuminatis, costa prominula, nervis tenuibus creberrimis, petiolo valido elongato stricto ima basi crassa tantum vaginante; cataphylla pedalia, ensiformia, rigide coriacea. Pedunculus . . . Spatha crassa, lata. Spadix crassus; inflorescentiæ cylindraceæ, ♂ angustior, staminibus numerosissimis sensim magis imperfectis abbreviatis et in appendicem nudam cylindraceo-conoideam productis; ♀ masculo æquilonga, ovariis magnis haud densis.

Species 1. Brasilæ borealis ad Rio Negro incola. Genus valde singulare, certe, ut suspicatur Engler, *Philodendron* proximum, sed staminibus diversissimis, spadice in appendicem nudam abeunte, et foliis insignibus. Exemplaria imperfecta tantum nobis suppetunt difficillime scrutata.

43. **Syngonium**, Schott in *Wien. Zeitschr.* iii. 780, excl. sp.; *Gen. Aroid. t.* 48.—Flores in spadice inappendiculato monoici, ♂ a ♀ remoti, masculis imperfectis compactis deplanatis interjectis. Perianthium 0. Fl. ♂: Stamina 3-4, in corpus sessile obpyramidatum ambitu 3-4-lobum, vertice deplanatum connata; antherarum loculi lineares, basin fere connectivi attingentes, contigui, rimulis apicalibus infra marginem connectivi dehiscentes. Fl. ♀: Ovaria oblongo-obovoidea, lateribus connatis, 2- v. abortu 1-locularia; stigma sessile, convexum, integrum v. 2-3-lobum; ovula in loculis solitaria, anatropa, suberecta, funiculo brevissimo placentæ basilari affixa, micropyle infera. Baccæ spathæ tubo inclusæ, in syncarpium mucilaginosum connatæ. Semina obovoidea v. globosa, funiculo brevissimo, strophio gibbo, testa lævi tenui nigra, albumine 0; embryo macropodus.—Frutices scandentes, vasis laticiferis instructi, caudice ad nodos radicante et foliifero. Folia petiolata, primaria sagittata, adulta pedatim 3-9-secta, petiolo elongato, vagina persistente

acrescente. Pedunculi solitarii v. fasciculati, breves. Spathæ tubus ovoideus, accrescens, persistens, fauce contracta, lamina cymbiformi tandem reflexa decidua. Spadix spatha multo brevior; inflorescentia ♂ clavata, quam ♀ conico-cylindracea multo longior.

Species ad 8, Americæ tropicæ incolæ. *Engl. Arac.* 292, et in *Mart. Fl. Bras.* iii. ii. t. 26, 27. *Peyritsch, Aroid. Maximil.* t. 17, 18. *Jacq. Hort. Schœnb.* t. 191 (*Arum*). Antharæ dorso tantum confluentes transitum monstrant ad *Philodendron*, ut etiam embryo macropodus.

44. **Porphyrospatha**, *Engl. Arac.* 289.—Flores in spadice inappendiculato monoici, ♂ a ♀ remoti, masculis imperfectis obconicis vertice depressis interjectis. Perianthium 0. Fl. ♂: Stamina 4, in corpus tetragonum subsessile connata; antherarum loculi lineares, basin et apicem connectivi non attingentes, basi subacuti, sub vertice connectivi incrassati rimulis dehiscentes. Fl. ♀: Ovaria distincta, ovoidea, truncata v. 2-cornuta, 2-locularia, loculis lateralibus; stigma transverse oblongum, 2-lobum; ovula in loculis 1-2, brevia, anatropa, erecta, funiculis brevissimis placentis centralibus affixa. Fructus . . . —Frutices scandentes, vasis laticiferis instructi, caudicibus elongatis, ramis ad nodos radican- tibus foliosis. Folia juniora oblonga, basi rotundata v. breviter auriculata, adulta sagittata v. 3-secta, petiolo tereti, vagina elongata apice haud soluta. Pedunculus solitarius? Spathæ tubus ovoideus, quam lamina ovata acuta paullo brevior. Spadix spatha multo brevior; inflorescentia ♀ breviter cylindracea; ♂ 2-3-plo longior, apice obtusa.

Species 2, Costæ Ricæ incolæ. Genus a nobis non visum, includens *Syngonium Schottianum*, Wendl., et *S. Hoffmanni*, Schott, inter *Syngonium* et *Montrichardiam* ab auctore locatum.

45. **Culcasia**, *Beauv. Fl. Ow. et Ben.* i. 3, t. 3. (Denhamia, *Schott, Melet.* 19.)—Flores in spadice inappendiculato monoici, ♂ a ♀ remoti, masculis sparsis deplanatis interjectis. Perianthium 0. Fl. ♂: Stamina 3-4, distincta; antheræ sessiles, trigono-obpyramidatae, dorso contiguæ, loculis contiguis oblongis obtusis connectivo crasso truncato paullo brevioribus, rimulis apicalibus dehiscentibus. Fl. ♀: Ovaria sparsa, depresso-globosa, 1-2-locularia; stigma sessile, dilatatum, ovario æquilatum, pulvinare, 4-sulcatum; ovula in loculis solitaria, brevialia, anatropa, funiculis brevissimis placentis sub-basilaribus affixa, micropyle infera. Baccæ globosæ, 1-spermæ. Semen ovoideum, subsessile, testa tenui, albumine copioso; embryo parvus, axilis.—Frutices scandentes, ramis gracilibus ad nodos radican- tibus. Folia spiraliter inserta, ovato v. oblongo-lanceolata, basi acuta v. cordata, acuminata, coriacea, nervis patentibus tenuibus nervulis parallelis v. reticulatis, petiolo gracili longe interdum ad apicem vaginante. Pedunculi axillares, solitarii v. plures fastigiati, breves. Spatha parva, erecta, tota plus minusve convoluta, decidua. Spadix in spatha inclusus v. exsertus, sessilis, gracilis; inflorescentia ♂ elongata, fusiformis, superne densiflora; ♀ angustior et brevior.

Species 6 v. 7, Africæ tropicæ incolæ. *Engl. Arac.* 101. *Schott, Gen. Aroid.* t. 50.

46. **Cercestis**, *Schott in Estr. Bot. Wochenbl.* 1857, 414; *Gen. Aroid.* t. 52.—Flores in spadice inappendiculato monoici, ♂ a ♀ remoti, masculis imperfectis deplanatis compactis interpositis. Perianthium 0. Fl. ♂: Stamina 4, distincta, sessilia, prismatico-trigona, dorso contigua, vertice deplanata; antherarum loculi lineari-oblongi, connectivo crassiore paullo breviores, loculis contiguis rimulis apicalibus dehiscentibus. Fl. ♀: Ovarium obovoideum v. globosum, 1-loculare; stigma magnum, sessile, orbiculare, pulvinare; ovulum solitarium, anatropum, funiculo brevissimo placentæ suprabasilaris affixum, micropyle infera. Baccæ obovoideæ, stigmatibus coronatæ. Semen obovoideum, pendulum, umbilico excavato, albumine 0; embryo macropodus.—Frutices scandentes, vasis laticiferis instructi, ramis gracilibus ad nodos radican- tibus. Folia spiraliter inserta, sagittato-cordata v. hastata; petiolo gracili, vagina elongata angusta. Pedunculi breves, solitarii v. plures, axillares. Spatha parva v. mediocris, erecta, tota plus minusve convoluta, decidua. Spadix spatha brevior, sessilis; inflorescentiæ densifloræ, ♂ longior crassior obtusa.

Species 3-4, Africæ tropicæ occidentalis incolæ. *Engl. Arac.* 300. Genus ad *Culcasiam* quam maxime affine, differt semine (quod non vidimus) exalbuminoso cum embryone macropodo.

47. *Rhektophyllum*, *N. E. Brown in Trim. Journ. Bot.* 1882, 194, t. 230.—Flores in spadice inappendiculato monoici, omnes perfecti, ♂ et ♀ contigui. Perianthium 0. Fl. ♂ : Stamina 3-5, trigono-prismatica, truncata, dorso contigua; antherarum loculi lineares, contigui, connectivo crasso æquilongi, poris apicalibus dehiscentibus. Fl. ♀ : Ovaria ovoidea globosa v. oblique compressa, 1-locularia; stigma sessile, pulvinare; ovulum solitarium, breve, anatropum, funiculo brevissimo placentæ parietali elongatæ in loculum extensæ affixum, micropyle infera. Fructus . . . Frutex scandens. Folia longe petiolata, ampla, submembranacea, ambitu subhastata v. cordato-ovata, acuta, pertusa et in lacinias paucas latas irregulariter pinnatisecta, costa valida, nervis patentibus validis, petiolo 1-2-pedali basi vaginante. Pedunculi solitarii v. plures, breves, crassi. Spatha subcylindracea, tota convoluta, crasse coriacea, obtusa. Spadix sessilis, cylindraceus; inflorescentia ♂ quam ♀ triplo longior, paulo crassior, obtusa.

Species 1, Africæ tropicæ occidentalis incola.

48. *Aglaonema*, *Schott, Melet.* i. 20; *Gen. Aroid.* t. 59.—Flores spadice inappendiculato monoici, omnes perfecti, ♂ et ♀ arcte contigui, rarissime interspatio staminodiis instructo disjuncti. Perianthium 0. Fl. ♂ : Stamina 2-4, distincta, obovoidea v. clavata, 3-gona v. cuneata, dorso contigua; antherarum loculi filamento breviores v. longiores connectivo immersa, remoti, poris apicalibus dehiscentes. Fl. ♀ : Staminodia, si adsint, 1-3, prismatica, ovario breviora. Ovarium 1- rarissime 2-loculare; stylus brevis, crassus, v. 0, stigmate magno orbiculari v. infundibulari, rarius parvo depresso; ovula in loculis solitaria, brevia, anatropa, funiculis brevibus placentis subbasilaribus affixa, micropyle infera. Baccæ paucæ, sæpe magnæ, ovoideæ v. oblongæ, 1-spermæ. Semen ovoideum v. ellipsoideum, subsessile, erectum, testa membranacea lævi, albumine 0; embryo macropodus.—Herbæ, caudice erecto v. prostrato basi stolonifero v. rhizomate tuberoso. Folia ovato-v. oblongo-lanceolata, costa crassiuscula, nervis ad marginem attingentibus, nunc 4 v. pluribus crassiusculis arcuatis, nunc omnibus tenuissimis densis parallelis, petiolo elongato longe vaginante. Pedunculi fasciculati, plerumque breves. Spatha recta, tubo breviter convoluta superne in laminam ovatam v. ovato-lanceolatam apertam v. conchiformem et fere clausam v. subcylindraceam dilatato, demum marcescens. Spadix spatham æquans v. ea brevior, rarius longior, sessilis v. stipitatus; inflorescentia ♂ elongata, cylindracea v. clavata, densiflora; ♀ brevis, pauciflora. Fructus tubo spathæ non inclusus.

Species ad 20, omnes tropicæ, plurimæ Asiæ tropicæ et Archipelagi Malayani incolæ, paucæ Africanæ. *Engl. Arac.* 436. *Blume, Rumph.* i. t. 36, 65, 66. *Wight, Ic.* t. 804 et 806 (*Calla*). *Regel, Gartenfl.* t. 470. *Bot. Mag.* t. 5500, 5760. Stigma in speciebus Africanis parvum et ovarium 2-loculare.

*AGLAODORUM*, *Schott, Gen. Aroid.* t. 58. *Engl. Arac.* 443, et in *Bull. Soc. Tpsc. Ort.* 1879, 300, planta uliginosa, Malayensis, fructu ignoto, est ut videtur *Aglaonematis* species (*A. palustre*, *Teysm. et Binn.*) rhizomate tuberoso, petiolis pedunculisque crassissimis elongatis, fl. ♂ infimis paucis imperfectis, staminodiis 3-4 ovarium 1 2-loculare cingentibus et stigmate magno obscure 4-lobo. Habitus ex Griffithio (*Notul.* iii. 148) omnino *Cryptocorynis*.

49. *Philonotus*, *Schott, Gen. Aroid.* t. 54.—Flores in spadice inappendiculato monoici, ♂ et ♀ longe remoti, organis neutris paucis sparsis concis interpositis. Fl. ♂ : Stamina 2, distincta, compressa, cuneata, truncata, filamento 0; antherarum loculi connectivum marginantes, eoque æquilongi, distantes, poris apicalibus dehiscentes. Fl. ♀ : Ovaria numerosissima, lineari-oblonga, subcylindracea, 1-locularia, in stylum brevem continuum producta, stigmate pulvinari; ovulum solitarium, orthotropum, erectum, funiculo curvo parietali affixum, micropyle supera. Fructus . . .—Herba, rhizomate hypogæo. Folia longe petiolata, lanceolata, caudato-acuminata, nervis creberrimis tenuissimis marginem attingentibus, subtus pallida, petiolo gracili laminæ æquilongo sublonge vaginante. Pedunculus gracilis, petiolo æquilongus. Spatha erecta, tubo convoluta, fauce vix contracta, in laminam æquilongam subcymbiformem haud latiore desinens, apice caudiculata, persistens?. Spadix longe stipitatus, spatham æquans, gracilis; inflorescentia ♂

elongato-cylindræa partem nudam cum ♀ æquans; parte nuda longitudinaliter costata costis obscure tuberculati; ♀ cylindræa quam ♂ crassior, ovariis densissimis.

Species 1, Amazonica. *Engl. Arac.* 431.

50. *Montrichardia*, *Orüger in Bot. Zeit.* 1854, 25.—Flores in spadice inappendiculato monoici, omnes perfecti, ♂ et ♀ contigui. Perianthium 0. Fl. ♂: Stamina 3-6, distincta; antheræ sessiles, obpyramidatae, 3-gonæ, dorso contiguæ, loculis contiguis lineari-oblongis acutis connectivo crasso truncato brevioribus rimulis apicalibus retrorsum dehiscentibus; pollen pulvereum, globosum. Fl. ♀: Ovaria turbinata, connata, hexagona, vertice rotundato-sphinctriformi, 1-locularia; stigma areola depressa sessile, 4-lobum; ovula solitaria v. gemina, anatropa, brevia, funiculis brevissimis placentæ subbasilari affixa, v. semianatropa, micropyle hiante infera. Baccæ in syncarpium connatæ, spongiosæ, vertice intruso radiatim sulcato, 1-spermæ. Semen subglobosum v. oblongo-ovoideum et compressum, testa tenui, albumine 0; embryo macropodus, intra pericarpium germinans.—Frutices arborescentes, vasis laticiferis instructi, caudicibus erectis crassis annulatis interdum divisis lævibus v. aculeatis. Folia coriacea, sagittata, lobis posticis elongatis, costis crassiusculis, nervis tenuibus, petiolo robusto alte vaginante, vagina in ligulam producta. Pedunculi 1-2, foliis breviores. Spatha crassa, late ovata, acuta, erecta, basi convoluta, fauce aperta, tota decidua. Spadix spatha brevior, sessilis, erectus, crassus, obtusus; inflorescentiæ densissimæ, cylindrææ, ♂ quam ♀ multo longior.

Species 3 v. 4, Americæ tropicæ incolæ. *Engl. Arac.* 287, et in *Mart. Fl. Bras.* iii. ii. t. 25. *Schott, Gen. Aroid.* t. 49. *Vell. Fl. Flum. Ic.* ix. t. 109 (*Arum*). *Peyritsch, Aroid. Maximil.* t. 21, 22.

Descriptio a Schottio ad *M. Fendleri* stabilita, sed in specie typica *M. aculeata* (*Caladium aculeatum*, Meyer, Prim. Fl. Esseq. 274; *Philodendron? aculeatum*, Kunth, Enum. Pl. iii. 48), planta ab Englero prætermissa, ovaria libera et ovulum solitarium orthotropum a Crügero descripta sunt. In *M. linifera*, a Peyritschio descripta, ovulum solitarium semianatropum depictum est.

51. *Nephtytis*, *Schott in Æstr. Bot. Wochenbl.* 1857, 406; *Gen. Aroid.* t. 51.—Flores in spadice inappendiculato monoici, omnes perfecti, ♂ et ♀ arcte contigui. Perianthium 0. Fl. ♂: Stamina distincta, brevissima, prismatica v. subcubica, ambitu sulcata, vertice deplanata; antherarum loculi connectivo æquilongi, lineari-oblongi, poris apicalibus dehiscentes. Fl. ♀: Ovarium globosum, 1-loculare; stigma sessile, discoideum, centro depressum; ovulum solitarium, breve, anatropum, funiculo brevissimo placentæ parietali infra apicem loculi affixum, pendulum, micropyle infero. Baccæ magnæ, ellipsoideæ. Semen pendulum, obovoideum, umbilico excavato circulari, albumine 0; embryo macropodus.—Herbæ elatæ, vasis laticiferis instructæ, caudice prorepente v. rhizomate crasso. Folia proteranthia, ampla, longe petiolata, membranacea, triangulari-sagittata, lobis posticis incumbens v. divaricatis anticum æquantibus v. eo majoribus, petiolo gracili ima basi subvaginante. Pedunculus gracilis, erectus, folia superans. Spatha membranacea, elliptica, acuta, in pedunculum decurrens, basi breviter convoluta, dein aperta et reclinata, nervis reticulata. Spadix spatha brevior, erectus, stipitatus; inflorescentia ♂ cylindræa, obtusa, quam ♀ pauciflora triplo longior.

Species 2, Africæ occidentalis tropicæ incolæ. *Engl. Arac.* 301. *N. E. Brown in Gard. Chron.* 1881, 790. Descriptio ad flores *N. libericæ*, N. E. Br., et fructus ad analysin *N. Afzelii* in opere Schottii.

52. *Richardia*, *Kunth in Mém. Mus. Par.* iv. 437, t. 20. (*Zantedeschia*, *Spreng. Syst. Veg.* iii. 765 pro parte.)—Flores in spadice inappendiculato monoici, omnes perfecti, ♂ et ♀ arcte contigui. Perianthium 0. Fl. ♂: Stamina 2-3, distincta, filamentum elongato crasso; antheræ obtusæ v. retusæ filamentum breviores, loculis oblongis connectivo immersis poris apicalibus dehiscentibus; pollen vermiforme. Fl. ♀: Staminodia 3, spatulata, apice incrassata v. clavata. Ovarium ovoideum, 2-5 (rarius 1-)loculare; stylus brevis, cum ovario continuus v. 0, stigmate parvo pulvinari v. capitato; ovula in loculis ad 4, anatropa, brevia, funiculis brevibus placentis angulo interiori adnatis 2-seriatim affixa

v. superposita, micropyle infera. Baccæ tubo spathæ inclusæ, obovoideæ v. subglobosæ, 1-5-loculares, oligospermæ. Semina ovoidea v. subglobosa, funiculo brevi, testa costata, raphe elevata in strophiolum parvum desinente, albumine copioso; embryo axilis.—Herbæ paludosæ, rhizomate crasso, foliis floribusque cœtaneis. Folia sagittata, interdum maculis albis translucidis fenestrata, costa valida, nervis marginem attingentibus, petiolo elongato crasso basi vaginato interdum asperulo. Pedunculi sæpe plures, validi, elongati. Spatha erecta, tubo brevi convoluto infundibulari accrescente persistente, fauce aperta; lamina oblique explanata, apice cuspidata recurva, marginibus eversis, marcescens, alba v. flavida. Spadix spatha brevior, substipitatus, erectus, cylindraceus; inflorescentiæ densifloræ, ♂ quam ♀ multo longior.

Species 5, Africæ australis incolæ. *Engl. Arac.* 326. *Schott, Gen. Aroid. t.* 62. *Gærtn. Fruct. t.* 84 (*Calla*). *Regel, Gartenfl. t.* 462. *Fl. des Serres, t.* 2258. *Lem. Ill. Hort. t.* 255. *Bot. Mag. t.* 832 (*Calla*), 5140, 5176, 5765.

53. **Homalomena**, *Schott, Melet. i.* 20; *Gen. Aroid. t.* 61, *err. typ.* Homalomena. (*Zantedeschia, Spreng. Syst. Veg. iii.* 765, *pro parte.*)—Flores in spadice inappendiculato monoici, omnes perfecti rarius paucis ♂ infimis imperfectis, ♂ et ♀ arcte contigui, v. spatio brevi nudo separati. Perianthium 0. Stamina 3-4, rarius 5-6, distincta, brevina, prismatica, truncata, 3-4-gona, dorso contigua; antherarum loculi oblongi v. ovoidei, subremoti, prominenter, connectivo crasso multo breviores, rimulis subapicalibus dehiscentes; pollen vermiforme. Fl. ♀: Staminodia in spiras cum ovariis alternantibus disposita, clavata v. capitata, rarius 0. Ovarium oblongum v. obovoideum, vertice contractum, perfecte v. imperfecte 3-4-loculare; stigma sessile, orbiculare, integrum v. 3-4-lobum; ovula in loculis numerosa, anatropa v. semi-anatropa, funiculis elongatis erecto-patentibus placentis marginibus septorum v. angulo interiori loculi adnatis 2-seriatim affixa, micropyle laterali v. infera v. supera. Baccæ spatha totæ inclusæ, obovoideæ globosæ v. angulatæ, 3-4-loculares, polyspermæ. Semina ovoidea, funiculo elongato, testa costata atro-brunnea extus succosa, albumine copioso; embryo axilis.—Herbæ robustæ, rhizomate crasso, caudice brevi v. 0. Folia ovato- v. triangulari-cordata v. lanceolata, interdum pubescentia, nervis marginem attingentibus, petiolo sæpius elongato et longe vaginante. Spatha recta, cylindracea v. inferne convoluta, superne in laminam convolutam v. hiantem acuminatam protensa, tandem recta, tota accrescens et persistens. Spadix spatha inclusus, sæpius breviter stipitatus; inflorescentia ♂ cylindracea v. fusiformis; ♀ brevior et angustior.

Species ad 20, Asiæ et Americæ tropicæ incolæ. *Engl. Arac.* 332; *et in Bull. Soc. Tosc. Ort.* 1879, 296. Genus ab Englero in sectiones 2 divisum:—

1. *Euhomalomena*. Spathæ brevis hiantis tubus indistinctus, lamina tubo vix longior. Fl. ♂ 3-4-andri. Folia utrinque glaberrima. Asiaticæ et Americane. *Lodd. Bot. Cab. t.* 12 (*Calla*). *Wight, Ic. t.* 805, 807 (*Calla*). *Griff. Notul. iii.* 152. *Regel, Gartenfl.* 634. *Bot. Mag. t.* 2279 (*Calla*) 6571. *Masters in Gard. Chron.* 1877, *fig.* 45, 46.

2. *Curmeria*. Spathæ tubus distinctus. Fl. ♂ sæpius 5-6-andri. Fl. ♀: Staminodia sæpe 0. Folia glabra v. pilosa. *CURMERIA, Lind. et André in Ill. Hort.* 1873, 121, 303. *Regel, Gartenfl. t.* 891. *Masters in Gard. Chron.* 1874, *fig.* 159, 160, 1876, *fig.* 16.

CYTOCLADON, *Griff. Notul. iii.* 147; *Ic. Pl. Asiat. t.* 173, *f.* 1, est verisimiliter species *Homalomenatis*.

ANDELONNIA, *Schott, Prod. Aroid.* 316, planta Amazonica, floribus ♂ imperfectis notis est ex Englero (in *Mart. Fl. Bras. iii.* ii. 171, *t.* 38) vix sine dubio *Homalomenatis* species.

54. **Chamaeladon**, *Miq. in Bot. Zeit.* 1856, 564; *Fl. Ind. Bat. iii.* 212, *t.* 40.—Flores in spadice inappendiculato monoici, omnes perfecti, ♂ et ♀ arcte contigui. Perianthium 0. Fl. ♂: Stamina 2-3, distincta, brevina, late cuneata, compressa, retusa, filamentis brevissimis; antherarum loculi breves, connectivo immersi, remoti, rimulis apicalibus dehiscentes; pollen vermiforme. Fl. ♀: Staminodia 1-3, clavata, brevina. Ovarium ovoideum v. subglobosum, 2-rarius 3-loculare; stigma sessile, latum, orbiculare, pulvinare; ovula in loculis plura, anatropa v. semianatropa, brevina, funiculis subelongatis placentis angulo interiori adnatis 4-seriatim affixa, micropyle infera. Baccæ spatha inclusæ, ellipsoideæ,

2-3-loculares, loculis polyspermis. Semina elongata, funiculo laterali, testa tenui remote costata, raphe prominula, chalaza tumida, albumine copioso; embryo axilis.—Herbæ parvæ v. inter minores, caudice brevi v. subnullo a basi diviso. Folia elliptico-ovata v. oblonga, v. triangulari-ovata v. lanceolata, raro basi cordata, nervis marginem fere attingentibus, petiolo elongato longe vaginante. Spatha parva, subcylindracea, inferne convoluta, superne hians, demum reclusa, tota persistens. Spadix spatha inclusus, stipitatus, subcylindraceus; inflorescentia ♂ quam ♀ multo longior.

Species ad 12, Asiæ tropicæ et Archipelagi Malayani incolæ. *Engl. Arac.* ii. 343. *Schott, Gen. Aroid.* t. 60.

55. *Schismatoglottis*, *Zoll. et Morr. Syst. Verz. Pl. Jav.* 83. (*Zantedeschia*, *C. Koch, Ind. Sem. Hort. Berol.* 1854, *App.* 9.)—Flores in spadice inappendiculato monoici, ♂ superiores omnes et interdum pauci inferiores imperfecti, inferiores ♀ contigui v. fere contigui. Perianthium 0. Fl. ♂: Stamina 2-3, distincta, brevissima, prismatica subcuneata v. compressa, truncata, filamentum late lineari; antherarum loculi filamentum terminantes, ovoidei, remoti v. contigui, poris magnis apicalibus dehiscentes, connectivo apice verrucoso; pollen vermiforme. Fl. ♀: Stamindia si adsint pauca, clavata. Ovarium oblongum, 1-loculare; stigma sessile, discoideum; ovula plurima, anatropa, funiculis elongatis placentis 2-4 parietalibus affixa, micropyle infera. Baccæ tubo spathæ inclusæ, oblongæ, polyspermæ. Semina ellipsoidea, arrecta, testa atro-viridi epidermide diaphano; embryo . . .—Herbæ rhizomate stolonifero, caudice brevi. Folia oblongo- v. ovato-cordata, rarius hastata v. lanceolata, sæpe marmorata v. maculata, nervis marginem fere attingentibus, petiolo basi vaginante. Pedunculi solitarii v. fasciculati, petiolo breviores. Spatha cylindracea, tubo convoluta fauce vix constricto, lamina apiculata v. acuminata circumscissæ decidua. Spadix sessilis, spatha inclusus, medio v. infra medium constrictus; inflorescentia ♂ cylindracea v. clavata superne pro maxima parte (rarius inferne) imperfecta; ♀ brevior v. angustior, cylindracea v. conica.

Species ad 15, Archipelagi Malayani incolæ. *Engl. Arac.* 349; *Bot. Jahrb.* i. 184, et in *Bull. Soc. Tosc.ortic.* 1879, 297. *Ill. Hort.* xxviii. t. 418. *Schott, Gen. Aroid.* t. 55. Ovula a Schottio (*Gen. Aroid.* l. c.) orthotropa depicta sed anatropa descripta. Genus in sectiones 2 divisum:—

1. *Euschismatoglottis*, *Engl.* l. c. 350. Flores ♀ omnes fertiles v. superiores tantum steriles. Antherarum loculi connectivum haud superantes. *Wight, Ic.* t. 799 (*Calla*); includit *APOBALLIS*, *Schott in Estr. Bot. Zeitschr.* 1858, 318, genus nullo caractere distinguendum.

2. *Colobogynium*, *Engl.* l. c. 353. Inflorescentia ♀ ima basi staminodia ferens. Antherarum loculi connectivum superantes. *COLOBOGYNIUM*, *Schott in Estr. Bot. Zeitschr.* 1865, 34.

56. *Apatemone*, *Schott, Gen. Aroid.* t. 57.—Flores in spadice appendiculato monoici, ♂ et ♀ contigui; organa neutra conica umbonata ovariis subsimilia appendicem cylindraceam vestientia. Fl. ♂: Stamina 1-2, brevissima, distincta, compressa, latiora quam longa; antherarum loculi hemisphærici, subremoti, connectivo tenui latiores, vertice planiusculo verrucoso centro poris apicalibus dehiscentes. Fl. ♀: Ovarium diaphanum, ovoideum, 1-loculare; stigma sessile, pulvinare v. hemisphæricum; ovula numerosa, semianatropa, funiculis elongatis gracillimis placentis 2-3 tenuissimis parietalibus affixa, micropyle directione varia. Fructus . . .—Herbæ acaules, pusillæ. Folia ovata v. ovato- v. cordato-lanceolata, nervis tenuissimis, nervulis parallelis, petiolo gracili ima basi vaginante. Pedunculus petiolo brevior. Spatha membranacea, tubo angusto convoluta persistente, lamina paullo longiore lanceolata convoluta circumscissæ decidua. Spadix spatha inclusus, stipitatus, totus cylindraceus; inflorescentia ♂ neutro subæquilonga; ♀ elongata, ovariis distinctis.

Species 2, Borneensis et Malaccensis. *Engl. Arac.* 354.

57. *Mucephalandra*, *Schott, Gen. Aroid.* t. 56.—Flores in spadice appendiculato monoici, ♂ et ♀ contigui; organa neutra hexagona, verrucosa, floribus multoties majora, appendicem clavatam vestientia. Fl. ♂: Stamina 1-2, brevissima, obovoideo-cuneata, com-

pressa, filamentis crassis; antherarum loculi ovoidei, contigui, oblique oppositi, tubulis rectis divaricatis corniformibus basi annulo verrucoso cinctis dehiscentes. Fl. ♀: Ovarium globosum, diaphanum, imperfecte 2-3-loculare; stigma sessile, parvum, disciforme; ovula numerosa, semianatropa, funiculis tenuissimis elongatis flexuosis aciebus semiseptorum affixa, micropyle directione varia. Fructus . . —Herba acaulis, pusilla. Folia numerosa, lineari-lanceolata, apiculata, subtus punctulata, nervis tenuissimis, nervulis parallelis, petiolo gracili ima basi vaginante. Pedunculus petiolo subæquilongus. Spathæ tubus brevis, convolutus, persistens, lamina lanceolata circumscisse decidua. Spadix spatha multo brevior, stipitatus, appendice crassa ellipsoidea organis neutris hexagono-areolata; inflorescentia ♂ brevis; ♀ longior et angustior, ovaris distinctis.

Species 1, Borneensis. *Engl. Arac.* 354.

MICROCASIA, *Engl. in Bull. Soc. Tosc.ortic.* 1879, 299, genus indicatum, sed non descriptum, ex auctore *Bucephalandra* quam maxime affine, differt ovulis placentæ basilari affixis. Species 2, Borneenses.

58. *Rhynchophylla*, *Engl. Bot. Jahrb.* i. 183. —Flores in spadice inappendiculato monoici, ♂ et ♀ contigui, omnes foemineis infimis paucis masculisque summis exceptis perfecti. Perianthium 0. Fl. ♂: Stamina 2-3, distincta, compressiuscula; antheræ connectivo truncato æquilongæ, loculis poris apicalibus dehiscentibus. Fl. ♀: Ovarium 2-3-loculare; stigma sessile, suborbiculare, tenue; ovula numerosa, semianatropa, elongata, funiculis subæquilongis parti apicali septi affixa. Baccæ obovoideæ, 2-3-loculares, polyspermæ, Semina fusiformia, integumento exteriore pellucido ultra interius longe producto rostrata, albumine copioso; embryo axilis. —Herbæ caudice brevi. Folia lanceolata, apiculo tubuloso instructa, nervis plurimis patentibus subparallelis, petioli vagina fere a basi soluta elongata ligulæformi. Pedunculi elongati. Spatha bis terve convoluta, tubus persistens, cupularis, quam lamina dejecta 2-3-plo brevior. Spadix spatha brevior; inflorescentia ♀ quam ♂ brevior.

Species 2 (*Schismatoglottis marginata* et *S. elongata*, *Engl. in Bull. Soc. Tosc.ortic.* 1879, 298), Borneenses. Genus a nobis non visum.

59. *Piptospatha*, *N. E. Brown in Gard. Chron.* 1879, 138, f. 20. —Flores in spadice inappendiculato monoici, ♂ et ♀ contigui; organa neutra infra fl. ♀ numerosa, dense compacta, clavata v. peltata, stipite crasso. Perianthium 0. Stamina 1-2, distincta, compressa, porrecta, filamentis brevi; antherarum loculi ellipsoidei, subremoti, connectivum in rostrum loculis æquilongum productum marginantes, rimulis terminalibus dehiscentes. Fl. ♀: Ovarium subcylindraceum v. obtuse angulatum, truncatum, 1-loculare; stigma sessile, verticem totum ovarii occupans et cum eo æquilatum, pulvinare; ovula numerosa, orthotropa, erecta, funiculis elongatis placentis 2-3-parietalibus affixa, micropyle supera. Fructus . . —Herba pusilla, cæspitosa, acaulis. Folia numerosa, coriacea, lanceolata, acuminata, cartilagineo-marginata, subtus punctulata, nervis tenuissimis nervulisque supra obscuris, petiolo lamina multo brevior gracili ima basi vaginante. Pedunculus petiolo longior, gracilis, apice decurvus. Spatha cernua, oblique ovoidea v. ellipsoidea, cuspidate terminali recurva, convoluta, lamina a tubo obscuro circumscisse decidua. Spadix spatha inclusus, sessilis, brevis; inflorescentia ♂ ovoidea v. hemisphærica, vertice rotundata, ob connectiva rostrata quaquaversa subsquarrosa; ♀ lævis, brevissima, cylindræa, masculo angustior; neutralis cum foeminea continua et ea longior.

Species 1, Borneensis. *Bot. Mag. t.* 6598.

60. *Gamogyne*, *N. E. Brown in Trim. Journ. Bot.* 1882, 195. —Flores in spadice inappendiculato monoici, ♂ a ♀ remoti, masculis sterilibus ambitu undulatis dense compactis interpositis arcte contigui. Perianthium 0. Fl. ♂: Stamina 1-2, distincta, compressa, filamentis brevi lato; antherarum loculi cylindræci, paralleli, pro maxima parte remoti, superne confluentes et verticem staminis truncatum efficientes, poris apicalibus in rimulam

confluentibus dehiscentes, connectivo loculis angustiore tenui non producto. Fl. ♀ : Ovaria minuta, omnino connata, 1-locularia ; stigma sessile, pulvinare ; ovula numerosa, orthotropa, erecta, funiculis subelongatis placentis parietalibus affixa, micropyle supera. Fructus . . .—Herba. Folia lanceolata, coriacea, nervis nervulisque tenuissimis, petiolo lamina breviora ima basi vaginante. Pedunculus elongatus. Spatha inclinata, elliptico-ovoidea, breviter rostrata, arcte convoluta, rima apicali aperta, lamina a tubo obconico circumscissae decidua. Spadix spatha inclusus, robustus, totus cylindraceus, apice rotundatus ; inflorescentia ♂ cum imperfecta quam ♀ triplo longior.

Species 1, Borneensis.

61, *Microcasia*, Beccari in *Bull. Soc. Tosc.ortic.* 1879, 180, cum ic. xylog. ; et in *Nuov. Giorn. Bot. Ital.* xi. 394.—Flores in spadice appendiculato monoici, fl. ♂ superiores et inferiores dilatati imperfecti, ♀ infimi steriles ; appendix sessilis, nuda, globosa. Perianthium 0. Fl. ♂ perfecti pauci. Stamina sessilia ; antheræ globoso-didymæ, loculis apice aristatis. Fl. ♀ pauci. Ovaria globosa, 1-locularia ; stigma sessile, pulvinare ; ovula ad 12, orthotropa, erecta, funiculis brevibus placentæ latæ basilari affixa, micropyle supera. Fructus spathæ tubo involucri. Baccæ . . .—Herbæ perpusillæ, cæspitosæ, rhizomate repente brevi. Folia spathulata v. oblonga, petiolo longe v. breviter vaginante. Pedunculi solitarii v. pauci. Spathæ tubus convolutus, persistens ; lamina ovato-lanceolata, acuminata, vix hians, circumscissae decidua. Spadix spatha inclusus, clavatus ; inflorescentiæ breves, fl. ♂ imperfecti infra et supra fertiles iis multo majores, tenues, cuneato-obovatæ ; fl. ♀ steriles pauci, minuti ; appendix sessilis, inflorescentia crassior, v. subæquans.

Species 2, Borneenses. *Engl. in Bull. Soc. Tosc.ortic.* 1879, 299. Genus a nobis non visum.

#### TRIBUS VII. DIEFFENBACHIÆ.

62, *Dieffenbachia*, Schott, *Melet.* i. 20 ; *Gen. Aroid.* t. 63.—Flores in spadice inappendiculato monoici, ♂ a ♀ remoti, masculis imperfectis paucis sparsis interpositis. Perianthium 0. Fl. ♂ : Stamina 4-5, in corpus crassum depressum sessile vertice deplanatum connata ; antherarum loculi connectivo breviores, lineari-oblongi, contigui, rimulis apicalibus dehiscentes ; pollen vermiforme. Fl. ♀ : Staminodia 4-5, ovarium cingentia, incurva, inferne dilatata, apicibus clavatis. Ovarium globosum depresso-ovoideum v. 2-3-lobum, 1-3-loculare ; stigma sessile, depresso-globosum, 2-3-lobum, medio concavum v. umbonatum ; ovula in loculis solitaria, rarius altero imperfecto addito, anatropa, erecta v. subhorizontalia, funiculis brevibus placentis basilariibus v. angulo interiori adnatis affixa, micropyle infera. Baccæ spathæ tubo demum rupto inclusæ, globosæ, v. 2-3-dymæ, stigmate coronatæ, 1-3-loculares, loculis 1-spermis. Semina ovoidea v. globosa, testa crassiuscula lævi, chalaza magna orbiculari, albumine 0 ; embryo macropodus.—Herbæ v. suffructices crassi, caudicibus erectis v. basi decumbentibus. Folia subterminalia, oblonga v. oblongo-lanceolata, acuta, costa nervisque utrinque numerosis crassis, petiolo crasso ultra medium vaginante. Pedunculi plures, petiolo breviores. Spatha angusta, tubo elongato convoluta accrescente persistente, fauce leviter constricta, lamina tubo paullo longiore aperta anguste cymbiformi acuminata, demum recurva. Spadix spatha brevior, erectus, stipitatus, basi spathæ adnatus ; inflorescentia ♂ cylindracea, densiflora ; ♀ unilateralis, elongata, multi-remotiflora.

Species ad 6, Americæ tropicæ incolæ. *Engl. Arac.* 444, et in *Mart. Fl. Bras.* iii. ii. t. 39. Schott, *ic. Aroid.* t. 21 ad 30. Jacq. *Stirp. Amer.* t. 151 (*Arum*). Lodd. *Bot. Cab.* t. 608 (*Caladium*). Hook. *Exot. Bot.* t. 1 (*Caladium*). Demaire, *Ill. Hort.* t. 387, 470, 471. Regel, *Gartenfl.* t. 672.

63, *Taccarum*, Brongn. mss. ex Schott, *Gen. Aroid.* t. 65. (*Lysistigma*, Schott in *Bonpland.* x. 222. *Endera*, Regel, *Gartenfl.* 1872, 226, t. 732.)—Flores in spadice inappendiculato monoici, omnes perfecti, ♂ et ♀ contigui. Perianthium 0. Fl. ♂ : Stamina 4-∞, in corpus sessile v. stipitatum peltatum vertice deplanato v. tumido connata ; antherarum loculi peltæ appensi, v. circa v. infra apicem stipitis verticillati, lineari-

oblongi, contigui, rimulis apicalibus dehiscentes. Fl. ♀: Staminodia ovarium cingentia 4-6, e basi lata sensim angustata, incurva, apicibus clavellatis recurvis. Ovarium subglobosum v. late ovoideum, teres v. 3-6-lobum, 3-6-loculare, in stylum columnarem attenuatum; stigma crassum, capitatum, 3-6-lobum; ovula in loculis solitaria, anatropa, funiculis brevibus placentis angulo interiori adnatis affixa, micropyle infera. Fructus . . .—Herbæ elatæ, rhizomate tuberoso, foliis floribusque cœtaneis. Folia longe petiolata, ambitu late hastato-ovata, bipinnatifida, pinnis undulatis. Pedunculus petiolo multo brevior. Spatha erecta, tubo brevi convoluto, fauce aperta, lamina hianta v. explanata oblonga acuta. Spadix spatha brevior, breviter stipitatus, laxiflorus; inflorescentia ♂ ovoidea v. elongata, quam ♀ longior.

Species 3-4, Brasiliæ incolæ. *Engl. Arac.* 519, 645, et in *Mart. Fl. Bras.* iii. ii. t. 49. *Arcang. in Nuov. Giorn. Bot. Ital.* xi. 312, t. 8. *N. E. Brown in Gard. Chron.* 1881, 654, fig. 134.

64. *Andromycta*, *A. Rich. Fl. Cub.* ii. 282, t. 89.—Flores in spadice inappendiculato monoici, omnes perfecti, ♂ et ♀ contigui? Perianthium 0, nisi discus in fl. ♀. Fl. ♂: Stamina 3-4; antheræ in ambitu corporis peltati hemisphærici immersæ, 2-loculares, loculis approximatis apice dehiscentibus. Fl. ♀ sparsi. Ovarium subglobosum, disco tumido obtuse 3-lobo sessile, 3-loculare, in stylum brevem crassum attenuatum, stigmatibus 3-cruri, cruribus elongatis recurvo-patentibus; ovula in loculis solitaria, in angulo interiore loculi basilaria, erecta, anatropa, funiculo brevi, micropyle infera. Fructus . . .—Herba. Folia hysteroanthia, pedatisecta, lobo medio magno elliptico acuminato, lateralibus oblique lanceolatis, nervis arcuatis, petiolo elongato. Pedunculus cataphyllis acuminatis vaginatus. Spatha erecta, lanceolata, acuminata, basi convoluta, superne aperta. Spadix spatha brevior, gracilis, laxiflora.

Species 1, Cubensis, nobis ignota, ab Englero (*Arac.* 486) inter *Xanthosomatis* species inclusus.

65. *Staurostigma*, *Scheidw. in Otto et Dietr. Allgem. Gartenz.* xvi. 129.—Flores in spadice inappendiculato monoici, omnes perfecti, ♂ et ♀ contigui. Perianthium 0. Fl. ♂: Stamina 3-4, in corpus crasse stipitatum, peltatum, subhexagonum vertice umbonatum connata; antherarum loculi margine inferiore peltæ appensi, oblongi v. sacciformes, contigui, rimulis porisve demum hiantibus dehiscentes; pollen vermiforme. Fl. ♀: Staminodia 3-5, brevia, cuneata, truncata, plus minusve connata v. in cupulam lobatam confluentia. Ovarium globosum v. pyriforme, 2-5- rarius 1-loculare; stylus conoideus v. 0, stigmatibus 2-5-partito, lobis triangularibus v. clavatis stellatim patentibus; ovula in loculis solitaria, anatropa, obovoidea cylindracea v. lageniformia, funiculis brevibus placentis subbasilaribus affixa, micropyle infera v. transversa. Baccae subglobosæ, profunde 2-5-sulcatæ, 2-5-loculares, loculis 1-spermis. Semina oblonga, obtuse 3-gona, testa tenui fusca lævi v. granulata epidermide diaphana, strophiole conoideo, albumine copioso; embryo axilis.—Herbæ tuberosæ, stoloniferæ, foliis floribus cœtaneis v. proteranthiis. Folia longe petiolata, ambitu hastato-cordata, pinnatisecta v. 1-2-pinnatipartita, pinnis sessilibus acuminatis. Pedunculi solitarii v. plures, foliis æquilongi. Spatha erecta, lanceolata, basi convoluta, superne hians v. aperta. Spadix cylindraceus, spatha brevior et inferne basi ejus adnatus; inflorescentiæ laxifloræ, ♂ quam ♀ longior.

Species 6, Americæ tropicæ incolæ. *Engl. Arac.* 513. Genus ab Englero in sectiones 2 divisum:—

1. *Asterostigma*. Stigma stellatim 3-5-partitum, segmentis 2-fidis. *Engl. in Mart. Fl. Bras.* iii. ii. t. 48. *Velloz. Fl. Flum. Ic.* ix. t. 103 (*Arum*). *Lodd. Bot. Cab.* t. 1590 (*Caladium*). *ASTEROSTIGMA*, *Schott in Estr. Bot. Wochenbl.* 1852, 67; *Gen. Aroid.* t. 66. *Bot. Mag.* t. 5972. *Peyritsch, Aroid. Maximil.* t. 23 ad 26.

2. *Rhopalostigma*. Stigma 2-3-partitum, segmentis tereti-clavatis. *RHOPALOSTIGMA*, *Schott in Estr. Bot. Zeitschr.* 1859, 39. *Prodr. Syst. Aroid.* 34 (*Rhopalostigmium*). *Peyritsch, Aroid. Maximil.* t. 27.

66. *Gearum*, *N. E. Brown in Trim. Journ. Bot.* 1882, 196, t. 231, f. 1.—Flores in spadice inappendiculato monoici, staminodiis interpositis arcte contigui. Perianthium 0.

Fl. ♂ : Stamina 4 (5?) in corpus sessile subhexagonum vertice tumido subpeltato connata; antherarum loculi remoti, margini inferiori peltæ affixi, elliptico-oblongi, rimulis terminalibus dehiscentes. Fl. ♀ dense conferti. Staminodia compressa. Ovarium subglobosum v. globoso-3-gonum, 3-4-loculare; stigma subsessile, 3-4-lobum; ovula in loculis solitaria, basilaria, erecta, orthotropa. Fructus . . —Herba rhizomate tuberoso. Folia hysteranthia, petiolata, pedata, segmento intermedio sessili, lateralibus pinnatifidis. Pedunculus brevissimus. Spatha erecta, elongata, infra medium constricta, convoluta, superne cymbiformis, acuta. Spadix elongatus, cylindraceus, spatha paullo brevior, sessilis, parte ♂ anguste fusiformi subacuta; inflorescentia densa.

Species 1, prov. Goyaz, Brazilæ, incola. Specimina imperfecta tantum nota foliis non certe ad inflorescentiam pertinentibus.

67. *Mangonia*, Schott in *Æstr. Bot. Wochenbl.* 1857, 77; *Gen. Aroid.* t. 64.—Flores in eodem spadice inappendiculato monoici; ♂ inferiores dissiti, ♀ approximati, supremi imperfecti. Perianthium 0. Fl. ♂ : Stamina 3-5, in corpus peltatum stipitatum connatæ; antheræ didymæ, ad apicem stipitis columnaris verticillatæ, loculis globosis contiguis poris apicalibus dehiscentibus. Fl. ♀ : Staminodia 3, ovarium cingentia, linearia, apicibus dilatatis. Ovarium ovoideum, 3-loculare; stylus columnaris, stigmatibus 3-lobis centro depresso, lobis patenti-recurvis obtusis; ovula in loculis gemina, anatropa, lageniformia, funiculis brevibus placentis angulo interiori adnatis affixa, micropyle supera. Fructus . . —Herba tuberosa? Folia proteranthia, oblongo-sagittata, costa crassa, nervis arcuatis, petiolo elongato. Pedunculus elongatus. Spatha oblongo-lanceolata, inferne convoluta, superne reclinata. Spadix elongatus, spatham superans; inflorescentia ♂ valde elongata, floribus perfectis laxis, imperfectis densis; ♀ brevis, densiflora, floribus quam ♂ multo majoribus.

Species 1, Provinciæ Argentinae incola. *Engl. Arac.* 518. Exemplum valde imperfectum foliis ademptis a nobis visum. Descriptio pro maxima parte ad analyses Schottii l. c.

68. *Staudnera*, C. Koch in *Wochenschr. Gärtn.* 1862, 114.—Flores in spadice inappendiculato basi spathæ adnato monoici, omnes perfecti, ♂ et ♀ contigui. Perianthium 0. Fl. ♂ : Staminodia 3-6, in corpus prismaticum v. subcylindraceum breviter stipitatum peltatum vertice depresso connata; antherarum loculi subglobosi v. oblongi, contigui, basin connectivi non attingentes, rimulis porisve apicalibus dehiscentes; pollen minutissimum. Fl. ♀ : Staminodia 2-5, brevia, clavata, rarius 0. Ovarium subglobosum, 1-loculare; stigma sessile, stellatum 3-5-lobum, lobis triangularibus acutis; ovula plurima, orthotropa, erecta, funiculis brevibus placentis parietalibus 2-seriatim conferta, micropyle supera. Baccae ovoideæ, polyspermæ. Semina ovoidea, testa crassula sulcata, epidermide diaphana, raphe strophiolata, albumine copioso; embryo axilis.—Herbæ, caudice crasso elongato ascendente membranaceo-vaginato. Folia longe petiolata, peltata, ovato-oblonga, basi emarginata. Pedunculus brevis. Spatha aperta, basi brevissime convoluta, ovato-lanceolata, demum supra medium reflexa, marcescens. Spadix spatha multoties brevior, parte ♀ dorso spathæ adnata; inflorescentia densiflora, ♂ crassa, clavata, obtusa; ♀ multo brevior.

Species 3 v. 4, Burmæ incolæ. *Engl. Arac.* 451 (ubi ovarium errore 2-5-loculare descriptum). N. E. Brown in *Gard. Chron.* 1875, ii. 708. André in *Ill. Hort.* xix. t. 90. Fl. des Serres, t. 2201. Griff.  *Ic. Pl. Asiat.* t. 164, f. 1 (*Arum*). *Bot. Mag.* t. 6076 (excl. fig. ovarii).

69. *Gorgonidium*, Schott in *Ann. Mus. Bot. Lugd. Bat.* i. 283.—Flores in spadice inappendiculato? monoici, ♂ et ♀ arcte contigui. Perianthium 0. Fl. ♂ : Stamina 2-6-8, filamentis filiformibus florum inferiorum distinctis fasciculatis, superiorum alte connatis; antherarum loculi globosi, infra apicem connectivi prominuli, truncati, oppositi, stipitati, poris apicalibus dehiscentes. Fl. ♀ : Staminodia 6-8, ovarium irregulariter cingentia et longe superantia, filiformia, apicibus incrassatis. Ovarium 4-loculare; stylus filiformis, stigmatibus 4-crenato; ovula in loculis solitaria, orthotropa, placentis basi anguli

interioris adnatis affixa. Fructus . . .—Herbæ. Folia . . . Pedunculus brevis. Spatha persistens, navicularis, fere ad basin hians. Spadix spatha brevior, conico-cylindraceus, stipitatus; inflorescentia ♂ densiflora; ♀ stipiti spadiceis æquilonga, ovariis in verticillos 4 remotiusculos dispositis.

Species 1, ins. Carari maris Sualici incola. Planta a Gaudichaudio detecta, a nobis non visa, ex sententia N. E. Brownii verisimiliter *Pseudodracontio* affinis.

#### TRIBUS VIII. SPATHICARPEÆ.

70. *Spathicarpa*, Hook. Bot. Misc. ii. 147, t. 77.—Flores in spadice inappendiculato per totam longitudinem spathæ adnato monoici, omnes perfecti, ♂ et ♀ seriebus paucis longitudinalibus dispositi, exteriores ♀. Perianthium 0. Fl. ♂: Stamina 3-4, cum ovari rudimentum in corpus peltatum graciliter stipitatum connata; antheræ breves, peltæ suborbiculari v. obtusæ quadratæ appensæ, loculis contiguus poris subapicalibus dehiscen- tibus; pollen vermiforme. Fl. ♀: Staminodia 3-6, minuta, globosa v. depresso-peltata, ovario accumbentia. Ovarium ovoideo-oblongum v. lageniforme, 1-loculare, in stylum conicum attenuatum, stigmatē pulvinari integro v. obscure 3-4-sulcato; ovulum ortho- tropum, erectum, sessile, fundo loculi affixum, micropyle supera. Baccæ minutæ, ovoideæ, stylo coronatæ et staminodiis cinctæ. Semen ovoideum, erectum, funiculo crasso, testa brunnea extus viridi succosa, albumine copioso; embryo axilis.—Herbæ rhizomate tuberoso, foliis floribusque cœtaneis. Folia membranacea, lanceolata, v. hastato- v. sagittato-cordata v. hastato-3-sectâ, petiolo elongato longe vaginante. Pedunculi graciles, folia superantes. Spatha oblongo-lanceolata, acuminata, membranacea, demum aperta, longitudinaliter nervosa, reticulata, basi apiceque convoluta, persistens. Spadix semi- cylindraceus, spatha brevior, densi- v. laxi-flora.

Species ad 8, Brasiliz et Paraguayæ incolæ. Engl. Arac. 530, et in Mart. Fl. Bras. iii. ii. t. 51. Schott, Gen. Aroid. t. 67. Peyritsch, Aroid. Maximil. t. 12 ad 15.

71. *Spathanthemum*, Schott in Bonplandia, 1859, 165.—Flores in spadice inappendiculato per totam longitudinem spathæ adnato monoici, omnes perfecti, ♂ et ♀ seriebus paucis longitudinalibus dispositi, exteriore ♀. Perianthium 0. Fl. ♂: Stamina 4-7 distincta v. filamentis connatis, v. tota in corpus peltatum stipitatum connata; antheræ oblongæ, liberæ v. apicem versus stipitis verticillatæ, loculis contiguus rimulis apicalibus dehiscen- tibus. Fl. ♀: Staminodia 4-∞, brevia, ovarium cingentia, basi dilatata, apice capitata. Ovarium lageniforme, 4-∞-loculare, stylus elongatus, stigmatē 4-∞-lobo, lobis patentiter recurvis; ovula in loculis solitaria, anatropa, funiculis longiusculis placentis basi anguli interioris adnatis affixa, micropyle infera. Fructus . . .—Herbæ, rhizomate tuberoso, foliis floribusque cœtaneis, v. uno post alterum evoluti. Folia longe graciliterque petiolata, cordata v. sagittato-ovata, integra v. pinnatifido-lobata. Pedunculus gracilis, folia sub- æquans. Spatha oblongo-lanceolata, acuminata, membranacea, demum aperta, longitu- dinaliter nervosa et reticulata, basi apiceque obscure convoluta, persistens. Spadix semi- cylindraceus, spatha brevior, laxiflora.

Species 2 nobis cognitæ, altera Boliviana, *S. Orbignyana*, Schott l.c.; Engl. Arac. 530, foliis integris floribus non cœtaneis et staminibus in corpus peltatum connatis; altera, *GAMOCHLAMYS heterandra*, Baker in Gard. Chron. 1876, 164, et in Saund. Ref. Bot. v. t. 346, patria ignota, stamini- bus partim liberis partim connatis. Ovula in ambabus certe anatropa, nec ut descripserunt Schott et Engler orthotropa.

#### TRIBUS IX. CALLEÆ.

72. *Calla*, Linn. Gen. n. 1030. (Provenzialia, Adans. Fam. Nat. ii. 469.)—Flores in spadice stipitato inappendiculato omnes hermaphroditi, fertiles v. supremi ♂. Peri- anthium 0. Stamina ad 6, filamentis linearibus; antheræ brevissimæ, loculis connectivum terminantibus ellipsoideis divaricatis rimis elongatis dehiscen- tibus. Ovarium ovoideum,

1-loculare, in stylum brevem conicum attenuatum, stigmatē parvo pulvinare; ovula 6-9, anatropa, erecta, funiculis brevibus placentæ basilari affixa, micropyle infera. Baccæ depresso-obconicæ, v. prismaticæ, vertice sulcatæ, polyspermæ. Semina oblonga, tere-tiuscula, raphe prominula, testa crassa micropylum versus striata, chalaza tumida, albumine copioso; embryo axilis.—Herba aquatica, rhizomate repente elongato annulato folia disticha et pedunculum basi vaginatum proferente. Folia ovato- v. rotundato-cordata, nervis numerosis tenuissimis arcuatis, cuspidata, petiolo elongato basi longe vaginante. Pedunculus petiolum subæquans. Spatha ovato-lanceolata v. elliptica, acuminata, tota aperta, basi in pedunculum breviter decurrens, alba, accrescens et persistens. Spadix brevis, spatha multo brevior, longe stipitatus, ellipsoideus v. cylindraceus, multi-densiflorus.

Species 1, Europæ mediæ et borealis, necnon Americæ boreali-orientalis incola. *Engl. Arac.* 213. *Schott, Gen. Aroid.* t. 69. *Gaertn. Fruct.* ii. t. 84. *Negs, Gen. Fl. Germ. Monocot.* iii. n. 38. *L. C. Rich. in Guillem. Archiv.* i. t. 2. *Schkuhr, Handb.* t. 278. *Bot. Mag.* t. 1831.

73. *Stenospermation*, Schott, *Gen. Aroid.* 70.—Flores in spadice stipitato inappendiculato omnes hermaphroditi. Perianthium 0. Stamina 4, filamentis complanatis apicibus abrupte angustatis; antheræ parvæ, connectivum superantes, loculis oblongo-ovoideis divaricatis rimulis sublateraliter dehiscentibus; pollen pulvereum. Ovarium obpyramidatum v. prismaticum, vertice deplanato dilatato 4-gono, incomplete 2-loculare; stylus in centro verticis minutus, conoideus, stigmatē lineari-oblongo; ovula in loculis 4-6, collateralia, anatropa, erecta, funiculis breviusculis placentis basi septi adnatis affixa, micropyle infera. Baccæ parvulæ, obovoideæ, truncatæ, 2-loculares, loculis 2-4-spermis, vertice operculatim dehiscentes. Semina clavata, tere-tiuscula, testa crassula, chalaza tumida, albumine copioso; embryo axilis.—Herbæ v. suffrutices raphidibus instructi, caudice elongato scandente ad nodos radicante. Folia disticha, coriacea, lanceolata, acuminata, nervis numerosis tenuissimis, petiolo brevi v. elongato interdum per totam longitudinem vaginante. Pedunculus terminalis, petiolo vaginatus, strictus. Spatha navicularis, convoluta, demum aperta, tota decidua. Spadix spatha multo brevior, longe stipitatus, cylindraceus.

Species ad 7, Americæ tropicæ incolæ. *Engl. Arac.* 235, et in *Mart. Fl. Bras.* iii. ii. t. 18. *Masters in Gard. Chron.* 1875, i. 558, fig. 116.

74. *Rhodospatha*, Poepp. et Endl. *Nov. Gen. et Sp.* iii. 91, t. 300.—Flores in spadice stipitato inappendiculato omnes hermaphroditi v. inferiores ♀. Perianthium 0. Stamina 4, filamentis linearibus complanatis apicibus angustatis; antheræ terminales, loculis connectivum superantibus parallelis v. divergentibus ellipsoideis, rimis elongatis lateralibus dehiscentibus; pollen vermiforme. Ovarium obpyramidatum v. prismaticum, vertice dilatato-deplanato 2-loculare; stigma in centro verticis parvum, oblongum, depressum; ovula in loculis plura, semianatropa v. campylotropa, funiculis breviusculis placentis septo adnatis ad apicem loculi extensis 2-seriatim affixa, micropyle hiantē infera. Baccæ parvulæ, oblongæ, 4-6-gonæ, truncatæ, 2-loculares, polyspermæ. Semina imbricata, reniformia, compressa, obtusæ cristata, crista tuberculata, testa durissima granulata, albumine parco; embryo hippocrepicus.—Frutices scandentes, raphidibus instructi, ramis radicantibus. Folia disticha, elliptico-oblonga, acuminata, nervis numerosis arcuatis parallelis, petiolo cum lamina subæquilongō longe vaginante apice geniculato. Pedunculi basi longe vaginati, graciles. Spatha cymbiformis, rostrata, decidua. Spadix spatha brevior, cylindraceus, densiflorus, stipite elongato.

Species 6 v. 7, Americæ tropicæ incolæ. *Engl. Arac.* 231, et in *Mart. Fl. Bras.* iii. ii. t. 17. *Peyritsch, Aroid. Maximil.* t. 29, 30. Fructus a nobis non visus.

*R. Wendlandii*, Schott in ic. Herb. Vindob. ex *Engl. Arac.* 235, spathæ articulatæ vaginæ persistente et lamina decidua, cujus patria ignota, nobis ignota est.

ATTENTIA, Schott, *Gen. Aroid.* t. 71; *Peyritsch, Aroid. Maximil.* t. 19, 20, ad species *Rhodospathæ*

floribus inferioribus staminibus perfectis destitutis stabilitum, minime ut nobis videtur pro genere diverso habendum est.

*ANEPHSIAS*, Schott, *Gen. Aroid. t. 73*; *Engl. Arac. 230*; genus Venezuelanum a nobis non visum, ex descriptione et icone auctoris a *Rhodospatha* differt ovario 2-6-loculari.

75. *Heteropsis*, Kunth, *Enum. Pl. iii. 59*.—Flores in spadice stipitato inappendiculato hermaphroditi, v. infimi abortu ♀. Perianthium 0. Stamina 4 v. pauciora, filamentis brevibus latis compressis; antheræ connectivum superantes, loculis brevibus contiguis sacciformibus v. ellipsoideis rimulis hiantibus apicalibus dehiscentibus. Ovarium obpyramidatum, vertice dilatato deplanato, perfecte v. imperfecte 2-loculare; stylus in centro verticis minutus, conoideus, stigmate lineari; ovula in loculis 2, erecta, anatropa, funiculis elongatis placentis basi septi adnatis affixa, micropyle infera. Fructus .—Frutices scandentes, ramosi, ramis ramulisque gracilibus teretibus flexuosis haud annulatis ad nodos et alibi radices emittentibus. Folia alterna, lanceolata v. elliptico-lanceolata, acuminata, coriacea, costa prominula, nervis tenuissimis creberrimis, petiolo brevi v. brevissimo tereti, ima basi semiamplexicauli. Pedunculi breves, axillares, vaginis brevibus. Spatha parva, oblonga v. ellipsoidea, rostrata, convoluta, cito decidua. Spadix spatha inclusus, rectus, stipitatus, ellipsoideus v. cylindraceus.

Species 5 v. 6, Brasiliæ et Guianæ incolæ. *Engl. Arac. 98*, et in *Mart. Fl. Bras. iii. ii. t. 6*. Schott, *Gen. Aroid. t. 76*; *Aroid. t. 58 ad 60*.

76. *Anadendrum*, Schott in *Bonplandia*, 1857, 45; *Gen. Aroid. t. 78*. (*Anadendron*, *Prod. Syst. Aroid. 389*.)—Flores in spadice stipitato inappendiculato hermaphroditi. Perianthium 0, nisi urceolus brevis stamina et ovarium cingens. Stamina 4-6, filamentis brevissimis complanatis late linearibus v. quadratis; antheræ terminales, loculis connectivum superantibus erectis subreniformibus discretis rimis elongatis extrorsum dehiscentibus. Ovarium obconicum v. obpyramidatum, vertice dilatato deplanatum, 1-loculare; stigma sessile, parvum, oblongum, depressum; ovulum solitarium, anatropum, funiculo brevi adscendente placentæ basilari affixum, micropyle infera. Baccae remotæ, globosæ v. turbinatæ. Semen subglobosum v. turbinatum, testa crassiuscula, albumine 0; embryo macropodus.—Fruticuli repentis v. scandentes, caudicibus gracilibus, ramis radicanibus. Folia disticha, oblique ovato-oblonga v. lanceolata, acuminata, integra pertusa v. pinnatifida, petiolo brevi v. elongato gracili longe vaginante apice geniculato, vaginis persistentibus v. deciduis, marginibus latis v. angustis. Pedunculi terminales, solitarii v. plures, breves v. elongati, sæpius graciles. Spatha ovato-oblonga, navicularis, rostrata, decidua. Spadix spatha inclusus, sæpius longe stipitatus, cylindraceus, densiflorus. Baccae pisiformes, rubræ.

Species 4 v. 5, Archipelagi Malayani incolæ. *Engl. Arac. 95*. *Miq. Fl. Ind. Bat. iii., t. 39* (*Scindapsus*).

77. *Monstera*, Adans. *Fam. ii. 470*. (*Tornelia*, *Gutierrez ex Schlecht. in Linnæa*, xxvi. 382. *Monstera* sect. *Heteropsis*, *Miq. in Linnæa*, xviii. 79, non *Heteropsis*, Kunth. *Serangium*, *Wood*; *Salisb. Gen. Pl. Fragm. 5*.)—Flores in spadice sessili inappendiculato hermaphroditi; inferiores steriles conici, minuti, ovario effæto. Perianthium 0. Stamina 4-6, filamentis complanatis late linearibus apicibus abrupte angustis; antheræ breves, loculis connectivum superantibus oblongis apiculatis divaricatis rimis brevibus lateralibus dehiscentibus. Ovarium obconicum v. prismaticum, 4-6-gonum, vertice dilatato deplanato, 2-loculare; stigma sessile, parvum, depressum, oblongum v. lineare; ovula in loculis 2, anatropa v. semi-anatropa, funiculis brevissimis placentis tumidis basi septorum adnatis affixa, micropyle infera. Bacce in syncarpium cohærentes, superficiebus conglutinatis sponte solvendis, 1-2-spermæ. Semina ovoidea v. subcordiformia, testa crassiuscula epidermide solubili, albumine 0; embryo macropodus.—Frutices scandentes, ramosi, raphidibus instructi, ramis radicanibus. Folia disticha, lanceolata v. oblonga, inæquilatera, integra pertusa v. pinnatifida, petiolo elongato vaginante, vagina persistente et

accrescente v. decidua. Pedunculi terminales, solitarii v. fasciculati. Spatha ovata v. oblonga, cymbiformis, apiculata, post anthesin reclusa, demum decidua. Spadix spatha brevior, sessilis, subcylindraceus, densiflorus.

Species ad 12, Americæ tropicæ incolæ. *Engl. Arac.* 255, *et in Mart. Fl. Bras.* iii. ii. t. 19 ad 21, *Schott, Gen. Aroid.* t. 74 (*Tornelia*). *Vell. Fl. Flum. Ic.* ix. t. 117 (*Dracontium*). *Jacq. Hort. Schænb.* ii. t. 184, 185 (*Dracontium*). *Bot. Mag.* t. 5086.

ALLOSCHERMON, *Schott, Prod. Syst. Aroid.* 358; *Engl. Arac.* 267, genus Brasilianum penitus ignotum, a Pæppigio incomplete descriptum, verisimiliter species est *Monstera*, sed stamina 10–12, ovarium dubie 1-loculare, et ovulum dubie anatropum.

**78. *Scindapsus*, Schott, Melet. 21; Gen. Aroid. t. 81.**—Flores in spadice sessili inappendiculato hermaphroditi, omnes fertiles. Perianthium 0. Stamina 4, filamentis latiusculis complanatis apicibus incrassatis; antheræ terminales, loculis connectivum superantibus oblongis parallelis v. divaricatis rimis lateralibus dehiscentibus. Ovarium prismaticum v. obpyramidatum, vertice dilatato deplanato, 1-loculare; stigma in centro verticis sessile, lineari-oblongum, depressum; ovulum solitarium, anatropum, funiculo brevi placentæ basilari affixum, micropyle infera. Baccæ obpyramidatæ, succosæ, 1-spermæ, vertice coriaceo secedente dehiscentes. Semen reniformi-rotundatum, basi arillo succulento instructum, testa dura tenui lævi v. verrucosa, albumine 0; embryo macropodus, hippocrepicus.—Frutices alte scandentes, robusti, raphidibus instructi, ramis radicanlibus. Folia ovata oblonga v. oblongo-lanceolata, acuminata, nervis numerosis arcuatis, petiolo elongato longe lateque vaginante apice geniculato, vagina sæpe accrescente. Pedunculus terminalis, brevis, crassus. Spatha cymbiformis, rostrata, crassa, mox decidua. Spadix spatha brevior, sessilis, cylindraceus, densiflorus.

Species ad 9, Asiæ tropicæ, Archipelagi Indici, Nov. Guinææ, et ins. Fiji incolæ. *Engl. Arac.* 252; *Bot. Jahrb.* i. 182; *et in Bull. Soc. Tosc.ortic.* 1879, 270.

Baccæ ex descriptionibus Schottii et Engleri arcte connexæ, sed in exemplaribus nostris *S. officinalis* (typi generis) aliisque certe distinctæ sunt, ut apparet ex Roxburghii icone (in *Herb. Kew.*). In *S. geniculata*, Engler (Bull. Soc. Tosc. l. c.) stigma orbiculare!

CUSCUARIA, *Schott in Bonplandia*, 1857, 45; *Gen. Aroid.* t. 80; *Engl. Arac.* 251, ut nobis videtur a *Scindapsus* nullo caractere dato differt.

**79. *Raphidophora*, Schott, Gen. Aroid. t. 77. (*Raphidophora*, Hassk. in *Flora*, 1842, ii. Beibl. 11, quoad syn. Roxburghii.)**—Flores in spadice sessili inappendiculato hermaphroditi, v. pauci abortu ♀. Stamina 4–5, filamentis linearibus complanatis latiusculis apicibus abrupte angustatis; antheræ parvæ, loculis connectivum superantibus oblongis divergentibus rimis elongatis extrorsum dehiscentibus. Ovarium obpyramidatum v. prismaticum, vertice deplanato dilatato, 1- v. imperfecte 2-loculare; stylus in centro verticis parvus conicus, v. subelongatus, stigmatē rotundato v. oblongo; ovula numerosa, anatropa, funiculis brevibus v. elongatis placentis parietalibus v. aciebus semiseptorum adnatis affixa, micropyle infera. Baccæ in syncarpium arcte coherentes, verticibus conglutinatis sponte solvendis, polyspermæ. Semina lineari-oblonga, v. turbinato-cylindracea, funiculo elongato, testa tenui, epidermide solubili, albumine copioso; embryo axilis.—Frutices graciles v. robusti, scandentes, raphidibus instructi, ramis radices longissimas solum petentes emittentibus. Folia disticha, inæquilatera, sæpe ampla, lanceolata v. ovato-oblonga, coriacea v. submembranacea, integra pertusa v. pinnatifida rarius pinnatipartita, segmentis basi latis, petiolo brevi v. elongato longe vaginante apice geniculato. Pedunculi terminales, solitarii v. plures. Spatha crassa, cymbiformis, primum oblonga et convoluta, demum aperta, sæpius rostrata, marcescens, demum decidua. Spadix spatha inclusus, crassus, cylindraceus, densiflorus.

Species ad 30, Asiæ tropicæ, Archipelagi Malayani, Australiæ, et ins. maris Pacifici incolæ, cum paucis Africanis. *Engl. Arac.* 238, excl. sp. 18; *in Bot. Jahrb.* i. 180; *et in Bull. Soc. Tosc.ortic.* 1879, 268. *Wight, Ic.* t. 779 et 781 (*Scindapsus*). *Wall. Pl. As. Rar.* ii. t. 156, 192 (*Pothos*). *Gard. Chron.* 1874, ii. fig. 124 (ubi ovula omnia basilaria depicta).

Genus ab Hasskarlio ad plantam Javanicam conditum quam prius in *Flora* l. c. absque dubio, postea

in Hæv. et Vriese, Tijdschr. cum dubio, ad *Pothon pertusum*, Roxb., retulit. Nomen a Schottio et Englero pro specie Roxburghiana congeneribusque receptum est. Planta javanica typus est generis *Enicemum*. Schott.

80. *Eptipremnum*, Schott in *Bonplandia*, 1857, 45; *Gen. Aroid. t. 79.* (*Raphidophora*, Hassk. *Cat. Hort. Bogor.* 1844, 58 *partim*, et in Hæv. et Vriese, *Tijdschr.* 1842, 168.)—Flores in spadice sessili inappendiculato hermaphroditi, v. pauci inferiores ♀. Perianthium 0. Stamina 4, filamentis linearibus complanatis latiusculis; antheræ parvæ, terminales, loculis connectivum superantibus lineari-oblongis contiguïs parallelis v. divergentibus, rimis extrorsum dehiscentibus. Ovarium obpyramidatum v. prismaticum, 1- v. imperfecte 2-loculare, vertice dilatato deplanato; stylus in centro verticis brevis v. 0, stigmatē lineari-oblongo; ovula 2 v. plura, anatropa, funiculis brevibus placentis basi semiseptorum v. parietalibus affixa, micropyle infera. Baccæ libere v. in syncarpium cohærentes, superficiebus conglutinatis sponte solvendis, monospermæ. Semen reniforme, compressum, hilo latiusculo albo, albumine crasso; embryo axilis, curvus, gracilis.—Frutices scandentes, raphidibus instructi, caudicibus elongatis radices aereas longissimas solum petentes emittentibus. Folia disticha, ovata ovato-cordata v. lanceolata, sæpe ampla, inæquilatera, integra pertusa v. pinnatifida, petiolo elongato basi vaginante apice geniculato. Pedunculi terminales, breves v. elongati, solitarii v. plures. Spatha crassa, cymbiformis, primum oblonga et convoluta, demum aperta, sæpius rostrata, marcescens, decidua. Spadix spatha inclusus, crassus, cylindraceus, densiflorus.

Species ad 8, Archipelagi Malayani et insularum maris Pacifici incolæ. *Engl. Arac.* 248; *Bot. Jahrb.* i. 182; et in *Bull. Soc. Tosc. Ort.* 1879, 269. *N. E. Brown in Trim. Journ. Bot.* 1882, 332.

Genus male definitum, ulterius scrutandum, verisimiliter pro sectione *Raphidophoræ* habendum. Ex icone Schottii ovula 2 fertilia basilaria, cum innumeris abortivis aciei placentæ insertis. Ovula ex descriptione Hasskarlii (sub *Raphidophora*) 2-na. In speciebus nuperrime ab Englero descriptis (*Bull. Soc. Tosc. Ort.* 1. c.) ovula 2-na v. plura, secus totam longitudinem placentis parallelis inserta. Baccæ libere ex Hasskarlio, sed fide Engleri connatæ.

81. ? *Amydrium*, Schott in *Miq. Ann. Mus. Lugd. Bat.* i. 127.—Flores in spadice brevissimo sessili inappendiculato hermaphroditi. Perianthium 0. Stamina 4, filamentis linearibus latiusculis; antheræ terminales, loculis ovoideis rimulis extrorsum dehiscentibus. Ovarium obpyramidatum, 4-gonum; stylus ovario crassior, vertice medio elevatus, stigmatē parvo rotundato; ovula in loculis solitaria, anatropa, funiculis brevibus placentis basi septi adnatis affixa. Fructus . . .—Herba prorepens, rhizomate tenui dense foliato. Folia ovato- v. rotundato-cordata, costa tenui, nervis ad 4, nervulis laxè areolatis, petiolo brevi sulcato apice geniculato. Pedunculus erectus, petiolo brevior. Spatha conchiformis, apiculata.

Species 1, Archipelagi Malayani incola. *Engl. Arac.* 100. Genus imperfecte cognitum, stigmatē in tribu alieno, a nobis non visum.

#### TRIBUS X. ZAMIOCULCASIÆ.

82. *Zamioculcas*, Schott, *Synops. Aroid.* 71.—Flores in spadice inappendiculato abortu monoici, superiores ♂ ovarii effectis, inferiores ♀ staminibus effectis v. 0, interspatio 0. Perianthii segmenta 4, cuneato-spathulata, apicibus truncatis incrassatis. Fl. ♂: Stamina 4, filamentis brevibus subclavatis inclusis, apicibus angustatis; antheræ minutæ, terminales, loculis connectivum superantibus rimulis apicalibus dehiscentibus; pollen vermiforme. Ovarium effectum. Fl. ♀: Stamina 4, imperfecta. Ovarium oblongum v. ovoideum, 2-loculare, in stylum brevem attenuatum, stigmatē pulvinari; ovula in loculis solitaria, subamphitropa, funiculis brevibus placentis septo adnatis affixa, micropyle infera. Fructus . . .—Herbæ rhizomate brevi v. horizontali, inferne tubera sessilia emittente, superne folia 1-2-pedalia cum inflorescentia parva proferentes. Folia plura, crasse petiolata, imparipinnata, pinnis alternis 6-8-jugis, v. bipinnata pinnis pinnulisque oppositis cum rachis articulatis deciduis reticulatis, petiolo supra medium nodoso-incrassato basi

tumido brevissime vaginante. Pedunculus elongatus v. foliis multoties brevior et petiolo tenuior. Spathæ tubus subglobosus, convolutus, fl. ♀ involvens, fauce constricta, lamina lanceolata v. cymbiformi dorso supra apicem cornuta horizontali recurva v. reflexa. Spadix sessilis, cylindraceus, spatha brevior, brevis v. elongatus, supra fl. ♀ constrictus; inflorescentiæ densifloræ; ♂ brevis et ellipsoidea v. elongata et cylindræa, floribus hexagonis; ♀ brevis, floribus 4-gonis.

Species 2, Africæ tropicæ orientalis incolæ. Genus in sectiones 2 divisum:—

1. *Eusamioculcas*. Folia imparipinnata. Pedunculus brevis. Spatha cymbiformis. Inflorescentia ♂ brevis et cum ♀ conformis. Fl. ♀ staminodiis instructus. *Engl. Arac.* 208. *Lodd. Bot. Cab. t.* 1408 (*Caladium*). *Bot. Mag. t.* 5985.

2. *Gonatopus*. Folia bi-tri-pinnata. Pedunculus gracilis. Spatha lanceolata. Inflorescentia ♂ cylindræa, quam ♀ multo longior. Fl. ♀ staminodiis 0. *Bot. Mag. t.* 6026. *GONATOPUS*, *Engl. Arac.* 208.

### TRIBUS XI. ORONTIÆ.

83. *Orontium*, *Linn. Amæn. Acad.* iii. 17, t. 1, f. 3; *Gen. n.* 435.—Flores in spadice stipitato inappendiculato hermaphroditi, omnes fertiles. Perianthii segmenta in floribus superioribus 4, in inferioribus 6, brevia, transversim oblonga, fornicata, irregulariter imbricata. Stamina 4 v. 6, filamentis brevibus complanatis anthera latioribus apicibus abrupte angustatis; antheræ parvæ, terminales, loculis connectivum superantibus ellipsoideis parallelis rimis extrorsum dehiscentibus. Ovarium depressum, angulatum, inferne in rhachi spadici leviter immersum, 1-loculare; stigma sessile, minutum, pulvinare; ovulum solitarium, semi-anatropum, horizontale, funiculo brevi ascendente placentæ basilari affixum, micropyle transversa. Utriculi membranacei. Semen erectum, subglobosum v. leviter compressum, testa crassiuscula, albumine 0; embryo macropodus.—Herba aquatica, rhizomate descendente. Folia oblonga v. elliptico-oblonga, natantia, costa 0, nervis parallelis, petiolo elongato longe vaginante. Pedunculus submersus, elongatus. Spatha incompleta, membranacea, stipitem elongatum spadici involvens, spadicem juniorem tantum includens, demum soluta. Spadix elongato-conoideus, densiflorus, sursum florens, stipite longissimo superne incrassato pedunculum mentiente.

Species 1, Americæ boreali-orientalis incola. *Engl. Arac.* 212. *Schott, Gen. Aroid. t.* 92. *Barton, Fl. N. Am. ii. t.* 37. *Lodd. Bot. Cab. t.* 402. *Hook. Exot. Fl. t.* 19.

84. *Zyschitum*, *Schott in Oesterr. Bot. Wochenbl.* 1857, 62; *Gen. Aroid. t.* 91. (*Arctiodracon*, *A. Gray in Mem. Amer. Acad. ser. 2, vi.* 408.)—Flores in spadice stipitato inappendiculato hermaphroditi, omnes fertiles. Perianthii segmenta 4, oblonga, vertice trigona, fornicata, irregulariter imbricata. Stamina 4, filamentis complanatis lineari-elongatis antheris angustioribus; antheræ terminales, loculis connectivum superantibus ellipsoideis suberectis rimis elongatis extrorsum dehiscentibus. Ovarium elongatum, inferne rhachi spadici immersum, perfecte v. imperfecte 2-loculare, in stylum breve conicum attenuatum, stigmate parvo capitellato; ovula in loculis 1-2, orthotropa, ovoidea, funiculis dorso cristatis ascendentibus dein decurvis medio septo adnatis affixa, pendula, micropyle infera. Baccæ in rhachi spadici immersæ, 2-loculares, loculis 1-spermis. Semina oblongo-rotundata a dorso convexo compressa, convexo-concava, umbilico ventrali intruso, testa firme membranacea embryoni arte adherente, albumine 0; embryo macropodus.—Herba paludosa, robusta, caudice crasso folioso horizontali. Folia magna, oblonga v. oblongo-lanceolata, crasse coriacea, acuta, sessilia v. in petiolum brevem crassum angustata, costa latissima, nervis arcuatis. Pedunculus brevis, robustus. Spatha membranacea, spadicem juniorem tantum includens demum stipitem ejus elongatum inferne involvens, lamina foliacea ovato-cucullata demum decidua. Spadix oblongo-cylindræus, sæpe magnus, obtusus, sursum florens, stipite longissimo pedunculum simulante.

Species 1, Siberiæ orientalis, Japoniæ et Americæ boreali-occidentalis incolæ. *Engl. Arac.* 209.

85. *Symplocarpus*, *Salisb. in Nutt. Gen. N. Amer. Pl. i. 105.* (Ictodes, *Bigelow, Med. Bot. ii. 41, t. 24.* *Spathyema*, *Rafin. in New York Med. Repos. ii. ex Endl. Gen. 240.*)—Flores in spadice subgloboso stipitato inappendiculato hermaphroditi, omnes fertiles. Perianthii segmenta 4, elongato-cuneata, apicibus dilatatis fornicatis dorso pyramidatis imbricatis. Stamina 4, exserta, filamentis lineari-elongatis complanatis apicibus angustatis; antheræ breves, terminales, loculis connectivum superantibus oblongis parallelis rimis lateralibus dehiscentibus. Ovarium elongatum, inferne rhachi immersum, 1-loculare v. loculo altero effocto, in stylum elongatum, crassum, 4-gonum attenuatum, stigmatibus minuto capitellato; ovulum solitarium, subcampylotropum, ovoideum, funiculo brevissimo infra apicem loculi affixum, micropyle laterali. Baccæ in rhachi spadice spongiosa immersæ, syncarpium globosum efficientes, monospermæ. Semen magnum, irregulariter rotundatum, obtuse angulatum, testa membranacea embryoni arcte adherente, albumine 0; embryo macropodus.—Herba magna, robusta, foetida, rhizomate crassissimo descendente annis alternis folia floresque proferente. Folia ampla, ovato-cordata, acuta, crasse coriacea, nervis crassis, petiolo robusto longe vaginante. Pedunculus brevissimus. Spatha ventricosa v. conchoidea, apice curva, crasse coriacea, fornicato-rostrata, acuminata, inferne cucullato-convoluta, marcescens, persistens. Spadix inclusus, longe crasseque stipitatus, spatha multo brevior, violaceus.

Species 1, Americæ, Asiæ boreali-orientalis et Japoniæ incolæ. *Engl. Arac. 211. Schott, Gen. Aroid. t. 90. Bot. Mag. t. 836 (Pothos), 3224.*

86. *Dracontium*, *Linn. Gen. n. 1029.*—Flores in spadice appendiculato hermaphroditi, omnes fertiles. Perianthii segmenta 4–8, cuneata v. spathulata, apicibus fornicatis imbricatis. Stamina 4–8, v. 9–12 et 3–4-seriata, filamentis linearibus dilatatis; antheræ terminales, loculis majusculis connectivum superantibus parallelis elliptico-oblongis rimulis apicalibus extrorsum dehiscentibus; pollen conglomeratum. Ovarium ovoideum v. globosum, perfecte v. imperfecte 2–4-loculare, in stylum brevem v. elongatum productum, stigmatibus in centro styli apicis integro v. 2–4-lobo; ovula in loculis solitaria, campylotropa, funiculis brevibus placentis medio anguli interioris adnatis affixa, micropyle infera. Baccæ sub-2–3-lobæ, 2–3-loculares, loculis 1-spermis. Semina reniformi-rotundata, cristata v. dorso tuberculata, umbilico intruso, testa crassa, albumine 0; embryo curvus, macropodus.—Herbæ magnæ v. giganteæ, vasis laticiferis instructæ, tubere hypogæo, unifoliatæ. Folium hysteranthium v. synanthium, giganteum, 3-partitum, segmentis 3-sectis pinnatipartitis, petiolo longissimo verrucoso ima basi vaginante. Pedunculus sub anthesi brevis, demum elongatus. Spatha erecta, oblonga, basi convoluta, dein aperta, fornicata, marcescens, persistens. Spadix spatha brevior, breviter stipitatus, cylindraceus, densiflorus, deorsum florens.

Species ad 6, Americæ tropicæ incolæ. *Engl. Arac. 282, et in Mart. Fl. Bras. iii. ii. t. 24. Schott, Gen. Aroid. t. 87. Lemaire, Ill. Hort. 1864, t. 424 (Amorphophallus). Saund. Ref. Bot. iv. t. 282. Masters in Gard. Chron. 1870, f. 58. Bot. Reg. t. 700. Bot. Mag. t. 6523. Typus generis est *D. polyphyllum*, Linn., a quo *D. asperum*, Koch (CHERSYDRUM, Schott in *Esterr. Bot. Zeit.* 1875, 72) non genericè differt. *GODWINIA*, *Seem. Journ. Bot.* 1869, 313, t. 96, 97; *Masters in Gard. Chron.* 1873, fig. 13, 14; *Bot. Mag. t. 6048; Fl. des Serres, xxi. t. 2244–5*, sectionem efficit *Dracontii* apud Englerum differt staminibus 3–4-seriatis.*

ECHIDNIUM, Schott in *Esterr. Bot. Wochenbl.* 1857, 62; *Gen. Aroid. t. 88; Engl. l. c. 285. Regel, Gartenfl.* 1866, t. 503, stigma habet parvum integrum (ut in *Godwinia*) ovulaque fere basilaria; includit species 2, Guianæ incolæ (unius varietates?) quarum una tantum bene nota.

87. *Lasia*, *Lour. Fl. Coch. 81.*—Flores in spadice sessili inappendiculato hermaphroditi, omnes fertiles. Perianthii segmenta 4–6, obovata, apicibus truncatis fornicatis, lateralibus interiora tegentibus. Stamina 4–6, filamentis brevibus latis complanatis apice incrassatis; antheræ filamentis paulo breviores, loculis connectivum superantibus elliptico-oblongis parallelis rimis elongatis extrorsum dehiscentibus. Ovarium ovoideum, 1-loculare, stigmatibus in vertice crasso tumido sessili depresso-capitato; ovulum solitarium, anatropum,

*v. semi-anatropum*, funiculo brevissimo ab apice loculi oblique appenso, micropyle supra. *Baccæ hexagonæ*, vertice truncato muricato. *Semen subcuneatum, compressum*, pendulum, testa crassa ad funiculum rugosa, albumine demum evanido; embryo campylo-tropus, macropodus.—Herba robusta, paludosa, vasis laticiferis instructa, rhizomate crasso ramoso repente cum petiolis foliorum nervis subtus pedunculoque spinosis. Folia juniora sagittata v. hastata, adulta pedato-pinnatifida, petiolo robusto basi vaginante. Pedunculus elongatus. Spatha valde elongata, carnosa, angusta, inferne breviter convoluta, dein longe arcte contorta, supra basin sub anthesi aperta, postea reclusa, decidua. Spadix brevis, cylindraceus, densiflorus.

Species 1, Asiæ tropicæ et Archipelagi Malayani incola. *Engl. Arac.* 272. *Schott, Gen. Aroid.* t. 82. *Wight, Ic.* t. 777.

88. *Podolasia*, *N. E. Brown in Gard. Chron.* 1882, ii. 70.—Flores in spadice stipitato inappendiculato hermaphroditi, omnes fertiles. Perianthii segmenta 4–6, obovato-cuneata, apicibus truncatis fornicatis imbricatis. Stamina 4–6, filamentis oblongo-quadratis apice incrassatis; antheræ terminales, filamento multo breviores angustioresque, didymæ, loculis globosis connectivum superantibus parallelis rimis extrorsum dehiscentibus; pollen pulverum. Ovarium prismaticum, 4–6-gonum, 1-loculare, vertice crasso tumido; stigma sessile, pulvinare; ovulum solitarium, sessile, basilare v. subbasilare, anatropum. Fructus . . .—Herba gracilis, caudice brevi erecto. Folia graciliter petiolata, sagittata v. hastata, lobis elongatis angustis acuminatis, terminali medio costato nervis lateralibus utrinque 2, lateralibus terminali æquilongis horizontalibus v. flexis, costa margini inferiori propinquiore, petiolo sparse aculeato. Pedunculus gracillimus, inermis v. aculeis paucis armatus. Spatha erecta, anguste cymbiformis, obtusa, purpurea, dorso infra medium 1-costata, crassiuscula, ab ima basi aperta. Spadix spatha brevior, longiuscule stipitatus, stipite basi dorso spathe adnatus, parte florifera cylindracea obtusa, purpureus demum pallidus, densiflorus.

Species 1, Borneensis.

89. *Urospatha*, *Schott; Aroid.* 3, t. 7 ad 10; *Gen. Aroid.* t. 86.—Flores in spadice inappendiculato hermaphroditi, inferiores steriles. Perianthii segmenta 4–6, subtruncata, fornicata, varie imbricata. Stamina 4–6, filamentis brevibus latis complanatis apicibus abrupte angustatis; antheræ filamento breviores, terminales, loculis connectivum superantibus ovato-oblongis rimis subterminalibus extrorsum dehiscentibus. Ovarium ovoideum v. obconoideum, imperfecte 2-loculare; stigma sessile pulvinare; ovula 2–∞, funiculis subelongatis angulo interiori affixa, anatropa, erecta, micropyle parva. *Baccæ* obovoideæ, 2- v. abortu 1-loculares, 1–2-spermæ. Semina suberecta, meniscoidea, testa crassiuscula scrobiculata, umbilico majusculo, albumine carnoso; embryo curvus, teres.—Herbæ paludosæ, rhizomate crasso, petiolis pedunculisque lævibus v. verrucosis. Folia pauca, sagittato-hastata, nervis divergentibus v. costæ subparallelis, petiolo elongato basi vaginante. Pedunculus elongatus. Spatha erecta, basi clausa, dein aperta, superne longe angustata, recta decurva v. torta, persistens. Spadix sessilis v. subsessilis, spatha multo brevior.

Species ad 10, Americæ tropicæ incolæ. *Engl. Arac.* 275, et in *Mart. Fl. Bras.* iii. ii. t. 23. *Peyritsch, Aroid. Maximil.* t. 16. *Pepp. et Endl. Nov. Gen. et Sp.* iii. t. 296 (*Spathyphyllum*). *Rudge, Pl. Gui.* t. 34 (*Pothos*). *U. desciscens*, *Schott*, species spatha brevi fornicata et ovario in stylum producto nobis ignotum est.

90. *Anaphyllum*, *Schott, Gen. Aroid.* t. 83.—Flores in spadice stipitato inappendiculato hermaphroditi, omnes fertiles. Perianthii segmenta 4, late obovata, apicibus latis subtruncatis fornicatis irregulariter imbricatis. Stamina 4, filamentis latis complanatis apicibus abrupte angustatis; antheræ terminales, loculis connectivum superantibus sacciformibus subparallelis poris latis apicalibus extrorsum dehiscentibus. Ovarium late ovoideum v. oblongum, 1-loculare; stigma sessile, disciforme; ovulum solitarium, semi-anatropum,

funiculo brevi placentæ parietali affixum, micropyle ampla infera. Baccæ obovoideæ . . . —Herba elata, caudice prorepente. Folia membranacea, ampla, juniora sagittato-hastata, adulta pedatipartita, segmentis remotis sessilibus v. inferioribus petiolulatis elongato-lineari-lanceolatis integerrimis acuminatis, petiolo valde elongato gracili ima basi vaginante. Pedunculus præaltus, gracillimus. Spatha lanceolata, longe acuminata, inferne breviter convoluta, superne torta, membranacea, decidua. Spadix spatha multo brevior, cylindraceus, stipite spathæ adnato.

Species 1, Peninsulæ Indiæ orientalis incolæ. *Engl. Arac.* 274.

91. **Ophione**, Schott in *Æsterr. Bot. Wochenbl.* 1857, 101; *Gen. Aroid.* t. 89.—Flores in spadice subsessili inappendiculato hermaphroditi, omnes fertiles. Perianthii segmenta 4-5, cuneata, apicibus late dilatatis truncatis dorso tuberculatis, irregulariter imbricata. Stamina 4-5, filamentis linearibus dorso subcarinatis, apicibus abrupte angustatis; antheræ terminales, loculis connectivum superantibus contiguis erectis obovoideis, rimis subapicalibus hiantibus dehiscentibus. Ovarium breviter ovoideum, 4-5-loculare, in stylum crassum conicum attenuatum, stigmate parvo obscure 4-lobo; ovula in loculis solitaria, semi-anatropa, funiculis brevibus placentis angulo interiori adnatis affixa, micropyle infera. Fructus . . . —Herba tuberosa. Folia . . . Pedunculus ultra vaginas exsertus, gracilis. Spatha lanceolata, superne convoluta, margine superiore reflexo. Spadix spatha multo brevior, brevissime stipitatus, cylindraceus, obtusus, deorsum florens.

Species 1, Novæ Grenadæ incolæ. *Engl. Arac.* 281. Exemplar mancum tantum vidimus. Descriptio ex icone et descriptione Schottii desumpta.

92. **Cyrtosperma**, Griff. *Notul.* iii. 149;  *Ic. Pl. Asiat.* t. 169.—Flores in spadice inappendiculato hermaphroditi, omnes fertiles. Perianthii segmenta 4-8, subtruncata, fornicata, varie imbricata. Stamina 4-8, filamentis brevibus latis complanatis apicibus abrupte angustatis; antheræ filamento breviores, terminales, loculis connectivum superantibus ovato-oblongis rimis elongatis extrorsum dehiscentibus. Ovarium cylindraceo-ovoideum, 1-loculare; stigma sessile, pulvinare; ovula 1-2 v. plura, semi-anatropa, funiculis elongatis placentis parietalibus ad apicem loculi extensis 2-seriatim affixa, micropyle infera ampla. Baccæ globosæ, confertæ, læves, oligo- rarius 5-7-spermæ. Semina reniformia v. rotundata, compressa, cristata, testa crassula crustacea, albumine parco carnosio; embryo curvus.—Herbæ rhizomate tuberoso v. elongato, petiolis pedunculisque sæpissime spinulosis v. verrucosis. Folia hastata, lobis posticis elongatis, nervis patentibus arcuatis, petiolo elongato basi vaginante. Spatha ovato-lanceolata v. oblonga, ima basi convoluta, dein aperta, lamina recta v. torta, tota diu persistens. Spadix spatha brevior, sessilis v. stipitatus, cylindraceus v. globosus, densiflorus, deorsum florens.

Species ad 16, Asiæ, Africæ et Americæ tropicæ incolæ. *Engl. Arac.* 268, et in *Bull. Soc. Tosc. Ortic.* 1879, 295. Genus in sectiones sequentes divisum:—

1. *Eucyrtosperma*, *Engl. Arac.* 270. Sæpissime armatæ. Flores 6-meri. Ovarium 2-ovulatum. —Asiaticæ. Schott, *Gen. Aroid.* t. 84. *Ill. Hortic.* xxvii. t. 395 (*Alocasia*).
2. *Lasimorpha*, *Engl. Arac.* 269. Armatæ. Flores 5-6-meri. Ovarium pluri-ovulatum. *LASIMORPHA*, Schott in *Bonplandia*, v. 127; *Gen. Aroid.* t. 85.—Africanæ.
3. *Polytomophyllum*, *Engl. Arac.* 272. Flores 4-meri. Ovarium 1-2-ovulatum. Foliorum lobi postici pinnatifidi v. pinnatipartiti. *Engl. in Mart. Fl. Bras.* iii. ii. t. 22.—Americænæ.

93. **Spathiphyllum**, Schott, *Melet.* i. 22; *Gen. Aroid.* t. 93; *Aroid.* i. t. 1 ad 6.—Flores in spadice inappendiculato hermaphroditi, omnes fertiles. Perianthii segmenta 4, 6, v. 8, connata v. in cupulam truncatam v. lobatam coherentia, apicibus truncatis v. fornicatis et regulariter imbricatis 3-4 exterioribus interiores tegentibus. Stamina 4, 6 v. 8, filamentis brevibus plano-convexis antheris angustioribus v. latioribus; antheræ terminales, loculis connectivum superantibus oblongis erectis rimis elongatis extrorsum dehiscentibus. Ovarium oblongum, 3-4-loculare, truncatum v. in stylum conicum brevem v. elongatum et longe exsertum productum, stigmate 3-6-lobo; ovula in loculis 2-8, anatropa, funiculis

brevibus adscendentibus placentis angulo interiori adnatis 2-seriatim affixa, micropyle infera. Baccæ globosæ v. oblongo-conicæ, 3-loculares, loculis 1-2-spermis. Semina oblonga, recta v. curvula, umbilico laterali, testa coriacea v. crasse crustacea striato-granulata v. -foveolata, raphe prominula, albumine copioso; embryo axilis.—Herbæ sub-acaulæ, raphidibus instructæ. Folia oblonga v. lanceolata, acuminata v. cuspidata, costa valida, nervis tenuibus arcuatis, petiolo elongato longe vaginante sæpissime apice geniculato. Spatha foliacea, membranacea, oblonga v. lanceolata, acuta acuminata v. caudato-acuminata, demum late explanata, accrescens et persistens. Spadix spatha brevior, sessilis v. stipitatus, stipite interdum spathæ adnato, cylindraceus, densiflorus, sursum florens.

Species ad 20, Americæ tropicæ incolæ, cum 2 Malayanis. *Engl. Arac.* 219, 641; *et in Bull. Soc. Tosc.ortic.* 1879, 268. Genus ab Englero in sectiones sequentes male definitas divisum:—

1. *Euspathiphyllum*, *Engl. Arac.* 220, *et in Mart. Fl. Bras.* iii. ii. t. 16, f. 3. Perianthii segmenta 6-8, biseriata, sæpius distincta. Ovarium 3-4-loculare, stylo pyramidato exserto. *Schott, Aroid. t. 3, 3 B, 5, 6. Regel, Gartenfl. t. 738. Jacq. Coll. iv. 118; Ic. Rar. iii. t. 612 (Dracontium). HYDNOTACHYON, Liebm. in Vidensk. Meddel. 1849, 24.*

2. *Amomophyllum*, *Engl. Arac.* 227. Perianthii segmenta distincta. Ovarium truncatum, stylo obsoleto; ovula in loculis 2, medio septo affixa. *Ill. Hort.* 1877, t. 159 (*Anthurium*). *Masters in Gard. Chron.* 1875, i. f. 109 (*Anthurium*). *AMOMOPHYLLUM, Engl. in Gard. Chron.* 1877, i. 139. *Regel, Gartenfl.* 920.

3. *Massovia*, *Engl. Arac.* 228. Perianthii segmenta in cupulam truncatam v. 6-lobam connata. Stamina 6. Ovarium 3-loculare, vertice planiusculo, stigmatibus sessilibus triangularibus, loculis 2-6-ovulatis. *Schott, Aroid. t. 1. Engl. in Mart. Fl. Bras.* iii. ii. t. 16, f. 1, 2. *Pæpp. et Endl. Nov. Gen. et Sp.* iii. t. 295. *Miq. in Ann. Mus. Lugd. Bat.* iii. t. 1, 2. *Lodd. Bot. Cab. t. 471 (Pothos). Bot. Mag. t. 603 (Pothos). André in Ill. Hort. xxiv. t. 269 (Anthurium). MASSOVIA, C. Koch in Bot. Zeit. 1852, 277. SPATHIPHYLLOPSIS, Teyem. et Binnend. in Nat. Tijdschr. Neerl. Ind. xxvii. 16, ex Miq. in Ann. Mus. Lugd. Bat. iii. 79. LEUCOCHLAMYS, Pæpp. in Herb.*

4. *Ambliscoon*, N. E. Brown, mss. Perianthii segmenta in urceolum oblongum 4-gonum truncatum connata. Ovarium oblongum, 2-4-loculare, stylo brevi; ovula angulo interiori affixa. Bacca monosperma.—*Ins. Aru.*

94. *Anthurium*, *Schott in Wien. Zeitschr.* iii. 828; *ex ejus Ic. Aroid. t. 11 ad 20; Gen. Aroid. t. 94.*—Flores in spadice inappendiculato hermaphroditi, omnes fertiles. Perianthii segmenta 4, cuneata v. oblonga, apicibus fornicatis, exteriora interiora sæpe includentia, post anthesin aucta. Stamina 4, filamentis complanatis ovatis linearibus oblongis v. triangularibus; antheræ terminales, loculis connectivum superantibus erectis v. divergentibus rimis porisve magnis dehiscentibus. Ovarium oblongum ovoideum v. obovoideum, 2-loculare, vertice truncato v. in stylum brevem conicum attenuato; stigma parvum, discoideum v. oblongum et 2-lobum, lobis conniventibus; ovula in loculis 1-2, anatropa v. campylotropa v. fere orthotropa, ovoidea v. lageniformia, funiculis brevibus placentis spongiosis medio v. apicem versus septi adnatis affixa, micropyle infera. Baccæ formæ variæ, 2-loculares, loculis rarius 2-spermis, maturitate gradatim e perianthio protrusæ et filis binis e marginibus segmentorum solvendis spadici appensæ. Semina oblonga, plano-convexa v. hippocrepica, micropyle prominula, testa striata verrucosa granulata v. punctulata, albumine carnoso; embryo axilis.—Herbæ perennes, v. frutices caudice robusto brevi v. elongato suberecto v. scandente et radicante, vaginæ oppositifoliæ sæpe defectu foliorum superpositæ. Folia integra, lobata v. partita, crasse coriacea, petiolo brevi v. elongato tereti v. sulcato apice geniculato basi breviter vaginante. Pedunculi sæpius elongati. Spatha ovata elliptica v. lanceolata, crasse coriacea, explanata v. cucullata v. torta, in pedunculum sæpe desinens, persistens et accrescens. Spadix sessilis v. stipitatus, cylindraceus v. conicus, interdum valde elongatus, fructifer plerumque auctus, sursum florens.

Species ad 160 bene notæ, Americæ tropicæ incolæ. *Engl. Arac.* 103 et 637, *et in Mart. Fl. Bras.* iii. ii. t. 7 ad 15. *Pæpp. et Endl. Nov. Gen. et Sp.* iii. t. 293, 294. *H. B. et K. Nov. Gen. et Sp. i. t. 18 ad 20 (Pothos). Vell. Fl. Flum. Ic. ix. t. 121 ad 126 (Pothos). Saund. Ref. Bot. t. 14, 267,*

265 ad 281. *Lodd. Bot. Cab. t. 567, 632, 1301, 1673 (Pothos). Hook. Exot. Fl. t. 55, 122, 210, 211 (Pothos). Jacq. Stirp. Amer. t. 153; Ic. Rar. iii. t. 609 ad 611; Fragm. t. 1 (omnia sub Potho). Regel, Gartenfl. t. 482, 501, 508, 519, 540, 558, 681, 702, 719, 720, 723, 873. Fl. des Serres, t. 1794-5. Lemaire, Ill. Hort. t. 283 (Alocasia) et t. 314; 1873, t. 128; 1877, t. 271. Peyritsch, Aroid. Maximil. t. 4 ad 11. Masters in Gard. Chron. 1876, ii. fig. 139, 140; 1879, ii. f. 47. Bot. Reg. t. 1635. Bot. Mag. t. 2801, 2953, 2987 (Pothos), et t. 5319, 5848, 6261, 6339. Genus in sectiones 17 ab Englero, et in greges 28 a Schottio divisum, ad characteres valde complexas habitus, foliorum, inflorescentiæ et florum stabilitas.*

95. **Pothos**, *Linn. Gen. n. 1031*.—Flores in spadice stipitato inappendiculato hermaphroditi; omnes fertiles. Perianthii segmenta 6, apicibus fornicatis. Stamina 6, filamentis brevibus v. elongatis linearibus v. dilatatis; antheræ terminales, loculis connectivum superantibus erectis ellipsoideis rimis extrorsum dehiscentibus. Ovarium ovoideum oblongum v. depressum, 3-loculare; stigma sessile, hemisphæricum; ovula in loculis solitaria, anatropa, funiculis brevibus adscendentibus placentis angulo interiori adnatis affixa, micropyle infera. Baccæ ellipsoideæ v. obovoideæ, 1 3-spermæ. Semina ellipsoidea v. obovoidea, sæpe compressa, umbilico laterali, testa crassiuscula, albumine 0; embryo macropodus.—Frutices alte scandentes, ramosissimi, ramulis inferioribus radicantibus, summis patentibus, gemmis axillaribus v. quasi infra-axillaribus et vaginam folii perforantibus. Folia disticha, oblique lineari- v. ovato-lanceolata, lamina interdum deficiente, costa distincta, nervis sæpissime a basi laminæ egredientibus, petiolo alato v. explanato et foliaceo, apice geniculato v. auriculato, basi vaginante. Pedunculi axillares v. infra-axillares, foliosi, vaginati v. nudi. Spatha parva, ovata v. conchoidea, rarius elongata, reflexa, viridis, accrescens v. persistens. Spadix spatha brevior, stipite elongato, clavatus globosus v. ovoideus, sæpe decurvus, interdum tortus v. flexuosus, sursum florens, floribus contiguis v. dissitis.

Species ad 40 enumeratæ, sed insigniter polymorphæ et verisimiliter ad 20 reducendæ, Asiæ tam continentalis quam insularis, Australiæ et insularum Pacificarum incolæ, una *Madagascariensis*. *Engl. Arac. 78, et in Bull. Soc. Tosc.ortic. 1879, 266. Schott, Gen. Aroid. t. 95; Aroid. t. 31 ad 56. Wight, Ic. t. 776. Hook. Ic. Pl. t. 133, 175.*

*GONIURUS, Presl, Epimel. Bot. 244*, ad species spadice contorto et floribus spiraliter dispositis constitutus est.

96. **Pothoidium**, *Schott, Aroid. i. 26, t. 57; Gen. Aroid. t. 96*.—Flores in spadice paniculatis inappendiculatis hermaphroditi, omnes fertiles. Perianthii segmenta 6, concava, imbricata, apicibus fornicatis. Stamina 6, filamentis late ovatis complanatis dilatatis longe exsertis, apicibus acutatis; antheræ breves, terminales, loculis connectivum superantibus subglobosis erectis rimis hiantibus extrorsum dehiscentibus. Ovarium obovoideum, 1-loculare, vertice depresso; stigma sessile, hemisphæricum; ovulum solitarium, anatropum, funiculo brevi adscendente placentæ subbasilari affixum, micropyle infera. Fructus . . .—Frutex scandens, ramis gracilibus teretibus foliosis. Folia disticha, triangulari-lanceolata, acuminata, coriacea, petiolo lineari elongato laminæ æquilato et multo longiore plano basi semiamplexicauli, nervis parallelis laminam et petiolum percurrentibus. Spadices in ramos axillares elongatos basi vaginatos paniculati, graciliter pedicellati, cylindracei, longe stipitati, basi spatha parva conchiformi reflexa suffulti.

Species 1, Archipelagi Malayanae incolæ. *Engl. Arac. 94.*

97. **Acorus**, *Linn. Hort. Cliff. 137; Gen. n. 434*.—Flores in spadice inappendiculato hermaphroditi, omnes fertiles. Perianthii segmenta 6, rotundata, concava, apicibus fornicatis, 3 exteriora interiora obtegentia. Stamina 6, filamentis linearibus complanatis apicibus angustatis; antheræ terminales, reniformes, loculis connectivum superantibus erectis late ellipsoideis rimis latis confluentibus dehiscentibus, valvis lateralibus demum recurvis. Ovarium oblongo-conoideum, truncatum v. obtusum, 2-3-loculare; stigma sessile, punctiforme; ovula in loculis plura, orthotropa, subfusiformia, funiculis brevibus ab apice loculi pendulis, micropyle infera. Baccæ oblongæ v. ovoideæ, 2-3-loculares, loculis

oligospermis. Semina oblongo-cylindracea, pendula, testa coriacea, micropyle interdum longissime fimbriata, albumine carnosio; embryo axilis.—Herbæ paludosæ, aromaticæ, rhizomate repente ramoso. Folia disticha, ensiformia, basi equitantia, longitudinaliter nervosa, pedunculis foliiformibus elongatis. Spatha obsoleta v. margini pedunculi adnata, ultra spadicem in laminam ensiformem producta. Spadix cylindraceus, densiflorus, sursum florens.

Species ab auctoribus inordinate multiplicatæ, ab Englero (*Arac.* 215) rite ad 2 reductæ, in regionibus temperatis hemispheriæ borealis obviæ. *Schott, Gen. Aroid. t. 98. Gærtn. Fruct. ii. t. 84. Lam. Illustr. t. 252. Schkuhr, Handb. 1, t. 97. Nees, Gen. Pl. Germ. Monocot. iii. n. 37. L. C. Rich. in Guillem. Archiv. i. t. 3. Smith, Spicileg. t. 17. Griff. Ic. Pl. Asiat. t. 162.*

98. *Gymnostachys, R. Br. Prod. 337.*—Flores in spadicibus racemosis inappendiculatis hermaphroditi, omnes fertiles. Perianthii segmenta 4, subquadrato-rotundata, apicibus fornicatis, 2 exteriora interiora obtegentia. Stamina 4, filamentis late oblongis complanatis; antheræ terminales, breves, loculis connectivum superantibus ellipsoideis divergentibus rimis extrorsum dehiscentibus. Ovarium ovoideo-oblongum, 1-loculare; stigma subsessile, pulvinare; ovulum orthotropum, ovoideum, funiculo brevissimo ab apice loculi pendulum, micropyle infera. Baccæ ellipsoideæ, apiculatæ. Semen ovoideum, pendulum, testa tenui, albumine duro copioso; embryo axilis.—Herba tuberibus fusiformibus, post folium caulem gracilem 4-gonum proferens. Folia radicalia elongata, angusta, graminea, longitudinaliter nervosa; caulina brevia, carinata. Spadices apicem versus caulis, graciles, cylindracei, solitarii v. 2-4 ni, pedunculati, pedunculo basi vaginis 2-3 lanceolatis bracteato, floribus numerosis remotis, fructiferi nutantes.

Species 1, Australiæ orientalis incola. *Engl. Arac. 218. Schott, Gen. Aroid. t. 97.*

## ORDO CXCI. LEMNACEÆ.

Endl. Gen. Pl. 232. Hegelmeier, Die Lemnaceen, Leipzig, 1868. PISTIACEÆ, partim, Lindl. Veg. Kingd. 124.

*Flores* monoici, e rimis marginalibus v. superficialibus herbulæ emergentes, nudi v. spatha membranacea monophylla primum clausa demum rupta instructi. *Perianthium* 0. *Fl. ♂*: *Stamina* 1 v. 2; filamenta filiformia v. medio incrassata v. 0. *Antheræ* 1-loculares, v. 2-loculares loculis subglobosis superpositis rimis transversis dehiscentibus; pollenglobosum. *Fl. ♀*: *Ovarium* sessile, 1-loculare, in stylum late infundibularem attenuatum; stigma simplex. *Ovula* 1-7, fundo ovarii inserta, erecta v. horizontalia, anatropa semi-anatropa v. orthotropa. *Utriculus* subcarnosus, indehiscens v. circumscissus, 1-7-spermus. *Semina* erecta v. horizontalia; testa coriaceo-carnosa, costata, operculatim dehiscens, membrana interiore hyalina; albumen carnosum v. parcum v. 0. *Embryo* inclusus, axilis, rectus, radice supra infera v. vaga, plumula extremitati radiculari propior, rimula immersa; radícula germinatione operculum testæ auferens.

Herbulæ parvæ v. minutæ, gregariz, natantes v. submersæ, simplicissimæ v. rimis marginalibus proliferæ, lenticulares v. subglobosæ, supra levigatæ, subtus spongiosæ, bulbillis autumnno fundum, vere superficiem, aquæ petentibus magis quam seminibus multiplicantes; radices 0, v. 1-∞, liberi, simplices, filiformes.

Species ad 20, in aquis dulcibus tam tropicis quam temperatis vigentes.

Ordo quoad characteres fructificationis cum *Aroideis* proxime cognatus, sæpeque pro harum tribu habitus, affinitas tamen arcta *Lemnacearum* cum *Pistia* a nonnullis ficta, nullo modo confirmatur, nec cum hoc genere connectuntur nisi characteribus cum omnibus *Aroideis* communibus. *Pistia* revera *Ambrosiniæ* proxime accedit, dum *Lemnaceæ*, vegetatione in omnibus *Monocotyledoneis* singulari, locum sibi vindicant ordinis proprii, *Aroideis* stricte finitimæ, etsi distinctæ.

## CONSPECTUS GENERUM.

1. **LEMNA**. Flores rimis marginalibus frondis inserti. Stamina 1-2, antheris 2-locularibus. Plantulæ radicibus instructæ.—*Reg. temp. et trop.*

2. **WOLFFIA**. Flores e superficie frondis erumpentes. Stamen 1, anthera 1-loculari. Plantulæ arhizæ.—*Europa, Ind. or., Africa, Amer.*

## GENERA EXCLUSA.

**PISTIA**, Linn., et **AMBROSINIA**, Linn., a Lindleyo aliisque *Lemnaceis* associatæ, inter **Aroides** quærendæ.

1. **Lemna**, Linn. Gen. n. 1038.—Fl. ♂ 2-ni, alter altero præcocior. Stamen 1, filamento filiformi v. medio dilatato recurvo; anthera 2-locularis, globosa, loculis rimis transversis dehiscentibus; pollen globosum, muricatum. Fl. ♀ solitarius, masculo contiguus. Ovarium 1-7-ovulatum; ovula anatropa semi-anatropa v. orthotropa. Utriculus 1-7-spermus. Semina erecta v. horizontalia; embryo conicus v. ovoideus.—Herbulæ ovoideæ v. lanceolatae, radicibus instructæ, basi v. a latere proliferæ. Flores rimæ marginali herbulæ inserti, spatha minuta primum inclusi.

Species 7, aquarum dulcium totius orbis temperatæ et tropicæ incolæ. Genus in sectiones 3 divisum:—

1. **Eulemna**. Ovulum 1, orthotropum v. semi-anatropum. Semen horizontale, albumine copioso. Radix solitarius. *Hegelm. Lemn.* 134, sp. 1-6, t. 5 (*Lemna*, sect. *Hydrophace*). *Schkuhr, Handb.* t. 281. *Brongn. in Guillem. Archiv.* ii. t. 12, f. 1. *Hook. Fl. Lond.* t. 120. *Lam. Illustr.* t. 747, f. 1, 2. *Reichb. Ic. Fl. Germ.* vii. t. 14, 15. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 42. *Griff. Ic. Pl. Asiat.* t. 262 ad 264.

2. **Telmatophace**. Ovula 2-7, erecta, anatropa. Semina erecta, anatropa, albumine parco v. 0. Radix solitarius. *Hegelm. Lemn.* 145, t. 11, 12, 13, f. 1-9. *Schkuhr, Handb.* t. 281. *Hook. Fl. Lond.* t. 119. *Hook. Bot. Misc.* t. 42. *Brongn. in Guillem. Archiv.* 1, t. 6, ii. t. 12, f. 2. *Lam. Illustr.* t. 747, f. 3. *Reichb. Ic. Fl. Germ.* vii. t. 14. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 42. **TELMATOPHACE**, *Schleid. in Linnæa*, xiii. 391.

3. **Spirodela**. Ovula 2, erecta, anatropa. Fructus . . . Radices plurimi. *Schkuhr, Handb.* t. 281. *Lam. Illustr.* t. 747, f. 4. *Reichb. Ic. Fl. Germ.* vii. t. 15. **SPIRODELA**, *Schleid. in Linnæa*, xiii. 391. *Hegelm. Lemn.* 147, t. 16.

2. **Wolma**, *Horkel*; *Schleid. in Linnæa*, xiii. 389. (*Horkelia*, *Reichb. ex Bartl. Ord. Nat.* 76. *Grantia*, *Griff. Notul.* iii. 226; *Ic. Pl. Asiat.* t. 266 ad 268. *Bruniera*, *Franchet in Billotia*, 1864, 25.)—Fl. ♂ solitarius. Stamen 1, filamento brevi v. elongato; anthera globosa, 1-locularis; pollen læve. Fl. ♀ solitarius, stamini contiguus. Ovarium globosum v. ovoideum; ovulum 1, orthotropum. Utriculus sphaericus. Semen globosum, erectum, testa crassa, albumine parco; embryo oblongus.—Herbulæ minutissimæ, planiusculæ globosæ v. subtus in conum interdum elongatum productæ, arhizæ, basi proliferæ. Flores rimæ superficiali herbulæ inserti; spatha 0.

Species 12, in Europa, India orientali, Africa tropica et America tropica et temperata detectæ. *Hegelm. Lemn.* 121. *Welw. in Seem. Journ. Bot.* 1865, 110, t. 29. *Lam. Illustr.* t. 747 (*Lemna*). *Reichb. Ic. Fl. Germ.* vii. t. 14 (*Lemna*). *Hoffm. in Hæv. et Vricse, Tijdschr.* iv. 282, t. 3, et in *Ann. Sc. Nat. ser. 2*, xiv. 223, t. 10 ad 12, excl. fig. 6-8 et 9, d-n.

## ORDO CXCI. TRIURIDÆ.

Lindl. Veg. Kingd. 213

Flores monoici dioici v. rarissime polygami. Perianthium 3-, 4-, 5-, 6- v. 8-partitum v. lobatum; segmenta lobive 1-seriata, æqualia v. inæqualia, ovata subulata lanceolata v. e basi lata abrupte longe caudata, æstivatione valvata, apicibus inflexis v. induplicatis, post anthesin persistentia reflexa. Fl. ♂: Stamina 2, 3, 4 v. 6, receptaculo v. ima basi peri-

anthii inserta; filamenta brevissima v. 0. *Antheræ* liberæ v. receptaculo discove crasso immersæ, 2-loculares, loculis subglobosis demum confluentibus, rimis confluentibus transverse dehiscentibus; pollen globosum. *Ovarii rudimenta* minuta v. 0, rarius stylodia 3, subulata, erecta. Fl. ♀: *Staminodia* 0, v. rarissime antheræ 2 v. plures imperfectæ. *Ovarii carpella* numerosa, in receptaculo tumido sessilia, 1-locularia. *Stylus* nunc terminalis subulatus, stigmatē acuto v. truncato, nunc ventralis v. fere basilaris ovario brevior, stigmatē clavellato v. aspergilliforme. *Ovula* in carpellis solitaria, in angulo interiore basilaria, sessilia, erecta, anatropa, raphe ventrali, integumento unico, micropyle majuscula. *Carpella matura* numerosa, in globum conferta, pyriformia v. obovoidea, recta v. curva, decidua, stylo persistente instructa; pericarpium crasse coriaceum carnosum v. cellulosum, facie dorsali et vertice longitudinaliter dehiscens. *Semen* pericarpio conforme, erectum, pyriforme v. ellipsoideum, sessile; testa crasse carnosā, cellulosa, nucleo adhærens, raphe percursa; nucleus homogeneus, dense carnosus, albus, oleosus, e granulis arcte connatis; embryo si adsit nos omnino effugit.

Herbulæ aphyllæ, simplices, tenues, rigidulæ, totæ albæ flavæ rubellæ v. rosæ, caule stricto v. flexuoso hic illic squamis paucis instructo, basi radices elongatas paucas simplices flexuosas rigidas emittente. Flores parvuli v. minuti, pauci et subcorymbosi, v. plures racemosi, pedicellis decurvis rigidulis basi bractea membranacea auctis. Perianthium stellatim-patens, segmentis non raro papillosis v. apicibus barbellatis.

Species ad 16, Americæ australi-orientalis, Indiæ orientalis et Archipelagi Malayani incolæ, ut videtur supra ligna et folia putrescentia vigentes, more *Voyriæ* et *Burmanniæ* specierum.

Ordo nulli arcte affinis, etsi *Alismaceis* plus quam ullis aliis floribus conveniens; ab illis recedit habitu terrestri, perianthii segmentis 1-seriatis valvatis, seminibusque. Seminis nucleus ulterius scrutandus, an albumine sit embryo inconspicuo, ut in *Balanophoriceis*; vel embryo homogeneus?

#### CONSPECTUS GENERUM.

1. **TRIURIS.** Perianthium 3- v. 6-lobum. *Antheræ* receptaculo magno conoideo immersæ Stylus terminalis v. subterminalis.—*Brasilia*.

2. **SCIAPHILA.** Perianthium 3-8-partitum v. profunde lobatum. *Antheræ* ima basi perianthii sessiles v. subsessiles. Stylus in fructu ventralis v. basilaris.—*Amer. trop., Ind. or., ins. Malay.*

1. **Triuris**, Miers in *Trans. Linn. Soc.* xix. 78, t. 7; xxi. 57.—Flores dioici. Perianthium profunde 3- v. 6-lobum, lobi e basi lata triangulari-ovata in caudam filiformem lamina 3-4-plo longiorem æstivatione induplicatam inflexam abrupte attenuati. Fl. ♂: *Antheræ* 3, sessiles, basin versus receptaculi centralis magni obtuse pyramidati immersæ, remotæ, didymæ, loculis confluentibus rima transversa dehiscentibus. Fl. ♀: *Staminodia* 0. *Ovarii carpella* numerosa, in receptaculo tumido sessilia, anguste ovoidea, in stylum subulatum terminalem v. subterminalem attenuata, stigmatē acuto v. oblique truncato. Fructus . . . —Herbæ exiguæ, albæ, diaphanæ v. flavidæ, caule filiformi 2-4-floro, floribus graciliter pedicellatis, pedicellis basi bracteatis.

Species 2, *Brasiliæ* incolæ; altera *T. hyalina*, Miers, l. c., perianthio 3-mero, stigmatibus acutis; altera, *T. lutea* (*Peltophyllum luteum*, Gardn. in *Trans. Linn. Soc.* xix. 157, t. 15. *Hexuris Gardneri*, Miers l. c. xxi. 44), perianthio 6-mero et stigmatibus oblique truncatis, cujus flores ♂ ignoti, a nobis non visa est.

2. **Sciaphila**, Blume, *Bijdr.* 514; *Mus. Bot.* i. 321, fig. 48.—Flores monoici v. dioici, rarissime polygami. Perianthium 3-8-partitum v. profunde lobatum; segmenta ovato-lanceolata v. subulata, æqualia v. alterna paullo longius producta, interdum varie connata, apicibus nudis v. villosis, in æstivatione inflexis. Fl. ♂: *Antheræ* 2-6, sessiles, v. filamento brevissimo receptaculo parvo insertæ, didymæ, latiores quam longæ rimis transversis singularibus v. confluentibus extus dehiscentes. *Ovarii rudimenta* 0 v. minuta v. 3 styliformia. Fl. ♀: *Ovarii carpella* numerosa, in receptaculo tumido sessilia; stylus ventralis, infra medium insertus, nunc brevis cum stigmatē aspergilliformi v. clavellato, nunc elongatus et subulatus v. filiformis cum stigmatē acuto. *Carpella matura* ventre et vertice

dehiscencia. Semen erectum, pyriforme v. ellipsoideum.—Herbæ simplices, albæ rosæ v. rubræ, radicibus paucis filiformibus elongatis flexuosis; caulis filiformis v. gracilis, rigidulus, flexuosus, squamis parvis membranaceis. Flores parvi v. minuti, racemosi, pedicellis basi bracteatis decurvis, v. subcorymbosi; bracteæ ad basin pedicellorum membranaceæ.

Species ad 14, Brasiliæ borealis, Venezuelæ, Indiæ orientalis, Archipelagi Malayani et Novæ Guinæe incolæ. *Thw. Enum. Pl. Zeyl.* 294. *Miq. Fl. Ind. Bat.* iii. 232. *Benth. in Hook. Kew Journ.* 1855, 11. Genus in sectiones 2 divisibile:—

1. *Euciaphila*. Stylus ovario brevior, stigmatē clavellato v. aspergilliformi. *SCIAPHILA* et *SORIDIUM*, *Miers in Trans. Linn. Soc.* xxi. 47, 49, t. 6 et 7, f. 10–28. *APHYLLEIA*, *Champ. in Calc. Journ. Nat. Hist.* vii. 468.

2. *Hyalisma*. Stylus filiformis, stigmatē acuto. Huc pertinet *S. janthina*, *Thw. (HYALISMA, Champ. in Calc. Journ. Nat. Hist.* vii. 468; *Miers in Trans. Linn. Soc.* xxi. 48, t. 7, f. 1–9), perianthio 8-partito, et species nova, *S. khasiana*, nob., perianthio 4–5-partito, et stylodiiis 3 erectis subulatis antheris oppositis et longe superantibus.—Species Asiaticæ.

## ORDO CXCIV. **ALISMACEÆ.**

Endl. Gen. Pl. 127 (excl. Juncagineis). Lindl. Veg. Kingd. 209. *BUTOMACEÆ*, Endl. Gen. Pl. 129. Lindl. Veg. Kingd. 208. *ALISMACEÆ* et *BUTOMACEÆ*, M. Micheli in DC. Monogr. Phanerog. iii. 29, 84. Buchenau in Engl. Bot. Jahrb. ii. 465.

*Flores* regulares, hermaphroditi, monoici v. polygami, rarissime dioici. *Perianthii segmenta* 6, 2-seriata, v. serie exteriore deficiente rarissime 3, imbricata; exteriora sæpissime herbacea, concava, nervosa, persistentia; interiora sæpius majora, petaloidea, decidua, rarius persistentia. *Stamina* 6 v. plura, rarissime 3, basi perianthii inserta v. hypogyna, verticillata v. spiraliter inserta, sæpius marcescentia, exteriora interdum ananthera; filamenta brevina v. subelongata, filiformi-subulata, teretia v. complanata. *Antheræ* basi v. dorso paullo supra basin affixæ, didymæ oblongæ v. lineares, erectæ utrinque obtusæ v. breviter 2-fidæ, v. connectivo apiculatæ, loculis contiguis rimis lateralibus v. plus minusve dorsalibus dehiscentibus; pollen sphericum v. obtuse 3-gonum. *Ovarii carpella* 6 v. plura, rarissime 3, receptaculo parvo v. magno plano tumido oblongo v. globoso 1-∞-seriatim inserta, distincta v. basi connata, sessilia v. inferne in stipitem brevem attenuata, 1-locularia. *Stylus* subterminalis v. ventralis, brevis v. subelongatus, rarius 0; stigma terminale punctiforme capitellatum v. ventre rarius dorso styli v. carpelli decurrens. *Ovula* in carpellis solitaria v. 2 superposita, v. numerosa, angulo interiori affixa v. rarissime basilaria et solitaria, in *Butomeis* in placentis reticulatis parietalibus sparsa, anatropa semi-anatropa campylotropa v. amphitropa, micropyle infera. *Carpella matura* distincta v. basi connata, 1-locularia, nucæ crustaceæ coriaceæ v. membranaceæ, stylo v. stigmatē sæpius terminata, indehiscencia v. sutura ventrali dehiscencia, rarissime ima basi circumscissa. *Semina* parva v. minuta, erecta v. patentia, ovoidea oblonga v. compressa; testa membranacea v. coriaceæ, lævis rugosa v. subechinata; albumen 0. *Embryo* conduplicatim hippocrepicus, extremitate radiculari sæpius incrassata, cotyledonari attenuata, rarissime rectus; plumula inconspicua, extremitate cotyledonari immersa.

Herbæ aquaticæ v. paludosæ, erectæ v. rarius natantes, sæpissime glabræ, pleræque lactescentes, scapigeræ v. caulescentes, perennes, rarius annuæ; rhizoma brevissimum v. elongatum, interdum surculosum. Folia erecta, rarius natantia, radicalia v. ad nodos caulis repentis conferta, petiolata, linearia lanceolata oblonga v. sagittata, sæpe pellucide punctata v. lineolata, nervis paucis v. plurimis curvis in apicem laminæ convergentibus, nervulis transversis crebris v. distantibus simplicibus v. reticulatis; petiolus sæpissime elongatus, vagina fissa brevi v. elongata. Inflorescentia indefinita, verticillatim racemosa

v. *spicata*, rarius pseudo-umbellata v. floribus subsolitariis, umbellis verticillisque basi bracteatis; bracteæ 3 v. plures, membranaceæ, bracteolas in axillis parvas foveantes. Flores parvi mediocres v. majusculi, pedicellati, basi ebracteolati, albi rosei raro flavi v. azurei.

Species ad 60, in aquis dulcibus totius orbis frigidis exceptis obviæ.

*Ordo Nasadeis arctissime affinis, et potius pro subordine inflorescentia floribusque magis evolutis habendus; sed habitu, floribus sæpissime verticillatim v. umbellatim paniculatis v. pseudo-umbellatis, perianthio 2-seriato interiore petaloideo, aliisque notis facile recognoscendus. Ab Hydrocharideis differt defectu spathæ, inflorescentia, perianthio infero, et embryone sæpissime hippocrepiformi.*

**Tribus I. Alismese.** Ovula solitaria, basilaria, v. plura angulo interiori carpelli affixa. Carpella matura indehiscencia v. (in *Damasonio*) basi circumscissa.

\* *Ovarii carpella distincta, basi parva inserta, 1-ovulata, matura indehiscencia.*

† *Perianthii foliola interiora petaloidea, exterioribus majora.*

a. *Carpella receptaculo parvo inserta.*

1. **ALISMA.** Flores ♂. Stamina 6–9. Ovuli raphe ventralis. Herbæ foliis erectis, floribus verticillatis v. umbellatis.—*Europ., As. bor., Afr. trop., Amer. bor., Australia.*

2. **ELISMA.** Flores ♂. Stamina 6–9. Ovuli raphe dorsalis. Herba foliis natantibus, floribus subsolitariis.—*Europ. occident.*

3. **LIMNOPHYTON.** Flores monoici, ♂ et ♀. Stamina 6. Ovuli raphe ventralis. Herba succulenta, foliis erectis, floribus verticillatis.—*As. et Afr. trop.*

b. *Carpella receptaculo magno oblongo v. globoso multiseriatim dense conferta.*

4. **SAGITTARIA.** Flores monoici v. dioici. Carpella matura lata, valde compressa. Herbæ, verticillis sæpissime 3-floris.—*Reg. trop. et temp.*

5. **ECHINODORUS.** Flores ♂. Carpella matura stylo rostrata, in capitulum echinatum congesta, alte costata. Herbæ, verticillis sæpissime multifloris.—*Amer. bor. et trop., Senegambia.*

†† *Perianthii foliola interiora exterioribus multo minora v. 0.*

6. **BURNATIA.** Flores dioici, verticillatim paniculati. Stamina 9. Carpella ∞.—*Afr. trop.*

7. **WISNERIA.** Flores monoici, verticillatim subspicati. Stamina 3. Carpella 3–6.—*Ind. or., Afric. trop., Madagasc.*

\*\* *Ovarii carpella basi lata connata, 2–∞-ovulata, matura basi circumscissæ dehiscentia.*

8. **DAMASONIUM.** Flores ♂. Perianthii foliola interiora magna, petaloidea. Carpella 1-seriata. Herbæ, floribus verticillatim paniculatis.—*Europ., Asia occid., Austral.*

**Tribus II. Butomese.** Ovula numerosa, placentis parietalibus reticulatim ramosis inserta. Carpella matura sutura ventrali dehiscentia.

9. **BUTOMUS.** Petala marcescentia. Stamina 9. Carpella 6. Embryo rectus. Herba rhizomate repente, foliis 3-quetris erectis.—*Europ., As. med. et bor., Ind. or.*

10. **BUTOMOPSIS.** Petala decidua. Stamina 8–9. Carpella 6–9. Embryo hippocrepicus. Herba annua, foliis ellipticis.—*Asia, Afric. et Austral. trop.*

11. **HYDROCLEIS.** Petala decidua. Stamina numerosa. Carpella 2–6, erecta, angusta, stylo elongato. Herbæ, foliis natantibus.—*Amer. trop.*

12. **LIMNOCHARIS.** Petala decidua. Stamina numerosa. Carpella 15–20, dimidiato-ovata, compressissima, in globum conferta; stigma sessile. Herbæ erectæ.—*Amer. trop.*

#### TRIBUS I. ALISMEÆ.

1. **Alisma**, Linn. Gen. n. 460.—Flores hermaphroditi. Perianthii foliola 6, 2-seriata, 3 exteriora herbacea, persistentia, post anthesin patentia reflexa v. erecta; 3 interiora majora, petaloidea, decidua. Stamina 6, rarius 9, subperigyna, filamentis subulato-filiformibus; antheræ dorso basi insertæ, oblongæ v. didymæ, subextorsum dehiscentes. Ovarii carpella pauca v. plurima, receptaculo parvo inserta, distincta; styli ventrales v. subapicales, brevissimi v. subelongati, decidui v. persistentes, stigmatibus terminalibus parvis; ovula solitaria, anatropa, basilaria, funiculo brevi, raphe ventrali. Carpella

matura pauca v. plurima, a latere compressa v. turgida, dorso sæpissime 3-costata, pericarpio coriaceo v. indurato indehiscente. Semina basilaria, erecta, compressa, testa membranacea; embryo complicato-hippocrepicus, extremitate radiculari incrassata.—Herbæ paludosæ, perennes, scapigeræ, acaules. Folia erecta, petiolata, elliptica lanceolata v. sagittata, interdum pellucide punctata v. lineolata. Scapus brevis v. elongatus. Flores umbellati v. in paniculæ ramis ramulisque verticillatis dispositi, nodis 3-bracteatis, longe pedicellati, albi v. pallide rosei.

Species ad 10, Europæ, Asiæ temperatæ et tropicæ, Africæ tropicæ, Australiæ et Americæ incolæ. *Micheli in DC. Monogr. Phanerog.* iii. 31 et 46 (*Echinodori sp.* 1-4). *Benth. Fl. Austral.* vii. 184.

Species sub sectionibus sequentibus distributæ:—

1. *Eualisma*. Stamina 6. Ovarii carpella numerosa, 1-seriatim verticillata, matura perianthio patente v. reflexo subtensa, valde compressa, dorso canaliculata. Flores verticillatim paniculati. Species 1 (*A. Plantago*, L.), Europæ, Asiæ et Americæ temperatæ et Australiæ incolæ. *Gertn. Fruct.* ii. t. 84. *Schnitzl. Ic.* t. 49. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 25. *Mirb. in Ann. Mus. Par.* xvi. t. 18. *Red. Lil.* t. 452. *Reichb. Ic. Fl. Germ.* t. 57. *Buchen. in Pringsh. Jahrb.* vii. t. 2, f. 14 ad 20, et in *Engl. Bot. Jahrb.* ii. 480.

2. *Caldesia*. Stamina 6. Ovarii carpella pauca v. numerosa, conferta, matura perianthio patente v. reflexo subtensa, compressa, dorso 3-5-costata. Flores verticillatim paniculati. Species 4 (*A. parnassifolium*, Linn., *A. nymphaeifolium*, Griseb., *A. oligococcum*, F. Muell., et *A. acanthocarpum*, F. Muell.), Europæ, Asiæ, Australiæ et Africæ incolæ. *Reichb. Iconogr. Bot.* t. 228; *Ic. Fl. Germ.* t. 56. *Wight, Ic.* t. 322. *CALDESIA, Parlat. Fl. Ital.* iii. 598. *Buchen. in Engl. Bot. Jahrb.* ii. 479, 480.

3. *Baldellia*. Stamina 6. Ovarii carpella numerosa, conferta, matura perianthio reflexo subtensa, dorso crasso 3-ventre 1-costata, lateribus depressis. Flores umbellati. Species 1 (*A. ramunculoidea*, Linn.) Europæ et Africæ borealis incola. *Red. Lil.* v. t. 268. *Reichb. Iconogr. Bot.* t. 37; *Ic. Fl. Germ.* t. 55. *Cav. Ic.* i. t. 55. *BALDELLIA, Parlat. Nuov. Gen. Pl. Monocot.* 1854, 57; *Fl. Ital.* iii. 595. *Buchen. in Pringsh. Jahrb.* vii. t. 2, f. 1-4 (*Echinodorus*).

4. *Helanthium*. Stamina 9. Ovarii carpella pauca, matura perianthio involuta, turgida, costata. Flores umbellati, Species 2 (*A. tenellum*, Mart., et *A. intermedium*, Mart.), Americæ borealis et australis incolæ. *Seub. in Mart. Fl. Bras.* iii. i. t. 13, f. 2, t. 14. *HELANTHIUM, Engelm. mss.*

2. *Alisma*, *Buchen. in Pringsh. Jahrb.* vii. 25, t. 2, f. 5-12; et in *Engl. Bot. Jahrb.* ii. 481.—Flores hermaphroditi. Perianthii segmenta 6, 2-seriata, 3 exteriora membranacea, post anthesin patentia, persistentia; 3 interiora majora, petaloidea, decidua. Stamina 6, basi perianthii inserta, filamentis planis subulatis; antheræ breviter oblongæ, subbasifixæ, loculis extrorsum dehiscentibus. Ovarii carpella 10-12, in receptaculo planiusculo conferta, distincta, ovoidea, in stylum brevem terminalem persistentem attenuata, stigmatibus capitellato; ovula solitaria, basilaria, erecta, anatropa, funiculo brevi, raphe dorsali. Carpella matura oblonga v. ovoideo-oblonga, fere recta, leviter compressa, multicostata, coriacea, stigmatibus terminali. Semen oblongum, compressum, testa membranacea; embryo complicato-hippocrepicus, extremitate radiculari clavata, cotyledonari attenuata.—Herba pusilla, surculosa, surculis gracilibus fluitantibus ad nodos radicanibus. Folia primordialia subulata, 1-nervia; caulina petiolata, natantia, elliptica, pellucide punctata, 3-nervia, nervis secundariis remotis. Flores ad nodos 1-5, longe pedicellati, albi, 3-bracteati, pedicellis post anthesin decurvis.

Species 1, Europæ occidentalis incola. *Micheli in DC. Monogr. Phanerog.* iii. 40. *Red. Lil.* v. t. 285. *Reichb. Ic. Fl. Germ.* t. 54; *Iconogr. Bot.* t. 37 (omnes, *Micheli* excepto, sub *Alismate*).

3. *Zinnophyton*, *Miq. Fl. Ind. Bat.* iii. 242. (Dipseudochorion, *Buchen. in Flora*, 1865, 241.)—Flores polygami, ♀ et ♂. Perianthii segmenta 6, 2-seriata; 3 exteriora herbacea, persistentia, post anthesin reflexa; 3 interiora majora, petaloidea, decidua. Stamina 6, perigyna (in fl. ♂ majora), filamentis filiformi-subulatis compressis; antheræ lineari-oblongæ, dorso basifixæ, loculis subextrorsum dehiscentibus. Ovarii carpella (in fl. ♂ obsoleta) 15-20, in receptaculo parvo planiusculo conferta, distincta, ovoidea; stylus ventralis, brevis, crassus, deciduus, stigmatibus capitellato; ovula basilaria, anatropa, funiculo brevi, micropyle extera. Carpella matura plurima, distincta, obovoidea,

turgida, dorso 3-costata, pericarpio intus osseo lateribus utrinque cavis. Semina basilaria, erecta, oblonga, compressa, testa membranacea; embryo conduplicatim hippocrepicus, extremitate radiculari incrassata.—Herba erecta, robusta, perennis, acaulis, scapigera, lactescens. Folia erecta, longe crassequae petiolata, late sagittata, pellucide punctulata, nervis 7–11, nervulis obliquis ramosis. Scapus crassus. Flores verticillatim racemosi v. paniculati, nodis 3-bracteatis; superiores in panicula ♂ minores, graciliter pedicellati; inferiores ♀ cum ♂ paucis intermixti, pedicellis crassis post anthesin decurvis.

Species 1, Asiæ et Africæ tropicæ incola. *Micheli in DC. Monogr. Phanerog.* iii. 38. *Baker in Trans. Linn. Soc.* xxix. t. 102 (*Alisma*). *Buchen. in Engl. Bot. Jahrb.* ii. 481. Genus habitu floribusque *Echinodoro* affine sed receptaculo et fructu *Alismatis*.

4. *Sagittaria*, Linn. Gen. n. 1067.—Flores monoici dioici v. polygami. Perianthii segmenta 6, 2-seriata; 3 exteriora herbacea, persistentia, post anthesin reflexa, erecta v. patentia; 3 interiora majora, petaloidea, decidua. Stamina 9 v. plura, sæpius numerosa, hypogyna v. receptaculo inserta, filamentis filiformi-subulatis compressis; antheræ oblongæ v. lineares, dorso basi affixæ, erectæ, lateraliter v. extrorsum dehiscences. Ovarii carpella numerosissima, distincta, receptaculo magno globoso v. oblongo densissime spiraliter imbricata, capitata, infima interdum imperfecta; stylus ventralis v. apicalis, brevis v. longiusculus, persistens, stigmatibus papillosis; ovula solitaria, basilaria, anatropa, micropyle externa. Carpella matura perplurima, in receptaculo elevato in globum congesta, orbicularia securidiformia v. dolabriformia, valde compressa, ambitu costata v. alata, alis integris dentatis v. in processus productis, faciebus ecostatis v. costatis sæpe glandulosis. Semina basilaria, erecta, testa membranacea v. tenuiter coriacea, sæpe punctata; embryo conduplicatim hippocrepicus, extremitate radiculari incrassata.—Herbæ paludose, sæpiissime erectæ, perennes rarissime annuæ, acaules scapigeræ. Folia longe v. sæpius crasse petiolata, elliptico-lanceolata v. sagittata, sæpe pellucido-punctata v. -lineolata. Scapus erectus, gracilis v. robustus. Flores sæpius 3-natim verticillati, spicati v. paniculati, breviter v. longe pedicellati, albi, nodis 3-bracteatis bracteolatisque, in specie unica 1-bracteati.

Species ad 15, in regionibus temperatis et tropicis amphigææ, in sectiones sequentes dispositæ:—

1. *Eusagittaria*. Flores monoici v. dioici, in verticillos sæpius 3-flores dispositi, superiores ♂, inferiores ♀. Perianthii foliola exteriora post anthesin erecta patentia v. reflexa. Stamina numerosa. Carpella matura valde compressa. *Micheli in DC. Monogr. Phanerog.* iii. 64. *Buchen. in Engl. Bot. Jahrb.* ii. 485. *Gærtn. Fruct.* ii. t. 84. *Reichb. Ic. Fl. Germ.* t. 53. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 26. *Red. Lil.* v. t. 279, 280, 411. *Lam. Illustr.* t. 776. *Schkuhr, Handb.* t. 298. *Seub. in Mart. Fl. Bras.* iii. t. 15, 16. *Andr. Bot. Rep.* t. 333. *Bot. Mag.* t. 1631, 1632, 1792. *Bot. Reg.* t. 1141.

2. *Lophiocarpus*. Flores monoici, ♂ et ♀ in verticillos 1–3-flores dispositi, ♂ superiores. Perianthii foliola exteriora post anthesin erecta. Stamina 9–15. Carpella matura valde compressa, alata. *LOPHIOCARPUS, Micheli in DC. Monogr. Phanerog.* iii. 60. *Buchenau in Engl. Bot. Jahrb.* ii. 485.

5. *Echinodorus*, L. C. Rich. in *Mém. Mus. Par.* i. 365, nomen tantum.—Flores hermaphroditi. Perianthii segmenta 6, 2-seriata; 3 exteriora herbacea, persistentia, post anthesin reflexa v. erecta; 3 interiora petaloidea, majora, decidua. Stamina numerosa, 20 v. plura, hypogyna, filamentis filiformi-subulatis compressis; antheræ oblongæ v. lineari-oblongæ, dorso basifixæ, subextrorsum dehiscences. Ovarii carpella perplurima, distincta, receptaculo elevato oblongo imbricatim capitata, obovoidea, in stylum oblique apicalem persistentem attenuata, stigmatibus minuto; ovula basilaria, erecta, anatropa, micropyle externa. Carpella matura numerosa, in capitulum rigide echinatum congesta, obovoidea v. oblanceolata, stylo rigido aristata, plus minusve compressa, alte costata. Semina oblonga, compressa, testa membranacea; embryo conduplicatim uncinatus, extremitate radiculari incrassata.—Herbæ, sæpe elatæ, annuæ v. perennes, acaules, scapigeræ. Folia longe petiolata, elliptica cordata lanceolata v. sagittata, sæpiissime pellucido-punctata v. -lineolata. Flores in racemos strictos angustos verticillatos dispositi, verticillis plerumque multifloris, pedicellis breviusculis rigidis, nodis 3-bracteatis, bracteolis numerosis.

Species ad 14, Americæ tropicæ et borealis temperatæ incolæ et una (an potius *Sagittariæ* species) Senegambica. *Micheli in DC. Monogr. Phanerog.* iii. 44, excl. sp. 1-4. *Buchenau in Engl. Bot. Jahrb.* ii. 483. *Seub. in Mart. Fl. Bras.* iii. t. 13, f. 4 (*Alisma*). *Vell. Fl. Flum. Ic.* x. t. 31 (*Sagittaria*).

6. *Burnatia*, *Micheli in DC. Monogr. Phanerog.* iii. 81.—Flores dioici, parvuli. Fl. ♂: Perianthii foliola 6, 2-seriata, marcescentia, 3 interiora multo minora. Stamina 9, basi perianthii inserta, filamentis filiformi-subulatis; antheræ lineari-oblongæ, filamentis æquilongæ, basi dorso affixæ, subextrorsum dehiscentes. Carpella rudimentaria ad 12, dolabriformia, compressa. Fl. ♀: Perianthii foliola 3, parva, orbicularia, membranacea, post anthesin patentia. Stamina 0 v. 1-2 imperfecta. Ovarii carpella ad 12, in receptaculo parvo conferta, oblique dimidiato-orbicularia; stigma ventrale, subsessile, papillosum; ovula solitaria, basilaria, anatropa, micropyle ventrali. Carpella matura 6-8, obovato-orbicularia, compressa, ambitu 3-cristata, stigmatе minuto ventrali rostrata, pericarpio coriaceo. Semen immaturum late oblongum, testa membranacea; embryo conduplicatim hippocrepicus, extremitate radiculari incrassata.—Herba paludosa, erecta, *Alismatis* facie, acaulis, scapigera. Folia longe petiolata, lineari- v. elliptico-lanceolata, acuta, tenuiter 7-9-nervia, nervulis gracillimis obliquis. Paniculæ verticillatim ramosæ, axillis 3-bracteatis, ♂ amplæ, floribus globosis graciliter pedicellatis; ♀ contractæ, floribus multo minoribus subsessilibus.

Species 1, Nubiæ incola.

7. *Wisneria*, *M. Micheli in DC. Monogr. Phanerog.* iii. 82.—Flores monoici, minuti. Perianthii foliola membranacea, v. 3 persistentia, v. 5-6 2-seriata, 3 exterioribus æqualibus v. 2 ceteris minoribus concavis persistentibus, 2 v. 3 interioribus multo minoribus deciduis? Fl. ♂: Stamina 3, receptaculo parvo inserta, filamentis subulatis v. filiformibus; antheræ basifixæ, didymæ v. breviter oblongæ, rimis lateralibus v. subdorsalibus dehiscentes; pollen globosum. Ovarii rudimenta subulata. Fl. ♀: Staminodia setiformia. Ovarii carpella 3-6, ovoidea, receptaculo parvo tumido inserta; stylus 0 v. terminalis, subulatus, stigmatе minuto; ovulum solitarium, basilare, anatropum. Carpella matura subglobosa, late oblonga v. ellipsoidea, compressa v. turgida, obscure costata, obtusa v. stylo terminali rostrata, pericarpio tenui v. crassiusculo spongioso. Semen oblongum v. subglobosum, testa membranacea; embryo conduplicatim hippocrepicus, extremitate radiculari incrassata.—Herbæ paludosæ v. aquaticæ, acaules, scapigeræ, rhizomate parvo fibras crassas articulatas emittente. Folia longe petiolata, filiformia, lamina 0, v. lamina parva v. majuscula lanceolata v. oblanceolata, costa valida, nervis tenuibus, nervulis obliquis reticulatis. Flores minuti, secus rhachin scapi gracillimi remoti, verticillati, verticillis involucris campanulatis truncatis membranaceis inclusis, floribus seriatim emergentibus, ♂ in involucris superioribus pedicello basi 2-bracteolato, ♀ in inferioribus pedicello ebracteolato.

Species 3: 1. *W. triandra*, *Micheli*, Malabarica, perianthii foliolis 6, carpellis maturis globosis, stigmatе sessili. 2. *W. Schweinfurthii*, *Hook. f.*, Africa centralis incola, perianthii foliolis 3, carpellis maturis compressis rostratis. 3. *W. filifolia*, *Hook. f.*, Madagascarensis, perianthii foliolis exterioribus 3, uno ceteris multo majore, interioribus 4, carpellis maturis rostratis.

8. *Damasontum*, *Juss. Gen.* 46. (*Actinocarpus*, *R. Br. Prod.* 342.)—Flores hermaphroditi. Perianthii foliola 6, 2-seriata; 3 exteriora tenuiter membranacea, persistentia, post anthesin patentia v. reflexa; 3 interiora majora, petaloidea, decidua. Stamina 6, perigyna, filamentis subulatis v. filiformibus; antheræ sub-basifixæ, didymæ, loculis extrorsum dehiscentibus. Ovarii carpella 6-10, verticillata, basi lata leviter connata, subulata, in stylum rectum brevem persistentem attenuata, stylo introrsum sub apice stigmatifero; ovula in carpellis 2 superposita v. 8-20, anatropa, inferiora basilaria, erecta, micropyle ventrali, superiora angulo interiori affixa, adscendentia, micropyle dorsali. Carpella matura 6-9, stellatim patentia, a basi lata leviter connata, subulata, rigide coriacea, a latere compressa, lævia v. costata, pungentia, indehiscentia v. supra basin tarde circumscissæ dehiscentia, 1-polysperma. Semina inferiora erecta, superiora horizontalia, testa castanea crasse coriacea transverse rugosa, funiculo capillari; embryo hippocrepicus,

extremitate radiculari incrassata.—Herbæ annuæ v. radicibus perennantibus, paludosæ, erectæ, acaules, scapigeræ, lactescentes. Folia omnia radicalia, petiolata, ovata oblonga cordata v. lanceolata, costa valida, nervis utrinque solitariis. Flores in racemos paniculæve amplas ramis verticillatis dispositi, 3-bracteati, albi, pedunculis pedicellisque fructiferis incrassatis.

Species 4, quarum 2 Europæ, Africæ borealis, Asiæque occidentalis incolæ, tertia Australiensis, quarta Californica. *Micheli in DC. Monogr. Phanerog.* iii. 41. *Buchen. in Pringsh. Jahrb.* vii. t. 2, f. 21 ad 27; et in *Engl. Bot. Jahrb.* ii. 482. *Benth. Fl. Austral.* vii. 186. *Red. Lil.* vi t. 289 (*Alisma*). *Torr. Bot. Whipl. Exped.* t. 21. Ovulum inferius fere campylotropum invenimus in *D. stellato*. Petala in *D. californico* inciso-dentata.

## TRIBUS II. BUTOMÆÆ.

9. *Butomus*, *Linn. Gen. n.* 507.—Flores hermaphroditi. Perianthii segmenta 6, 2-seriata, persistentia, petaloidea, imbricata, concava, post anthesin erecta. Stamina 9, hypogyna, 6 per paria foliolis exterioribus 3 singulatim interioribus opposita, filamentis a basi ad apicem attenuatis; antheræ erectæ, basifixæ, lineari-oblongæ, obtuse 4-gonæ, post anthesin didymæ, rimis lateralibus dehiscentes; pollen minutissimum, subglobosum. Ovarii carpella 6, in receptaculo plano verticillata, sessilia, basi ventre connata, 1-locularia, in stylum brevem recurvum attenuata, stigmatate ventrali incrassato longitudinaliter sulcato; ovula numerosa, in placentis parietalibus reticulatim ramosis dense conferta, sessilia, adscendentia, anatropa. Carpella matura 6, perianthii basi involuta, coriacea, rostrata, basi ventre cohærentia, sutura ventrali dehiscentia, polysperma. Semina parietalia, lineari-oblonga, adscendentia, testa coriacea profunde sulcata; embryo elongato-ovoideus, rectus, extremitate radiculari infera paullo angustiore, plurima in extremitate cotyledonari immersa.—Herba glaberrima, paludosa, scapigera, vasis laticiferis destituta, rhizomate repente dense folioso perennante. Folia lineari-oblonga, 3-quetra, sensim acuminata, flaccida. Scapus axillaris, cylindraceus, erectus, teres. Flores numerosi, umbellati, rosei; umbella bracteis brevibus subspathaceis involuata, pedicellis inæquilongis.

Species 1, Europæ et Asiæ temperatæ incola. *Micheli in DC. Monogr. Phanerog.* iii. 85. *Gærtn. Fruct.* 1, t. 19. *Mirbel in Ann. Mus. Par.* xvi. t. 18. *Lam. Illustr.* t. 324. *Red. Lil.* t. 209. *Schnizl. Ic.* i. t. 60. *Spach, Suites Buff.* t. 115. *Reichb. Ic. Fl. Germ.* vii. t. 58. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 17. *Buchen. in Engl. Bot. Jahrb.* ii. 468.

10. *Butomopsis*, *Kunth, Enum. Pl.* iii. 164. (*Tenagocharis*, *Hochst. in Flora*, 1841, 369).—Flores hermaphroditi. Perianthii segmenta 6, 2-seriata, imbricata; exteriora (sepala) viridia, concava, post anthesin erecta, persistentia; interiora (petala) majora, petaloidea, tenuissima, decidua. Stamina 8 v. 9, hypogyna, 6 exteriora per paria sepalis 3 interiora singulatim petalis opposita, filamentis membranaceis a basi dilatata sensim attenuatis; antheræ lineari-oblongæ, basifixæ, rimis lateralibus dehiscentes; pollen minutissimum. Ovaria carpella 6-9, in receptaculo plano verticillata, sessilia, basi ventre connata, 1-locularia, in stylum brevem attenuata, stigmatate capitellato apicem versus styli externo; ovula numerosa, minima, in placentis parietalibus reticulatim ramosis dense conferta, adscendentia, anatropa. Carpella matura 6-7, sepalis involuta, basi ventre connata, coriacea, sutura ventrali dehiscentia, polysperma. Semina minuta, parietalia, late oblonga, compressa, testa tenuiter coriacea pallida pellucida; embryo conduplicatim hippocrepicus.—Herba annua, aquatica, simplex, erecta, scapigera, lactescens, rhizomate parvo subtuberoso fibras densas emittente. Folia omnia radicalia, petiolata, elliptica v. elliptico-lanceolata, acuta, 3-7-nervia, petiolo basi vaginante. Scapus folia superans. Flores umbellati; bractææ breves, spathacææ, interiores parvæ, pedicelli inæquilongi. Perianthii foliola exteriora et carpella reticulatim venosa.

Species 2, Asiæ, Africæ et Australiæ tropicæ incolæ. *Micheli in DC. Monogr. Phanerog.* iii. 87. *Benth. Fl. Austral.* vii. 187. *Royle, Ill. Bot. Himal.* t. 95 (*Butomus*). *Buchen. in Engl. Bot. Jahrb.* ii. 468.

11. *Hydrocleis*, L. C. Rich. in *Mém. Mus. Par.* i. 368, t. 18, et 19, f. 1 (*Limnocharis*). (Vespuccia, *Parlat. Nuov. Gen. e Sp. Monocot.* 55.)—Flores hermaphroditi. Perianthii segmenta 6, 2-seriata, 3 exteriora (sepala) herbacea, post anthesin erecta, persistentia; 3 interiora (petala) majora, tenuissima, decidua. Stamina numerosa, hypogyna, multiseriata, filamentis filiformi-subulatis exterioribus sæpissime anantheris; antheræ lineares, basifixæ, erectæ, rimis sublateralibus v. extrorsum dehiscentes; pollen minutissimum. Ovarii carpella 2-8, distincta, in receptaculo planiusculo verticillata, sessilia, elongato-lanceolata, 2-locularia, in stylum brevem attenuata, stigmatē terminali et in ventrem styli decurrentia; ovula numerosa, in placentis parietalibus reticulatim ramosis conferta, sessilia, anatropa v. campylotropa. Carpella matura 6-20, sepalis involuta, distincta, angusta, teretiuscula, tenuiter coriacea, rostrata, sutura ventrali dehiscentia, polysperma. Semina minuta, adscendentia, obovoidea, compressa, testa coriacea brunnea reticulatim impressa lævi v. hispida; embryo conduplicatim hippocrepicus, crure cotyledonari paulo majore.—Herbæ glaberrimæ, aquaticæ, stoloniferæ, lactescentes, caulibus natantibus ramosis, ramis ad nodos radicantibus et vaginis oblongis spathaceis involucratīs. Folia fasciculata, natantia, ovato- v. cordato-orbicularia, nervis ad apicem convergentibus; petiolo crasso basi vaginante et costa folii inflatis. Flores solitarii, longe crasse pedunculati, magni. Petala flava.

Species 3 v. 4, Americæ tropicæ australis incolæ. *Michx.* in *DC. Monogr. Phanerog.* iii. 91 (*Limnocharis* sp. 2, 3, 4). *Buchen.* in *Engl. Bot. Jahrb.* ii. 469. *Vell. Fl. Flum. Ic.* x. t. 32. *Endl. Iconogr.* t. 37. *Seub.* in *Mart. Fl. Bras.* iii. i. t. 13, f. 1, t. 16. *Bot. Mag.* t. 3248, et *Bot. Reg.* t. 1640 (*utroque sub Limnocharite*). Ovula in specie Neogranatensi (La Paila, Holton, n. 129), anatropa, ut in exemplaribus in horto Kewensi cultis, sed in exemplaribus *H. Humboldtii* in Hort. Van Houtte cultis, certe campylotropa evadunt.

12. *Limnocharis*, H. B. et K. *Pl. Æquin.* i. 116, t. 34.—Flores hermaphroditi. Perianthii segmenta 6, 2-seriata, patentia, imbricata; 3 exteriora (sepala) herbacea, post anthesin erecta, persistentia; 3 interiora (petala) majora, tenuissima, decidua. Stamina numerosa (ad 20), hypogyna, filamentis filiformi-subulatis exterioribus anantheris; antheræ lineares, basifixæ, erectæ, rimis lateralibus dehiscentes; pollen minutissimum, obtuse 3-gonum. Ovarii carpella 15-20, distincta, dimidiato-ovata, acuta, compressissima, confertim verticillata et in capitulum globosum compacta, apicibus acutis convergentibus; stylus 0, stigmatē ad apicem carpelli dorsali; ovula numerosa, in placentis parietalibus reticulatim ramosis sparsa, campylotropa. Carpella matura 15-20, sepalis involuta, in capitulum globosum conferta, compressa, lunato-curvata, dorso plana, lateribus membranaceis, sutura ventrali dehiscentia, polysperma. Semina parva, sparsa, late v. subquadrato-oblonga, testa crassiuscula extus spongiosa et processibus mollibus echinata; embryo conduplicatim hippocrepicus, crure cotyledonari paulo minore.—Herbæ glaberrimæ, paludosæ, scapigeræ, rhizomate tuberoso fibras emittente. Folia longe crasseque petiolata, elliptico-lanceolata v. ovato-cordata, nervis paucis ad apicem convergentibus. Scapus brevis, nunc brevissimus floribus fere radicalibus, nunc elongatus, erectus, teres, 3-gonus v. 3-alatus, basi vaginatus. Flores umbellati, umbella bracteis latis spathaceis involucrata, pedicellis crassis inæquilongis. Petala flava.

Species descriptæ 3 v. 4, Americæ tropicæ incolæ. *Michx.* in *DC. Monogr. Phanerog.* iii. 88 (*Limnocharis* sp. 1). L. C. Rich. in *Mém. Mus. Par.* i. t. 19, f. 2, t. 20. *Endl. Iconogr.* t. 26. *Buchen.* in *Engl. Bot. Jahrb.* ii. 469. *Bot. Mag.* t. 2525.

## ORDO CXCIV. NAIADACEÆ.

*Endl. Gen. Pl.* 229. *Lindl. Veg. Kingd.* 143. JUNCAGINÆ, *Endl. Gen. Pl.* 127. *Lindl. Veg. Kingd.* 210. ZOSTERACEÆ, *Lindl. Veg. Kingd.* 145.

Flores hermaphroditi, monoici v. dioici. *Perianthium* 0, v. e segmentis 1-4 v. 6 distinctis aequalibus v. inæqualibus herbaceis coloratis v. hyalinis persistentibus v. deci-

duis æstivatione valvatis v. imbricatis, rarius perianthium tubulosum tenuissimum. Stamina 1-6, rarissime plura, in floribus hermaphroditis distincta, hypogyna, v. basibus segmentorum perianthii inserta, in unisexualibus solitaria v. connata; filamenta varia. Antheræ basifixæ, erectæ, nunc 2-loculares loculis globosis oblongis v. linearibus, rimis elongatis extrorsum v. a latere rarius transverse dehiscentes; nunc ad loculum solitarium reductæ; pollen globosum ellipsoideum v. breviter tubulosum v. confervoideum. Ovarii carpella 1-6, distincta v. rarius ventre connata, sessilia v. stipitata, 1-locularia, obtusa v. in stylum brevem v. elongatum nunc longissimum attenuata; stigmata nunc apices versus carpellorum discoidea v. paulo decurrentia, nunc stylum terminantia et pulvinaria v. dilatata; nunc stylus in stigmata 2-3 capillaria fissus. Ovula 2-∞, rarissime solitaria, basi v. apice rarius angulo interiore loculi inserta, rarissime 2-seriata, sessilia, orthotropa anatropa v. campylotropa, micropyle semper infera. Carpella matura membranacea coriacea carnosula v. nucæ, distincta v. rarius connata, stylo v. stigmate persistente terminata, indehiscentia v. angulo ventrali dehiscentia, 1-∞-sperma. Semina erecta pendula v. angulo interiori carpelli peltatim affixa, sessilia, recta v. curva; testa coriacea carnosula v. membranacea; albumen 0. Embryo carnosus, sæpissime macropodus, extremitate radiculari infera, cotyledonari consimili v. in processum vermiformem involutum v. induplicatum attenuata; plumula in fissura processus v. extremitatis cotyledonaris abscondita, v. in sinu faciei ventralis embryonis imposita et plus minus evoluta.

Herbæ, nunc acaules paludosæ et scapigeræ rhizomate tuberoso v. repente, nunc aquaticæ rhizomate repente nodoso caulibus dichotome ramosis submersis v. fluitantibus. Folia submersa emersa v. natantia, in generibus scapigeris radicalia, linearia v. junciformia, in caulescentibus opposita alterna v. rarissime 3-natim verticillata, sessilia v. petiolata, oblonga v. linearia v. capillaria, basi vaginantia, vaginis sæpe stipuliformibus v. in auriculas membranaceas productis. Stipulæ veræ 0, v. intrapetiolares, membranaceæ, tubulosæ v. fissæ, amplexicaules. Flores parvi, sæpissime inconspicui, spicati racemosi v. in spadicibus pedunculatis terminalibus v. axillaribus dispositi, bracteati v. ebracteati.

Species ad 120, aquis paludibusque tam dulcibus quam salsis orbis terrarum incolæ. Ordo vere naturalis, quamvis primo aspectu heterogeneus, *Alismaceis* quam maxime affinis, ab *Aroideis* non longe distans et non nisi habitu facile distinguendus; *Hydrocharideas* multis notis revocans etsi valde diversus.

#### FORMÆ ABNORMES.

Folia defectu parenchymatis parallelogrammaticæ fenestrata in *Aponogetone fenestrali* et *A. Bernieriana*; apice tubulosa in *Scheuchzeria*.

Flores ♀ dimorphi, alii minuti spicati stigmatibus subsessilibus, alii ad basin foliorum multo majores stylo longissimo instructi in *Lilæa*.

#### CONSPECTUS GENERUM.

Series A. Stigma discoideum v. decurrens.

**Tribus I. Juncagineæ.** Flores spicati v. racemosi, hermaphroditi v. unisexuales. Perianthii (rarissime 0) segmenta 6, 2-seriata, herbacea. Stamina 6, rarissime 1. Ovarii carpella 3-∞, 1-2-ovulata; ovula basilaria, erecta, anatropa. Carpella matura indehiscentia v. dehiscentia. Embryo rectus.—Herbæ erectæ foliis junciformibus, in paludibus dulcibus salsisque vigentes.

1. **TRIGLOCHIN.** Flores hermaphroditi, ebracteati. Perianthii segmenta 3 v. 6. Stamina 6, basi perianthii inserta. Carpella 3-6, 1-ovulata.—*Reg. temp.*

2. **SCHUCHZERIA.** Flores hermaphroditi, bracteati. Perianthii segmenta 6. Stamina 6, subhypogyna. Carpella 3, pauci-ovulata.—*Europ., Amer. bor.*

3. **TYTRONCIUM.** Flores dioici, ebracteati. Perianthii segmenta 4. Stamina 4, basi perianthii inserta. Ovarii carpella 4, 1-ovulata.—*Amer. antarct.*

4. **LILÆA.** Flores monoici, bracteati, perianthium 0; ♂ stamen 1: ♀ alii spicati stigmate subsessili, alii ad basin foliorum solitarii stylo longissimo. Carpellum 1, 1-ovulatum.—*Amer. aust. et bor.-occid.*

**Tribus II. Aponogetonese.** Flores spicati, hermaphroditi, sæpius albo-bracteati. Perianthium 0, v. e segmentis bracteivse 1-3 coloratis. Stamina 6 v. plura, hypogyna. Ovarii carpella 3-5, 3-∞-ovulata; ovula basilaria v. subbasilaria. Carpella matura dehiscentia. Embryo rectus.—Herbæ rhizomate tuberoso, foliis submersis v. natantibus, in aquis dulcibus vigentes.

5. APONOGETON. *Reg. trop. et temp., Asia, Africa et Australia.*

**Tribus III. Potamose.** Flores spicati, hermaphroditi. Perianthium 0, v. segmenta 4, herbacea. Stamina 2 v. 4, basi perianthii inserta. Ovarii carpella 4, 1-ovulata; ovulum sub apice pendulum v. suturæ ventrali loculi peltatim affixum, campylotropum. Carpella matura indehiscentia. Embryo curvus.—Herbæ submersæ v. foliis natantibus in aquis dulcibus rarius salsis vigentes.

6. POTAMOGETON. Perianthii segmenta 4. Carpella matura sessilia.—*Orbis fere totus.*

7. RUPPIA. Perianthium 0. Carpella matura longe stipitata.—*Orbis fere totus.*

**Tribus IV. Posidoniese.** Flores spicati, unisexuales. Perianthium 0, v. segmenta 2. Stamina 2-4; antheræ liberæ v. in corpus oblongum v. ellipsoideum connatæ, polline confervoideo. Ovarii carpella solitaria, 1-ovulata; ovulum basilare v. parietale. Embryo macropodus.—Herbæ maritimæ, submersæ.

8. POSIDONIA. Stamina distincta, connectivo maximo. Stigma disciforme, muricatum v. spinosum. Embryo oblongus, extremitate cotyledonari obtusa, plumula apicali.—*Mare Mediterr. et Australia.*

9. AMPHIBOLIS. Stamina connata. Stigma subglobosum, ovario crassius. Embryo macropodus, extremitate cotyledonari oblique attenuata subulata.—*Mare Austral.*

**Tribus V. Zannichelliæ.** Flores axillares, unisexuales. Perianthium 0 v. hyalinum. Fl. ♂: Stamen 1, filamentum elongato, v. antheræ 2-3 sessiles connatæ, polline globoso. Fl. ♀: Ovarii carpella 2-9, 1-ovulata; ovulum ab apice loculi pendulum, orthotropum. Embryonis extremitas cotyledonaris apicalis v. infra-apicalis, attenuata induplicata v. involuta.—Herbæ aquaticæ, submersæ.

10. ZANNICHELLIA. Perianthium 0. Stamen 1, filamentum gracili. Ovarii carpella 2-9, curvula.—*Orbis fere totus.*

11. ALTERNIA. Perianthium e squamulis 3. Antherarum columna sessilis. Ovarii carpella 3, recta. Embryonis extremitas cotyledonaris infra-apicalis, attenuata, involuta.—*Mare Mediterr.*

12. LEPILÆNA. Perianthium e squamulis 3. Antherarum columna sessilis. Ovarii carpella 3, recta. Embryonis extremitas cotyledonaris terminalis, induplicatus.—*Australia.*

Series B. Stigma v. stigmata subulata v. capillacea.

**Tribus VI. Zosterese.** Flores in spadice complanato secundi, unisexuales. Perianthium 0 Fl. ♂: Anthera sessilis, 1-locularis, polline confervoideo. Fl. ♀: Carpellum solitarium, sessile, 1-ovulatum; ovulum pendulum. Embryonis extremitas cotyledonaris vermiformis, sulco inserta.—Herbæ marinæ submersæ, foliis gramineis.

13. ZOSTERA. Flores monoici. Capellum ovoideum.—*Orb. vet.*

14. PHYLLOSPADIX. Flores dioici. Carpellum cordiforme.—*Amer. bor.-occid.*

**Tribus VII. Naiadese.** Flores axillares, unisexuales. Perianthium hyalinum. Fl. ♂: Anthera 1, sessilis, v. 2 connatæ, polline globoso. Fl. ♀: Carpellum solitarium, 1-ovulatum; ovulum basilare, anatropum. Embryo oblongus, symmetricus.—Herbæ submersæ, in aquis dulcibus vigentes.

15. NAIAS.—*Orbis fere totus.*

**Tribus VIII. Cymodoceæ.** Flores axillares, unisexuales. Perianthium 0. Fl. ♂: Antheræ in corpus longe stipitatum connatæ, polline confervoideo. Fl. ♀: Ovarii carpella 2, ovoidea, 1-ovulata; ovula sub apice loculi pendula, orthotropa. Embryonis extremitas cotyledonaris vermiformis, adscendens, dorso embryonis incumbens.—Herbæ submersæ, marinæ, foliis gramineis.

16. CYMODOCEA.—*Mare trop.*

## GENERA EXCLUSA.

*EPISTYANTHUS*, Blume (quæ *Hydrilla*, L. C. Rich.), et *THALASSIA*, Soland., supra sub *Hydrocharideis* memorantur. *LEMNOPSIS*, Zipp. in *Flora*, 1829, 285 (nomen). *Zoll. Syst. Vers. Pf. Zolling.* 74, est *Halophila*, Thoa., pariter ad *Hydrocharideas* pertinens, synonymon supra p. 455, prætermisum.

## TRIBUS I. JUNCAGINÆ.

1. *Triglochin*, Linn. *Gen. n.* 453.—Flores hermaphroditi, rarius polygami. Perianthii segmenta 3 v. 6, rarius pauciora, herbacea, concava, decidua, 3 interiora altius inserta. Stamina 6, basi segmentorum inserta v. 3 interioribus rarissime obsoletis; antheræ sessiles, in media facie affixæ, extus dehiscentes. Ovarii carpella 6, distincta v. plus minus connata, 1-locularia, omnia fertilia v. 3 alterna imperfecta v. ad laminas tenues reducta; styli breves v. sub 0, liberi v. connati, stigmatibus plumosis v. papillois; ovula in carpellis solitaria, basilaria, erecta, anatropa. Fructus subcylindracei obovoidei v. columnaris carpella distincta v. connata, angulata costata v. teretia, apicibus rectis v. recurvis, basibus simplicibus v. 2-calcaratis, indehiscentia v. ventre dehiscentia, perfecta sæpius ab axi persistente a basi solvenda, imperfecta dum adsint persistentia, pericarpio sicco v. succulento. Semina erecta, cylindracea v. ovoideo-oblonga, teretia v. compressa, testa tenuiter membranacea; embryo semini conformis, extremitate cotyledonari recta, plumula prope basin extremitatis radicularis inserta.—Herbæ erectæ, scapigeræ, rhizomate tuberoso v. sub 0, in paucis stolonifero, radicibus interdum tuberosis. Folia elongata, plana v. teretiuscula, interdum natantia. Flores parvi v. majusculi, spicati v. pedicellis brevibus racemosi, erecti, ebracteati et ebracteolati.

Species ad 12, in paludibus aquæ dulcis et salæ regionum temperatarum et frigidarum utriusque hemisphæræ vigentes. *Micheli in DC. Monogr. Phanerog.* iii. 96. *Buchen. in Engl. Bot. Jahrb.* ii. 505. *Benth. Fl. Austral.* vii. 165. *Gartn. Fruet.* ii. t. 84. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 23. *Mirb. in Ann. Mus. Par.* xvi. t. 16. *L. C. Rich. in Ann. Mus. Par.* xvii. t. 5. *Schnizl. Icon.* i. t. 49. *Schkuhr, Handb.* t. 102. *Reichb. Ic. Fl. Germ.* vii. t. 51, 51 b, 52. *Griff. Ic. Pl. Asiat.* t. 271. *Engl. in Mart. Fl. Bras.* iii. i. t. 12. *Jacq. Ic. Rar.* t. 454. *Hook. Ic. Pl.* t. 416, 579, 728, 731. *Bot. Mag.* t. 1446. Genus in sectiones 3 divisum:—

1. *Eutriglochin*. Carpella perfecta 3, decidua, imperfecta in axi persistentia. Stamina sæpiissime 3, v. in flore supremo 6.

2. *Cyanogeton*. Carpella distincta, perfecta 3–6, imperfecta 0. Stamina sæpiissime 6. *CYANOGETON*, *Endl. in Ann. Wien. Mus.* ii. 210; *Iconogr.* t. 73.

3. *Maundia*. Carpella 3–4, post anthesin coalita. *MAUNDIA*, *F. Muell. Fragm. Phytogr. Austral.* i. 23.

2. *Scheuchzeria*, Linn. *Gen. n.* 452.—Flores hermaphroditi. Perianthii segmenta 6, oblonga, acuta, coriacea, subcolorata, persistentia, 3 interiora angustiora. Stamina 6, basi perianthii inserta, filamentis flaccidis; antheræ basifixæ, lineares, apiculatæ, extus dehiscentes, exsertæ. Ovarii carpella 3–6, inferne ventre connata, compressa, 1-locularia; stigmata sessilia, obliqua, papillosa, extrorsum spectantia; ovula in loculis 2 v. pauca, basilaria, erecta, anatropa. Carpella matura sæpius 3, divaricata, suborbicularia, inflata, coriacea, ventre dehiscentia, 1–2-sperma. Semina ellipsoidea v. obovoidea, erecta, testa coriacea crassa, membrana interna tenui; embryo semini conformis, extremitate radiculari infera, cotyledonari rotundata, plumula minuta infra medium sita. Herba junciformis, glaberrima, rhizomate repente in caulem erectum foliorum flexuosum producta. Folia semiteretia, apice pervia, basi longe vaginantia. Flores pauci, laxè racemosi, pedicellis basi bracteatis, bracteis basi vaginantibus.

Species 1, paludibus turfosis Europæ, Asiæ et Americæ borealis obvia. *Micheli in DC. Monogr. Phanerog.* iii. 95. *Buchen. in Engl. Bot. Jahrb.* ii. 508. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 24. *Reichb. Ic. Fl. Germ.* x. t. 419. *Schkuhr, Handb.* t. 100.

3. *Tetronotum*, Willd. in *Gen. Nat. Fr. Berl. Mag.* ii. 17. (Cathantes, L. C. Rich. in *Mém. Mus. Par.* i. 365.)—Flores dioici, deflexi. Perianthii obliqui colorati segmenta 4, inæqualia, late ovata, in fl. ♀ angustiora, concava, colorata, 2 superiora altius inserta supremo majore. Stamina 4 (in fl. ♀ 0), basi perianthii inserta; antheræ subsessiles, basi affixæ, late didymæ, extrorsum dehiscentes. Ovarii carpella 4, in fl. ♂ 0, loculis ima basi confluentibus, subulata, supra medium distincta, in stylos subulatos sensim attenuata, 1-locularia, stigmatibus punctiformibus; ovula in loculis solitaria, basilaria, erecta, anatropa. Fructus elongatus, deflexus, subulatus, apice 4-cornutus, imperfecte 4-locularis, sæpiissime 1-spermus. Semen erectum, subcylindraceo-clavatum, obtuse trigonum, testa tenuissima; embryo rectus, teretiusculus, extremitate radiculari attenuata.—Herba parvula, junciformis, glaberrima, rhizomate repente in caulem erectum foliosum flexuosum producta. Folia disticha, equitantia, anguste ensiformia, rigida, acuta, vaginis membranaceis. Flores pauci, spicati, ebracteati, perianthii segmentis rufo-fusco-maculatis, ebracteati.

Species 1, Fugie et insularum Maclovianarum incola. *Micheli* in *DC. Monogr. Phanerog.* iii. 110 (*Catanthes*). *Buchen.* in *Engl. Bot. Jahrb.* ii. 494. *Hook. Ic. Pl.* t. 534. *Hook. f. Fl. Antarct.* ii. t. 128.

4. *Lilsea*, Humb. et Bonpl. *Pl. Æquin.* i. 221, t. 63. (Heterostylus, *Hook. Fl. Bor. Am.* ii. 171, t. 185.)—Flores monoici, perianthio 0. Fl. ♂ in spicis unisexualibus v. androgynis dispositi, bracteati. Stamen 1, minutum, bractæ basi insertum; anthera sessilis, didyma, loculis membranaceis a latere dehiscentibus, connectivo apice latiusculo obtuso hyalino, polline globoso. Fl. ♀: alii minuti, in spicis pedunculatis dispositi, alii majores, ad basin foliorum solitarii, sessiles. Ovarium sessile, lanceolatum, compressum, 1-loculare; stylus in floribus spicatis 0, stigmate disciformi, in solitariis longissimus, filiformis, stigmate capitato; ovulum solitarium, basilare, erectum, anatropum. Fructus oblongo-lanceolatus, compressus, coriaceus, costatus, indehiscens, in fl. spicatis anguste alatus, in solitariis incurvus, 3-gonus, exalatus, apice uno latere dentatus. Semen pericarpio conforme, erectum, testa membranacea; embryo elongatus, rectus, angustus, extremitate radiculari infera, cotyledonari paullo attenuata.—Herba cæspitosa, glaberrima, aquatica v. paludosa, flaccida, rhizomate brevissimo, radicibus fibrosis. Folia lineari-ligulata, submembranacea, integerrima; obtusiuscula, basi vaginantia, nervis parallelis. Spicæ ovoideæ, longe pedunculatæ; bractæ caducæ. Flores ♀ radicales quam spicati multo majores, stylo interdum 3-pollicari.

Species 1 v. 2, Americæ tropicæ et subtropicæ australis et boreali-occidentalis incolæ. *Micheli* in *DC. Monogr. Phanerog.* iii. 111. *Lam. Illustr.* t. 993. *S. Wats. Bot. Calif.* ii. 193. *Schnizl. Iconogr.* i. t. 49. An bractæ pro perianthii segmentum habenda?

## TRIBUS II. APONOGETONÆ.

5. *Aponogeton*, Thunb. *Diss.* i. 73, t. 4. (Spathium, *Edgew. in Journ. As. Soc. Beng.* 1842, 145, *cum ic.*; et in *Calc. Journ. Nat. Hist.* iii. 533, t. 15, 16, non *Lour.*)—Flores hermaphroditii, rarius abortu unisexuales, spicati. Perianthii segmenta (v. bractæ) 2-3, rarius 1 v. 0, petaloidea, æqualia v. inæqualia, ovata obovata v. oblonga, basi lata inserta, persistentia v. tarde decidua. Stamina 6-∞, hypogyna, filamentis inæquilongis subulatis v. filiformibus crassiusculis persistentibus; antheræ parvæ, didymæ; pollen subglobosum v. ellipsoideum. Ovarii carpella 3-6, distincta, oblique ovoidea, sessilia, in stylo brevem v. subelongatum (rarius 0) attenuata, stigmate oblique disciformi v. breviter decurrente; ovula 2-∞, basilaria, sutura ventrali 2-seriatim inserta, erecta v. adscendentia, anatropa. Carpella matura 3 v. plura, oblonga lageniformia v. subglobosa, obtusa v. stylo apiculata, ventre dehiscentia, 2-∞-sperma. Semina erecta, oblongo-lanceolata v. cylindracea, testa carnosae v. membranaceae; embryo rectus, nunc oblongus plumula polyphylla in sinu ventrali infra medium inserta, nunc cylindraceus et homogeneus plumula germinatione tardius evoluta.—Herbæ submersæ, scapigeræ, rhizomate tuberoso interdum stolonifero, radicibus fibrosis. Folia longe petiolata, oblonga v. linearia, erecta v. natantia. Spicæ solitariae v.

(scapo apice 2-cruri) 2-næ, ad apicem scapi sessiles, prima juventute spatha extensoriformi v. fissa hyalina caduca inclusæ. Flores in rhachin apicæ unilaterales et distichi, v. polystichi et undique rhachi inserti, perianthii segmentis (bracteisve) amplis albis v. rarius roseis aut violaceis.

Species ad 20, Asiæ et Africæ tropicæ et temperatæ Australisq[ue] incolæ. *Planch. in Ann. So. Nat. Ser. 3, i. 107. Benth. Fl. Austral. vii. 188. Baker in Trans. Linn. Soc. xxix. 158, et in Journ. Linn. Soc. xviii. 279. Roxb. Cor. Pl. t. 81. Edgew. in Hook. Lond. Journ. iii. t. 17; et t. 18. (Ouvirandra). Bot. Mag. t. 1268, 1293, 6399.*

OUVIRANDRA, *Thou. Gen. Nov. Madag. 2 (HYDROGETON, Pers. Syn. i. 400)* ab *Aponogetone* nullo caractere differt nisi defecta parenchymatis inter nervos folii. *Deless. Ic. Sel. iii. t. 99, 100, Bot. Mag. t. 4894, 5076 (ic. in Fl. des Serres, t. 1107-8, 1421-2, iteratæ). Ill. Hort. t. 300. Regel, Gartenf. t. 387. Edgeworth, in Hook. Lond. Journ. iii. 402, distinguit Aponogetonem ab Ouvirandra (char. reform.) evolutione embryonis, cotyledone in priore sub germinatione elongata plumulam tardius e basi latere evolvente; in posteriore plumula magna 2-folia in sinu elongato embryonis latet. Nos enim sectiones tres *Aponogetonis* ad indolem seminis distinguere possumus sed nullis aliis caracteribus congruentes: 1. Testa carnosula v. subcoriacea, embryo oblongo v. lanceolato ventre excavato, plumula simplici in fissura abscondita; includit *A. elongatum*, F. Muell., *A. spathaceum*, E. Mey., aliosque. 2. Testa carnosula, embryo oblongo, plumula sinui ventrali imposita valde evoluta 2-poly-phylla; includit *A. crispum*, Thunb., *A. fenestrale*, Hook. f., *A. Bernerianum*, Hook. f., *A. undulatum*, Roxb., aliosque. 3. Seminum integumentum duplex, exterius laxum hyalinum et longitudinaliter plicatum, interius coriaceum, bruneum, embryo cylindræo obtuso homogeneo, germinatione in cornu elongato, plumula basin versus cornu tarde evoluta; includit *A. monostachyum*, Linn. f., *A. distichum*, Thunb., *A. vallisnerioidem*, Baker, aliosque.*

### TRIBUS III. POTAMÆ.

6. *Potamogeton*, *Linn. Gen. n. 174.*—Flores hermaphroditi, spicati. Perianthii segmenta 4, rotundata, brevissime unguiculata, concava, herbacea, æstivatione valvata. Stamina 4, unguibus segmentorum inserta; antheræ sessiles, didymæ, loculis connectivo crassiusculo v. tenui sejunctis lateraliter dehiscentibus. Ovarii carpella 4, sessilia, distincta, 1-locularia, in stylum brevem v. brevissimum attenuata, stigmate peltato v. stylo apice introrsum stigmatoso; ovula solitaria, medio v. supra medium anguli interioris carpelli ventre v. apice affixa, campylotropa, micropyle infera. Carpella matura 4, parva, ovoidea v. subglobosa, obtusa v. stigmatibus recurvis apice uncinata, 1-asperma, pericarpio crasse coriaceo spongioso v. indurato, rarissime membranaceo. Semen subreniforme, hilo ventrali v. subapicali, testa membranacea; embryo macropodus, extremitate cotyledonari attenuata uncinata v. involuta, plumula inclusa.—Herbæ aquaticæ, rhizomate repente, ramis dichtomis demersis teretibus v. compressis. Folia distiche alternâ v. rarissime opposita, demersa membranacea, emersa natantia, membranacea v. coriacea; stipulæ intrafoliaceæ, ligulatæ, liberæ v. basi folii v. petioli adnatæ. Pedunculi axillares, emersi, basi spatha membranacea stipati. Flores parvi, virescentes v. rufescentes, ebracteati et ebracteolati.

Species ad 50, cum subspeciebus et varietatibus numerosis quarum multæ pro speciebus auctoribus variis habitæ. *Kunth, Enum. Pl. iii. 127. Robbins in A. Gray, Man. Bot. N. U. St. ed. v. 484. Walp. Ann. i. 766, iii. 604. Benth. Fl. Austral. vii. 169. Gertn. Fruct. ii. t. 84. Mirb. in Ann. Mus. Par. xv. t. 18; L. C. Rich. ibid. xvii. t. 5, f. 31 ad 37. Nees, Gen. Fl. Germ. Monocot. iii. n. 48. Schmeis. Iconog. t. 71. Reichb. Iconogr. Bot. t. 175, 176, 184, 185; Ic. Fl. Germ. t. 18 ad 50. Cosson, Atlas, ed. 2, t. 35 ad 37. Ruiz et Pav. Fl. Per. et Chil. t. 106. Raoul, Fl. Nov. Zel. t. 7.*

SPIRILLUS, *J. Gay in Comptes Rend. Acad. Sc. April, 1854*, genus ad *P. hybridum*, Mich. (*P. Spirillum*, Tuckerm.), conditum floribus ♀ solitariis submersis una cum emersis spicatis hermaphroditis, pericarpio membranaceo, embryo involuto et rhizomate continuo (nec sympodiali).

GROENLANDIA, *J. Gay l. c. ad P. densum*, L., condita, a congeneribus plerisque differt, pericarpio membranaceo, et embryo apice circumvoluto.

PELOPIS, *Rafin. Journ. Phys. lxxxix. 101*, genus ad *P. perfoliatum* stabilitum fuit.

7. *Uppia*, *Linn. Gen. n. 175.*—Flores hermaphroditi, spicati. Perianthium 0. Stamina 2, opposita (v. 4 antheris 1-locularibus), filamentis brevissimis latis; antheræ

dorsifixæ, loculis reniformibus connectivo disjunctis rimis extrorsum dehiscentibus; pollen tubulosum, curvulum. Ovarii carpella 4 v. plura; stigmata sessilia, peltata v. umbilicata; ovula solitaria, ab apice loculi pendula, campylotropa. Carpella matura 4 v. pauciora, pedunculo elongato spiraliter torto inserta, longe stipitata, oblique ovoidea, truncata, indehiscentia, pericarpio duro extus carnosulo. Semina pendula, uncinata, testa membranacea; embryo macropodus, extremitate cotyledonari infra apicem attenuata inflexa, plumula immersa.—Herbæ aquaticæ, cæspitosæ, dichotome ramosæ, rhizomate filiformi, caulibus filiformibus foliosis. Folia opposita et alterna, longe et anguste linearia v. setacea, basi vaginantia, vaginis stipuliformibus. Spica terminalis, 2-6-(æpissime 2-) flora, primum vagina folii inclusa, demum valde elongata. Flores et fructus parvuli, ebracteati et ebracteolati.

Species 1 v. plures, paludibus salis per regiones temperatas et subtropicas incolæ. *Kunth, Enum. Pl.* iii. 122. *Walp. Ann.* i. 766. *Gertn. Fruct.* ii. t. 84. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 47. *Mirbel in Ann. Mus. Par.* xvi. t. 18; *L. C. Rich. ibid.* xvii. t. 5. *Reichb. Iconogr. Bot.* t. 174. *Is. Fl. Germ.* vii. t. 17. *Griff. Ic. Pl. Asiat.* t. 257 ad 259. *Durieu, Expl. Alger.* t. 46.

#### TRIBUS IV. POSIDONIEÆ.

8. *Posidonia*, *Kæn. in Kæn. et Sims, Ann. Bot.* ii. 95, t. 6. (*Kerner, Willd. Sp. Pl.* iv. 947. *Tænidium*, *Targ. Tozz. Cat. Veg. Mar.* 80, t. 1. *Caulinia*, *DC. Fl. Fr.* iii. 156, non *Willd.*)—Flores hermaphroditi, spicati. Perianthii segmenta 0, v. 3 membranacea caduca. Stamina 3-4, hypogyna; antheræ magnæ, sessiles, hastato-cordatæ, connectivo crasso ovato-lanceolato loculis prope basin remotis, v. orbiculari et longe aristato loculis costæ utrinque positis; pollen confervoideum. Ovarium elongato-ovoideum, sessile, compressum, 1-loculare; stigma sessile, incrassatum, discoideum, muricatum v. inæqualiter dentatum; ovulum elongatum, parieti loculi adnatum, apice et basi liberum, micropyle infera. Fructus ovoideus, crasse carnosus, paullo compressus. Semen oblongum, teretiusculum, testa evanida (v. pericarpio adnata); embryo solidus, ventre longitudinaliter depressus, extremitate cotyledonari recto.—Herbæ submersæ, rhizomate robusto repente vestigiis fibrosis foliorum vetustorum operto, ramis nodosis. Folia ad apices ramorum congesta, distiche imbricata, lineari-elongata, obtusa, integerrima v. serrulata, nervosa et transverse venosa, vaginarum marginibus anguste inflexis. Pedunculi plures, axillares et terminales, stricti, rigidi, compressi, basi foliis abbreviatis vaginati. Flores pauci, alterni, terminali interdum masculo, bracteati.

Species 2, altera Mediterranea, altera marium Australiæ incola. *Kunth, Enum. Pl.* iii. 221. *Benth. Fl. Austral.* vii. 175. *Brongn. et Gris. in Bull. Soc. Bot. Fr.* vii. 472. *St. Pierre, ibid.* iv. 577 et vii. 474. *J. Gay, ibid.* vii. 453. *Aschers. in Linnaea*, xxxv. 170, et in *Nuov. Giorn. Bot. Ital.* i. 185. *Reichb. Ic. Fl. Germ.* viii. t. 5. In specie Europæa perianthium 0, antheræ 4 latissimæ convolutivo-imbricatæ aristatæ, et stigma creberrime muricatum; in exemplaribus male conservatis speciei Australasiæ (an genus distinctum?) si nos non fallimus perianthii foliola 3 reniformia ad basin staminum, antheræ ovato-cordatæ loculis (imperfectis?) inconspicuis, et stigma crassum, spinulis paucis crassis erectis instructum.

9. *Amphibolis*, *Agardh. Syst. Alg.* 192. (*Graumueller, Reichb. Conspect.* 43.)—Flores unisexuales. Fl. ♂: Perianthium 0. Stamina 4, filamentis brevibus in stipitem connatis; antheræ sessiles, in corpus oblongum connatæ, apicibus liberis 2-fidis, loculis rimis longitudinalibus dehiscentibus; pollen confervoideum. Fl. ♀ spicati, bracteati. Perianthii foliola 2, ovato v. oblongo-lanceolata. Ovarii carpellum solitarium, sessile, crassum, obtusum; stigma sessile, subglobosum, ovario crassius, obscure 4-lobum; ovulum . . .—Fructus oblique ellipsoideo-lanceolatus, compressus, apice longe attenuatus, pericarpio crasse carnosus. Semen erectum, loculum implens, testa tenuiter membranacea; embryo macropodus, oblique ovoideo-oblongus, extremitate cotyledonari infra apicem embryonis attenuata subulata recta apice flexuosa.—Herba submersa, rhizomate rigido repente, ad articulos nodoso et radicante, caulibus parce ramosis rigidis annulatis. Folia apices versus ramorum distiche imbricata, ligulata, apicibus truncatis v. excisis, plurinervia, basi vagi-

nantia, vaginis superne in ligulam brevem productis marginibus infractis. Spicæ ♀ pedunculus subcompressus, floribus 3-4 alternis sessilibus; bracteæ perianthii segmentis connatis, tandem deciduæ.

Species 1, orum Australiæ incolæ. *Aschers. in Linnæa*, xxxv. 164. *F. Muell. Fragm. Phyt. Austral.* iv. 113. *Labill. Pl. Nov. Holl.* ii. t. 264 (*Ruppia*). *Gaud. in Freyc. Voy. Bot.* t. 40, f. 2 (*Ruppia*).

Flores a nobis non visi; descriptio fl. ♂ ad Gaudichaudium, fl. ♀ et fructus ad Muellermum. Genus ut nobis videtur *Posidonieæ* quam maxime affine.

#### TRIBUS V. ZANNICHELLIÆ.

10. *Zannichellia*, *Linn. Gen. n.* 1034.—Flores monoici, axillares, ♂ et ♀ vaginis hyalinis inclusi. Fl. ♂ infra foemineum solitarius. Perianthium 0. Stamen 1, filamentum gracili elongato; anthera basifixa, linearis, connectivo apiculato, 2-3-locularis, loculis rimis lateralibus dehiscentibus; pollen globosum. Fl. ♀ sessilis. Perianthium breve, cupulare, hyalinum. Ovarii carpella 2-9, sessilia, oblongo-reniformia, in stylum brevem v. elongatum attenuata, stigmatibus magnis oblique peltatis; ovula solitaria, ab apice loculi pendula, orthotropa. Carpella matura sæpius 4, sessilia v. stipitata, oblongo-reniformia, compressa, dorso undulata v. crenata, stylo terminata. Semen pendulum, loculo conforme, testa tenuissima; embryo subcylindraceus, curvulus, extremitate cotyledonari attenuata ter induplicata.—Herbæ aquaticæ, submersæ, tenerrimæ, rhizomate repente filiformi nodoso-incrassato, caulibus intertextis ramosis capillaceis. Folia submersa, plerumque opposita, linearia, basi vaginantia, vaginis stipuliformibus. Flores minuti, primum terminales, sed evolutione rami axillares.

Species 1 v. plures, in paludibus salsis totius orbis obviæ. *Kunth, Enum. Pl.* iii. 123. *Walp. Ann.* i. 766, vi. 1. *Gærtn. Fruct. i.* t. 19. *Nees, Gen. Pl. Germ. Monocot.* iii. n. 46. *Schmizl. Leonog.* t. 71. *Mirb. in Ann. Mus. Par.* xvi. 18. *L. C. Rich. ibid.* xvii. t. 5, f. 38 ad 41. *Reichb. Iconogr. Bot.* t. 756 ad 760; *l.c. Pl. Germ.* vii. t. 16. *Treviran. Symbol.* t. 45 ad 47. *Steinh. in Ann. Sc. Nat. Ser. 2;* ix. 87, t. 3, 4. *Griff. Notul.* iii. 190; *l.c. Pl. Asiat.* t. 255, 256.

11. *Althenia*, *Petit in Ann. Sc. Observ.* i. 451, cum ic.—Flores monoici, axillares, ♂ cum ♀ vaginis elongatis hyalinis inclusi. Fl. ♂ ad basin pedicelli ♀ solitarius, longe pedicellatus. Perianthii squamulæ 3, minimæ. Stamen 1; anthera sessilis, oblonga, 1-locularis, longitudinaliter dehiscens, valvis demum solutis; pollen globosum. Fl. ♀ pedicellatus. Perianthii segmenta 1-3, angusta, hyalina, integra v. lacera. Ovarii carpella 3, distincta, oblonga, stipitata, in stylos validos filiformes attenuata, stigmatibus magnis obliquis capitatis; ovulum solitarium, ab apice loculi pendulum, orthotropum. Carpellum maturum lanceolatum v. oblongum, compressum, marginibus incrassatis v. alatis, styli basi terminatum, pericarpio coriaceo indehiscente v. tarde dehiscente. Semen pendulum, oblongum, compressum, testa membranacea; embryo rectus, oblongus, extremitate cotyledonari infra apicem attenuata spiraliter involuta, radiculari crassa infera.—Herbæ aquaticæ, submersæ, tenerrimæ, rhizomate repente filiformi nodoso-articulato, caulibus cæspitosis ramosis capillaceis. Folia ad nodos congesta, breviuscula, setacea, basi late vaginantia, vaginis in ligulam latam elongatam concavam productis, floralia ad vaginas hyalinas demum fissas reducta. Flores minuti.

Species 2, aquarum mortuarum salsarum Galliæ meridionalis, Hispaniæ, Siciliæ, et Algeriæ incolæ. *Kunth, Enum. Pl.* iii. 125. *Reichb. Iconogr. Bot.* t. 755. *Prillieux in Ann. Sc. Nat. Ser. 5,* ii. 169, t. 15, 16. *Duval Joue in Bull. Soc. Bot. Fr.* xix. 80, t. 5.

12. *Lepilena*, *J. Drummond ex Harv. in Hook. Kew Journ.* vii. 58. (*Hexathea*, *Sond. ex F. Muell. Fragm. Phyt. Austral.* viii. 217.)—Flores monoici v. dioici, axillares, vaginis hyalinis inclusi. Fl. ♂ solitarius, pedicellatus. Perianthii squamulæ 3, minutæ, truncatæ. Antheræ 2-3, sessiles, ope connectivorum in columnam ellipsoideo-oblongam apiculatam connatæ, 2-loculares; loculis longitudinaliter dehiscentibus; pollen globosum. Fl. ♀ sessilis v. pedicellatus. Perianthii segmenta 3, oblonga, obtusa, hyalina. Ovarii

carpella 3, distincta, sessilia v. breviter stipitata, in stylum brevem v. elongatum attenuata, stigmatibus oblongis v. spathulatis; ovula solitaria, ab apice loculi pendula, orthotropa. Carpella matura oblonga, stylo apiculata, indehiscencia, pericarpio coriaceo. Semen oblongo-cylindraceum, testa membranacea; embryo macropodus, elongatus, extremitate cotyledonari ter inflexa, radícula obtusa.—Herbæ submersæ, tenerrimæ, rhizomate repente filiformi nodoso-articulato, caulibus cespitosis ramosis capillaribus. Folia ad nodos congesta, tenuissima, integerrima v. serrulata, basi lata vaginantia, vagina in ligulam elongatam simplicem v. 2-fidam producta, floralibus ad vaginas reductis. Flores minuti.

Species 3, in aquis salis et dulcibus Australiæ vigentes. *Benth. Fl. Austral.* vii. 179.

#### TRIBUS VI. ZOSTERÆ.

13. *Zostera*, Linn. *Gen.* n. 1032. (*Alga*, Lam. *Fl. Fr. ed. i.* iii. 539.)—Flores in eodem v. diversis spadicebus complanatis monoici, secundi. Perianthium 0. Fl. ♂: Anthera 1, in spadicem prona, dorsifixa, cylindracea, curva, utrinque obtusa, 1-locularis, membranacea, rima antica dehiscens; pollen confervoideum. Fl. ♀: Carpellum solitarium, in spadicem pronum et supra medium puncto affixum, in stylum brevem subulatum attenuatum, stigmatibus 2 capillaribus; ovulum solitarium, ab apice loculi pendulum, orthotropum. Carpellum maturum lageniforme, membranaceum, pendulum, irregulariter ruptum. Semen pendulum, oblongum v. subglobosum, testa firme membranacea, striata; embryo ellipsoideo-oblongus, antice profunde longitudinaliter sulcatus, extremitate cotyledonari medio sulco imposita caudiformi sigmoidea.—Herbæ submersæ, rhizomate tenui repente ad nodos radicante, caulibus simplicibus v. ramosis gracilibus foliosis, ramis intricatis. Folia disticha, anguste linearia, 1-5 nervia, basi vaginantia, vaginæ stipuleformes marginibus inflexis. Spadix linearis, foliiformis, marginibus nudis v. bracteis oblongis instructis, primum in spatha elongata apice in folium producta inclusus. Flores in superficie spadiceis 2-seriati, alterni, oblique oppositi, stylis ♀ intus spectantibus.

Species 4, marium temperatarum orbis veteris incolæ. *Kunth, Enum. Pl.* iii. 115. *Walp. Ann.* vi. 1. *Lanessan in Assoc. Franc. Sc. Congrès, Nantes*, 1875. *Benth. Fl. Austral.* vii. 175. *Aschers. in Linnaea*, xxxv. 165, et in *Nuov. Giorn. Bot. Ital.* ii. 162. *Gartn. Fruct.* i. t. 19. *Schmizl. Iconogr.* t. 71. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 43. *Mirb. in Ann. Mus. Par.* xvi. t. 19. *Reichb. Ic. Fl. Germ.* vii. t. 2 ad 4. *Ehrenb. et Hempr. Symb.* t. 5, 6.

14. *Phyllospadix*, Hook. *Fl. Bor. Am.* ii. 171, t. 186.—Flores dioici, in spadicebus complanatis secundi. Perianthium 0. Fl. ♂: Anthera in spadicem prona, dorsifixa, cylindracea, curva, utrinque obtusa, 1-locularis, membranacea, rima antica dehiscens; pollen confervoideum. Fl. ♀: Carpellum solitarium, late ovoideo-cordatum, a dorso compressum, basi intrusa spadici insertum, in stylum brevem attenuatum, stigmatibus 2 capillaribus; ovulum ab apice loculi pendulum, orthotropum. Fructus late sagittato-cordatus, basi utrinque acute productus, coriaceus, indehiscens. Semen pendulum, obtuse rhomboideum, paullo a dorso compressum, testa membranacea; embryo semini conformis, dorso rotundatus, ventre obscure 2-lobus, extremitate cotyledonari parvula linguiformi inter lobos posita decurva.—Herbæ submersæ, rhizomate tuberoso lobato reliquiis rigidis fibrosis foliorum vetustorum onusto; caulibus gracilibus simpliciusculis elongatis. Folia longe angustaque linearia, coriacea, basi longe angusta vaginantia, vaginis sursum in ligulam brevem productis, marginibus stipuliformibus. Spadix linearis, dorso nudus, marginibus bracteis oblongis imbricatis primum floribus incumbenibus demum patentibus onustis, spatha elongata apice in folium producta primum inclusus. Flores in spadice 2-seriati, alterni, oblique oppositi, foemineorum stigmatibus intus spectantibus.

Species 2, oræ Americæ boreali-occidentalis incolæ. *S. Wats. Bot. Calif.* ii. 192. *Rupr. in Mem. Acad. Petersb.* ix. t. 1, 2.

## TRIBUS VII. NAIADÆÆ.

15. *Najas*, Linn. Gen. n. 1096.—Flores monoici v. dioici, axillares. Fl. ♂ sessilis v. pedicellatus. Perianthium duplex, exterius tubulosum v. ventricosum integrum v. 4-fidum; internum tenuissime hyalinum, antheræ coadunatum. Stamen 1; anthera sessilis, ellipsoidea v. oblonga, 1-4-locularis, apiculata v. 2-cuspidata, loculis rimis longitudinalibus dehiscentibus; pollen globosum. Fl. ♀: Perianthium 0, v. tenuissimum, carpello adhærens. Ovarii carpellum solitarium, sessile, ellipsoideum v. lanceolatum, apice angustatum, stigmatibus 2-4-subulatis v. capillaribus; ovulum basilare, erectum, anatropum. Carpellum maturum oblongum v. ellipsoideum, indehiscens, pericarpio crustaceo v. subdrupaceo. Semen pericarpio conforme, erectum, testa tenuissima; embryo semini conformis, rectus, extremitate cotyledonari supra radiculari consimili, plumula immersa.—Herbæ teneræ, submersæ, rhizomate filiformi repente, caulibus ramosis sæpius filiformibus interdum molliter muricatis. Folia opposita alterna v. 3-natim verticillata, linearia, integerrima serrulata v. sinuato-dentata, enervia, basi breviter vaginantia. Flores solitarii v. glomerati.

Species ad 10, aquarum dulcium regionum tropicarum et temperatarum incolæ. Kunth, Enum. Pl. iii. 111. Benth. Fl. Austral. vii. 181. Magnus in Nuov. Giorn. Bot. Ital. ii. 187. Griff. Notul. iii. 181; Ic. Pl. Asiat. t. 237 ad 254.

Genus in sectiones 2 divinum:—

1. *Eunaias*. Flores dioici, subsolitarii. Anthera 4-locularis, pedicellus spathella calyptriformi demum fissa apice 2-cuspidata inclusus, perianthio 4-fido. Fl. ♀ perianthio 0. Caulis et folia molliter muricata. *NAIAS*, Willd. in Mem. Acad. Sc. Berlin, 1798, 87. Schnizl. Iconogr. t. 71. Nees, Gen. Fl. Germ. Monocot. iii. n. 44. Schkuhr, Handb. t. 296. L. C. Rich. in Ann. Mus. Par. xvii. t. 1. Theden. in Flora, 1840, 305, t. 5. Delile, Fl. Eg. t. 50. Griff. Ic. Pl. Asiat. t. 251 ad 254. Hook. Fl. Bor. Am. t. 184. FLUVIALIS, Michel, Nov. Gen. t. 8.

2. *Caulinia*. Flores monoici, glomerati. Anthera 1-4-locularis, perianthio apice denticulato. Fl. ♀ perianthio carpello adhærente. Caulis et folia inermia. Delile, Fl. Eg. t. 50, f. 3. Schkuhr, Handb. t. 296. CAULINIA, Willd. in Mem. Acad. Sc. Berlin, 1798, 87, et in Kan. et Sims, Ann. Bot. ii. 48, t. 1, 2. Nees, Gen. Fl. Germ. Monocot. ii. n. 45. FLUVIALIS, Pers. Syn. ii. 530. Balb. et Nocca, Fl. Ticin. ii. t. 15. ITTNEBA, Gmel. Fl. Bad. iii. t. 4.

## TRIBUS VIII. CYMODOCÆÆ

16. *Cymodocea*, Kæn. in Kæn. et Sims Ann. Bot. ii. 96, t. 7.—Flores monoici v. dioici, axillares, vaginis membranaceis v. foliaceis inclusi. Perianthium 0. Fl. ♂: Antheræ 2, ad apicem stipitis (filamenti?) elongati sessiles, a dorso in corpus oblongum connatæ, loculis basi et apice distinctis rimis longitudinalibus extrorsum dehiscentibus; pollen confervoideum. Fl. ♀: Ovarii carpella 2, distincta, subsessilia, ovoidea, compressa v. tumida, in stylum attenuata, stigmatibus elongato-subulatis recurvis; ovula solitaria, sub apice loculi pendula, orthotropa. Carpella matura oblique ovoidea, sessilia v. stipitata, tumida v. compressa marginibus rotundatis, v. complanata et marginata, indehiscencia, pericarpio coriaceo v. subsucculento intus indurato. Semen pendulum, late ovoideum v. oblongum, compressum v. complanatum, testa crassiuscula; embryo semini conformis, extremitate cotyledonari medio lateri posita caudiformi adscedente margini embryonis applicita.—Herbæ submersæ, rhizomate rigido repente, nodis articulatis et radicantibus, caulibus brevibus simplicibus erectis v. elongatis et dichotome ramosis. Folia graminea, ad nodos fasciculata v. apices versus ramorum dense distiche imbricata, brevia v. elongata, obtusa, integerrima v. serrulata, basi vaginantia, vaginis stipuliformibus in ligulam brevem productis. Flores in axillis infimis solitarii v. in ramis floriferis numerosi.

Species 3, orum maritimorum tropicorum et subtropicorum orbis veteri et Australiæ incolæ. Kunth,

*Enum.* iii. 118. *Benth. Fl. Austral.* vii. 177, excl. sp. 1. *Ascherson in Linnæa*, xxxv, 160, et in *Nuov. Giorn. Bot. Ital.* ii. 180.

Genus ab *Aschersonio* in sectiones sequentes divisum:—

1. *Phycagrostis*. Flores in ramos foliosos terminales, axibus floriferis spicam foliosam mentientibus. Folia plana, plurinervia, apicem versus plus minusve dentata. *CYMODOCEA*, *Kæn.* l. c. *PHUCAGROSTIS*, *Willd. Sp. Pl.* iv. 649. *Bornet in Ann. Sc. Nat. Ser. v.* i. 5, t. 1 ad 11. *Carolini in Usteri, Neue Ann.* v. 42, t. 3, errore 4 (*P. major*).

2. *Phyoschænus*. Inflorescentia dichotome cymosa, multiflora, floribus bracteis haud foliosis stipatis. Folia subulato-teretiuscula, carnosula. Species 1, Indica (*C. isoetæfolia*, *Asch.*).

*HALODULA*, *Endl. Gen. Pl.* 1368. *Miq. Fl. Ind. Bat.* iii. 227. *Aschers. in Linnæa*, xxxv. 163. *Solms-Laub. in Schweinf. Beitr. Fl. Æthiop.* 196. (*DIPLANTHERA*, *Thou. Gen. Nov. Madagasc.* 3. *Steinh. in Ann. Sc. Nat. Ser. 2*, ix. 98, t. 3 B). Genus prorsus ignotum ex descriptionibus *Cymodoceæ* valde affine. Species enumeratæ sunt: 1. *H. australis*, *Miq.*, Madagascariæ et ins. Malayanarum incola. 2. *H. Wrightii*, *Aschers.*, Cubensis. Harum fructum *H. Wrightii* tantum vidimus minutus est, globosus, stylo capillari persistente, pericarpio crasse coriaceo; semen globosum, parietale, basi lata loculo affixum, testa crassiuscula; embryo globosus, superne 2-lobus, extremitate cotyledonari brevi vermiformi adscendente in sinu embryonis posita.

## ORDO CXCVI. ERIOCAULEÆ.

*Endl. Gen. Pl.* 122. *Lindl. Veg. Kingd.* 122. *Körnicker, Monogr. in Linnæa*, xxvii. 564; et in *Mart. Fl. Bras.* iii. i. 273.

Flores minimi, regulares v. vix irregulares, unisexuales, in capitulis sæpissime androgynis densissime aggregati. *Perianthium* scariosum hyalinum v. tenuiter membranaceum, duplici serie 3-merum v. 2-merum, exterioris segmenta 3 v. 2, distincta v. rarius præsertim in fl. ♂ basi v. altius connata v. in fl. ♀ in speciebus paucis desunt; interius in fl. ♂ sæpissime stipitatum (ad apicem tori stipitifformis v. clavati affixum), cyathiforme v. tubuloso-campanulatum, 3- v. 2-lobum v. e segmentis 3 v. 2 distinctis compositum, rarius deficiens; in fl. ♀ *perianthium* interius ab exteriori sæpius parum distat interdum tamen ut in mare longiuscule stipitatum, e segmentis 3 v. 2 distinctis v. medio coherentibus compositum, v. rarius deficiens. *Stamina* in fl. ♂ basi v. prope basin *perianthii* interioris affixa, ejusque lobis segmentisve nunc numero æqualia et opposita, nunc numero dupla segmentis opposita et alterna, v. interdum abortu pauciora, *perianthio* inclusa v. breviter exserta; filamenta distincta, filiformia v. leviter complanata. *Anthera* parvula, ovata v. oblonga, prope basin dorsifixæ, loculis sæpius 2 discretis parallelis rimis longitudinalibus dehiscentibus; rarius sub-1-loculares, antice sulcatæ et rima unica dehiscentes, polline emissio apertæ evidenter 1-loculares; *staminodia* in fl. ♀ rara, minima. *Ovarium* in fl. ♀ intra *perianthium* interius sessile v. rarius breviter stipitatum, breve, 3- v. 2-loculare sæpeque 3- v. 2-lobum. *Stylus* terminalis, filiformis, superne v. jam infra medium in ramos 3 v. 2 indivisos v. 2-fidos superne introrsum stigmatosos divisus, interdumque lobis intermediis polymorphis appendiculatus. *Ovula* in loculis solitaria, pendula, orthotropa. *Fructus* ovario conformis nec multum auctus, membranaceus, 3- v. 2-locularis, loculis longitudinaliter dehiscentibus. *Semina* in loculis solitaria, pendula, ovoidea oblonga v. subglobosa, testa appressa sæpius striata v. minute tuberculata. *Albumen* farinaceum v. laxè carnosum. *Embryo* parvus, lenticularis turbinatus v. obovoideus, ab hilo remotus, albumini applicitus.

Herbæ paludosæ uliginosæ aquaticæ v. campestres, perennes v. rarius annuæ, nunc caule brevissimo cæspitosæ, acaules dictæ, nunc caule foliato plus minus evoluto simplici v. ramoso. Folia angusta, sæpius breviter linearia, haud raro laxè fenestrato-venosa subpellucida v. fistulosa, interdum rigidule membranacea, in caule brevissimo v. ad apicem

caulis dense conferta, v. secus caulem sparsa. Scapi v. pedunculi in cœspite radicali solitarii v. plures, v. ad axillas foliorum superiorum sparsi, interdum fasciculum seu umbellam densam formantes, singuli monocephali v. rarius apice confertim pleiocephali, basi vagina cylindracea clausa inclusi, cæterum nudi. Capitula primum sæpe hemisphærica v. depressa, demum haud raro globosa, rarius oblonga v. breviter cylindracea. Bractæe exteriores vacuæ, sæpius 2-co-seriatim imbricatæ floribus breviores v. paullo longiores, rarius præsertim seriei interioris plus minus elongatæ radiato-patentes; interiores sub quoque flore sæpius perianthii exterioris segmentis subsimiles. Flores sæpius numerosissimi, minimi, in receptaculo concavo dilatato convexo v. subgloboso sessiles v. brevissime pedicellati, perianthiis cum bracteis interioribus nunc apice dense ciliato-villosis villis haud raro candidis, nunc parce pilosulis v. glabris; flores ♂ et ♀ in capitulo irregulariter mixti v. ♀ plures in ambitu ♂ in centro, rarius in capitulis distinctis separati. Capitula fructifera sæpius florentibus magis globosa, cæterum paullo tantum majora.

Species notæ ad 325, per regiones calidiores utriusque orbis late dispersæ, paucae ultra tropicos in Asia orientali, Australia, Africa australi, America australi v. Americæ borealis civitatibus orientali-bus obviæ; in Asia Rossica in Europa et in Africa boreali desunt, una excepta ex Americanis in Hibernia et Scotia maxime occidentali vigente.

Ordo naturalis et bene limitatus, olim in *Restiaceis* inclusus, a quibus facile distinguitur habitu, inflorescentia, et perianthii minimi segmentis hyalinis v. scariosis nec glumaceis. Species a Kœrnickio diligenter scrutatæ et in locis citatis fusius descriptæ; genera tamen in quibus post Martium et Kunthium distribuuntur minus definita sunt, nec quoad omnes species naturalia evadunt. Species nonnullæ *Eriocauli*, *Pæpalanthi* et *Lachnocauli* inter se adeo similes ut non nisi scrutatione accuratissima separandæ, dum nonnullæ generum duo majorum imprimis *Pæpalanthi* habitum valde polymorphum exhibent, et auctores nonnulli ordinem totum præter Toninam pro genere unico habent. Hic tamen, distributionem a Kœrnickio propositam pro maxima parte secuti sumus, meliore nobis non occurrente.

#### CONSPECTUS GENERUM.

\* *Antherarum loculi 2, discreti, rimis distinctis 2-valvatim dehiscentes.*

1. **ERIOCAULON.** Perianthium interius e segmentis v. dentibus distinctis sæpius intus glandula notatis compositum, rarius in fl. ♀ 0. Stamina in flore 3-mero 6 in flore 2-mero 4, v. abortu pauciora. Stylus inappendiculatus. Herbæ sæpissime subcaules, foliis radicalibus confertis, scapis monocephalis (rarius caule submerso foliato elongato). Bractæe involucrantes non radiantes.—*Area tota ordinis.*

2. **MESANTHERUM.** Perianthium interius in fl. ♂ tubulosum, 3-merum. Stamina 6, tubo 2-seriatim inclusa. Stylus inappendiculatus. Habitus *Eriocauli* specierum validiorum. Bractæe involucrantes interiores plus minus radiato-patentes.—*Afr. trop., ins. Mascarens.*

3. **PÆPALANTHUS.** Perianthium interius eglandulosum. Stamina in flore 3-mero 3, in flore 2-mero 2. Stylus sæpius inter ramos stigmatosos appendiculis alternis instructus. Habitus nunc omnino *Eriocauli*, nunc sæpius caule foliato plus minus evoluto, interdum robusto ramoso-que.—*Amer. austr., Ind. occid., cum specie una bor.-Amer. et una Afr. austr.*

\*\* *Antheræ antice sulcatæ, rima unica dehiscentes, apertæ 1-loculares.*

4. **PHILODICE.** Perianthium interius eglandulosum. Stamina in flore 3-mero 3 v. 2. Stylus inter ramos stigmatosos appendiculis alternis instructus. Herbæ humiles, foliosæ, habitu specierum minorum foliatarum *Pæpalanthi*.—*Brasilia, Guiana.*

5. **LACHNOCAULON.** Perianthium interius 0. Stamina in flore 3-mero 3. Stylus inter ramos stigmatosos appendiculis alternis minimis instructus. Habitus *Eriocauli*.—*Amer. bor.*

6. **TONINA.** Perianthium interius minimum, eglandulosum, in fl. ♀ longissime ciliato-fimbriatum. Stamina in flore 3-mero 3. Stylus inter ramos stigmatosos appendiculis alternis instructus. Caules foliosi longe procumbentes, basi radicales. Capitula globosa, bracteis perianthiorumque segmentis exterioribus quasi echinata, ad axillas breviter pedunculata v. subsessilia.—*Amer. trop.*

1. **Eriocaulon**, Linn. *Gen. n.* 100. (*Randalia*, *Sphaerochloa* et *Symphachne*, Beauv. ex Desv. in *Ann. Sc. Nat. ser. 1*, xiii. 47, t. 5. *Nasmythia*, Huds. *Fl. Angl. (ed. 2)* 414.

*Leucocephala*, *Roxb. Fl. Ind.* iii. 612. *Electrosperma*, *F. Muell. in Trans. Phil. Soc. Vict.* i. 23. *Lasiolepis*, *Bæckeler in Flora*, 1873, 90, quoad *L. brevifoliam* et *L. aquaticam*. *Chaetodiscus*, *Steud. Syn. Pl. Gl.* ii. 261, ex char. *manco.*)—Perianthii exterioris segmenta 3 v. 2, distincta v. in floribus ♂ varie connata, cæterum in utroque sexu polymorpha, rarius in floribus ♀ 0; perianthium interius ad apicem stipitis e segmentis v. dentibus 3 v. 2, sæpius præsertim in fl. ♂ intus glandula notatis, rarius in fl. ♀ 0. Stamina in fl. ♂ numero segmentorum dupla v. abortu pauciora, 3 v. 2 segmentis interioribus opposita, 3 v. 2 alterna; antheræ distincte 2-loculares; staminodia in fl. ♀ 0. Ovarium in fl. ♀ sessile, 3- v. 2-lobum, 3- v. 2-loculare; stylus columnaris v. filiformis, apice 3- v. 2-fidus inappendiculatus; pistilli rudimentum in fl. ♂ parvum 3-fidum, v. rarius 0. Fructus et semina ordinis.—Herbæ sæpius paludosæ v. aquaticæ, annuæ v. perennes, sæpius sic dictæ acaules, caule nempe brevissimo foliis quasi radicalibus rosulatis v. cæspitosis; in *E. setaceo*, *Linn.*, paucisque affinibus aquaticis caulis elongatus undique tenuiter foliatus, et in *E. striati*, *Körn.*, varietate caulis elongatus robustus ramosusque. Scapi v. pedunculi ad axillas foliorum superiorum semper 1-cephali, foliis multo longiores. Bractæe involucrantes imbricatæ, floribus breviores v. vix longiores, rarius longiores scariosæque nec radiantes; bractæe interiores et perianthii segmenta exteriora dense ciliata villosa pubescentia v. glabra. Flores plerique masculi in centro capituli, foeminei in ambitu, interdum tamen undique mixti. Antherarum loculi semper bene distincti, sæpius nigricantes.

Species a *Körn.* enumeratæ 100, per totam aream ordinis dispersæ, fere omnes tropicæ v. subtropicæ, in Asia, Africa et Australia numerosæ et plures *Körn.*ianis addendæ, perpaucæ extra tropicos in Africa australi, Asia orientali et Australia extensæ, in America australi minus copiosæ, in America boreali-occidentali desunt, in civitatibus orientalibus paucæ adsunt, quarum una etiam in Britannia boreali-occidentali invenitur. *Kunth, Enum. Pl.* iii. 539. *Mart. in Wall. Pl. As. Rar.* iii. 25, t. 248, 249. *Benth. Fl. Austral.* vii. 190. *Körn. in Linnaea*, xxvii. 577, et in *Mart. Fl. Bras.* iii. i. 473, t. 60 ad 63. *Lam. Illustr. t.* 50, f. 1, 2. *Hook. Fl. Lond.* iv. t. 52. *Royle, Illustr. Bot. Himal. t.* 97. *Griff. Ic. Pl. Asiat. t.* 159 ad 161. *Bot. Mag. t.* 3126. *Lodd. Bot. Cab. t.* 1310.

Species etsi numerosæ, inter se habitu parum differunt nec bene in sectiones distinctas distribuendæ. Series 2 nimis artificiales distinguuntur: 1, floribus semper 2-meris; et 2, floribus 3-meris, et *Körn.*ie subgenera nonnulla proposuit imprimis ad formam bractearum et perianthii segmentorum, quæ tamen sæpe variant de specie in speciem, nec cum differentiis habitus comitantur.

2. *Mesanthemum*, *Körn. in Linnaea*, xxvii. 572.—Perianthii exterioris segmenta 3, distincta, hyalina, in fl. ♂ ovalia basi interdum breviter cohærentia, in fl. ♀ breviora latiora; interioris segmenta in tubum breviter 3-lobum connata, v. in fl. ♀ unguibus basi breviter solutis, apice in fl. ♂ longe in fl. ♀ breviter ciliata, intus infra apicem glandula instructa. Stamina in fl. ♂ 6, tubo 2-seriatim inclusa; antheræ distincte 2-loculares. Ovarium in fl. ♀ sessile, 3-loculare; stylus superne 3-fidus, appendiculis 0; pistilli rudimentum in fl. ♂ parvum, 3-partitum. Semina subglobosa, papilloso-tuberculosa.—Plantæ robustæ habitu *Eriocauli decangularis*, *Linn.*, sæpius plus minus pilis laxis pubescentes. Rhizoma crassum, rarius infra foliorum cæspitem breviter productum. Folia longiuscula. Scapi rigiduli, 1-cephali. Capitulum hemisphæricum, bracteis involucrantis coriaceis v. rigidulis late ovatis arete imbricatis, seriei interioris in laminam patentem productis quasi radicanatis. Bractæe interiores sub floribus singulis breviter v. longe lineari-filiformes, apice dilatate, clavate, albæ, minute ciliatæ v. glabræ.

Species 3, Africæ tropicæ et Madagascariæ nec Brasilie incolæ. Genus errore a *Körn.* in *Mart. Fl. Bras.* iii. i. 471, t. 60, f. 1 inclusum. Specimina a *Lindley* cum *Benth.*io communicata et mediante *Prescottio* ad *Herb. Mus. Petrop.* missa, e *Sierra Leone* nec e *Rio Janeiro* proveniunt, et a *Benth.*io cum aliis ex *Africa tropica* sub nomine *Eriocauli radiantis* descripta fuerunt, sed infauste errore typographico sub *E. radicante* in *Hook. Fl. Nigr.* 547 edita. Genus sat naturale et bene distinctum, a *Körn.*io in species 3 divisum: 1. *M. Prescottianum*, *Körn.*, e solis speciminibus supra memoratis a *Lindley* distributis notum, bractearum involucrantium laminis radiantibus longiuscule oblongis. 2. *M. radicans*, *Körn.*, in *Africa tropica occidentali* late copioseque dispersum,

bractearum laminis radiantibus brevius ovatis. 3. *M. pubescens*, Kœrn., e Madagascaria, bractearum laminis minimis vix prominulis. *M. Rutenbergianum*, Kœrn. in Rel. Rutenberg., e Madagascaria, est verisimiliter *M. pubescens* forma glabrior.

3. *Pæpalanthus*, Mart. in Nov. Act. Nat. Cur. xvii. 13. (Dupatya, Vell. Fl. Flum. 35, Ic. i. t. 85 ad 87. Lasiolepis, Boeckl. in Flora, 1873, 90, quoad *L. pilosam*.)—Perianthii exterioris segmenta 3 v. 2, distincta, v. rarius in fl. ♀ basi v. medio connata, plana v. concava; interius, in fl. ♂, ad apicem stipitis sæpius brevis interdum superne clavati, tubuloso-campanulatum v. cyathiforme, breviter v. rarius fere ad basin 3- v. 2-fidum; in fl. ♀ ab exteriori parum distans, e segmentis 3 v. 2 distinctis v. rarius medio connatis. Stamina in fl. ♂ infra medium v. basi perianthii interioris affixa, lobis numero æqualia (3 v. 2) iisque opposita, sæpius breviter exserta, filamentis filiformibus; antheræ ovatae v. oblongæ, sæpius parvæ pallidæque, loculis 2 distinctis parallelis longitudinaliter dehiscens; staminodia in fl. ♀ rara minima. Ovarium in fl. ♀ intra perianthium interius sessile, 3- v. 2-lobum, 3- v. 2-loculare; stylus columnaris v. filiformis, apice 3- v. 2-fidus, ramis subulatis stigmatosis sæpius 2-fidis, additis sæpius lobis v. appendiculis 3 v. 2, cum stigmatosis alternantibus iisque nunc multo brevioribus apice penicillatis v. glandulosis nunc elongatis nudisque; pistilli rudimentum in fl. ♂ e lobis v. glandulis 3 v. 2 nunc appendiculis styli subsimilibus, nunc sæpius minimis v. interdum obsoletis. Fructus et semina ordinis.—Herbæ perennes v. rarius annuæ, campestris paludosæ v. rarius aquaticæ, habitu polymorpho nunc omnino *Eriocauli*, nunc sæpius caule foliato plus minus evoluto interdum robusto ramosoque. Scapi v. pedunculi ad axillas foliorum superiorum solitarii, sæpius longi 1-cephali, in sectione *Platycaulo* apice ∞-cephali, in paucis speciebus foliis breviores. Bractæe variæ. Flores utriusque sexus sæpius in capitulo irregulariter mixti, foeminei tamen in ambitu masculi in centro copiosiores, rarius capitula omnino unisexuality videntur.

Species enumerat Kœrnicke 215, fere omnes Americæ tropicæ incolæ, perpaucae in America australi extratropica extensæ, una sola in Americæ borealis civitatibus austro-orientalibus obvia, et una ex Africa australi a Kœrnickio ut videtur rite ad *Pæpalanthum* potius quam *Eriocaulum* relata. *P. repens*, Kœrn., tamen, ex insulis Mascarensibus, nobis omnino ad *Eriocaulum* restituendum videtur. Inter species Americanas a Kœrnickio descriptas paucae verisimiliter melius notæ reducendæ erunt, nonnullæ tamen novæ tam Brasilienses quam Guianenses v. Colombianæ adhuc addendæ. Kunth, Enum. Pl. iii. 498. Kœrn. in Mart. Fl. Bras. iii. i. 305, t. 39 ad 60. Bongard in Mem. Acad. Imp. Sc. Petersb. ser. 6, i. 601, t. 1 ad 10; ii. 219, t. 11 ad 19; iii. 545, t. 20 ad 27; v. (Bot.) 9, t. 28 ad 32 (*Eriocaulon*). Species a Bongardio illustratæ, omnes Brasilienses, ad *Pæpalanthum* pertinent, præter *E. guyabensem*, de quo confer infra sub *Philodice*.

Genus a Kœrnickio in series 2 (sectiones dictas) et in sectiones 14 (subgenera dictas) dividitur quarum aliæ naturales v. accurate limitatæ, aliæ nimis artificiales v. male definitæ v. monotypicæ. Series prima, capitulis sæpius nec semper dense villosis continet sectiones 5:—

1. *Dimeranthus*. Flores 2-meri, 2-andri (in cæteris sectionibus 3-meri 3-andri). Herbæ robustæ v. rarius humiles, nunc ramosæ umbelliferæ *Actinocephali*, nunc subacaules habitu *Eupæpalanthi* v. *Eriocauli*. In speciebus umbelliferis umbellæ more *Actinocephali* ramos terminant sæpiusque simul ad apicem caulis ipsius evolvuntur, quod rarissime in *Actinocephalo* observatur. Kœrn. in Mart. Fl. Bras. iii. i. t. 39 ad 42.

2. *Actinocephalus*. Caules foliati sæpius robusti ramosi. Umbellæ ramos terminantes, pedunculis numerosissimis confertis subæqualibus, bracteis sub umbella paucis involucrum parum distinctum formantibus. Sectio naturalis sæpius bene distincta, etsi *P. (Dimerantho) specioso* et *P. (Eupæpalanthe) polygono* habitu accedit. Kœrn. in Mart. Fl. Bras. iii. i. t. 43 ad 46. Hook. Ic. Pl. t. 512, 527.

3. *Xerantis*. Bractæe capitula involucrantis rigidulæ, acutæ, interiores flores superantes patentes v. recurvæ vix tamen radiantes. Caules nunc brevissimi foliis subradicalibus *Eupæpalanthi* v. *Eriocauli*, nunc evoluti superne foliati pedunculis axillaribus. Sectio minime naturalis. Kœrn. in Mart. Fl. Bras. iii. i. t. 47, f. 1, t. 57, f. 4. Deless. Ic. Sel. iii. t. 97. Hook. Ic. Pl. t. 523.

4. *Eupæpalanthus*. Species numerosæ habitu diversissimæ nunc sæpe subacaules foliis rosulatis scapicæ subradicalibus *Eriocauli*, nunc caule foliato evoluti, pedunculis paucis axillaribus elongatis v. brevissimis, rarius numerosis in umbellam terminalem confertis. Sectio polymorpha distinguitur

potius absentia characterum aliis sectionibus propriorum quam caractere v. habitu proprio. In *P. dichotomo*, Kl. (a quo *P. guianensis*, Kl., non differre videtur), *P. selaginoides*, Kærn., *P. sessiliflora*, Mart., paucisque aliis caules humiles cæspitoso-ramosi fere muscoidei dense foliati et capitula ad axillas subsessilia v. pedunculis folio brevioribus fulta; in *P. Gardneriano*, Kærn. (CLADOCaulo, Gardn. in Hook. Ic. t. 528), caulis foliatus elongatus ramosus, capitula ad axillas superiores breviter pedunculata, bractee involucentes imbricatæ rigide et obtusæ flores non superantes; in *P. argyrolino*, Kærn., caules elongati, pedunculi longi tenues cum foliis dissite fasciculati fere *Stephanophylli*; in *P. Schomburgkii*, Kl., habitus omnino *Andraspidopsis*, foliis subradicalibus rosulato-cæspitosis, scapis apice umbellam rigidam foliaceo-involucratam ferentibus cæterum nudis; in *P. polygono*, Kærn., caulis robustus foliatus *Actinocephali*, et pedunculi pariter numerosi, ad apicem caulis conferti fere umbellati, sed foliis quam pedunculi paullo brevioribus intermixti. Lam. Illustr. t. 50, f. 3 (*Eriocaulon*). H. B. et K. Nov. Gen. et Sp. t. 69, f. 2. Deless. Ic. Sel. iii. t. 95, 96. Miq. Stirp. Surin. t. 65. Hook. Ic. Pl. t. 510. Kærn. in Mart. Fl. Bras. iii. i. t. 47 ad 50.

De *P. albedo* et *P. rupestre*, Gardn. in Hook. Ic. Pl. t. 525, a Kærnickio in *Eupæpaltho* inclusis, confer infra sub *Philodice*.

5. *Platycaulon*. Scapi aphylli v. pedunculi apice  $\infty$ -cephali (in cæteris omnibus sectionibus 1-cephali), capitulis breviter pedicellatis v. arcte sessilibus, corymbum parvum v. capitulum compositum formantibus. Cætera *Eupæpalthi*. Caulis sæpius brevissimus crassus v. subnullus. Folia rigidula, rosulata v. conferta. Scapi v. pedunculi more generis basi vaginati; pedicelli in corymbo nudi, rarissime bractea unica adest ad apicem scapi sub corymbo. Sectio distinctissima, species plures Andinas cum Brasilianis includens. Mart. in Nov. Act. Nat. Cur. xvii. t. 1. Kærn. in Mart. Fl. Bras. iii. i. t. 51, 52.

Series altera (sectio Kærn.) distinguitur capitulis glabriusculis, sæpe præter pilos paucos receptaculi glaberrimis, et a Kærnickio in sectiones (subgenera, Kærn.) 9 dividitur. Species tamen plures speciebus respondentibus *Eupæpalthi* simillimæ sunt, et character seriei minime constans est. In *P. arenario*, Kærn., et *P. heterophyllo*, Kærn., capitula dense villosa sunt et in pluribus alijs plus minus pilosa. Inter has sectiones, 3 magis distinctæ videntur:—

6. *Stephanophyllum*, caule primario brevissimo subnullo, ramis flagelliformibus elongatis hinc inde foliorum pedunculorumque fasciculos ferentibus quasi proliferis cæterum nudis. Kærn. in Mart. Fl. Bras. iii. i. t. 54. STEPHANOPHYLLUM, Guillem. in Deless. Ic. Sel. iii. 61, t. 98. Sectio *P. (Eupæpalthi) argyrolino*, Kærn., prope accedit.

7. *Eulepis*. Capitulum bractee involucentes exteriores breviusculæ, latæ, imbricatæ, subcoriaceæ, interiores elongatæ, radiato-patentes, albæ, scariosæ v. fere petaloideæ. Kærnickia, in Mart. Fl. Bras. iii. i. t. 57, f. 1, sectionem restrixit ad species subcaules habitu *Eriocauli*, nobis tamen melius definita videtur si includimus *P. anthemidiflorum*, Kunth.; Kærn. in Mart. Fl. Bras. iii. i. t. 57, f. 2, et *P. laricifolium*, Gardn. in Hook. Ic. Pl. t. 524, quorum capitula peculiariter *Eulepidis*, cum habitu *Andraspidopsis*.

8. *Andraspidopsis*, apud Kærnickium (in Mart. Fl. Bras. iii. i. 439, t. 57, 58), species plures continet foliis ut in subcaulibus dense rosulatis, scapo tamen apice fasciculum densum foliorum pedunculorumque ferente cæterum aphylo v. paucifoliato. Lam. Illustr. t. 50, f. 4 (*Eriocaulon*). Species tamen Kærnickianæ inter se parum affines sunt. *P. anthemidiflorum* et *P. laricifolium* jam supra ad *Eulepidem* retulimus; in *P. fertili*, Kærn., et *P. verticillato*, Kærn., foliorum fasciculi secus caulem plures fere *Stephanophylli*; in *P. Steudeliano*, Kærn., caules infra fasciculum terminalem folia parva sparsa v. hinc inde fasciculata fert et species *P. (Eupæpalthi) fasciculato* accedit; in *P. arenario*, Kærn. (*Eriocaulo arenario*, Gardn. in Hook. Lond. Journ. i. t. 13) capitula dense villosa seriei primæ. *P. densiflorus*, Kærn., habitum præbet omnino *P. (Eupæpalthi) Schomburgkii*, Kl. cujus etiam capitula fere glabra.

Sectiones parvæ v. monotypicæ *Lophophyllum*, *Psilocalyx*, *Trichocalyx*, *Thyranoccephalus*, *Psilocephalus* et *Carpophoccephalus*, Kærn. in Mart. Fl. Bras. iii. i. t. 53, 55, 56, 59, speciebus respondentibus *Eupæpalthi* prope accedunt, nec nisi bracteis perianthiisque sæpissime nec semper glabris ab hac sectione separantur.

4. *Philodice*, Mart. in Nov. Act. Nat. Cur. xvii. 16, t. 3.—Perianthii exterioris segmenta 3, distincta, plana, sæpius unguiculata, tenuissime hyalina; interius in fl. ♂ cum stipite sæpius apice incrassato continuum, cyathiforme, brevissime 3-lobum v. 3-dentatum; in fl. ♀ ab exteriori parum distans, e segmentis 3 unguibus distinctis, laminis in cyathum quam in mare majorem connatis v. liberis conniventibusque. Stamina in fl. ♂ 2 v. 3,

intra basin cyathi affixa, breviter exserta, filamentis filiformibus; antheræ parvæ, ovato-oblongæ, antice sulcatæ, rima unica dehiscentes, apertæ 1-loculares; staminodia in fl. ♀ 0. Ovarium in fl. ♀ intra perianthium interius sessile, 3-lobum, 3-lôculare; stylus filiformis, 3-fidus, ramis stigmatosis indivisis, appendiculis 3 cum ramis stigmatosis alternantibus iisque multo brevioribus; pistilli rudimentum in fl. ♂ minimum. Fructus et semina ordinis.—Herbæ humiles, tenues, caulibus dense foliatis cæspitoso-ramosis v. infra inflorescentiam simplicibus. Folia brevina, lineari-filiformia. Pedunculi filiformes, 1-cephali. Capitula parva, fructifera globosa. Perianthia glabra v. exteriora parce ciliata. Receptaculum breviter pilosum.

Species 5 (v. 2?) Guianæ et Brasiliæ incolæ. *Kunth, Enum. Pl. iii. 495. Kærn. in Mart. Fl. Bras. iii. i. 304, t. 38.*

Genus *Papalantho* valde affine, nec habitu nec floribus fœmineis a speciebus nonnullis generis istius polymorphi distinguendum. Kœrnicke genus retinuit ad species 2 limitatum floribus ♂ 2-andris in perianthio 3-mero, nobis melius definitum videtur si includimus *Papalanthum albidum* et *P. rupestrem*, Garda. in Hook. Pl. t. 525, floribus ♂ 3-andris, antheris tamen apertis 1-locularibus. Species typica *P. Hoffmanseggii*, Mart., habitu speciminibus minoribus *Papalanthi Schraderi* simillima est, et bractæ involucrantæ pariter angustæ acutæque, caulis foliatus basi simplex plus minus evolutus etsi humilis, apice corymbosus dense foliosus, pedunculis filiformibus folia parum excedentibus; in hac stamina semper 2 tantum vidimus. In *P. albida* et *P. rupestre*, caules foliati dense cæspitoso-ramosi basi breviter tantum simplices, pedunculi capillares quam in *P. Hoffmanseggii* longiores et bractæ involucrantæ breviores latioresque. Stamina ut videtur constanter 3. *Philodice cuyabensis*, Kærn. (*Eriocaulon cuyabense*, Bong. in Mem. Acad. Petersp. ser. 6, i. t. 10), floribus ♂ ex Bongardio 3-andris, ex Kærnickio 2-andris, et *Papalanthus prostratus*, Kærn., floribus ♂ 3-andris, antheris tamen 1-locularibus, nobis ignoti sunt.

5. *Zachnocaulon*, *Kunth, Enum. Pl. iii. 497.*—Perianthii exterioris segmenta 3, distincta, ovalia v. spathulata, concava; interior 0. Stamina in fl. ♂ ad apicem stipitis perianthio exteriori inclusa 3, circa pistilli rudimentum minimum 3-partitum inserta, filamentis brevibus persistentibus; antheræ oblongæ, rima unica dehiscentes, apertæ 1-loculares. Ovarium in fl. ♀ intra perianthium exterius fere sessile, pilis numerosis cinctum, 3-loculare; stylus superne crassiusculus, breviter 3-fidus, appendicibus alternis minimis. Semina ovoideo-globosa, striata.—Habitus *Eriocauli* normalis. Folia radicalia v. in rhizomate breviter evoluta cæspitoso-rosulata, tenuia, acuminata. Scapi tenues, 1-cephali. Capitulum primum interdum depressum, perfecte evolutum globosum v. ovoideo-globosum. Bractæ involucrantæ floribus breviores, scariosæ, sub capitulo perfecte evoluta occultæ, interiores sub floribus spathulatæ, hyalinæ, interdum medio nigricantes. Perianthii exterioris segmenta nunc in fl. ♂ solis, nunc in utroque sexu, medio nigricantia, margine nunc conspicue albo-ciliata, nunc ciliis minutissimis glabra apparent. Pili receptaculi et stipitum copiosi.

Species nobis adsunt 2, Americæ borealis civitatum austro-orientalium incolæ, nec plures ab auctoribus Americaniæ recognite. Kœrnicke tamen in Linnæa, xxvii. 564, 4 descripsit quarum 2 novæ *L. Beyrichianum*, Kærn., e Georgia, cujus characteres omnino convenire videntur speciminibus bene evolutis *L. Michauxi*, Kunth; et *L. digynum*, Kærn., pistillo 2-mero, ad specimina Drummondiana prope Covington lecta descriptum, quæ nobis videntur specimina depauperata *L. Michauxi*, capitulis parvis nondum bene evolutis, floribus 3-meris pistillo sæpe imperfecto.

6. *Tonina*, *Aubl. Pl. Gui. 856, t. 330. (Hyphydra, Schreb. Gen. Pl. 666.)*—Perianthii exterioris segmenta 3, in fl. ♂ membranacea, rotundata, concava, in globum conniventia, basi subconnata, in fl. ♀ lanceolata, acuta, carinata, rigidula, a basi distincta; interior in fl. ♂ ad apicem stipitis clavati minimum, cyathiforme, minute 3-dentatum v. truncatum, in fl. ♀ e segmentis 3 distinctis hyalinis brevissimis longe ciliato-fimbriatis. Stamina in fl. ♂ 3; antheræ parvæ, ovatæ, antice sulcatæ, rima unica dehiscentes, apertæ 1-loculares; staminodia in fl. ♀ 0. Ovarium in fl. ♀ sessile, 3-lobum, 3-loculare; stylus filiformis, 3-fidus, ramis stigmatosis 2-fidis, appendiculis 3 cum ramis stigmatosis alternantibus iisque parum brevioribus rigidulis; pistilli rudimenta in fl. ♂ minuta glanduliformia. Fructus et semina ordinis.—Caulis foliati, longe procumbentes, basi radicales. Folia brevina,

linearia v. sublancoolata, patentia v. recurva, basi complicata amplexicaulia v. breviter vaginantia. Pedunculi axillares, 1-cephali, nunc brevissimi v. vix ulli, nunc capitulo paullo longiores, vagina basilari brevi sæpius in laminam foliaceam linearem producta. Capitulum globosum, bractearum perianthiorumque exteriorum segmentorum acuminibus quasi echinatum. Bracteæ omnes acute acuminatæ, exteriores perpaucæ vacuæ, v. interdum omnes florem fovere videntur. Flores ♂ et ♀ in speciminibus pluribus examinatis irregulariter mixtos invenimus, nec per paria oppositos ut a Martius descripsi.

Species 1, in paludibus, campis inundatis, locis arenosis, ad margines aquarum per Americam tropicam late dispersa, caulibus basi sæpe submersis radicanibus, ramis florentibus longis demersis in limo v. arena procurrentibus nec fluitantibus. *Mart. in Nov. Act. Nat. Cur.* xvii. 15, t. 4. *Kunth, Enum. Pl.* iii. 494. *Körn. in. Mart. Fl. Bras.* iii. i. 301, t. 38.

## ORDO CXCVII. CENTROLEPIDÆ.

Endl. Gen. Pl. 119. Hieronymus, Beiträge zur Kenntniss der Centrolepidaceen, Halle, 1873, cum tabb. 4, in Abhandl. Nat. Gesellsch. Halle xii. DESVAUXIACÆ, Lindl. Veg. Kingd. 120.

*Flores* hermaphroditi v. polygami, in spiculis v. capitulis parvis plures v. rarius solitarii, sessiles, glumis v. bracteis sub quoque flore 1-3 v. 0. *Perianthium* 0. *Stamen* 1, v. rarissime stamina 2; filamenta filiformia. *Antheræ* oblongæ v. lineares, versatiles, rima unica longitudinali dehiscentes, apertæ 1-loculares. *Ovarium* 1, 1-loculare v. collateraliter 2-3-loculare, v. loculis carpellisve 2-∞ 1-2-seriatim superpositis. *Styli* tot quot loculi v. carpella, distincti v. plus minus connati, v. rarius in ovario 1-loculari 2-3, lineari-filiformes, indivisi, superne 1-lateraliter stigmatosi. *Ovula* in loculis solitaria, pendula, orthotropa. *Fructus* parvus, ovario conformis, paullo auctus, pericarpio membranaceo, loculis v. carpellis extrorsum in longitudinem dehiscentibus. *Semina* in loculis carpellisve solitaria, pendula sæpeque axi lateraliter adnata, testa tenui appressa. *Albumen* subfarinaceum. *Embryo* parvus, obovoideus v. obconicus, ad marginem albuminis ab hilo remotus.

*Herbæ* parvæ, nunc minimæ, modo annuæ caule brevissimo v. subnullo, modo perennes cæspitoso-ramosæ fere muscoideæ. Folia linearia v. filiformia, in speciebus annuis radicalia dense cæspitosa, in perennibus secus ramos breves imbricato-subpatentia. Scapi radicales v. pedunculi terminales, tenues, 1-cephali.

Species vix 30, fere omnes Australianæ, cum una in Asia orientali australi reperta et 3 (v. 4?) Novæ Zelandiæ v. Americæ antarcticæ propriis.

Ordo parvus, olim *Restiaceis* adjunctus, fructu et seminibus *Eriocaulis* affinis, quibus etiam habitu mediante *Trithuria* accedit, ubi utroque ordine tamen facile distinguitur perianthio prorsus deficiente.

### CONSPECTUS GENERUM.

\* *Herbæ annuæ subacaules, foliis scapisque radicalibus.*

1. TRITHURIA. Capitulum depressum, bracteis ∞ (ad 6) involuacratum. Stamina cum ovariis 1-locularibus in receptaculo subplano mixta, absque bracteis interioribus. Styli in ovario 2-3.—*Australia austro-occid., Victoria, Tasmania.*

2. APHELLA. Spicula complanata, bracteis (v. glumis) ∞ distichis 1-floris v. infimis 2-∞-floris. Ovarium 1-loculare, stylo unico.—*Australia austro-occid., Victoria, Tasmania.*

3. CENTROLEPIS. Spiculæ bracteæ (v. glumæ) 2, alternæ, 1-∞-floræ. Ovarii loculi v. lobi 3-∞, 2-seriatim superpositi, rarius ad 1 v. 2 reducti, styli totidem.—*Australia, Asia austr. or.*

\*\* *Herbæ perennes, cæspitoso-ramosæ, dense foliatæ fere musciformes, pedunculis terminalibus.*

4. GAIMARDIA. Spiculæ bracteæ (v. glumæ) 2, alternæ, 1-2-floræ. Ovarii loculi v. carpella stylique 2, rarius 3-4.—*Nov. Zelandia, Amer. antarct.*

1. *Trithuria*, Hook. f. *Fl. Tasm.* ii. 78, t. 138. (*Juncella*, F. Muell. *Sec. Gen. Rep.* 16, nomen tantum.)—Flores in capitulo depresso numerosi, in receptaculo subplano sessiles

ovariis staminiibusque densissime confertis specie irregulariter mixtis, absque bracteis interioribus. Stamina filamentum filiforme; anthera oblonga. Ovaria 3-quetra v. compressa, 1-locularia, 1-ovulata; styli 3 v. 2, filiformia, distincta v. basi breviter connata. Fructus 2-3-angulatus, a basi sursum in valvas totidem ab angulis filiformibus solvendas dehiscens.—Herbæ annuæ, flauæ, subacaules. Folia filiformia, radicalia, cæspitoso-conferta. Scapi tenues, radicales. Capitulum parvum, bracteis 6 (ab 6) angustis acutis involucreto.

Species 2, Victoris, Tasmanis et Australis austro-occidentalis incolæ.—*Benth. Fl. Austral.* vii. 199.

2. *Aphelia*, R. Br. *Prod.* 251. (*Brizua* et *Aphelia*, Hieron. *Centrolep.* 92, 94.)—Spicula plano-compressa, bracteis (v. glumis) distichis. Flores hermaphroditi v. polygami, sub quaque bractea sessiles, solitarii v. sub bracteis inferioribus 2-∞, singuli sæpius squamellis 1-2 hyalinis minimis stipati. Stamen 1, filamentum filiforme; anthera linearis v. oblonga. Ovarium 1-loculare, in stylum indivisum lineari-filiformem superne stigmatosum desinens. Fructus ex ovario parum auctus, pericarpio membranaceo, in longitudinem dehiscens.—Herbæ annuæ, parvulæ, subacaules. Folia lineari-filiformia, radicalia, cæspitoso-conferta. Scapi tenues, radicales. Spicula ovata v. lanceolata, bracteis angustis complicatis, distiche patentibus, laxè v. arcte imbricatis. Flores sub bracteis inferioribus sæpe 2 v. ∞, unus v. omnes masculi, superiores sæpius solitarii hermaphroditi.

Species 6, Australis austro-occidentalis Victoris et Tasmanis incolæ. *Benth. Fl. Austral.* vii. 199. *Desv. in Ann. Sc. Nat. ser. 1, xiii. t. 2. Hook. f. Fl. Tasm.* t. 138.

Hieronymus genus limitavit ad *A. cyperoidem*, Br., floribus omnibus hermaphroditis ad bracteas solitariis. Nos tamen in hac specie semper ad bracteam infimam et interdum etiam ad secundam flores 2 invenimus, altero v. utroque masculo. Cæteræ species genus *Brizulam*, Hieron., formant.

3. *Centrolepis*, Labill. *Pl. Nov. Holl.* i. 7, t. 1. (Desvauxia, errore Devauxia, et Alepyrum, R. Br. *Prod.* 252, 253.)—Spicula e bracteis (v. glumis) sæpius 2, alternis. Flores hermaphroditi, sub quaque bractea sessiles plures v. rarius solitarii v. sub bractea inferiore 0, singuli sæpius squamellis 1-3 hyalinis minimis stipati. Stamen 1, filamentum filiforme; anthera oblongo-linearis. Ovarium e carpellis 3-∞ (rarius ad 2 v. 1 reductis) in receptaculo lineari a latere adnatis superpositeque 2-seriatis 1-ovulatis; styli tot quot carpella, distincti v. basi connati, lineari-filiformes, indivisi, superne stigmatosi. Fructus ovario conformis parumque auctus, pericarpio membranaceo, carpellis extrorsum in longitudinem dehiscens.—Herbæ (an semper?) annuæ, humiles interdum nanæ, subacaules. Folia lineari-filiformia, radicalia, cæspitoso-conferta. Scapi tenues, radicales. Spicula erecta v. basi recurva, bracteis 2 arcte approximatis v. inter se parum distantibus, inferiore sæpius majore acuminato, in una specie deficiente.

Species 17, quarum una a L. Pierre in Cambodia detecta, cæteræ omnes Australianæ. *Benth. Fl. Austral.* vii. 202. *Hieron. Centrolep.* 95. *Desv. in Ann. Sc. Nat. ser. 1, xiii. t. 2. Rudge in Trans. Linn. Soc. x. t. 12. Guillem. Ic. Pl. Austral. t. 17 (Devauxia). Endl. Iconogr. t. 49. Hook. f. Fl. Tasm. t. 138. Hance in Trim. Journ. Bot. 1876, 14.*

4. *Gaimardia*, Gaudich. in Freyc. *Voy. Bot.* 418, t. 30.—Spicula e bracteis (v. glumis) 2 alternis. Flores in spicula 2, sessiles v. stipitati, hermaphroditi v. inferior ♀ v. imperfectus. Stamina 1 v. 2, filamentis filiformibus; antheræ oblongæ. Ovarium 2- rarius 3-loculare, loculis collateralibus connatis v. vix apice discretis; styli 2 v. 3, filiformes, fere a basi stigmatosi. Capsula apice loculicide 2-valvis, v. loculis axi adhærentibus rima dorsali dehiscens.—Herbæ perennes, humiles, densissime cæspitoso-ramosæ foliosæque, fere muscoides. Folia linearia v. setacea, undique imbricata. Spiculæ intra folia summa brevissimæ v. longiuscule pedunculatæ.

Species 3 v. 4, Americæ antarcticæ et Novæ Zelandiæ incolæ. *Hieron. Centrolep.* 104. *Hook. f. Fl. Antarct.* i. 85; *Handb. N. Zel. Fl.* 295.

Species inter se habitu simillimæ, pluribus notis tamen valde diversæ. In *G. pallida*, Hook. f.

postea ab auctore *Fl. N. Zel.* i. 268, t. 62 C, ad *Alepyrum* relata (genus *ALEPYRUM*, *Hieron. Centrolep.* 103, non *R. Br.*), spiculæ brevissime pedicellatæ folia non superantes; ovaria utriusque floris sessilia, 2-3-locularia; stamen in spicula unicum ad florem superiorem, v. 2 unum ad quemque florem; capsulæ juniores iis *G. australis* subsimiles, maturæ ignotæ. In specie typica, *G. australi*, Gaud., spiculæ brevissime pedunculatæ, folia vix v. non superantes, 1-2-floræ; stamina ad florem superiorem 2; ovaria 2-locularia, basi in stipitem contracta, floris inferioris dum adit sterile; capsula apice 2-valvatim dehiscens. In *G. setacea*, Hook. f., spiculæ (*Centrolepidis*) longe pedunculatæ, exsertæ, acuminatæ, 1-floræ; stamina sæpius 2; ovarium sessile, 2-loculare; capsula membranacea loculis dorso in longitudinem dehiscentibus.

## ORDO CXCVIII. RESTIACEÆ.

Endl. Gen. Pl. 120. Lindl. Veg. Kingd. 121. Masters in DC. Monogr. Phanerog. i. 218.

*Flores* dioici, rarius monoici, rarissime hermaphroditi, in spiculas e glumis (seu bracteis) siccis rigidisve v. rarius tenuibus varie imbricatis v. rarius dissitis dispositi, sub quaque gluma solitarii sessiles v. rarius stipitati, v. præsertim ♀ in spicula solitarii. *Perianthium* regulare, segmentis 6 rarius ad 5, 4 v. 3 reductis glumaceis rigidis scariosis v. hyalinis plus minus distincte 2-seriatis. *Stamina* in fl. ♂ 3; filamenta filiformia, distincta v. rarius basi in columnam connata; antheræ oblongæ, pro perianthio majusculæ dorsifixæ, in paucis generibus distincte 2-loculares, loculis parallelis, in plerisque 1-loculares, loculis in omnibus rima longitudinali dehiscentibus; staminodia in fl. ♀ 3 parva interdum clavata v. 0. *Ovarium* in fl. ♀ sessile v. stipite crasso fultum, 1-3-loculare. *Styli* tot quot loculi, v. in ovario 1-loculari 1-3, a basi discreti v. plus minus connati, filiformes, superne v. fere a basi introrsum in longitudinem stigmatosi, sæpeque villosi-subplumosi. *Ovula* in loculis solitaria, pendula, orthotropa. *Fructus* siccus, sæpius parvus, nuceus v. capsularis, teres compressus v. 3-quetor, indehiscens v. a latere v. ad angulos dehiscens, 1-3-locularis, 1-3-spermus. *Semina* in loculis v. in fructu solitaria, pendula, apice v. sub apice affixa, sæpius striata v. tenuiter tuberculato-rugosa, testa appressa. *Albumen* copiosum, farinaceum v. plus minus carnosum. *Embryo* parvus, lenticularis v. obovoideus, ab hilo remotus, albumini applicitus.

Herbæ sæpissime perennes, basi caespitosæ v. rhizomate duro horizontali v. repente sæpius squamis imbricatis oblecto. Caules rigidi, simplices v. ramosi, erecti flexuosi v. varie contorti. Folia interdum pauca radicalia longe cyperoidea, sæpissime tamen omnia ad vaginas rigidas convolutas secus caulem dissitas reducta v. prorsus deficientia; vaginæ hæc variant nunc arcte appressæ tubuliformes, marginibus tamen non connatis ut in *Cyperaceis*, nunc laxiores plus minus apertæ, persistentes v. cito deciduæ cicatricem annularem v. brevissime tubulosum relinquentes; summæ sæpe in bracteas primarias inflorescentiæ seu spathas abeuntes. Inflorescentia polymorpha, in planta ♂ et ♀ conformis v. valde diversa, in priore sæpius laxior ramosiorque, in illa simplicior, interdum ad spiculam unicum reducta. Flores quoad spiculas *Cyperaceis*, quoad perianthium *Junco* accedunt. Bracteæ primariæ seu spathæ sub ramis inflorescentiæ nunc amplæ rigidulæ coloratæ laxè citoque deciduæ, nunc minores appressæ vaginiformes v. acuminatæ, sub spiculis singulis sæpius parvæ. Spiculæ sæpe compressæ, glumis tamen (v. bracteis) undique imbricatis omnibus florem sessilem foventes v. infimis paucis vacuis; interdum vero laxæ, glumis dissitis floribusque breviter pedicellatis fere racemiformes, v. præsertim in planta foeminea 1-floræ, glumis pluribus vacuis undique imbricatis quaquaversis. Bracteolæ interdum præsertim in spicula laxiflora adsunt 1-2 parvæ sub quoque flore. Perianthia sæpius glumas excedunt; interdum vero omnino inclusa.

Species ad 230, pro maxima parte Africæ austro-occidentalis v. Australiæ incolæ, perpaucae in Nova Zelandia inveniuntur, una sola in Chile; una in Cochinchina; omnes extratropicæ, exceptis 5 inter Australianas cum Cochinchinensi in regione tropica obviis.

Ordo habitu et inflorescentia *Cyperaceis* accedit, perianthio *Juncaceis*, ab utroque ordine facile distinguitur ovulis pendulis orthotropis, et seminum structura, a *Juncaceis* insuper constanter differt staminum seriei exterioris defectu, et a *Cyperaceis* vaginarum marginibus etsi sæpe clausis nunquam (quantum adhuc observatis) connatis. Differentias *Eriocaularum* et *Centrolepidearum* supra sub his ordinibus indicavimus.

Generum specierumque definitio accurata et ordinatio opus est difficillimum. Inflorescentia ♂ sæpe in generibus distinctis simillima v. in eodem genere polymorpha. Flores ♂ in generibus haplantheris characteres paucos distinctivos præbent. Inflorescentia et flores ♀ melius definiuntur, sed specimina ♀ in herbariis nostris haud numerosa v. male maribus suis adæquata. Præter specimina in herbario Kewensi servata, Masters numerosa Africana in variis herbariis, Bentham Australiana in Herb. R. Br. et F. Muell. observavit comparavitque, in speciebus tamen per plurimis, modo floris ♀ sub anthesi, modo fructus maturus adhuc ignotus v. imperfecte scrutatus est, et ordo botanicis australibus quibus fas est plantas vivas in loco natali observare intente commendatur.

## FORMÆ ABNORMES.

Folia saltem radicalia evoluta in *Anarthria*.

Flores interdum monoici in *Ecdiocolæa*, *Lepyrodia*, et *Leptocarpo*, hinc inde hermaphroditi in una specie *Lepyrodia*.

Spiculæ laxæ, glumis dissitis, floribus sæpe pedicellatis in *Anarthria*, *Lepyrodia* et in infl. ♂ *Willdenowia* et *Ceratocaryi*.

## CONSPECTUS GENERUM.

\* *Antheræ* distincte 2-loculares, loculis rimis distinctis dehiscentibus (*Diplantheræ*).

1. *LYGINIA*. Spiculæ ♂ paucae, spicatæ, ∞-floræ, glumis imbricatis. Filamenta in columnam alte connata. Spiculæ ♀ sæpe solitariae, 1-floræ, glumis vacuis ∞ imbricatis. Capsula 3-angulata. Vaginæ persistentes.—*Australia austro-occid.*

2. *ECDIOCOLÆA*. Spiculæ utriusque sexus (interdum androgynæ) terminales, solitariae, oblongo-cylindraceæ, multifloræ, glumis numerosis obtusis arcu imbricatis. Filamenta distincta. Ovarium 2-loculare. Vagina unica, persistens.—*Australia austro-occid.*

3. *ANARTHRIA*. Spiculæ utriusque sexus paucae, spicatæ v. anguste paniculatæ, laxæ ∞-floræ, glumis dissitis v. vix imbricatis. Filamenta distincta. Capsula 3-angularis. Caules sæpe complanati. Folia radicalia evoluta. Vaginæ in caule simplici 0, in caule ramoso persistentes foliiferi.—*Australia austro-occid.*

\*\* *Antheræ* 1-loculares, rima unica dehiscens (*Haplantheræ*). Styli v. styli rami 2 v. 3. Fructus 2-3-angulatus, ad angulos dehiscens v. rarius indehiscens.

4. *LEPYRODIA*. Spiculæ utriusque sexus (rarius hermaphroditæ) laxæ ∞-floræ, paniculatæ v. interrupte spicatæ, glumis plus minus dissitis, floribus sæpe pedicellatis. Bracteolæ sæpe 2. Vaginæ persistentes v. deciduæ.—*Australia extratrop., Nov. Zel.*

5. *RESTIO*. Spiculæ utriusque sexus ∞-floræ v. ♀ interdum 1-floræ, glumis imbricatis. Inflorescentia varia, ♂ sæpius paniculata, ♀ similis v. simplicior, interdum 1-stachya. Capsula 2-3-locularis. Vaginæ persistentes.—*Afr. austr., Australia.*

6. *DOVEA*. Spiculæ utriusque sexus paucifloræ v. præsertim ♀ 1-floræ, spicatæ v. anguste paniculatæ, glumis imbricatis. Capsula 3-locularis. Vaginæ bracteæque spathaceæ, caducissimæ.—*Afr. austr.*

7. *ASKIDIOSPERMA*. Spiculæ utriusque sexus paucifloræ v. præsertim ♀ 1-floræ, spicatæ v. breviter denseque paniculatæ, glumis imbricatis. Capsula 2-locularis. Vaginæ caducæ. Bractæ spathaceæ longe setaceo-acuminatæ margineque ciliatæ.—*Afr. austr.*

8. *ELEGIA*. Spiculæ ♂ paucifloræ, ♀ 1-floræ, spicatæ capitatæ v. breviter denseque paniculatæ, glumis imbricatis. Fructus 3-quetor v. 3-costatus, 1- rarius 2-3-spermus, vix v. non dehiscens. Vaginæ caducæ v. rarius persistentes. Bractæ spathaceæ majusculæ, more *Doveæ* deciduæ.—*Afr. austr.*

9. *LEPTOCARPUS*. Spiculæ utriusque sexus ∞-floræ v. ♀ rarius 1-floræ, paniculatæ spicatæ v. capitatæ, glumis imbricatis. Fructus sæpiissime 3 quoter, 1 spermus, indehiscens v. ad angulos dehiscens. Vaginæ persistentes. Bractæ spathaceæ sæpius parum conspicuæ.—*Afr. austr., Australia, Nov. Zel., Chile, Cochinchina.*

\*\*\* *Antheræ 1-loculares, rima unica dehiscentes (Haplantheræ). Stylus simplex, filiformis. Fructus teres, nec angulatus nec costatus, pericarpio duro indehiscens (rarius hinc fissus!) Glumæ imbricatæ.*

10. *LOXOCARYA*. Spiculæ parvæ, ♂ ∞-floræ, ♀ 1-floræ. Caules ramosi, sæpius flexuoso-ramosissimi. Vaginæ persistentes.—*Australia*.

11. *LEPIDOBOLUS*. Spiculæ utriusque sexus ∞-floræ, capituliformes, terminales, solitariae v. in ♂ rarius 1-2 inferiores additæ. Caules sæpius simplices. Vaginæ caducissimæ.—*Australia extratrop. austr.*

12. *CHÆTANTHUS*. Spiculæ ♂ ignotæ; ♀ parvæ, ∞-floræ, in glomerulum terminalem congestæ. Caules tenues, simplices. Vaginæ persistentes.—*Australia austro-occid.*

13. *ONYCHOSEPALUM*. Spiculæ utriusque sexus ∞-floræ, terminales, solitariae. Perianthii segmenta 3, hyalina, unguiculata. Caules tenues, simplices, præter squamas basales nudi.—*Australia austro-occid.*

14. *THAMNOCHORTUS*. Spiculæ utriusque sexus ∞-floræ, ♂ ovatæ in panicula paucae pedicellatæ, ♀ oblongæ, erectæ, in spica paucae, sessiles. Flores plano-compressi. Perianthii segmenta 2 exteriora late alato-carinata. Caules sæpe ad nodos ramulis sterilibus fasciculato-ramosissimis instructi. Vaginæ persistentes.—*Afr. austr.*

\*\*\*\* *Antheræ 1-loculares, rima unica dehiscentes (Haplantheræ). Styli v. styli rami 2-3. Fructus teres v. leviter compressus, nec angulatus nec costatus, pericarpio duro indehiscens. Vaginæ persistentes.*

† *Glumæ imbricatæ.*

15. *STABEROHA*. Spiculæ utriusque sexus ∞-floræ, ♂ ovatæ in panicula paucae pedicellatæ, ♀ oblongæ, erectæ, sæpius solitariae. Flores plano-compressi. Perianthii segmenta 2 exteriora alato-carinata. Styli 2. Caules simplices v. virgato-ramosi.—*Afr. austr.*

16. *HYPOLÆNA*. Spiculæ parvulae, ♂ sæpius ∞-floræ, secus ramos sessiles v. paniculatæ, ♀ 1-floræ, terminales, solitariae v. geminae. Perianthii segmenta ♂ linearia, ♀ brevialia hyalina. Styli 2-3. Caules sæpius flexuoso-ramosissimi.—*Afr. austr., Australia.*

17. *HYPODISCUS*. Spiculæ ♂ subglobosæ, ∞-floræ, solitariae spicatæ v. paniculatæ; ♀ 1-floræ, solitariae v. paucae spicatæ. Glumæ aristatæ. Perianthii segmenta ♂ angusta, ♀ brevialia hyalina. Stylus 2-fidus. Caules simplices juncei.—*Afr. austr.*

18. *CANNOMOIS*. Spiculæ ♂ ∞-floræ, paniculatæ; ♀ paucifloræ, solitariae v. geminae. Perianthii ♂ segmenta plus minus scariosa; perianthium ♀ latum, scarioso-hyalinum, demum lacerum v. fissum. Styli 2. Caules simplices v. ramosi.—*Afr. austr.*

†† *Spiculæ ♂ laxæ subracemiformes, glumis dissitis.*

19. *WILDENOWIA*. Spiculæ ♂ ∞-floræ, interrupte spicatæ, ♀ 1-floræ, solitariae v. geminae, glumis ad 6 amplius coriaceis florem involventibus. Perianthii segmenta ♂ linearia, ♀ brevialia, hyalina, demum squamiformia, basi fructus arcte appressa. Styli 2. Fructus (an semper?) lævis. Caules virgati, simplices v. ramosi.—*Afr. austr.*

20. *CERATOCARYUM*. Inflorescentia ♂ composita, dense thyrsoidæa v. oblonga, glumis perianthiisque scariosis argenteo-nitens. Fructus (an semper?) papilloso-tuberculatus. Cætera *Willdenowiae*.—*Afr. austr.*

#### GENERA EXCLUSA.

*ERIOCAULON*, Linn., et *CENTROLEPIS*, Labill., olim *Restiaceis* inclusæ, hodie pro ordinibus propriis acceptæ, **Eriocaulaceæ** et **Centrolepidææ**.

*CHÆTODISCUS*, Steud., ex descriptione manca auctoris, videtur *Eriocaulon Smithii*, Br., inter **Eriocaulaceas**.

*EUROSTORHIZA*, Steud., est *Caustis pentandra*, Br., inter **Cyperaceas**.

1. *Lyginia*, R. Br. Prod. 248. (*Schoenodum*, Labill. Pl. Nov. Holl. ii. 79, t. 29, quoad plantam ♂.)—Flores dioici, spiculis ♂ -floris, ♀ 1-floris, glumis imbricatis, inferioribus paucis in ♂ pluribus in ♀ vacuis. Perianthii segmenta 6, glumacea, glumas non excedentia. Fl. ♂ : Stamina 3, filamentis alte in columnam connatis apice breviter liberis; antheræ 2-loculares, loculis distinctis parallelis basi apiceque discretis medio breviter

affixis rimis distinctis dehiscentibus. Pistilli rudimentum 0. Fl. ♀: Staminodia 0. Perianthii segmenta quam in mare latiora, rigida, acuta, circa ovarium late convoluta. Ovarium 3-loculare; styli basi breviter connati, crassiuscule filiformes, introrsum plumoso-stigmatosi. Capsula depressa, dura, prominenter 3-angulata, ad angulos demum dehiscentis. —Caules e basi v. rhizomate duro decumbente v. repente ramoso squamosoque erecti, simplices, rigidi, sæpe flexuosi, vaginis paucis dissitis persistentibus interdum setaceo-acuminatis, ore dense ciliato-barbatis v. subnudis. Spiculæ paucæ, secus rhachin simplicem spicæ terminalis sessiles, foemineæ haud raro ad unam terminalem reductæ. Bractææ spathacæ a vaginis caulinis parum mutatæ, pariterque ciliato-barbatæ v. subnudæ, sæpius acuminatæ.

Species 1, Australiæ austro-occidentalis incola. *Benth. Fl. Austral.* vii. 210. *Mast. in DC. Monogr. Phanerog.* i. 302, t. 1, 5, f. 3.

2. *Medelococlea*, *F. Muell. Fragm. Phytogr. Austral.* viii. 236.—Flores unisexuales, in spicula terminali oblongo-cylindracea androgyna v. unisexuali numerosi, glumis undique arcte imbricatis. Perianthii segmenta 6, glumacea, glumas non excedentia. Fl. ♂: Stamina 3, filamentis liberis; antheræ 2-loculares, loculis distinctis parallelis basi apiceque discretis medio breviter affixis, rimis distinctis dehiscentibus. Pistilli rudimentum vix conspicuum. Fl. ♀: Staminodia 3, parva, nunc minuta. Ovarium 2-loculare; styli 2, distincti, longi, filiformes, fere a basi stigmatosi. Fructus . . . —Rhizoma reptans, squamosum. Caules erecti, simplices, basi squamis coriaceis nitidis imbricatis obtecti, quarum intima in vaginam cylindraceam sæpius producitur. Vagina caulina cæterum unica, cylindracea, arcte appressa persistensque, ab inflorescentia distans. Spicula unica terminalis, erecta, illi *Lepironiæ* aliarumque nonnullarum *Cyperacearum* similima, glumis numerosis  $\infty$ -seriatim arcte imbricatis flores obtegentibus infimis paucis minoribus vacuis. Bractea spathacea nulla sub spicula.

Species 1, Australiæ austro-occidentalis incola. *Benth. Fl. Austral.* vii. 211. *Mast. in DC. Monogr. Phanerog.* i. 304, t. 1.

3. *Anarthria*, *R. Br. Prod.* 248.—Flores dioici v. rarius hinc inde monoici, spiculis laxè  $\infty$ -floris interdum subracemiformibus. Perianthii segmenta 6, glumacea, glumis sæpius longiora. Fl. ♂: Stamina 3, filamentis distinctis; antheræ 2-loculares, loculis distinctis parallelis apice basiue breviter discretis medio dorso affixis, rimis distinctis dehiscentibus, Pistilli rudimentum 0. Fl. ♀: Staminodia 0 v. rarius 3 parva. Ovarium 3-loculare; styli 3, elongati, discreti, fere a basi stigmatosi. Capsula 3-angularis v. 3-loba, dura, demum ad angulos dehiscentis. —Caules e rhizomate squamoso nunc erecti, rigidi, simplices, plus minus complanati, nunc ramosi, ramis virgatis strictis v. flexuoso-diffusis compressis v. teretibus. Folia radicalia v. ad basin caulium longa, linearia, basi vaginantia, secus caulem simplicem desunt, in caule ramoso sæpe plura; bractææ spathacæ sub inflorescentia v. sub ramis primariis foliis similes. Spiculæ seu racemuli in inflorescentia terminali spiciformi v. anguste paniculata ad nodos rhacheos sæpe complanatæ sessiles, erectæ v. in speciebus ramosis sæpe in ramulis solitariæ. Glunæ seu bractææ in spiculis parvæ, plus minus dissitæ v. subimbricatæ. Bracteolæ 2 sub quoque flore.

Species 6, omnes Australiæ austro-occidentali propriæ. *Benth. Fl. Austral.* vii. 211. *Mast. in DC. Monogr. Phanerog.* i. 310, t. 2.

4. *Lepyrodia*, *R. Br. Prod.* 247.—Flores dioici monoici v. rarius hermaphroditi, spiculis laxè  $\infty$ -floris interdum subracemiformibus. Perianthii segmenta 6, glumacea v. tenuia, interdum fere hyalina, glumis sæpius longiora. Fl. ♂: Stamina 3, filamentis distinctis; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscentes. Pistilli rudimentum parvum v. 0. Fl. ♀: Staminodia sæpius 3, filiformia clavata v. anthera cassâ terminata, rarius antheris perfectis flos ♀ evadit. Ovarium 3-quetæ, 3-loculare; styli 3, distincti v. basi plus minus connati, lineares, superne v. fere a basi introrsum stigmatosi, sæpe plumosi. Capsula 3-loba v. 3-angularis, ad angulos dehiscentis. —Caules e rhizomate

squamoso erecti, simplices juncei v. virgato-ramosi, aphylli. Vaginæ secus caulem plures, persistentes v. (in *L. macra* et *L. Drummondii*) deciduæ. Inflorescentia utriusque sexus subconformis. Panicula nunc dense polystachya, sæpius tamen angusta v. ad spicam interruptam reducta. Bracteæ sub paniculæ ramis v. spicularum fasciculis lanceolatæ v. angustæ, nec magnæ spathacæe ut in *Dovea*. Spiculæ laxæ, glumis angustis v. parvis dissitis ut in *Anarthria*; bracteolæ sub floribus sæpius 2, in speciebus paucis desunt.

Species 15, quarum una Novo-Zelandica, cæteræ omnes Australiæ extratropicæ incolæ. *Benth. Fl. Austral.* vii. 214. *Mast. in DC. Monogr. Phanerog.* i. 224, t. 1. *Beauv. ex Desv. in Ann. Sc. Nat.* ser. 1; xiii. t. 3, f. 3. *Hook. f. Fl. Tasm.* t. 135.

SPORADANTHUS, *F. Muell. in Trans. N. Zeal. Inst.* vi. 389; *Kirk, ibid.* x. App. 41, est *Lepyrodia Traversii*, *F. Muell.* *Fragm. Phytogr. Austral.* viii. 79, species Novo-Zelandica, serius ab auctore generice distincta ob fructum nucem 1-spermum. Nobis videtur, tanquam adhuc nota, *Lepyrodia* species vera, *L. scariosa*, Br., proxime affinis, sed elatior, panicula majore floribunda. Specimina mascula non vidimus, feminea quæ a Cheesmannio e Nova Zelandia accepimus omnia fructifera sunt, stylis jam delapsis. Fructus obliquus, inæqualiter 3-queter (abortu?) 1-locularis 1-spermus, pericarpio tenui prominenter 3-costato, demum hinc in longitudinem dehiscens.

5. **Restio**, *Linn. Syst. Veg. ed.* 13, ii. 735. (*Rhodocoma*, *Nees in Lindl. Introd. Nat. Syst. ed.* 2, 450. *Megalotheca*, *F. Muell. Fragm. Phytogr. Austral.* viii. 98. *Ischyrolepis*, *Steud. Syn. Pl. Glum.* ii. 249. *Craspedolepis*, *Steud. l. c.* 264.)—Flores dioici, spiculis utriusque sexus  $\infty$ -floris v. femineis rarissime masculis 1-floris, glumis imbricatis, bracteolis 0. Perianthii segmenta 6 v. interdum 5 v. 4, rarissime in fl. ♀ deficientia, 2 exteriora sæpius carinata. Fl. ♂: Stamina 3, filamentis distinctis; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscentes. Pistilli rudimentum minimum v. sæpius 0. Fl. ♀: Staminodia 3 v. 0. Ovarium 2- v. 3-loculare; styli 2 v. 3, distincti v. basi breviter connati, fere a basi introrsum stigmatosi, sæpe plumosi. Capsula compressa v. 3-quetra, ad angulos dehiscens.—Caules e rhizomate squamoso erecti, simplices v. ramosi, virgati v. flexuoso-ramosissimi, aphylli. Vaginæ sæpius plures dissitæ persistentesque. Inflorescentiæ ♂ et ♀ nunc subconformes, nunc valde diversæ; spiculæ ♂ sæpius paniculatæ, secus ramos pedicellatæ v. sessiles; ♀ sæpe sessiles v. subsessiles, solitariae fasciculatæ v. spicatæ, interdum tamen uti ♂ paniculatæ. In planta juniore vaginæ inferiores interdum lamina brevi instructæ, planta adulta semper aphylla videtur.

Species descriptæ ad 100, plures tamen adhuc imperfecte notæ, Africæ australis et Australiæ incolæ. *Kunth, Enum. Pl.* iii. 382. *Mast. in DC. Monogr. Phanerog.* i. 232, t. 1 (excl. *R. loxocaryo*), et in *Journ. Linn. Soc.* viii. t. 15. *Benth. Fl. Austral.* vii. 220. *Rotb. Descr. et Ic. Pl.* t. 2, f. 2, 4, t. 3, f. 1. *Labill. Pl. Nov. Holl.* t. 226, 227. *Hook. f. Fl. Tasm.* t. 135.

Genus a Mastersio post Kunthium in sectiones 2 ad pistillum 2- v. 3-merum divisum, a Benthamio ad spiculas ♀ 1- v.  $\infty$ -floras, caractere utroque nec semper constante nec habitu diverso comitato. Inflorescentia ♂ quam maxime polymorpha, sed vix sectiones distinctas præbet.

6. **Dovea**, *Kunth, Enum. Pl.* iii. 457.—Flores dioici, spiculis utriusque sexus paucifloris v. præsertim ♀ 1-floris, glumis imbricatis, bracteolis 0. Perianthii segmenta 6, glumacea, 2 extima paullo breviora acute carinata, cætera subplana. Fl. ♂: Stamina 3, filamentis distinctis; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscens. Pistilli rudimentum minimum, 3-fidum. Fl. ♀: Staminodia minima v. 0. Ovarium 3-loculare; styli 3, distincti, crassiusculi, recurvi, introrsum piloso-stigmatosi. Capsula dura, subgloboso-3-dyma, loculis 3 in longitudinem dehiscenibus.—Caules in rhizomate brevi conferti, erecti, rigidi, simplices, robusti v. tenues, ima basi squamati. Vaginæ secus caulem dissitæ, laxæ, deciduæ, ad nodos annulum fuscum relinquentes. Inflorescentia terminalis, spiculis spicatis, spicis brevibus subsessilibus densis simplicibus ramosisve, in paniculam nunc angustam densam hinc inde interruptam nunc breviorē laxiuscule pyramidatam dispositis; inflorescentia ♀ masculo simplicior, cæterum similis. Bracteæ spathacæe magnæ, coriaceæ, coloratæ, sub spicis ramisve inflorescentiæ, sed cito deciduæ.

Species 6, Africæ australis incolæ. *Mast. in DC. Monogr. Phanerog.* i. 305, t. 2, et in *Journ. Linn. Soc.* x. t. 7 B.

7. *Askidiosperma*, Steud. Syn. Pl. Glum. ii. 257.—Flores dioici, spiculis utriusque sexus paucifloris v. præsertim ♀ 1-floris, bracteolis 0. Perianthii segmenta 6, glumacea, lanceolata, plus minus setaceo-acuminata, extima carinata subdimidio breviora. Fl. ♂ : Stamina 3, filamentis liberis ; antheræ dorsifixæ, oblongo-lanceolatae, 1-loculares, rima unica dehiscences, polline emisso late apertæ medio incrassatæ. Fl. ♀ : Staminodia minima. Ovarium ovato-oblongum, retusum, compressum, 2-loculare ; styli 2, distincti, lineares, recurvi, fere a basi introrsum plumoso-stigmatosi. Capsula compressa, 2-locularis, loculis margine in longitudinem dehiscens.—Herba juncea, aphylla, vaginis deciduis habituque *Elegiæ junceæ*, a qua parum differt bracteis sub spicis spiculisque angustis margine v. undique scariosis longe setaceo-acuminatis margineque longe ciliatis, et fructu compresso distincte dehiscens.

Species 1, Austro-Africana. Mast. in DC. Monogr. Phanerog. i. 304, excl. speciminibus Burchellianis n. 8719, potius ad *Elegiam junceam* pertinentibus.

8. *Elegia*, Linn. Mant. n. 1331. (Chondropetalum, Rottb. Descr. et Ic. Pl. 10, t. 3, f. 2, 3).—Flores dioici, spiculis ♂ paucifloris, ♀ sæpe 1-floris, glumis imbricatis, bracteolis 0. Perianthii segmenta 6, glumacea, obtusa v. rarius setaceo-acuminata, exteriora breviora v. rarius in fl. ♀ interioribus longiora. Fl. ♂ : Stamina 3, filamentis distinctis ; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscences. Fl. ♀ : Staminodia minima v. 0. Ovarium 3-quetrum v. rarius compressum, sæpius 1-loculare 1-ovulatum, interdum vere 2-3-loculare loculis 1-ovulatis ; styli 3, rarius 2, distincti, lineares v. breves, recurvi, introrsum a basi piloso-stigmatosi. Fructus 3-quet v. 3-costatus, rarius compressus, pericarpio crustaceo nitente, intus interdum albo-incrassato, indehiscens, sæpe tamen ad angulos facillime solubilis, sæpissime 1-locularis 1-spermus, interdum vero in *E. juncea* fructum invenimus 2-3-spermum.—Caulis e rhizomate nunc abbreviato crasso lignoso nunc repente squamoso erecti, simplices, nisi in *E. verticillari* et interdum in *E. propinqua* ramulis sterilibus ad nodos densissime fasciculatis instructi. Vaginæ secus caulem dissitæ, sæpius deciduæ annulum brevem relinquentes, in paucis tamen speciebus more *Restionis* diu persistentes. Spiculæ utriusque sexus parvule, in glomerulas spicas v. paniculas breves dense confertæ, spicis v. paniculis ad apicem caulis pluribus sessilibus in capitulum confertis v. paniculam angustam densam v. interruptam formantibus. Bracteæ spathacæ sub spicis v. paniculis partialibus amplæ, rigide membranacæ, castaneæ, caducissimæ, sub spiculis parvæ, glumacæ. Glumæ perianthio breviores.

Species enumeratæ 13, omnes Austro-Africanæ. Kunth, Enum. Pl. iii. 460. Mast. in DC. Monogr. Phanerog. i. 351, t. 3. In speciminibus 2 speciei typicæ *E. junceæ* fructum 2-3-spermum invenimus, in specimine tertio tamen 1-spermus erat qualis in speciebus cæteris pluribus nec in omnibus observatur. Specimina tamen bene fructifera in herbariis rara.

LAMPROCAULOS, Mast. in DC. Monogr. Phanerog. i. 349, t. 3, genus ad *E. grandem*, Kunth, et *E. Neesii*, Mart., stabilitum, quoad characteres essentielles et habitum omnino *Elegiam* refert, a qua differre dicitur vaginis persistentibus et præsertim fructu compresso stylis 2 brevibus triangularibus coronato. Vaginæ tamen non diutius persistunt quam in *E. densa* et præsertim in *E. asperifolia*, et styli in aliis speciebus variant 2 v. 3 et interdum valde abbreviati sunt. Specimina nostra *Lamprocauli* (etiam Dregeana n. 1650) omnia ♂ sunt ; hæc insignia sunt glumis perianthiique segmentis exterioribus angustissimis fere setaceis, sed jam in *E. asperifolia* longe setaceo-acuminata sunt.

9. *Leptocarpus*, R. Br. Prod. 250. (Calopsis, Beauv. ; Desc. in Ann. Sc. Nat. ser. 1, xiii. 44, t. 3, f. 2. Schœnodum, Labill. Pl. Nov. Holl. ii. 79, t. 229, quoad plantam ♀.)—Flores dioici v. rarius monoici, spiculis utriusque sexus ∞-floris v. ♀ rarius 1-floris, glumis imbricatis, bracteolis 0 v. rarius in ♀ 2. Perianthii segmenta 6, rarius pauciora, sæpius glumacea, 2 exteriora interdum carinata. Fl. ♂ : Stamina 3, rarius 2, filamentis filiformibus ; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscens. Pistilli rudimentum parvum v. 0. Fl. ♀ : Staminodia 3, parva v. 0. Ovarium 3-quetrum, 1-loculare, (an semper ?) 1-ovulatum ; styli 3, rarius 2, elongati, tenues, distincti v. ad

medium connati, introrsum stigmatosi. Fructus angustus v. ovoideus, pericarpio tenui v. crassiusculo, indehiscens v. uno latere v. ad angulos dehiscens.—Caulēs e rhizomate repente squamoso simplices v. ramosi. Vaginæ sæpius breves, cauli arcte appressæ, persistentes. Inflorescentia varia, ♂ v. utriusque sexus sæpius paniculata. Bracteæ spathacæ, sæpius parum conspicuæ.

Species enumeratæ 21, quarum 1 Novo-Zelandica, 1 Cochinchinensis, 1 Chilensis, cæteræ Africæ australis v. Australiæ incolæ. *Mast. in DC. Monogr. Phanerog.* i. 329, t. 2. *Benth. Fl. Austral.* vii. 230. *Rotth. Descr. et Ic. Pl. t. 2, f. 1, 3.* *Hook. f. Fl. N. Zel. t. 61; Fl. Tasm. t. 136.*

Genus in sectiones 3 parum distinctas dividitur:—

1. *Calopsis*. Caulēs sæpius ramosi nunc ramosissimi, inflorescentia utriusque sexus subsimili. Spiculæ præsertim in specie typica *L. paniculato* numerosæ ample paniculatæ, v. in panicula angustiore secus rhachin parum ramosam subsessiles, in *L. modesto* fide Mastersii flos in spiculis ♀ unicus tantum fertilis. Vaginæ præsertim superiores quam in sectionibus sequentibus laxiores. Species omnes austro-Africanæ.

2. *Diplanthesis*. Caulēs simplices v. parum ramosi. Spiculæ ♂ pedicellatæ, paniculatæ v. fasciculatæ, ♀ sessiliores, capitatæ spicatæ v. dense paniculatæ. Species Australiæ extratropicæ et Novæ Zelandiæ incolæ. Huc etiam potius quam ad *Calopsidem* referenda videtur species Chilensis unica in ordine. Styli rami a Mastersio l. c. t. 2, f. 40, 41, 44 crassiusculi delineantur et introrsum villosi, in speciminibus Bridgesianis n. 853 more generis longos tenuesque invenimus. Specimina nostra typica Lechleriana omnia ♂ sunt.

3. *Homœanthesis*. Caulēs parum ramosi. Spiculæ utriusque sexus minimæ, secus ramos paniculæ fasciculatæ. Species 4, Australianæ tropicæ, quibus additur *L. disjunctus*, *Mast. in Journ. Linn. Soc.* xvii. 344, species Cochinchinensis *L. ramoso*, Br., valde affinis, sed monoica dicitur.

10. *Loxocarya*, R. Br. *Prod.* 249? *Benth. Fl. Austral.* vii. 240. (Haplostigma, *F. Muell. Fragm. Phytogr. Austral.* viii. 100.)—Flores dioici v. monoici, spiculis parvis ♂ plurifloris, ♀ 1-pauci-floris, glumis imbricatis, bracteolis 0. Fl. ♂: Perianthii segmenta 6, angusta, tenuiter glumacea v. præsertim interiora hyalina. Stamina 3, filamentis filiformibus v. complanatis; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscens. Pistilli rudimentum 0 v. in flore terminali minutum. Fl. ♀: Perianthii segmenta 3-6, tenuia, hyalina, breviter lataque, ovario appressa, v. 0. Staminodia 0. Ovarium angustum, 1-loculare, 1-ovulatum, in stylum simplicem filiformem introrsum a medio stigmatosum desinens. Fructus parvus, ovoideus v. oblongus, subteres, ecostatus, indehiscens (v. in *L. cinerea* demum uno latere dehiscens?).—Caulēs e rhizomate erecti, ramosi, sæpe flexuosi et intricato-ramosissimi. Vaginæ persistentes. Spiculæ ad apices ramulorum solitariae v. præsertim in maribus 2 v. paucae, secus ramulum sessiles dissitæ, omnes unisexuales sæpiusque dioicæ, interdum vero inferiores 1-2 ♀ in speciminibus cæterum ♂.

Species 7, Australiæ austro-occidentalis incolæ.

Masters speciem typicam *L. cineream*, R. Br., ad *Restionem* refert ob fructum dehiscentem, et cæteras pro sectione cum *Hypolena* jungit. *L. cinerea* tamen habitu, inflorescentia, floribus ♀ perianthio orbatis, ovario et stylo *L. flexuosa* simillima est, nec nostro sensu generice separanda. Fructus ex R. Br. est 'folliculus cartilagineus margine convexo dehiscens,' maturus nobis deest, immaturus ei *L. flexuosa* simillimus est, et dehiscentiæ natura ulterius scrutanda. Pistillum in omnibus speciebus a Benthamio sub *Loxocarya* descriptis constanter monocarpicum; nec ut in *Hypolena* syncarpicum.

DESMOCLADUS, *Nees in Pl. Preiss.* ii. 56, est *L. fasciculatus*, Benth., species insignis ramulis sterilibus numerosis brevibus simplicibus ad nodos fasciculatis, spiculis ♂ pedunculatis v. ♀ sessilibus internixtis. Spicularum florum fructuumque structura omnino *Loxocaryæ*.

11. *Lepidobolus*, *Nees in Pl. Preiss.* ii. 66.—Flores dioici, spiculis utriusque sexus ∞-floris globosis v. demum oblongis, glumis imbricatis numerosis, bractæolis 0. Perianthii segmenta 5, 6, angusta, glumacea v. scariosa, 2 extrema interdum rigidiora carinataque. Fl. ♂: Stamina 3, filamentis filiformibus; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscens. Pistilli rudimentum 0. Fl. ♀: Staminodia 0. Ovarium ovoideum,

1-loculare, 1-ovulatum; stylus simplex, filiformis, jam infra medium uno latere stigmatosus. Fructus ovoideus v. obovoideo-oblongus, teres, ecostatus, pericarpio duro, indehiscens.—Caules e rhizomate horizontali v. repente squamoso sæpius lanato-piloso erecti, simplices, virgati v. flexuosi. Vaginæ rigidulæ, deciduæ, annulum nigrum more *Dovea* relinquentes. Spiculæ terminales, capituliformes, solitariae v. in maribus additis 1-3 inferioribus sessilibus; ♀ quam ♂ sæpius angustiores. Glumæ inferiores in utroque sexu præsertim in ♀ vacuæ. Bracteæ spathaceæ sub inflorescentia 1-2, floribus breviores.

Species 3, Australiæ extratropicæ australis incolæ. *Benth. Fl. Austral.* vii. 244.

12. *Chaetanthus*, *R. Br. Prod.* 251. (*Prionosepalum*, *Steud. Syn. Pl. Glum.* ii. 266.)—Flores dioici, masculi ignoti. Spiculæ ♀ parvæ, ∞-floræ, in glomerulum terminalem confertæ, glumis imbricatis, bracteolis 0. Perianthii segmenta 6, exteriora linearia hyalina, interiora capillacea. Staminodia 0. Ovarium 1-loculare, 1-ovulatum; stylus simplex, filiformis, jam infra medium uno latere stigmatosus. Fructus indehiscens?, maturus ignotus.—Caules tenues, erecti, simplices, dense cæspitiosi. Vaginæ tenues, cylindraceæ, arcte appressæ, persistentes. Inflorescentia terminalis, parvula, oblonga, densa etsi ramosa, e spiculis sat numerosis sessilibus confertisque. Glumæ exteriores fusco-brunneæ, interiores hyalinæ. Flores 6-8 v. plures, brevissime pedicellati.

Species 1, Australiæ austro-occidentalis incola. *Benth. Fl. Austral.* vii. 245.

13. *Onychosepalum*, *Steud. Syn. Pl. Glum.* ii. 249.—Flores dioici, spiculis utriusque sexus solitariis terminalibus ∞-floris, glumis imbricatis, bracteolis 0. Perianthii segmenta 3, tenuiter hyalina, unguiculata. Fl. ♂: Stamina 3, filamentis filiformibus; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscentes. Pistilli rudimentum 0. Fl. ♀: Staminodia 0. Ovarium stipitatum, 1-loculare, 1-ovulatum; stylus elongatus, filiformis, indivisus, a medio uno latere stigmatosus. Fructus maturus ignotus.—Caules e rhizomate v. basi cæspitoso-ramosa squamosa erecti, simplices, tenues, præter squamas basales imbricatas nudi. Spiculæ ovoideæ, erectæ; glumæ inferiores plures præsertim in ♀ sæpe numerosæ vacuæ, florentes tamen in utroque sexu plures, sæpe deciduæ florem denudantes.

Species 1, Australiæ austro-occidentalis incola. *Benth. Fl. Austral.* vii. 246.

14. *Thamnochortus*, *Berg. Pl. Cap.* 353.—Flores dioici, spiculis utriusque sexus ∞-floris, glumis imbricatis, bracteolis 0. Spiculæ ♂ paniculatæ, glumis margine plus minus scariosis, inferioribus paucis vacuis. Perianthii segmenta 2 exteriora complicato-carinata, 3-4 interiora hyalina. Stamina 3, filamentis filiformibus; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscentes. Pistilli rudimentum 0. Spiculæ ♀ masculis crassiores, in spica paucae, erectæ, sessiles, glumis inferioribus pluribus v. perpaucis vacuis. Perianthium plano-compressum, segmentis 2 exterioribus complicatis carinis late alatis, interioribus hyalinis. Staminodia 0. Ovarium sessile, 1-loculare, 1-ovulatum; stylus simplex, elongatus, superne uno latere stigmatosus, basi interdum dilatatus. Fructus ovatus, complanatus, indehiscens.—Caules florentes e rhizomate repente v. brevi erecti, juncei, indivisi, vaginis paucis distantibus persistentibus, ad nodos tamen sæpe ramulos breves steriles dense fasciculatos ramosissimosque emittunt. Spiculæ in panicula ♂ haud numerosæ, sæpius pedicellatæ nutantes, in spica ♀ secus rhachin simplicem v. breviter ramosam paucae. Spiculæ utriusque sexus, uti ramorum steriliu fasciculi, nunc argenteo-nitentes nunc brunnei. Flores plano-compressi.

Species 10, Africæ australis incolæ. *Kunth, Enum. Pl.* iii. 428. *Mast. in DC. Monogr. Phanerog.* i. 314, quoad § 1; t. 2, f. 16 ad 27. *Rotth. Descr. et Ic. Pl.* t. 1, f. 1 (*Restio*).

15. *Staberoha*, *Kunth, Enum. Pl.* iii. 442.—Flores dioici, spiculis utriusque sexus ∞-floris, glumis imbricatis, bracteolis 0. Spiculæ ♂ paniculatæ, ovatae, glumis brunneis nitidis, inferioribus paucis vacuis. Perianthii segmenta angusta, subæqualia, 2 exteriora

complicato-carinata, interiora tenuiora plana. Stamina 3, filamentis filiformibus; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscentes. Pistilli rudimentum 0. Spiculæ ♀ oblongæ v. angustæ, solitariae v. 2, erectæ, sessiles, glumis rigiduliâ demum apice patentibus, inferioribus paucis vacuis. Perianthium valde compressum, segmentis tenuibus sæpe hyalinis, exterioribus complicatis carinis late alatis. Staminodia 0. Ovarium sessile, compressum, 1-loculare, 1-2-ovulatum, ovulo altero tamen mox abortiente; styli 2, a basi distincti, superne v. fere a basi introrsum subplumoso-stigmatosi. Fructus nuceus, subteres, leviter compressus, ecostatus, nitidus, pericarpio duro indehiscente.—Caules e rhizomate squamoso erecti, juncei, simplices v. in ramos paucos virgatos divisi. Vaginæ paucæ, dissitæ, persistentes. Bracteæ spathacæ sub inflorescentia ♂ et sub spicula ♀ angustæ, erectæ, complicatæ, persistentes. Spiculæ ♂ in panicula paucæ, ad axillam spathæ pedicellatæ, nutantes; ♀ erectæ, sæpius solitariae terminales, additis rarius 1-2 inferioribus sessilibus, omnes brunneæ nitidulæ nec scariosæ.

Species 6, Africæ australis incolæ. *Mast. in DC. Monogr. Phanerog.* i. 323 (*Thamnochorti* § 2). *Rotb. Descr. et Ic. Pl. t. 2, f. 5, t. 3, f. 5 (Restio).*

Masters hoc genus cum *Thamnochorto* jungit, cui certe proxime affine, sed character e pistillo syncarpico nec monocarpico constans videtur, et quodammodo habitu et characteribus nonnullis minoribus comitatur.

16. *Hypoleuca*, R. Br. *Prod.* 251. (*Calorophus*, Labill. *Pl. Nov. Holl.* ii. 78, t. 228. *Calostrophus*, F. Muell. *Fragm. Phytogr. Austral.* viii. 86, 88.)—Flores dioici, spiculis ♂ ∞-floris rarius 1-floris, ♀ 1-floris, glumis imbricatis, bracteolis 0. Fl. ♂: Perianthii segmenta sæpius 6, angusta, glumacea v. tenuia. Stamina 3, filamentis filiformibus; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscentes. Pistilli rudimentum 0. Fl. ♀: Perianthii segmenta 6, tenuissima, fere hyalina, brevia lataque v. rarius lanceolata. Staminodia 3 minima v. 0. Ovarium 1-loculare, 1-ovulatum, apice sæpius plus minus corneo-incrassatum; styli v. styli rami 2, filiformes, introrsum stigmatosi. Fructus nuceus, ovoideus v. obovoideus, teres, ecostatus, apice incrassatus v. æqualis, pericarpio duro indehiscente.—Caules e rhizomate repente tenues, ramosi, interdum ramosissimi, subflexuosi. Vaginæ persistentes. Spiculæ sæpius parvæ, ♂ nunc secus ramos solitariae v. geminæ, sessiles, sæpe distantes, nunc ad apices ramorum paniculatæ; ♀ ad apices ramorum solitariae v. 2-3-næ.

Species 17, Africæ australis, Australiæ extratropicæ v. Novæ Zelandiæ incolæ. *Mast. in DC. Monogr. Phanerog.* i. 364, excl. § 1; in *Journ. Linn. Soc. x. t. 7 A. Benth. Fl. Austral.* vii. 287. *Hook. f. Fl. Tasm.* t. 137.

Genus in series 3 sequentes dividendum:—

1. *Tenuis*. Spiculæ ♂ secus ramos dissitæ sub bractea spathacea solitariae sessilesque v. geminæ altera sessili altera breviter pedicellata. Styli v. styli rami 3 v. 2. Species Australiæ cum una Novo-Zelandica.

2. *Restioides*. Spiculæ ♂ in paniculam parvulam laxam dispositæ, omnes pedicellatæ. Styli rami 3. Species 2, Australiæ. Planta ♂ a speciebus nonnullis *Restionis* v. *Leptocarpi* sæpe distinguenda.

3. *Africana*. Spiculæ ♂ subsessiles, paniculatæ v. secus ramos dissitæ. Styli rami 2. Species 11; austro-Africæ.

17. *Hypodiscus*, Nees in Lindl. *Introd. Nat. Syst. ed. 2*, 450. (*Leucoploeus*, Nees in Lindl. l. c. Boeckhia, Kunth, *Enum. Pl.* iii. 448.)—Flores dioici, spiculis ♂ multifloris, ♀ 1-floris, glumis imbricatis, bracteolis 0. Spiculæ ♂ globosæ v. ovoideæ, glumis rigiduliâ subulato-acuminatis. Perianthii segmenta 6, rarius 5, angusta, 2 exteriora subcarinata. Stamina 3, filamentis filiformibus; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscentes. Pistilli rudimentum 0. Spiculæ ♀ masculis angustiores, glumis ∞ vacuis arcte imbricatis brevius quam in masculis aristatis. Torus intra perianthium nunc brevissimus nunc crassus, papillis carnosus tuberculatus. Perianthii segmenta 3-6, tenuia v. fere hyalina, nunc ad basin stipitis brevia, nunc basi stipiti adnata, ovario paullo breviora. Ovarium ovoideum, basi v. fere ad apicem papillis carnosus obtectum, junius sæpe 2-locu-

lare 2-ovulatum, sed jam sub anthesi abortu 1-loculare 1-ovulatum; stylus crassiusculus, superne v. infra medium in ramos 2 rigidulos introrsum stigmatosos divisus. Fructus ovoideus v. oblongus, lævis v. plus minus carnosus-tuberculosus, ecostatus, pericarpio duro indehiscente, endocarpio (in speciminibus perpaucis examinatis) membranaceo, solubili, 1-2-loculari 1-2-spermo.—Caules e rhizomate squamoso erecti, simplices, juncei. Vaginæ paucæ, dissitæ, persistentes. Bracteæ spathacæ sub inflorescentia v. sub spiculis rigidulæ, sæpe albo-marginatæ, deciduæ. Spiculæ ♂ variant solitariae terminales crassæque, v. paucæ sessiles dissitæ spicatæ, v. plures minoresque dense paniculatæ; ♀ solitariae v. paucæ simpliciter spicatæ.

Species 11, Africæ australis incolæ. *Mast. in DC. Monogr. Phanerog.* i. 379, t. 4; et in *Journ. Linn. Soc.* x. t. 7 C.

*LEPIDANTHUS*, Nees in *Linnaea*, v. 665, caractere manco ex specimine ♂ solo deducto, est, fide Mastersii, *Hypodisci* species antheris perperam 2-locularibus dictis.

18. *Cannomois*, Beauv.; Desv. in *Ann. Sc. Nat. ser.* 1, xiii. 43, t. 3, f. 1. (*Mesanthus* et *Cucullifera*, Nees in *Lindl. Introd. Nat. Syst. ed.* 2, 451.)—Flores dioici, spiculis ♂ ∞-floris ♀ paucifloris, glumis imbricatis, bracteolis 0. Spiculæ ♂ paniculatæ, ovoideæ v. oblongæ, glumis latis, inferioribus paucis vacuis. Perianthium plano-compressum, segmentis 5-6, 2 exterioribus complicato-carinatis margine scariosis, interioribus angustioribus magis scariosis. Stamina 3, filamentis filiformibus; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscentes. Pistilli rudimentum 0. Spiculæ ♀ masculis multo majores, ovoideo-acuminatæ, terminales, solitariae v. geminae, glumis latissimis valde convolutis subulato-acuminatis, inferioribus minoribus vacuis. Flores sessiles v. stipiti brevi crasso impositi, laterales 2-3 obliqui fertilesque, terminalis æqualis at sæpius sterilis videtur. Perianthium hyalinum, latissimum, ovarium obtegens, mox varie lacerum v. divisum, sub fructu plus minus persistens. Ovarium 1-loculare, 1-ovulatum; styli 2, a basi discreti, longe lineares, fere a basi stigmatosi. Fructus ovoideus v. subglobosus, teres, ecostatus, lævis, pericarpio duro crasso indehiscens; endocarpium? in fructu nondum perfecte maturo laxum membranaceum.—Caules e rhizomate squamoso erecti, nunc rigidi virgati simplicesque, nunc valde ramosi. Vaginæ persistentes. Panicula ♂ densa, nunc ample thyrsoides, nunc contracta fere spiciformis, spiculis fere semper numerosis. Spiculæ ♀ erectæ, sæpius in ramulis seu pedunculis solitariae, addita rarius altera inferiore, et in *C. virgato* caulis interdum repetite ramosus, ramis etsi apice monostachyis paniculam laxam formantibus.

Species 3, Africæ australis incolæ. *Kunth, Enum. Pl.* iii. 447. *Mast. in DC. Monogr. Phanerog.* i. 360, t. 3 (*Cannamois*).

19. *Willdenowia*, Thunb. in *K. Vet. Acad. Nye Handl. Stockh.* 1790, 26, t. 2, ex ejusd. *Gen. Nov.* 103. (*Nematanthus*, Nees in *Linnaea*, v. 661.)—Flores dioici, spiculis ♂ laxæ ∞-floris, ♀ 1-floris, bracteolis 0. Fl. ♂ intra glumas breves lineares v. lineari-lanceolatas dissitas breviter pedicellati. Perianthii segmenta 6, linearia, acute acuminata, subæqualia. Stamina 3, filamentis brevibus; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscentes. Pistilli rudimentum 0. Fl. ♀ glumis ∞ (ad 6) vacuis spathiformibus coriaceis acute acuminatis imbricatis inclusus, intra glumas stipite crasso sæpe carnosus-6-lobo fultus. Perianthii segmenta 6, brevina, tenuia, hyalina, basi stipiti adnata, post anthesin basi ovarii arcte appressa, squamiformia. Staminodia 0. Ovarium obtusum, 1-loculare, 1-ovulatum, addito interdum ovuli alterius rudimento parvo; styli 2, a basi distincti, crassiuscule filiformes, caducissimi. Fructus ovoideus, obtusus, teres, ecostatus, ima basi perianthii segmentis persistentibus squamatus, cæterum lævis, pericarpio crasso duro indehiscente.—Caules e rhizomate squamoso rigidi, virgati, simplices v. ramosi. Vaginæ laxæ, persistentes. Spiculæ ♂ ad apicem caulis sæpius plures, interrupte spicati, bracteis spathaceis coriaceis deciduis interstincti. Spiculæ ♀ terminales, solitariae v. 2 inter se parum distantes, sessiles.

Species 8, Africæ australis incolæ. *Mast. in DC. Monogr. Phanerog.* i. 391, t. 2; in *Journ. Linn. Soc.* x. t. 8 D.

*ANTHOCHORTUS*, *Nees in Lindl. Introd. Nat. Syst. ed. 2*, 451 (*ANTHOCHORTUS*, *Kunth, Enum. Pl. iii.* 484), genus ad specimen ♂ solum conditum et ideo valde incertum, est tamen ex caractere dato verisimiliter *Willdenowia* species, *W. striatæ*, Thunb., valde affinis nisi eadem.

20. *Ceratocaryum*, *Nees in Lindl. Introd. Nat. Syst. ed. 2*, 451.—Flores dioici, spiculis ♂ laxe ∞-floris, ♀ 1-floris, bracteolis 0. Fl. ♂ intra glumas longe lineares subscariosas dissitas pedicellati. Perianthii segmenta 6, linearia, acuta, interiora margine scariosa. Stamina 3, filamentis brevibus; antheræ oblongæ, dorsifixæ, 1-loculares, rima unica dehiscentes. Pistilli rudimentum 0. Fl. ♀ glumis ∞ (ad 6) magnis acutis rigide subscariosis imbricatis inclusus. Perianthii segmenta 6, parva, hyalina, sub fructu ovata, squamiformia, arcte appressa. Ovarium obtusum, 1-loculare, 1-ovulatum; styli 2, a basi distincti, longiusculi, crassi, undique papilloso-stigmatosi. Fructus ovoideus, leviter compressus, ecostatus, papillis tuberculiformibus undique obtectus, stylis diu persistentibus coronatus, basi squamis 6 orbiculatis appressis (perianthii segmentis?) stipatus.—Caulis e rhizomate squamoso rigidi, erecti, simplices. Vaginæ in tubum arcte convolutæ, persistentes, apice demum scariosæ laceræque. Spiculæ ad apicem caulis subsessiles, ♂ plures in spicam compositam oblongam dense thyrsoidæam confertæ, glumis perianthiisque argenteo-nitentibus insignes; ♀ paucæ, magnæ, rigidæ. Bracteæ spathacæe paucæ, magnæ, rigidæ, nitidæ, sæpius purpurascens, caducæ.

Species 2, Africæ australis incolæ. *Mast. in DC. Monogr. Phanerog. i.* 390, t. 4. Genus vix ac ne vix a *Willdenowia* distinctum.

## ORDO CXCIX. CYPERACEÆ.

Endl. Gen. 109. Lindl. Veg. Kingd. 117.

*Flores* hermaphroditi v. unisexuales, in spicas parvas *spiculas* dictas dispositi, singuli ad axillam bracteæ parvæ *glumæ* dictæ solitarii, sessiles v. subsessiles. *Glumæ* in spicula distiche v. undique imbricatæ, inferiores 1-2 rarius plures vacuæ, cæteræ flores obtegentes, v. rarius spicula ♀ ad glumam floremque 1 reducta. *Perianthium* perfectum 0 (nisi in *Oreobolo*), sed in floribus ♂ generum nonnullorum adsunt setæ v. squamellæ 6 v. pauciores rarius plures hypogynæ dictæ, sed semper extra stamina affixæ sæpeque sub-2-seriatæ, quæ verisimiliter perianthio homologæ. *Stamina* 3 v. pauciora, rarius 4-6 v. ∞, filamentis liberis filiformibus v. leviter complanatis. *Antheræ* e spicula sæpissime exsertæ, basifixæ, oblongæ v. lineares, loculis 2 parallelis longitudinaliter dehiscentibus. *Ovarium* intergrum, erectum, in centro floris sessile v. stipiti brevi interdum incrassato v. in discum dilatato impositum, 1-loculare. *Stylus* terminalis centralis, cum ovario continuus v. rarius articulatus, filiformis v. basi incrassatus, a basi v. supra basin persistentem deciduus, superne v. jam infra medium in ramos 2-3 v. rarius ∞ filiformes introrsum a basi stigmatoso-papillosos sæpe stigmata dictos divisus v. rarius apice subulato indivisus v. minute 2-3-dentatus. *Ovulum* 1, a basi ovarii erectum, anatropum. *Fructus* parvus, gluma obtectus v. exsertus, nuceus, indehiscens, sub stylo 2-fido plus minus complanatus v. 2-convexus; sub stylo 3-fido obscure v. distincte 3-queter; pericarpium crustaceum induratum v. interdum subdrupaceum, exocarpio tenui v. suberoso-incrassato, endocarpio duro. *Semen* a basi erectum, a pericarpio (an semper?) liberum, testa tenui. *Embryo* intra basin albuminis copiosi farinacei v. carnosi parvus, lenticularis globosus v. ovoideus.

Herbæ perennes rarius annuæ, habitu *Gramineis* accedentes, sæpius tamen rigidiores, interdum juncoideæ, restioides v. fluitantes, sæpius caespitosæ, v. rhizoma repens v. stolones emittens, vaginisque brevibus membranaceis demum marcescentibus obtectum. Caulis solidus v. rarius cavus, tenuis humilisque v. elongatus validus interdum orgyalis,

infra inflorescentiam simplex v. rarius ramosus. Folia vulgo pro maxima parte in cœspite v. ad basin caulis conferta, extima v. radicalia basi in vaginas apertas dilatata v. ad vaginas illas rhizomatis subsequentes reducta, interiora et caulina superiora dum adsint e vaginis tubulosis clausis caulem amplectentibus in laminam angustam gramineam v. carinatum scabramque producta; ligula rarissime ad apicem vaginæ laminæ opposita; interdum folia pleraque v. omnia ad vaginas tubulosas reducta v. caules præter vaginam unicam basalem aphylli. Spiculæ distinctæ v. in fasciculos v. capitula aggregatæ sessilesque. Capitula, fasciculi, v. spiculæ singulæ nunc solitaria terminaliaque, nunc plura secus caulem dissita, v. variè umbellata paniculata v. rarius spicata; si umbellata centrale sessile, cætera pedicellis seu radiis sæpius valde inæqualibus fulta. Bracteæ sub ramis inferioribus inflorescentiæ sæpe foliis caulinis similes, sub umbella 2-3 exteriores etsi valde inæquales involucrium patens sæpe formant; sub inflorescentia capitata v. simpliciter fasciculata bractea exterior haud raro erecta, cum caule continua, inflorescentiam infra apicem caulis specie lateralem præbet; bracteæ superiores minores, sub spiculis ipsis v. interdum fere omnes parvæ glumiformes.

Species descriptæ ultra 3000, quarum tamen vix 2200 retinendæ videntur, per orbem terrarum copiose dispersæ, in locis uliginosis paludosisve frequentes, usque ad regiones frigidas alpinas arcticas antarcticasque extensæ, nec in calidioribus inter tropicos raræ, nonnullæ ipsæ cosmopolitaneæ.

Ordo vastus et facillime distinctus, etsi primo aspectu nunc *Gramineis* nunc *Restiaceis* accedere videtur; a prioribus tamen abunde differt caule solido sæpe angulato, foliorum vaginis clausis, florum structura, stigmatibus et embryone, et species nulla inter hos ordines media adhuc detecta est. A *Restiaceis Cyperaceæ* distinguuntur ovulo v. semine erecto sæpissimeque perianthio imperfecto v. nullo, et hac ratione *Oreobolo* solo cum illis connectuntur. Distributio in tribus et genera minus definita evadit, jam diu optime elaborata fuit a Brownio et Kunthio, etsi characteres nonnulli quibus uti sunt (e.g. setarum hypogynarum absentia v. præsentia) ex observationibus posterioribus minus certi præstant. Divisio primaria ad flores fertiles hermaphroditos v. femineos a Boeckelero aliisque adoptata optime definita apparet, sed limites tribuum generumque majorum interdum obscuriores sunt, et species intermediæ haud raro observantur.

De generibus Beauvoisianis *Cyperacearum* confer Benth. in Journ. Linn. Soc. xviii. 360.

#### FORMÆ ABNORMES.

Perianthium regulare adest in *Oreobolo*.

Stamina numerosa in *Evandra*, *Chrysitricæ*, *Chorisandra* et *Lepironia*.

Styli rami 8 in *Evandra*, 4-5 in speciebus nonnullis *Elynanthi*, *Gahnia*, *Lagenocarpi*.

Flores ♀ ad basin caulis pedunculati in speciminibus extra-europæis *Scirpi supini* indicavit A. Gray, in speciminibus Europæis deesse videntur.

#### CONSPECTUS TRIBUUM (exceptis neglectis).

A. Monoclines. Flores fertiles hermaphroditi v. rarissime filamentis anantheris subfeminei.

**Tribus I. Scirpeæ.** Spiculæ pluri- sæpius multi-floræ, glumis inferioribus 1, rarius 2 vacuis. Setæ v. squamæ hypogynæ filiformes planæ v. 0.

**Tribus II. Hypolytrææ.** Spiculæ pluri- sæpius multi-floræ, glumis inferioribus 1-∞ vacuis. Squamæ hypogynæ nunc 2 laterales complicato-carinatæ liberæ v. connatæ, nunc ∞, 2 exterioribus lateralibus complicato-carinatis.

**Tribus III. Rhynchosporææ.** Spiculæ sæpissime 1-2-floræ, glumis inferioribus 2-∞-vacuis. Setæ v. squamæ hypogynæ filiformes planæ v. 0.

B. Didineæ. Flores strictè unisexuales, staminodiis 0 in femineis, pistillo 0 in masculis.

**Tribus IV. Cryptangiææ.** Spiculæ unisexuales, femineæ 1-floræ terminales v. in parte superiore paniculæ, masculæ inferiores 2-∞-floræ.

**Tribus V. Sclerieææ.** Flores feminei ad basin spiculæ androgynæ solitarii, v. spiculæ unisexuales, femineæ 1-floræ in parte inferiore paniculæ; masculæ superiores 2-∞-floræ.

**Tribus VI. Cariceæ.** Spiculæ fœminæ 1-floræ, spicatæ, gluma unica utriculiformi clausa v. hinc fissâ florem includente; masculæ 2-∞-floræ, terminales v. cum spicæ fœminæ apice rarius basi continuæ.

## CONSPECTUS GENERUM.

**Tribus I. Scirpæ.** Spiculæ pluri-sæpius multi-floræ, floribus omnibus hermaphroditis v. summo rarius masculo. Glumæ omnes florentes v. 1 rarius 2 infimæ vacuæ. Setæ v. squamæ hypogynæ dum adsint 6 v. pauciores, rarius ∞, filiformes v. planæ. Stylus 2-3-fidus.

Excepta: Spiculæ 1-2-floræ in *Cyper* sect. *Marisco* et in *Kyllinga* et *Courtoisia*.

\* *Glumæ distichæ.*

1. CYPERUS. Spiculæ ∞-floræ v., si 1-floræ, gluma supra vacua v. florem ♂ fovens e gluma florente protrusa. Setæ hypogynæ 0. Stylus basi haud incrassatus. Inflorescentia terminalis, 1-stachya capitata v. irregulariter umbellata.—*Orbis utriusque reg. trop. subtrop. et temp.*

2. KYLLINGA. Spiculæ 1-2-floræ. Glumæ 3, infima parva, 2 superiores majores, flores glumamque quartam parvam vacuam v. florem ♂ dum adsint arcute includentes. Setæ hypogynæ 0. Inflorescentia terminalis, capitata.—*Orbis utriusque reg. calid.*

3. COURTOISIA. Spiculæ plano-compressæ, 1-floræ. Glumæ 2, complicatæ, naviculares, florem includentes. Setæ hypogynæ 0. Spicularum capitula in umbellam compositam disposita.—*Ind. or.*

4. ANDROTICHUM. Spiculæ ∞-floræ. Setæ hypogynæ 0. Filamenta post anthesin longissime accreta crispæque, comam longe exsertam formantia. Caudales junciformes, aphylli, umbella terminali.—*Bras. austr., Republ. Argent.*

5. DULICHIMUM. Spiculæ ∞-floræ. Setæ hypogynæ 8, longæ, rigidæ. Spiculæ in spicas breves ad axillas foliorum subsessiles dispositæ.—*Amer. bor.*

(Cfr. etiam 14, *Hemichlænæ* et 37, *Schæni* species paucas floribus 3-4.)

\*\* *Glumæ undique imbricatæ (exceptis sp. paucis Fimbristylis et Hemichlænæ). Spiculæ pluri-sæpius multi-floræ.*

6. HELIOCHARIS. Setæ hypogynæ 3-8. Nux styli (2-3-fidi) basi bulboso-incrassata persistente coronata. Caudales aphylli, vagina appressa stipati. Spicula solitaria, terminalis, bractea infima glumiformi.—*Area tota ordinis.*

7. DICHROMENA. Setæ hypogynæ 0. Nux styli (2-fidi) basi dilatata persistente coronata. Caudales foliati. Spiculæ in capitulo terminali paucae, sessiles v. brevissime pedicellatæ, albæ, bracteis exterioribus involucrantibus foliaceis basi albis v. rarius brevissimis.—*Amer. bor. et austr.*

8. PSILOCARYA. Setæ hypogynæ 0. Nux styli (2-fidi) basi dilatata persistente rostrata. Caudales foliati. Spicularum corymbi densi v. laxi subcompositi, terminales v. in axillis pedunculati; spiculis fuscis v. rarius pallidis.—*Amer. bor.*

9. FIMBRISTYLIS. Setæ hypogynæ 0. Styli basis bulboso-incrassata v. conica, cum stylo decidua v. (in sect. *Oncostyle*) in nuce diu persistens. Folia ad basin caulis conferta. Inflorescentia terminalis, spiculis sæpius irregulariter umbellatis, rarius capitatis v. solitariis.—*Orbis utriusque reg. trop. et temp.*

10. PENTASTICHA. Setæ hypogynæ 6. Nux stipitata, styli basi incrassata persistente acuminata. Caudales stricti, foliis brevibus. Spiculæ glumis quinquefariam imbricatis fere angulatae, in capitulo terminali plures, in pedunculis axillaribus 1-5-næ.—*Afr. trop., Madagasc.*

11. SCIRPUS. Setæ hypogynæ 3-8 v. 0, rarius in squamulas lineares plumosas dilatatae. Stylus basi non v. vix dilatatus. Nux apice nuda, v. styli basi parva tuberculata v. mucronata. Spiculæ sæpius pseudolaterales, solitariae fasciculatæ v. in umbella paucae, rarius solitariae terminalesque, v. in panicula terminali numerosæ.—*Area tota ordinis.*

12. ERIOPHORUM. Setæ hypogynæ 6 v. numerosæ, post anthesin longissime excrecentes, crispo-flexuosæ v. gossypinæ. Inflorescentia terminalis, spiculis solitariis capitatis v. paniculatis.—*Eur., Asia extratrop., Amer. bor.*

13. FICINIA. Setæ hypogynæ 0. Ovarii stipes in discum cartilagineum plus minus dilatatus. Stylus basi haud incrassatus. Spiculæ terminales, solitariae v. capitatae, var. bracteatae, sæpe nigricantes, rarius secus caulem laxè spicatæ.—*Afr. austr., Abyssinia.*

14. **HEMICHLÆNA.** Omnia *Ficinæ* nisi spiculæ subcomplanatæ, glumis distichis.—*Afr. austr.*

15. **FUIRENA.** Squamellæ hypogynæ 3, latæ, sæpe stipitatæ, interdum cum setis totidem alternantes, rarius minutæ v. evanidæ. Inflorescentia sæpius pubescens, spicularum fasciculis terminalibus v. axillaribus paniculam angustam foliatam formantibus.—*Utriusque orbis reg. trop. et subtrop.*

16. **HEMICARPHA.** Squama hypogyna 1, minuta, sæpe 2-dentata. Spiculæ minimæ, globosæ, dense multifloræ, sæpius ternæ, in capitulo pseudolaterali.—*Utriusque orbis reg. trop. et subtrop.*

17. **LIPOCARPHA.** Squamæ hypogynæ 2, hyalinæ, glumis parallelæ, ovario et nuci appressæ. Spiculæ parvæ, densissime multifloræ, 3-5 in capitulo terminali sessiles.—*Utriusque orbis reg. trop. et subtrop.*

**Tribus II. Hypolytræ.** Spiculæ pluri- sæpius multi-floræ, floribus omnibus hermaphroditis v. nonnullis abortu masculis. Glumæ undique imbricatæ, omnes florentes v. inferiores paucae vacuæ. Squamæ hypogynæ nunc 2, laterales, complicato-carinatæ, liberæ v. in unam antice plus minus apertam connatæ, nunc  $\infty$ , lineares, planæ, duabus exterioribus lateralibus sæpius complicato-carinatis, flore cum squamis semper complanato gluma oblecto (sententiâ aliorum spica spiculi-formis, androgyna, composita, spiculis androgynis bractea glumiformi oblectis  $\infty$ -floris, floribus exterioribus masculis 1-andris, cum glumis linearibus florem fœmineum centalem nudum circumdantibus). Stylus 2-3-fidus.

Excepta: Spiculæ 1-2-floræ, squamis hypogynis linearibus staminibusque numerosis in *Chrysitricæ*.

Squamæ hypogynæ in unam connatæ, glumas excedunt, in *Ascolepide*.

18. **ASCOLEPIS.** Squamæ hypogynæ ejusve floris in unam complanatam introrsum (v. supra) fissam glumam sæpius excedentem et florem includentem connatæ. Spiculæ terminales, nunc solitariæ, depressæ, radiantes v. subglobosæ candidæ v. coloratæ, nunc ovoideæ v. globosæ, more *Kyllingæ* sæpius ternæ.—*Afr. trop. et austr.*

19. **HYPOLYTRUM.** Squamæ hypogynæ 2, laterales, complicato-carinatæ, liberæ v. basi connatæ absque squamis interioribus planis. Spiculæ in panicula irregulariter corymbosa rarius in fasciculum densum contracta numerosæ.—*Utriusque orbis reg. trop. et subtrop.*

20. **DIPLASIA.** Squamæ hypogynæ 2 exteriores laterales complicato-carinatæ, 2 interiores planæ glumæ parallelæ. Stamina 6-8. Stylus 2-fidus. Spiculæ elongatæ, corymboso-paniculatæ.—*Amer. austr. trop., Ind. occid.*

21. **MAPANIA.** Squamæ hypogynæ 2 exteriores laterales complicato-carinatæ, 4 interiores planæ v. concavæ angustæ v.  $\infty$ -nerves. Stamina 3. Stylus 3-fidus. Spiculæ magnæ, terminales, solitariæ v. aggregatæ, v. in una specie minores numerosæ laxè paniculatæ.—*Utriusque orbis reg. trop.*

22. **SCIRPODENDRON.** Squamæ hypogynæ 2 exteriores laterales complicato-carinatæ,  $\infty$  interiores angustæ planæ v. concavæ, facillime partitæ. Stamina 6 (v.  $\infty$ ?). Stylus 2-3-fidus. Nux magna, exserta, costis 6-8 valde prominentibus. Spicularum fasciculi in paniculam dense thyrsoidem dispositi.—*Zeylania, Archip. Malay.*

23. **EXOCARYA.** Squamæ hypogynæ 2 exteriores laterales complicato-carinatæ, 2 interiores planæ v. concavæ, glumæ parallelæ. Stamina 3. Stylus 2-fidus. Nux exserta, ecostata, styli basi persistente coronata. Spiculæ minimæ, graciliter umbellatæ, nuce sæpius unica perfecta quam spicula ipsa multo majore.—*Australia.*

24. **LEPIRONIA.** Squamæ hypogynæ 2 exteriores laterales complicato-carinatæ, interiores numerosæ angustæ. Stamina 8- $\infty$ . Stylus 2-fidus. Herba junciformis, spicula magna pseudolaterali solitaria.—*Reg. Indo-Austral. et Madagascaria.*

25. **CHORISANDRA.** Squamæ hypogynæ numerosæ, angustæ, omnes planæ v. concavæ, v. 2 exteriores laterales complicato-carinatæ. Stamina 6-12. Stylus 2-fidus. Spicula globosa v. ovoidea, pseudo-lateralis, solitaria, sessilis v. semi-immersa.—*Australia, Nov. Caled.*

26. **CHRYSITRIX.** Squamæ hypogynæ numerosissimæ, angustæ lineares. Stamina  $\infty$ . Stylus 3-fidus. Spicula pseudolateralis, solitaria, sessilis v. semi-immersa, 1-2-flora, glumis paucis coriaceis nigris.—*Afr. austr.*

(Cfr. etiam *Scirpi membranacci* formam *Dregeanæ* (*Hellmuthiam*) squamis hypogynis *Hypolytri*.)

**Tribus III. Rhynchosporæ.** Spiculæ paucifloræ, sæpius 1-2-floræ, rarius floribus 4-6, sæpeque uno solo fertili, qui semper hermaphroditus. Glumæ 2-∞ inferiores vacuæ. Setæ hypogynæ 6 v. pauciores v. 0, rarius squamiformes.

Excepta: Flores hermaphroditii fertiles 3-6 in speciebus perpaucis *Rhynchospori* et *Schani*.

Setæ hypogynæ in perianthium perfectum 6-partitum mutatae in *Oreobolo*.

27. **OREOBOLUS.** Spiculæ 1-floræ, in pedunculo erecto solitariae v. rarius 2. Glumæ 3. Squamæ hypogynæ v. potius perianthii segmenta 6, angusta, rigida, subæqualia, post glumas delapsas persistentia. Herbæ nanæ, dense foliatae, caespitosæ.—*Australia austr., N. Zel., Amer. antarct.*

28. **REMIREA.** Spiculæ 1-floræ, in capitulo denso sessili v. pedunculato bracteis foliaceis involucreto numerosæ. Glumæ 4. Setæ hypogynæ 0. Stylus 3-fidus. Herba maritima, repens, dense foliata.—*Utriusque orbis reg. trop.*

29. **ARTHROSTYLIS.** Spiculæ 1-floræ, in capitulo parvo bracteis brevibus rigidis involucreto numerosæ. Glumæ (ad 7) undique imbricatæ. Setæ hypogynæ 0. Stamina 6. Stylus 3-fidus, undique gossypino-lanatus, cum basi incrassata deciduus. Caules aphylli, tenuiter junciformes.—*Australia trop.*

30. **ACTINOSCHÆNUS.** Spiculæ angustæ, 1-floræ, in capitulo parvo globoso numerosæ, radiantes, exteriores subreflexæ bracteis parvas occultantes. Glumæ 4-5. Setæ hypogynæ 0. Stamina 3. Stylus 3-fidus, glaber, cum basi incrassata deciduus. Caules aphylli, tenuiter junciformes.—*Madagascaria, Zeylania, China.*

31. **RHYNCHOSPORA.** Spiculæ sæpius angustæ v. acuminatæ, 1-2- rarius 3-6-floræ, varie capitatae fasciculatæ v. corymbosæ, capitulis 1-∞, nunc paniculatis. Glumæ undique imbricatæ, vacuæ 2-∞. Setæ hypogynæ tenues v. 0. Stylus indivisus v. 2-fidus. Nux basi styli dilatata persistente rostrata. Inflorescentia terminalis v. simul axillaris.—*Utriusque orbis reg. trop. subtrop. et temp.*

32. **CYATHOCHÆTE.** Spiculæ longæ, 2-floræ, flore superiore fertili, intra vaginas bractearum subinclusæ v. in panicula angusta foliata pedunculatæ. Glumæ 4, undique imbricatæ. Setæ hypogynæ 4, rigidæ, subæquales. Stylus 2-fidus, basi incrassata in nuce persistente.—*Australia.*

33. **CARPHA.** Spiculæ 1-floræ, in corymbum terminalem densum subcapitatum confertæ. Glumæ 4-5, distichæ, membranaceæ. Setæ hypogynæ 6, subæquales, plumosæ, sub nuce patentes pappum simulates. Stylus 3-fidus, basi incrassata in nuce persistente.—*Australia austr., N. Zel., Amer. austr. frigid.*

34. **MESOMELÆNA.** Spiculæ 1-2-floræ, flore superiore fertili, in capitulum terminale densum confertæ, sæpius nigricantes, bracteis involuerantibus rigidis brevibus obtusis v. rigide acuminatis. Glumæ ∞, distichæ v. subdistichæ. Setæ hypogynæ 3, æquales, rigidulæ v. complanatæ. Stylus 3-fidus. Nux gynophoro imposita sæpius rostrata.—*Australia.*

35. **TRIANOPTILES.** Spiculæ 1-2-floræ, flore superiore fertili, laxè spicatæ, bracteis 1-3-foliaceis. Glumæ 4-5. Squamæ hypogynæ 3, lineares, basi plumoso-ciliatæ, apice inæqualiter 3-dentatæ. Stylus 3-fidus. Nux styli basi coronata.—*Africa austr.*

36. **ASTEROCHÆTE.** Spiculæ 1-3-floræ, rhachilla non producta dense capitata, capitulis exinvolueratis in panicula composita numerosis v. in panicula simplici paucis. Glumæ paucae, vix distichæ, pallidæ. Setæ hypogynæ tenues. Stylus 3-fidus. Nux 3-quetra, acutiuscula v. apiculata.—*Afr. austr., ins. Mascar.*

37. **SCHÆNUS.** Spiculæ paucifloræ, flore infimo fertili, rhachilla inter flores v. supra florem unicum producta flexuosa, sæpius fasciculata nigricantesque, fasciulis varie capitatis spicatis paniculatis v. solitariis. Glumæ ∞, distichæ. Setæ hypogynæ tenues v. complanatæ v. 0. Stylus 3-fidus. Nux 3-quetra v. 3-costata, erostis.—*Utriusque orbis reg. temp. hemisph. bor. et austr., Archip. Malay.*

38. **CYCLOCAMPE.** Spiculæ 2-3-floræ, rhachilla inter v. ultra flores producta flexuosa, in panicula ampla numerosæ distinctæ. Glumæ ∞, distichæ. Setæ hypogynæ 6, longæ, rigidulæ, plumoso-pilosæ. Stylus 3-fidus. Nux 3-quetra, breviter apiculata.—*Ins. Mascar., Molucc., N. Caled.*

39. **ELYNANTHUS.** Spiculæ 2-3-floræ, flore superiore fertili, rhachilla non producta, sæpius fasciculatæ fuscæ v. nigricantes, fasciulis sæpius in paniculam angustam strictamque dispositis. Glumæ ∞, distichæ. Setæ hypogynæ tenues membranaceæ v. 0. Stylus 3-4-fidus. Nux obtusa, plus minus drupiformis.—*Afr. austr., Australia austr., N. Zel., N. Caled., Amer. austr. frigida.*

40. **TRICOSTULARIA.** Spiculæ parvæ, 1-3-floræ, flore superiore fertili, rhachilla non producta, paucae v. breviter paniculatæ. Setæ hypogynæ breves, tenues v. rigidæ, non accrescentes. Stylus 3-fidus. Nux obovoidea, erostris.—*Australia, Zeylania, Borneo.*

41. **LÉPIDOSPERMA.** Spiculæ 1-3-floræ, flore superiore fertili, sæpius nigræ, distinctæ v. fasciculatæ, angustæ v. ample paniculatæ. Glumæ subdistichæ. Setæ v. squamæ hypogynæ sub anthesi parvæ, mox accrescentes, incrassatæ, acuminatæ v. setigeræ. Stylus 3-fidus. Nux apice inûrta, erostris.—*Australia, N. Zel. Archip. Malay., China austr.*

42. **CLADIUM.** Spiculæ 1-3-floræ, flore inferiore fertili, brunneæ v. nigræ, paniculatæ. Glumæ undique imbricatæ. Setæ hypogynæ 0, v. rarius tenues. Stylus 3-fidus, basi dilatata ab ovario vix distincta. Nux obtusa, plus minus drupiformis.—*Utriusque orbis reg. trop. et temp.*

43. **GAHNIA.** Spiculæ 1-3-floræ, flore superiore fertili, nigræ v. rarius brunneæ, varie paniculatæ. Glumæ undique imbricatæ. Setæ hypogynæ 0. Stylus 3-5-fidus. Nux sæpius nitida, dura, ecostata. Folia sæpius teretia, longa, subulato-acuminata.—*Australia, N. Zel., N. Caled., Archip. Malay., China, ins. maris Pacif.*

44. **CAUSTIS.** Spiculæ 1-2-floræ, flore superiore fertili, v. abortu unisexuales subdioicæ. Glumæ paucae, undique imbricatæ. Setæ hypogynæ 0. Stylus 3-fidus. Caulis ramosus, ramis erectis strictis v. flexuoso-ramosissimis.—*Australia.*

45. **REEDIA.** Spiculæ ovatæ, 1-2-floræ, flore superiore fertili, in spicis longis intra vaginas laxas bractearum foliacearum occultis densissime confertæ. Glumæ undique imbricatæ. Setæ hypogynæ 0. Stylus 3-fidus. Caulis altissimus, simplex.—*Australia austr. occid.*

46. **EVANDRA.** Spiculæ majusculæ, nigræ, 2-floræ, flore superiore fertili, laxè paniculatæ v. in fasciculo terminali sessiles. Glumæ undique imbricatæ. Setæ hypogynæ 0. Stamina 15-20. Stylus 8-fidus.—*Australia austr. occid.*

**Tribus IV. Cryptangieæ.** Spiculæ unisexuales, femineæ 1-floræ, inter masculas 1-∞-floras terminales, v. in parte superiore inflorescentiæ. Setæ hypogynæ 0.

\* *Spiculæ paniculatæ, omnes dissitæ v. ♂ glomerulatæ.*

47. **LAGENOCARPUS.** Panicula longa, ampla, laxè composita, superne femineæ, in parte inferiore mascula. Stylus 3-5-fidus. Nux ovoidea v. globosa, non angulata.—*Amer. trop.*

48. **CRYPTANGIUM.** Pedunculi secus caulem dense foliatum v. subnudum graciles v. breves, parum compositi, spiculis femineis præsertim in pedunculis superioribus cum masculis irregulariter mixtis. Stylus 3-fidus. Nux 3-angulata.—*Amer. trop.*

\*\* *Spiculæ minimæ, in capitulis globosis v. spiculiformibus sæpius androgynis sessiles.*

49. **FINTELMANNIA.** Spiculæ utriusque sexus 1-floræ, in spicas parvas spiculiformes confertæ, superioribus femineis, spicis graciliter paniculatis. Glumæ 2.—*Brasilia.*

50. **CEPHALOCARPUS.** Spiculæ in fasciculis capituliformibus ad axillas graciliter pedunculatis sessiles, femineæ 1-2, masculis 3-7 ∞-floris cinctæ. Glumæ vacuæ 1-2. Folia dense conferta, angusta, patentia, rigidula, inflorescentiis multo longiora.—*Brasilia.*

51. **PTEROSCLERIA.** Spiculæ in capitulo denso terminali involucrato sessiles, numerosæ, subfasciculatæ; femineæ in quoque fasciculo 1 masculis ∞ cincta, rarius spiculæ utriusque sexus in capitulo subirregulariter mixtæ. Glumæ vacuæ 1-2. Spicularum capitula 1-3 infra terminalem ad axillas sessilia sæpius adsunt.—*Amer. trop.*

\*\*\* *Spiculæ minimæ, in fasciculis parvis corymbosis v. capitatis sessiles, femineæ in quoque fasciculo 1, masculis paucis cincta.*

52. **CALYPTROCARYA.** Spicularum fasciculi in capitula parva conferti, capitulis corymboso-paniculatis, paniculis terminalibus axillaribusque. Spicula ♀ ad florem nudum reducta, glumis 0, v. 1-2 minutis vix conspicuis.—*Amer. trop.*

53. **BEQUERELIA.** Spicularum fasciculi dense cymosi, cymis corymboso-paniculatis, paniculis terminalibus sæpeque axillaribus. Spiculæ ♀ glumæ 4-5, mox auctæ, subæquales, florem involventes, nucem fere obtegentes.—*Amer. trop.*

54. **HOPPIA.** Spicularum fasciculi dense capitati, capitulis in capitulo composito confertis v. in umbella irregulari dispositis. Spiculæ ♀ glumæ (3?) in urceolum clausum apice minute perforatum florem et nucem arcte includentem connatæ. Caulis brevis, dense foliatus. Scapi florentes inter folia infima elongati, aphylli.—*Bras. bor., Guiana.*

**Tribus V. Sclericeæ.** Flores unisexuales, feminei ad basin spiculæ androgynæ solitarii v. in spiculis distinctis 1-floris in parte inferiore inflorescentiæ. Setæ hypogynæ 0.

55. **ERIOSPORA.** Spiculæ minimæ, 1-3-floræ, in spicas spiculiformes densissime confertæ, apicis ipsis numerosis parvis in panicula longa laxa sessilibus v. pedicellatis. Ovarium pilis longis numerosis cinctum.—*Africa trop.*

56. **SCLERIA.** Spiculæ parvæ, sæpe fasciculatæ, fasciculis nunc minimis axillaribus, nunc in cymas v. paniculas terminales v. axillares dispositis. Nux sæpius alba, gynophoro in discum dilatato v. rarius obsoleto.—*Utriusque orbis reg. trop. et subtrop., Amer. bor.*

57. **KOBRESIA.** Spiculæ in spicam terminalem simplicem v. parum compositam dispositæ. Folia ad basin caulis sæpius cæspitosa.—*Europa, Asia bor. et mont.*

**Tribus VI. Cariceæ.** Spiculæ unisexuales, femineæ 1-floræ, spicatæ, gluma unica utriculi-formi clausa v. hinc fissa florem sæpeque rhachillam includente; masculæ 2-∞-floræ, spiciformes, terminales distinctæque, v. spicam femineam apice v. rarius basi continuantes. Setæ hypogynæ 0.

58. **HEMICAREX.** Spiculæ femineæ utriculus introrsum ad medium v. fere ad basin fissus; rhachilla setiformis v. complanata utriculum non excedens.—*Ind. or., Africa austr.*

59. **SCHÆNOXIPHUM.** Spiculæ femineæ utriculus usque ad os 2-dentatum clausus; rhachilla exserta, apice glumas vacuas v. flores masculos ferens.—*Afr. austr.*

60. **UNCINIA.** Spiculæ femineæ utriculus usque ad os obliquum v. 2-dentatum clausus; rhachilla exserta, apice uncinata v. reflexo-glochidiata.—*Hemisph. austr. reg. temp. et frigid., Amer. andina, Mexico, Ind. occid.*

61. **CAREX.** Spiculæ femineæ utriculus usque ad os obliquum v. 2-dentatum clausus; rhachilla inclusa, setiformis v. complanata v. 0.—*Utriusque orbis reg. temp. et frigid.; inter tropicos species paucæ.*

#### GENERA DUBIA V. EXCLUSA.

**ACORIDIUM,** Nees in *Pl. Meyen.* 131, genus ab auctore inter *Philydraceas* collocatum, a Bœckelero in *Flora* 1879, 158, ex specimine authentico ad *Cyperaceas* transfertur. Character Bœckeleri a Neesiano notis pluribus essentialibus longe discrepat. Forte Nees specimina confudit ad plantas duo distinctas pertinentia et genus suum delendum est. Planta a Bœckelero descripta e verbis suis a *Scirpo (Isolepidæ)* non differre videtur, nisi spiculæ rhachi post anthesin valde elongata. An status abnormis, an stirpis distincta, adhuc dubium remanet.

**AULACORHYNCHUS,** Nees in *Linnaea*, x, 198, ex Africa australi, e characteribus notis fere omnibus *Rhynchosporæ* convenit. Spiculæ tamen unisexuales dicuntur, masculæ plurifloræ in capitulum terminale aggregatæ, femineæ in pedunculo axillari solitariae v. geminae omnino *Rhynchosporæ* excepta staminum deficientia. In specimine descripto anthesis ex auctore peracta fuit, et stamina forte jam delapsa. Si spiculæ revera unisexuales, inflorescentia *Scleriam* indicat, genus tamen nobis valde dubium apparet.

**LASIOLEPIS,** Bœckel. ad *Eriocaulas* referenda est. *L. brevifolia*, ad specimen Indicum Wightianum tenue depauperatumque descriptum, est *Eriocauli* species. *L. pilosa*, e Guiana, ex descriptione fusiore nobis videtur *Pæpalanthus Lamarckii*, Kunth, et *L. aquatica*, ex eadem regione, *Eriocaulon melanocephalum*, Kunth. Flores masculi tamen ab auctore prætervisi sunt, et ovarium non rite scrutatum.

**THRYOCEPHALON,** Forst. *Char. Gen.* 129, t. 65, ab Endlichero *Gen.* 119 (sub *Tryocephalo*), ad *Kyllingam* refertur, et inflorescentia depicta satis conformis, sed spiculæ structura ab auctore descripta, et analysis in icone delineata, nec huic nec ulli generi *Cyperacearum* nobis noto convenit.

#### TRIBUS I. SCIRPÆ.

1. **Cyperus,** Linn. *Gen. n.* 66.—Spiculæ pluri-sæpius multi-floræ rarissime 1-2-floræ, floribus omnibus hermaphroditis v. terminali rarius masculo. Glumæ distichæ, naviculares v. concavæ, infimæ 1-2 sæpius parvæ vacuæque, cæteræ subæquales florentes v. summa rarius parva vacua. Setæ v. squamæ hypogynæ 0. Stamina 3 v. pauciora. Stylus cum ovario continuus, basi haud incrassatus, deciduus, breviter v. alte in ramos 2 v. 3 stigmatosos filiformes divisus v. rarius subinteger. Nux sessilis v. basi in stipitem brevem solidum cum pericarpio continuum contracta, complanata 2-convexa v. 3-quetra, lœvis v.

minute granulosa.—Herbæ perennes v. rarius annuæ, caulibus cæspitosis v. e rhizomate repente distinctis, infra inflorescentiam simplicibus. Folia ad basin caulis pauca v. rarius vaginis caulem altius obtegentibus, sæpe longa, infima haud raro et interdum omnia ad vaginas reducta. Spiculæ sæpissime in spicas densas fasciculiformes capituliformes v. elongatas confertæ, spicis v. rarius spiculis singulis in umbellam terminalem irregularem simplicem v. compositam dispositis, spica centrali sessili, cæteris ad apices ramorum v. radiorum vâlde inæqualium umbelli v. umbelluli sitis, v. interdum inflorescentia tota in capitulum sessile compositum contracta; rhachis primaria rarissime inter radios umbellæ breviter producta. Sub quoque radio adest sæpissime bractea linearis, persistens; harum exteriores paucae foliaceæ inæqualiter elongatæ involucrum sub inflorescentia formant; intimæ et quæ spiculas singulas subtendunt parvæ, squamiformes, v. sub spiculis interdum omnino desunt.

Species enumeratæ ultra 700, sed per plurimæ e regionibus diversis sub nominibus diversis repetitæ et verisimiliter vix 400 bene distinctæ, per regiones tropicas subtropicasque utriusque orbis copiose dispersæ, cum paucis ad regiones temperatas extensis, nec in frigidis nec in alpinis inveniuntur. Rottb. *Descr. et Ic. Pl.* 17 cum *ic. specierum* 32. Kunth, *Enum.* ii. 2 et 115 (*Mariscus*). Liebm. *Mex. Halogr.* 8, et 40 (*Mariscus*). Steud. *Syn. Pl. Glum.* ii. 2, et 59 (*Mariscus*). Bæckel. in *Linnaea*, xxxv. 436; xxxvi. 271. Benth. *Fl. Austral.* vii. 253.

Genus pro maxima parte facillime distinctum, etsi cum *Scirpo* mediante *C. pygmæa*, et cum *Schano* mediante *C. ægyptiaco* connexum, in sectiones sequentes non semper stricte definitas dividitur:—

1. *Pycneus*. Spiculæ  $\infty$ -floræ, complanatæ, glumis navicularibus carinatis, rhachi exalata v. foveolis angustissime marginatis. Stylus sæpissime 2-fidus. Nux glumæ contrarie complanata, 2-convexa, margine rhachillam spectans. Host, *Gram. Austr.* iii. t. 72, iv. t. 67. Reichb. *Ic. Fl. Germ.* t. 278, 279. Sibth. *Fl. Gr.* t. 47. Torr. *Fl. N. York* t. 135. Vahl, *Ic. Pl. Amer.* t. 12. C. Gay, *Fl. Chil.* t. 70. PYCNEUS, Beauv. *Fl. Ov. et Ben.* ii. 48, t. 86. TORREYA et DISTIMUS, Rafin. in *Journ. Phys.* lxxxix. 105.

2. *Juncellus* (Griseb. *Fl. Brit. W. Ind.* 562). Spiculæ  $\infty$ -floræ, compressæ, sæpius tamen crassiusculæ, glumis concavis, rhachi exalata. Stylus 2-fidus v. hinc inde 3-fidus. Nux ovata v. lata, glumæ parallele compressa, facie plana v. concava rhachillam spectante, dorso convexa v. angulo centrali obtuso parum elevato. Host, *Gram. Austr.* iii. t. 70. Jacq. *Pl. Austr.* v. App. t. 6. Sibth. *Fl. Gr.* t. 49. Desf. *Fl. Atl.* t. 7, f. 1. Cav. *Ic.* t. 204, 588.

DICHOSTYLIS, Nees in *Linnaea*, ix. 289; *Gen. Fl. Germ. Monocot.* ii. n. 13, non Beauv., est *Cyperus pygmæus*, Rottb., sæpe ad *Scirpum* relatus, cujus glumæ variant distichæ tristichæ v. rarius irregulariter imbricatæ. Reichb. *Ic. Fl. Germ.* t. 311. Host, *Gram. Austr.* iii. t. 69.

ANOSPORUM, Nees in *Linnaea*, ix. 287 (TRENTEOHLLIA, Bæckel. in *Bot. Zeit.* 1858, 249), genus propositum fuit ad *C. cephalotum*, Vahl (*C. Hookerianum*, Thw. *Enum. Pl. Zeyl.* 342), ex India orientali, cui pericarpium sub semine et plus minus secus angulos nucis incrassatur et stipitem durum format inepte perigynium dictum, et stylus sæpissime (nec semper fide Bæckeleri) indivisus. Huic addidit Bæckeler in *Linnaea*, xxxvi. 411, species 2 ex Africa tropica, inclusa *C. colymbete*, Kotsch. in *Pl. Tinn.* t. 24, cum *C. pallido*, Heyne, ex India Orientali, cui pericarpium totum plus minus incrassatum subcartilagineum, et *Scirpum cubense*, Kunth. In *C. podocarpum*, Bæckel., ex Africa tropica, nux pariter in stipitem contracta sed stipes tenuior. *Orycaryum*, Nees, a Bæckelero in *Anosporum* inclusum, characteres *Scirpi* nec *Cyper*i præbet. Stylus indivisus in cæteris *Cyperis* rarissime occurrit.

ATOMOSTYLIS, Steud. *Syn. Pl. Glum.* ii. 315, e Senegambia, Leprieur, est verisimiliter *C. pectinatus*, Vahl (*C. nudicaulis*, Poir.), a Bæckelero ad *Anosporum* relatus.

*C. alopecuroides*, Rottb. (*C. dives*, Delile, *Fl. Eg.* t. 4), habitu *C. (Papyro) exaltato*, Retz, accedit, sed nux omnino *Juncelli*, variat tamen stylo 2-fido v. præsertim in speciminibus africanis 3-fido.

3. *Eucyperus*. Spiculæ  $\infty$ -floræ, complanatæ v. rarius subteretes, glumis navicularibus v. concavis sæpius carinatis, rhachilla exalata, v. rarius foveolæ membrana angustissima hyalina marginatæ. Stylus 3-fidus. Nux æqualiter 3-quetra, v. rarius a dorso depressa. Host, *Gram. Austr.* iii. t. 71 73, 74. Reichb. *Ic. Fl. Germ.* t. 280, 284. Jacq. *Ic. Rar.* t. 295, 298, 299; *Hort. Vind.* iii. t. 12 Webb. *Phytogr. Canar.* t. 240. Ten. *Fl. Nap.* t. 101. Sibth. *Fl. Gr.* t. 46, 48. Delile, *Fl. Eg.* t. 5. Desf. *Fl. Atl.* t. 9. Jaub. et Spach. *Ill. Pl. Or.* t. 101. Dobeaux, *Fl. Tchefou*, t. 3. Beauv. *Fl. Ov. et Ben.* t. 20, t. 97, f. 1. Grant in *Trans. Linn. Soc.* xxix. t. 108. Torr. *Fl. N. York*, t. 138. Presl, *Rel. Hank.* t. 31, f. 1, t. 32, f. 1. Saund. *Ref. Bot.* t. 240. Fenzl, in *Denkschr. Akad. Wiss. Wien*, viii. t. 1, 2.

*SOROSTACHYS*, Steud. *Syn. Glum.* ii. 71, est *C. pulchellus*, Br. (*C. sorostachys*, Bœckel. in Linnæa, xxxv. 588), species vix a *C. leucocephalo*, Retz, distincta, spiculis in capitulum globosum confertis *Kyllingam* simulantibus.

*GALILEA*, *Parlat. Fl. Palerm.* i. 297, *Fl. Ital.* ii. 45, est *C. ægyptiacus*, Glox. Obs. Bot. 20, t. 3 (*Schænus mucronatus*, Linn., Reichb. Ic. Fl. Germ. t. 286, f. 680; Host, Gram. Austr. iv. t. 70), a *Parlatore* generice distinctus est stylo plano et gluma inferiore vacua cæteris longiore. Stylus tenuem tamen vidimus vix magis complanatum quam in speciebus pluribus sectionis *Juncelli*, et bractea spiculam subtendens glumiformis est, nec gluma infera cæteris major. Hæc species cæterum *Eucyperum* cum *Juncello* quodammodo connectit. Nuclei facies interior lata plana, exterior obtusangula fere *Juncelli* sed stylus constanter 3-fidus videtur. *C. sinensis*, Debeaux, Fl. Tchefou, 141, t. 2, videtur *C. ægyptiaci* varietas v. species annua ei valde affinis.

*BOBARTIA*, Linn. Fl. Zeyl. 17, Lam. Illustr. t. 40, est *Cyperi* species *C. arenario*, Retz, affinis, quam Linnæus serius cum *Moræa spathacea*, Thunb. (*Bobartia*, Ker), confusit.

4. *Papyrus*. Spiculæ ∞-floræ, complanatæ v. subteretes, glumis navicularibus v. concavis, rhachillæ foveolis v. angulis membrana hyalina a gluma superiore decurrente marginatis, membrana sæpe demum decidua squamiformi. Stylus 3-fidus. Nux æqualiter 3-quetra v. rarius a dorso depressa. Host, Gram. Austr. iii. t. 75, 76. Reichb. Ic. Fl. Germ. t. 281 ad 283. Jacq. Ic. Rar. t. 296, 297. Moggr. Fl. Ment. t. 97. Desf. Fl. Atl. t. 7, f. 2, t. 8. Ten. Fl. Nap. t. 207, 208. *Parlat. in Mem. Pres. Acad. Sc. Par.* xii. t. 1, 2. Sibth. Fl. Gr. t. 44, 45. Beauv. Fl. Ow. et Ben. t. 97, f. 2. Hook. f. Fl. Tasm. t. 139, 140. A. Rich. Fl. Nouv. Zel. t. 17. Torr. Fl. N. York, t. 136, 137. Nees in Mart. Fl. Bras. ii. i. t. 3 (*Papyrus*).

*PAPYRUS*, Willd. in Abhandl. Acad. Wiss. Berl. 1812–13, 70, genus prius ad *Cyperum Papyrus*, Linn., stabilium, a Kunthio Neesio auctoribusque pluribus pro genere v. sectione ad species *Cyperi* extensum fuit, quibus membranæ hyalinæ ad margines foveolorum rhachillæ spiculæ deciduæ sunt, et pro squamellis distinctis descriptæ, et species ubi persistunt in *Eucypro* retinuerunt, sed character quam maxime incertus est, et variat in eadem spicula, et *Cyperus rotundus* cum affinis jam ad sectionem *Papyrus* referuntur in Benth. Fl. Austral. vii. 278.

*BORABORA*, Steud. *Syn. Pl. Glum.* ii. 71, est *Mariscus macrophyllus*, Brongn. in Duperr. Voy. Bot. 179, t. 33, rite ad *Cyperum* a Bœckelero, in Linnæa, xxxvi. 376, refertur, sed potius ad sect. *Papyrus* quam ad *Mariscum* pertinere videtur, nam spiculas invenimus semper 3–4-floras ut a Brongniartio descriptas et delineatas, nec 1-floras ut a Steudelio et Bœckelero dicuntur. Species est statura et inflorescentia insignis, *C. ligulari*, Linn., subaffinis. *Mariscum appendiculatum*, Brongn. l. c. 178, t. 34, ab ipso *C. ligulari* distinguere nequimus.

*HYDROSCÆNUS*, Zoll. et Mor. Verz. Pl. Zoll. 95, planta javanica paludosa a nobis non visa, est ex descriptione verisimiliter *Cyperi* species *C. dubio*, Rottb., affinis. Flores inferiores spiculæ fœminei dicuntur staminodiis elongatis, annon potius hermaphroditi filamentis demum elongandis antheris delapsis?

5. *Diclidium*. Spiculæ 1–∞-floræ, angustissimæ, teretes v. subteretes, glumis distantibus angustis erectis appressis, rhachilla sæpe flexuosa, alis hyalinis nucis amplectentibus. Stylus 3-fidus. Nux æqualiter 3-quetra. Post anthesin spiculæ rhachilla sæpe prope basin articulatim delabitur, stipitem brevem in rhachi spicæ ut in *Kyllinga* relinquens. Rudge, Pl. Gui. t. 20, 21. DICLIDIUM, Schrad. ex Nees in Mart. Fl. Bras. ii. i. 51, t. 1, 2. TORULINIUM, Desv. in Hamilt. Prod. Pl. Ind. Occid. 15.

6. *Mariscus*. Spiculæ parvæ, numerosæ, teretes v. subteretes, 1–2-floræ, ut in *Kyllinga* sæpius articulatim deciduæ stipitem brevem relinquentes, sed gluma florens, cæteris major, inferne tantum obtegit rhachillæ acumen v. glumam alteram florentem semper plus minus exsertim, et spicularum spicæ plures irregulariter umbellatæ, nec in capitulo sessiles v. solitariae. Jacq. Ic. Rar. t. 300 (*Kyllinga*). Beauv. Fl. Ow. et Ben. t. 55 (*Kyllinga*). Anders. in Eugen. Resa, Bot. t. 13. MARISCUS, Vahl, Enum. ii. 372. ADUPLA, Bosc. in Jaume St. Hil. Expos. Fam. Nat. i. 65.

*OPETIOLA*, Gærtn. Fruct. i. 14, t. 2, ab Endlichero ut videtur rite ad *Cyperum* quemdam e sectione *Marisci* relata est, spiculis in specimine delineato omnibus delapsis callum in rhachi spicæ relinquuntibus, quod a Gærtnero pro fructu descriptum est.

2. *Kyllinga*, Rottb. Descr. et Ic. Pl. 12, t. 4. (*Kyllingia*, auct. plur.)—Spiculæ parvæ, flore unico hermaphrodito, addito interdum altero parvo masculo v. rarius hermaphrodito. Glumæ 3 v. 4, distichæ, infima parva vacua, 2 majores æquales v. inæquales, florem ♂ cum v. absque alterum parvum ♂ rarius ♀ v. rudimentarium glumamque minimam includentes. Setae hypogynæ 0. Stamina 3 v. pauciora. Stylus cum ovario continuus, basi haud

incrassatus, sæpius deciduus; rami stigmatosi 2, filiformes. Nux sessilis, complanata, glumis majoribus arcte inclusa, quibuscum maturitate decidua, rhachilla spiculæ articulata stipitem brevem in rhachi spicæ relinquente; rarius nuces perfectæ 2, glumis tamen majoribus arcte inclusæ.—Herbæ perennes rhizomate repente v. rarius annuæ, caulibus sæpius tenuibus. Folia ad basin caulis conferta v. in una specie ad vaginas breves reducta. Spiculæ minimæ, numerosissimæ, in apicis breves oblongas v. globosas densissime confertæ. Spicæ v. capitula e spicis 3-5 sessilibus composita, terminalia, intra bracteas 2-4 lineares foliaceas inæquales sessilia.

Species enumeratæ fere 60, vix tamen ultra 20 bene distinguendæ, per regiones calidiores utriusque orbis latissime dispersæ. *Kunth, Enum. Pl. ii. 127. Steud. Syn. Pl. Glum. ii. 66. Bæckel. in Linnæa, xxxv. 403. Beauv. Fl. Ow. et Ben. t. 8, 31. Jacq. Hort. Vind. t. 97 (Scirpus).*

Spiculæ rhachillæ pars infra articulationem persistens stipitiformis a Bæcklero *discus* dicitur, eadem in *Cyperis* nonnullis imprimis sectionis *Marisci* observatur; *Kyllinga* his valde affinis, distinguitur tamen flore secundo dum adsit v. gluma terminali vacua intra glumas majores arcte inclusa, nec ut in *Marisco* exserta.

3. *Courtoisia*, *Nees in Linnæa, ix. 286.*—Spiculæ plano-compressæ, flore unico hermaphrodito, addito rarius altero parvo imperfecto. Glumæ 2, membranaceæ, complicatæ, naviculares, carina ad medium v. altius alata, exterior vacua internam vix minorem florentem amplectens. Setæ hypogynæ 0. Stamina 3. Stylus cum ovario continuus, basi haud incrassatus, deciduus, ramis stigmatosis 3 filiformibus. Nux glumis inclusa quibuscum decidua, oblongo-fusiformis, acute 3-quetra, basi apiceque acuta, erostris, lævis.—Herba cæspitosa, 1-2-pedalis, aspectu *Cyperum assimilem*, *Hochst., referens.* Folia ad basin caulis elongata, angusta, flaccida. Umbella terminalis, irregulariter composita, bracteis exterioribus longe foliaceis involucreta, radiis numerosis valde inæqualibus, exterioribus umbelluliferis. Spiculæ parvæ, in capitulis subglobosis ad apices radiorum pluribus numerosæ, sessiles, singulæ bractea membranacea hyalina subtensæ.

Species 1, Indiæ orientalis incola. *Kunth, Enum. Pl. ii. 127. Steud. Syn. Pl. Glum. ii. 71. Bæckel. in Linnæa, xxxv. 434. Benth. in Hook. Ic. Pl. t. 1341.*

Gluma exterior ab auctoribus descripta est potius bractea spiculam subtendens, et post spiculam fructiferam delapsam semper in receptaculo seu rhachi communi persistit.

4. *Androtrichum*, *Brongn. in Duperr. Voy. Coq. Bot. 176, t. 32, sub Abildgaardia.* (Comostemum, *Nees in Linnæa, ix. 283, pro parte.*)—Spiculæ co-floræ, floribus omnibus hermaphroditis. Glumæ distichæ, naviculares, carinatæ, angustæ, 1 v. 2 inferiores vacuæ paullo majores. Setæ hypogynæ 0. Stamina 3, filamentis post anthesin longissime accretis crispis comam longe exsertam formantibus. Stylus basi minute bulbiformis, cum ovario subarticulatus, ramis stigmatosis 3 longe filiformibus. Nux angusta, æqualiter 3-quetra.—Herba perennis, rhizomate repente, caulibus longis junciformibus aphyllis prope basin vaginis pluribus fuscis obtectis. Umbella terminalis, irregularis, vaginis paucis rigide paleaceis spathiformibus involucreta, radiis pluribus interdum numerosis valde inæqualibus. Spiculæ ad apices radiorum in capitula densa globosa plus minus composita confertæ, coma filamentorum spiculis ipsis 2-3-plo longiore. Nuces minimæ.

Species 1, Brasilæ australis et reipublicæ Argentinæ incola. *Kunth, Enum. Pl. ii. 250. Steud. Syn. Pl. Glum. ii. 105. Bæckel. in Linnæa, xxxvi. 415 (Comostomum). Fenzl in Denkschr. Akad. Wiss. Wien. viii. t. 3 (quoad analysin male).*

Genus a Brongniartio l. c. caractere optimo indicatum, serius a Neesio sub nomine *Comostemi* propositum caractere imperfecto, et auctor cum specie typica infauste junxit *Cyperum prolixum*, H. B. et K., tam habitu quam characteribus longe alienum.

5. *Dulichium*, *Pers. Syn. Pl. i. 65.*—Spiculæ angustæ, compressiusculæ, multifloræ, floribus omnibus hermaphroditis. Glumæ distichæ, naviculares, carinatæ, infima vacua, cæteris omnibus florentibus, rhachillæ foveolis membrana a glumis decurrente angustissime marginatis. Setæ hypogynæ sæpius 8, 1-seriatæ, longæ, rigidæ, retrorsum barbellatæ. Stamina 3. Stylus cum ovario continuus, basi vix incrassatus, deciduus, ramis stigmatosis 2 filiformibus. Nux stipitata, oblonga, compressa, styli basi acuminata.—Caulis e rhizo-

mate repente simplices, supra medium foliati et florentes, foliis inferioribus plerisque ad vaginas breves reductis. Spiculæ longiusculæ, plures in spica laxa distichæ, sessiles, apicis secus caulem pluribus, omnibus axillaribus, pedunculis communibus e vaginis non exsertis. Folia floralia seu bracteæ foliaceæ sub spicis iis longiora. Bracteæ sub spiculis glumis similes.

Species 1, boreali-Americana. *Kunth, Enum. Pl. ii. 329. Steud. Syn. Pl. Glum. ii. 2. Bæckel. in Linnæa, xxxvi. 414. Ell. Bot. S. Carol. et Georg. t. 2.*

Genus quoad spiculas *Cypero (Papyro)* affine; setis hypogynis distat et habitus peculiaris.

6. *Heleocharis, R. Br. Prod. 224 (Eleocharis).*—Spiculæ pluri-sæpius multi-floræ, floribus omnibus hermaphroditis. Glumæ undique imbricatæ, exteriores 1 rarius 2 minores vacuæ. Setæ hypogynæ sæpius 6, sed variant 3-8 v. rarissime omnino desunt. Stamina 3 v. pauciora. Stylus supra basin bulboso-incrassatam persistentem tenuis, continuus, demum deciduus, ramis stigmatosis 2 v. 3 filiformibus. Nux nunc obovoidea v. subglobosa 3-costata, nunc compressa v. 2-convexa, costis 2 marginalibus, basi persistente styli conica v. depressa coronata.—Caules cæspitiosi v. e rhizomate repente erecti, simplices, aphylli, vagina longa appressa et sæpe vaginis nonnullis exterioribus basi stipati. Spicula terminalis, solitaria, erecta, exinvolucrata, nisi gluma extima vacua (v. bractea glumiformi) interdum cæteris paullo majore stipata; rarissime in specimine casu prolifero spicula altera evolvitur.

Species enumeratæ ultra 80, plures tamen inter se ægre distinguendæ, per regiones tropicas et temperatas utriusque orbis imprimis in locis uliginosis v. aquaticis latissime dispersæ, etiam ad terras arcticas extensæ. *Kunth, Enum. Pl. ii. 139. Steud. Syn. Pl. Glum. ii. 75. Bæckel. in Linnæa, xxxvi. 418. Benth. Fl. Austral. vii. 290.*

Genus habitu et styli basi distincte dilatata haud male definitum, etsi species nonnullæ sectionis *Scirpidii* ad *Scirpi* sectionem *Bæothryon* prope accedant; in sectiones 3 sequentes dividitur:—

1. *Limnochloa.* Spicula cylindracea, sæpius majuscula, glumis sæpius numerosis obtusis vix carinatis rigidulis margine hyalinis. Nucis rostrum sæpius depresso-conicum. Caules sæpe elati, interdum septis transversis nodulosi. *Rotb. Descr. et Ic. Pl. t. 15, f. 1, 2 (Scirpus). Roxb. Cor. Pl. t. 231 (Scirpus). Limnochloa, Nees in Linnæa, ix. 294.*

2. *Scirpidium.* Spicula cylindracea, obtusa v. superne acutata, quam in *Limnochloa* sæpius minor. Glumæ dorso carinatæ v. linea centrali notatæ. Nucis rostrum breviter conicum, sæpe a latere compressum. Caules nunc elati fere *Limnochloæ*, glumis numerosissimis angustis, nunc tenuiores spiculis angustis iis sect. sequentis accedentes. *Host, Gram. Austr. iii. t. 55, 56, 60 (Scirpus). Reichb. Ic. Fl. Germ. t. 294, 295. Nees, Gen. Fl. Germ. Monocot. ii. n. 18 et 19 (Eleocharis et Scirpidium). Del. Fl. Eg. t. 6, f. 2. C. Gay, Fl. Chil. t. 71, f. 3. Scirpidium, Nees in Linnæa, ix. 293.*

3. *Heleogenus.* Spicula ovoideo-conica v. parva pauciflora. Glumæ dorso carinatæ v. linea viridi notatæ. Nucis rostrum breve, depressum. Caules tenues, humiles, interdum fluitantes v. filiformes. Spiculæ sæpius parvæ. *Rotb. Descr. et Ic. Pl. t. 15, f. 3 (Scirpus). C. Gay, Fl. Chil. t. 71, f. 1, 2. Chætocyperus, Nees in Linnæa, ix. 289, et Eleogenus, Nees, l. c. 294.*

*Limnochloa, Beauv. in Lestib. Essai Fam. Cyp. 41,* includit species *Heleocharitis* varias e diversis sectionibus stylo 3-fido.

7. *Dichromena, Mich. Fl. Bor. Amer. i. 37. (Dichroma, Pers. Syn. i. 57.)*—Spiculæ ovoides, obtusæ v. vix acuminatæ, floribus pluribus sæpius numerosis, inferioribus v. fere omnibus hermaphroditis, superioribus interdum masculis. Glumæ undique imbricatæ, obtusæ, sæpe albidæ, omnes florentes v. infima vacua. Setæ 0. Stamina 3 v. pauciora. Stylus basi incrassatus, persistens, superne tenuis, deciduus, ramis stigmatosis 2 filiformibus. Nux obovata v. oblonga, sæpe transverse rugosa, styli basi lata indurata rostrata.—Herbæ perennes, caulibus foliatis. Spiculæ sæpius plures, in capitulo terminali sessiles, rarius 3-5 brevissime pedicellatæ v. solitariae. Bracteæ exteriores nunc foliaceæ 2 v. 3 elongatæ basi albidæ, nunc brevissimæ.

Species ad 8, Americæ borealis et australis tropicæ incolæ. *Kunth, Enum. Pl. ii. 274, quoad sect. 1. Steud. Syn. Pl. Glum. ii. 134.*

Genus *Scirpeas* cum *Rhynchosporis* arcte connectit. Nuces parvæ, sæpius numerosæ *Scirpearum*,

sed flores superiores masculi videntur. *Bæckeler in Linnæa*, xxxvii. 526, species omnes in *Rhynchospora* includit. Kunth *Dichromenam* a *Rhynchospora* distinxit setarum deficientia et in genere inclusit *Haloschænum*, Nees, tam habitu et inflorescentia quam spicularum forma et structura valde diversum. *Asteroschænus*, Nees (infra sub *Rhynchospora*), *Dichromenæ* accedit bracteis involucrentibus elongatis basi albis, sed spiculæ omnino *Rhynchosporæ*, angustæ acuminatæ sæpius monocarpicæ, et stylus indivisus.

In specie a Spruceo ad flumen Atabapo prope Maypures Venezuelæ lecta sub n. 3708, caulis brevissimus undique dense foliatus, foliis stellato-patentibus, floralibus involucrentibus similibus nisi brevioribus basi albis. characteribus floralibus omnino *Dichromenæ*.

8. *Psilocarya*, Torr. in *Ann. Lyc. N. York*, iii. 359.—Spiculæ ovoideo-conicæ, multifloræ, floribus omnibus hermaphroditis. Glumæ undique imbricatæ, omnes florentes v. infima vacua. Setæ hypogynæ 0. Stamina sæpius 2, interdum 3. Stylus basi v. ad medium induratus, plus minus incrassatus persistensque, superne tenuis, ramis stigmatosis 2 filiformibus. Nux late obovoidea, compressa, margine 2-costata, styli basi persistente sæpe elongata rostrata.—Herbæ cæspitosæ, annuæ (v. perennes?), caulibus foliatis, foliis gramineis. Spiculæ corymbulosæ, rhachi communi inflorescentiæ sæpe breviter producta, corymbi densi v. laxi subcompositi, terminales v. in axillis longe pedunculati. Glumæ fuscescens v. rarius pallidæ.

Species nobis notæ 4, quarum 3 Americæ borealis incolæ, *Steud. Syn. Pl. Glum.* ii. 150; quarta *Cubensis* (*Scirpus corymbiformis*, Wright in Sauv. Fl. Cub. 176).

Genus *Fimbristylis* affine, ob inflorescentiam et nucis rostrum quam in *Heleocharite* longius ab A. Grayio *Rhynchosporo* adjunctum, a qua differt spicularum multiflorarum forma, glumis omnibus florentibus. Species Mexicanæ et austro-Americanæ a Neesio et Liebmanno descriptæ pleræque ad *Rhynchosporam* (*Haloschænum*) pertinent. *P. candida*, Nees, potius ad *Dichromenam* referenda.

9. *Fimbristylis*, Vahl, *Enum.* ii. 285.—Spiculæ pluri- sæpius multi-floræ, floribus omnibus hermaphroditis v. summo rarius imperfecto. Glumæ undique imbricatæ v. rarius distichæ, infimæ 1-2 rarius 3 vacuæ. Setæ hypogynæ 0. Stamina 3 v. pauciora. Stylus basi plus minus incrassatus, basi bulbiformi v. conica cum stylo decidua v. (in sect. *Oncostyli*) diu persistente; ramis stigmatosis 2 v. 3 filiformibus. Nux obovoidea globosa v. compressa, 3-quetra v. 2-convexa, basi sæpe valde contracta.—Herbæ annuæ v. perennes, cæspitosæ, sæpe tenues v. humiles, rarius elatæ nec unquam staturam *Scirporum* majorum attingentes. Folia radicalia v. ad basin caulis conferta, graminea v. filiformia, rarius ad vaginas membranaceas reducta. Inflorescentia terminalis, sæpius irregulariter umbellata, umbella simplex v. sæpius plus minus composita, rarius in capitulum densum sessile contracta v. ad spiculam unicam v. paucas reducta. Spiculæ in radiis primariis v. ultimis solitariae v. rarius capitato-congestæ. Bractææ exteriores minimæ v. inflorescentia breviores, rarius foliaceæ inflorescentiam excedentes.

Species editæ ad 300, verisimiliter vix 200 retinendæ, per orbem terrarum late dispersæ, imprimis in regionibus tropicis numerosæ, in temperatis paucæ, in frigidis desunt. *Kunth, Enum. Pl.* ii. 220. *Steud. Syn. Pl. Glum.* ii. 106. *Bæckel. in Linnæa*, xxxvii. 2. *Benth. Fl. Austral.* vii. 298.

Genus pro maxima parte naturale et characteribus certis distinguendum, adsunt tamen species paucæ, præsertim inter monostachyas *Scirpo* (*Isolepidi*) prope accedentes v. a *Heleocharite* vix nisi setarum absentia distinguendæ. In sectiones sequentes dividitur:—

1. *Heleocharoides*. Spicula solitaria, terminalis, erecta v. nutans. Glumæ undique imbricatæ. Stylus 2-fidus v. 3-fidus, basi bulbiformi decidua. Species fere omnes Asiaticæ v. Australienses, interdum *Heleocharitis* v. *Isolepidis* speciebus tenuibus accedentes, sed styli basis semper decidua et folia (sæpius filiformia) adsunt, nunc ad basin caulis, nunc inter scapos aphyllas cæspitosa.

MISCHOSPORÆ, *Bæckel. in Flora*, 1860, 113, est *F. cylindrocarpa*, Wall.

2. *Abildgaardia*. Spiculæ erectæ, solitariae v. paucæ, compressæ v. angustæ. Glumæ distichæ v. 2-3-seriatim spirales, interdum irregulares. Stylus vulgo 3-fidus, basi bulbiformi decidua. *Rothb. Descr. et Ic. Pl.* t. 13, f. 3 (*Cyperus*). ABILDGAARDIA, *Vahl, Enum.* ii. 296. *Kunth, Enum. Pl.* ii. 247. *Steud. Syn. Pl. Glum.* ii. 72. *Bæckel. in Linnæa*, xxxvii. 51. *Beauv. Fl. Ow. et Ben.* t. 86. *Oliv. in Trans. Linn. Soc.* xxix. t. 109.

Genus ab auctoribus plerisque admissum, quoad speciem typicam *A. monostachyam*, Vahl, bene distinctum videtur glumis distichis paleaceis in spicula plana latiuscula, sed in speciminibus nonnullis imprimis Americanis dispositio glumarum minus regularis et in speciebus nonnullis gerontogeis imprimis Australiensibus glumæ irregulariter spirales, hinc inde tantum distichæ et genus jam a Hasskarlio, F. Muellero aliisque cum *Fimbristyle* junctum. *Benth. Fl. Austral.* vii. 307.

GUSSONEA, *Presl, Rel. Hænk.* i. 183, t. 33. *Brongn. in Duperr. Voy. Coq. Bot.* t. 34, species 2, altera Californica (?) altera Moluccana, ob glumas subdistichas *Abildgaardie* relatæ, habitum et inflorescentiam *Fimbristylum* typicarum ostendunt.

3. *Dichelostylis*. Spiculæ plures, sæpius numerosæ, laxæ v. rarius dense umbellatæ, nec capitatæ nec fasciculatæ. Glumæ undique imbricatæ. Stylus 2-fidus, basi bulbiformi decidua. Nux 2-convexa, lævis v. rugosa nec tuberculata. Species nonnullæ latissime dispersæ, una etiam in Europa obvia. *Rottb. Descr. et Ic. Pl.* t. 13, f. 1, t. 17, f. 6 (*Scirpus*). *Reichb. Ic. Fl. Germ.* t. 315. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 9. *Sibth. Fl. Gr.* t. 50 (*Scirpus*). *Delile, Fl. Eg.* t. 6, f. 3.

POGONOSTYLIS, *Bertol. Fl. Ital.* i. 312, est *F. (Dichelostylis) squarrosa*, Vahl, species humilis, styli bulbo basi pilis longis supra ovarium reflexis fimbriato. Huic affinis sed bene distincta est *F. velata*, R. Br. ex Australia.

*F. dichotoma*, Vahl (*Scirpus annuus*, All.), cui stylus vulgo 2-fidus a Hostio, Gram. Austr. iii. t. 63, stylo trifido delineatur.

4. *Trichelostylis*. Spiculæ paucae v. numerosæ, varie umbellatæ capitatæ v. fasciculatæ, rarissime ad unam reductæ. Glumæ undique imbricatæ. Stylus sæpiissime 3-fidus, basi bulbiformi decidua. Species numerosæ, tropicæ v. subtropicæ imprimis Asiaticæ v. Australienses. *Rottb. Descr. et Ic. Pl.* t. 5, f. 2, t. 17, f. 3 (*Scirpus*). *Rudge, Pl. Gui.* t. 19 (*Cyperus*). *TRICHELOSTYLIS, Lestib. Essai Fam. Cyp.* 40.

5. *Oncostylis*. Spiculæ depresso-capitatæ subcymosæ v. laxæ irregulariterque umbellatæ, rarius solitariæ. Glumæ undique imbricatæ, interdum paucae. Stylus 3-fidus, basi bulbiformi sæpius parva diuque in nucem persistente. *Rottb. Descr. et Ic. Pl.* t. 17, f. 4 (*Scirpus*). *Rudge, Pl. Gui.* t. 22 (*Scirpus*). *ONCOSTYLIS, Nees in Mart. Fl. Bras.* ii. i. 80. Sectio a Kunthio aliisque ad *Scirpum* relata ob styli basin sæpius persistentem, sed habitus omnino *Fimbristylis* nec *Scirpi*, et, ut monet A. Gray, styli basis distincte bulbiformis et demum haud raro decidua. Species tamen paucae monostachyæ Americane, glumis floribusque numerosissimis, *Fimbristylem* cum *Scirpo (Isopleide)* arete connectunt.

LEPTOSCHIENUS, *Nees in Hook. Journ. Bot.* ii. 393, est *Scirpus Schomburgkianus*, Bæckel. in Linnæa, xxxvi. 757, species sectionis *Oncostylis, F. capillari*, A. Gr., valde affinis, nisi ejusdem forma subprolifera. Setæ hypogynæ interdum nec semper adsunt minutæ.

ECHINOLYTRUM, *Desv. Journ. Bot.* i. (1808) 20, t. 1, est *Scirpus dipsaceus*, *Rottb. Descr. et Ic. Pl.* t. 12, f. 1, ab auctoribus *Isopleidi* relatus, sed stylus certe basi bulbiformis, bulbo nunc cum stylo deciduo nunc persistente. Species est insignis, humillima, densissime multicaulis, umbella simplici, spiculis parvis globosis v. oblongis, glumis numerosissimis squarrosis, nucibus compressis margine sæpius subtiliter glochidiatis.

10. *Pentasticha*, *Turcz. in Bull. Soc. Imp. Nat. Mosc.* 1862, ii. 330.—Spiculæ multifloræ, angustæ, floribus omnibus hermaphroditis. Glumæ quinquefariam imbricatæ, carinatae, acuminatæ, omnes florentes v. infima vacua. Setæ hypogynæ 6, retrorsum ciliolatæ. Stamina 3. Stylus cum ovario continuus, basi incrassatus, ramis stigmatosis 3 filiformibus. Nux stipitata, acute 3-quetra, styli basi persistente coronata.—Herba caespitosa, caulibus numerosis strictis acute 3-quetris foliatis. Foliorum lamina rigidula sæpe vagina sua brevior. Spiculæ fere 5-angulatæ, fasciculatæ, in fasciculo terminali 3-9, additis fasciculis nonnullis 1-5-stachyis, ad axillas superiores breviter pedunculatis. Bracteæ brevissimæ, sæpius setaceo-acuminatæ, una interdum sub fasciculo terminali spiculas subæquans.

Species 1, Africæ tropicæ et Madagascariæ incola. *Fuirena stricta*, *Steud. Syn. Pl. Glum.* ii. 128, Bæckel. in Linnæa, xxxvii. 99. Planta habitu quodammodo *Fuirena glomerata* accedit, sed multo affinis videtur *Fimbristyli* et *Scirpo*, genus tamen ab omnibus bene distinctum. *Turczaninow* (mendo typographico?) achenium tripartitum (loco triquetrum?) dixit.

11. *Scirpus*, *Linn. Gen.* n. 67.—Spiculæ pluri- sæpius multi- floræ, floribus omnibus hermaphroditis v. summo rarius masculo. Glumæ undique imbricatæ, omnes florentes v. infima vacua. Setæ hypogynæ dum adsint 3-8, sæpius 6, setulis minutis retrorsum v.

rarius sursum ciliatæ, v. in squamellas plumosas complanatæ, v. in sect. *Isolepide* sæpissime desunt. Stamina 3 v. pauciora. Stylus cum ovario continuus, basi v. haud incrassatus, deciduus, ramis stigmatosis 2 v. 3 filiformibus. Nux obovoidea globosa 3-quetra v. complanata, sessilis v. rarius stipitata, apice nuda v. styli basi minute tuberculiformi coronata, varie striata foveolata v. lævis.—Herbæ nunc parvæ annuæ cæspitosæ v. tenues fluitantesque, nunc elatæ validæ perennes rhizomate repente. Folia ad basin caulis pauca, nunc longissima, nunc parva graminea, v. omnia ad vaginas solas reducta. Inflorescentia nunc specie lateralis spiculis solitariis v. paucis fasciculatis sessilibus v. in umbella paucis inæqualiter pedicellatis, bractea infima erecta caulem ultra inflorescentiam continuante, nunc more *Cyper*i terminalis, composita, bracteis inferioribus inæqualiter elongatis foliaceis involucrata, v. rarius spicula unica, erecta, terminalis, bracteam subtendentem superans.

Species editæ ad 300, sed numerus valde reducendus et verisimiliter vix 200 retinendæ, per orbem terrarum latissime dispersæ, in locis humidis paludosis v. etiam in aquis stagnantibus frequentes, nec in Alpinis v. Arcticis Antarcticisque desunt. *Kunth, Enum. Pl.* ii. 157 et 187 (*Isolepis*). *Steud. Syn. Pl. Glum.* ii. 83 et 90 (*Isolepis*). *Bæckel. in Linnæa*, xxxvi. 475 et 691 (excl. sect. *Oncostylis*). *Benth. Fl. Austral.* vii. 322.

Genera ab auctoribus pluribus 2 admissa: *Isolepis* setis hypogynis 0, et *Scirpus* setis 3–6, pro maxima parte sat naturalia sunt, prius a *Fimbristyle*, id a *Heleocharite* distinctum, imprimis stylo basi non bulboso-incrassato; character tamen in speciebus nonnullis valde incertus, et Grayium Bæckelerum aliosque secuti sumus genus in integrum servando, quod in sectiones sequentes dividimus, omnes jam a nonnullis pro generibus propriis propositis.

1. *Bæothryon*. Spicula 1, terminalis, bractea spiculam non superante ut in *Heleocharite*, sed styli basis cum ovario continua angusta nec bulbiformis. Setæ hypogynæ sæpius 6. Habitus fere *Heleocharitis* sect. *Scirpidium*. *Reichb. Ic. Fl. Germ.* t. 296, 297, 299, 300. *Host, Gram. Austr.* iii. t. 58, 59. *More in Seem. Journ. Bot.* 1868, t. 85. *BæOTHRYON, Ehrh. Beitr.* iv. 147 (nomen); *A. Dietr. Spec. Pl.* ii. 89; *Nees, Gen. Fl. Germ. Monocot.* ii. n. 17.

2. *Nemum*. Spicula 1, terminalis, bractea spiculam non superante. Stylus basi haud incrassatus, totus deciduus. Setæ hypogynæ 0. Spicula in caule tenui erecta, spadicea, a spica *Trifolii spadicei* primo aspectu haud absimilis. Species 1 Indiæ occidentalis? et Africæ tropicæ occidentalis incola (specimina Africana sola vidimus). *NEMUM, Desv. in Hamilt. Prod. Pl. Ind. Occid.* 13. *Kunth, Enum. Pl.* ii. 220. Species glumis membranaceis spadiceis persistentibus distinctissima, vix tamen a *Scirpo* generice separanda, cui adjunxit Bæckeler.

3. *Isolepis*. Setæ hypogynæ 0 v. rarissime paucæ parvæ. Herbæ sæpius tenues, spiculis 1–3 parvis sessilibus, rarius elatæ inflorescentia composita. Bractea infima erecta, inflorescentiam quasi lateralem sæpissime excedens, caulem continuans. *Rotth. Descr. et Ic. Pl.* t. 8, f. 3, t. 15, f. 4, 5, 6, t. 17, f. 2, 5. *Host, Gram. Austr.* iii. t. 64, 65. *Reichb. Ic. Fl. Germ.* t. 298, 301, 302. *Delile, Fl. Eg.* t. 6, f. 1. *Thou, Melanges*, t. 7. *Jacq. Fl. Austr.* t. 448. *Rudge in Trans. Linn. Soc.* x. t. 15, f. 2. *IOLEPIS, R. Br. Prod.* 221; *Nees, Gen. Fl. Germ. Monocot.* ii. n. 10. *Oliv. in Trans. Linn. Soc.* xxix. t. 107. *Hook. f. Fl. Ant.* t. 50; *Fl. Tasm.* t. 143 ad 145. *A. Rich. Fl. Nouv. Zel.* t. 18. *Berggr. Ny. Zeal. Fanerog.* t. 5. *C. Gay, Fl. Chil.* t. 70.

*DICHOSTYLIS, Beauv. in Lectib. Essai Fam. Cyper.* 39, non *Nees*, genus propositum fuit ad *Isolepides* Brownianas stylo bifido.

*ELEOGITON, Link. Hort. Berol. Descr.* i. 284, *Nees, Gen. Fl. Germ. Monocot.* ii. n. 12, est genus ab auctore propositum pro speciebus paucis *Isolepidis* spicula solitaria terminali a bractea non superata.

*HOLOSCHÆNUS, Link. Hort. Berol. Descr.* i. 293; *Nees, Gen. Fl. Germ. Monocot.* ii. n. 11; *Reichb. Ic. Fl. Germ.* t. 316 ad 318, est *S. Holoschænus*, Linn., *Host, Gram. Austr.* iii. t. 62 cum specie affini, inflorescentia composita, spiculis parvis dense globoso-capitatis, insignis, sed characteres omnino *Isolepidis*.

*S. Lavianus*, Bæckel., e peninsula Indiæ Orientalis, nobis videtur *Fimbristylis* species, ubi collocavit Law.

4. *Desmoschænus*. Setæ hypogynæ ut in *Isolepide* 0, sed spiculæ ovoideo-globosæ, in linea longa 1-laterali subspirali secus caulem 2–3-seriatim confertæ, arcte sessiles, bracteis foliaceis longe adnatis inflorescentiam semi-amplexantibus, lamina patente. Species 1 Novo-Zelandica. *A. Rich. Fl. Nouv. Zel.* t. 19 (*Isolepis*). *DESMOSCHÆNUS, Hook. f. Fl. N. Zel.* i. 271. *ANTHOPHYLLUM, Steud. Syn. Pl. Glum.* ii. 160, spiculis errore 1-floris dictis.

6. *Schanoplectus*, Reichb. Setæ hypogynæ sæpissime 3-8. Caules sæpius validi, inflorescentia pseudolaterali, spiculis paucis sessilibus confertis v. pluribus irregulariter umbellatis, bractea extima erecta caulem continuante. *Host, Gram. Austr.* iii. t. 61, 66, iv. t. 68. *Reichb. Ic. Fl. Germ.* t. 303 ad 308. *Delile, Fl. Eg. t.* 7, f. 1 et 3. *Torr. Fl. N. York*, t. 139. *ELYTROSERNUM*, *C. A. Mey. in Mem. Sav. Etrang. Acad. Petersb.* i. 200, t. 2.

**HYMENOCHÆTE**, *Nees in Linnæa*, ix. 293, non *Beauv.*, est fide *Kunthii Scirpus grossus*, *Linn. HYMENOCHÆTA*, *Beauv. in Lestib. Essai Fam. Cyper.* 43, spiculis in corymbo simplici aggregato-confertis et setis membranaceis longitudine pistilli, est certe planta diversissima, ex auctore vix ab *Eriophoro* distincta, cæterum ex caractere manco et patria non data non agnoscenda et genus delendum.

*Scirpus semi-subterraneus*, *Bœckel. in Linnæa*, xxxvi. 495 (*S. thermalis*, *Spruce, Pl. Exs. n.* 5781, *Carex gaimardioides*, *Em. Desv. in C. Gay, Fl. Chil.* vi. 202, t. 73, f. 2), est species Chilensis et Andina, habitu *Oreobolo* similis, quocum v. cum *Gaimardia* in eodem cæspite interdum mixta est, sed vera *Scirpi* species, spiculis 2-3 ad apicem pedunculi in capitulum parvum aggregatis. In specimine a *C. Gay* accepto nunc jam maturæ sunt, setis filamentisque jam delapsis, sed pauca supersunt, et utriculus a *Desvauxio* descriptus et delineatus est nunc pericarpium.

*Scirpus membranaceus*, *Thunb., ex Africa australi, Scirpum* cum *Hypolytro* connectit. Spiculæ magnæ, 3-9 in capitulo terminali sessiles, glumis numerosissimis latis margine scarioso laceris arcate imbricatis. Setæ hypogynæ desunt et in speciminibus *Zeyherianis n.* 1775 et *Burchellianis n.* 5645 flores more *Isolepidis* intra glumam nudi, sed in speciminibus cæterum simillimis n. 3943 squamas hypogynas 2 laterales complicato-carinatas invenimus omnino *Hypolytri*. Hic numerus *Dregei* citatur a *Stendelio* sub genere suo *HELLMUTHIA*, *Steud. Syn. Pl. Glum.* ii. 90, et descriptio quoad habitum inflorescentiam spiculas glumasque convenit, sed flores dicit dioicos. In speciminibus nostris *Dregeanis* certe hermaphroditi sunt.

**HELEOPHYLAX**, *Lestib. Essai Fam. Cyp.* 41, est verisimiliter *S. lacustris*, *Linn.*, ab auctore genericè distinctum ob stylum 2-fidum.

**MALACHOCHÆTE**, *Nees in Linnæa*, ix. 292; *Gen. Fl. Germ. Monocot.* ii. n. 14 (*PTEROLEPIS*, *Schrad. in Gætt. Gelehrte. Anz.* 1821, 2071, ex ejusd. *Anal. Fl. Cap.* 30), genus propositum fuit ad *S. littoralem*, *Schrad.*, speciesque ei affines *S. lacustri* similes, sed setæ hypogynæ planæ, plus minus dilatatae, superne longe plumoso-ciliatae. *Reichb. Ic. Fl. Germ.* t. 309.

*Dichromena atrosanguinea*, *Em. Desv. in C. Gay, Fl. Chil.* vi. 190, t. 71, est verisimiliter *Scirpus teretichumis*, *Steud.*, species Chilensis *S. pungenti*, *Vahl*, affinis. Styli basis sub anthesi vix ovario angustior ut in icone delineatur, in fructu maturo tamen parva remanet vix bulbiformis et cum stylo delabitur. Setæ variant 2-3 v. 0.

6. *Blysmus*. Setæ hypogynæ sæpissime 3-6. Spiculæ plures, distinctæ, ad apicem caulis dense v. subinterrupte spicatæ, secus caulem sessiles, distichæ. Species 2 v. 3 Europææ v. Asiaticæ, quarum unam legit *Lechler* etiam in Chile sub n. 2927, spiculis tamen minus regulariter distichè spicatis, quod etiam observatur in *Blysmo brevifolio*, *Dene. in Jacquem. Voy. Bot.* t. 173, e Himalaya. *Host, Gram. Austr.* iii. t. 57. *BLYSMUS*, *Panz. in Ram. et Schult. Syst.* ii. Mant. 41; *Link, Hort. Berol. Descr.* i. 278. *NOMOCHLOA*, *Beauv. in Lestib. Essai Fam. Cyper.* 37, non *Nees*.

7. *Euscirpus*. Setæ hypogynæ sæpissime 3-6. Inflorescentia terminalis, composita, spiculis paucis majusculis v. minoribus numerosis irregulariter paniculata, bracteis exterioribus foliaceis inæqualiter elongatis involucreta. *Host, Gram. Austr.* iii. t. 67, 68, iv. t. 69. *Reichb. Ic. Fl. Germ.* t. 310, 313, 314. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 15. *Willd. Hort. Berol.* t. 99.

8. *Androcoma*. Setæ hypogynæ 0. Inflorescentia terminalis, composita et decomposita, bracteis exterioribus foliaceis inæqualiter elongatis involucreta. Nux acuminata, cum filamentis post anthesin valde elongatis persistentibus decidua. Species typica Brasiliensis, *S. giganteus* (*ANDROCOMA*, *Nees in Hook. Journ. Bot.* ii. 396), elata est, valida, spiculis numerosissimis majusculis confertis.

**BLEPHAROLEPIS**, *Nees in Mart. Fl. Bras.* ii. i. 91, e Brasilia, *Gardner n.* 1215, characteres omnino *Androcomatis* exhibet, nisi statura spiculisque multo minoribus, glumis pilis lanosis fimbriatis.

**OXYCARYUM**, *Nees in Mart. Fl. Bras.* ii. i. 90, est *S. cubensis*, *Kunth*, species per Americam tropicam late diffusa etiam in Africa tropica obvia, habitu et characteribus *Blepharolepidi* affinis, sed spiculæ in panicula dense globoso-capitatae, filamenta post anthesin vix accrescunt, et nunc pericarpium cartilagineum incrassatur, quare a *Bœckelero* cum *Cyperis* nonnullis ad genus *Neesianum Anosporum* refertur.

**APLOSTEMON** seu **HAPLOSTEMUM**, *Rafin. in Journ. Phys.* lxxxix. 105, genus propositum fuit ad species *Scirpi* floribus 1-andris. **DIPLABRHINUS**, *Rafin.*, species floribus 2-andris, et **DISTICHMUS**, *Rafin.*, species floribus 3-andris includit ex *Endl. Gen.* 119.

12. *Eriophorum*, Linn. Gen. n. 68. (Linagrostis, Adans. Fam. Pl. ii. 41.)—Spiculæ pluri-sæpius multi-floræ, floribus omnibus hermaphroditis. Glumæ undique imbricatæ, omnes florentes. Setæ hypogynæ 6 v.  $\infty$  (6 indivisæ v.  $\infty$ -partitæ, Bæckel.), filiformes v. complanatæ, post anthesin longissime excrecentes. Stamina 3. Stylus cum ovario continuus, basi haud incrassatus, ramis stigmatosis 3 filiformibus. Nux obovoideo-3-quetra, apice basique sæpe attenuata, setis persistentibus cincta.—Herbæ perennes, cæspitosæ, basi foliatæ v. rarius foliis omnibus ad vaginas reductis. Inflorescentia terminalia, spiculis nunc solitariis v. 2-3 capitatis brevissime bracteatis, nunc pluribus simpliciter umbellatis, v. numerosis in panicula decomposita bracteis elongatis foliaceis involucreta.

Species ad 10, Europæ, Asiæ extratropicæ et Americæ borealis incolæ. Kunth, Enum. Pl. ii. 176. Steud. Syn. Pl. Glum. ii. 128. Bæckel. in Linnæa, xxxvii. 91.

Genus quoad setas hypogynas in sectiones 2 parum naturales dividitur:—

1. *Trichophorum*, setis 6 tenuissimis longe crispo-flexuosis vix tamen gossypinis. Hic includimus (cum Persoonio) *E. alpinum*, L., spicula solitaria erecta exinvolucrata, et *E. cyperinum*, Linn., et *E. lineatum*, Mich., spiculis in panicula numerosis, bracteis foliaceis elongatis. Hæ species ab auctoribus recentioribus ad *Scirpum* transferuntur, sed setæ hypogynæ tenues lævesque omnino ut in *E. alpino* nec rigidulæ barbellatæque *Scirpi*. *S. criniger*, A. Gray, tamen in *Scirpo* retinendus videtur setis rigidulis barbellatis v. ciliolatis non flexuosis. Host, Gram. Austr. i. t. 40. Reichb. Ic. Fl. Germ. t. 288. Torr. Fl. N. York. t. 140. TRICHOPIPHORUM, Pers. Syn. i. 69.

2. *Eueriophorum*, setis  $\infty$  sæpius numerosissimis (v. ex Bæckelero 6 multipartitis). In *E. vaginato*, Linn., *E. polystachyo*, Linn., affinisque spiculæ solitariæ v. in umbella haud numerosæ et setæ longissimæ copiose gossypinæ sæpiusque candidæ; in *E. comoso*, Wall., tamen, e Himalaya, habitus fere *E. cyperini* et setæ, etsi numerosæ, tenues sunt et flexuoso-crispæ ut in *Trichophoro*. Reichb. Ic. Fl. Germ. t. 289 ad 292. Host, Gram. Austr. i. t. 37 ad 39, iv. t. 73, 74. Torr. Fl. N. York, t. 141.

13. *Ficinia*, Schrad. Anal. Fl. Cap. 43, t. 2. (Hypolepis, Beauv. in Lestib. Essai Fam. Cyper. 33, ex char. et ic. cit.)—Spiculæ pluri-sæpius multi-floræ, floribus omnibus hermaphroditis. Glumæ undique imbricatæ, infima v. rarius 2 v. 3 inferiores vacuæ. Setæ hypogynæ 0. Stamina 3. Discus hypogynus cartilagineus, nunc a stipite ovarii distinctus, nunc cupulatus v. tubulosus, margine sæpe dentatus v. breviter lobatus. Stylus basi haud incrassatus, ramis stigmatosis 3, rarius 2, filiformibus v. abbreviatis, deciduus. Nux 3-quetra v. rarius 2-convexa, apice interdum contracta, cum stipite discoque decidua.—Herbæ sæpius rigide. Folia radicalia v. ad basin caulis conferta, nunc elongata graminea v. filiformia, nunc breviter rigidula interdumque obtusa. Spiculæ sæpius terminales, solitariæ v. capitatæ, bracteis exterioribus foliaceis patentibus involucreta, v. bractea una erecta caulem continuante pseudo-laterales, interdum bracteis pluribus foliaceis patentibus etiam interioribus spiculas superantibus comoso-capitatæ, rarius plures secus caulem laxè spicatæ. Glumæ sæpiissime ferrugineo-castaneæ v. nigricantes, rarius pallide virentes.

Species ad 40, omnes Africanæ et perpaucis exceptis australes extratropicæ. Kunth, Enum. Pl. ii. 251. Steud. Syn. Pl. Glum. ii. 121. Bæckel. in Linnæa, xxxvii. 56. Endl. Atakta, t. 12.

Discus hypogynus a Kunthio rite descriptus, errore a Neesio aliisque perigynium dicitur; semper intra nec extra stamina situs est.

SCHÆNIDIUM, Nees in Linnæa, ix. 291, est *F. lateralis*, Kunth, stylo 2-fido, nuce biconvexa, cæterum omnino generi conformis.

MELANCRANIS, Vahl, Enum. ii. 239, Kunth, Enum. Pl. ii. 264, species includit 2, spiculis paucifloris in capitulum ovoideum spiculam unicam simulans confertis, et rite a Bæckelero ad *Ficiniam* refertur.

SICKMANNIA, Nees in Linnæa, ix. 292, est *F. radiata*, Kunth, a Vahl in *Melancrane* inclusa, species humilis, rigida, capitata, bracteis numerosis rigide foliaceis etiam interioribus spiculas excedentibus insignis. Glumæ etiam rigide acuminatæ et stylus elongatus sæpius brevissime 2-3-fidus.

CHAMÆXIPHUM, Hochst. in Flora, 1844, 102, Steud. Syn. Pl. Glum. ii. 59, species continet 2, alteram Abyssinicam, alteram austro-Africanam, evidenter *F. radiatæ* valde affines, sed capitula foliaceo-bracteata inter folia radicalia sessilia fere occulta.

**PLEURACHNE**, Schrad. *Anal. Fl. Cap.* 47, t. 4, est *F. secunda*, Kunth, iisdem notis a cæteris *Ficiniis* distincta quam *Abildgaardia* a cæteris *Fimbristylibus*, glumis 2-seriatis, inferioribus v. fere omnibus distichis. Spiculæ v. spicularum capitula in hac ut in speciebus nonnullis affinis ad apicem caulis dissita, in spicam secundam disposita sunt.

**ACROLEPIS**, Schrad. *Anal. Fl. Cap.* 42, t. 2, f. 5. Kunth, *Enum. Pl.* ii. 330 (**HYPOPHALIMUM**, Nees in Sieb. *Agrost. n.* 95), quo includit Bœckeler in Linnæa, xxxvii. 89; *Ficiniam ramosissimam*, Kunth, characteres præbet omnino *Ficiniæ*, nec differt nisi caule diffuso ramosissimo dense sæpiusque breviter foliato, ramis floriferis brevibus tenuibus et spiculis parvis in capitulo paucis.

**14. Hemichlæna**, Schrad. in Gætt. *Gelehr. Anz.* 1821, 2066, ex ejusd. *Anal. Fl. Cap.* 40, t. 3, f. 1.—Spiculæ  $\infty$ -floræ, compressiusculæ, floribus omnibus hermaphroditis. Glumæ distichæ, striatæ, carinatæ, infima rarius vacua. Setæ hypogynæ 0. Stamina 3. Ovarium stipiti crasso plus minus in discum dentatum expanso impositum. Stylus basi haud incrassatus, deciduus, ramis stigmatosis 3 filiformibus. Nux ovoidea v. oblonga, obtusangula, cum stipite discoque decidua.—Herbæ basi ramosæ diffusæ v. cæspitosæ. Folia longa, angusta, graminea. Spiculæ terminales, solitariæ erectæ v. plures in capitulo sessiles, sæpius longiusculæ, more *Ficiniæ* fuscæ v. nigricantes; rhachilla interdum nec semper articulata. Bractea exterior nunc glumiformis, nunc in laminam brevem erectam setiformem producta.

Species 3, Africæ australis incolæ. Kunth, *Enum. Pl.* ii. 330. Steud. *Syn. Pl. Glum.* ii. 1. Bœckel. in Linnæa, xxxvii. 86.

**15. Fuirena**, Rottb. *Descr. et Ic. Pl.* 70, t. 19, f. 3.—Spiculæ pluri- sæpius multi-floræ, floribus omnibus hermaphroditis. Glumæ undique imbricatæ, infimæ 1 rarius 2 vacuæ. Squamellæ hypogynæ 3, latæ, sæpe stipitatæ, membranacæ v. carnosulæ, interdum cum setis totidem alternantes. Stamina 3. Stylus basi cum ovario continuus, basi haud incrassatus, deciduus, ramis stigmatosis 3 filiformibus. Nux 3-quetra, erostris.—Herbæ annuæ v. perennes, foliatæ, sæpe pubescentes. Foliorum vaginæ membrana coronatæ. Spiculæ fasciculatæ, pubescentes v. hirsutæ, fasciculis terminalibus v. in axillis superioribus breviter pedunculatis paniculam irregularem angustam formantibus, v. paucis distantibusque.

Species enumeratæ ultra 30, sed verisimiliter infra 20 reducendæ, per regiones tropicas subtropicasque utriusque orbis late dispersæ. Kunth, *Enum. Pl.* ii. 180. Steud. *Syn. Pl. Glum.* ii. 125. Bœckel. in Linnæa, xxxvii. 98. Desf. *Fl. Atl.* t. 10 (*Scirpus*). Oliv. in *Trans. Linn. Soc.* xxix. t. 108 B.

**VAGINARIA**, Pers. *Syn.* i. 70, est *F. scirpoidea*, Mich. Fl. Bor. Amer. i. 38, t. 7, a Persoonio generice distincta ob setas hypogynas squamellis æquilongas, quod interdum observatur in *F. squarrosa* aliisque. Bœckeler squamellas hypogynas staminodia nuncupat, sed semper vidimus setis dum adsint alternas, in serie staminibus exteriore.

**16. Hemicarpha**, Nees in Edinb. *N. Phil. Journ.* xvii. 263; et in Wight, *Contrib. Bot. Ind.* 70.—Spiculæ parvæ, subglobosæ, dense multifloræ, floribus omnibus hermaphroditis. Glumæ numerosissimæ, undique imbricatæ, omnes florentes v. infimæ vacuæ. Squama hypogyna 1, minuta, diaphana, rarius dimidium ovarii attingens, sæpe 2-fida v. 2-dentata, interdum omnino evanida. Stamen 1. Stylus cum ovario continuus, basi haud incrassatus, tenuis, ramis stigmatosis 2 filiformibus. Nux basi parum contracta, obovoideo-oblonga, compressiuscula, erostris.—Herbæ pusillæ, cæspitosæ, habitu fere *Scirpi* (*Isolepidis*) setacei, Linn. Folia tenuia. Spiculæ minimæ, sessiles, sæpius ternæ, specie laterales, bractea tenui erecta caulem continuante.

Species 2, per regiones tropicas subtropicasque utriusque orbis late dispersæ. Nees in Mart. *Fl. Bras.* ii. i. t. 4.

Genus quasi medium tenet inter *Scirpum* (*Isolepidem*) et *Lipocarpum*; habitus prioris quacum junxit Bœckeler in Linnæa, xxxvi. 498, 499. Squamella hypogyna ab hoc auctore staminodium dicitur, sed ad seriem exteriorem pertinere videtur et sæpe 2-fida est. In speciminibus siccis diffillime observatur.

17. *Lipocarpa*, R. Br. *App. Tuckey, Congo*, 459.—Spiculæ parvæ, globosæ v. oblongæ, densissime multifloræ, floribus omnibus hermaphroditis. Glumæ numerosissimæ, undique imbricatæ, omnes florentes v. infima vacua. Squamæ hypogynæ 2, glumæ parallelæ, hyalinæ, ovario æquilongæ v. longiores. Stamina 1–2. Stylus cum ovario continuus, basi haud incrassatus, tenuis, ramis stigmatosis 2 v. 3. Nux anguste oblonga, compressa, obtusa v. acuta, erostis, inter squamas hypogynas persistentes inclusa.—Herbæ annuæ v. perennes. Folia ad basin caulis conferta. Spiculæ sæpius 3–5 in capitulo terminali sessiles, rarius solitariae, bracteis exterioribus paucis foliaceis valde inæqualibus involucatæ.

Species 6 v. 7, per regiones tropicas subtropicasque utriusque orbis dispersæ. *Kunth, Enum. Pl.* ii. 266. *Steud. Syn. Pl. Glum.* ii. 129. *Bæckel. in Linnæa*, xxxvii. 114. *Benth. Fl. Austral.* vii. 336.

Genus olim *Hypolytro* inclusum, sed squamellæ hypogynæ setas v. squamellas hypogynas planas *Scirpi* referunt; laterales complicatæ carinatæ *Hypolytri* desunt.

## TRIBUS II. HYPOLYTREÆ.

18. *Ascolepis*, Nees in *Herb. Un. Itin.* n. 1644; *Steud. Syn. Pl. Glum.* ii. 105, *pro parte*. (*Platylepis*, *Kunth, Enum. Pl.* ii. 269, *non A. Rich.*)—Spiculæ depressæ globosæ v. subovoideæ, multifloræ, floribus omnibus hermaphroditis. Glumæ tenuiter paleacæ v. subhyalinæ, angustæ, sub squamellis sæpe occultæ, omnes florentes v. inferiores perpaucae vacuæ. Squamella hypogyna e duabus lateralibus complicatis connatis composita, plana v. basi crassa, glumam excedens, subtus integra, supra longitudinaliter aperta florem includens. Setæ 0. Stamina 3 v. 2. Stylus cum ovario continuus, basi haud incrassatus, ramis stigmatosis 2 v. 3 filiformibus. Nux squamella inclusa, stipitata, oblonga, plano-compressa v. 3-quetra.—Herbæ perennes, cæspitosæ. Folia angusta sæpe filiformia, ad basin caulis conferta, vaginis laxè membranaceis v. rigidule fuscis. Spiculæ terminales, nunc solitariae depressæ v. subglobosæ, nunc more *Kyllingæ* 3–5 arcte sessiles, ovoides v. globosæ, candidæ pallide fuscescentes v. fere aureæ. Bractæ foliaceæ sub inflorescentia 2–3, patentes, valde inæquales, angustæ.

Species ad 6, Africæ tropicæ et australis incolæ, quarum una etiam in America australi orientali tropica v. extratropica haud rara. *Bæckel. in Linnæa*, xxxvii. 119. *Steud. Syn. Pl. Glum.* ii. 131.

Genus squamellis glumas ab auctoribus sæpe prætervisas excedentibus distinctissimum, formas tres præbet, quæ tamen non generice separandæ videntur:—

1. *Euscolepis*. Spiculæ solitariae, depresso-globosæ, interdum squamellis numerosissimis majoribus radiantibus fere bellidiformes. Squamellæ basi concavæ, florem foventes at vix includentes. Stylus variat 2–3-fidus. Species plures Africanæ tropicæ. *Welw. in Trans. Linn. Soc.* xxvii. 74, t. 24. *Oliv. in Trans. Linn. Soc.* xxix. t. 110.

2. *Platylepis*. Spiculæ solitariae, depresso-globosæ, candidæ, fere *Euscolepidis*, sed squamellæ plano-compressæ florem fere omnino includentes, rima aperta angusta. Stylus 2-fidus. Species 1, austro-Africana. Huc etiam pertinere videtur *LYPROLEPIS*, *Steud. Syn. Pl. Glum.* ii. 130, e fl. Gaboon Africæ occidentalis.

3. *Kyllingoides*. Spiculæ sæpius 3 v. 5, ovoides v. subglobosæ, in capitulum sessile arcte confertæ. Squamæ *Platylepidis*. Stylus 2-fidus. Species 1, Africana et Americana. *Nees in Mart. Fl. Bras.* ii. t. 4 (*Platylepis*).

19. *Hypolytrum*, *Rich. in Pers. Syn.* i. 70. (*Hypælyptum*, *Vahl, Enum.* ii. 283, *pro parte*, nomine *Richardiano* haud rite transcripto ex *Lestib.* *Beera, Beauv. in Lestib. Essai Fam. Cyper.* 43. *Hypelytrum*, *Link, Hort. Berol.* i. 327. *Tunga*, *Roxb. Fl. Ind. ed. Car. et Wall.* i. 187. *Albikia*, *Presl, Rel. Hænk.* i. 184, t. 34, 35.)—Spiculæ pluri-sæpe multifloræ, floribus omnibus hermaphroditis. Glumæ undique imbricatæ, inferioribus nonnullis minoribus vacuis. Flores complanati. Squamæ hypogynæ 2, laterales, complicatæ, carina acuta sæpius ciliata, interiores planæ setæque 0. Stamina 3 v. pauciora. Stylus cum ovario continuus, basi haud incrassatus, deciduus, ramis stigmatosis 2 v. 3 filiformibus.

*Nux dura*, obtusangula v. compressa, erostris (v. ex Kunthio basi styli spongiosa rostrata), lævis v. irregulariter rugosa.—Herbæ perennes, sæpius validæ, caule foliato. Spiculæ sæpius numerosæ, in paniculam irregulariter corymbosam rhachi communi breviter producta rarius in fasciculum densum contractam dispositæ. Bracteæ involucrentes elongatæ, inæquales, foliaceæ.

Species ad 25, per regiones tropicas et subtropicas utriusque orbis late diffusæ. *Kunth, Enum. Pl. ii. 269. Steud. Syn. Pl. Glum. ii. 131. Bæckel. in Linnæa, xxxvii. 120. Benth. Fl. Austral. vii. 338. Beauv. Fl. Ow. et Ben. t. 67. Bot. Mag. t. 6282.*

*H. pungens*, Kunth, cum specie affini, utraque e Guiana v. Brasilia boreali, *Rudge, Pl. Gui. t. 23 (Scirpus)*, a cæteris differunt squamellis hypogynis alte (nec usque ad apicem ut in *Ascolepide*) connatis florem omnino includentibus. *H. micranthum*, Bæckel., e Brasilia boreali, insigne est pedunculis ex axillis inferioribus scapiformibus tenuibus quam folia brevioribus, spiculis perpaucis v. solitariis erectis. In specie Africana, *Barter, n. 1575*, pedunculi v. scapi pariter ex axillis inferioribus folio brevioribus, sed rigiduli apice more generis  $\infty$ -stachyi. De *Hellmuthia*, Steud., characteribus fere *Hypolytri*, confer supra sub *Scirpo*.

20. *Diplasia*, *Rich. in Pers. Syn. i. 70.*—Spiculæ multifloræ, floribus omnibus hermaphroditis v. nonnullis abortu masculis. Glumæ undique imbricatæ, inferiores paucae vacuæ. Flores complanati. Squamæ hypogynæ 2 exteriores laterales complicatæ carina ciliata, 2 interiores planæ glumæ parallelæ. Setæ 0. Stamina 6-8. Stylus cum ovario continuus, basi haud incrassatus, tenuis sed complanatus, ramis stigmatosis 2 elongatis. *Nux ovalis*, compressa, obtusa, nitida, pericarpio duro circa semen parvulum undique incrassato.—Herbæ validæ, elatæ. Folia ad basin caulis latiuscula, pluripedalia. Spiculæ cylindraceæ, elongatæ, in ramis paniculæ corymbosæ sæpius fasciculatæ, rhachi communi plus minus elongata. Bracteæ inferiores longe foliaceæ, interiores setaceæ, sub spiculis singulis sæpe minimæ.

Species 1 v. 2, in America tropica a Brasilia usque ad Indiam occidentalem extensæ. *Kunth, Enum. Pl. ii. 273. Steud. Syn. Pl. Glum. ii. 133. Bæckel. in Linnæa, xxxvii. 135. Rudge, Pl. Gui. t. 24 (Scirpus).*

Speciei unicæ editæ (*D. karatæfoliæ*, Pers.), addenda videtur species affinis e Brasilia boreali, *Burchell, n. 9324*, spiculis minoribus, nuce multo angustiore longiore glumam superante. Specimen tamen unicum tantum adest, et species ulterius probanda. Stylus ab auctoribus dicitur basi semiglobosus ovarium coronans, quod non invenimus nisi partem superiorem ovarii ab inferiore non distinctam pro styli basi haberes.

21. *Mapania*, *Aubl. Pl. Gui. i. 47, t. 17. (Lepironia, sect. Macrolepironia, Miq. Ill. Fl. Archip. Ind. 60.)*—Spiculæ multifloræ, floribus omnibus hermaphroditis. Glumæ undique imbricatæ, inferiores paucae vacuæ. Flores complanati. Squamæ hypogynæ 6 (v.  $\infty$  ?), 2 exteriores laterales, complicatæ, carina acuta sæpe ciliata, 4 interiores planæ v. concavæ, angustæ, sæpe  $\infty$ -nerves absque costa centrali, quarum 1 antica, 3 staminibus alternæ. Stamina (an semper ?) 3. Stylus cum ovario continuus, basi haud v. breviter incrassatus, deciduus, ramis stigmatosis 3 filiformibus. *Nux sessilis*, 3-quetra v. complanata, erostris v. breviter rostrata.—Herbæ perennes, validæ, interdum altissimæ. Folia ad basin caulis v. in rhizomate fasciculata, longa, latiuscula, v. in petiolo longo ovato-lanceolata. Spiculæ sæpius majusculæ v. magnæ, in caule v. in scapo aphylo terminales, solitariae v. paucae in capitulo sessiles, v. rarius numerosæ corymboso-paniculatæ. Bracteæ nunc brevissimæ, nunc 1-3 longe foliaceæ.

Species nobis adsunt ad 30, per regiones tropicas utriusque orbis dispersæ, plures adhuc ineditæ, et characteres florales in paucis tantum rite observati, specimina nempe sæpe spiculas præbent paucas ætate jam marcescentes v. aliter imperfectas. In sectiones sequentes distribuuntur:—

1. *Thoracostachyum*. Inflorescentia more *Hypolytri* corymbosa, spiculis ovoideis quam in cæteris sectionibus minoribus; inflorescentiæ rami in speciebus 2 Sumatranis (*Lepironia bancana* et *L. sumatrana*, *Miq. Ill. Fl. Ind. Archip. t. 24*) breves oligostachyi; in specie Australiana, *Benth. Fl. Austral. vii. 341*, panicula ampla decomposita, spiculis numerosissimis. *THORACOSTACHYUM, Kurz in Journ. Asiat. Sc. Beng. xxxviii. 75.*

2. *Mapania*. Spiculæ plures, in capitulo sessiles, bracteis 3 foliaceis amplis æqualibus elevato-venosis involucreatæ. Huc species typica Guianensis Aubletii.

3. *Cephaloscirpus*. Spiculæ plures, interdum numerosæ, magnæ v. minores, in capitulo denso sessiles, bractea 1 longa foliacea involucreatæ, additis interdum 1-2 minoribus. Species adsunt 11, quarum 3 Americanæ, 4 Africanæ, 4 Asiaticæ v. insularum maris Pacifici. *CEPHALOSCIRPUS*, Kurz in *Journ. Asiat. Soc. Beng.* xxxviii. 83.

4. *Pandanophyllum*. Spiculæ plures capitatae, v. in scapo solitariae, bracteis exterioribus spiculum non v. brevissime tantum superantibus. Species adsunt 17, quarum 2 Africanæ, 5 Asiaticæ et 2 Samoenses spiculis capitatis, *Miq. Ill. Fl. Ind. Archip. t. 25, 27 (Lepironia)*; 1 Africana (*M. africana*, Beckel. in Linnæa, xxxvii. 137), et 7 Asiaticæ, scapis monostachyis, *Miq. l. c. t. 21 ad 23, 26 (Lepironia)*. *PANDANOPHYLLUM*, Hassk. *Cat. Hort. Bogor.* 297; Kurz in *Journ. Asiat. Soc. Beng.* xxxviii. 78. *HALOSTEMMA*, Wall. *Cat. Herb. Ind. n. 4470, 4474, nomen.*

22. *Scirpodendron*, Zipp.; Kurz in *Journ. Asiat. Soc. Beng.* xxxviii. 84. (*Ptychocarya*, R. Br. in Wall. *Cat. Herb. Ind. n. 3538, nomen*).—Spiculæ multifloræ, floribus omnibus hermaphroditis. Glumæ undique imbricatæ, inferiores paucae vacuæ. Flores complanati. Squamæ hypogynæ  $\infty$ , 2 exteriores laterales complicatæ carina sepius ciliata, interiores angustæ planæ v. concavæ absque costa centrali, facillime partitæ. Stamina 6 (v.  $\infty$ ?). Stylus tenuis, cum ovario continuus, basi haud incrassatus, ramis stigmatosis 2 v. 3 breviter filiformibus. Nux magna, exserta, costis 6-8 valde prominentibus obtusis sulcis profundis.—Herba perennis, valida, caule elato *Pandanus* aphyllus simulans. Folia ad basin caulis v. e rhizomate lignoso longa lata. Spiculæ ovatae, dense fasciculatae, fasciculis in paniculam densam thyrsoidem dispositis. Bractee  $\infty$ , longæ, inæquales, foliaceæ, exteriores paniculam involucentes.

Species 1 (v. 2?), Zeylanicæ, Archipelagi Malayani, insularum maris Pacifici et Australiæ tropicæ incolæ. *Benth. Fl. Austral. vii. 341. Miq. Ill. Fl. Archip. Ind. t. 28.*

23. *Exocarya*, Benth. in Hook. *l. c. Pl. t. 1206*.—Spiculæ parvæ, floribus 1-2 hermaphroditis cum masculis inferioribus 3-4. Glumæ undique imbricatæ, inferiores plures vacuæ. Flores complanati. Squamæ hypogynæ 4, quarum 2 exteriores laterales complicatæ carinatae, 2 interiores glumæ parallelæ planæ v. concavæ. Setæ 0. Stamina 3. Stylus basi induratus bulbiformis, persistens, superne tenuis deciduus, ramis stigmatosis 2 filiformibus. Nux e spicula exserta, ovoideo-oblonga, levis sed opaca, styli basi coronata.—Herba perennis, rhizomate repente, caule elongato tenui foliato. Folia longa, graminea, subulato-acuminata. Spiculæ minimæ, in umbellam amplam tenuem compositam dispositæ, ramis pedicellisque filiformibus. Nux sæpe unica perfecta etsi parva, spicula ipsa tamen multo major.

Species 1, Australiensis. *Benth. Fl. Austral. vii. 339*. Genus quoddam characteres floris *Mapania* aequat, habitu et inflorescentia longe distat.

24. *Lepironia*, Rich. in Pers. *Syn. i. 70*. (*Chondrachne*, R. Br. *Prod. 220*. *Choricarpha*, Beckel. in *Flora*, 1858, 19.)—Spicula multiflora, floribus omnibus hermaphroditis. Glumæ undique imbricatæ, areto appressæ, inferiores paucae vacuæ. Flores complanati, glumis obtecti. Squamæ hypogynæ numerosæ, 2 exteriores laterales complicatæ carina ciliata, interiores angustæ planæ v. subplanæ dense pluriseriatæ. Stamina 8 v. plura, squamis exterioribus opposita, cum interioribus alternæ. Stylus in centro floris supra ovarium haud incrassatus, ramis stigmatosis 2 filiformibus. Nux complanata, erostris, ecostata.—Herba perennis, caulibus e rhizomate repente erectis junciformibus aphyllis intus septis transversis nodulosis. Folia ad vaginas reducta. Spicula solitaria, specie lateralis, bractea subtendente erecta caulem continuante.

Species 1, Indiæ orientalis, Archipelagi Malayani, Madagascariae et Australiæ incolæ. Kunth, *Enum. ii. 366. Steud. Syn. Pl. Glum. ii. 181. Miq. Ill. Fl. Archip. Ind. t. 20.*

Squamellæ hypogynæ sæpius numero staminum duplo plura, quæ staminibus oppositæ cum stamine ab auctoribus pluribus flores ♂ 1-andri dicuntur, illæ staminibus alternæ pro floribus

neutris seu glumis vacuis habitæ, et stylus centralis flos ♀ nudus dicitur, cui interpretationi tamen assentiri nequimus. Plantæ habitus *Ecdiocolam* inter *Restiaceas* refert, sed structura spiculæ longe diversa. *Lepironiæ* sect. *Macrolepironia*, Miq., ad *Mapaniam* pertinet.

25. **Chorisandra**, R. Br. *Prod.* 221.—Spiculæ multifloræ, floribus omnibus hermaphroditis (v. apud auctores nonnullos in capitulo androgyno numerosæ 1-floræ unisexuales). Glumæ (v. capituli bracteæ) undique laxè imbricatæ, inferiores nonnullæ vacuæ. Flores (v. spiculæ) complanati v. teretiusculi. Squamæ hypogynæ (v. florum ♂ glumæ) numerosæ, 2 exteriores laterales sæpius complicatæ carina ciliata, interiores angustæ planæ v. concavæ dense ∞-seriatæ, v. omnes planæ v. concavæ. Stamina (v. flores ♂ 1-andri) 6-12, squamis interioribus alterna v. exterioribus opposita. Stylus (v. flos ♀ nudus) centralis, supra ovarium haud incrassatus, ramis stigmatosis 2 filiformibus. Nux 2-convexa v. ovoideo-globosa, costis ad 8 longitudinalibus prominulis.—Herbæ perennes, caulibus e rhizomate repente erectis junciformibus, intus interdum transverse septatis. Folia ad basin caulis pauca, teretia, cauliformia, v. ad vaginas reducta. Spicula (v. spicularum capitulum) globosa v. ovoidea, specie lateralis, bractea subtendente erecta caulem continuante.

Species 4, Australianæ, quarum una etiam in Nova Caledonia obvia. *Benth. Fl. Austral.* vii. 343.

Genus *Lepironiæ* affine et structura spicularum pariter duplici modo intelligitur. Sectiones 2 adnata vix non pro generibus propriis habendæ:—

1. *Euchorisandra*. Spicula globosa, sessilis, bractea subtendente (caulis apice) basi non v. vix dilatata. Squamæ hypogynæ 2 exteriores laterales, complicatæ, carina ciliata. Species 3, Australianæ.

2. *Cymbaria*. Spicula ovoideo-globosa, in basi dilatata bracteæ subtendentis (caulis apicis) semi-immersa. Squamæ hypogynæ omnes oblongo-spathulatæ, concaviusculæ. Species Australiana et Novo-Caledonica.

26. **Chrysitrix**, Linn. *Mant. n.* 1335 (Chrysitrix). Spiculæ 1-2-floræ, floribus hermaphroditis (v. apud auctores nonnullos spiculæ in capitulo androgyno numerosæ 1-floræ unisexuales). Glumæ (v. capituli bracteæ) paucae, rigidae, coriaceæ, nigrae, imbricatæ, concavæ v. carinatæ, exteriores vacuæ. Squamæ hypogynæ numerosissimæ, angustæ lineares, aliæ stamina singula foveantes, aliæ vacuæ (v. flores ♂ numerosi 1-andri, gluma lineari subtensi, glumis plurimis vacuis). Antherae tenues, longe acuminatæ. Stylus cum ovario centrali continuus, basi haud incrassatus, ramis stigmatosis 3 filiformibus (v. flos centralis femineus ad stylum cum ovario reductus absque gluma subtendente). Nux stipitata, ovoidea, obtusissima, crostris, in longitudinem multistriata.—Herbæ perennes, rhizomate repente, caule erecto rigido tereti v. compresso. Folia ad basin caulis erecta, rigida, a latere compressa v. juncea, sæpius breviter, interdum ad vaginam reducta. Spicula solitaria, specie lateralis, sessilis v. cauli semi-immersa, bractea subtendente basi dilatata erecta caulem continuante.

Species 2, Austro-Africanæ. Linn. *f. Nov. Gram. Gen. in Amæn. Acad.* x. 28, t. 1 (*Chrysitrix*). Kunth, *Enum. Pl.* ii. 365. Steud. *Syn. Pl. Glum.* ii. 181 (*Chrysitrix*). Backel. in *Linnea*, xxxvii. 139.

Genus præcedentibus affine, structura pariter duplici modo explicanda.

### TRIBUS III. RHYNCHOSPOREÆ.

27. **Oreobolus**, R. Br. *Prod.* 235.—Spiculæ angustæ, 1-floræ, flore hermaphrodito. Glumæ 3 (v. 2 cum bractea subtendente subconformi), imbricatæ, parum inæquales, exteriores 2 (v. 1 cum bractea) vacuæ. Squamæ hypogynæ (v. perianthii segmenta) 6, angustæ, rigidae, erectæ, persistentes, 2-seriatæ, sed omnes subæquales. Stamina 3. Stylus tenuis, cum ovario continuus, basi haud incrassatus, deciduus, ramis stigmatosis 3 tenuibus. Nux ovoidea, lævis, erostris.—Herbæ perennes, habitu *Gaimardiam* et

*Distichiam* simulantes, caulibus nanis dense foliatis in cespitem pulvinatum confertis. Folia disticha, equitantia v. rarius irregulariter imbricata. Spiculæ parvæ solitariae terminales, v. 2 altera laterali, pedunculo post anthesin sæpe elongato. Squamæ hypogynæ post nucem glumasque delapsas diu persistentes.

Species 2 v. 3, inter se valde affines, Australiæ australis, Novæ Zelandiæ et Americæ australis antarcticæ v. Andinæ incolæ. Kunth, *Enum. Pl.* ii. 367. Steud. *Syn. Pl. Glum.* ii. 182. Bæckel. in *Linnaea*, xxxviii. 230. Benth. *Fl. Austral.* vii. 346. Gaudich. in *Ann. Sc. Nat. ser. 1*, v. t. 2. Hook. f. *Fl. Antarct.* i. t. 49. Berggr. *Ny. Zeal. Fanerog.* 25, t. 6, f. 12 ad 24. His addidit H. Mann in *Proc. Amer. Acad.* vii. 210 speciem in insulis Sandwicensibus detectam a nobis non visam.

28. *Remirea*, Aubl. *Pl. Gui.* i. 44, t. 16. (Miegia, Schreb. *Gen. Pl.* 786.)—Spiculæ parvæ, 1-floræ, flore hermaphrodito. Glumæ 4, imbricatæ, exteriores vacuæ gradatim auctæ, suprema florens inclusa, sub anthesi membranacea, demum carnosio-incrassata. Setæ hypogynæ 0. Stamina 3, filamentis elongatis. Stylus cum ovario continuus, basi haud incrassatus, ramis stigmatis sæpissime 3 filiformibus. Nux glumis interioribus arcte inclusa, ovoideo-3-quetra, sæpe leviter compressa.—Herba perennis, e rhizomate late repente breviter cespitoso-ramosa, dense foliata. Folia linearia, rigida. Spiculæ in capitulo terminali sessili v. pedunculato ovoideo simplici v. composito dense confertæ, numerosæ, sessiles. Bracteæ exteriores involucentes breves patentæ.

Species 1, in maritimis regionum tropicarum utriusque orbis late diffusa. Kunth, *Enum. Pl.* ii. 138. Steud. *Syn. Pl. Glum.* ii. 71. Bæckel. in *Linnaea*, xxxv. 435. Benth. *Fl. Austral.* vii. 347. Beauv. *Fl. Ow. et Ben.* t. 73 (quoad glumas male).

29. *Arthrostylis*, R. Br. *Prod.* 229.—Spiculæ angustæ, flore unico hermaphrodito (addito rarius altero parvo imperfecto?). Glumæ  $\infty$ , undique imbricatæ, florens longiuscula acuta, cæteræ inferiores vacuæ, gradatim minores, addita interdum terminali minuta vacua (v. ex Bœckelero florem ♂ fovente). Setæ hypogynæ 0. Stamina 6, filamentis demum elongatis, 3 sæpius cæteris præcociora cito elongata anantheraque. Stylus undique dense gossypino-lanatus, basi incrassatus, cum ovario articulatus, deciduus, ramis stigmatis 3 recurvis. Nux ovoideo-subglobosa, erostris, costis 3 obtusis.—Herba perennis, caulibus e rhizomate crasso erectis plus minus complanatis simplicibus aphyllis basi vagina stipatis. Spiculæ minimæ, in capitulo parvo terminali sessiles, numerosæ, stylorum ramis gossypinis exsertis recurvis insignes. Bracteæ exteriores  $\infty$ , angustæ, rigidulæ, involucrum spiculis brevius formantes.

Species 1, Australiensis. Benth. *Fl. Austral.* vii. 422; in Hook.  *Ic. Pl.* t. 1345, a Bœckelero in *Linnaea*, xxxviii. 391, sub nomine *Fimbristylis planiculmis* descripta.

30. *Actinoschoenus*, Benth. in Hook.  *Ic. Pl.* xiv. 33, t. 1346. (Arthrostylis, Bæckel. in *Linnaea*, xxxvii. 523, non Br.)—Spiculæ angustæ, flore unico hermaphrodito, addito rarius altero parvo imperfecto. Glumæ 4 v. 5, 2 v. 3 exteriores breves vacuæ, 2 interiores longiores subæquales florem perfectum sæpeque glumam parvam v. floris alterius rudimentum involventes. Setæ hypogynæ 0. Stamina 3, filamentis interdum post anthesin accretis. Stylus tenuis, cum basi conico-dilatata deciduus, ramis stigmatis 3 filiformibus. Nux obovoideo-globosa, erostris, tenuiter 3-costata.—Herbæ annuæ (v. perennes?) cæspitosæ, caulibus tenuibus aphyllis basi vagina unica stipatis. Spiculæ in capitulo terminali subgloboso sessiles, exteriores sæpe subreflexæ. Bracteæ angustæ, spiculis breviores et parum conspicuæ, una rarius capitulum superante.

Species 3, *Arthrostylis Thouarsii*, Kunth, *Enum. Pl.* ii. 284, e Madagascaria; *A. filiformis*, Thw. *Enum. Pl. Zeyl.* 352, e Zeylania; et *A. chinensis*, Benth. *Fl. Hongk.*, e China. Genus a *Fimbristyle* differt uti *Kyllinga* a *Cypero*. Ab *Arthrostyle*, Br., longius distat capitulo, staminum numero et styli indole. Setas hypogynas a Hanceo in *Journ. Linn. Soc.* xiii. 133, descriptas frustra quæxivimus.

31. *Rhynchospora*, Vahl, *Enum. Pl.* ii. 229.—Spiculæ sæpius angustæ v. acuminatæ, floribus paucis, hermaphroditis perfectis 1, 2 v. rarius  $\infty$ , additis haud raro 1 v. 2 masculis

v. sterilibus. Glumæ undique imbricatæ, inferiores 2- $\infty$  v. rarius 1, breviores, vacuæ, 1 v. 2 superiores flores masculos v. imperfectos foventes v. vacuæ. Setæ hypogynæ 6 v. pauciores, nunc minimæ v. 0, rarius 7-8. Stamina 3 v. pauciora. Stylus basi varie dilatatus sæpiusque persistens, superne tenuis deciduus, nunc elongatus indivisus v. brevissime 2-fidus, nunc in ramos stigmatosos 2 longos filiformes divisus. Nux ovata obovata v. oblonga, plus minus compressa, rostro (styli basi persistente) polymorpho continuo v. articulo coronata.—Herbæ annuæ v. perennes, tenues v. validæ, erectæ v. rarissime diffusæ v. fluitantes, caulibus sæpius foliatis. Spiculæ nunc globoso-capitatæ capitulis terminalibus solitariis v. secus caulem v. inflorescentiæ ramos plures sessiles v. in umbellas irregulares dispositæ, nunc fasciculatæ v. subdissitæ, laxè corymbosæ, v. irregulariter corymboso-paniculatæ, inflorescentia terminali interdum valde composita, additis nonnunquam inflorescentiis minoribus in axillis pedunculatis, v. corymbi  $\infty$  secus caulem sessiles v. brevi-pedunculatæ. Bracteæ exteriores foliaceæ nunc longissimæ, nunc breves v. tenues.

Species descriptæ fere 200, sed verisimiliter infra 150 retinendæ, per regiones tropicas subtropicasque utriusque orbis late dispersæ, in America boreali plurimæ, in Europa et Asia Rossica duæ tantum. *Kunth, Enum. Pl. ii. 287. Steud. Syn. Pl. Glum. ii. 139. Bæckel. in Linnæa, xxxvii. 525 (excl. sp.  $\infty$  ad Dichromenam v. Psilocaryam referendis). A. Gray in Ann. Lyc. N. York, iii. 194, t. 6. Griseb. Fl. Brit. W. Ind. 573; Cat. Pl. Cub. 242. Wright in Sauv. Fl. Cub. 179.*

Genera numerosa a Neesio imprimis ad rostri formam, ad setas evolutas v. deficientes, stylum indivisum v. 2-fidum proposita, a Bækelerio aliisque bene ad *Rhynchosporam* restituta, in sectiones sequentes plus minus distinctas distribuenda videntur, series 2 formantia facile pro subgeneribus habendas:—

A. **Haplostyleæ.** *Spiculæ capitatæ v. in panicula fasciculatæ, acuminatæ, sæpissime 1-carpicæ. Stylus longus, tenuissimus, indivisus v. rarius breviter 2-fidus.*

1. *Haplostylis.* Spiculæ in capitulo solitario terminali globoso v. depresso numerosæ. Bracteæ 1-2 involucrantes sæpius foliaceæ, interdum longæ, inæquales, a basi virides. Setæ hypogynæ nunc nuce longiores, nunc paucae brevissimæ v. 0. Species tropicæ pleræque Americanæ. *HAPLOSTYLIS, Nees in Linnæa, ix. 295, et in Mart. Fl. Bras. ii. i. 126.*

*ΤΥΧΟΧΕΤΑ, Steud. Syn. Pl. Glum. ii. 155, e Brasilia, est R. (Haplostylis) barbata* var. v. species ei valde affinis, foliis glabris, spiculis in capitulo paullo majoribus paucioribusque.

*MORISIA, Nees in Linnæa, ix. 295 (SPHÆROSCHÆNUS, Nees in Pl. Meyen. 97), est species Asiatica, quam nec characteribus nec habitu a Haplostylibus Americanis separare possumus.*

*MITROSPORA, Nees in Linnæa, ix. 295, quoad M. recurvatam, Nees in Mart. Fl. Bras. ii. i. t. 11. Mart. Herb. Pl. Bras. n. 849, nec 815, a Haplostyle non differre videtur nisi capitulo minus regulariter globoso, et glumis tenuiter recurvo-acuminatis in spiculis squarrosis. Setæ 0. R. polyphylla, Vahl, a nonnullis ad Mitrosporam relata, species panicula longa gracili spiculis pallidis insignis, potius ad Calyptrastylem referenda est.*

Species nonnullæ Grisebachianæ ex India occidentali tenues, capitulis parvis oligostachyis, cæterum *Haplostyli* conveniunt, e.g. *R. subimberbis, R. curvula, R. setigera, R. seslerioides*, etc.

*PTEROTHECA, Presl, Symb. Bot. i. 55, t. 35, est R. (Haplostylis) barbata, Vahl (Schænus globosus, Rudge, Pl. Gui. t. 15), nuce 2-alata, rostro lanceolato, analysi nec a Rudge nec a Preslio accurate delineata. Nux cæterum in Haplostyle quoad formam alas et rostrum polymorpha, nunc plana ovata v. fere orbicularis ala angusta v. margine incrassato cincta, nunc antice valde incrassata alis cartilagineis crenulatis antice inflexis achænium fere cymbiformem efficientibus. Huc verisimiliter pertinet DIPLOCHÆTA guianensis, Nees in Linnæa, ix. 296, nucis alis pro perigynii squamis interioribus cum fructu coalescentibus descriptis. Genus cæterum a Kunthio aliisque sub silentio præteritum.*

2. *Asteroschænus.* Bracteæ involucrantes longæ, basi (ut in *Dichromena leucocephala*) valde dilatæ candidæque, capitulum fere occultantes. Cætera omnino *Haplostylis*. Setæ hypogynæ 0 v. minutæ. Species v. varietates 3 Brasilienses. *ASTEROSCHÆNUS, Nees in Mart. Fl. Bras. ii. i. 124.*

3. *Cephaloschænus.* Bracteæ involucrantes latæ, coriaceæ, nitidæ, obtusæ v. vix acuminatæ, spiculas non superantes. Setæ hypogynæ longæ, rigidæ v. tenues, plumosæ v. barbellatæ. Cætera *Haplostylis*. Species Americana tropica, *R. globosa*, Rœm. et Schult., *CEPHALOSCHÆNUS, Nees in Linnæa, ix. 295. Ptilosciadium, Steud. Syn. Pl. Glum. ii. 149, ex descr.*

*R. armerioides*, Presl, Rel. Hænk. 197, t. 31, f. 2, a Neesio ad *Haplostylem* relata, nobis *Cephaloschæno* affrior videtur. Bracteæ involucentes  $\infty$ -seriatim imbricatæ spiculas non excedentes, quam in *R. globosa* minus rigidæ acutæque, et potius paleaceæ quam coriaceæ. Stylus longissimus est et indivisus v. vix 2-dentatus, nec alte 3-fidus ut a Preslio errore quodam descriptus.

4. *Echinoschænus*. Capitula globosa *Haplostylis*, sed plura secus caulem sessilia v. nonnulla in corymbum parvum terminalem disposita. Species Americanæ tropicæ. Huc pertinent *R. exaltata*, Kunth (ECHINOSCHÆNUS, Nees in *Linnaea*, ix. 297, et in *Mart. Fl. Bras.* ii. i. 131, t. 10), setis hypogynis 0, et *R. polycephala*, Kunth, affinesque paucæ (EPHIPPIORHYNCHIUM, Nees l. c. 134, t. 12), setis hypogynis evolutis, Rudge, *Pl. Gui.* t. 17 (*Schænus*).

5. *Calyptrostylis*. Spiculæ plus minus fasciculatæ, fasciculis numerosis in paniculam terminalem irregularem compositam umbelliformem v. subcorymbosam dispositis, additis sæpe paniculis minoribus in axillis superioribus pedunculatis. Bracteæ exteriores sæpe longe foliaceæ involucentes. Setæ hypogynæ evolutæ. Species plures sæpius validæ, inclusa *R. aurea*, Vahl, tam in America tropica quam in Asia late diffusa. Rudge, *Pl. Gui.* t. 18 (*Schænus*). CALYPTROSTYLIS, Nees in *Linnaea*, ix. 295.

CERATOSCHÆNUS, Nees in *Linnaea*, ix. 296, species 2 continet boreali-Americanas a *Calyptrostylis* tropicis parum distinctas spiculis majoribus valde elongatis et nucibus longe rostratis.

In *R. polyphylla*, Vahl, spiculis anguste paniculatis et in *R. corymbifera*, Nees, forteque in nonnullis aliis rostrum in nuce articulatum mox delabitur.

B. *Dichostyleæ*. Spiculæ polymorphæ, interdum 2-4-carpicæ, laxè corymbosæ v. subumbellato-paniculatæ, vix fasciculatæ, panicula rarius in capitulum ovoideum v. elongatum contracta. Stylus ad medium v. altius divisum in ramos stigmatosos 2 tenuiter filiformes.

6. *Eurhynchospora*. Herbæ nunc tenues v. filiformes, nunc elatæ foliaceæ, inflorescentia terminali nunc corymbosa parum diffusa, nunc decomposita rhachi communi breviter producta v. in capitulum ovoideum contracta. Spiculæ angustæ, 1 2-carpicæ, v. rarius ovato-conicæ 3-4-carpicæ. Setæ hypogynæ variæ v. 0. Species nonnullæ latissime dispersæ, tam in orbe vetere quam in novo, pro maxima tamen parte Americanæ. Host, *Gram. Austr.* iv. t. 72 (*Schænus*). Reichb.  *Ic. Fl. Germ.* t. 285. Benth. *Fl. Austral.* vii. 348. Presl, *Symb. Bot.* t. 36. Wawra, *Bot. Maxim. Reise*, t. 90.

HALOSCHÆNUS, Nees in *Linnaea*, ix. 296, species includit *Eurhynchosporæ* quibus setæ hypogynæ minutissimæ v. sæpius omnino deficientes, et idcirco a Kunthio ad *Dichromenam* translatas. Spiculæ sæpius tenues v. minimæ, sed in *R. mexicana* aliisque austro-Americanis a Neesio sub *Psilocarya* enumeratis, ovato-conicæ sunt, formæ iis *Scirpi* quodammodo accedentes sed sæpissime 2-carpicæ.

PTILOCHÆTA, Nees in *Mart. Fl. Bras.* ii. i. t. 8, species 2 Americanas continet (*R. diodon* et *R. lunata*, Griseb.), habitu tenui et corymbo laxo parum diffuso fere *R. (Eurhynchospora) alba*, Vahl, sed nucis rostrum breve, latissimum, apice breviter 2-3-cornutum. SPERMODON, Beauv. in *Lestib. Essai Fam. Cyper.* 27, Nees in *Mart. Fl. Bras.* ii. i. t. 8, a *Ptilochæta* differt setarum hypogynarum deficientia.

*R. Cephalotes*, Vahl; *Rotth. Descr. et Ic. Pl.* 61, t. 20 (*Schænus*), species Americana tropica, a cæteris *Eurhynchosporis* differt spiculis numerosis in capitulum crassum sæpius ovoideum densissime confertis. In *R. cariciformi*, Nees, spiculæ densissime confertæ, sed spicam oblongam subramosam v. anguste thyrsoidem formant.

*R. ruppioides*, Benth. in Hook. *Ic. Pl.* t. 1344, simul e Ceylona et e Paraguya recepta, insignis est caule foliis bracteisque in aqua submersis filiformi-capillaceis.

CALYPTROLEPIS, Steud. *Syn. Pl. Glum.* ii. 151, est *R. oligantha*, A. Gray.

7. *Pleurostachys*. Corymbi laxi v. densiusculi, secus caulem plures, ad axillas sessiles v. breviter pedunculati. Spiculæ parvæ, sæpius 1-carpicæ, breviter ovatæ, vix acuminatæ. Stylus setæ hypogynæ et nuces omnino *Eurhynchosporæ*. Species ad 14, omnes Americanæ tropicæ. PLEUROSTACHYS, Brongn. in Duperr. *Voy. Coq. Bot.* 172, t. 31; Kunth, *Enum. Pl.* ii. 284; Steud. *Syn. Pl. Glum.* ii. 138; Bæckel. in *Linnaea*, xxxvii. 643, et xxxviii. 223. NEMOCHLOA, Nees in *Linnaea*, ix. 299, non Beauv. NEMOCHLOA, Nees in *Mart. Fl. Bras.* ii. i. 148, t. 14, 15, excl. *syn. Beauv.*; Wawra, *Bot. Maxim. Reise*, t. 92.

Sectio inflorescentia et spicularum indole sat distincta si includas *R. sparsam*, Vahl, affinesque nonnullas a Bæckelero in *Rhynchospora* rotentas, et *P. strictam*, Kunth, excludes. Bæckeler *Pleurostachyn* a *Rhynchospora* distinguit styli basi cum ovario continua, quod tamen vidimus in omnibus fere *Rhynchosporis* sub anthesi, et nucis rostrum bene distinctum est in *Pleurostachi* ut in cæteris *Rhynchosporis*. Nees nuper *Nemochloam* a *Pleurostachi* distinxit forma rostri, quod tamen in toto genere sæpe variat de specie in speciem.

*ZOSTEROSPERMON*, Beauv. in *Lestib. Essai Fam. Cyp.* 28, ex caractere manco non agnoscendum est et species non indicatur, sed ex descriptione Desvauxii in Ham. Prod. Fl. Ind. Occid. 14, qui verisimiliter specimen authenticum vidit, est *R. (Pleurostachys) sparsa*, Vahl.

8. *Millegrana*. Spiculæ parvæ, sæpius minimæ, 1-carpicæ, in paniculis axillaribus terminalibusque pyramidalis thyrsoideis v. angustis numerosæ. Species 3 v. 4, austro-Americanae, inclusa *R. millegrana*, Griseb. e Trinidad, quæ vix cum caractere Neesiano *R. (Schæni, Schrad) millegrana* suæ convenit. *Pleurostachys stricta*, Kunth, a cæteris *Millegranis* paullulum differt spiculis majoribus, paniculis angustis fere spiciformibus sæpe interruptis.

9. ? *Campylorhachis*. Spiculæ angustæ, ∞-floræ, rhachilla inter flores flexuosa, floribus alternatim foveis insidentibus fere *Schæni*, sed stylus 2-fidus et nux 2-convexa rostrata *Rhynchosporæ*. Paniculæ subcorymbosæ, terminales et axillares. Species 2: *R. gracillima*, Thw. Enum. Pl. Zeyl. 435, e Zeylanicæ paniculis laxissimis oligostachyis; et *R. thyrsoidea*, Nees et Mey. ex ins. Sandwichensibus, spiculis numerosis in paniculis brevibus dense confertis.

32. *Cyathochaete*, Nees in *Pl. Preiss.* ii. 86. (*Tetralepis*, Steud. *Syn. Pl. Glum.* ii. 159.)—Spiculæ angustæ, 2-floræ, flore superiore hermaphrodito, inferiore masculo v. sterili. Glumæ sæpius 4, undique imbricatæ, 2 exteriores breviores vacuæ, 2 superiores longiores flores arcte involventes. Setæ hypogynæ sæpius 4, longæ, rigida, acutæ. Stamina sæpius 2. Stylus elongatus, basin versus incrassatus, diu persistens, ramis stigmatosis 2 filiformibus. Nux ubi nota oblonga, stipiti crasso imposita, ecostata, styli basi incrassata coronata (an demum stylo deciduo denudata?).—Caulis e rhizomate perenni sæpius elati. Folia ad basin caulis elongata, superiora pauca in bracteis foliaceis abeuntia. Spiculæ nunc paucæ 2-pollicares, nunc sat numerosæ ½-pollicares, in paniculam longam angustam dispositæ. Flores hinc inde sed rarius 3-meri occurrunt. Styli staminaque interdum valde elongata.

Species 3, omnes Australianæ. *Benth. Fl. Austral.* vii. 350; in *Hook. Ic. Pl.* t. 1343. Genus ob setas hypogynas rigidas a Brownio *Carpheæ* adjunctum, sed habitu glumis non distichis et floribus sæpissime 2-meris longiuscule recedit, hoc caractere et nuce rostrata *Rhynchosporæ* affine, habitus potius *Elynanthi*.

33. *Carphe*, *R. Br. Prod.* 230, pro parte.—Spiculæ angustæ, 1-floræ, flore hermaphrodito. Glumæ 4-5, rigidule membranaceæ, distichæ, 2-3 exteriores vacuæ breviores, florens longior, rhachilla ultra florem rigide setiformi v. glumam vacuum ferente. Setæ hypogynæ 6, longæ, plumosæ, demum sub nuce patentes pappum simulant. Stamina 3. Stylus basi incrassatus, cum ovario continuus, ramis stigmatosis 3 filiformibus. Nux oblonga, 3-quetra, apice in basin induratum persistentem styli attenuata.—Herbæ perennes, haud elatæ. Folia ad basin caulis conferta. Spiculæ plures, fasciculatæ, fasciculis corymbosis fere in capitula contractis, capitulis corymbisve terminalibus v. interdum 1-2 minoribus axillaribus. Bractee foliaceæ sæpius 2, corymbum superantes.

Species 2, altera Australiæ et Novæ-Zelandiæ, altera Americæ australis antarcticæ et Chilensis incolæ. *Benth. Fl. Austral.* vii. 381, et in *Hook. Ic. Pl.* t. 1216. *Hook. f. Fl. Antarct.* t. 148.

*Carpheæ* ceteræ Brownii hodie ad *Cyathochaetam* v. ad *Mesomelenam* referuntur. *Carphe*, qualis a Bœckelero in Linnaea, xxxviii. 265, recepta, nobis videtur genus nec naturale nec caractere certo limitatum. *C. glomerata* et *C. capitellata* sunt *Asterochætis* species. *C. arundinacea*, *C. Auberti* et *C. elongata* genus *Cyclocampem* formant. *C. Urvilleana* e Moluccis ex descr. et ic. Brongn. in Duperr. Voy. 169, t. 30, videtur *Elynanthi* species *E. laxæ* subaffinis. *E. Schweinfurthiana*, Bœckel. in Flora 1879, 569, est *Erioporeæ* species.

34. *Mesomelæna*, Nees in *Pl. Preiss.* ii. 88.—Spiculæ 2-floræ v. rarius 1-floræ, floribus hermaphroditis inferiore dum adsit sterili. Glumæ distichæ v. subdistichæ, inferiores usque ad 5 vacuæ, florentes longiores flores arcte involventes, rhachilla brevi. Setæ hypogynæ 3, æquales, longæ v. brevès, rigidulæ, interdum complanatæ fere squamiformes. Stamina 3. Stylus cum ovario continuus, basi plus minus incrassatus induratusque, demum tamen sæpe deciduus, ramis stigmatosis 3. Nux obovoidea, primum (v. etiam matura?) styli basi indurata coronata, gynophoro v. stipiti brevi crasso plus minus distincto imposita.—Herbæ perennes, rigida, caespitosæ. Folia ad basin caulis sæpe elongata, addito

interdum uno in medio caule. Spiculæ in capitulum terminale globosum v. late oblongum densissime confertæ, bracteis rigidis haud raro nigris intermixtæ, quarum 1-2 v. in una specie 3-4 a basi brevi lata sæpe longe rigideque acuminatæ.

Species 5 v. 6, Australianæ. *Benth. Fl. Austral.* vii. 377, ubi forte 2 species sub *M. stygia* confusæ. In hac et in *M. deusta*, bracteæ exteriores 1 v. 2 acumine erecto nigro præditæ, glumæ vacuæ 4-5 strictè distichæ. In *M. sphaerocephala* et *M. ancipiti* (quæ *GYMNOSCHÆNUS*, *Nees in Ann. Nat. Hist.* ser. 1, vi. 47. *Hook. f. Fl. Tasm.* t. 142) bracteæ in capitulo globoso late orbiculatæ, muticæ v. una acumine brevi prædita, glumæ subdistichæ, vacuæ 1-2. In *M. tetragona*, capitula ut in speciebus typicis aterrima sed majora, bracteis 3-4 acuminibus longis patentibus rigidissimis præditis, glumæ subdistichæ, vacuæ 1-2 ut in *Gymnoschæno*. *PTILANTHELIUM*, *Steud. Syn. Pl. Glum.* ii. 166, species unica e Port Jackson, *Urville*, nobis ignota est, nisi ad *Mesomelanam deustam*, *Benth.*, referenda, quacum descriptio haud male convenit.

35. *Trianoptiles*, *Fenzl in Endl. Gen.* 113. (*Ecklonia*, *Steud. in Flora*, 1829, 138, non *Hornem.*)—Spiculæ angustæ, sæpius 2-floræ, floribus hermaphroditis, uno sæpe sterili. Glumæ 4-5, imbricatæ, quarum 1-2 inferiores breviores vacuæ, et interdum summa parva vacua. Squamæ hypogynæ 3, angustæ, complanatæ, basi plumoso-ciliatæ, superne glabræ 3-fidæ, lobis lineari-setiformibus erectis, medio lateralibus longiore. Stamina 3. Stylus basi incrassatus, piloso-pubescent, persistens, superne glaber filiformis deciduus, ramis stigmatosis 3. Nux obovoidea, 3-quetra, styli parte inferiore indurata coronata.—Herba caespitosa, foliis ad basin caulis gramineis. Spiculæ fasciculatæ, sessiles, in spicam breviter oblongam terminalem densam v. laxam dispositæ. Bracteæ 1-3 inferiores foliaceæ, spica sæpius longiores.

Species 1, Austro-Africana. *Kunth, Enum. Pl.* ii. 287. *Steud. Syn. Pl. Glum.* ii. 139. *Bæckel. in Linnæa*, xxxviii. 229, omnes sub *Ecklonia*. *Benth. in Hook. Ic. Pl.* t. 1348.

36. *Asterochaete*, *Nees in Linnæa*, ix. 300.—Spiculæ 1-3-floræ, floribus hermaphroditis uno alterove sæpius sterili. Glumæ paucae, vix distichæ, rigidule membranaceæ, 2 rarius 3 exteriores breviores vacuæ, rhachilla non producta. Setæ hypogynæ sæpius 6, inæquales. Stamina 3. Stylus cum ovario 3-costato continuus, basi brevissime bulboso-incrassatus, ramis stigmatosis 3 filiformibus. Nux oblongo-3-quetra, acutiuscula v. styli basi brevi coronata, angulis prominenter costatis, faciebus planis sæpe foveolatis v. granulosis.—Herbæ perennes, interdum elatæ. Folia ad basin caulis conferta, longa, secus caulem pauca breviora, vaginis in una specie longis laxis. Spiculæ nunc numerosissimæ, pallidæ, in capitula densa ovoidea v. globosa exinvolucrata densissime confertæ, capitulis in panicula ampla composita numerosis sessilibus v. breviter pedunculatis, nunc pauciores capitulis in panicula simplici paucis.

Species 3 v. 4, una ex insula Borbonia adhuc inedita, 2 v. 3 Africæ australis incolæ. *Kunth, Enum. Pl.* ii. 311. *Steud. Syn. Pl. Glum.* ii. 155. *Bæckel. in Linnæa*, xxxviii. 265 (*Carpha*).

37. *Schoenus*, *Linn. Gen. n.* 65, pro parte.—Spiculæ paucifloræ, floribus omnibus hermaphroditis fertilibusque v. infimo solo fertili, rarius ad florem unicum reductæ. Glumæ distiche imbricatæ, inferiores 1, 2 v. usque ad 6 vacuæ contiguæque, rhachilla inter flores hermaphroditos producta flexuosaque v. in spicula 1-flora ultra florem producta incurva glumam parvam vacuum ferente. Setæ hypogynæ nunc 6 v. irregulariter pauciores, tenues sæpe ciliatæ, breves v. longiusculæ, interdum complanatæ dilatatæque, nunc omnino deficientes. Stamina 3, rarius pauciora v. 4-6. Stylus cum ovario continuus, basi haud v. vix incrassatus, ramis stigmatosis 3 filiformibus interdum subplumosis. Nux obovoidea ovoidea v. rarius oblonga, erostris, plus minus distincte 3-quetra v. 3-costata.—Herbæ sæpius perennes habitu vario, nunc validæ erectæ junciformes v. infra medium foliatæ, nunc humiles, rarius teneræ diffusæ v. fluitantes. Spiculæ sæpius fasciculatæ, fasciculis in capitulo terminali dense capitatis v. varie spicatis v. paniculatis, rarius solitariæ terminalesque v. parvæ paucæque ad axillas subsessiles.

Species ad 60, pro maxima parte Australianæ v. Novo-Zelandicæ, 2 Europeanæ quarum 1 etiam in Africa australi et in America boreali obvia, 1 Africæ australi propria, 2 adhuc dubiæ Africæ tropicæ, 2 Americæ australis extratropicæ incolæ, 2 ut videtur bene congeneres in Archipelago Malayano detectæ. *Kunth, Enum. Pl.* ii. 334. *Steud. Syn. Pl. Glum.* ii. 165. *Bæckel. in Linnæa*, xxxviii. 273. *Benth. Fl. Austral.* vii. 352. *Reichb. Ic. Fl. Germ.* t. 286, f. 679. *Host, Gram. Austr.* iii. t. 54, iv. t. 71.

Genus habitu sat polymorphum sed characteribus certis in sectiones distinctas non dividendum videtur. In *Benth. Fl. Austral.* species in series 10 distribuuntur imprimis ad inflorescentiam et auctores varii genera sequentia separare proposuerunt:—

**CHÆTOSPORA**, *R. Br. Prod.* 232; *Kunth, Enum. Pl.* ii. 323; *Steud. Syn. Pl. Glum.* ii. 160; *Bæckel. in Linnæa*, xxxviii. 287; *Reichb. Ic. Fl. Germ.* t. 285, *Hook. f. Fl. Tasm.* t. 140 B (*STREBLIDIA*, *Link, Hort. Berol.* i. 276), species omnes includit quibus setæ hypogynæ plus minus evolutæ, distinctio tamen nec habitu nec aliis characteribus confirmata, et in speciebus nonnullis setæ variant plus minus evolutæ v. omnino deficientes. *Chætospore* paniculatæ ex Africa australi et America antarctica *Bæckeleri* in *Linnæa*, xxxviii. 300 n. 19 ad 25, spicularum rhachi non flexuosa, habitu, et nuce *Elynanthum* nec *Schœnum* referunt. *S. quadrangularis*, *Bæckel.* l. c. 274, cum *S. nigricante*, *Linn.*, et specie tertia inedita sunt solæ *Schœni* species hucusque in Africa australi detectæ.

**ISOSCHÆNUS**, *Nees in Ann. Nat. Hist. ser.* 1, vi. 49, species nonnullas Australianas includit, spiculis in capitulo terminali dense confertis sæpius paucis, setis hypogynis parvis v. 0.

**GYMNOCHÆTA**, *Steud. Syn. Pl. Glum.* ii. 156, est *S. Drummondii*, *Benth.*, species Australiana spiculis in capitulo terminali denso numerosis, setis hypogynis valde inæqualibus interdum ad 1-2 reductis v. omnibus minimis.

**HELOTHRIX**, *Nees in Ann. Nat. Hist. ser.* 1, vi. 45, est *S. axillaris*, *Hook. f. (Chætospora axillaris*, *R. Br.*, *Hook. f. Fl. N. Zel.* t. 62), species habitu anomala. Caules humiles, teneri, diffusi, ramosi, foliis flaccidis, spiculis parvis ad axillas 2-3-nis. Cum aliis tamen speciebus e serie *Microcarparum* bene connectitur.

38. **Cyclocampe**, *Steud. Syn. Pl. Glum.* ii. 156, ex char. dato.—Spiculæ angustæ, floribus 2-3 hermaphroditis perfectis, addito interdum infero sterili. Glumæ ∞, distiche imbricatæ, inferiores 5-8 vacuæ gradatim minores, summæ longiores flores involventes, rhachilla inter flores flexuosa apiceque producta glumam parvam vacuum ferente. Setæ hypogynæ 6, longæ, rigidulæ, plumoso-pilosæ. Stamina 3. Stylus cum ovario continuus, basi breviter incrassatus, superne deciduus, ramis stigmatosis 3 filiformibus. Nux ovoidea, sessilis, 3-quetra, styli basi brevi conica apiculata.—Herbæ perennes, caule elato. Folia longa, ad basin caulis conferta. Panicula longa, ampla, ramis erectis v. nutantibus, spiculis numerosis distinctis v. hinc inde confertis nec vere fasciculatis.

Species nobis notæ 2, *C. arundinacea*, *Benth.*, e Nova Caledonia, et *C. elongata*, *Benth.*, ex insulis Mascarensibus, a *Kunthio*, *Enum. Pl.* ii. 312, sub *Asterochæte*, a *Bæckelero* in *Linnæa*, xxxviii. 271 et 273, sub *Carpha* descriptæ. Species typica *Steudelii* in insulis Moluccis ab *Urvilleo* collecta, a nobis non visa, est evidenter eadem ac *Carpha Urvilleana*, *Gaud.*, ex eadem collectione descripta. Hæc a *Kunthio* cum *C. arundinacea* jungitur, a *Bæckelero* iterum separatur. In icone *Brongniartii* in *Duperr. Voy. Coq. Bot.* t. 30, flores 2 in spicula arcte approximati delineantur rhachi non producta, ex descriptione *Steudelii* flores ut in cæteris speciebus in rhachi flexuosa spiculæ dissiti, unde quidem nomen genericum deduxit.

39. **Elynanthus**, *Nees in Linnæa*, ix. 298, non *Beauv.*—Spiculæ plus minus compressæ, 2-3-floræ, flore superiore v. 2 superioribus arcte approximatis hermaphroditis fertilibusque, 1 v. 2 inferioribus masculis v. sterilibus, rhachilla nec flexuosa nec supra florem producta. Glumæ arcte imbricatæ, distichæ v. subdistichæ, plures (sæpius 4-6) inferiores vacuæ gradatim minores nisi aristato-acuminatæ, superiores flores arcte involventes. Setæ hypogynæ 6 v. pauciores v. 0, tenues v. membranaceæ, interdum breviter plumosæ, breves inæqualesque v. rarius elongatæ, basi interdum leviter dilatatæ v. in anulum subconnatæ. Stamina 3, rarius 4-8. Stylus cum ovario continuus, basi dilatata ab ovario sub anthesi sæpe discolori, post anthesin nunc a nuce non distinguenda nunc crassa brevissima cum pericarpio continua, ramis stigmatosis 3 rarius 4 filiformibus. Nux ovali-oblonga v.

obovoidea, obtusa, erostris, plus minus drupiformis, exocarpio tamen tenui, endocarpio subgloboso duro.—Herbæ perennes, elatæ v. rarius tonues. Folia pleraque ad basin caulis conferta, rarius secus caulem dissita, teretia v. angusta marginibus revolutis, rarius plana, interdum subulata, basi sæpe dilatata v. in paucis speciebus ad vaginas reducta. Spiculæ plus minus fasciculatæ, sæpius nigricantes, in paniculam angustam strictamque rarius laxam dispositæ, fasciculis nunc angustis paucispiculatis nunc densissime multipiculatis. Bracteæ foliaceæ parum elongatæ, sæpe subulato-acuminatæ.

Species fere 30, pro maxima parte Africæ australis extratropicæ incolæ, cum paucis in Nova Zelandia, Nova Caledonia, Australia meridionali v. America australi subantaretica obviis. *Kunth, Enum. Pl.* ii. 308. *Steud. Syn. Pl. Glum.* ii. 153. *Bæckel. in Linnæa*, xxxviii. 253. *Benth. Fl. Austral.* vii. 376. *Hook. f. Fl. Antarct.* t. 146, 147 (*Chaetopora*).

Genus in integrum servatum naturale est et facile dignoscendum, a Neesio aliisque in plura divisum, imprimis ad setarum hypogynarum indolem, quæ tamen si adsint semper tenues sunt. A *Schæno* differt rhachilla spicularum nec flexuosa nec supra florem producta arcuataque. Nux omnino *Cladii*. Genera sequentia vix pro sectionibus distinguenda.

TETRARIA, *Beauv. in Mém. Instit. Par.* 1812, ii. 54; *Lestib. Essai Fam. Cyper.* 36, proposita fuit ad specimina capensia *E. comparis*, Nees, floribus 8-andris 4-gynis. In *E. octandro*, Nees, flores pariter sæpius 6–8-andri 4-gyni.

LEPISIA, *Presl, Symb. Bot.* i. 9, t. 5, est *E. ustulatus*, Nees, species spiculis majusculis dense fasciculatis, glumis exterioribus aristato-acuminatis insignis, a Preslio genericè distincta ob squamellas sub staminibus 3, quas tamen in speciminibus nostris frustra quæsivimus.

SCLEROCHÆTIUM, *Nees in Linnæa*, ix. 302 (*TRICHOBALLIA*, *Presl, Symb. Bot.* i. 9 in adnot., nomen tantum), species 3 continet austro-Africanas spiculis densissime fasciculatis, glumis exterioribus ut in *Lepisia* aristato-acuminatis, setis hypogynis tenuibus nuce sæpius brevioribus plus minus barbellatis, nec rigidulis longis plumosisve ut in *Carpha*; Bæckeler, has species ad *Lepidosperma* transfert, squamellæ tamen cartilagineæ hujus generis omnino desunt.

CYATHOCOMA, *Nees in Linnæa*, ix. 300; *Bæckel. in Linnæa*, xxxviii. 311 (*MACROCHÆTIUM*, *Steud. Syn. Pl. Glum.* ii. 159), species continet 3 austro-Africanas *Elynanthi*, setis hypogynis tenuissimis inæqualibus interdum valde elongatis, ima basi leviter dilatatis subconnatis. Stylus interdum 2-fidus observatur, sæpissime tamen more generis 3-fidus. Habitus omnino *Elynanthi*.

BUEKIA, *Nees in Linnæa*, ix. 300, a *Cyathocomate* differt styli ramis sæpius 6 inæqualibus, characteres cæteri et habitus eidem. Species 2, austro-Africanæ, *B. punctoria*, Nees, *Kunth, Enum. Pl.* ii. 310, *Steud. Syn. Pl. Glum.* ii. 155, *Bæckel. in Linnæa*, xxxviii. 310, caule junceo folio unico erecto tereti staminibus sæpius 3, cum altera inedita caule basi foliato staminibus sæpius 6.

IDELERIA, *Kunth, Enum. Pl.* ii. 310, species 2 continet austro-Africanas a *Cyathocomate* parum diversas setis hypogynis elongatis superne pubescentibus v. breviter plumoso-laceris. Habitus idem.

ELYNANTHUS, *Beauv. in Lestib. Essai Fam. Cyper.* 32, genus valde dubium remanet ob characterem mancum, minime tamen *Elynanthum*, Nees, refert. 'Perianthium 2-paleaceum, paleis navicularibus compressis' aliique characteres plerique generi nulli nisi *Hypolytro* conveniunt, ubi tamen glumæ non subdistichæ.

40. **Tricostularia**, *Nees in Pl. Preiss.* ii. 83. (*Discopodium*, *Steud. Syn. Pl. Glum.* ii. 150).—Spiculæ 1–3-floræ, flore superiore hermaphrodito fertili, 1–2 inferioribus sterilibus v. masculis. Glumæ distichæ v. subdistichæ, imbricatæ, sæpius membranaceæ, 2–4 exteriores vacuæ, rhachilla brevi supra flores gluma parva vacua terminata. Setæ hypogynæ 6 v. pauciores, breves nunc minimæ, tenues v. rigidulæ, inæquales, interdum basi dilatatæ nec post anthesin auctæ. Stamina 3. Stylus basi haud incrassatus, ramis stigmatosis 3 longe filiformibus. Nux obovoidea, erostris.—Herbæ perennes. Folia ad basin caulis conferta, sæpe ad vaginas reducta, rarius secus caulem 1–2. Spiculæ parvulæ, sessiles v. pedunculatæ, nunc secus caulem paucæ dissitæ v. ad apicem caulis simpliciter spicatæ, nunc in ramis brevibus paniculæ fasciculatæ.

Species Australianæ 5, additis una Zeylanica alteraque Borneensi ab una ex Australianis parum distinctis. *Benth. Fl. Austral.* vii. 382. *Thw. Enum. Pl. Zeyl.* 353 (*Cladium*).

Genus *Schæno* affine, sed rhachilla spiculæ minime flexuosa et flos superior nec inferior fertilis;

habitu etiam sat naturale. Bœckeler in Linnæa, xxxviii. 332, speciem Zeylanicam ad *Lepidosperma* refert, aliæ a Brownio aliisque sub *Chetospora* descriptæ sunt.

41. *Lepidosperma*, Labill. *Pl. Nov. Holl.* i. 14, t. 11 ad 16. (Vauthiera, *A. Rich. Fl. N. Zel.* 106, t. 20.)—Spiculæ vix compressæ, flore superiore hermaphrodito fertili, additis sæpius 1-3 inferioribus sterilibus v. masculis. Glumæ imbricatæ, subdistichæ, exteriores (1-6) minores, vacuæ, florentes flores glumamque summam parvam vacuum arcte involventes. Setæ v. squamæ hypogynæ 6 v. abortu pauciores, sub anthesi sæpius tenues setiformes v. hyalinæ, interdum minutæ, post anthesin auctæ, incrassatæ, albidæ, cartilagineæ v. spongiosæ acuminatæ v. setiferæ, basi nucis arcte appressæ sub-2-seriatæ, nucem tamen rarius superantes. Stamina 3 v. rarissime in floribus paucis 4-5. Stylus cum ovarii apice crasso pulvinato v. indurato continuus, ramis stigmatis 3. Nux ovoidea v. oblonga, obtuse 3-quetra, apice indurato lævi, erostris.—Herbæ rhizomate perenni, caulibus sæpius rigidis interdum elatis haud raro complanatis v. angulatis. Folia ad basin caulibus pauca, a latere complanata et equitantia v. angulata v. teretia, sæpe a caule non distinguenda nisi vagina baseos et apice acuminato. Spiculæ sæpius numerosæ, nigræ, sessiles, distinctæ v. fasciculatæ, in paniculam nunc brevem spiciformem nunc longam densam angustamque nunc laxam amplam et diffusam dispositæ. Bractæe polymorphæ, inferiores sæpe foliaceæ, inflorescentiam tamen raro excedentes.

Species fere 40, plures tamen inter se parum distinctæ, quarum 2 in Malacca Archipelago Malayano v. China australi obvia, 2 Novo-Zelandicæ, cæteræ omnes Australianæ. *Benth. Fl. Austral.* vii. 384. *Bœckel. in Linnæa*, xxxviii. 315 (excl. spec. Zeylanica et austro-Africanis). *Hook. f. Fl. Tasm.* t. 146, 147.

42. *Cladium*, P. Br. *Hist. Jam.* 114.—Spiculæ 1-3-floræ rarius 4-6-floræ, floribus omnibus hermaphroditis, sæpius tamen infimo solo fertili, rarius 2-3 perfectis additis 1-2 masculis. Glumæ undique imbricatæ, 1-3 rarius 4 inferiores vacuæ, sæpiusque 1 rarius 2-3 superiores parvæ vacuæ v. florem imperfectum foventes, glumis florentibus cæteris æquilongis v. longioribus. Setæ hypogynæ rarius adsunt 6 v. pauciores, tenues. Stamina 3, rarius pauciora. Stylus cum ovario continuus, basi dilatata ab ovario sub anthesi discolori, post anthesin nunc a nuce non distinguenda nunc crassa brevissima v. rarius longiuscula cum pericarpio continua, ramis stigmatis 3 rarissime casu 2 filiformibus. Nux oblonga v. ovoidea, plus minus drupiformis, lævis, ecostata 3-costata v. 3-quetra, costis angulise apice (in styli basi) minus distinctis.—Herbæ perennes, rhizomate repente v. horizontali. Caulis nunc elati foliati, nunc junciformes foliis ad basin paucis v. ad vaginas reductis. Folia plana teretia v. a latere complanata basiue distiche equitantia, interdum septis transversis nodulosa. Spiculæ sæpius brunneæ v. nigro-fuscae, rarius pallidæ, secus ramos paniculæ terminalis sæpius fasciculatæ, additis sæpe paniculis axillaribus.

Species ad 30, per regiones tropicas temperatasque utriusque orbis late dispersæ, pro maxima tamen parte Australienses v. Novo-Zelandicæ. *Kunth, Enum. Pl.* ii. 303. *Steud. Syn. Pl. Glum.* ii. 152. *Bœckel. in Linnæa*, xxxviii. 231. *Hook. f. Handb. N. Zeal. Fl.* 303. *Benth. Fl. Austral.* vii. 400. *J. Kirk in Trans. N. Zeal. Inst.* ix. 552.

Genus in sectiones sequentes a nonnullis pro generibus propriis habendas dividitur:—

1. *Eucladium*. Caulis elati, foliati, foliis explanatis longis angustis. Paniculæ densæ, corymbosæ, spiculis numerosis fasciculatis. Spiculæ vulgo 2-floræ, flore inferiore solo fertili, gluma terminali vacua minuta v. 0. Nux distincte drupacea, exocarpio plus minus spongioso in sicco fragili, endocarpio duro. Species enumerantur 5 v. 6, quarum tamen 3 v. 4 inter se valde affines sæpe varietates *C. Marisci*, Br., nuncupantur, per totam fere aream generis dispersæ. *Reichb. Ic. Fl. Germ.* t. 287. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 8. *Host, Gram. Austr.* iii. t. 53 (*Schænus*).

2. *Baumea*. Folia sæpius ad basin caulibus conferta, teretia v. a latere complanata et distiche equitantia, rarius omnia ad vaginas breves reducta. Paniculæ laxæ v. thyrsoides v. angustæ. Spiculæ 1-floræ, v. si 2-3-floræ flos infimus solus fertilis, rhachi sæpius gluma parva vacua v. florem ♂ fovendo terminata. Nux sessilis, ubi nota subdrupacea, pericarpio crasso, endocarpio minus

distincto quam in *Eucladio*. Species pro maxima parte Australasiæ, sed etiam in Ceylona, Bengalia, Malacca, Japonia et in insulis Mascarensibus et maris Pacifici obviæ. *Labill. Pl. Nov. Holl. t. 17 (Lepidosperma)*, t. 18 et 19 (*Schanus*). *Hook. f. Fl. Tasm. t. 148, 149*. *SCHENOPSIS*, *Beauv. in Lestib. Essai Fam. Cyper. 34 (ex char.)*. *BAUMEA*, *Gaudich. in Freyc. Voy. Bot. 416, t. 29*. *Thw. Enum. Pl. Zeyl. 353*. *Berggr. N. Zeal. Fanerog. 23, t. 6*. *CHAPELLIERA*, *Nees in Linnæa*, ix. 298 et eo teste, *TRACHYRHYNCHIUM*, *Nees in Herb. Meyen. Cladia dubia et Baumea*, *Kunth, Enum. Pl. ii. 304, 313*. *Cladia paniculata et Baumea*, *Bœckel. in Linnæa*, xxxviii. 233 et 237.

3. *Vincentia*. Folia ad basin caulis conferta, a latere complanata, distiche equitantia. Panicula quam in *Baumea* sæpius magis effusæ, interdum nutantes spiculis numerosis. Flores in spicula perfecti sæpe 2 v. interdum 3-4. Nux stipitata, sæpius prominenter 3-costata et rostrata, interdum fere 3-alata. Species 6, in insulis Mascarensibus et maris Pacifici et America australi distributæ. *VINCENTIA*, *Gaudich. in Freyc. Voy. Bot. 417; Kunth, Enum. Pl. ii. 314*. *Steud. Syn. Pl. Glum. ii. 156*. *Bœckel. in Linnæa*, xxxviii. 247. *TEROBERA*, *Steud. Syn. Pl. Glum. ii. 164*. *TRASI*, *Beauv. in Lestib. Essai Fam. Cyper. 32 (ex char. manco)*.

*Scirpus iridifolius*, *Bory, Voy. t. 23 (S. lavarum, Poir. Dict. ex descr.)*, est *Vincentia latifolia*, *Kunth. S. iridifolius*, *Bory, l. c., t. 23 bis*, est ex descr. *S. iridifolius*, *Poir., rite a Bœckelero ad sect. Baumeam relata. Elynanthus ensifolius*, *Bœckel. in Linnæa*, xxxviii. 264, e Rio Janeiro, ex speciminibus nostris a Glaziovio acceptis est omnino *Vincentiæ* species.

*MACHERINA*, *Vahl, Enum. Pl. ii. 238. Kunth, Enum. Pl. ii. 313*, ex India occidentali, a *Vincentia* nec habitu nec characteribus differt, nisi præsentia setarum nonnullarum hypogynarum. *Macherina filifolia*, *Griseb. Cat. Pl. Cub. 242*, e Cuba, habitum et characteres *Baumeæ* præfert, a qua tamen pariter differt setarum præsentia.

43. *Gahnia*, *Forst. Char. Gen. 51, t. 26*. (*Psittacoschoenus*, *Nees in Pl. Preiss. ii. 87, nomen tantum.*)—Spiculæ sæpius 2-floræ, flore superiore hermaphrodito fertili, inferiore masculo v. sterili, uno alterove interdum deficiente. Glumæ plures, undique imbricatæ, inferiores 4 v.  $\infty$  vacuæ, quarum intima cæteris longior rigidiorque, florentes minores tenuiores includens, gluma vacua supra florem minima v. 0. Setæ hypogynæ 0. Stamina 3-6. Stylus cum ovario continuus, basi haud incrassatus, ramis stigmatosis 3-5 filiformibus. Nux ovoidea obovoidea v. subfusiformis, obscure 3-quetra v. teres, matura sæpissime nitens, exocarpio tenui, endocarpio duro crasso intus in pluribus speciebus transverse rugoso.—Herbæ perennes, rhizomate duro v. repente, caule sæpe elato valido, in paucis speciebus tenui. Folia sæpe longa, teretia, introrsum sulcata v. marginibus involutis specie teretia, longe subulato-acuminata. Panicula nunc ampla laxa nuntansque, nunc angusta et erecta v. spiciformis, spiculis nigrescentibus v. rarius brunneis. Filamenta interdum valde elonganda. Nuces nunc pulchre rubro-fuscae, nunc albidæ griseæ v. demum nigerrimæ, haud raro e spicula rejectæ sed filamentis persistentibus apice intra glumam vacuum clausam retentis diu a spicula pendulæ.

Species editæ ultra 30, plures tamen potius pro varietatibus *G. asperæ* v. *G. psittacorum* habendæ, et vix 20 retinendæ, pro maxima parte Australiæ, paucae Novæ Zelandiæ, Novæ Caledoniæ, Archipelagi Malayani, Chinæ australis, v. insularum maris Pacifici incolæ. *Benth. Fl. Austral. vii. 410. Hook. f. Handb. N. Zel. Fl. 305. H. Mann in Proc. Amer. Acad. vii. 209. Bœckel. in Linnæa, xxxviii. 338. Gærtn. f. Fruct. iii. t. 181.*

Genus *Cladio* affine quocum junxit F. Mueller et ab auctoribus pluribus intermixtum est, nobis tamen bene distinctum apparet spicularum structura et nuce. In sectiones 2 interdum pro generibus propriis habitas dividitur:—

1. *Lampocarya*. Spiculæ 1-floræ, flore inferiore imperfecto sæpissime deficiente. Panicula longa angustaque, spicularum fasciculis compositis v. breviter spicatis secus rhachin paniculæ sessilibus v. breviter pedunculatis. *Labill. Pl. Nov. Holl. t. 116. LAMPOCARYA, R. Br. Prod. 238. Brongn. in Duperr. Voy. Cog. Bot. t. 29. MORELOTIA, Gaudich. in Freyc. Voy. Bot. 416, t. 28. HEXALEPIS, Bœckel. in Flora, 1875, 118.*

2. *Eugahnia*. Spiculæ 2-floræ, flore inferiore masculo v. si hermaphrodito sterili sæpissimo præcoci. Panicula laxa, nunc longa angusta v. thyrsioidea, nunc ampla diffusa v. nutans, v. in una specio inflorescentia fere *Lampocaryæ*. *Labill. Pl. Nov. Holl. t. 115. DIDYMONEMA, Presl, Diss. 1829, Synb. Bot. 5, t. 3. et eo teste EPIANDRA, Presl in Isis, 1828, 270. MELACHNE, Schrad. ex Nees in Linnæa, ix. 301. SYZIGANTHUS, Steud. Syn. Pl. Glum. ii. 153.*

44. **Caustis**, *R. Br. Prod.* 239. (Eurostorrhiza, *Steud. Syn. Fl. Glum.* ii. 265.)—Spiculæ angustæ, flore 1 hermaphrodito, addito sæpe altero masculo infero, interdum abortu unisexuales. Glumæ 3-4, undique imbricatæ, acuminatæ v. aristatæ, 1-2 inferiores breviores vacuæ. Setæ hypogynæ 0. Stamina 3-6. Stylus basi incrassatus induratusque, ramis stigmatis 3 filiformibus. Nux ovoidea v. oblonga, basi styli ovoidea v. oblonga cum nuce continua v. basi constricta coronata.—Herbæ perennes, rhizomate repente crasso squamis vaginatis oblecto. Caules ramosi, ramis nunc erectis strictis nunc valde flexuosis et intricato-ramosissimis. Folia ad vaginas appressas clausas reducta, v. rarius lamina lineari evoluta. Spiculæ in vaginis solitariæ v. geminæ, pedunculis inclusis v. longiuscule exsertis ramulis sterilibus similibus, nunc omnes fertiles, nunc aliæ foemineæ v. hermaphroditæ, aliæ masculæ in diversis ramis ejusdem caulis v. in caulibus diversis ex eodem rhizomate.

Species 5, omnes Australianæ. *Benth. Fl. Austral.* vii. 419. *Guillem. Ic. Pl. Austral.* t. 14.

45. **Reedia**, *F. Muell. Fragm. Phytogr. Austral.* i. 239, t. 10.—Spiculæ ovatæ, flore 1 hermaphrodito, additis 1 v. 2 masculis inferioribus. Glumæ  $\infty$ , undique imbricatæ, inferiores 8-9 vacuæ, ab infima minima gradatim auctæ, florentes 2-3, longiores, tenues, summa tenuissima. Setæ hypogynæ 0. Stamina sæpius 6. Stylus basi haud incrassatus, ramis stigmatis 3 brevibus. Nux . . .—Caulis elatus, e basi crassa lignosa tenuis at rigidus. Folia longa ad basin caulis conferta. Spiculæ parvæ, in spica longa densa numerosæ, sessiles, confertæ, spica intra vaginas laxas bractearum foliacearum 2-3 occulta.

Species 1 in maritimis Australiæ austro-occidentalis rarissima. *Benth. Fl. Austral.* vii. 423.

46. **Evandra**, *R. Br. Prod.* 239.—Spiculæ oblongæ, 2-floræ, floribus hermaphroditis v. inferiore abortu masculo v. sterili. Glumæ  $\infty$ , undique imbricatæ, acutæ v. aristatæ, inferiores ad 15 vacuæ, ab extima minima gradatim auctæ, florentes superiores tenues v. scarioso-marginatæ. Setæ hypogynæ 0. Stamina numerosa (15-20), antheris linearibus aristatis. Stylus cum ovario continuus, basi haud incrassatus, ramis stigmatis 8. Nux . . .—Herbæ perennes, foliis longis ad basin caulis confertis v. secus caulem dissitis. Spiculæ majusculæ, laxè paniculatæ, pedunculis longis filiformibus, v. in fasciculo terminali sessiles.

Species 2, Australiæ austro-occidentalis incolæ. *Benth. Fl. Austral.* vii. 424, et in *Hook. Ic. Pl.* t. 1212, 1213.

#### TRIBUS IV. CRYPTANGIÆ.

47. **Lagenocarpus**, *Nees in Linnaea*, ix. 304, et in *Mart. Fl. Bras.* ii. 1, 164, t. 20, 21. (*Anogyna*, *Nees in Hook. Journ. Bot.* ii. 395.)—Spiculæ unisexuales, parvæ, paniculatæ;  $\sigma$  plurifloræ, glumis imbricatis 2-3 inferioribus vacuis. Stamina 1-2. Spiculæ  $\varphi$  1-floræ, glumis 3-5 latiusculis imbricatis. Setæ hypogynæ 0. Stylus cum ovario continuus, basi haud v. vix incrassatus, ramis stigmatis 3 v. 4-5 inæqualibus filiformibus. Nux obovoidea v. fere globosa, nuda v. styli basi persistente coronata, pericarpio crassiusculo, disco parum conspicuo imposita.—Herbæ perennes, elatæ. Folia ad basin caulis conferta, elongata. Spiculæ masculæ sæpius in panicula glomerulatæ, foemineæ solitariæ v. glomerulatæ, omnes minimæ, laxè paniculatæ, paniculis secus caulem ad axillas bractearum foliacearum in paniculam generalem amplam longam dispositis, inferioribus masculis præcocioribus superioribus foemineis.

Species enumeratæ 8, nonnullæ inter se parum distinctæ, Americæ australis tropicæ incolæ. *Backel. in Linnaea*, xxxviii. 422.

Genus vix a *Cryptangio* differt inflorescentia et nuce sæpius (an semper?) crassiore non angulata subsuberosa, a *Steudelio* *Syn. Pl. Glum.* ii. 177 in *Scleria* includitur.

48. **Cryptangium**, *Schrad.*; *Nees in Mart. Fl. Bras.* ii. i. 163, t. 19. (*Acrocarpus*, *Nees in Mart. l. c.* 157, t. 16, 17.)—Spiculæ unisexuales, tenues, distincte pedicellatæ,

♂ ∞-floræ, glumis angustis imbricatis, 2-3 inferioribus vacuis. Stamina 1-2. Spiculæ ♀ 1-floræ, glumis 3 latiusculis imbricatis acuminatis florem circumdantibus. Setæ hypogynæ 0. Stylus cum ovario continuus, basi haud incrassatus, ramis stigmatosis 3 filiformibus. Nux oblonga, 3-quetra, erostris, angulis costatis.—*Herbæ perennes. Folia in rhizomate v. ad basin caulis conferta, elongata. Spiculæ graciliter v. breviter pedicellatæ, pedunculis nunc simplicibus v. parum compositis tenuibus secus caulem elongatum fasciculatis, nunc paucis spiculas paucas ferentibus inter bracteas foliaceas fere occultis. Inflorescentia nunc præter bracteas breviter foliaceas sub fasciculis dissitis aphylla, nunc bracteis foliaceis numerosis angustis dense confertis spiculas superantibus inclusa. Spiculæ utriusque sexus sæpius irregulariter mixtæ.*

Species ad 10, Americæ tropicæ incolæ. *Backel. in Linnæa*, xxxviii. 412, excl. *C. Dracænula*, ad *Cephalocarpum* referenda.

49. **Fintelmannia**, Kunth, *Enum. Pl.* ii. 362.—Spiculæ unisexuales, minimæ, in spica androgyna v. unisexuali spiculiformi sessiles, bracteis undique imbricatis glumiformibus obtectæ, superiores femineæ, inferiores masculæ, utriusque sexus 1-floræ. Glumæ 2, exterior vacua, interior florem involvens. Stamina 2, rarius 3. Setæ hypogynæ 0. Stylus cum ovario continuus, basi haud incrassatus, ramis stigmatosis 3 filiformibus. Nux matura ignota, immatura angusta, erostris.—Herba perennis, cæspitosa. Folia ad basin caulis densissime conferta, recurvo-patentia, angusta, subulato-acuminata. Spicæ spiculiformes, parvæ, tenues, fuscæ, longe graciliterque v. breviter pedicellatæ, pedicellis in panicula laxa gracili terminali fasciculatis. Bractææ foliæ ad basin fasciculorum inferiorum, vagina fusca, lamina lineari-subulata.

Species 1, Brasiliensis, *Nees in Mart. Fl. Bras.* ii. i. 197, t. 29 (*Trilepis*).

Genus *Trilepis* a Neesio conditum fuit ad species duas inter se parum affines, alteram Indicam alteram Brasiliensem caractere falso imprimis a specie Indica deducto, quæ rite ad *Kobresiam* refertur, Kunth speciem Brasiliensem quam a caractere Neesiano sub *Trilepide* agnoscere non potuit, pro genere nomine *Fintelmanniæ* optime descripsit, quare genus spurium Neesii, etsi tardius caractere emendato ad speciem Brasiliensem limitatum, nobis delendum videtur. Perigynium utriculiforme cum stylo cohærens a Neesio in caractere emendato descriptum est nucis pericarpium. *Trilepis abyssinica* et *T. pilosa*, Boeckel., ad *Erioporum* pertinent.

50. **Cephalocarpus**, *Nees in Mart. Fl. Bras.* ii. i. 162, t. 18.—Spiculæ unisexuales, parvæ, in fasciculis capituliformibus androgynis v. unisexualibus sessiles; ♂ plurifloræ, glumis acutis imbricatis 1-2 exterioribus vacuis. Stamina 1-2. Spiculæ ♀ 1-floræ, glumis sæpius 3. Setæ hypogynæ 0. Stylus basi bulboso-incrassatus, demum cum bulbo deciduus, ramis stigmatosis 3 longe filiformibus. Nux (a nobis non visa) chartacea, 3-gona, basi parum angustior, styli basi diu coronata, demum denudata.—Caulis cum rhizomate continuus, ascendens, brevis, dense foliatus, basi vaginis persistentibus foliorum vetustiorum obtectus. Folia conferta, patentia, rigidula, acuta, vaginis imbricatis. Pedunculi ad axillas fasciculati v. solitarii, filiformes, folio multo breviores, capitulum parvum turbinatum ferentes. Bractææ rigide subulatæ, spiculas non v. vix superantes. Spiculæ in capitulo 3-7, sessiles, 1-2 femineæ masculis cinctæ.

Species 1, Brasiliæ borealis incola. *Steud. Syn. Pl. Glum.* ii. 180. *Backel. in Linnæa*, xxxviii. 415, sub *Cryptangio*, a quo tamen nobis distinctissima videtur habitu et inflorescentia, et fide Neesii stylo basi bulboso cum nuce articulo.

51. **Pteroscleria**, *Nees in Linnæa*, ix. 303, et in *Mart. Fl. Bras.* ii. i. 196.—Spiculæ unisexuales, parvæ, in fasciculo capituliformi varie intermixtæ, sessiles; ♂ paucifloræ, glumis acutis carinatis imbricatis, 1 rarius 2 exterioribus vacuis. Stamina 1-2. Spiculæ ♀ 1-floræ, glumis sæpius 3. Setæ hypogynæ 0. Stylus cum ovario continuus, basi haud incrassatus, ramis stigmatosis 3 filiformibus. Nux 3-costata, erostris, disco hypogyno parum prominulo.—Herbæ perennes. Folia ad basin caulis conferta, brevina v. elongata, secus caulem pauca. Spiculæ in capitulo terminali sæpius numerosæ, omnes sessiles sæ-

irregulariter fasciculatæ, foeminea in quoque fasciculo terminalis, masculis lateralibus, sed interdum foeminea adest infra masculas, adsunt etiam sæpius capitula 1-3 minora ad axillas foliorum sessilia. Bracteæ foliaceæ sub capitulo terminali sæpius 2 v. 3, parum elongatæ.

Species 3, Americæ tropicæ incolæ. *P. longifolia*, Griseb. Fl. Brit. W. Ind. 579; Benth. in Hook. Ic. Pl. t. 1347, e Trinidad, *Herb. Hook.*, et Brasilia boreali, *Spruce*, n. 648, habitum et inflorescentiam præbet *Rhynchospora exaltata*, Kunth. Species Guianensis in herb. Hook., quæ verisimiliter typica *P. guianensis*, Nees, statura multo minor foliis tamen  $\frac{1}{2}$ - $\frac{3}{4}$  pedes longa (nec  $\frac{1}{2}$ - $\frac{3}{4}$  poll. ut probabiliter lapsu calami a Neesio descripta). In specie tertia, *Spruce*, n. 3763, e Venezuela v. Brasilia boreali, statura at folia adhuc breviora, et huic verisimiliter referenda *Scleria capitata*, Willd., Kunth, Enum. Pl. ii. 351, a Bœckelero in Linnæa, xxxviii. 435 ad *Diplacrum* translata.

52. **Calyptracarya**, Nees in Linnæa, ix. 304, et in Mart. Fl. Bras. 192, t. 28.—Spiculæ unisexuales, minimæ, in fasciculis androgynis paucæ, sessiles, bracteis glumiformibus imbricatis; ♂ paucæ, paucifloræ, bracteam non excedentes, glumis paucis undique imbricatis 1-2 exterioribus vacuis, floribus 1-andris. Spicula ♀ inter masculas centralis, sessilis, 1-flora (v. flos nudus), glumis 0 v. interdum 1-2 parvis tenuissime membranaceis. Setæ hypogynæ 0. Stylus basi haud incrassatus, ramis stigmatosis 3 filiformibus. Nux subglobosa, erostris, intra bracteas fasciculi semi-inclusa v. stipata, disco hypogyno parum prominulo.—Herbæ perennes, subcæspitosæ. Folia longa, ad basin caulis interdum elongati conferta, secus caulem dissita. Spicularum fasciculi plures, in capitula parva conferti, capitulis laxo corymboso-paniculatis, paniculis terminalibus et secus caulem ad axillas foliorum subsessilibus, iis *Rhynchospora* sect. *Pleurostachyos* similibus.

Species 3 v. 4, Americæ australis tropicæ incolæ. Kunth, Enum. Pl. ii. 363. Steud. Syn. Pl. Glum. ii. 181. Bœckel. in Linnæa, xxxviii. 429.

*Schenus longifolius*, Rudge, Pl. Gui. 14, t. 16, a Kunthio dubie ad *Calyptracaryam* relatus, est *Hoppia microcephala*, Bœckel. *S. fragifer*, Rudge, l. c. 15, t. 17, a Neesio olim quoque docente a Kunthio aliisque pariter ad *Calyptracaryam* relata, est *Rhynchospora polycephala*, Wydl., ut rite emendavit Nees in Mart. Fl. Bras. ii. i. 135. Stylus 2-partitus in *Calyptracarya* a Neesio descriptum nunquam vidimus.

53. **Becquerelia**, Brougn. in Duperr. Voy. Coq. Bot. 161, t. 27.—Spiculæ unisexuales, parvæ, in fasciculis androgynis ∞ sessiles, bracteis glumiformibus imbricatis acuminatis v. aristatis; ♂ paucæ, ∞-floræ, glumis acuminatis imbricatis 2-3 exterioribus vacuis, floribus 1-andris. Spicula ♀ inter masculas sessilis, centralis, 1-flora, glumis ∞ (4-5) bracteis fasciculi similibus mox auctis florem fere involventibus. Stylus basi haud incrassatus, ramis stigmatosis 3 longe filiformibus. Nux globosa v. ovoidea, lævis v. rugosa, erostris, disco brevissimo lato crassiusculo imposita, glumis auctis appressis acuminibus patentibus fere obtecta.—Herbæ perennes, caule foliato interdum valido elongatoque. Spicularum fasciculi dense cymosi, cymis laxè v. breviter corymboso-paniculatis, paniculis terminalibus sæpiusque etiam secus caulem ad axillas bractearum foliacearum sessilibus. Bracteæ intra paniculas angustæ, rigidulæ, inflorescentia breviores.

Species 3, Americæ australis tropicæ incolæ. Kunth, Enum. Pl. ii. 361. Steud. Syn. Pl. Glum. ii. 180. Bœckel. in Linnæa, xxxviii. 538 (*Scleria* sect.). Genus nostro sensu *Calyptracarya* et *Hoppia* potius quam *Scleria* affine a qua hæc tres essentialiter differunt spicula ♀ terminali nec masculis infera, aliisque notis.

54. **Hoppia**, Nees in Mart. Fl. Bras. ii. i. 199, t. 30.—Spiculæ unisexuales, in fasciculis minimis androgynis sæpius 3 sessiles, bracteis glumiformibus imbricatis; ♂ sæpius 2, 2-floræ, glumis paucis imbricatis, 1-3 inferioribus vacuis, floribus 1-andris. Spicula ♀ inter masculas sessilis, centralis, 1-flora, bractea parva glumiformi subtensa, glumis (3?) in utriculo ovoideo-3-gono acutiusculum v. acuminatum florem fructumque arcte includentem connatis, ore parvo minute 3-dentato v. subintegro. Setæ hypogynæ 0. Stylus cum ovario continuus, basi haud v. vix incrassatus, ex ore utriculi breviter exsertus, ramis

stigmatis 3 filiformibus sæpe brevibus.—Herbæ perennes. Folia e rhizomate in axi brevi conferta, elongata. Caules v. potius scapi floridi ad axillas foliorum inferiorum iis sæpe breviores, basi vaginis paucis instructi, cæterum præter bracteas aphylli. Spicularum fasciculi numerosi, dense capitati, capitulis ad apicem scapi pluribus parvis irregulariter umbellatis v. in capitulo composito arcte sessilibus. Bractea foliacea ad basin inflorescentiæ parva, v. magis evoluta capitula superans.

Species 3 v. 4, Brasiliæ borealis et Guianæ incolæ. *Bæckel. in Linnæa*, xxxix. 11. *Rudge, Pl. Gui. t. 16* (*Schanus longifolius*, species evidenter eadem ac *Hoppia microcephala*, Bæckel.).

Genus utriculo non obstante *Becquerelia* nec *Carici* affine; utriculus enim e glumis 3 concretis compositum nec gluma unica sistens. Speciebus 3 a Bæckelero enumeratis addenda videtur planta Spruceana n. 2933, prope flumen Uaupès lecta, cui utriculus post anthesin auctus supra nucem spongioso-farctus; cæterum characteres omnes uti habitum *Hoppia* exhibens.

#### TRIBUS V. SCLERIEÆ.

55. *Eriospora*, *Hochst., A. Rich. Fl. Abyss. ii. 508.*—Spiculæ 1-3-floræ, androgynæ v. abortu unisexuales, flore infimo fœmineo, superioribus 1-2 masculis, uno alterove interdum abortiente. Glumæ paucae, carinatae, tenues, subdistichæ, infima vacua, secunda florem ♀ dum adsit, 1-2 superiores flores ♂ foventes, summa v. interdum omnes supra florem ♀ vacuæ. Setæ hypogynæ normales desunt, sed ovarium basi pilis longis flexuosis numerosis (setis tenuissimis?) cinctum. Stamina in flore ♂ 1-3. Stylus in flore ♀ cum ovario continuus, basi haud incrassatus, elongatus, apice ramis stigmatis 3. Nux oblongo-3-quetra.—Herbæ elatæ. Folia ad basin caulis conferta, elongata, angusta. Spiculæ parvæ, in spicas spiculiformes densissime confertæ, spicis ipsis numerosis parvis in panicula longa laxa sæpe nutante sessilibus v. pedicellatis. Bracteæ sub ramis paniculæ longe vaginatae, lamina foliacea brevi.

Species 4, Africæ tropicæ incolæ. *Bæckel. in Linnæa*, xxxix. 9 (*Trilepis*), et in *Flora*, 1879, 569 (*Carpa*). *Benth. in Hook. Ic. Pl. xiv. 30, t. 1342.* Species Abyssinica, a *Quartin-Dillono* et a *Schimpero* n. 1262 lecta, a typica *Schimperiana* n. 233 paullulum diversa videtur.

CATAGYNA, *Beauv. in Lestiboud. Essai Fam. Cyp. 26*, species a *Thouarsio* communicata, patria non nota, ex caractere manco videtur *Eriospora* affinis, sed valde dubia remanet et e generibus delenda.

56. *Scleria*, *Berg in K. Vetensk. Acad. Handl. Stockholm, xxvi. (1765), 142, t. 4, 5.*—Flores unisexuales, fœminei solitarii, in spiculis androgynis infra masculos v. in spicula distincta, masculi in spiculis androgynis v. distinctis ∞. Glumæ undique imbricatæ, 1-3 inferiores et interdum 1-3 supra florem ♀ vacuæ. Setæ hypogynæ 0. Stamina 1, 2 v. rarius 3. Stylus cum ovario continuus, basi haud v. breviter incrassatus, ramis stigmatis 3 filiformibus. Nux globosa v. ovoidea, sæpius alba, obtusissima et erostris v. styli basi brevi persistente mucronata, gynophoro sæpe in discum simplicem v. duplicem cartilagineum dilatato v. rarius obsoleto imposita.—Herbæ nunc humiles diffusæ v. laxæ, nunc elatæ validæ. Folia nunc graminea flaccida, nunc longa lata plicato-nervosa. Spiculæ parvæ, sæpius fasciculatæ, fasciculis nunc minimis ad axillas subsessilibus v. in cymulas breves terminales v. ad axillas breviter pedunculatas dispositis, nunc in panicula terminali lata densa numerosis, v. in paniculis terminalibus axillaribusque laxè numerosissimis. Bracteæ ad basin cymarum v. panicularum foliaceæ, intra inflorescentiam breves, sed sæpe in acumen rigidum tenue fere aristiforme productæ, sub spiculis sæpe glumiformes.

Species ad 100, per regiones tropicas et subtropicas utriusque orbis late dispersæ, in America boreali usque ad regiones temperatas extensæ. *Kunth, Enum. Pl. ii. 339. Steud. Syn. Pl. Glum. ii. 167. Bæckel. in Linnæa, xxxviii. 436, excl. sect. D. Benth. Fl. Austral. vii. 425.*

Genus habitu sat polymorphum, facile tamen dignoscendum, a *Nesio* in genera plura divisum imprimis ad disci hypogyni formam, quæ de specie in speciem variat et characteres potius específicos quam genericos præbet. Bæckeler species melius distribuit ad inflorescentiam et *Bentham* in *Flora Australiensis* series 6 proposuit, hæc tamen inter se arcte connexæ sunt nec pro sectionibus distinctis habendæ. Genera igitur sequentia a variis auctoribus proposita in *Scleria* includimus.

**DIPLACRUM**, *R. Br. Prod.* 241 *Endl. Iconogr. t. 25*; *Brongn. in Duperr. Voy. Coq. Bot. t. 26*, est *S. caricina*, Benth., species regionis Indo-Australiæ annua, diffusa, habitu fere *Schani axillaris*, Hook. f., spicularum fasciculis minimis ad axillas subsessilibus; glumæ spicularum ♂ sæpius 3, tenuissimæ, floribus 2 1-2-andris, spicularum ♀ pariter 3, quarum 2 interiores florem arcte includunt.

**SPHÆROFUS**, *Bæckel. in Flora*, 1873, 89, ex Australia tropica, est ipsa *S. pygmæa*, Br. (*Diplacrum pygmæum*, Nees), species *S. caricinæ* arcte affinis, floribus ♂ præcoccibus cito marcescentibus a Bæckelero prætervisis sed in speciminibus ipsis Schultzianis obviis. *D. pygmæum*, Bæckel. in *Linnaea*, xxxviii. 434, ex Africa tropica, est species affinis sed bene distincta (*S. africana*, Benth.) nucibus minutis longitudinaliter  $\infty$ -costatis, disco hypogyno minuto v. obsoleto. *D. capitatum*, Bæckel., ex America tropica, cui si specimina Spruceana rite referimus, est *Pteroscleria* species.

**HYPOPORUM**, *Nees in Linnaea*, ix. 303, species includit habitu varias, disco hypogyno minuto v. obsoleto. Plurimæ tamen bene distinguuntur spicularum fasciculis ut in *Diplacro* minimis, sed secus rhachin spicæ terminalis tenuis aphyllæ dissitis, et seriem formant sat naturalem. Species pleræque Americanæ australes v. boreales et Africanæ cum una Indica. *Nees in Mart. Fl. Bras.* ii. i. t. 9, f. 2. *Bæckel. in Linnaea* xxxviii. 438, n. 1 ad 6. *Hypopora* cætera Neesiana ad series *Lazarum* v. *Subspicatarum*, Benth., pertinent.

**CYLINDROFUS**, *Nees in Linnaea*, ix. 303, est *S. pilosa*, Bæckel., e Zeylanis, species habitu *S. tessellate*, Willd., affinis, disco hypogyno crasso breviter cylindraceo spice integro basi annulato.

**TRACHYLOMIA**, *Nees in Mart. Fl. Bras.* ii. i. 174, est *S. triglomerata*, Mich., ex America boreali, caractere nullo a *Scleriis* typicis tenuioribus separanda.

**SCLERIA**, *Nees in Mart. l. c.* 178, t. 23, ad *S. communem*, Kunth, affinesque paucas limitatur, paniculis axillaribus terminalibusque, spiculis unisexualibus, disco 3-lobis.

**MASTIGOSCLERIA**, *Nees in Mart. l. c.* 177, est *S. reflexa*, H. B. et K.; **OMOSCLERIA**, *Nees in Mart. l. c.* 180, est *S. Flagellum*, Swartz; species utraque ex America tropica tam habitu quam characteribus omnino normales.

His juxtaposuit Bæckeler **DIPLOSCYPHUM**, *Liebm. Mexic. Halfgr.* 74, speciem Mexicanam (*S. mexicanam*, Bæckel.) disco duplici utroque 3-lobis. Specimina non vidimus.

**SCHIZOLEPIS**, *Schrad. ex Nees in Mart. Fl. Bras.* ii. i. 186, t. 26, species continet nonnullas austro-Americanas, inflorescentia normali sæpe laxa, disci hypogyni lobis laceris.

**CHONDRLOMIA**, *Nees in Mart. l. c.* 173, est *S. Sellowiana*, Kunth, species Brasiliensis, spiculis in corymbum breviter foliatum confertis, disco hypogyno interiore e tuberculis 6 composito, exteriore patelliformi.

**HYMENOLYTRUM**, *Nees in Mart. l. c.* 174, t. 22, includit species nonnullas austro-Americanas, cum *S. oryzoides*, Presl, ex orbe vetere, caule elato, foliis magnis, spiculis numerosissimis in paniculam densam pyramidatam confertis, disci lobis obscuris nuci adhærentibus.

**MACROLOMIA**, *Schrad.*; *Nees in Mart. l. c.* 181, t. 24, est *S. bracteata*, Cav., species Americana inflorescentia insignis. Spiculæ masculæ numerosissimæ, brunneæ, in paniculis superioribus breviter bracteatis dense confertæ; fœminæ in paniculis axillaribus sessilibus brevibus angustis paucæ, bracteæ numerosis longe subulato-acuminatis.

**OPHEYOSCLERIA**, *Nees in Mart. l. c.* 182, t. 25, species continet plures austro-Americanas elatas laxè floribundas cæterum habitu normales, nucibus parvis majusculisve nitidis styli basi diu persistente mucronatis, disco hypogyno truncato ciliato.

*S. sphacelata*, F. Muell., ex Australia, ab omnibus differt spiculis strictè dioicis.

**DIAPHORA**, *Lour. Fl. Cochinch.* 578, species Cochinchinensis ex caractere auctoris est verisimiliter *Scleria* species, glumis spiculæ masculæ pro paleis receptaculi descriptis.

57. **Cobresia**, *Willd. Spec. Pl.* iv. 205. (*Elyna*, *Schrad. Fl. Germ.* i. 155. *Cobresia*, *Pers. Syn.* ii. 534. *Froelichia*, *Wulf. Fl. Nor.* 729. *Trilepis*, *Nees in Edinb. N. Philos. Journ.* xvii. 267, et in *Linnaea*, ix. 305, pro parte.)—Flores unisexuales, in spiculis androgynis, inferiore fœmineo, cæteris 1- $\infty$  masculis. Glumæ undique imbricatæ, infima vacua. Setæ hypogynæ 0. Stamina in fl. ♂ sæpius 3. Stylus cum ovario continuus, basi haud v. parum incrassatus, ramis stigmatosis 3 filiformibus. Nux sessilis, disco nullo prominente, sæpe styli basi breviter mucronata.—Herbæ perennes, cæspitosæ, sæpius humiles. Folia ad basin caulis in cæspite denso confertæ, scapis sæpius aphyllis. Spiculæ in spicam terminalem simplicem v. parum compositam dispositæ.

Species ad 8, Europæ et Asiæ borealis et montanæ incolæ. *Kunth, Enum. Pl.* ii. 532 (*Elyna*).

*Steud. Syn. Pl. Glum.* ii. 246 (*Cobresia*). *Bæckel. in Linnæa*, xxxix. 2 (excl. *K. seticulmi*, *K. Hookeri* et *K. laxa*). *All. Fl. Ped.* t. 92, f. 2 et t. 89, f. 5 (*Carex*). *Reichb. Ic. Fl. Germ.* t. 193 (*Elyna* et *Kobresia*). *Host, Gram. Austr.* iv. t. 77, 78 (*Carex*). De genere Neesiano *Trilepide*, cfr. supra sub *Fintelmannia*.

#### TRIBUS VI. CARICEÆ.

58. **Hemicarex**, *Benth. in Journ. Linn. Soc.* xviii. 367.—Spiculæ unisexuales, ♂ plurisæpe multi-floræ, distinctæ v. spicas fœmineas apice continuantes, glumis undique imbricatis v. subdistichis. Stamina 3. Spiculæ ♀ 1-floræ, spicatæ, ad axillas bractearum glumiformium sessiles v. breviter stipitatæ, gluma unica marginibus circa florem convolutis basi quæ interdum breviter connatis, utriculæ formans introrsum ad medium v. interdum ad basin fissum; rhachilla (spiculæ rhachis) intra utriculæ ultra florem producta, setiformis v. plana, utriculæ non v. vix excedens. Setæ hypogynæ 0. Stylus basi haud v. parum incrassatus, ramis stigmatosis 2? v. 3 filiformibus. Nux gluma pene involuta, obtuse 3-quetra (v. compressa?).—Herbæ perennes, habitu uti *Carices* variabiles, nunc humiles cæspitosæ spicis simplicibus interdum dioicis, nunc elatiores spicis decompositis paniculatis.

Species ad 10, Indiæ orientalis et Africæ australis incolæ, includunt species fere omnes *Schænoziphii*, Kunthii et Bœckeleri, præter *S. rufum*, Nees (*S. Dregeanum*, Kunth), cum *Kobresia laxa*, Nees, et *K. seticulmi* et *K. Hookeri*, Bæckel. in *Linnæa*, xxxix. 3, et *Caricem linearem*, Boott. III. Gen. *Carex*, t. 136.

Genus a *Kobresia* differt spiculis nunquam androgynis etsi more *Caricis* interdum spicam androgynam format, a *Carice* nonnisi gluma seu utriculo fœmineo plus minus aperto.

59. **Schænoziphium**, *Nees in Linnæa*, ix. 305, pro parte.—Spiculæ unisexuales, ♂ multifloræ, distinctæ v. spicas fœmineas breviter continuantes. Stamina 2-3. Spiculæ ♀ v. potius androgynæ, breviter spicatæ, ad axillas bractearum glumiformium sessiles, gluma more *Caricis* marginibus connatis utriculæ florem includens formante, ore parvo sub-2-dentato; rhachilla (spiculæ rhachis) ultra florem producta, setiformis, ex utriculo exserta, et glumas 2-3 parvas sæpius flores masculos foventes ferens. Setæ hypogynæ 0. Stylus basi subbulboso-incrassatus, demum deciduus, ramis stigmatosis 3 filiformibus. Nux triquetra, utriculo lageniformi omnino inclusa.—Herba perennis, caule elongato foliato. Spiculæ numerosæ, in paniculas densas oblongas terminales et ad axillas pedunculatas dispositæ, glumis membranaceis brunneis. Bractæ sub paniculis foliaceæ, inflorescentiam longe superantes, intra paniculas glumiformes v. hinc inde setaceæ parum elongatæ.

Species 1, Africæ australis incola. *Kunth, Enum. Pl.* ii. 529. *Bæckel. in Linnæa*, xli. 352.

Genus ad *S. rufum*, Nees, limitatum, a Kunthio sub nomine *S. Dregeani* optime descriptum, a *Caricibus* dense paniculatis vix differt spicularum fœminearum rhachilla ex utriculo exserta et glumas sæpiusque flores masculos ferente. Species cæteræ Neesii et Kunthii pleræque ad *Hemicaricem* pertinent, rhachilla ut in *Carice* nuda.

60. **Uncinia**, *Pers. Syn. Pl.* ii. 534.—Spiculæ unisexuales, ♂ multifloræ, terminales, cum spica fœminea continuæ, glumis undique imbricatis. Stamina 3, rarius pauciora. Spiculæ ♀ 1-floræ, spicatæ, ad axillas bractearum glumiformium sessiles v. breviter stipitatæ, gluma unica marginibus connatis utriculæ lageniformem florem includentem formante, ore parvo obliquo v. 2-dentato; rhachilla (spiculæ rhachis) intra utriculæ ultra florem producta, apice ex utriculo exserta, uncinata v. reflexo-glochidiata. Setæ hypogynæ 0. Stylus basi haud incrassatus, ex utriculo protrusus, ramis stigmatosis 3 filiformibus. Nux utriculo sæpe nonnihil aucto inclusa, compressa v. 3-quetra.—Herbæ habitu *Caricis* specierum quibus inflorescentia simplex androgyna et continua, nec differunt nisi rhachilla exserta apice mucrone reflexo glochidiata, et *Carex microglochium*, *Wahlenb.*, rhachilla apice sæpe leviter uncinata quasi medium inter duo genera tenet.

Species ad 25, pro maxima parte in temperatis frigidisque hemisphærii australis vigentes, in ins. Sandwichensibus, et secus Andes Americæ tropicæ usque ad Mexicum et Indiam occidentalem obviæ.

*Kunth, Enum. Pl.* ii. 524. *Steud. Syn. Fl. Glum.* ii. 243. *Bæckel. in Linnaea*, xli. 339. *Hook. f. Handb. N. Zeal. Fl.* 308. *Benth. Fl. Austral.* vii. 433. *Raoul, Choix Pl. N. Zel.* t. 5. *Hook. f. Fl. N. Zel.* t. 64; *Fl. Antarct.* t. 51, 145; *Fl. Tasm.* t. 152, 153. *Thou. Mel.* t. 5, 6. *C. Gay, Fl. Chil.* t. 72.

Genus a Clarkeo in sectiones 2 dividitur: 1. *Stenandra*, filamentis filiformibus. Species omnes australes Americanæ v. gerontogææ. 2. *Platyandra*, filamentis complanatis sæpe antheris latioribus. Species omnes Americanæ.

61. *Carex*, *Linn. Gen. n.* 1046.—Spiculæ unisexuales; ♂ multifloræ, terminales distinctæque v. spicas femineas apice v. basi continuantes, glumis undique imbricatis. Stamina 3, rarius pauciora. Spiculæ ♀ 1-floræ, spicatæ, ad axillas bractearum glumiformium sessiles v. breviter stipitatæ, gluma unica marginibus connatis utriculum sæpe lageniforme (*perigynium* auct. plur.) florem includens formante, ore parvo sæpius 2-dentato; rhachilla (spiculæ rhachis) intra utriculum sæpe ultra florem producta, setiformis v. linearis plana, utriculum non v. vix excedens. Setæ hypogynæ 0. Stylus basi haud incrassatus, ex utriculo protrusus, ramis stigmatosis 2 v. 3 filiformibus. Nux utriculo sæpe nonnihil aucto inclusa, compressa v. 3-quetra.—Herbæ perennes, foliis gramineis ad basin caulis confertis rariusque secus caulem dissitis. Spiculæ masculæ si distinctæ terminales, solitariae, v. plures, quarum una terminalis, paucae sub ea laterales; spicæ femineæ v. androgynæ infra masculas v. absque masculis distinctas varie dispositæ, paucae distinctæque v. varie capitatae v. paniculatae; in inflorescentiis seu spicis androgynis flores masculi ad apicem v. rarius ad basin spicæ, bractea spiculas femineas (seu utriculum) subtendentes in glumas florum masculorum abeuntes iisque simillimæ, nisi sæpius paullo majores laxiusque imbricatæ v. interdum subdissitæ. Bractæ sub spicis inferioribus v. sub ramis paniculæ interdum foliaceæ, sub spicis spiculisve summis vix glumis majores.

Species enumeratæ ultra 800 et verisimiliter ultra 500 retinendæ, per regiones temperatas frigidæque utriusque orbis copiose dispersæ, inter tropicos paucae nisi in montibus. *Kunth, Enum. Pl.* ii. 368. *Steud. Syn. Fl. Glum.* ii. 182. *Bæckel. in Linnaea*, xxxix. 14, xl. 327, xli. 145. *Franch et Savat. Enum. Pl. Japon.* ii. 123. *Liebm. Mex. Halfgr.* 75. *Benth. Fl. Austral.* vii. 435. *Hook. f. Handb. N. Zeal. Fl.* 310. *Boott, Illustr. Gen. Carex cum tabb.* 600. *Schkuhr, Besch. und Abbild. Riedgr. Wittenberg*, 1801 et 1806 cum tabb. 93, et *Kunze, Suppl. Leipzig*, 1840, 1850, cum tabb. 50. *Host, Gram. Austr.* i. t. 41 ad 100; iii. t. 77 ad 79; iv. t. 75, 76, 79 ad 96. *Reichb. Ic. Fl. Germ.* t. 194 ad 277. *C. A. Mey. in Mem. Sav. Etr. Acad. Petersb.* i. t. 4 ad 14. *A. Rich, Fl. N. Zel.* t. 21, 22. *Hook. f. Fl. Antarct.* t. 142 ad 144; *Fl. N. Zel.* t. 63; *Fl. Tasm.* t. 150, 151. *Brongn. in Duperr. Voy. Coq. Bot.* t. 25. *C. Gay, Fl. Chil.* t. 73, f. 3, 5. *Hook. Fl. Bor. Amer.* t. 207 ad 226. *Torr. Fl. N. York*, t. 142 ad 145, 147.

Genus vastum, facillime dignoscendum, quoad inflorescentiam polymorphum, sed characteres certos ad sectiones formandas non præbet. Species ab auctoribus distribuuntur in series imprimis ad numerum et rationem spicularum muscularum cum spicis femineis. *VIGNEA*, *Beauv. in Lestib. Essai Fam. Cyper.* 22, genus propositum fuit ad species stylo 2-fido, et *TRASUS*, *S. Gray, Nat. Arr. Brit.* Pl. ii. 53, ad species stylo 3-fido, sed distinctio minime naturalis, et character in speciebus nonnullis inconstans. Rafinesque in *Journ. Phys.* lxxxix. 106, genus in 4 dividit: *CAREX*, *SCURIA*, *TRIPLIMA* et *TRIODUS*; et *Schur* in *Enum. Pl. Trans.* 696 et seqq. pariter genera 4 accepit: *CAREX*, *PSYLOPHORA* (*Ehrh. Beitr.* iv. 146 nomen), *VIGNEA*, *Beauv.*, et *VIGNANTHA*, *Schur.* Heuffel in *Flora*, 1844, 527, 528, species plures genericè separavit sub nominibus *MAUKSCHIA*, *LEUCOGLOCHIN*, *CALLISTACHYS*, *GENERSICHIA* et *CRYPTOGLOCHIN*.

*PSEUDOCAREX*, *Miq. in Ann. Mus. Lugd. Bat.* ii. 146, e Japonia, floribus statu juniore ab auctore examinatis, ex descriptione videtur *Caricis* species, utriculo juniore pubescente pro ovario descripto.

*SCHELHAMMERIA*, *Mærch, Meth. Suppl.* 119, est *C. cyperina*, *Linn.*, cui flores pauci masculi ad basin spicæ femineæ, quod in speciebus pluribus observatur et character auctoris cæterum vix intelligibilis est.

*C. microglochin*, *Wahlenb.*, rhachilla spiculæ femineæ ex utriculo exserta et sæpe leviter uncinata *Uncinæ* accedit. *C. gaimardioides*, *Em. Desv.* in *C. Gay, Fl. Chil.* vi. 202, t. 73, f. 2, est *Scirpus semisubterraneus*, *Bæckel.*, staminibus setisve jam delapsis et pericarpio pro utriculo delineato et descripto.

De utriculo et ovario *Caricis* confer *Kunth* in *Wiegmann. Archiv.* i. ii. 349, t. 6, et ii. i. 213, t. 5.

ORDO CC. **GRAMINEÆ.**

Endl. Gen. 77. Lindl. Veg. Kingd. 106. Kunth, Rev. Gram. Parisiis, folio, 1829, cum tabb. 220. Benth. in Journ. Linn. Soc. xix. 14.

*Flores* hermaphroditi v. unisexuales, in spicas parvas *spiculas* dictas dispositi, singuli ad axillam bracteæ parvæ *glumæ* dictæ solitarii, sessiles v. subsessiles. *Glumæ* in spicula sæcus *rhachillam* (i.e. spiculæ rhachin) alternæ, distiche rarissime subternatim imbricatæ, inferiores 2, rarius 3- $\infty$  v. rarissime una sola vacuæ, 1- $\infty$  sequentes *florentes* (*palea inferiores* auct. plur.) florem foventes, interdum 1- $\infty$  summæ minores vacuæque (*flores tabescentes* auct. plur.). *Perianthium* perfectum 0, sed in glumæ axilla ad basin axis floralis *palea* sæpius adest (*palea superior* auct. plur.) rhachillam spiculæ spectans, 2-nervis v. 2-carinata, integra v. 2-dentata, rarius 2-partita, nunc glumæ æquilonga, nunc sæpius minor, interdum minuta v. omnino evanida; et supra paleam infra stamina adsunt sæpius *lodiculæ* 2 v. 3, squamellæ parvæ hyalinæ v. carnosulæ, quarum 2 liberæ lateralesque v. pone axin a rhachilla spiculæ aversæ et plus minus connatæ, tertia dum adsit lateralibus æqualis v. minor. *Stamina* 3 v. pauciora, rarius 4 v. 6, rarissime  $\infty$ , filamentis capillaribus v. leviter complanatis liberis v. rarissime in tubum connatis. *Antheræ* versatiles v. rarius basifixæ, lineares oblongæ v. ovoideæ, loculis 2 parallelis apice basique sæpe plus minus discretis, longitudinaliter dehiscens. *Ovarium* in centro floris sessile v. breviter stipitatum, erectum, integrum v. stylorum basibus sub-2-dentatum, 1-loculare. *Styli* 2 v. rarius 3, terminales v. ad apicem ovarii sublaterales, distincti v. plus minus in stylum 2-rarius 3-fidum connati, filiformes, breves v. elongati, superne v. fere a basi breviter v. longe stigmatosi, papillis stigmatosis nunc brevissimis nunc filiformibus simplicibus v. ramulosis plumosi. *Ovulum* 1, adscendens, anatropum, prope basin v. lateraliter affixum, ab ovario sæpius difficile separandum. *Fructus* (*caryopsis*) sæpius parvus, gluma paleaque cum fragmento rhachillæ inclusus, quibuscum v. cum tota spicula dilabitur, rarius exsertus v. seorsum deciduus, indehiscens; pericarpium sæpius tenuissimum semini arcte adnatum et supra seminis hilum macula notatum, rarius laxum, membranaceum v. in *Bambuseis* nonnullis crustaceum induratum v. crassissime carnosum. *Seminis* testa a pericarpio adnata non distinguenda, v. intra pericarpium liberum tenuissima albumini adnata; albumen copiosum, farinaceum v. rarius carnosum. *Embryo* ad basin albuminis parvus, globosus v. depressus, sæpe minutus.

Herbæ annuæ v. perennes v. in *Bambuseis* pluribus frutescentes v. arborescentes, basi sæpe cæspitosæ v. e rhizomate multicaules, interdum repentæ v. stoloniferæ, rarius scandentes. Caulis teretes v. compressiusculi, inter nodos sæpius cavi, simplices v. ramosi. Folia pleraque ad basin caulis conferta, sæpeque distiche imbricata, superiora alterna, dissita, interdum subspiraliter disposita; vaginæ introrsum in longitudinem fissæ ore sæpius ligula brevi scariosa v. membranacea v. annulo setarum coronato; lamina patens v. rarius erecta, sæpius angusta plana v. præsertim siccitate convoluta, interdum rigide subulato-teres, sæpius venis numerosis parallelis lineata et in speciebus nonnullis latifoliis venulis parvis transversis plus minus distincte tessellata. Inflorescentia in pedunculo terminali v. rarius in pedunculis ad axillas solitariis v. fasciculatis simpliciter spicata racemosa v. varie paniculata, sæpissime ebracteata; in *Bambuseis* tamen nonnullis perpaucisque aliis bracteæ spathacæ v. glumiformes adsunt sub ramulis paniculæ et sub spiculis ipsis.

Specierum numerus a variis auctoribus varie estimatus, ad normam nostram verisimiliter ad 3100 v. 3200 reducendæ, per orbem totum terrarum copiose dispersæ, undique nec in terris Arcticis summisque Alpibus nec in calidissimis apricisque inter tropicos desunt, in uliginosis tamen paludibusque sæpe *Cyperaceis* cedunt, nonnullæ latissime diffusæ fere cosmopolitanæ, plures jam a temporibus antiquissimis copiose cultæ statu sylvestri hodie ignotæ.

Ordo quoad partem in orbis vegetatione tenentem inter *Monocotyledones* maximus, etsi numero specierum *Orchideis* palmam cedit. Naturalissimus est et circumscriptione accuratissime definitus,

nec cum ullo alio generibus intermediis connexus. *Cyperaceis* spicularum structura floribusque proxime affinis, differt caule inter nodos sæpissime cavo, foliorum vaginis in longitudinem fissis, palea lodiculisque huic ordini propriis, embryonis situ et structura, sæpissimeque stigmatibus plumosis aliisque characteribus pluribus minus constantibus. De palea et lodicularum homologia multum disputatum est et nuperrime disseruit Hackel (Engl. Bot. Jahrb. i. 336) qui paleam, lodicularum par et lodiculam tertiam dum adsit pro bracteolis (2 v. 3) habet, in axi floris infra florem proprium (stamina cum pistillo) alternatim affixis, quod tamen ulterius probandum est. Hæc organa cæterum in nullo alio ordine distincte observantur, nisi forte paleam cum squamis hypogynis exterioribus *Cyperacearum* e tribu *Hypolytrearum* comparas, v. paleam cum perianthio exteriori lodiculas cum interiore *Eriocauli*. Palea denique quoad venationem cum bractea intra spatham 1-floram *Iridearum* e tribu *Ixiearum* comparanda, homologia tamen cæterum minime clara.

Distributio in tribus et genera tamen difficillima est et a variis auctoribus modis diversis tentata. Quam hic proponimus, quoad notas essentielles a Brownio indicata, a pluribus auctoribus varie reformata, imprimis in notis Munroanis characteribus certioribus definita in Journ. Linn. Soc. xix. 14 breviter exposita recentiusque ad notas a Prof. Hackelio aliisque benevole communicatas, emendata adhuc fatendum est sæpe valde imperfecta remanet. Tribus plures uti genera majora modo nimis artificialia, modo male definita sunt sæpeque formis intermediis connectuntur.

## FORMÆ ABNORMES.

Caulis arborescens in *Bambuseis* pluribus.

Foliorum vagina marginibus connatis in tubum clausa more *Cyperacearum* in *Melica uniflora*, Linn., et forte in speciebus aliis perpaucis adhuc imperfecte observatis.

Spicula unica, maxima, glumis florentibus in tubum connatis in *Lygeo*; spiculæ singulæ bractea stipatæ in *Xerochloa* et *Spinifice*.

Glumæ non distichæ in *Streptochæta*; inferiores vacuæ 3-∞ in *Streptochæta*, in *Phalarideis* nonnullis, in *Cathestecho*, *Ctenio*, *Tetrachni*, *Pommereulla*, *Brylkinia*, *Uniola*, omnino desunt v. ad dentem parvum reductæ in *Coleantho*, *Nardo* et interdum in *Psiluro* et *Asprella*.

Palea intra glumam tertiam maxima in *Xerochloa* et *Phyllorhachi*.

Stamina monadelphica in *Streptochæta*, *Gigantochloa* et *Oxytenanthera*, plus quam 6 in *Pariana* et sæpius in *Luziola* et *Ochlandra*.

Stylus indivisus in *Lygeo*, *Anomochloa*, *Nardo*, in *Bambuseis* paucis et hinc inde in aliis generibus, 3-fidus v. styli 3 in *Pharo* et *Leptaspide*, 4-6-fidus in *Melocanna* et *Ochlandra*, longissimus spirali-terque contortus in *Streptochæta*, abbreviatus late membranaceus 2-fidus in *Boissiera*.

## CONSPECTUS TRIBUUM (exceptis neglectis).

Series A. PANICACEÆ. Spiculæ cum pedicello infra glumas articulatae, flore fertili unico terminali, addito interdum altero inferiore masculo v. sterili.

**Tribus I. Paniceæ.** Spiculæ hermaphroditæ, rarius abortu unisexuales, spicatæ v. paniculatæ, rhachi inflorescentiæ inarticulata. Gluma florens exaristata, fructifera indurata v. saltem exterioribus rigidior.

(Genera anomala plura, *Paniceis* plus minus affinia, ad calcem tribus enumerantur.)

**Tribus II. Maydeseæ.** Spiculæ 1-sexuales, ♂ terminales, spicatæ v. paniculatæ, v. (in *Pariana*) fœmineam circumdantes; ♀ inferiores, spicatæ, cum rhacheos internodio (excepta *Zea*) articulatis secedentes.

**Tribus III. Oryzeæ.** Spiculæ hermaphroditæ v. rarius unisexuales, paniculatæ v. spicatæ, rhachi inflorescentiæ inarticulata. Gluma sub flore summa (palea?) 1-nervis v. carinata.

**Tribus IV. Tristegineæ.** Spiculæ hermaphroditæ, secus paniculæ ramulos inarticulatos solitariae geminae v. fasciculatae, cum pedicello articulatae. Glumæ vacuæ aristatae v. muticae, florens hyalina v. tenuiter membranacea, mutica v. arista geniculata terminata.

**Tribus V. Zoyaleæ.** Spiculæ hermaphroditæ v. nonnullæ imperfectæ, cum rhachi inarticulata spicæ simplicis sigillatim v. fasciculatim articulatae. Gluma florens membranacea, sæpius vacuis minor hyalinaque.

Subtribus 1. Anthephoreæ. *Spiculæ in pedicello 3-∞, in fasciculum deciduum confertæ. Gluma florens nunc vacuis sublongior, nunc brevior hyalina.*

Subtribus 2. Euzoysiæ. *Spiculæ in pedicello solitariae rarius geminae. Gluma florens vacuis brevior, hyalina.*

**Tribus VI. Andropogonæ.** *Spiculæ secus apicem rhachin v. paniculae ramulos sæpissime geminae v. terminales ternæ, in quoque pari homogamæ v. heterogamæ. Gluma florens vacuis minor, hyalina, sæpe aristata.*

Series B. POACEÆ. Pedicellus infra glumas continuus. Rhachilla supra glumas inferiores persistentes sæpe articulata, ultra flores fertiles producta stipitiformis v. glumas vacuas v. flores imperfectos ferens, v. interdum flos fertilis more *Panicacearum* unicus terminalis, sed cum gluma sua a vacuis persistentibus articulatim secedens.

**Tribus VII. Phalaridæ** (genuinae). Flos hermaphroditus unicus, terminalis. Glumæ 6 (v. 5 et palea) 1-nerves v. carinatae. (*Oryzæ*, additis glumis 2 infra articulationem vacuis.)

**Tribus VIII. Agrostidæ.** *Spiculæ 1-floræ, rhachilla ultra florem nuda v. in setam v. stipitem producta.*

Subtribus 1. Stipeæ. *Panicula laxa v. irregulariter spiciformis. Gluma florens arista sæpius terminata, fructifera caryopsin arcte involvens. Rhachilla ultra florem non producta.*

Subtribus 2. Phleoidæ. *Panicula spiciformis, dense cylindracea v. subglobosa. Gluma florens mutica v. aristis 1-3 terminata, fructifera caryopsin laxè includens. Rhachilla interdum producta.*

Subtribus 3. Sporobolæ. *Panicula laxa v. ad racemum reducta. Gluma florens mutica. Caryopsis demum sæpius glumis apertis subdenudata. Rhachilla non producta.*

Subtribus 4. Euagrostæ. *Panicula varia, sæpius laxa. Gluma florens sæpius arista dorsali instructa rarissime mutica. Caryopsis gluma laxè inclusa. Rhachilla sæpe producta.*

**Tribus IX. Avenæ.** *Spiculæ 2-floræ, rarius ∞-floræ, sæpius paniculatae. Glumæ florentes arista dorsali v. interdum terminali sæpissime instructæ v. in generibus æqualiter 2 floris muticæ. Rhachilla ultra flores sæpius producta.*

Subtribus 1. Aireæ. *Spiculæ stricte 2-floræ, rhachilla non producta.*

Subtribus 2. Euavenæ. *Spiculæ 2-∞-floræ, rhachilla producta.*

**Tribus X. Chloridæ.** *Spiculæ 1-∞ floræ, secus rhachin spicarum unilateralium 2-seriatim sessiles secundæ.*

**Tribus XI. Festucæ.** *Spiculæ 2-∞-floræ, varie paniculatae v. rarius racemosæ. Glumæ florentes muticæ v. aristis 1-∞ terminatæ.*

Subtribus 1. Pappophoræ. *Glumæ florentes ∞-nerves 3-∞-dentatæ v. absque aristis 4-lobæ.*

Subtribus 2. Triodiæ. *Glumæ florentes 1-3-nerves, 3-dentatæ 3-fidæ v. 3-aristatæ.*

Subtribus 3. Arundinæ. *Rhachilla sub glumis florentibus longe pilosa.*

Subtribus 4. Sesleriæ. *Inflorescentia spiciformis v. capituliformis, basi glumis vacuis v. spicis sterilibus sæpius stipata. Stylus v. rami sæpius longi tenues.*

Subtribus 5. Eragrostæ. *Glumæ florentes 3-nerves. Cætera normalia.*

Subtribus 6. Melicæ. *Glumæ florentes 3-∞-nerves, superiores 2-∞ vacuæ semel involventes.*

Subtribus 7. Centothecæ. *Folia plana lanceolata v. ovata inter venas transverse venulosa. Glumæ florentes 5-∞-nerves.*

Subtribus 8. Eufestucæ. *Glumæ florentes 5-∞-nerves. Cætera normalia.*

**Tribus XII. Hordeæ.** *Spiculæ 1-∞-floræ, ad dentes seu excavationes rhacheos apicæ simplicis sessiles.*

Subtribus 1. Triticæ. *Spiculæ ad nodos solitariae, 3-∞-floræ rarius 2-floræ.*

Subtribus 2. Lepturæ. *Spiculæ ad nodos solitariae, 1-5-floræ. Spica tenuis.*

Subtribus 3. Elymæ. *Spiculæ ad nodos 2-∞, collaterales.*

**Tribus XIII. Bambusæ.** Gramina elata, sæpius basi saltem lignosa. Folia plana, sæpissime cum vagina articulata. *Spiculæ 1-∞-floræ. Lodiculæ sæpe 3. Stamina 3, 4 v. ∞.*

Subtribus 1. Arundinariæ. *Stamina 3. Palea 2-carinata. Pericarpium tenue, semini adnatum.*

Subtribus 2. Eubambusæ. *Stamina 6. Palea 2-carinata. Pericarpium tenue, semini adnatum.*

Subtribus 3. Dendrocalameæ. *Stamina 6. Palea 2-carinata. Pericarpium crustaceum v. cartilagineum, a semine liberum.*

Subtribus 4. Melocannæ. *Stamina* 6-∞. *Palea* 0 nisi *glumis* simillima. *Pericarpium* crustaceum v. carnosum, a semine liberum.

## CONSPECTUS GENERUM.

**Series A. PANICACEÆ.** Spiculæ cum pedicello infra glumas articulatae, articulatio sæpius immediate sub glumis infimis, interdum sub spicularum fasciculo, v. (in *Maydeis*) rhachis ipsa spicæ sub quaque spicula ♀ articulata. Glumæ in spicula 4 v. pauciores. Flos fertilis unicus sub gluma summa specie terminalis, addito interdum flore altero inferiore masculo v. rarissime hermaphrodito sterilique; rhachilla ultra florem fertilem non continuata, inter glumas continua v. rarissime articulata; glumæ infimæ vacuæ.

**Excepta:** Flos inferior hermaphroditus perfectus in *Isachne*, hermaphroditus sed sæpius sterilis in *Beckmannia* et hinc inde in speciminibus nonnullis *Setariæ* specierum paucarum.

Glumæ infimæ vacuæ infra articulationem persistentes in *Isachne*.

**Tribus I. Panicæ.** Spiculæ fertiles hermaphroditæ rarius abortu unisexuales, spicatæ v. paniculatæ, rhachi inflorescentiæ inarticulata. Gluma florens exaristata, fructifera indurata v. saltem exterioribus rigidior v. major.

**Excepta** (præter genera anomala n. 24 ad 30):—

Spiculæ abortu unisexuales in *Amphicarpo*, strictæ unisexuales in generibus anomalis n. 24 ad 27.

Spicæ rhachis demum articulata in speciminibus nonnullis *Stenotaphri*.

Gluma fructifera vix rigescens in *Panici* sect. *Tricholena*, et in *Anthenantia*.

\* *Paniculæ rami simplices spiciformes v. varie ramulosi, ultra spiculas non producti. Pedicelli sub spiculis singulis articulati.*

1. REIMARIA. Paniculæ rami simplices. Glumæ 2. *Stamina* 2.—*Amer. trop. et bor. subtrop.*

2. PASPALUM. Paniculæ rami simplices spiciformes, spiculis sessilibus v. subsessilibus sigillatim v. per paria alternis, secus rhachin unilateralibus v. subdistichis. Glumæ 3 rarissime 2. *Stamina* 3.—*Amer. trop. et subtrop., in Afr. et Asia trop. pauciores, in Eur. austr. inquilinæ.*

3. ANTHÆNANTIA. Panicula laxiuscula sericeo-pilosa et glumæ membranaceæ *Panici* sectionis *Tricholena*. Glumæ 3 *Paspali*.—*Amer. trop. et bor.*

4. AMPHICARPUM. Spiculæ abortu unisexuales, ♂ in panicula angusta parum divisa, ♀ duplo majores in scapis aphyllis solitariæ. Glumæ 3 *Paspali*.—*Amer. bor.*

5. ERIOCHLOA. Paniculæ rami simplices spiciformes. Spiculæ ovoidæ, glumis 3 fere *Paspali*, sed supra articulationem pedicelli callo insidentes, et gluma florens obtusissima, sæpius mucrone brevi instructa.—*Utriusque orbis reg. trop. et subtrop.*

6. BECKMANNIA. Paniculæ rami spiciformes fere *Panici colonum*, spiculis subsessilibus. Glumæ 4, 2 inferiores vacuæ dorso subvesiculosæ, 2 superiores florentes, flore utroque ♀, inferiore (an semper?) sterili.—*Eur. or., Asia temp., Amer. bor.*

7. ISACHNE. Panicula *Panici* (*Eupanici Effusarum*). Glumæ 4, 2 inferiores vacuæ, sub articulatione persistentes, 2 superiores æqualiter fructiferae.—*Utriusque orbis reg. calid.*

8. PANICUM. Paniculæ rami nunc simplices spiciformes *Paspali*, nunc ramulosi stricti v. effusi. Glumæ sæpiissime 4, infima exaristata minima v. rarius tertiæ v. omnibus æquilonga.—*Utriusque orbis reg. trop. et subtrop.; in temperatis pauca.*

9. ICHNANTHUS. Paniculæ rami ramulosi et glumæ 4 *Panici*. Spiculæ rhachilla sub gluma fertili utrinque membrana longa v. minima appendiculata.—*Amer. trop.*

10. OPLISMENUS. Paniculæ rami simplices, dissiti, secundi, spiculis secus rhachin unilateraliter fasciculatis. Glumæ 4, inferiores vacuæ aristatæ.—*Utriusque orbis reg. trop. et subtrop.*

11. CHÆTUM. Panicula angusta, densa, ramulis strictis. Glumæ 4, 2 inferiores vacuæ subæquales, aristatæ.—*Brasilia, Mexico.*

12. SETARIA. Panicula densa nunc cylindracea spiciformis, nunc anguste thyrsoidæa. Spiculæ setis rigidis (ramulis setiformibus) in pedicello sub articulatione persistentibus stipatæ. Glumæ 4, infima sæpius parva *Panici*.—*Utriusque orbis reg. trop. et temp.*

\*\* *Spicæ v. racemi simplices, solitarii v. rarius ∞ paniculati. Pedicelli sub involucri 1-∞-setis spiculas 1-3 continente articulati.*

13. CENCHRUS. Involucri setæ v. squamæ rigida, basi connatæ.—*Utriusque orbis reg. trop. et subtrop.*

14. *Pennisetum*. Involucri setæ tenues, simplices, nudæ barbato-plumosæ v. rarius pinnatifidæ, numerosæ rarius paucæ v. ad unam reductæ.—*Utriusque orbis reg. calidiore, imprimis Africa trop. et extratrop.*

15. *Plagiosetum*. Involucrum supra articulationem ramulosum, unilaterale, spiculis inter ramulos sessilibus.—*Australia.*

16. *Paratheria*. Racemus tenuiter spiciformis, pedicellis supra articulationem in setam longam cum spicula deciduam productis.—*Amer. trop., Ind. occid.*

\*\*\* *Spica in pedunculo communi 1-∞, rhachi ultra spiculam ultimam producta.*

17. *Echinolæna*. Spica unica, unilaterialis, densa, sub apice pedunculi defracta, spiculis sterilibus cum perfectis intermixtis. Glumæ 4, infima cæteris majore.—*Amer. trop.*

18. *Chamæraphis*. Spicæ seu paniculæ rami simplices ∞ filiformes ∞-spiculate, v. 1-2-spiculati in racemo spiciformi conferti. Glumæ 4, infima minima.—*Asia trop., Australia.*

19. *Spartina*. Spicæ seu paniculæ rami simplices ∞, unilaterales, densi, multispiculati. Glumæ 3. Stylus filiformis, superne 2-fidus.—*Amer. bor. et austr. extratrop., ins. Tristan d'Acunha et Amsterdam, littora Eur. Afr. et Amer.*

20. *Xerochloa*. Spicæ brevissimæ, paucispiculatæ, intra bracteam spathaceam rigidule paleaceam inclusæ. Glumæ 4, infima lata fere hyalina. Palea floris inferioris ♂ maxima.—*Australia.*

21. *Stenotaphrum*. Spicæ rhachis complanata, demum interdum articulata, spiculis secus faciem fasciculatis v. in ramulos brevissimos dispositis. Glumæ 3 v. si 4 infima parva.—*Utriusque orbis reg. trop. in maritimis.*

22. *Phyllorhachis*. Spicæ rhachis foliacea complicata spiculas 1-seriatas amplectens. Palea sub gluma tertia maxima.—*Angola.*

23. *Thuarea*. Spica unica, unilaterialis; spiculæ secus rhachin 1-seriatæ, superiores abortu ♂, inferiores 1-2 fertiles, fructifera intra rhachin dilatatam subinclusæ in arena sæpius sepultæ. Glumæ 3, v. si 4 infima parva.—*Littora maris Ind. et Pacifici.*

\*\*\*\* *Genera anomala, nec inter se nec ulli alii proxime affinia, sed Paniceis præ aliis accedentia gluma fructifera sæpius indurata.*

† *Spiculæ unisexuales.*

24. *Spinifex*. Spiculæ dioicæ, bracteata, globoso-capitata, ♂ intra quamque bracteam spicata, ♀ solitaria. Glumæ 4. Gramina dura, ramosa, repentia v. diffusa.—*Asia trop., Australasia.*

25. *Olyra*. Spiculæ monoicæ, paniculatæ, ♂ inferiores, ♀ superiores. Glumæ in spicula ♀ 3, in spicula ♂ 1. Gramina nunc elata latifolia panicula terminali, nunc humiliora parvifolia inflorescentia partim axillari.—*Amer. et Afr. trop.*

26. *Pharus*. Spiculæ monoicæ, paniculatæ, secus ramulos geminæ, altera sessilis ♀, altera parva pedicellata ♂. Gluma fructifera angusta indurata. Folia lata, longe petiolata.—*Amer. trop.*

27. *Læptaspis*. Spiculæ monoicæ, paniculatæ, secus ramulos 2-3-næ, 1-2 inferiores ♀ breviter pedicellatæ, terminalis ♂ parva longe pedicellata. Gluma fructifera membranacea, inflato-globosa. Folia lata, longe petiolata.—*Afr. Asia et Australia trop.*

†† *Spiculæ hermaphrodite.*

28. *Lygeum*. Spicula in pedunculo unica magna. Gluma infima spathiformis, florentes 2-3, inclusæ, basi in tubum plumoso-pilosum connatæ; paleæ lineares, convolutæ, breviores. Stylus indivisus. Folia convuluto-teretia.—*Reg. Mediterr.*

29. *Streptochæta*. Spiculæ angustæ, longæ, in spica simplici erectæ. Glumæ non distichæ, 6 inferiores breves, latæ, 6 superiores longæ angustæ quarum extima cæteras includit, summa sola florens. Stamina 5-7. Stylus longus, 3-fidus. Folia ovato-lanceolata.—*Brasilia.*

30. *Anomochloa*. Spiculæ in spica brevi, per 2-3 intra bracteas magnas spathiformes inclusæ. Glumæ 2, inferior fructiferam induratam includens. Folia petiolata, ovato-lanceolata.—*Brasilia.*

**Tribus II. Maydese.** Spiculæ unisexuales, masculæ terminales, paniculatæ spicatæ v. solitariae, rarius femineas circumdantes, femineæ inferiores spicatæ v. solitariae, cum rhacheos internodio articulatum secedentes (excepta *Zea*); rhachis inter spiculas masculas continua.

\* *Spica simplex, undique androgyna. Stamina ∞.*

31. **PARIANA.** Spiculæ ad quemque nodum spicæ plures masculæ, fœmineas 1-2 circumdantes.—*Amer. trop.*

\*\* *Spiculæ ♂ ad nodos superiores spicæ androgynæ v. ad nodos omnes spicarum mascularum geminæ, ♀ ad nodos inferiores solitariae rarius geminæ. Stamina 3.*

32. **COIX.** Spicæ pedunculatæ, nodi inferiores 1-2 fœminei, bractea vaginante demum lapidea globosa fructum includente.—*Utriusque orbis reg. colid.*

33. **POLYTOCA.** Spicæ pedunculatæ, nodi inferiores v. spicæ inferiores fœmineæ, spiculis 1-2-floris, una sola fertili. Gluma fructifera globosa v. ovoidea, lapidea, rhacheos internodium cum fructu includens.—*Ind. or., ins. maris Pacifici.*

34. **CHIONACHNE.** Spicæ e folio florali exsertæ, nodi inferiores fœmineæ spiculis 1-floris. Gluma fructifera globosa v. ovoidea, lapidea, fructum includens, rhacheos internodium amplectens.—*Ind. or., Archip. Malay., Australia trop.*

35. **SCLERACHNE.** Spicæ intra vaginam folii floralis subinclusæ, spicula mascula unica terminali, fœmineis 1-2 inferioribus. Gluma fructifera indurata, fructum includens.—*Java.*

36. **TRIPSACUM.** Spicæ pedunculatæ nodi inferiores fœmineæ, spiculis 1-floris. Gluma fructifera indurata, lapidea, rhacheos internodio pariter indurato incrassatoque sed excluso.—*Amer. calid.*

\*\*\* *Spicæ masculæ ∞ in panicula terminali, fœmineæ axillares sessiles.*

37. **EUCHLÆNA.** Spicæ fœmineæ intra vaginas foliorum fasciculatæ, singulæ bractea ampla semi-inclusæ, spiculis 1-seriatis. Rhacheos articuli glumæ demum adnati, cum spicula fructifera decidui.—*Mexico.*

38. **ZEA.** Spica fœminea axillaris, maxima, bracteis foliaceis involuta, spiculis dense ∞-seriatis, rhachi crassa inarticulata.—*America? in utroque orbe culta, sylvestris ignota.*

**Tribus III. Oryzæ.** Spiculæ hermaphroditæ v. rarius unisexuales, sæpius parvulæ, varie paniculatæ v. rarius simpliciter spicatæ, rhachi inflorescentiæ inarticulata. Glumæ 2-4, membranacæ v. inferiores minimæ. Palea 0 nisi pro palea glumam summam 1-nervem v. carinatum habes.

Tribus quoad spicularum structuram a *Phalarideis* genuinis non differt nisi glumarum inferiorum infra articulationem deficientia, et hac ratione Benthani prius includit *Alopecurum*, *Cornucopias* et *Crypsin*, nunc ad *Phalarideas* translatas.

\* *Spicæ simplices 1-sexuales. Stamina 6.*

39. **HYDROCHLOA.** Spicæ paucispiculatæ, ♂ terminalis pedunculata, ♀ axillares sessiles.—*Carolina, Florida.*

\*\* *Paniculæ laxæ. Stamina 6 rarius ∞ v. pauciora.*

40. **ZIZANIA.** Spiculæ unisexuales, angustæ. Panicula longa floribunda androgyna. Glumæ 2. Stamina 6.—*Amer. bor., Asia bor. or., Japonia.*

41. **LUZULA.** Spiculæ unisexuales, ovatæ, parvæ. Paniculæ laxæ unisexuales v. rarius androgynæ. Glumæ 2. Stamina ∞ v. rarius 6.—*Amer. trop. et bor.*

42. **POTAMOPHILA.** Spiculæ angustæ, flore hermaphrodito v. abortu unisexuales. Glumæ 4, inferioribus minimis v. setiformibus. Stamina 6. Panicula sæpe elongata.—*Australia, Madagasc., Afr. austr.*

43. **HYGRORHIZA.** Spiculæ angustæ, flore hermaphrodito. Glumæ 2, inferiore aristata. Stamina 6. Panicula brevis, angusta.—*Ind. or.*

44. **ORYZA.** Spiculæ plano-compressæ, flore hermaphrodito. Glumæ 4, inferiores minutæ v. setiformes, 2 superiores complicato-carinatæ sæpe rigidæ, quarum exterior interdum aristata. Stamina 6.—*Ind. or., Australia. In Africa et Amer. trop. inquilina?*

45. **LEERSIA.** Spiculæ compressæ, flore hermaphrodito. Glumæ 2, complicato-carinatæ, membranacæ, muticæ. Stamina 6, 3 v. pauciora.—*Utriusque orbis reg. trop. et bor. temp.*

46. **ACHLÆNA.** Spiculæ angustæ, flore hermaphrodito. Glumæ 4, infima aristiformis, secunda lanceolata aristata, tertia acuminata, quarta minor hyalina. Stamen 1.—*Cuba.*

47. **BECKERA.** Spicæ simplices, pedunculatæ, solitariae v. 2-∞ subpaniculatæ. Glumæ 2, v. si 4, 2 inferiores minutæ. Stamina 3.—*Abyssinia.*

\*\*\* *Spiculæ dense spicatæ capitatæ v. in paniculam dense spiciformem confertæ.*

(Huc pertinent, quoad characteres spiculæ, genera 105 CRYPSIS, 106 CORNUCOPILÆ, et 107 ALOPECURUS, infra ob habitum ad *Phalarideas* translata.)

**Tribus IV. Tristeginesæ.** Spiculæ hermaphroditæ, secus paniculæ ramulos inarticulatos sparse fasciculatæ v. rarius geminæ, cum pedicello articulatæ. Glumæ 3 v. 4, 2 v. 3 inferiores vacuæ membranaceæ articulatæ v. muticæ, terminalis florens mutica v. sæpe arista geniculata terminata, cum palea hyalina v. tenuiter membranacea.

Tribus *Paniceas* cum *Andropogoneis* et *Agrostideis* arcte connectens, a prioribus glumis florentibus tenuioribus sæpiusque aristatis, ab *Andropogoneis* plerisque inflorescentia, spiculis consimilibus si geminis pariter pedicellatis, gluma florente magis evoluta, ab *Agrostideis* pedicello nec rhachilla articulado.

\* *Glumæ 3.*

48. **THURBERIA.** Glumæ vacuæ muticæ, florens inter dentes v. lobos terminales aristata. Styli distincti. Panicula elongata, laxa.—*Amer. bor.*

49. **LIMNAS.** Glumæ vacuæ muticæ, florens dorso aristata. Styli basi connati. Panicula brevis, angusta, laxa, spiculis secus ramulos solitariis paucis.—*Asia temp. or.*

50. **GARNOTIA.** Glumæ vacuæ muticæ, v. secunda breviter aristata, florens apice aristata. Styli distincti. Panicula longa, angusta v. effusa, spiculis secus ramulos geminis.—*Ind. or., China, Japonia.*

(Vide etiam 131 POLYPOGON.)

\*\* *Glumæ 4.*

51. **ARUNDINELLA.** Gluma infima brevis, secunda longior v. breviter aristata, tertia brevior vacua v. florem ♂ fovens, fertilis aristata. Panicula varia, spiculis secus ramulos confertis fasciculatisve.—*Utriusque orbis reg. trop.*

52. **PHÆNOSPERMA.** Gluma infima brevis, 1-nervis, secunda tertiaque vacuæ et terminalis florens parum inæquales 3-nerves. Palea 0. Lodiculæ 3. Caryopsis e glumis semi-exserta. Panicula ampla, ramis dissite verticillatis, spiculis sparsis.—*China.*

53. **MELINIS.** Gluma infima minima, secunda tertiaque subæquales vacuæ, muticæ v. tertia aristata, fertilis mutica. Panicula angusta, densa, spiculis secus ramulos confertis.—*Brasilia, Afr. austr.*

54. ? **TRISCENTIA.** Gluma infima parva, secunda tertiaque subæquales vacuæ, florens brevior, omnes muticæ. Spiculæ racemosæ raræ racemique breves, in panicula distantes.—*Cuba.*

55. **ARTHROPOGON.** Gluma infima angusta subaristata, secunda major obtusa v. emarginata, arista brevi, tertia subsimilis, mutica, florem ♂ sæpe fovens, fertilis mutica. Panicula patens, spiculis secus ramulos paucis sparsis.—*Brasilia.*

56. **REYNAUDIA.** Glumæ 3 inferiores subsimiles vacuæ, inter lobos seu dentes breviter aristatæ, fertilis acuta mutica. Palea 0, lodiculæ 4 (v. palea 2-partita lodiculæ 2). Panicula brevis, angusta, spiculis secus ramulos paucis sparsis.—*Cuba, S. Domingo.*

57. **REYNCHELYTRUM.** Gluma infima a cæteris distans, brevis, mutica, secunda, pilosa, inter dentes longe aristata, tertia similis nisi paleam v. florem ♂ fovens, fertilis multo brevior, glabra, mutica. Panicula laxe thyrsioidea, spiculis sparsis v. subfasciculatis.—*Afr. trop.*

58. **THYSANOLENA.** Glumæ 2 inferiores breves, latæ, muticæ, tertia longior, vacua, acute acuminata, fertilis brevior, obtusa, mutica, ciliata. Panicula maxima, ramulis longis numerosissimis, spiculis minimis fasciculatis.—*Asia trop.*

59. **CLÉISTACHNE.** Glumæ 2 inferiores oblongæ, muticæ, duræ, clausæ, tertia vacua inclusa hyalina, quarta sub flore minima in aristam longam rigidam tortam producta. Panicula anguste thyrsioidea, floribunda.—*Ind. or., Afr. trop.*

(Vide etiam 73 IMPERATAM, et 74 MISCANTHUM.)

**Tribus V. Zoysieæ.** Spiculæ hermaphroditæ v. nonnullæ imperfectæ v. unisexuales cum spicæ v. racemi rhachi inarticulatæ sigillatim v. fasciculatim articulatæ. Glumæ 2, 3 v. 4, inferiores vacuæ muticæ v. aristatæ, terminalis sola florens, vacuis sæpius minor, tenuis v. hyalina, exaristata.

Excepta: Gluma florens interdum vacuis paullo major in *Anthephoris* nonnullis.

Spiculæ 2-floræ in *Cathestecho*.

Spiculæ in axillis subfasciculatæ nec spicatæ in *Schaffnera*.

Subtribus 1. Anthephoreæ. *Spiculæ in pedicello 3-∞, nonnullæ interdum imperfectæ v. ♂, in fasciculum a spicæ rhachi articulatim deciduum confertæ. Gluma florens nunc vacuis sublongior, nunc brevis hyalina.*

Subtribus ab *Euzoysieis* differt sicut *Cenchræ* ab *Eupanicis*.

60. *HILARIA*. *Spiculæ in fasciculo 3, centralis fertilis 1-flora, laterales, masculæ 2-floræ. Glumæ 4, exteriores polymorphæ, involucrium simulant, parum induratæ v. rigide membranaceæ. Spica simplex, fasciculis quaquaversis v. distichis.—Reg. Mex.-Tex., California.*

61. *ÆGROGON*. *Spiculæ in fasciculo 2-6, steriles cum fertilibus sæpe intermixtæ. Glumæ 3, 3-dentatæ v. 3-cuspidatæ, dente medio interdum aristato. Spicularum fasciculi secus rhachin simplicem secundi, demum penduli.—Amer. trop. occid.*

62. *CATHESTECHUM*. *Spiculæ in fasciculo 3, 2-floræ. Glumæ florentes vacuis longiores, 4-fidæ 3-aristatæ.—Mexico.*

63. *ANTHEPHORA*. *Spiculæ in fasciculo 4, 1 rarius 2 fertiles, cæteræ steriles. Glumæ 3-4, infimæ minimæ, secunda cujusve spiculæ maxima, demum indurata, involucrium simulans, florens tenuior. Spica simplex, fasciculis quaquaversis.—Amer. trop., Afr. trop. et austr.*

64. *TRACHYS*. *Spiculæ in fasciculo 4-9, 1 rarius 2-3 fertiles, cæteræ ♂ v. vacuæ. Glumæ 3-4, tertia v. secunda maxima rigidula. Spicæ geminæ, fasciculis unilaterialibus, receptaculis pedicellisque spicularum demum induratis.—Ind. or.*

65. *TRAGUS*. *Spiculæ in fasciculo 3-5, terminalis sterilis, cæteræ sæpius fertiles. Glumæ 2-3, infima minima v. evanida, secunda major rigidula echinata. Spica simplex, fasciculis quaquaversis lappaceis.—Utriusque orbis reg. trop. et temp.*

Subtribus 2. *Euzoysieæ*. *Spiculæ in pedicello solitariæ rarius geminæ, flore hermaphrodito addito rarissime inferiore ♂. Gluma florens brevis hyalina.*

66. *LATIPES*. *Spiculæ parvæ, pedicellatæ. Glumæ 3, infima rigida valde concava muricata. Racemus laxiusculus.—Afr. trop., Asia occid.*

67. *LOPHOLEPIS*. *Spiculæ minimæ, pedicellatæ. Glumæ 3, infima major, basi dorso in gibbum ciliato-cristatum producta, apice iterum ciliato-cristata. Racemus elongatus, gracillimus.—Ind. cr.*

68. *NEURACHNE*. *Spiculæ sessiles. Glumæ 4, secunda major margine ciliata. Spica densa, brevis v. cylindracea.—Australia.*

69. *PEROTIS*. *Spiculæ tenues, subsessiles. Glumæ 3, 2 inferiores lineares tenuiter aristatæ. Spica longa, tenuis.—Asia, Afr. et Australia trop.*

70. *LEPTOTHRIUM*. *Spiculæ breviter pedicellatæ. Glumæ 3, 2 inferiores subcoriaceæ, acutato-subulatæ. Spica rigida.—Amer. calid.*

71. *ZOYSIA*. *Spiculæ subsessiles, rhachi appressæ. Glumæ 2, inferior vacua complicato-carinata, mutica. Gramina reptantia, humilia, spica rigida.—Asia, ins. Mascar. et Australasia, in maritimis.*

72. *SCHAFFNERA*. *Spiculæ in axillis subfasciculatæ. Glumæ 2, inferior vacua, 3-5-aristata, florens tenuis, brevissime 2-loba, inter lobos aristata.—Mexico.*

(Vide 81 *DIMERIAM*, gluma florente aristata.)

**Tribus VI. Andropogoneæ.** *Spiculæ secus spicæ rhachin v. paniculæ ramulos sæpissime geminæ, v. terminales ternæ, in quoque pari homogamæ v. heterogenæ. Gluma florens vacuis minor, hyalina, sæpe aristata.*

Excepta: *Spiculæ ad nodos solitariæ in Dimeria, et in speciebus paucis Arthraxi et Ophiuri.*

\* *Spiculæ paniculatæ rarius spicatæ cujusve parvis homogamæ (Saccharæ).*

† *Paniculæ ramuli inarticulati. Spiculæ cujusve parvis inæqualiter pedicellatæ.*

73. *IMPERATA*. *Panicula longa, dense cylindracea, pilis longis sericea, ramulis erectis. Glumæ omnes exaristatæ.—Utriusque orbis reg. trop. et subtrop. Eur. austr.*

74. *MISCANTHUS*. *Panicula ampla, pilis longis sericea v. fere glabra, ramulis patentibus. Gluma florens aristata v. rarius mutica.—Asia or., Archip. Malay., Afr. austr.*

†† *Panicula ramuli v. spicæ rhachis plus minus articulati. Spiculæ in quoque pari altera sessilis altera pedicellata.*

75. SACCHARUM. Panicula ampla subeffusa v. dense spiciformis, pilis longis involuta. Spiculæ minimæ. Glumæ exaristatæ.—*Utriusque orbis reg. trop. et subtrop.*

76. ERIANTHUS. Panicula angusta v. ampla, pilis longis sericeis sæpius involuta, ramulis ultimis spiciformibus. Gluma tertia vacua, florens setaceo-acuminata v. aristata.—*Utriusque orbis reg. trop. et subtrop., in hemisph. bor. temp.*

77. SPODIOPOGON. Panicula laxa, ramulis brevibus, spiculis ad apicem ternis, additis interdum paribus 1-2 inferioribus (more *Chrysopogonis*). Gluma tertia interdum florem ♂ fovens, terminalis fertilis aristata.—*Asia temp., Ind. or.*

78. POLLINIA. Paniculæ rami simplices, spiciformes, subdigitati v. sparsi, sericeo-pilosi v. subglabri. Gluma tertia vacua v. deficiens, terminalis fertilis aristata.—*Asia, Afr. et Australia trop. et subtrop.*

79. POGONATHERUM. Spica unica, simplex. Gluma secunda longe aristata, tertia mutica vacua v. deficiens rarius florem ♂ fovens, terminalis fertilis longe aristata.—*Ind. or., Archip. Malay, China, Japonia.*

\*\* *Spiculæ spicatæ, altera cujusve paris sessilis fertilis, altera ad stipitem nudum v. rarius glumiferum reducta v. deficiens (Arthraxonæ).*

80. APOCOPIS. Spicæ solitariae v. geminae, densæ. Glumæ 4, infima latissima truncato-denticulata, cæteras involvens, secunda angustior aristata v. mutica, tertia flore ♂ hyalina mutica, terminalis fertilis aristata. Stamina 2.—*Ind. or., China, Archip. Malay.*

81. DIMERIA. Spicæ solitariae v. fasciculatæ, tennes. Glumæ 4, 2 inferiores angustæ, rigidulæ, muticæ, tertia minor, tenuis, hyalina, vacua, fertilis tenuiter hyalina, aristata. Stamina 2.—*Ind. or., China, Archip. Malay., Australia.*

82. ARTHRAXON. Spicæ sæpius subdigitatæ, tennes. Glumæ 4, infima major sæpius acuta, secunda angustior acuta, tertiaque hyalina vacuæ muticæ, fertilis hyalina aristata. Stamina 3. Foliorum lamina cordato-lanceolata.—*Asia, Africa et Australia trop., Oriens, China, Japonia.*

\*\*\* *Spiculæ spicatæ, ad quamque excavationem rhacheos sæpius geminae, altera rarius 2 sessiles fertilesque, altera pedicellata sterilis rarius deficiens. Arista 0 præter acumen glumæ vacuæ (Rottboelliæ).*

83. ELIONURUS. Spica pilis longis sericeis dense oblecta. Cætera fere *Rottboelliæ*.—*Amer. trop., Africa, Oriens, Australia trop.*

84. ROTTBOELLIA. Spica teres. Spiculæ geminae, altera sessilis fertilis, altera pedicellata sterilis.—*Utriusque orbis reg. calid., Oriens.*

85. OPHIURUS. Spica teres. Spiculæ omnes sessiles, solitariae v. in parte inferiore spicæ, rarius in tota spica geminae.—*Asia, Africa, Australia.*

86. RATZBURGIA. Spica complanata. Spiculæ fertiles geminae, inter rhachin et pedicellum spiculæ sterilis sessiles.—*Burma.*

87. MANISURIS. Spica subteres. Spiculæ geminae, altera sessilis fertilis parva globosa, altera pedicellata sterilis.—*Utriusque orbis reg. calid.*

88. HEMARTHRIA. Spica compressa, imperfecte articulata. Spiculæ geminae, altera sessilis fertilis acuta, altera pedicellata sterilis, pedicello sæpius rhachi adnato.—*Utriusque orbis reg. calid., Reg. Mediterr.*

89. VOSSIA. Spicæ plures in panicula simplici. Spiculæ geminae sæpius 2-floræ *Ischæmi*, sed gluma infima acuminata v. in spicula pedicellata aristata, florens hyalina mutica.—*Afr. trop. et austr., Ind. or.*

\*\*\*\* *Spiculæ secus spicarum rhachin v. ramos paniculæ geminae heterogamæ altera sessilis altera pedicellata v. ad apices ramorum ternæ. Gluma florens spiculæ fertilis sæpiissime aristata. (Euandropogonæ).*

† *Spiculæ paribus pluribus spicatæ.*

90. THELEPOGON. Spicæ fasciculatæ, rhachibus excavatis *Vossie*. Spiculæ sessiles; glumæ inferiores rigidæ muricatæ, tertia hyalina florem ♂, terminalis florem ♀ fovens; spicula pedicellata ad stipitem glumiformem reducta.—*Ind. or., Afr. trop.*

91. ISCHÆMUM. Spicæ 2-3 confertæ v. rarius solitariae. Spiculæ sessiles, fertiles 2-floræ

flore inferiore ♂ terminali fertili; pedicellatæ steriles, floribus 1-2 ♂, v. vacuæ.—*Utriusque orbis reg. calid.*

92. TRACHYPOGON. Spica solitaria. Spiculæ 1-floræ, sessiles steriles muticæ; pedicellatæ fertiles longe aristatæ.—*Amer. trop., Afr. austr.*

93. HETEROPOGON. Spica solitaria. Spiculæ 1-floræ, sessiles fertiles ad unum latum spectantes longe aristatæ; pedicellatæ steriles ad latum alterum spicæ imbricatæ muticæ.—*Asia Afr. et Australiæ reg. calid., reg. Mediterr., Amer. bor.*

94. ANDROPOGON. Spicæ solitariae geminæ v. ∞ confertæ. Spiculæ secundæ v. quaquaversæ, sessiles fertiles aristatæ 1-floræ; pedicellatæ steriles muticæ.—*Utriusque orbis reg. calid., Eur. Asia et Amer. bor. temp.*

†† Spiculæ ad apices ramorum paniculæ v. spicarum fasciculiformium ternæ, infra ternationem paucae v. steriles.

95. CHRYSOPOGON. Spiculæ in ramulis articulatis paniculæ ternæ, centrali sessili fertili, lateralibus pedicellatis sterilibus, additis interdum paribus inferioribus 1-3.—*Utriusque orbis reg. calid., Eur. austr., Amer. bor.*

96. SORGHUM. Spiculæ *Chrysopogonis*, sed paniculæ ramuli vix articulati et gluma exterior spiculæ fertilis ovata demum indurata.—*Utriusque orbis reg. calid., in temp. plus minus extensa.*

97. ANTHISTIRIA. Spicæ fasciculiformes, in paniculam foliatam dispositæ v. rarius subsolitariæ, singulæ e spiculis 7, rarius 9-15 compositæ, quarum 4 (rarius 6?) seu paria 2 (rarius 3?) ad basin spicæ steriles involucentes, 3 terminales stipitatæ, centrali fertili, lateralibus sæpius sterilibus, additis interdum paribus intermediis secus rhachin 1-3.—*Utriusque orbis reg. calid.*

98. APLUDA. Spicularum ternationes in paniculam foliatam dispositæ, singulæ bracteatae, spicula una sessili fertili, altera breviter tertiaque longius pedicellata sterilibus.—*Asia trop., China, Nov. Caledonia, ins. maris Pacifici.*

(Vide etiam 59 CLEISTACHNE, *Sorgho* subsimilem sed spiculæ omnes hermaphroditæ, nunquam geminæ.)

Series B. POACEÆ. Pedicellus infra glumas continuus. Rhachilla supra glumas inferiores persistentes sæpe articulata, ultra flores fertiles producta stipitiformis v. glumas vacuas v. flores imperfectos ferens, v. interdum flos fertilis more *Panicacearum* unicus terminalis, sed cum gluma sua a vacuis persistentibus articulatum deciduus.

Excepta: Pedicellus infra spiculam articulatus in *Phalarideis Pseudoryzeis*, in *Fingerhuthia* et *Polypogone* et forte hinc inde in speciminibus perpaucis aliorum generum.

Glumæ infra articulationem ad callum minutum reductæ v. omnino deficientes in *Coleantho*, et *Nardo*.

**Tribus VII. Phalarideæ** (quoad genera genuina). Spiculæ flore unico terminali fertili, additis interdum 2 inferioribus masculis, rhachilla supra glumas inferiores articulata, ultra florem fertilem non producta. Glumæ 6 (v. 5 cum palea), 2 inferiores vacuæ sub articulatione sæpius persistentes, 2 sequentes intermediæ (tertia et quarta) vacuæ v. ad setam reductæ, v. florem masculum cum palea foventes, 2 superiores (quinta et sexta v. gluma florens et palea) sub flore perfecto inter se similes, nervo centrali instructæ v. carinatæ, palea cæterum 0.

Excepta: Nervus centralis evanescit in gluma sexta (seu palea) et interdum in glumis inferioribus *Phalaridis*.

Tribus quoad genera genuina ab *Oryzeis* non differt nisi glumarum vacuarum sub articulatione præsentia, *Pseudoryzeæ*, caractere normali *Oryzearum*, differunt habitu et inflorescentia.

\* Glumæ 2 vacuæ sub articulatione (**Genuinæ**).

99. EHRHARTA. Panicula effusa v. racemiformis. Glumæ tertia et quarta cæteris majores, vacuæ, sæpe aristatæ. Stamina 6.—*Afr. austr., ins. Mascar., Nov. Zel., in Australia inquilina.*

100. MICROLÆNA. Panicula angusta, laxa. Glumæ tertia et quarta cæteris longiores, vacuæ, aristatæ. Stamina 4 v. 2.—*Australia, Nov. Zel.*

101. TETRARHENA. Spica v. panicula spiciformis, subsimplex. Gluma tertia varia, quarta cæteris major, vacua, mutica. Stamina 4.—*Australia.*

102. PHALARIS. Panicula spiciformis capitata v. dense thyrsoides. Glumæ 2 inferiores

cæteris majores, tertia et quarta breves, vacuæ, muticæ, sæpius ad setam reductæ. Stamina 3.—*Reg. Mediter., Amer. extratrop., in aliis reg. inquilina.*

103. *ANTHOXANTHUM*. Panicula spiciformis, cylindracea. Glumæ 2 inferiores v. saltem secunda cæteris majores, tertia et quarta breves, dorso aristatæ, vacuæ. Stamina 2.—*Eur., Asia extratrop., in aliis reg. inquilina.*

104. *HIBROCHLOA*. Panicula pyramidalis, effusa v. contracta. Glumæ 2 inferiores vacuæ cæteris vix majores, tertia et quarta parum breviores muticæ v. arista brevi terminali, florem ♂ foventes. Stamina 3 v. in flore fertili 2.—*Reg. extratrop. imprimis mont. v. frigid. hemisph. bor. et austr.*

**\*\* Glumæ sub articulatione 0 (*Pseudoryzæ*).**

105. *CRYPISIS*. Spicularum capitulum densum, bracteis 2-3 vaginantibus involucreto, receptaculo lato convexiusculo. Glumæ 4, exaristatæ. Stamina 2.—*Reg. Mediterr.*

106. *COENUCOPIÆ*. Spicularum capitulum intra involucreto tubuloso-campanulatum  $\infty$ -dentatum inclusum, receptaculo subplano. Glumæ 3, intima florens dorso aristata. Stamina 3. Pedunculus fructifer sub involucreto incrassatus, recurvus.—*Oriens.*

107. *ALOPECURUS*. Spiculæ in panicula cylindracea spiciformi conferti, axi lineari. Glumæ 3 v. 4, florens dorso aristata v. mucronata. Stamina 3.—*Eur., As. temp.*

**Tribus VIII. Agrostideæ.** Spiculæ 1-floræ, rhachilla supra glumas inferiores articulata, ultra florem nuda v. in stipitem setamve producta. Glumæ sæpissime 3, 2 inferiores vacuæ, sub articulatione persistentes v. sigillatim deciduæ, rarissime deficientes, tertia florem hermaphroditum v. rarissime unisexualem fovens, haud raro aristata, arista terminali v. dorsali sæpius varie torta v. geniculata. Palea 2-nervis, rarius 2-carinata, sæpe tenuis v. hyalina, interdum minima v. rarius deficiens.

Excepta: Spiculæ interdum 2-floræ in speciebus 2 *Sporoboli*.

Glumæ vacuæ desunt in *Coleantho*.

Paleæ nervi in unum coaliti in *Cinna*.

Genera pleraque characteribus incertis male definita, et speciebus intermediis sæpe connexa.

Subtribus 1. Stipæ. *Spiculæ paniculatæ (in Aciachne ♀ solitaria), rhachilla ultra florem (excepto Brachyelytro) non producta. Arista glumæ florentis terminalis rarius deficiens. Caryopsis gluma indurata v. membranacea arcte involuta.*

**\* Gluma fructifera circa caryopsin rigens v. indurata.**

108. *ARISTIDA*. Gluma fructifera angusta, acuminata; arista sæpissime 3-fida, ramis lateralibus divaricatis rarius abbreviatis erectis v. obsoletis. Lodiculæ 2.—*Utriusque orbis reg. calid.*

109. *STIPA*. Gluma fructifera angusta, acuminata; arista integra sæpius cum gluma articulata, varie torta v. flexuosa, rarius continua. Lodiculæ sæpius 3.—*Utriusque orbis reg. trop. et temp.*

110. *ORYZOPSIS*. Gluma fructifera obovoidea v. latiuscula, obtusa truncata v. rarius acuminata; arista tenuis, sæpius excentrica v. caducissima. Lodiculæ 2.—*Reg. temp. et subtrop. hemisph. bor. et Amer. austr.*

111. *MILIUM*. Gluma fructifera ovoidea, cum palea indurata exaristata.—*Europa, Asia temp., Amer. bor.*

112. *ACIACHNE*. *Spiculæ dioicæ*, ♀ in pedunculo unica erecta. Gluma fructifera in acumen angustum producta (spiculæ ♂ thyrsoides-paniculatæ?). Gramen nanum, dense cæspitosum.—*Andes Amer. austr.*

**\*\* Gluma fructifera circa caryopsin tenuis v. membranacea.**

113. *MUEHLENBERGIA*. Glumæ vacuæ minimæ v. florentem subæquantes; fructifera angusta arista capillacea rarius obsoleta. Panicula nunc angusta, densa v. tenuis, nunc effusa ramulis capillaribus. Spiculæ parvæ.—*Amer. bor., And. Amer. austr., Asia or. et med.*

114. *BRACHYLEYTRUM*. Glumæ vacuæ minimæ; fructifera angusta arista longa recta. *Rhachilla ultra florem in setam producta.* Panicula angusta ramulis paucis erectis. Spiculæ longiusculæ.—*Amer. bor.*

115. *PERIPLEMA*. Omnia *Muehlenbergiæ* nisi glumæ omnes in aristam longam productæ, Panicula densa, spiciformis v. interrupta. Spiculæ minimæ glomeratæ.—*Amer. trop.*

Subtribus 2. Phleoidesæ. *Spiculæ in paniculam dense spiciformem cylindraceam v. subglobosam confertæ. Rhachilla ultra florem nuda v. in setam brevem producta. Gluma florens mutica v. in aristis 1-3 rectas producta, fructifera sæpius membranacea, caryopsin laxè includens.*

116. LYCURUS. Gluma infima 2-3-aristata, secunda 1-aristata, florens major, longius 1-aristata. Spiculæ steriles fertilibus intermixtæ. Spica longa.—*Amer. trop. et subtrop.*

117. ECHINOPOGON. Glumæ vacuæ acutæ, exaristatæ; florens apice 3-loba, lobo medio longe aristato. Spiculæ steriles paucae fertilibus intermixtæ. Spica ovoidea v. cylindracea.—*Australia, Nov. Zel.*

118. DIPLOPOGON. Glumæ vacuæ breviter 1-aristatæ; florens 3-aristata, aristis lateralibus brevibus erectis, intermedia longa torta v. refracta. Spica capituliformis.—*Australia austr. occid.*

119. AMPHIPOGON. Glumæ vacuæ acutæ v. breviter aristatæ; florens alte 3-fida, lobis acutis v. aristatis. Spica globosa v. cylindracea.—*Australia.*

120. HELEOCHLOA. Glumæ omnes integræ, exaristatæ, florens vacuis sublongior. Spica ovoidea intra vaginas superiores sessilis, v. cylindracea sæpiusque pedunculata.—*Reg. Mediterr., Eur. med., Asia temp.*

121. MAILLEA. Glumæ omnes exaristatæ, vacuarum carina late alata, florens vacuis paullo brevior. Spica ovoidea, sessilis.—*Archip. Græc., Sardinia.*

122. PHLEUM. Glumæ vacuæ mucronatæ v. brevissime aristatæ, exalatæ, florens multo brevior. Spica ovoidea v. cylindracea.—*Eur., Asia temp., Afr. bor., Amer. bor. et austr.*

(Vide etiam 145 LAGURUM, 220 FINGERHUTHIAM.)

Subtribus 3. Sporoboleæ. *Spiculæ parvæ, sæpe minimæ, simpliciter laxèque spicatæ v. varie paniculata, rhachilla ultra florem non producta. Glumæ exaristatæ v. florens rarius in aristam brevem rectam producta. Caryopsis intra glumas laxè inclusa, demum sæpe glumis apertis denudata.*

123. MIBORA. Glumæ muticæ, vacuæ florentem subsuperantes. Gramen nanum, spica tenui simplici.—*Europa.*

124. COLEANTHUS. Glumæ vacuæ 0, florens breviter aristata. Gramen nanum, panicula subsimplici, spiculis fasciculatis.—*Eur. med. et bor., Amer. bor. occid.*

125. PHIPPSIA. Glumæ muticæ, vacuæ minutæ. Gramen nanum, panicula tenui spiciformi, pedicellis fasciculatis.—*Terr. Arct.*

126. SPOROBOLUS. Glumæ muticæ, florens vacuis æqualis v. brevior. Caryopsis sæpe denudata, pericarpio interdum laxo. Panicula sæpius floribunda, nunc cylindracea spiciformis, nunc laxè effusa.—*Utriusque orbis reg. calid. et temp.*

(Confer etiam 127 EPICAMPEM, 130 CHÆTURUM.)

Subtribus 4. Euagrostesæ. *Spiculæ sæpius parvæ, varie paniculatæ. Gluma florens sæpius arista dorsali plus minus torta, rarius ad mucronem subterminalem reducta instructa, v. rarius mutica. Caryopsis gluma inclusa.*

\* *Rhachilla ultra florem non producta.*

127. EPICAMPEM. Gluma florens vacuis vix brevior v. sublongior, arista tenui v. minuta subterminali. Panicula longa dense floribunda.—*California, Mexico, And. Amer. austr.*

128. BAUCHEA. 'Ab Epicampi differt glumis vacuis valde inæqualibus.'—*Mexico.*

129. AGROSTIS. Gluma florens hyalina, vacuis multo brevior, arista sæpius infra medium dorsali.—*Tota fere orbis terrarum.*

130. CHÆTURUS. Gluma infima aristata, secunda submucronata, florens brevior hyalina mutica. Spiculæ in ramulis paniculæ 2-3-natim fasciculatæ.—*Hispania.*

131. POLYPOGON. Glumæ vacuæ aristatæ, florens minor, sæpe hyalina, in emarginatura v. dorso aristata. Panicula densa spiciformis v. major laxiorque irregularis. Pedicellus sub spicula sæpissime articulatus.—*Utriusque orbis reg. temp. et subtrop., inter tropicos rarior.*

132. ? ARCTAGROSTIS. Gluma florens vacuis sublongior, mutica. Panicula angusta, parum ramosa. Spiculæ quam in *Agrostes* majores.—*Terr. Arct.*

133. CALAMAGROSTIS. Rhachilla sub gluma florente annulo pilorum glumas superante instructa. Cætera *Agrostis*. Gramina elata, panicula sæpius angusta floribunda.—*Eur., Asia med. et bor., Afr. austr.*

134. CINNA. Palea carinata, 1-nervis. Stamen 1. Gramina elata panicula longa floribunda.—*Eur. bor., Amer. bor.*

**\*\* Rhachilla ultra florem in setam glabram v. pilosam sæpissime producta.**

135. **GASTRIDIMUM.** Glumæ vacuæ basi concavæ subvesiculosæ, nitidulæ, acutæ v. breviter aristatæ; florens multo brevior, arista sub apice dorsali interdum deficiente.—*Reg. Mediterr., Amer. austr. extratrop.*

136. **CHÆTOTROPIS.** Spiculæ parvæ et gluma florens brevis *Agrostis*, sed rhachillæ continuatio setacea. Panicula densissima ramulis breviter spiciformibus.—*Chile.*

137. **TRIPLACHNE.** Gluma florens hyalina, vacuis multo brevior, lobis 2 lateralibus in setam productis, arista dorsali.—*Reg. Mediterr.*

138. **APREA.** Gluma secunda cæteris major, florens hyalina breviter 2-fida, arista sub apice dorsali tenui. Panicula elegans floribunda, ramulis filiformibus, spiculis parvis.—*Eur., Asia occid.*

139. **CINNAGROSTIS.** Spiculæ unisexuales, cætera *Deyeuxiæ*.—*Rep. Argenti.*

140. **DEYEUXIA.** Rhachilla infra et ultra florem pilosa v. rarius glabra. Glumæ vacuæ parum inæquales, muticæ; florens paulo brevior v. sublongior, arista dorsali. Panicula angusta stricta v. laxè floribunda, spiculis quam in *Agrosti* sæpius majoribus.—*Utriusque orbis reg. temp. et mont.*

141. **AMMOPHILA.** Rhachilla infra florem pilosa, ultra florem tuberculiformis v. setiformis glabra. Glumæ paleacæ exaristatæ. Panicula dense spiciformis v. laxior, spiculis quam in affinis majoribus.—*Utriusque orbis hemisph. bor.*

142. **DICHELACHNE.** Gluma florens vacuis vix brevior, apice sæpius breviter 2-fida, arista sub apice tenui dorsali. Panicula elongata, aristis numerosis crinita.—*Australia, Nov. Zel.*

143. **TRISETARIA.** Glumæ florentis lobi 2 laterales tenuiter aristatæ, arista dorsali longa flexuosa. Panicula angusta, aristis numerosis crinita.—*Ægypt., Syria.*

144. **PENTAPOGON.** Gluma florens apice 4-fida lobis tenuiter aristatis, arista dorsali longa basi torta. Panicula angusta, ramulis brevibus fasciculatis.—*Australia.*

145. **LAGURUS.** Glumæ vacuæ angustæ, longè plumoso-ciliatæ, florentis aristæ 2 laterales tenues, dorsalis longa rigida. Panicula dense spiciformis ovoidea v. oblongo-cylindracea, mollissima.—*Reg. Mediterr., Eur. occid.*

**Tribus IX. Avenæ.** Spiculæ 2- $\infty$ -floræ, paniculatæ v. rarius spicatæ, rhachilla supra glumas inferiores articulata, ultra flores (*Aireis* exceptis) plus minus producta, floribus hermaphroditis v. uno unisexuali. Glumæ 4- $\infty$ , 2 inferiores vacuæ sub articulatione persistentes v. sigillatim deciduæ, 2- $\infty$  superiores florentes, muticæ v. sæpius arista dorsali v. terminali geniculata v. torta rarius erecta instructæ. Palea 2-nervis v. 2-carinata.

Excepta: Spiculæ 1-floræ in *Anisopogone*.

Subtribus 1. *Aireæ.* Spiculæ 2-floræ, rhachilla ultra flores non producta. Glumæ florentes muticæ v. rarius tenuiter v. breviter aristatæ.

Subtribus a Benthamico in Journ. Linn. Soc. xix. 92, pro tribu distincta sub nomine *Isachnearum* proposita, sed suadentibus Hæckelio aliisque *Isachnem* ipsam ad *Paniceas* revocamus, et genera cætera cum *Aira Avenis* jungimus, inter quas distinguuntur imprimis rhachilla ultra flores nunquam producta.

146. **ERIACHNE.** Glumæ membranacæ, inferiores vacuæ  $\infty$ -nerves acutæ, florentes longè ciliatæ muticæ v. breviter aristatæ. Panicula angusta, densa, v. laxè effusa.—*Asia trop., Australia.*

147. **PRIONACHNE.** Glumæ inferiores dorso cartilagineæ pectinato-dentatæ florentibus muticis sublongiores: Spiculæ secus rhachin spicæ subsimplicis 2-4-nati fasciculatæ.—*Afr. austr.*

148. **ZENKERIA.** Glumæ membranacæ, florentes obtusæ v. mucronato-subaristatæ. Rhachilla et palearum carinæ ciliatæ. Panicula floribunda, spiculis parvis.—*Ind. or.*

149. **MICRAIRA.** Glumæ membranacæ, muticæ, florentes  $\infty$ -nerves. Palea  $\infty$ -nervis, nervis 2 validioribus. Panicula parva, effusa, spiculis minimis.—*Australia.*

150. **CGLACHNE.** Glumæ membranacæ, muticæ, tertia major flore  $\sigma$ , quarta altius affixa flore  $\rho$ . Panicula laxa, ramis paucis.—*Ind. or., China, Australia.*

151. **AIROPSIS.** Glumæ semiglobosæ, muticæ, nitidulæ, vacuæ florentes includentes. Panicula densa, subcylindracea, spiculis parvis globosis.—*Eur. occid., Afr. bor. occid.*

152. **AIRA.** Glumæ inferiores membranacæ, muticæ, florentes hyalina, arista dorsali tenui

sæpe torta rarius deficiente. Paniculæ ramuli capillares, effusi v. rarius conferti stricti.—*Eur., Oriens, Afr. bor. in aliis regionibus inquilina.*

Subtribus 2. Euavenesæ. Spiculæ 2- $\infty$ -floræ, rhachilla ultra flores plus minus producta. Glumæ florentes sæpissime arista dorsali v. terminali geniculata v. torta instructæ.

\* *Arista glumarum florentium dorsalis v. rarius deficiens. Flores hermaphroditi v. supremus masculus.*

153. CORYNEPHORUS. Spiculæ parvæ, floribus 2 hermaphroditis, rhachilla in setam penicillatam producta. Glumarum florentium arista medio articulata, apice clavata. Habitus *Airæ*.—*Eur., Oriens, Afr. bor.*

154. DESCHAMPSIA. Spiculæ floribus 2 hermaphroditis, rhachilla in setam v. stipitem nudum penicillatum v. glumiferum producta. Gramina perennia, panicula varia.—*Orbis utriusque reg. temp. et frigid. et mont. trop.*

155. ACHNERIA. Spiculæ floribus 2 hermaphroditis, rhachilla sæpius breviter producta. Glumæ non v. vix aristatæ. Gramina perennia, panicula varia.—*Afr. austr.*

156. MONACHYRON. Spiculæ 2-floræ, flore inferiore hermaphrodito superiore masculo. Gluma vacua secunda ab infima distans, 2-fida, in sinu aristata, florentes muticæ, apice 2-fidæ.—*Ins. Cap. Viridis.*

157. HOLCUS. Spiculæ 2-floræ, flore inferiore hermaphrodito superiore masculo v. sterili, rhachilla in stipitem parvum producta. Gluma sub flore fertili mutica, sub flore sterili aristata. Gramina mollia, panicula sæpius densa.—*Eur., Afr., in aliis reg. inquilina.*

158. TRisetum. Spiculæ floribus 2 rarius 3-6 hermaphroditis, rhachilla producta. Glumæ tenuiter membranacæ v. scariosæ, carinatæ, apice præter aristam dorsalem 2-dentatæ v. 2-aristatæ. Caryopsis intra glumam libera, exsulca. Panicula dense spiciformis v. laxè effusa.—*Orbis utriusque reg. temp. et mont.*

159. VENTENATA. Omnia *Triseti* nisi spiculæ longiores, glumis rigide  $\infty$ -nerviis, et arista dorsalis in gluma florente inferiore deest.—*Eur. centr., reg. Mediterr.*

160. AVENA. Spiculæ paniculatæ, 2- $\infty$ -floræ, flore supremo masculo v. sterili. Glumæ florentes dorso rotundatæ, rigidule 5-7-nerves, præter aristam dorsalem muticæ. Caryopsis apice pubescens, sulcata, siccitate paleæ adhærens. Gramina annua, spiculis longis pendulis, v. perennia spiculis erectis fere *Triseti*.—*Orbis veteris reg. temp., in America paucæ.*

161. GAUDINIA. Spiculæ *Avenæ*, sed ad excavationes rhacheos spicæ simplicis sessiles.—*Reg. Mediterr., ins. Azor.*

162. AMPHIBROMUS. Spiculæ paniculatæ, floribus 5-10 hermaphroditis v. summis imperfectis. Glumæ florentes dorso rotundatæ, præter aristam dorsalem vix aristatæ. Caryopsis glabra, sulcata, a palea libera.—*Australia extratrop.*

\*\* *Arista glumarum florentium dorsalis. Flores 2, inferior ♂, superior ♀.*

163. ARRHENATHERUM. Gramen elatiusculum, spiculis laxè paniculatis.—*Eur., Afr. bor., Asia occid.*

\*\*\* *Arista glumarum florentium inter lobos sæpe aristatos terminalis.*

† *Spiculæ 2-floræ, flore inferiore ♂, superiore ♀ v. ♀.*

164. TRISTACHYA. Spiculæ ad apices ramulorum paniculæ ternatim sessiles v. breviter æqualiterque pedicellatæ.—*Afr. trop. et austr., Asia occid., Amer. trop.*

165. TRICHOPTERYX. Spiculæ secus ramulos paniculæ sparsæ.—*Afr. trop. et austr., Brasilia.*

†† *Spiculæ 1- $\infty$ -floræ, floribus hermaphroditis v. summo imperfecto.*

166. ANISOPOGON. Spiculæ longæ, 1-floræ, laxè paniculatæ.—*Australia.*

167. DANTHONIA. Spiculæ 3- $\infty$ -floræ, varie paniculatæ.—*Utriusque orbis reg. calid. et temp.*

(Vide etiam 263 BROMUM, arista interdum more *Avenarum* torta.)

**Tribus X. Chloridese.** Spiculæ 1- $\infty$ -floræ, secus rhachin continuam spicarum 1- $\infty$  unilateralium 2-seriatim sessiles, rhachilla supra glumas inferiores persistentes articulata, floribus saltem inferiore hermaphroditis. Styli breves, distincti, stigmatibus plumosis.

Spicæ brevissimæ in *Melanocenchro* et in speciebus nonnullis *Boutelouæ*, fasciculos *Anthephorearum* simulant.

\* *Flos fertilis in spicula 1, rarissime 2.*

168. *MICROCHLOA*. Spica terminalis, tenuis. Spiculæ parvæ, exaristatæ, rhachilla ultra florem non producta. Gluma florens vacuis multo brevior.—*Utriusque orbis reg. calid., Afr. trop. et austr.*

169. *SCHÆNEFELDIA*. Spicæ ad apicem pedunculi 1-4. Spiculæ longe aristatæ, rhachilla ultra florem non producta. Gluma florens vacuis multo brevior.—*Afr. trop.*

170. *CYNODON*. Spicæ ad apicem pedunculi 2-6, digitatæ. Spiculæ parvæ, exaristatæ, rhachilla ultra florem non v. in stipitem brevem producta. Gluma florens vacuis brevior v. longior.—*Utriusque orbis reg. calid., in temp. extensa.*

171. *HARPECHLOA*. Spica terminalis, densa. Glumæ exaristatæ, 1-3 supra florem fertilem flores ♂ foventes, v. summa vacua.—*Afr. austr.*

172. *CTENIUM*. Spicæ ad apicem pedunculi solitariae, rarius 2-3. Gluma secunda vacua cæteris major, medio dorso arista horizontali aculeiformi v. tuberculo instructa, tertia quartaque vacuæ v. paleam foventes, quinta florens tenuiter aristata, 1-2 superiores vacuæ.—*Amer. bor. et austr., Africa, ins. Mascar.*

173. *ENTEROPOGON*. Spica terminalis, elongata. Glumæ 2 inferiores vacuæ breves, tenues, flores longior, 3-nervis, apice 2-fida, arista tenui subdorsali, 1-2 superiores vacuæ v. una florem ♂ fovens.—*Ind. or., Afr. trop., ins. Mascar.*

174. *CHLORIS*. Spicæ ad apicem pedunculi digitatæ verticillatæ v. confertæ, rarius ad 1-2 reductæ. Glumæ 2 inferiores vacuæ, angustæ, florens 1-3-nervis, sæpius aristata, superiores vacuæ, sæpius plures, ad apicem rhacheos conniventes, breves latæ v. angustæ, aristatæ v. ad aristas reductæ v. rarius muticæ.—*Utriusque orbis reg. calid.*

175. *CRYPTOCHLORIS*. Spica densa, intra vaginam folii floralis sessilis. Glumæ 2 inferiores longæ, lineares, florentes 2 latæ superioresque vacuæ 3-4 aristatæ. Gramen annuum, nanum.—*Amer. austr. extratrop.?*

176. *TRICHLORIS*. Spicæ secus pedunculum ∞, erectæ, arcte approximatae, paniculam densam oblongam aristis longis numerosis molliter echinatas formantes. Glumæ 2 inferiores vacuæ angustæ, florens 3-aristata, superiores 1-3 vacuæ varie diminutæ v. ad aristas 3 reductæ.—*Reg. Mex.-Tex., Amer. austr. extratrop.*

177. *GYMNOPOGON*. Spicæ secus pedunculum ∞, sparsæ, dissitæ v. inferiores subverticillatæ. Spiculæ secus rhachin dissitæ. Glumæ 2 inferiores vacuæ angustæ, florens paulo latior aristata, superior vacua aristiformis v. a rhachillæ continuatione indistincta.—*Zeylanica, Amer. bor. et austr.*

178. ? *MONOCHÆTA*. Spicæ ad apicem pedunculi ∞, erectæ, approximatae. Spiculæ secus rhachin tenuem approximatae; rhachilla ultra florem non producta. Glumæ 2 inferiores vacuæ angustæ setaceo-acuminatæ, florens paulo latior aristata.—*Brasilia.*

179. *SCHÆDONNARDUS*. Spicæ secus pedunculum ∞, dissitæ. Spiculæ secus rhachin tenuem dissitæ. Glumæ 2 inferiores vacuæ angustæ, florens longior mutica; rhachilla ultra florem non producta.—*Amer. bor.*

180. *CRASPEDORHACHIS*. Spicæ secus pedunculum ∞, sparsæ. Spiculæ secus rhachin flexuosam marginatam dissitæ. Glumæ 2 inferiores vacuæ carinatæ, florens brevissima hyalina mutica; rhachilla ultra florem non producta.—*Afr. trop. or.*

181. *BOUTELOUA*. Spicæ ∞ secus pedunculum dissitæ rarius terminalis sola. Spiculæ confertæ. Glumæ 2 inferiores vacuæ angustæ, florens latior 3-dentata 1-3-mucronata v. aristata, summae 1-3 varie aristatæ v. aristiformes.—*Amer. bor. et austr.*

182. *MELANOCENCHRIS*. Spicæ ∞, breves, dissitæ, fasciculiformes, secundæ, articulati deciduæ. Glumæ 2 inferiores vacuæ, lineares, plumoso-ciliatæ, florens 3-aristata, summa vacuæ, gradatim minores.—*Ind. or., Arabia, Afr. trop.*

(Vide etiam 192 *LEPTOCHLOAM*; et quoad habitum 61 *ÆGOPORONEM*.)

\*\* *Flores fertiles in spicula 2-∞.*

† *Spicæ ad apicem pedunculi solitariae v. 2-3-næ erectæ.* (Genera *Festuca* affinia.)

183. *TRIPOGON*. Spica longa, tenuis. Glumæ florentes 3-aristatæ, aristis lateralibus rarius ad mucrones parvas reductis.—*Ind. or., Afr. trop.*

184. *LEPIDOPYRONIA*. Spica laxiuscula. Glumæ florentes integræ, dense pilosæ, dorso sub apice aristatæ.—*Abyssinia.*

185. **TETRAPOGON.** Spicæ 1-3, erectæ, pilis longis sericeæ, spiculis confertis. Glumæ florentes apice membranaceæ, truncatæ v. emarginato-bifidæ, arista centrali.—*Afr. bor. et trop., Asia occid.*

186. **ASTREBLA.** Spicæ 1-3, erectæ, pilosæ, crassiusculæ. Glumæ florentes apice 3-fidæ, lobis lateralibus rigidis, intermedio aristato.—*Australia.*

187. **WANGHEIMIA.** Spica densa. Glumæ inferiores vacuæ, angustæ, subæquales, spiculam æquantes, florentes 3-nerves, acuminatæ, exaristatæ.—*Hispan. austr., Africa bor. occid.*

188. **CTENOPSIS.** Spica tenuis. Gluma infima vacua minima v. 0, secunda longa setiformis, florentes 3-nerves, acutissimæ, exaristatæ.—*Africa bor.*

†† *Spicæ ∞, secus pedunculum dissitæ v. ad apicem fasciculatæ.*

189. **TETRACHNE.** Spicæ secus pedunculum dissitæ. Glumæ inferiores vacuæ 4, gradatim auctæ, florentes rigidulæ, apice 3-5-nerves, exaristatæ.—*Africa austr.*

190. **DINEBRA.** Spicæ secus pedunculum dissitæ. Glumæ inferiores vacuæ 2, subaristatæ, florentes multo breviores, tenues, obtusiusculæ.—*Afr. bor. et trop., Ind. or.*

191. **ELEUSINE.** Spicæ secus pedunculum sparsæ subverticillatæ v. sæpius ad apicem digitatæ. Spiculæ confertæ, complanatæ. Glumæ exaristatæ, inferiores vacuæ 2, florentibus breviores.—*Utriusque orbis imprimis veteris reg. trop. et subtrop.*

192. **LEPTOCHLOA.** Spicæ tenues, secus pedunculum dissitæ, sparsæ. Spiculæ secus rhachin alternæ, parvæ, 1-∞-floræ, complanatæ. Glumæ exaristatæ, inferiores vacuæ florentibus 2 sæpius breviores.—*Utriusque orbis reg. calid.*

(Vide etiam *Uniolam racemifloram*, Trin.)

\*\*\* *Spicæ stricte unisexuales, sæpius dioicæ, utriusque sexus valde heteromorphæ, ♀ 1-floræ. (Genera forte ad Scelericas amandanda.)*

193. **BUCHLOË.** Spiculæ ♀ in capitulo cenchroideo paucae, glumis majoribus induratis basi connatis involucrium simulantibus. Gramen reptans.—*Reg. Mex.-Tex.*

194. ? **JOUYEA.** Spiculæ ♀ in spica cylindracea rhachi immersæ semiadnatæque. Gramen junceum.—*Mexico.*

195. **OPIZIA.** Spiculæ ♀ secus rhachin spicæ gracilis alternæ. Glumæ 2-3-lobæ v. 3-aristatæ. Gramen reptans.—*Mexico.*

**Tribus XI. Festuceæ.** Spiculæ 2-∞-floræ, rarissime 1-floræ, in panicula nunc laxa effusa nunc dense spiciformi plus minus pedicellatæ, rarius in rhachi non excavata subsessiles, rhachilla cum pedicello continua, supra glumas vacuas inferiores sæpius articulata, ultra flores sæpissime producta v. flore imperfecto terminata. Glumæ muticæ v. aristis 1-∞ rectis terminatæ, aristis cum lobis membranaceis interdum alternis nec dorsalibus; 2 inferiores sub articulatione vacuæ, persistentes v. sigillatim deciduæ. Palea 2-nervis, sæpissime 2-carinata. Gramina herbacea v. rarius indurata, foliorum lamina cum vagina sæpissime continua. Spiculæ hermaphrodite, v. si unisexuales utriusque sexus similes (excepta *Scelopogon*).

Excepta: Spiculæ 1-floræ in *Eremochloa*, in spiculis terminalibus *Lamarchia*, in *Lophathero*, *Podophoro* et hinc inde in speciebus perpaucis aliorum generum.

Arista glumæ florentis interdum subdorsalis leviterque torta in speciebus paucis *Bromi*.

Subtribus 1. Pappophoræ. *Spiculæ sæpius paucifloræ. Gluma ∞-nerves, florentes 3-∞-aristatæ, additis interdum lobis alternis membranaceis, v. absque aristis 4-lobæ.*

196. **POMMERUILLA.** Spiculæ 2-5-floræ, in spica brevi intra vaginam semi-inclusa subsessiles. Glumæ exaristatæ, 2 inferiores vacuæ integre, 2 sequentes vacuæ 4-fidæ florentibus appressæ, florentes involucriantibus similes.—*Ind. or.*

197. **PAPPOPHORUM.** Spiculæ 1-2, rarius 3-floræ. Panicula dense spiciformis, brevis v. elongata, rarius ramosa. Glumæ florentes 9-23-aristatæ.—*Utriusque orbis reg. calid.*

198. **COTTEA.** Spiculæ 2-6-floræ. Panicula laxa. Glumæ florentes irregulariter 9-11-lobæ, lobis aristatis v. hyalinis.—*Amer. calid.*

199. **BOISSIERA.** Spiculæ 2-3-floræ. Panicula brevis, densa, bromoides. Glumæ florentes apice hyaline, lobatæ, nervis 5-9 validis pone lobos aristatis. *Stylus brevissimus, membranaceo-dilatatus, sub-2-fidus.* Gramen humile.—*Oriens.*

200. **SCHMIDTIA.** Spiculæ 4-6-floræ. Panicula angusta, laxiuscula. Glumæ florentes

234. *ECTROSLIA*. Panicula angusta. Spiculæ paucifloræ, floribus superioribus 2- $\infty$  ut in *Melicis* ♂ v. rudimentariis. Glumæ saltem superiores aristatæ, aristis in panicula semper numerosis.—*Australia*.

Subtribus 6. *Meliceæ*. *Inflorescentia varia*. Glumæ florentes 3-5- $\infty$ -nerves, summæ 2- $\infty$  vacuæ semet plus minus involventes. Folia angusta venulis transversis 0.

235. *HETERACHNE*. Panicula spiciformis, densa v. interrupta. Spiculæ planæ, paucifloræ. Glumæ florentes 1-2, latæ, complicatæ, superiores vacuæ 2- $\infty$ . Paleæ carina late alata. Gramina humilia spiculis parvis ovatis v. orbiculatis.—*Australia*.

236. *ANTHOCHLOA*. Panicula fere ad capitulum subsessile reducta. Spiculæ paucifloræ. Glumæ latæ, hyalino-scariosæ, albæ, florentes latissime petaloidæ subflabellatæ. Gramina humilia cæspitosa.—*And. Peruv. et Boliv.*

237. *MELICA*. Panicula angusta stricta secunda v. laxè effusa. Spiculæ paucifloræ. Glumæ superiores vacuæ, plures sæpius in massam clavatam confertæ, rarius laxiores gradatim minores. Gramina perennia, erecta, spiculis sæpe majusculis erectis patentibus v. nutantibus.—*Eur., Asia temp., Afr. extratrop., Amer. extratrop. et andin.*

238. *DIARRHENA*. Panicula elongata, ramulis paucis strictis. Spiculæ paucifloræ. Gluma secunda 5-nervis, florentes 3-nerves, demum coriaceæ nitidæ, superiores vacuæ 2-4. Stamina 2 v. 1. Caryopsis sæpe apice exserta. Gramen perenne, erectum.—*Amer. bor.*

(Confer etiam 175 *CRYPTOCHLORIDEM*, 234 *ECTROSLIAM*, 241 *LOPHATHERUM*.)

Subtribus 7. *Centothecæ*. Panicula laxa v. spica unilateralis. Glumæ florentes 5- $\infty$ -nerves. Gramina sæpius elata. Folia plana, lanceolata v. ovata, inter venas transverse venulosa.

Genera nonnulla ab foliorum venatione interdum *Bambuseis* adscripta, sed lamina nunquam cum vagina articulata et spiculæ *Festucearum*.

239. *CENTOTHECA*. Panicula laxa. Spiculæ  $\infty$ -floræ. Glumæ muticæ, summa vacua parva v. 0.—*Afr. et Asia trop., ins. Pacif.*

240. *ORTHOCLADA*. Panicula laxa. Spiculæ 1-2-floræ. Glumæ muticæ, summa vacua parva v. 0.—*Amer. calid.*

241. *LOPHATHERUM*. Panicula longa, ramis abbreviatis v. elongatis. Spiculæ 1-floræ. Glumæ mucronatæ v. subaristatæ, superiores vacuæ plures in cristam parvam unilateralem confertæ.—*Ind. or., Archip. Malay., China, Japonia.*

242. *STREPTOGYNE*. Spica longa, unilateralis. Spiculæ sessiles, longæ, paucifloræ. Glumæ florentes longæ, rigidæ, convolutæ. Stigmata longissime exserta, filiformia, demum spiraliter torta.—*Ind. or., Afr. trop., Amer. trop. et bor. subtrop.*

243. *ZEUGITES*. Panicula laxa v. dense floribunda. Spiculæ  $\infty$ -floræ, flore infimo fertili, superioribus 2-5 masculis. Gramina nunc debilia decumbentia, nunc valida elata.—*Amer. trop.*

Subtribus 8. *Eufestuceæ*. Spiculæ varie paniculatæ, inflorescentia basi obracteata. Glumæ florentes 5- $\infty$ -nerves, summa vacua 1 v. 0. Styli breves nunc brevissimi, stigmatibus plumosis. Caryopsis nunc libera nunc sæpius paleæ plus minus adherens. Folia sæpius angusta, venulis transversis 0.

244. *PLEUROPOGON*. Panicula ad racemum secundum reducta. Glumæ florentes mucronatæ v. aristatæ. Paleæ carinæ cristatæ v. appendice lineari instructæ.—*Terr. arct., California.*

245. *BRYLKINIA*. Panicula ad racemum secundum reducta. Glumæ inferiores vacuæ 4.—*Japonia, Asia bor. or.*

246. *UNIOLA*. Panicula nunc elongata stricta, nunc ampla. Spiculæ latæ planæ. Glumæ inferiores vacuæ 3-6.—*Amer. extratrop. et andin.*

247. *DISTICHLIS*. Panicula spiciformes v. oblongæ, strictæ dioicæ, spiculis subsessilibus. Glumæ rigidulæ, exaristatæ.—*Amer. extratrop. et andin., Australia, sæpius in maritimis.*

248. *ÆLURORUS*. Spiculæ  $\infty$ -floræ, dense subspicato-glomeratæ, glomerulis solitariis v. secus pendunculum sparsis. Glumæ florentes apice latiusculæ, mucronatæ. Gramina prostrata, foliis brevibus rigidis sæpe pungentibus.—*Reg. Mediterr., Asia med., Ind. or., sæpius in maritimis.*

249. *DACTYLIS*. Spiculæ paucifloræ, dense fasciculatæ, fasciculis compositis secundis ad

apicem pedunculi v. ramulorum confertis. Glumæ florentes vacuas superantes, mucronatæ v. breviter aristatæ. Gramina perennia, interdum elata.—*Eur., Asia temp., Afr. bor.*

250. LASIOCHLOA. Panicula spiciformis, densa v. interrupta. Glumæ vacuæ sæpius hispidæ, florentes breviores tenuiores muticæ. Gramina cæspitosa, foliis angustis.—*Afr. austr.*

251. DEMAZERIA. Spiculæ compressæ, distiche spicatæ v. inferiores fasciculatæ. Glumæ coriaceæ, muticæ, florentes distiche imbricatæ, vacuis longiores.—*Reg. Mediterr., Afr. austr.*

252. SCLEROCHLOA. Spiculæ compressæ, rigidulæ, in panicula brevi secunda arcte confertæ, subsessiles. Glumæ florentes carinatæ, apice membranaceæ truncatæ v. emarginatæ. Gramina annua humilia.—*Eur. austr., Asia occid. et med.*

253. BRIZA. Panicula laxa, rarius angusta. Spiculæ bene pedicellatæ. Glumæ valde concavæ v. vesiculosæ, non carinatæ, muticæ v. rarius aristatæ. Palea lata, caryopsi valde compressæ arcte appressa. Gramina erecta.—*Eur., Afr. bor., Asia temp., Amer. austr., reg. Mex.-Tex.*

254. SCHISMUS. Panicula angusta, ramulis erectis. Spiculæ parvulæ. Glumæ muticæ, vacuæ florentes minores includentes. Gramina annua.—*Reg. Mediterr. ab ins. Canar. usque ad Affghan. et Arabiam.*

255. NEPHELOCHLOA. Panicula gracilis, ramulis capillaribus verticillatis. Spiculæ parvæ, nitidulæ. Glumæ florentes tenues, vix curinatæ, apice scariosæ, 2-fidæ, inter lobos aristatæ.—*Oriens.*

256. POA. Panicula varia, sæpius laxa. Spiculæ paucifloræ. Glumæ membranaceæ, carinatæ, nervis lateralibus apice sæpius conniventibus. Caryopsis libera v. rarius paleæ adhærens.—*Utriusque orbis reg. temp. et frigid., inter tropicos pauciores.*

257. COLPODIUM. Panicula gracilis, laxa. Spiculæ parvæ, 1-2-floræ. Glumæ tenuiter membranaceæ, nervis lateralibus sæpe abbreviatis v. obscuris. Caryopsis oblonga, libera.—*Oriens, Asia med.*

258. GRAPHEPHORUM. Omnia *Glyceriæ* nisi rhachilla sub floribus pilosa.—*Reg. bor. Amer., Eur. et Asiæ.*

259. GLYCERIA. Panicula longa, angusta v. effusa, floribunda. Spiculæ  $\infty$ -floræ, rhachilla glabra v. vix pilosula. Glumæ obtusæ, muticæ, non carinatæ, nervis lateralibus apicem non attingentibus. Gramina sæpe elata, interdum aquatica.—*Utriusque orbis reg. temp.*

260. FESTUCA. Panicula varia. Spiculæ  $\infty$ -floræ. Glumæ florentes acutæ v. aristatæ rarius obtusæ, dorso rotundatæ nec a basi carinatæ, nervis sæpius tenuibus. Ovarium glabrum v. apice pilosulum. Caryopsis glabra, paleæ sæpius (nec semper) plus minus siccitate adhærens.—*Utriusque orbis reg. temp., inter tropicos rariores.*

261? PANTATHERA. Panicula ampla. Spiculæ majusculæ, planæ,  $\infty$ -floræ. Glumæ omnes aristatæ, florentes complicato-carinatæ. Caryopsis glabra.—*Juan Fernandez.*

262. PODOPHORUS. Panicula laxa, subsecunda. Spiculæ majusculæ, angustæ, 1-floræ, rhachilla ultra florem in stipitem longum aristiferum producta. Gluma florens linearis, carinata, longe aristata. Ovarium glabrum.—*Juan Fernandez.*

263. BROMUS. Panicula varia. Spiculæ majusculæ v. magnæ, planæ v. turgidæ,  $\infty$ -floræ. Glumæ florentes aristatæ v. rarius muticæ. Ovarium appendice villosa coronatum. Caryopsis paleæ adhærens.—*Hemisph. bor. reg. temp., Amer. austr. extratrop., inter tropicos pauca.*

264. BRACHYPODIUM. Spiculæ  $\infty$ -floræ, sæpius longiusculæ, in spica simplici pauca, subsessiles, rhachi nec excavata nec articulata. Glumæ florentes dorso rotundatæ, mucronatæ v. aristatæ. Ovarium apice villosum. Caryopsis paleæ adhærens.—*Eur., Asia temp. et mont., Afr. trop. et austr., Colombia, Mexico.*

(Vide etiam 232 CUTANDIAM.)

**Tribus XII. Hordeæ.** Spiculæ 1- $\infty$ -floræ, ad dentes seu excavationes rhacheos spicæ simplicis sessiles. Rhachilla supra glumas inferiores vacuas sæpius articulata, ultra flores fertiles producta, setiformis glumifera v. flore imperfecto terminata. Glumæ muticæ v. apice aristatæ, 2 inferiores vacuæ sub articulatione persistentes v. sigillatim deciduæ rarius deficientes. Palea 2-nervis, sæpius 2-carinata. Gramina herbacea.

Excepta: Rhachilla ultra florem non producta in *Nardo*.

Glumæ inferiores vacuæ desunt in *Nardo* et interdum in *Psiluro*, et *Asprella*.

Subtribus 1. *Triticæ*. *Spiculæ ad nodos solitariae, 3-∞-floræ rarius 2-floræ. Spica sæpius valida.*

265. *LOLIUM*. Spiculæ ∞-floræ, alternæ, distichæ, compressæ, margine (dorso glumarum) rhachin spectantes.—*Eur., Afr. bor., Asia temp., alibi inquilina.*

266. *AGROPYRUM*. Spiculæ ∞-floræ, alternæ, distichæ, compressæ, facie (lateribus glumarum) rhachin spectantes. Glumæ florentes dorso rotundatæ, 5-7-nerves, nervis lateralibus apice conniventibus v. in aristam terminalem confluentibus.—*Utriusque orbis reg. temp.*

267. *SECALE*. Spiculæ sæpius 2-floræ, in spicam cylindraceam confertæ, compressæ, facie rhachin spectantes. Glumæ florentes 5-nerves, nervis lateralibus faciei interioris tenuibus faciei exterioris prominentibus, omnibus in aristam confluentibus.—*Reg. Mediterr., alibi late culta.*

268. *TRITICUM*. Spiculæ paucifloræ, compressiusculæ. Glumæ florentes oblongæ v. ventricosæ, dorso rotundatæ v. superne carinatæ, 5-9-nerves, nervis lateralibus non conniventibus brevibus v. in dentes v. aristas distinctas productis.—*Reg. Mediterr., Asia occid., nonnulla alibi late cultæ.*

Subtribus 2. *Lepturæ*. *Spiculæ ad nodos solitariae 1-2-floræ. Spica tenuis, recta v. incurva.*

269. *LEPTURUS*. Glumæ vacuæ 1-2, rigidæ, florentibus hyalinis multo longiores.—*Eur., Afr. bor., Asia temp., maritim. Australasie et ins. Pacif.*

270. *PSILURUS*. Gluma vacua 1, minuta, florens angusta aristata. Stamen 1. Gramen annuum.—*Eur. austr., Oriens.*

271. *NARDUS*. Gluma vacua 0. Rhachilla non producta. Stylus longus indivisus. Gramen perenne, humile, spica unilaterali.—*Eur. occid., reg. Mediterr.*

272. *KHALIXIA*. Glumæ vacuæ 2, florentes 2 paullo longiores, carinatæ, 3-mucronatæ. Gramen perenne, gracile, spiculis minimis.—*Algeria.*

273. *OROPETIUM*. Glumæ vacuæ 2, infima parva, secunda rigida, florens paullo longior. Rhachilla sub flore longe pilosa. Gramen nanum. Spica spiculis parvis immersis subteres.—*Ind. or.*

Subtribus 3. *Elymæ*. *Spiculæ ad nodos rhacheos 2-∞, collaterales. Spica sæpius valida.*

274. *HORDEUM*. Spiculæ 1-floræ. Glumæ vacuæ subulatæ, rigidæ, involucrium sæpius simulantes.—*Eur., Asia temp., Afr. bor., Amer. extratrop., alibi late culta.*

275. *ELYMUS*. Spiculæ 2-6-floræ. Glumæ vacuæ angustæ v. aristiformes, involucrium sæpius simulantes.—*Eur., Asia temp., Amer. bor.*

276. *ASPRELLA*. Spiculæ 2-∞-floræ. Glumæ vacuæ 0 v. in spiculis infimis parvæ, subulatæ, florentes aristatæ.—*Amer. bor., Nov. Zel.*

**Tribus XIII. Bambusæ.** Gramina elata, caule sæpius fruticoso v. arborescente. Folia plana, petiolo brevi cum vagina articulato. Spiculæ 1-∞-floræ. Glumæ inferiores 2-∞ vacuæ, gradatim ab infima parva ad florentes auctæ, nonnullæ interdum supra florentes minores vacuæ v. flores imperfectos foventes v. ad rudimenta reductæ. Paleæ sæpius magna, 2-carinata v. (in *Melocantheis*) 0. Lodiculæ sæpiissime 3, majusculæ. Stamina 3, 6 v. ∞. Styli v. rami stigmatosi 2 v. 3.

Excepta: Folia angusta basi cum vagina continua in *Planotia*.

Lodiculæ desunt in *Dinochloa*, valde irregulares in *Ochlandra*.

Subtribus 1. *Arundinarieæ*. *Stamina 3. Paleæ 2-carinata. Pericarpium tenue, semini adnatum.*

277. *ARUNDINARIA*. Spiculæ ∞-floræ, racemosæ v. paniculatæ. Glumæ inferiores vacuæ 1-2. Caulis suffrutescens rarius arborescens.—*Asia trop., Japonia, Amer. bor. et trop.*

278. *ARTHEROSTYLIDIUM*. Spiculæ ∞-floræ, in spiciis racemise secundæ. Glumæ inferiores vacuæ 3-4. Caulis suffruticosus v. arborescens.—*Amer. trop.*

279. *PHYLLOSTACHYS*. Spiculæ 1-4-floræ, spicatæ, spicis bracteis spathaceis imbricatis subinclusis. Glumæ inferiores vacuæ 2-3. Caulis arborescens.—*Japonia, China.*

280. *ATREBOSTACHYS*. Spiculæ 1-floræ, densissime globoso-capitatæ. Glumæ vacuæ 2, infima ad basin rhachillæ persistens, secunda distans florenti appressa. Caulis suffrutescens, scandens.—*Brasilia.*

281. *MEROSTACHYS*. Spiculæ 1-floræ, in spica unilaterali sessiles. Glumæ inferiores vacuæ 3-4. Caulis arborescens.—*Amer. trop.*

282. *CHUSQUEA*. Spiculæ 1-floræ, varie paniculatæ. Glumæ inferiores vacuæ 4, 2 parvæ persistentes, 2 florenti appressæ. Caulis suffrutescens v. arborescens.—*Amer. trop. et subtrop.*

283. *PLANOTIA*. Spiculæ 1-floræ, parvæ, in panicula numerosissimæ. Glumæ inferiores vacuæ 4. Caulis herbaceus, elatus. Folia angusta, cum vagina continua.—*Amer. trop.*

Subtribus 2. Eubambusæ. Stamina 6. Palea 2-carinata. Pericarpium tenue, semini adnatum.

Excepta: Palea floris terminalis spiculæ deest v. glumæ similis in *Oxytenanthera*.

\* *Filamenta libera.*

284. *NASTUS*. Spiculæ 1-floræ, anguste paniculatæ v. capitatæ. Glumæ inferiores vacuæ  $\infty$ . Ovarium glabrum. Caulis arborescens.—*Ins. Mascar.*

285. *GUADUA*. Spiculæ 2- $\infty$ -floræ, subspicatæ glomeratæ v. capitatæ. Glumæ inferiores vacuæ 2-6. Paleæ carinæ alatæ. Ovarium apice villosum. Caulis arborescens.—*Amer. trop.*

286. *BAMBUSA*. Spiculæ 2- $\infty$ -floræ, secus ramos paniculæ dissite glomeratæ. Glumæ inferiores vacuæ 3-4. Paleæ carina ciliata nec distincte alata. Ovarium apice villosum. Caulis arborescens, rarius suffrutescens v. scandens.—*Asia et Amer. trop. et subtrop.*

\*\* *Filamenta in tubum tenuem connata.*

287. *GIGANTOCHLOA*. Spiculæ  $\infty$ -floræ. Paleæ omnes 2-carinatæ. Inflorescentia et habitus *Bambusæ*.—*Ind. or., Archip. Malay.*

288. *OXYTENANTHERA*. Spiculæ 1- $\infty$ -floræ, flore terminali solo fertili cui palea 0 v. glumis similis. Cætera *Gigantochloæ*.—*Ind. or., Archip. Malay.*

Subtribus 3. Dendrocalamæ. Stamina 6. Palea 2-carinata. Pericarpium crustaceum v. carnosum, a semine liberum.

289. *DENDROCALAMUS*. Spiculæ 2- $\infty$ -floræ, secus ramos paniculæ dissite glomeratæ, flore sæpius uno solo fertili. Ovarium apice hirsutum. Caryopsis parvula, pericarpio crustaceo. Habitus *Bambusæ*.—*Ind. or., Archip. Malay., China.*

290. *MELICALAMUS*. Spiculæ 2-floræ, secus ramos paniculæ dissite glomeratæ, flore infero solo fertili. Ovarium glabrum. Caryopsis magna, pericarpio crasso carnosum. Habitus *Bambusæ*.—*Martaban.*

291. *PSEUDOSTACHYUM*. Spiculæ parvulæ, 1-floræ, secus ramos paniculæ laxè spicatæ, bracteata. Gluma inferior vacua 1, terminalis vacua subglobosa. Caryopsis parvula, depresso-globosa, pericarpio crustaceo.—*Himalaya.*

292. *GRESLANIA*. Spiculæ 1-floræ, in ramulis paniculæ spicatæ v. subcymoso-confertæ. Gluma terminalis vacua, tenuis v. rudimentaria. Caryopsis tereti-oblonga, pericarpio crasso celluloso.—*Nov. Caled.*

293. *TEINOSTACHYUM*. Spiculæ 1-floræ, secus ramos paniculæ subspicatæ, bracteata. Glumæ inferiores 1-2 vacuæ, terminalis vacua, angusta. Caryopsis haud magna, pericarpio crassiusculo.—*Ind. or.*

294. *CEPHALOSTIGMA*. Spiculæ 1-floræ, in capitulo globoso unico v. in glomerulis capituli-formibus secus pedunculum dissitis dense confertæ, bracteata. Glumæ inferiores vacuæ 1-2; rhachilla ultra florem nuda. Caryopsis oblonga, rostrata, pericarpio crassiusculo.—*Ind. or., Madagascar.*

Subtribus 4. Melocannæ. Stamina 6- $\infty$ . Spiculæ 1-floræ. Palea 0 (v. glumis simillima). Pericarpium crustaceum v. carnosum, a semine liberum.

295. *SCHIZOSTACHYUM*. Spiculæ secus pedunculum seu paniculæ ramos dissite glomeratæ, rhachilla ultra florem producta. Glumæ inferiores vacuæ  $\infty$ . Lodiculæ 2-3. Caryopsis parvula, pericarpio crustaceo v. duro. Habitus *Bambusæ*.—*Archip. Malay., China, ins. Pacif.*

296. *DINOCHLOA*. Spiculæ minimæ, secus ramos paniculæ disseite glomeratæ, rhachilla ultra florem non producta. Glumæ inferiores vacuæ 3-4. Lodiculæ 0. Caulis frutescens, altissime scandens.—*Archip. Malay.*

297. *MELOCANNA*. Spiculæ bracteata, in spicis unilateralibus densissime confertæ, rhachilla ultra florem non producta. Glumæ inferiores vacuæ  $\infty$ . Lodiculæ 2. Caryopsis maxima, pericarpio crassissimo carnosum.—*Ind. or.*

298. *OCHLANDRA*. Spiculæ majusculæ, dense capitata v. sulspicata. Glumæ inferiores

vacuæ 3-∞. Lodiculæ valde irregulares. Stamina sæpius ultra 6 (usque ad 30), filamentis varie connatis. Caryopsis maxima, pericarpio crassissimo carnosio.—*Penins. Ind. or., Zeylania.*

GENERA EXCLUSA, DELENDÆ, DUBIA V. NON SATIS NOTA.

EPIPHYSTIS, *Trin. Fund. Agrost.* 97, est ex eod. in *Mem. Acad. Petersb.* ser. 6, iii. 95, genuina **Cyperacea** et fortasse *Cyper*i ipsius species.

ÆCHMOPHORA, *Spreng. in Pfeiff. Nomencl. Bot.* i. 61, errore Pfeifferi admissa, in loco citato, *Spreng. Gen. Pl.* i. 74, deest, nec in ullo opere Sprengelii nobis noto invenitur.

PODOPOGON, *Ehrenb. in Lindl. Veg. Kingd.* 116, ACOPHORUM, *Gaudich. in Steud. Nomencl. ed.* 1840, 20, et ALLAGOSTACHYUM, *Nees in Steud. l. c.* 50, nomine tantum designata sunt nec vere edita.

RYTACHNE, *Desv. in Ham. Prod. Fl. Ind. Occid.* 11.—Spiculæ 2-floræ, in excavationibus rhacheos spicæ immersæ, solitariae, flore inferiore ♂ superiore ♂. Glumæ aristatæ, inferiores transversim rugosæ. Folia setaceo-convoluta.—In *Antillis*. Character nimis brevis *Leptureis* convenit, sed species nulla Antillana ex hac subtribu botanicis recentioribus nota.

XENOCHLOA, *Lichtenst. in Ræm. et Schult. Syst.* ii. 29, 501, gramen Capense, ex caractere valde manco nequaquam recognoscendum. In *Neesii Flora Africae Australis* omissum, a *Steudelio* post *Trinium* dubie ad *Phragmites* refertur. Nomen delendum.

PENTARRHAPHIS, *H. B. et K. Nov. Gen. et Sp.* i. 177, t. 60, gramen Mexicanum nec a nobis nec a *Fourniero* visum. Ex auctoris descriptione pluribus notis *Boutelouæ* (*Triathera*) convenit sed ab omnibus *Gramineis* nobis notis differt gluma inferiore ex aristas 5 basi subconnatis composita. Hic tamen, ut suspicatur *Fournier*, verisimiliter latet error e specimine imperfecto oriundus.

POLYSCHISTIS, *Presl, Rel. Hænk.* i. 294, t. 41, f. 12 ad 18, gramen Philippinense a nobis non visum. Valde affine dicitur *Pentarrhaphi* gluma inferiore e laciniis 4 longe pilosis composita, secunda lineari integra.

POGONOPSIS, *Presl, Rel. Hænk.* i. 333, t. 46, gramen Mexicanum nec a nobis nec a *Fourniero* visum. Ex icone et descriptione characteres plures *Andropogonis* exhibet, sed spica simplex spiculis more *Setarii* setis longis circumdatis.

ALLOTEROPSIS, *Presl, Rel. Hænk.* i. 343, t. 47, e *Monterey Californiæ*, ex icone et descriptione genus spurium videtur e graminibus diversis compositum. Icon princeps f. 1, spiculis exaristatis *Panicum leucophæum* v. speciem ei affinem referre videtur. Analyses f. 2 ad 8, glumam florentem aristiformem spicula duplo longiorem et spiculas steriles pedicellatas exhibentes *Andropogonis*, verisimiliter ad fragmenta plantæ alienæ casu in eadem charta servata delineata fuerunt. Cæterum fig. 2, 5 et 7 inter se male conveniunt, et descriptionem *Preslii* intelligere nequimus.

ASTHENOCHLOA, *Büse in Pl. Jungh.* 367, genus ad specimen Javanicum imperfectum descriptum nec a nobis nec a *Miquelio* visum, caractere valde manco nequaquam recognoscendum dehinc omnino delendum. Eadem ratione delenda videntur genera 4 sequentia *Stedeliana*: LACHNOCHLOA, *Steud. Syn. Pl. Glum.* i. 5, a *Senegambia*; descriptio pessima speciminis manci nonnullis notis *Andropogonem* refert sed stamina 6; KAMPMANNIA, *Steud. l. c.* 34, gramen *Novo-Zelandicum* sine dubio jam sub alio quodam nomine editum, sed minime recognoscendum; DISAKISPERMA, *Steud. l. c.* 287, gramen Mexicanum a *Fourniero* dubie ad *Distichlis* relatum; KERINOZOMA, *Steud. l. c.* 358, species v. varietates 2 Javanicæ forte ad *Ischæmum muticum*, *Linn.*, referendæ.

LEPTUROPSIS, *Steud. Syn. Pl. Glum.* i. 357.—Spiculæ 2-floræ, in spica simplici ad articulos rhacheos solitariae. Glumæ inferiores vacuæ 2, aristatæ, altera latior herbacea 5-nervis, altera angustior 3-nervis, tertia florem ♂ fovens, hyalina, mutica, terminalis sub flore ♂ hyalina aristata. Palea minor. Stylus simplex, stigmate elongato longiuscule penicillato. Gramen basi ramosum, tenerimum, foliis subsetaceis, spica terminali.—Species 1, ins. *Loss Guinææ incola*, a nobis non visa. Genus pluribus notis *Leptureis* convenire videtur sed spicula *Andropogonearum*.

HALOCHLOA, *Grisob. Symb. Fl. Argent.* 285.—Spiculæ unisexuales, masculæ solæ notæ, in axillis foliorum floralium solitariae 1-3-floræ. Glumæ vacuæ ad basin spiculæ 0, florentes chartaceo-concavæ, oblongo-lanceolatae, acuminatæ, 3-nervos, summa si adsit imperfecta vacua. Palea glumæ subæquilonga, 2-carinata. Lodiculæ 0. Stamina 3, antheris linearibus.—Frutex ramulis ad nodos divisus v. fasciculatis. Folia brevina, rigida, apice angusto pungentia, demum bifariam imbricata, superiora spiculam foventia.—Species 1, e provincia Argentina Cordoba, a nobis non visa. Genus floribus fœmineis ignotis adhuc valde dubium, ab auctore *Chusquea* potius quam *Munroa* affine dicitur sed nec habitus nec characteres bene *Bambuseas* reformat.

CHABOISSÆA, *Fourn. Gram. Mex.* 112.—Spiculæ 2-floræ, paniculatæ, flore inferiore hermaphrodito superiore sterili. Glumæ inferiores vacuæ, inæquales, superiore majore; florens ampla integra,

acuminata, margine ciliata. Stamina 3. Styli longi, stigmatibus plumosis. Gramen glabrum, caule filiformi. Folia linearia. Panicula longa, contracta, radiis longis compositis alternis remotis basi nudis.—Species 1, Mexicana, a nobis non visa. Genus ex caractere dato ad *Festuceas* referendum videtur, sed glumarum venatione indescripta de subtribu incerti sumus.

Genera plurima a Rafinesquio verbis paucis indicata nec rite definita sub silentio præterimus, omnia verisimiliter sub aliis nominibus nota.

### TRIBUS I. PANICEÆ.

1. *Reimaria*, Fluegge, *Gram. Monogr.* 213, *pro parte*.—Spiculæ acuminatæ, in rhachi spicæ unilateralis subsessiles, cum pedicello articulatæ, alternatim dissitæ, flore unico hermaphrodito terminali. Glumæ 2, infima vacua, membranacea, 3-5-nervis, acuta, secunda florens vix brevior, paleam parum breviorē floremque amplectens, mox parum indurata. Stamina 2. Styli a basi distincti, stigmatibus longe plumosis. Caryopsis gluma paleaque leviter induratis inclusa, oblonga, compressiuscula, libera.—Gramina basi diffuse ramosissima, caulibus adscendentibus. Spicæ (v. paniculæ simplicis ramuli) indivisæ, apicem versus pedunculi plures rarius 2, erectæ v. demum reflexæ, una pedunculū terminante. Spiculæ secus rhachin tenuem v. parum dilatatum 2-seriatæ, arcte appressæ, exaristatæ.

Species 4, Americæ tropicæ et borealis subtropicæ incolæ. *Steud. Syn. Pl. Glum.* i. 16. *Trin. Sp. Gram.* t. 275, 276. *H. B. et K. Nov. Gen. et Sp.* t. 21. *Dæll in Mart. Fl. Bras.* ii. ii. 35, t. 12, 13.

Spicæ in speciebus typicis tenuissimæ brevesque, in *R. aberrante*, Dæll, spicæ rhachis marginatæ; in *R. oligostachya*, Munro, MS. (*Paspalo vaginato*, Curtis Pl. exs. n. 3566, Chapm. Fl. S. U. St. 570, e Florida, et Wright, Pl. Cub. exs. n. 3854, e Cuba) spiculæ fere *R. aberrantis*, sed spicæ sæpissime 2 nec 6-15, rhachi dilatata spiculis sublato.

2. *Paspalum*, Linn. *Gen. n.* 75.—Spiculæ obtusæ v. rarius breviter acuminatæ, in rhachi spicæ unilateralis v. subdistichæ sessiles v. brevissime pedicellatæ, cum pedicello articulatæ, singulæ v. per paria alternatim dissitæ v. confertæ, flore unico hermaphrodito terminali. Glumæ 3 v. extima deficiente rarius 2, sæpius parum inæquales, exteriores 2 vacuæ, membranaceæ, æquales v. extima in paucis speciebus minima v. evanida, interior florens plus minus concava, mox indurata, paleam breviorē amplectens. Stamina 3. Styli a basi distincti, sæpius elongati, stigmatibus plumosis. Caryopsis ovoidea v. oblonga, gluma paleaque induratis inclusa, libera.—Gramina habitu polymorpha. Spicæ (v. paniculæ simplicis ramuli) in pedunculo elongato nunc solitariæ v. geminæ, nunc plures ad apicem pedunculi subdigitatim approximatae v. secus pedunculū dissitæ, simplices, interdum valde numerosæ, patentes v. reflexæ. Spiculæ ad normam 2-seriatæ, in rhacheos latere inferiore seu exteriori secus lineam centalem rectam v. flexuosam alternæ, interdum dissitæ, specie 1-seriatæ, v. utrinque geminatim affixæ una cujusve paris brevissime pedicellatæ, v. densissime confertæ 4-seriatæ apparent.

Species vix 160, etsi ultra 300 ab auctoribus variis editæ, per regiones tropicas v. subtropicas utriusque orbis latissime dispersæ, pro maxima parte Americanæ, et ex his nonnullæ in regionibus calidioribus orbis veteris jam frequentissimæ, verisimiliter inquilinæ, perpaucae in Africa v. Asia inter tropicos endemicæ, 2 solæ in Europa australi inquilinæ. *Beauv. Agrostogr.* 10, t. 5, f. 3. *Steud. Syn. Pl. Glum.* i. 16. *Dæll in Mart. Fl. Bras.* ii. ii. 39. *Fourn. Gram. Mex.* 4. *Benth. in Journ. Linn. Soc.* xix. 34.

Species a Trinio imprimis ad spicularum magnitudinem ordinatæ fuerunt. Nees genus in sectiones 6 dividit, Dæll in sectiones 4. Nos sectiones 3 sequentes bene distinctas agnoscimus, quarum una in subsectiones seu series plures minus definitas divisibilis:—

1. *Eupaspalum*. Spiculæ, in facie inferiore v. exteriori rhacheos spicæ, secus lineam elevatam v. costam centalem sigillatim v. geminatim alternæ, haud immersæ, gluma inferiore cum florente costam spectante (spiculæ adversæ, Nees).

Subsect. 1. *Anachyris*. Gluma vacua 1. *Dæll in Mart. Fl. Bras.* ii. ii. 40, t. 14 (sect. *Erema-chyrrion*). *H. B. et K. Nov. Gen. et Sp.* t. 26. *Trin. Spec. Gram.* t. 271. *Hook. Ic. Pl.* t. 1190. *ANACHYRIS*, Nees in *Hook. Kew Journ.* ii. 103. Subsectio nimis artificialis, species singulæ sæpe

variis e sect. *Opisthion*, Döll, affiniores quam inter se. In *P. (Eremachyrio) sesquiglume*, Döll, specie *P. (Opisthion) maritimo*, Trin., valde affini, glumæ vacuæ 2, extima minima. In *P. pallido*, H. B. et K.; Kunth, Revis. Gram. t. 204, a Döllio in *Eremachyrio* incluso, glumæ vacuæ 2 æquales, dum in simillimo *P. candido*, H. B. et K. l. c. t. 25, gluma extima deest, utraque species melius sub *Pseudoceresia* militat.

Subsect. 2. *Opisthion*. Glumæ vacuæ 2. Spicæ rhachis angusta, plana v. vix concava. Döll in Mart. Fl. Bras. ii. ii. 44, t. 15 (excl. sp. ∞). Trin. Spec. Gram. t. 98 ad 106, 108 ad 118, 120 ad 132, 134 ad 143, 269, 270, 272 ad 274. Kunth, Rev. Gram. t. 10, 11, 205 ad 208. Jacq. Ic. Rar. t. 11. Willd. Hort. Berol. t. 74. Jacq. Ecl. Gram. t. 23. Beauv. Fl. Ow. et Ben. t. 85, 92. Colla, Pl. Rar. Chil. t. 59. Buchan. N. Zeal. Grass. t. 10. H. B. et K. Nov. Gen. et Sp. t. 23, 24, 28.

De speciebus spiculis minimis pedicellatis sæpius fasciculatis ab auctoribus nunc *Panico* nunc *Paspalo* relatis, conf. infra sub *Panico* (*Digitaria*).

Subsect. 3. *Pseudoceresia*. Glumæ vacuæ 2. Spicæ (seu rami paniculæ) numerosæ, breves, patentes, rhachi plus minus dilatata concava viridi, spiculis parvulis glabris. Huc *P. stoloniferum*, Bosc. *P. repens*, Berg., affinesque. Jacq. Ic. Rar. t. 302. Bosc. in Trans. Linn. Soc. ii. t. 16. Rudge, Pl. Gui. t. 26. Kunth, Rev. Gram. t. 164. CERESIA, Ell. Bot. S. Car. et Georg. i. 109, non Pers.

Subsect. 4. *Ceresia*. Glumæ vacuæ 2. Spicæ paucae v. solitariae, rhachi margine v. intra marginem membrana longitudinali discolori spiculas basi amplectente instructa. Spiculæ 2-4-seriatim imbricatæ, oblongæ, compressæ, longe ciliatæ. Species nobis notæ 7, quarum 6 Americæ australis incolæ; una Mexicana (*Liebmann* n. 105). Döll in Mart. Fl. Bras. ii. ii. 92, n. 74 ad 79. Trin. Spec. Gram. t. 119, t. 284 ad 286. CERESIA, Pers. Syn. Pl. i. 85. Beauv. Agrostogr. 9, t. 5, f. 4.

2. *Cabrera*. Spiculæ in facie inferiore v. exteriori rhacheos spicæ ad latera costæ centralis alternæ, singulæ in excavationibus rhacheos immersæ, gluma exteriori cum florente in exterum spectantibus, Species unica, *P. aurum*, H. B. et K. Nov. Gen. et Sp. i. 93, t. 27, non Trin. (*P. immersum*, Nees, Agrost. Bras. 82). CABRERA, Lag. Elench. Hort. Matr. Nov. Gen. et Sp. 5.

Species cæteræ a Neesio, Döllio aliisque ad sectionem *Cabrera* relatæ ad *Anastrophum* pertinent, inter quas synonymon *Cabrera chrysoblepharis*, Lag., perperam ad *P. exasperatum*, Nees, v. ad speciem novam refertur, nam descriptio optima Lagasce ad amussim cum *P. aureo*, H. B. et K. non Trin. convenit.

AXONOPUS, Beauv. Agrostogr. 12, a pluribus pro synonymo *Cabrera* allatum, genus fictum fuit ad species varias *Eupaspali* cum *Panico cimicino*, Retz, et auctor *P. (Cabrera) aureum* H. B. et K. dubie tantum addidit.

3. *Anastrophus*. Spiculæ ad utrumque latus rhacheos spicæ angustæ subflexuosæ sessiles, alternæ, subdistichæ, gluma infima florenteque a rhachi aversis. (Spiculæ inversæ, Nees.) Spicæ sæpius plures confertæ suberectæ. Nees, Agrostogr. Brasil 20 (sect. *Digitariæ*). Döll in Mart. Fl. Bras. ii. ii. 100 (sect. *Emprostion*). ANASTROPHUS, Schlecht. in Bot. Zeit. 1850, 681.

LAPPAGOPSIS, Steud. Syn. Pl. Glum. i. 112, est *Paspalum dissitiflorum*, Trin., species a plerisque *Anastrophis* diversa spicis pilis longis dense ciliato-hirtis et cum nonnullis aliis pro subsectione habenda. In *P. fastigiato*, Nees, glumæ vacuæ longe ciliatæ, rhachis nuda; in *P. senescente*, Nees, glumæ vacuæ ciliatæ at brevius quam rhachis; in *P. dissitifloro*, Trin., glumæ vacuæ rhachesque longe ciliatæ; in speciebus nonnullis a Neesio Döllio (Mart. Fl. Bras. ii. ii. 114, t. 16; Trin. Spec. Gram. t. 97) aliisque *Cabrera* inclusis, rhachis longe ciliata, glumæ nudæ, sed spiculæ nequaquam in rhacheos facie immersæ.

*Paspalum saccharoides*, Trin. Spec. Gram. t. 107 (*Panicum saccharoides*, Kunth, Rev. Gram. i. 237, t. 30), a genere differt habitu fere Saccharoideo, spicis v. paniculæ ramis elongatis pilis longis argenteis sericeis, spiculis minimis tenerrimis caducissimis, glumis omnibus paleaque membranaceo-hyalinis enervibus, gluma exteriori ad utrumque latus nervo valido longe piloso-ciliato cincta, quapropter *Andropogoneis* accedit, sed spicularum insertio et glumarum numerus omnino *Paspali*.

3. *Anthænantia*, Beauv. Agrostogr. 48, t. 10, f. 7. (*Aulaxanthus*, Ell. Bot. Carol. et Georg. i. 102. *Aulaxia*, Nutt. Gen. Pl. N. Amer. i. 47. *Leptocoryphium*, Nees, Agrost. Bras. 83.)—Spiculæ ovatæ v. breviter acuminatæ, paniculatæ, cum pedicello articulatæ, flore hermaphrodito unico terminali, addito interdum inferiore masculino. Glumæ 3, 2 exteriores parum inæquales, membranaceæ, vacuæ v. secunda paleam parvam v. florem ♂ fovens, interior florens paullo brevior, sub anthesi membranacea v. fere hyalina, demum rigidula v. leviter indurata, paleam paullo brevior floremque includens. Stamina 3. Styli distincti, stigmatibus penicillato-plumosis. Caryopsis glumis paleaque laxè inclusa, libera.

—Gramina erecta, multicaulia v. cæspitosa. Panicula oblonga, laxiuscula, plus minus sericeo-pilosa, floribunda, ramulis pedicellisque breviter filiformibus.

Species 3, quarum 2 e civitatibus australioribus Americæ borealis, gluma secunda paleam v. florem ♂ sæpe nec semper fovente, tertia (*Leptocoryphium*) per Americam tropicam late dispersa cujus gluma secunda tanquam nota semper vacua. Kunth, *Enum. Pl.* i. 98, et *Rev. Gram.* t. 20 (*Panicum*). H. B. et K. *Nov. Gen. et Sp.* t. 29 (*Paspalum*). Kunth, *Rev. Gram.* t. 163 (*Milium*). Döll in *Mart. Fl. Bras.* ii. ii. 120, t. 17 (*Leptocoryphium*). Benth. in *Journ. Linn. Soc.* xix. 38.

Genus a *Panici* sect. *Tricholena* differt glumæ exterioris defectu. Squamellæ spiculæ laterales a Beauvoisio delineatæ, sunt, fide Kunthii, laminæ a gluma florente vi separatæ.

4. **Amphicarpum**, Kunth, *Rev. Gram.* i. 28.—Spiculæ abortu unisexuales, 1-floræ, ovatæ, cum pedicello articulatae; masculæ angustæ paniculatæ, femineæ duplo majores, in scapis aphyllis solitariæ. Glumæ 3, 2 exteriores parum inæquales, vacuæ, membranaceæ, interior florens paullo brevior, tenuiter membranacea, in spicula ♀ demum leviter indurata, palea paullo brevior. Stamina, v. in spicula ♀ staminodia, 3. Styli distincti, stigmatibus plumosis; in spicula ♂ pistillum adest sed effectum marcescensque. Caryopsis in spicula ♀ oblonga, gluma paleaque induratis inclusa, cum glumis vacuis stipantibus decidua.—Gramina perennia, pilosa, foliis planis. Panicula ♂ in caule foliato terminalis, angusta, erecta, laxa, sed parum ramosa. Spiculæ fertiles duplo majores, in scapis radicalibus brevibus aphyllis solitariæ.

Species 2, boreali-Americanæ. Kunth, *Enum. Pl.* i. 67. Pursh, *Fl. Amer. Sept.* i. t. 2 (*Milium*). Chapm. *Fl. S. U. St.* 572.

Spiculæ ♀ in scapis aphyllis solitariæ illas formarum nonnullarum *Scirpi supini* supra p. 1038 notatas in mentem revocant. Character tamen in *Amphicarpo* constans videtur, nec hucusque in specie ulla *Panici* v. *Paspali* observatus, sed ulterius querendus.

5. **Eriochloa**, H. B. et K. *Nov. Gen. et Sp.* i. 94, t. 30, 31. (*Edipachne*, Link, *Hort. Berol.* i. 51. *Helopus*, Trin. *Fund. Agrost.* 103.)—Spiculæ ovatæ, sæpius acuminatæ, in rhachi spicæ unilateralis subsessiles v. brevissime pedicellatæ, cum pedicello articulatae, flore unico terminali hermaphrodito. Glumæ 3, exteriores 2 vacuæ, parum inæquales, membranaceæ, sæpius plus minus acuminatæ, interior florens brevior, mox indurata, obtusa, mucrone v. arista glumis vacuis brevior coronata, paleam muticam floremque includens. Stamina 3. Styli a basi distincti, stigmatibus plumosis. Caryopsis gluma paleaque induratis inclusa, libera.—Gramina (an semper?) perennia, foliis planis flaccidis. Spicæ (v. paniculæ simplices rami) nunc paucæ breves dissitæ, nunc plures elongatæ confertæ floribundæ, rhachi pedicellisque pubescentibus hirsutis longe setosis v. glabris. In una specie v. varietate (*E. annulati* var. *acrotricha*) setæ nonnullæ rigidæ pedicellos terminant more *Panici* sect. *Ptychophylli*.

Species editæ fere 20, quarum 5 bene distinctæ videntur; ex his 2 in America tropica endemice, *E. distachya*, H. B. et K., et *E. grandiflora*, Trin.; tertia, *E. trichopus*, Hochst., in Africa tropica; quarta, *E. villosa*, Kunth, in Asia orientali; cæteræ omnes (*E. annulata*, *E. punctata*, etc.) ad varietates *E. polystachya*, H. B. et K., reducendæ, speciei in regionibus tropicis subtropicisque utriusque orbis frequentissime dispersæ. Trin. *Spec. Gram.* t. 133, 155, 156 (*Paspalum*), t. 277 et 278 (*Helopus*). Kunth, *Revis. Gram.* t. 13. Döll in *Mart. Fl. Bras.* ii. ii. 123, t. 19 (*Helopus*). *Fourn. Gram. Mexic.* 13 (*Helopus*). Benth. in *Journ. Linn. Soc.* xix. 39.

MONACHNE, Beauv. *Agrostogr.* 49, t. 10, quoad f. 9, videtur *Eriochloa* species, gluma tamen secunda florem ♂ fovente, quod nunquam vidimus; f. 10 est *Panicum reptans*, Kunth.

6. **Beckmannia**, Host, *Gram. Austr.* iii. 5, t. 6. (*Bruckmannia*, Nutt. *Gen. N. Amer.* Pl. i. 48.)—Spiculæ latæ, compressæ, in rhachi spicæ unilateralis subsessiles, cum pedicello brevissimo articulatae, floribus 2 hermaphroditis, terminali solo tamen sæpius fertili. Glumæ 4, 2 exteriores vacuæ membranaceæ, concavæ, subnaviculares, obtusæ v. brevissime acuminatæ, dorso vesiculosæ, 2 florentes angustiores, subæquilongæ, concavo-carinatae, acutæ v. mucronatæ, tenuiter membranaceæ, demum rigescentes; palea hyalina, 2-carinata,

gluma vix brevior. Stamina 3. Styli distincti, breves, stigmatibus plumosis. Caryopsis oblonga, gluma paleaque acuminatis rigidis v. leviter induratis inclusa, libera.—Gramen erectum, foliis planis, habitu fere *Panici colonum*. Panicula terminalis, elongata, simplex v. subramosa, spicis secus axin sessilibus erectis; spiculæ secus faciem inferiorem rhacheos spicarum 2-seriatim imbricatæ, ob vesiculas glumarum prominentes specie 4-seriatæ.

Species 1, Europæ orientalis, Asiæ temperatæ et Americæ borealis incolæ. *Beauv. Agrostogr.* 96, t. 19, f. 6. *Kunth, Enum. Pl.* i. 27. *Reichb. Ic. Fl. Germ.* t. 25. *Nees, Gen. Fl. Germ. Monocot.* i. n. 40. *Ten. Fl. Nap.* t. 5.

Nomen *Юащмнеа*, Ten., a Kunthio citatum, nunquam editum fuit, hæc planta enim a Tenoreo in loco citato sub nomine *Beckmanniæ* descripta et delineata est. Nomen *Bruckmannia*, a Nuttallio errore forte scriptoris Jacquinio tribuitur, nam in auctoris Horto Schœnbrunensi, hæc species nec descripta nec delineata est.

7. *Isachne*, R. Br. *Prod.* 196.—Spiculæ æqualiter 2-floræ, paniculatæ, rhachilla supra glumas inferiores articulata brevissima ultra flores non producta, floribus hermaphroditis v. uno abortu sterili. Glumæ 2 inferiores vacuæ persistentes v. sigillatim caduæ. membranaceæ, sæpius acutiusculæ, muticæ, parum inæquales; 2 florentes parum breviores obtusæ membranaceæ, fructiferæ cum palea inclusa plus minus induratæ sæpius hemisphæricæ faciebus planis sibimet applicitæ. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis gluma paleaque inclusa, libera.—Gramina perennia v. rarius annua, cæspitosa v. basi decumbentia v. reptantia, foliis planis sæpe rigidulis. Panicula terminalis, pyramidata v. elongata, ramulis tenuibus sæpe filiformibus divergentibus v. divaricatis parce ramulosis. Spiculæ sæpius parvæ, nunc minimæ subglobosæ, secus ramulos dissite pedicellatæ v. subsessiles.

Species ad 20, per regiones calidiores utriusque orbis late dispersæ, pleræque gerontogæ, Asiaticæ v. Africanæ, ab ins. Mascarensibus usque ad Australiam et Japoniam extensæ, paucae Americane tropicæ. *Kunth, Enum. Pl.* i. 135; *Rev. Gram.* t. 33, 117. *Trin. Spec. Gram.* t. 85, 86. *Buchan. N. Zeal. Grass.* t. 12. *Döll in Mart. Fl. Bras.* ii. ii. 273, t. 35. *Fourn. Gram. Mex.* 34.

Genus caractere artificiali, spicularum rhachilla supra nec infra glumas inferiores vacuas articulata, ad seriem *Poacearum* nec *Panicacearum* pertinet, sed affinitas naturalis certe maxima cum *Panici* sect. *Eupanicæ* (*Effusus*), et suadentibus Hackelio aliisque nunc ad *Paniceas* restituimus. *Panicum Gardneri*, Thw. *Enum. Pl. Zeyl.* 359, ut rite observavit auctor, *Isachni Walkeri*, Wight, simillimum est, et nobis omnino congener videtur, etsi flos unus spiculæ haud raro (nec semper) sterilis evadit, pedicellus more generis inarticulatus est, eique referenda videtur *Isachne nilaghirica*, Hochst. GRAYA, *Nees ex Steud. Syn. Pl. Glum.* i. 119, quoad synonymon Wightianum, est *Isachne pulchella*, Roth (*Panicum bellum*, Steud.; *P. malaccense*, Trin.). Character tamen genericum Steudellii haud convenit.

8. *Panicum*, Linn. *Gen.* n. 76. (Thalasium, Spreng. *Syst. Cur. Post.* 22, 30, ex char.)—Spiculæ ovatæ, acuminatæ v. obtusæ, rarius globosæ, cum pedicello articulatæ, laxæ v. dense paniculatæ, v. in spicis (seu paniculæ simplicis ramis) indivisis secus rhachin fasciculatæ, flore hermaphrodito unico terminali, addito sæpe inferiore masculo. Glumæ sæpius 4, infima vacua, spicula multo brevior nunc minima v. in paucis speciebus evanida, rarius spicula paullo tantum brevior, nunquam aristata; secunda et tertia sæpius subæquales, membranaceæ, muticæ v. rarius aristatæ, vacuæ v. tertia paleæ rudimentum v. florem masculum fovens; terminalis florem ♀ fovens, cæteris spicius brevior obtusiorque, rarius mucrone coronata, cum palea paullo brevior inclusæ chartacea v. demum indurata. Stamina (an semper?) 3. Styli distincti v. ima basi brevissime connati, stigmatibus plumosis. Caryopsis gluma paleaque rigidulis v. induratis inclusa, libera.—Gramina annua v. perennia, humilia v. elata, habitu vario. Inflorescentia interdum e spicis simplicibus secus pedunculum dissitis v. ad apicem approximatis, sæpius tamen varie interdum ample laxissimeque paniculata.

Species in herbariis nostris servatæ verisimiliter inter 250 et 280, ab auctoribus nonnullis triplo plures enumeratæ, per regiones calidiores utriusque orbis latissime dispersæ, nonnullæ fere cosmopolitanæ, in Europa tamen uti in Asiæ et Americæ borealis temperatis paucae. *Beauv. Agrostogr.* 45,

t. 10, f. 1 ad 5. Steud. Syn. Pl. Glum. i. 37, excl. sect. 5, 7, 15 et 16. Döll in Mart. Fl. Bras. ii. ii. 127, excl. sect. 4, 5, 6, 8. Fourn. Gram. Mex. 16. Benth. in Journ. Linn. Soc. xix. 40.

Genus vastum et polymorphum, sed difficillime in sectiones distinctas dividendum, nec limitibus certis a *Paspalo* separatur. Gluma infima in *Digitariis* pluribus et hinc inde in aliis sectionibus minutissima est v. omnino deficiens, et inflorescentia specierum nonnullarum *Brachiariæ* omnino *laspali*. Sectiones sequentes quoad species plerasque bene distinctæ videntur, sed sæpe intermediis numerosis connectuntur et forte melius ut in Fl. Austral. pro seriibus habendæ.

1. *Digitaria*. Spiculæ parvæ glabræ v. pubescentes, secus paniculæ ramos simplices spiciformes secundæ, inæqualiter pedicellatæ, geminæ v. præsertim in parte inferiore cujusve rami fasciculatæ v. brevissime racemosæ. Gluma infima sæpe minuta v. deficiens. Species fere 40, tropicæ v. temperatæ, quarum una fere cosmopolitana. Steud. Syn. Pl. Glum. i. 38. Schreb. Besch. Gräs. t. 16. Kunth, Rev. Gram. t. 106, 110. Trin. Spec. Gram. t. 92 ad 94, 144, 148, 149. Host, Gram. Austr. ii. t. 17, iv. t. 15. Brongn. in Duperr. Voy. Cog. Bot. t. 20 (*Paspalum*). Döll in Mart. Fl. Bras. ii. ii. 128, t. 20. SYNTHESIMA, Walt. Fl. Carol. 76. DIGITARIA, Rich. in Pers. Syn. Pl. i. 84. Beauv. Agrostogr. 50, t. 10, f. 12. Reichb. Ic. Fl. Germ. t. 27. Nees, Gen. Fl. Germ. Monocot. n. 18. Guss. Pl. Inarim. t. 19. Parlat. in Webb. Phytogr. Canar. iii. t. 246. Torr. Fl. N. York, t. 146, 147.

In *P. glabro*, Gaudin., *P. filiformi*, Linn., *Paspalo brevifolio*, Fluegge, aliisque pluribus gluma infima sæpiissime deest, et species ab auctoribus nunc *Paspalo* nunc *Panico* tribuuntur.

In *P. platycarpho*, Trin. Spec. Gram. t. 356, e Bonin, spicarum (seu paniculæ ramorum) rhachis fere ut in *Paspalo* (*Ceresia*) membranaceo-dilatata. In *Digitariis* typicis paniculæ rami ad apicem pedunculi approximati quasi digitati, in speciebus variis secus pedunculum plus minus distant.

2. *Trichachne*. Spiculæ sericeo-pilosæ v. longe ciliatæ, secus paniculæ angustæ ramos simplices erectos sessiles v. breviter pedicellatæ, fasciculatæ v. rarius geminæ v. sparsæ. Glumæ longiores sæpe acuminatæ, acumine interdum in setam brevem producto, nunc omnes dense sericeo-pilosæ, nunc secunda sola pilis longis ciliata. Trin. Spec. Gram. t. 91, 220. Döll in Mart. Fl. Bras. ii. ii. t. 21. Kunth, Rev. Gram. t. 31, 165. TRICHACHNE, Nees, Agrostol. Bras. 85. ACICARPA, Raddi, Agrost. Bras. 31. UROCHLOA, Kunth, Rev. Gram. i. 31, t. 103. CORIDODCHLOA, Nees in Edinb. N. Phil. Journ. xv. 381. ERIACHNE, Philippi, Sert. Mend. alt. 49. HOLOSETUM, Steud. Syn. Pl. Glum. i. 118, et forte MESOSETUM, Steud. l. c.

BLUFFIA, Nees, Fl. Afr. Austr. Gram. 61, ex Africa australi, vix specificè differt a *P. semialato*, Br., ex Asia et Australia, quæ *Coridochloa*, Nees, v. *Urochloa*, Kunth. Præterea ad sect. *Trichachnen* pertinent *P. leucophæum*, H. B. et K., in utroque orbe frequens, *P. Gayanum*, Kunth, ex Africa, aliæque pauca.

3. *Diplaria*. Spiculæ secus rhachin flexuosam spicæ terminalis simplicis rectæ sessiles, alternæ, distichæ, primum arcte appressæ, demum patentes. Glumæ exteriores acutæ v. acuminatæ, dorso sæpius sericeo-pilosæ v. setosæ, infima cæteris parum brevior. Species ad 8, omnes Americane: *P. rotboellioides*, H. B. et K., affinesque, *P. exaratum* et *P. ferrugineum*, Trin., *P. pappophorum*, Nees, affinesque. H. B. et K. Nov. Gen. et Sp. t. 32. Trin. Spec. Gram. t. 90, 194, 281 ad 283. Döll in Mart. Fl. Bras. ii. ii. t. 28, 29.

Inflorescentia *Paspali* sect. *Anastrophæ*; differt gluma inferiore evoluta.

4. *Thrasya*. Spiculæ in facie inferiore v. exteriori rhacheos spicæ simplicis terminalis more *Paspalorum Ceresiarum* membranaceo-dilatatæ complicatæ specie 1-seriatæ. Glumæ 3 exteriores subæquales v. extima minima, tertia interdum rigidior florem ♂ fovens, facile 2-partita. Species paucæ Americane. THRASYA, H. B. et K. Nov. Gen. et Sp. i. 120, t. 39. Huc *P. ansatum*, Trin. Spec. Gram. t. 279, vix a specie typica distinctum, *P. thrasyoides*, Trin. l. c. t. 151 (*Thrasya hirsuta*, Nees, Kunth, Rev. Gram. t. 102) rhachii spicæ angustiore, et *P. petrosum*, Trin. l. c. t. 280 (TYLOTHRASYA, Döll in Mart. Fl. Bras. ii. ii. 295, t. 37). Hæc species insignis est pedicello supra articulationem more *Eriochloæ* calloso-incrassato, gluma extima minutissima non tamen nostro sensu a simillima *Thrasya paspaloides*, H. B. et K., generico separanda. Pedicellus apice leviter callosus in *P. latifolio* aliisque c. variis sectionibus.

5. *Harpostachys*. Spiculæ in latere inferiore rhacheos angustæ spicæ simplicis longe pedunculatæ sæpe arcuatæ sessiles, 2-4-seriatæ, ovatæ v. orbiculatæ, obtusæ, glabræ v. rarius angustiores pilosæque. Pedunculi simplices, sed sæpius e vagina superiore plures. Species 3, Americane, Trin. Spec. Gram. t. 145, 146. Kunth, Revis. Gram. t. 16, 104.

DIMORPHOSTACHYS, Fourn. in Comptes Rendus Acad. Par. lxxx. 441, ex ejusd. Gram. Mex. 13, includit *P. monostachyum*, H. B. et K., e sectione *Harpostachye* nonnullasque alias *Brachiariis* v. *Digitariis* affines v. nobis ignotas, quibus spiculæ duæ ejusdem paris parum dissimiles et gluma infima

in una quam in altera minore v. omnino deficiente. Hic character tamen nobis valde incertus videtur, in *P. (Digitaria) sanguinali*, *P. glabro*, affinibusque glumæ infimæ minimæ præsentia vel absentia minime constans.

6. *Brachiaria*. Spiculæ in latere inferiore spicarum (seu ramorum paniculæ simplicis) more *Paspali* sessiles v. brevissime pedicellatæ, sigillatim v. rarius geminatim 2-seriatæ confertæque, v. dissitæ et specie 1-seriatæ, exaristatæ. Species fere 40, pleræque gerontogæ, nonnullæ tamen in America endemicæ. *Trin. Spec. Gram.* t. 147, 150, 158, 159, 168, 172, 173, 184 ad 186, 335, 356. *Kunth, Rev. Gram.* t. 17, 18, 116. *Jacq. Ecl. Gram.* t. 2. *Sibth. Fl. Gr.* t. 59. *Webb. Phytogr. Canar.* t. 245.

Sectio quoad species typicas *P. flavidum* et *P. fluitans*, Retz, *P. paspaloides*, Pers., affinesque distinctissima, inflorescentia omnino *Paspali*, ab hoc genere non differt nisi glumæ infimæ parvæ præsentia. Species aliæ tamen omnino intermediæ sunt inter *Brachariam* et *Eupanicum*; e.g. *P. adpersum*, Trin. Spec. Gram. t. 169, *P. argenteum*, Br., Trin. l. c. t. 170, *P. Petiveri*, Trin. l. c. t. 176, *P. polyphyllum*, Br., Trin. l. c. t. 177, 2 priores potius sub *Brachiariis*, 2 posteriores sub *Eupanicis laxifloris* collocamus.

PARACTÆNIUM, Beauv. *Agrostogr.* 47, t. 10, f. 6, ex icona et char., videtur forma depauperata *P. gracilis*, Br., speciei Australianæ.

In *P. trachystachyo*, Trin. Spec. Gram. t. 167 (*P. perforato*, Trin. l. c. 175), spicæ laxiusculæ, spiculis hirsutis præsertim in spicis inferioribus subfasciculatis; in *P. brachystachyo*, Trin. l. c. t. 157, et *P. scopulifero*, Trin. l. c. t. 165, spiculæ pariter hirsutæ, spicis brevibus densis. Hæ species omnes Americanæ.

*P. Helopus*, Trin. Spec. Gram. t. 183 (UROCHLOA, Beauv. *Agrost.* 52, t. 11, f. 1), etiam a Kunthio *Rev. Gram.* t. 14, in *Urochloa* sua inclusum fuit ob mucronem apicem glumæ fertilis coronantem, cæteris tamen characteribus et habitu a *P. (Trichachne v. Urochloa) semi-alato* longe recedit et *Brachiariis* tribuendum.

7. *Echinochloa*. Spiculæ secus ramos simplices paniculæ sessiles, pleræque 3-4-seriatim v. irregulariter dense confertæ. Glumæ secunda tertiæque sæpiissime plus minus interdum longissime aristatæ. Species 5 v. 6, quarum 2 (*P. colonum*, Linn., et *P. crusgalli*, Linn.) fere cosmopolitanæ, vulgares et valde variabiles, cæteræ Americanæ. *Kunth, Enum.* i. 142 (*Oplismeni* sect.), *Fourn. Gram. Mer.* 39 (*Oplismeni* sect.). *Jacq. Ecl. Gram.* t. 20, 32. *Trin. Spec. Gram.* t. 160 ad 164, 166. *Host, Gram. Austr.* ii. t. 19, iii. t. 51. *Dall in Mart. Fl. Bras.* ii. t. 22. *ECHINOCHLOA*, Beauv. *Agrostogr.* 53, t. 11, f. 11. *Reichb. Ic. Fl. Germ.* t. 29. *Nees, Gen. Fl. Germ. Monocot.* i. n. 21.

8. *Ptychophyllum* (A. Braun, Ind. Sem. Hort. Berol. 1855, ex Walp. Ann. vi. 944). Species sæpius elatæ, foliis rigidulis longis plus minus plicato-costatis. Panicula simplex v. composita, pyramidalis v. subspiciformis, floribunda, ramulis ultimis nonnullis v. pluribus ultra spiculas in setam productis. Sectio *Setariae* subaffinis, sed setæ solitariae ramulum continuantes nec plures (ramuli steriles) sub spiculis fasciculatæ. Huc *P. plicatum*, Lam., ex orbe vetere, *P. sulcatum*, Aubl., ex America tropica, affinesque paucæ. *Jacq. Ecl. Gram.* t. 1. *Trin. Spec. Gram.* t. 89, 223. *Dall in Mart. Fl. Bras.* ii. t. 26.

9. *Hymenachne*. Spiculæ parvulæ, nunc minimæ, in panicula elongata cylindracea spiciformi dense confertæ, sæpius numerosissimæ, non sericeæ. Species 5 v. 6, gerontogæ v. Americanæ, quarum typica (*P. Myurus*, Lam.) a cæteris (*P. indicum*, Linn. et aff.) paullulum differt glumis longius acuminatis, florente cum palea sub anthesi tenuiter membranaceis demum rigidulis lævibus et non v. vix induratis. *Trin. Spec. Gram.* t. 197, 204, 205, 214, 334. *Dall in Mart. Fl. Bras.* ii. t. 32. *HYMENACHNE*, Beauv. *Agrostogr.* 48, t. 10, f. 8. *Nees, Agrostol. Bras.* 273. *Fourn. Gram. Mer.* 35.

10. *Eupanicum*. Spiculæ breviter v. graciliter pedicellatæ, secus paniculæ ramos simplices v. ramosos fasciculatæ v. laxè sparsæ, parvæ v. majusculæ, nec sericeo-pilosæ. Species fere 200, aliæ vix a *Brachiariis* v. *Digitariis* distinctæ, aliæ panicula ampla floribunda, v. capillari effusaque insignes, et a Trinio in sectiones 2, *Virgariam* et *Miliariam*, distributæ. Character tamen a ramulis paniculæ angulatis v. teretibus nobis valde incertus videtur. Series sequentes præsertim ex inflorescentia definitæ, quoad species nonnullas distinctissimæ apparent, sed veremur ut non semper accurate limitatæ inveniantur.

a. *Polystachya*. Paniculæ subsimplicis rami plures, simplices v. inferiores basi ramulosi, secundi, spiculis parvis secus rhachin confertis subfasciculatis brevissime pedicellatis. Species Americanæ. *P. pilosum*, Sw., *P. laxum*, Sw., *P. polygonatum*, Schrad., affinesque plures. *Trin. Spec. Gram.* t. 171, 174, 178, 182, 213, 215, 324. *Kunth, Rev. Gram.* t. 108, 209. *Dall in Mart. Fl. Bras.* ii. t. 30. Huc etiam pertinere videtur *P. pyramidale*, Kunth, *Rev. Gram.* t. 23, e Senegalia, nobis ignotum.

b. *Excelsæ*. Paniculæ rami primarii quam in *Polystachiis* longiores, breviter ramulosi, spiculis

sæpius majoribus acutioribus numerosissimis fasciculatis. Species Americane: *P. numidianum*, Lam., *P. excelsum*, Nees, *P. latissimum*, Mik., *P. agrostoides*, Mühl., affinesque plures. *Trin. Spec. Gram. t. 207, 208, 218, 238, 261, 264, 318.* Desf. *Fl. Atl. t. 11.* Döll in *Mart. Fl. Bras. ii. ii. t. 49.* Torr. *Fl. N. York, t. 148.*

His quodammodo affines sunt *P. aturense*, H. B. et K., Nov. Gen. et Sp. t. 33, ex America tropica, *P. gymnocarpon*, Ell., ex America boreali, et species inedita ex Africa tropica (*Mann, n. 2101*) quæ omnes insignes habitu et inflorescentia fere *Ichnanthis*, sed rhachillæ appendices omnino desunt.

c. *Altissimæ*. Paniculæ rami ramulosi, diu erecti floribundi, spiculis interdum ut in *Excelis* fasciculatis, plerisque tamen laxius pedicellatis. Species amphigæ. *P. altissimum*, Mey. (*P. altissimum*, Hort. Hafn. nomen prius editum sed ad formam hortensem valde obscuram nec hodie extricandam tributum, omnino delendum est), *P. maximum*, Jacq., *P. chloroticum*, Nees, *P. antidotale*, Retz, *P. miliaceum*, Linn., *P. miliare*, Linn., affinesque nonnullæ, a *Laxifloris*, aliæ ab *Excelis* parum distinctæ. *Host, Gram. Austr. ii. t. 20.* Jacq. *Ecl. Gram. t. 33.*

d. *Laxifloræ*. Panicula erecta laxa sed sæpius angusta, irregularis, spiculis minus numerosis. Species amphigæ, quarum varietates interdum *Brachiarie* interdum *Altissimis* accedunt. Huc *P. repens*, Linn., *P. Petiveri*, Trin., *P. polyphyllum*, Br., *P. strictum*, Br., *P. fuscum*, Sw., *P. marginatum*, Br., affinesque. *Nees, Gen. Fl. Germ. Monocot. i. n. 19.* Brot. *Phyt. Lusit. t. 6.* Kunth, *Rev. Gram. t. 16, 19, 21, 22, 26, 107, 109.* *Trin. Spec. Gram. t. 176, 177, 179, 180, 200, 206, 209, 357.* Sibth. *Fl. Gr. t. 61.* Torr. *Fl. N. York, t. 146.* Jacq. *Ecl. Gram. t. 21, 31.* Huc etiam referimus *P. uncinatum*, Trin. *Spec. Gram. t. 216*, quæ *Echinoloma polystachya*, H. B. et K., species in utroque orbe late dispersa, invita natura cum *E. scabra*, H. B. et K., associata ob glumas 2 exteriores vacuas inter se et glumæ tertiæ subæquales. OTACHYRIUM, *Nees, Agrostol. Bras. 273*, est *P. pterygodium*, Trin., Döll in *Mart. Fl. Bras. ii. ii. 254, t. 34*, species Brasiliensis, cui glumæ 2 exteriores vacuæ inter se subæquales, sed quam gluma tertia sub-2-plo breviores, ut in *P. (Brachiarie) Auitante*, Retz.

e. *Effusæ*. Panicula mox effusa, ramulis pedicellisque sæpe capillaribus, spiculis sæpius parvis glabris puberulisve. Species numerosæ, amphigæ, nonnullæ *Isachni* subsimiles sed caute distinguendæ pedicellis infra spiculam articulatis. *Trin. Spec. Gram. t. 88, 217, 221, 222, 225 ad 237, 239, 240, 244 ad 248, 263, 319 ad 322.* Kunth, *Rev. Gram. t. 24, 25, 27, 111 ad 114, 167, 210.* *Host, Gram. Austr. iv. t. 16.*

f. *Grandifloræ*. Panicula effusa, sæpe valida v. ampla, spiculis quam in præcedentibus distincte majoribus glabris. Huc *P. zizanioides*, H. B. et K.; Kunth, *Rev. Gram. t. 28*; *P. macranthum*, Trin. (*P. vaginatum*, Nees; Kunth, *Rev. Gram. t. 166*); *P. Maximiliani*, Schrad.; Döll in *Mart. Fl. Bras. ii. ii. t. 31*, aliæque paucae.

STREPTOSTACHYS, Desv. in *Nouv. Bull. Soc. Philom. ii. (1810) 190, et in Journ. Bot. i. (1813) 72*; Beauv. *Agrostogr. 49, t. 10, f. 11*, est *P. streptostachys*, Spreng., species Austro-Americana, *P. zizanioidis* valde affinis, panicula interdum tota v. pro maxima parte monstruosa sterili, spiculis lineari-falcatis, glumis numerosis distiche imbricatis omnibus vacuis.

g. *Lasiacæ* (sect. *Lasiaci*, Griseb.). Panicula ampla, effusa. Spiculæ turgidæ, mediocres v. majusculæ, glumis vacuis laxiusculis, fructifera plus minus obliqua. Huc *P. latifolium*, Linn. (*P. divaricatum*, Linn.), Kunth, *Rev. Gram. t. 29*; Jacq. *Hort. Schoenbr. t. 25.*

COLEATENIA, Griseb. *Symb. Fl. Argent. 308*, e provincia Uruguay, characteres *Eupanicis* ostendere videtur, et ex auctore forte congener est *P. prioniti*, Nees, et *P. sparsiflora*, Döll, sed ex auctore a *Panicis* generice distinguenda floribus dioicis. Grisebach tamen plantam fœmineam non vidit, et ex descriptione flores quos masculos nuncupavit adhuc juniores erant quo statu pistillum sæpe minimum est et facile prætervisum. In *P. prioniti*, Nees, flores hermaphroditi dicuntur.

11. *Tricholoma*. Spiculæ ut in *Trichachne* longe sericeo-pilosæ sed laxè paniculatæ. Gluma fructifera interdum tenerior quam in plerisque *Panicis*, etsi vacuis rigidior. Species ad 15, pleræque Africanæ, una regionis Mediterraneæ, altera Indiæ orientalis, paucae Americæ australis incolæ. Jacq. *Ecl. Gram. t. 34 (Saccharum)*. Sibth. *Fl. Græc. t. 53 (Saccharum)*. *Trin. Spec. Gram. t. 317.* TRICHOLOMA, Schrad. in *Ram. et Schult. Syst. ii. Mant. 163.* Parlat. in *Webb. Phytogr. Canar. iii. 425.* RHYNCHELYTHRUM, *Nees, Fl. Afr. Austr. Gram. 64, non Steud.*

9. *Ichnanthus*, Beauv. *Agrostogr. 56, t. 12, f. 1.* (*Navicularia, Raddi, Agrostogr. Bras. 38.*)—Spiculæ ovatæ v. acuminatæ, cum pedicello articulatæ, secus ramos paniculæ breviter pedicellatæ v. subsessiles, flore hermaphrodito unico terminali, addito sæpe inferiore

terminali rarius abortu foemineo, addito interdum inferiore masculo. Glumæ 4 v. rarius 3, extima parva nunc minima, rarius deficiens, secundaque spiculam sæpe æquans, vacuæ, tertia nunc vacua, nunc paleam v. florem ♂ fovens; terminalis florem ♀ v. abortu ♀ fovens, brevior, cum palea inclusa firmior. Stamina 3. Styli a basi distincti v. breviter v. alte connati, stigmatibus breviter plumosis interdum valde elongatis. Caryopsis gluma paleaque rigescentibus v. induratis inclusa, libera.—Gramina annua v. perennia, sæpe ramosa, statura varia. Folia plana. Spicularum involucri sæpius in spica terminali longa densaque conferta, sessilia, quaquaversa, spicis rarius gracilioribus pedunculatis in inflorescentia ramosa pluribus. Spiculæ intra involucrium sessiles v. subsessiles, sæpius (vix semper?) inarticulatæ, involucrio rarius ad setam unicam v. paucas reducto, setis tamen sæpius pluriseriatis, liberis v. ima basi brevissime connatis.

Species fere 40, pro maxima parte Africanæ, tropicæ v. extratropicæ, quarum 2 v. 3 per regionem Mediterraneam Asiam tropicam et subtropicam v. Americam tropicam latissime dispersæ, perpaucae in Asia ins. Mascarensibus Australia v. America tropica endemicæ. *Kunth, Enum. Pl. i. 160. Benth. in Journ. Linn. Soc. xix. 48.*

Genus ab auctoribus pluribus in duo v. plura dividitur ad setarum involucri indolem, quæ tamen vix limitibus certis definienda nec habitu distincta et melius pro sectionibus habenda:—

1. *Pennisetum* a Kunthio aliisque limitatur ad species setis involucri numerosis pluriseriatis, nunc omnibus barbato-plumosis, nunc centralibus solis barbatis, exterioribus integris nudis. *Beauv. Agrostogr. 59, t. 13, f. 5. Trin. Spec. Gram. t. 20. Kunth, Rev. Gram. t. 39 ad 41, 119. Delile, Fl. Eg. t. 8, f. 1. Webb. Phytogr. Canar. t. 244. H. B. et K. Nov. Gen. et Sp. t. 34. Dall in Mart. Fl. Bras. ii. ii. 304, t. 42. Benth. Fl. Austral. vii. 495.*

*ERIOCHÆTA*, *Fig. et De Not. in Mem. Acad. Torin. ser. 2, xiv. 370*, genus propositum est ad species nonnullas Africanas setis involucri insigniter lanato-plumosis.

In speciebus nonnullis e.g. *P. Benthamiano*, Steud.; Grant in Trans. Linn. Soc. xxix. t. 112, ex Africa tropica, et *P. (v. G.) flaccido*, Munro, ex India orientali, setæ fere omnes v. interdum omnes ut in *Gymnotrice* nudæ, sæpius tamen paucæ centrales v. una sola barbato-plumosæ.

*P. lanatum*, Klotzsch in Waldem. Reise, Bot. 65, t. 99, species Himalaica, insignis est involucri setis paucis interdum solitariis longis rigidis ramosis parce plumoso-ciliatis v. nudis.

2. *PENICILLARIA*, Willd. *Enum. Hort. Berol. 1036*, quoad formam typicam cultam, *P. spicatum*, Willd., a *Pennisetis* typicis differt spica longa crassa densissima, involucri in spica stipitatis haud raro post spiculas fructiferas delapsas persistentibus; sed inter varietates numerosas in Africa calidiore et India orientali cultas plures *Pennisetis* genuinis accedunt involucri brevissime tantum stipitatis, et character nullus superest ad genus distinguendum. Styli longissime filiformes infra medium plus minus connati observantur etiam in *P. villosa*, R. Br., *P. macrostachyo*, Brongn., aliisque nonnullis. *Steud. Syn. Pl. Glum. i. 102. Beauv. Agrostogr. 58, t. 13, f. 4. Jacq. Ecl. Gram. t. 17. Delile, Fl. Eg. t. 8, f. 3. Fresen. in Mus. Senkenb. ii. 134. Anders. in Peters Reise Mossamb. Bot. t. 60.*

3. *GYMNOTRIX*, *Beauv. Agrostogr. 59, t. 13, f. 6*, a *Pennisetis* genuinis nequaquam differt nisi involucri setis omnibus nudis simplicibus. Styli in plerisque speciebus ad normam generis liberi v. basi brevissime connati, variant tamen in paucis speciebus fere ad apicem connati. *Trin. Spec. Gram. t. 19, 287, 288. Kunth, Rev. Gram. t. 38; Enum. Pl. i. 158. Brongn. in Duperr. Voy. Cog. Bot. t. 10, 11. H. B. et K. Nov. Gen. et Sp. t. 678. C. Gay, Fl. Chil. t. 74. Dall in Mart. Fl. Bras. ii. ii. 301, t. 40, 41. Fourn. Gram. Mex. 47. CATATHEROPHORA, Steud. in Flora, 1829, 465. OXYANTHE, Steud. Syn. Pl. Glum. i. 197.*

*SERICURA*, Hasek. Cat. Hort. Bogor. 17, e Java, est *P. (Gymnotrix) macrostachyum*, Brongn., stylis solito altius connatis.

*AMPHOCHÆTA*, *Anders. in K. Vet. Akad. Handl. Stockholm, 1853 (edit. 1855), 136, et Galap. Veget. 45, t. 1, f. 1*, species Galapagensis, pro genere distincta fuit spicis gracilibus in inflorescentia ramosa pedunculatis, spiculis parvis secus rachin subdissitis, setis involucri paucis; sed formis intermediis numerosis cum *P. (Gymnotrice) tristachyo*, Kunth, connectitur.

*BECKEROPSIS*, *Fig. et De Not. in Mem. Acad. Torin. ser. 2, xiv. 361*, est *Gymnotrix unisetata*, Nees, cum speciebus v. potius varietatibus nonnullis per Africam late dispersis, spicis gracilibus in inflorescentia ramosa longe pedunculatis, spiculis parvis, involucrio sæpius ad setam unicam reducto interdum vero 2–3-setum est. Seta tamen cum spicula delabatur nec ut in *Setaria* infra articulationem pedicelli persistit. Huc verisimiliter pertinet *Setaria longisetata*, Beauv. Fl. Ow. et Ben. ii. 81, t. 110.

15. **Plagiosetum**, Benth. *Fl. Austral.* vii. 494.—Spiculæ angustæ, subacuminatæ, singulæ rarius 2 inter ramulos involucri obliqui parce ramosi et unilateraliter ramulosi (paniculæ sterilis?) sessiles, flore unico hermaphrodito terminali. Glumæ 4, extima spicula multo brevior, secunda tertiaque vacuæ, subæquales,  $\infty$ -nerves; terminalis florem  $\sigma$  fovens, cum palea inclusa mox indurata. Stamina 3. Styli a basi distincti, stigmatibus plumosis. Caryopsis gluma paleaque induratis inclusa, libera.—Gramen ut videtur annuum, glabrum, foliis angustis. Involucra pauca, secus rhachin simplicem inflorescentiæ terminalis dissite pedunculata, pedunculis patentibus v. reflexis basi articulatis cum spicula deciduis.

Species 1, Australiæ centralis incola. *Hook. Ic. Pl.* t. 1242.

16. **Paratheria**, Griseb. *Cat. Pl. Cub.* 236.—Spiculæ lanceolatæ, in ramulis inflorescentiæ spiciformis solitariæ, sessiles, ramulo articulo in setam longam ultra spiculam productum quacum deciduo, flore unico hermaphrodito. Glumæ 4, 2 exteriores minutæ, vacuæ, tertia vacua, quartæ florem foventi subæqualis, utraque rigidule membranaceo-herbaceæ; palea sub flore tenuior. Stamina 3. Styli basi vix brevissime connati v. liberi, stigmatibus plumosis. Caryopsis linearis-oblonga, gluma paleaque vix v. non induratis inclusa, libera.—Gramen (annuum?) multicaule, basi diffuse ramosum, foliis flaccidis. Racemus terminalis, pedunculatus, simplex, tenuiter spiciformis, pedicellis seu ramulis numerosis strictis 1-spiculatis aristiformibus demum prope basin articulatis.

Species 1, Americæ australis tropicæ et Indiæ occidentalis incola. *Dell in Mart. Fl. Bras.* ii. ii. 150, t. 25 (*Panici* sect. *Leptachyrium*).

Genus potius *Penniseto* quam *Panico* affine.

17. **Echinolæna**, Desv. *Journ. Bot.* i. (1813) 75.—Spiculæ angustæ, in spica unilaterali a pedunculo defracta sessiles, confertæ, cum rhachi articulatæ, flore hermaphrodito unico terminali, addito sæpe inferiore masculo, spiculis nonnullis sterilibus in spica intermixtis. Glumæ 4, 2 exteriores vacuæ, herbacæ, hispidæ, extima majore rigide acuminata; tertia nunc iis subæqualis vacua v. paleam parvam fovens, nunc brevior cum flore  $\sigma$ ; terminalis florem  $\sigma$  fovens, cum palea inclusa obtusa levis. Stamina 3. Styli a basi distincti, stigmatibus plumosis. Caryopsis oblonga, gluma paleaque rigidulis inclusa, libera.—Gramen decumbens, ramosum, plus minus hispidum, foliis planis. Pedunculi longi, rigidi, terminales v. axillares, ultra spicam unicam in acumen rigidum caducum producti. Spiculæ ad latus inferius spicæ confertæ, subfasciculatæ, rhachi spicæ rigida ultra spiculas producta; spiculæ steriles cum fertilibus intermixtæ, tenues, glumis 2-3 angustis glabris vacuis.

Species 1, per Americam tropicam late dispersa. *Kunth, Enum. Pl.* i. 171, quoad § 1. *H. B. et K. Nov. Gen. et Sp. t.* 38. *Rudge, Pl. Gui. t.* 25 (*Cenchrus*).

*Echinolæna* cæteræ Kunthii ad *Panicum* referendæ.

18. **Chamæraphis**, R. Br. *Prod.* 193.—Spiculæ angustæ v. acuminatæ, secus ramos filiformes paniculæ simplicis paucae, dissitæ v. solitariæ, sessiles, cum rhachi articulatæ, ramulo ultra spiculas setiformi, flore terminali hermaphrodito v. abortu femineo, addito sæpius inferiore masculo. Glumæ 4, extima vacua minima, secunda et tertia subæquales, membranacæ v. rigidulæ, sæpe acute acuminatæ nec aristatæ,  $\infty$ -nerves, secunda vacua, tertia paleam sæpiusque florem masculinum fovens; terminalis fructifera brevior vix nervosa; palea marginibus inflexis nec auriculatis. Stamina in flore  $\sigma$  3, in flore terminali sæpius ad staminodia 2 reducta rarius perfecta. Styli basi brevissime connati, stigmatibus plumosis. Caryopsis gluma paleaque rigidule scariosa inclusa, libera.—Gramina semi-aquatica, sæpius glabra, foliis planis. Panicula terminalis, pedunculata, ramulis simplicibus nunc numerosis filiformibus spiculas paucas dissitas ferentibus, nunc in racemo spiciformi confertis 1-spiculatis v. inferioribus dissite 2-spiculatis.

Species 4, per Asiam tropicam et Australiam dispersæ. *Kunth, Rev. Gram. t.* 32 (*Panicum*), 36. *Trin. Spec. Gram. t.* 181. *Gaudich. in Freyc. Voy. Bot. t.* 24 (*Panicum*). *Benth. Fl. Aus'r'al.* vii. 498.

19. *Spartina*, Schreb. *Gen. Pl.* 43. (*Trachynotia*, Mich. *Fl. Bor. Am.* i. 63. *Limnætis*, Pers. *Syn. Pl.* i. 72. *Ponceletia*, Thou. *Fl. Trist. Acugn.* 36, in *Mel. Bot.* *Solenachne*, Steud. *Syn. Pl. Glum.* i. 12.)—Spiculæ 1-floræ, in spicis unilateralibus secus pedunculum sessilibus subsessilibus, cum pedicello brevissimo articulatae, arcte confertæ, 2-seriatim imbricatæ, flore hermaphrodito. Glumæ 3, 2 exteriores vacuæ, angustæ, carinatæ, valde inæquales, tertia florens secundæ æquilonga v. paullo longior latiorque, præter carinam fere hyalina; palea vix inclusa, gluma sæpe paullo longior latiorque, tenuis fere hyalina, tenuiter 2-nervis, florem involvens. Stamina 3, Stylus filiformis, elongatus, superne in ramos stigmatosos 2 filiformes papillosos v. breviter plumosos divisus. Caryopsis gluma paleaque parum rigescentibus inclusa, libera, linearis, teres v. leviter compressa.—Gramina maritima, rigidula, sæpe elata, basi cæspitosa v. repentia, foliis convolutoteretibus v. basi explanatis. Spicæ secus pedunculum terminalem erectæ, appressæ, nunc confertæ paniculam longam dense spiciformem formantes, nunc dissitæ angustæ pedunculo appressæ. Spiculæ in spicis numerosæ, secundæ, imbricato-confertæ, rhachi spicæ ultra spiculas plus minus producta.

Species 5 v. 6, quarum una, per littora Americæ Europæ et Africæ late dispersa, sub nominibus pluribus descripta, 2 v. 3 Americæ boreali, 1 Americæ australi extratropicæ, 1 ins. Tristand'Acunha et Amsterdam propriæ. Beauv. *Agrostogr.* 25, t. 7, f. 6. Kunth, *Enum. Pl.* i. 277. Jacq. *Ecl. Gram.* t. 27. Host, *Gram. Austr.* iv. t. 66 (*Limnætis*). Nees, *Gen. Fl. Germ. Monocot.* i. n. 41. Reichb.  *Ic. Fl. Germ.* t. 25. *Groves in Trin. Journ. Bot.* 1882, t. 225. Fabre in *Ann. Sc. Nat.* ser. 3, xiii. t. 3. Brongn. in Duperr. *Voy. Coq. Bot.* t. 2. Torr. *Fl. N. York*, t. 153. Dall in *Mart. Fl. Bras.* ii. ii. t. 8 (*Solenachne*), et ii. iii. t. 23.

20. *Xerochloa*, R. Br. *Prod.* 196.—Spiculæ angustæ, in spica brevi simplici v. ramosa intra bracteam vaginantem paucae, rhachi spicæ ultra spiculam sæpe breviter producta, flore hermaphrodito v. foemineo unico terminali, addito sæpe masculo inferiore. Glumæ 4, tenues, extima brevis, lata, obtusissima, fere hyalina, secunda pariter vacua, longior et rigidior, obtusissima v. retusa, tertia rigida, apice sub-2-fida, paleam magnam 2-fidam facile 2-partibilem sæpeque florem ♂ fovens; terminalis angusta, tenuior at rigidula, paleam angustam et florem ♀ v. ♂ includens. Stamina 3. Styli plus minus connati, stigmatibus longis plumosis. Caryopsis gluma paleaque tenuibus rigidulis inclusa, libera.—Gramina erecta, basi ramosa, foliis erectis angustis v. fere teretibus. Bractæe spiculas includentes in parte superiore caulis dissitæ, rigidule paleaceæ, bractæas interiores spicasque breves sæpe fere ad apicem obtegentes.

Species 3, omnes Australianæ. Benth. *Fl. Austral.* vii. 501.

21. *Stenotaphrum*, Trin. *Fund. Agrost.* 175. (*Diastemanthe*, Steud. *Syn. Pl. Glum.* i. 360.)—Spiculæ acutæ v. acuminatæ, per 2-4 in fasciculis v. spicis brevissimis secus rhachin complanatam paniculæ spiciformis dissitis confertæ, rhachi fasciculorum ultra fasciculum producta, flore hermaphrodito unico terminali, addito sæpe infero masculo v. imperfecto. Glumæ 3-4, extima parva rarius deficiens, secunda spiculam æquans v. paullo brevior pariter vacua, tertia secundæ subsimilis paleam v. florem ♂ fovens, rarius vacua; terminalis florem ♂ fovens, cum palea inclusa cæteris rigidior. Stamina 3. Styli a basi distincti, stigmatibus plumosis. Caryopsis oblonga, gluma paleaque tenuibus at rigidulis inclusa, libera.—Gramina repentia, radicante, ramis brevibus adscendentibus sæpius compressis, foliis planis v. convolutis patentibus. Inflorescentia terminalis, spiciformis, rhachi nunc angusta angulata, nunc lata crassiuscula subplana, demum haud raro articulatim divisa, spicularum fasciculis ad faciem inferiorem seu exteriorem in scrobiculis alternis sessilibus v. semi-immersis, fasciculorum rhachi apice breviter mucroniformi rarius spiculis longiore.

Species 2 v. 3, per regiones tropicas utriusque orbis imprimis in maritimis latissime dispersæ, in insulis maris Indici et Pacifici australis frequentissimæ. Steud. *Syn. Pl. Glum.* i. 118. Trin. *Spec. Gram.* t. 360. Kunth, *Rev. Gram.* t. 211. Dall in *Mart. Fl. Bras.* ii. ii. t. 39.

22. ? *Phyllorhachis*, Trin. in *Journ. Bot.* 1879, 353, t. 205.—Spiculæ 1-floræ,

**angustæ**, in **spicis** brevissimis seu fasciculis 3-4 subsessiles, superiores 2-3 steriles, inferior florem hermaphroditum fovens, rhachi spicæ ultra spiculas breviter producta, spicis in pedunculo foliaceo-dilatato complicato subinclusis 1-seriatis. Spiculæ fertilis gluma infima brevis, rigide setiformis, secunda tertiaque vacuæ, quasi laterales, anguste lanceolatæ, tenuiter membranaceæ, quarta (v. potius palea ad axillam glumæ tertiæ) maxima, rigida, obtusa, 2-carinata, inter carinas profunde sulcata; gluma summa florens, paulo brevior, hyalina, tenuissime  $\infty$ -nervis; palea subæquilonga, angustior, hyalina. Stamina . . . Stylus . . . Caryopsis oblonga, glumis laxè inclusa.—Gramen elatiusculum, perenne, caulibus rigidulis subramosis, foliis paucis lanceolatis planis, lamina basi sagittata caulem amplectente. Pedunculus terminalis, spathiformis v. fere cymbiformis, elongatus, falcatus, spiculis vix ultra margines prominentibus; adsunt etiam interdum spiculæ singulæ cæteris multo longiores in pedunculo axillari solitariæ.

Species 1, *Angolensis*. Genus ad specimina fructifera descriptum, affinitatis dubiæ. Spicam unicam tantum examinare potuimus. Inflorescentia primaria fere *Spartinæ*. Spicæ basi tantum fertiles *Thuareæ*. Palea sub gluma tertia maxima *Xerochloæ*, a Trimenio (an rite?) pro gluma 2-carinata descripta, sub anthesi forte florem  $\delta$  fovens, staminibus a speciminibus fructiferis jam delapsis.

23. **Thuarea**, *Pers. Syn. Pl.* i. 110. (*Microthuareia*, *Thou. Gen. Nov. Madag.* 3. *Ornithocephalochloa*, *Kurz in Trim. Journ. Bot.* 1875, 332, t. 171.)—Spiculæ monoicæ, in spica unilaterali sessiles, 1-seriatæ, superiores 4-6 masculæ 2-floræ, inferiores 1-2 flore uno terminali hermaphrodito v. sæpius femineo, addito sæpius masculo inferiore. Glumæ 3-4, extima parva hyalina v. in spicula  $\delta$  sæpe deficiens, secunda vacua spiculæ æquilonga, v. in spicula  $\delta$  paulo brevior, tertia et quarta florentes subæquales; fructifera in spicula  $\varphi$  rigidior etsi tenuis. Stamina 3. Styli a basi distincti, stigmatibus dense plumosis. Sub fructu spicæ rhachis valde dilatatur spiculam fructiferam includens et fide collectorum in arena sepelitur. Caryopsis gluma paleaque rigidulis vix tamen induratis inclusa, libera.—Gramen longe repens, radicans, caulibus breviter adscendentibus, foliis planis brevibus sæpius minute sericeo-pubescentibus. Spica terminalis, basi bractea vaginante inclusa, fructifera bractea delapsa denudata.

Species 1 a nonnullis in 4 v. 5 divisa, ad littora maris Indici et Pacifici late dispersa. *Beauv. Agrostogr.* 127, t. 22, f. 9. *Steud. Syn. Pl. Glum.* i. 112. *Benth. Fl. Austral.* vii. 502. *Kunth, Rev. Gram.* t. 35.

Nomen genericum a Kunthio auctoribusque pluribus falso *THOUAREA* scriptum, nam a Persoonio a *Microthuareia*, *Thou.* (tunc inedita) contractum fuit, nec *Thouarsio* dicatum.

24. **Spinifex**, *Linn. Mant.* 163, n. 1333.—Spiculæ unisexuales, dioicæ, spicatim v. sigillatim bractea stipatæ, cum bracteis dense globoso-capitatæ. Spiculæ  $\delta$  intra bracteam sæpius spicatæ v. fasciculatæ, 2-floræ. Glumæ 4, subsimiles, 2 exteriores vacuæ, nunc minores nunc majores quam 2 interiores florentes paleamque foveantes. Stamina 3. Ovarii rudimentum 0. Spiculæ  $\varphi$  intra bracteam solitaria, flore unico hermaphrodito v. femineo terminali, addito interdum inferiore imperfecto rarissime masculo. Stamina v. sæpius staminodia 3, cum palea plus minus evoluta. Styli 2, a basi distincti, stigmatibus longis breviter plumosis. Caryopsis gluma paleaque induratis inclusa, libera.—Gramina dura, diffusa v. repentia, ramosa, foliis angustis v. marginibus involutis haud raro sericeo-pubescentibus. Inflorescentiæ terminales, bracteis nunc foliaceis nunc lanceolatis concavis subtentæ; spicæ  $\delta$  in capitulo sessiles v. pedicellatæ, spiculæ  $\varphi$  v. potius spicæ 1-spiculatæ cum bracteis nunc in capitulum magnum densum confertæ, spicarum rhachibus longe prominentibus spinescentibus, v. in *S. paradoxo* capitulum  $\varphi$  minor, bracteis varie auctis heteromorphis margine sæpe scariosis.

Species 4, quarum una in maritimis Asiæ tropicæ crescens a *S. hirsuto* Australiano parum diversa, cæteræ Australianæ, una etiam in Nova Zelandia et Nova Caledonia reperta. *Beauv. Agrostogr.* 137, t. 25, f. 1. *Steud. Syn. Pl. Glum.* i. 113. *Benth. Fl. Austral.* vii. 503. *Labill. Pl. Nov. Holl.* t. 230, 231. *Benth. in Hook. Ic. Pl.* t. 1243, 1244. *Buchan. N. Zeal. Grass.* t. 8, 9.

25. **Olyra**, Linn. Gen. n. 1045.—Spiculæ 1-floræ, unisexuales, monoicæ, paniculatæ; ♂ in parte inferiore paniculæ v. rarius omnes in distincta panicula angustæ. Gluma 1, membranacea, uninervis, sæpe acuminata v. brevissime aristata, addita rarius altera exteriore brevi lineari; palea 2-nervis, glumam fere æquans, mutica. Stamina 3. Ovarii rudimentum 0. Spiculæ ♀ in parte superiore paniculæ ovatæ. Glumæ 3, 2 exteriores vacuæ, membranaceo-herbaceæ, æquales v. exterior in acumen v. aristam producta; terminalis florens, brevior, obtusissima, cum palea inclusa cartilaginea, demum indurata. Staminiodia 0. Styli 2, basi connati. Caryopsis gluma paleaque plus minus induratis inclusa, libera.—Gramina nunc elata, foliis amplis latis planis venosis, panicula terminali laxè floribunda, nunc humiliora, ramosa, inflorescentia partim v. omnino axillari.

Species ad 20, quarum una Africæ tropicæ, cæteræ Americæ tropicæ incolæ, nonnullæ forte ad varietates *O. latifoliæ* reductæ. Beauv. Agrostogr. 124, t. 22, f. 7. Steud. Syn. Pl. Glum. i. 35. Döll in Mart. Fl. Bras. ii. ii. 313. Kunth, Rev. Gram. t. 12. Trin. Spec. Gram. t. 341 ad 344, 346, 347. Brongn. in Duperr. Voy. Coq. Bot. t. 22. Wawra, Maxim. Reise, Bot. t. 95.

LITHACHNE, Beauv. Agrostogr. 135, t. 24, f. 2. STREPHIUM, Schrad. in Nees, Agrostol. Bras. 298, Fourn. Gram. Mex. 4, et RADDIA, Bertol. in Opusc. Scient. Bologna, iii. 410. sectionem formant, species paucas continentem parum distinctas, caulibus brevibus fasciculatis v. rarius elongatis, foliis sæpius parvulis subdistichis, paniculis axillaribus inferioribus paucifloris androgynis v. fœmineis, superioribus spiculis numerosioribus masculis. In una specie scapi adsunt ad basin ramorum breves aphylli paucispiculati, paniculæ tamen nonnullæ parvæ in ramis foliatis evolvuntur. Ad sect. *Lithachnem* pertinent Trin. Spec. Gram. t. 345. Döll in Mart. Fl. Bras. ii. ii. t. 45.

26. **Pharus**, Linn. Gen. n. 1063.—Spiculæ unisexuales, monoicæ, 1-floræ, secus ramulos paniculæ geminæ, altera sessili fœminea, altera multo minore pedicellata mascula. Spicula ♂: Glumæ 3, omnes membranaceæ, latiusculæ, ∞-nerves, 2 exteriores vacuæ, infima paullo brevior, secunda florenti sublongior; tertia florens parum latior; palea 0. Stamina 6. Pistilli rudimentum 0. Spicula ♀: Glumæ 3, 2 exteriores vacuæ membranaceæ, ∞-nerves, subæquales; tertia florens multo longior, angusta, mox indurata, marginibus involutis subclausa, paleam membranaceam circa florem convolutam apice 2-fidam includens. Staminiodia 0. Stylus filiformis, elongatus, apice 3-fidus, stigmatibus pube brevi papillosis. Caryopsis subteres, linearis, cum palea intra glumam induratum inclusa.—Gramina valida, foliis supra vaginam longe petiolatis amplis acuminatis oblique subpenniveniis et multivenulosis, petiolo torto sæpius reversis. Panicula terminalis, ampla, laxè composita, ramulis elongatis tenuibus sæpe divisis. Spiculæ fœmineæ masculis 2-3-plo longiores, pedicello masculorum spiculam fœmineam sæpe superante. Gluma fructifera superne sæpe pilis brevibus subreversis hirsuta.

Species editæ 5, Americæ tropicæ a Brasilia usque ad Mexicum et Floridam incolæ, inter se valde affines, nec limitibus certis definitæ. Beauv. Agrostogr. 125, t. 22, f. 8. Steud. Syn. Pl. Glum. i. 8. Döll in Mart. Fl. Bras. ii. ii. 19, t. 6. Fl. des Serres, t. 316.

27. **Leptaspis**, R. Br. Prod. 211.—Spiculæ unisexuales, monoicæ, 1-floræ, secus ramulos paniculæ breviter racemulosæ, 1-2 inferioribus racemuli fœmineis, terminali mascula multo minore. Glumæ 3, 2 exteriores vacuæ, parvæ, latæ; tertia florens major, membranacea, 5-7-nervis, ovoidea v. inflato-globosa, in spicula mascula introrsum longitudinaliter aperta, in spicula fœminea clausa, apice solo oblique perforata; palea inclusa, lanceolata, plana, apice 2-dentata. Stamina in masculis 6, absque rudimento pistilli; staminiodia in fœmineo 0. Stylus elongatus, filiformis, apice in stigmata 3 plumosa divisus. Caryopsis gluma aucta inflata inclusa, libera.—Gramina elatiuscula, foliis supra vaginam longiusculam petiolatis late lanceolatis planis. Panicula terminalis, ramis paucis longis tenuibus sæpius indivisis. Spiculæ ♀ in racemulis 1-2 breviter pedicellatis, nec ut in *Pharo* ad basin pedicelli masculi sessiles.

Species 3 v. 4, Africæ, Asiæ et Australiæ inter tropicos incolæ. Steud. Syn. Pl. Glum. i. 8 et 416. Benn. Pl. Jav. Rar. t. 6.

28. **Zygeum**, Linn. Gen. n. 70.—Spicula unica, 2- rarius 3-flora, magna, acuminata, in apice pedunculi vix articulata, floribus hermaphroditis, rhachilla non producta. Glumæ

3-4, exterior vacua, spathiformis, acuminata v. in aristam brevem producta; 2, rarius 3, florentes in exteriore inclusæ, æquales, gluma exteriori breviores; infra medium in tubum 2-3-locularem extus pilis longis dense plumosis connatæ, superne liberæ, tenuiter membranaceæ, obtusæ; palea membranacea, anguste linearis, convoluta, genitalia includens, apice 2-fida, glumas interiores longe superans. Lodiculæ 0. Stamina 3. Stylus filiformis, indivisus, longe exsertus, superne papillis parvis stigmatosus. Caryopses tubo glumarum indurato densissime plumoso et glumarum parte libera coronato arcte inclusæ, nunc in tubo abortu solitariae, nunc 2-3 in loculis segregatæ, liberæ. — Gramen perenne, caulibus in rhizomate duro repente confertis erectis rigidis, foliis erectis convolutis teretibus longe subulato-acuminatis. Pedunculus terminalis, basi vagina folii breviter subulati stipatus. Spicula in ordine magna, unica, erecta v. nutans.

Species 1, in maritimis petrosisque per regionem Mediterraneam late dispersa. Beauv. *Agrostogr.* 140, t. 25, f. 6. Kunth, *Enum. Pl.* i. 18. L. C. Rich. in *Mém. Soc. Hist. Nat. Par. Ann.* 7, 28, t. 3, tract. opt. anglie reddita et ic. repetita in *Kön. et Sims Ann. Bot.* ii. 548, t. 15. Schreb. *Beschr. Gräs.* t. 52, 53.

29. **Streptochaeta**, Schrad. ex Nees, *Agrostol. Bras.* 536. (Lepideilema, Trin. in *Mém. Acad. Sc. Petersb. ser.* 6, i. 93.) Spiculæ angustæ, teretes, acuminatæ, 1-floræ, in spica dissitæ, subsessiles, articulatæ; flore hermaphrodito terminali. Glumæ 12, rigidæ, nervoso-striatæ, undique imbricatæ nec distichæ, 6 exteriores abbreviatæ, latæ, inæquales, varie denticulatæ, 6 interiores elongatæ, concavæ, quarum extrema maxima ceteras fere includens, in aristam longissimam filiformem insigniter spiritaliter tortam producta; subsequentes 2 multo breviores, angustiores, acutiæ sed muticæ, interiores 3 his similes nisi paullo longiores etsi extrema multo breviores, fere convolute, florem includentes; palea 0. Lodiculæ 0. Stamina 5-7, filamentis in tubum tenuissime membranaceum primum brevem demum glumas subsuperantem connatis, antheris supra tubum breviter stipitatis. Stylus longe filiformis, apice in ramos 3 stigmatosos filiformes brevissime papillosos divisus. Caryopsis elongata, styli basi coronata, hinc sulcata, glumis rigidulis arcte inclusa, libera. — Gramen subramosum, erectum, foliis ovato-lanceolatis supra vaginam subsessilibus multinerviis. Spiculæ longæ, in spica simplici tenui terminali erectæ, rhachi subappressæ.

Species 1, Brasiliæ australioris incolæ. Trin. *Spec. Gram.* t. 296, 297. Döll in *Mart. Fl. Bras.* ii. iii. 217, t. 56.

Genus glumis numerosis non distichis et arista cirrhiformi insignis, quoad folia *Parianæ*, quoad stylum *Pharo* accedit, cæteris characteribus ab utroque longe recedit nec cum ullo alio bene comparandum.

30. **Anomochloa**, Brongn. in *Ann. Sc. Nat. ser.* 3, xvi. 368, t. 23. — Spiculæ 1-floræ, per 2-3 intra bracteam spathaceam inclusæ, pedicellis brevibus basi articulatis, flore hermaphrodito. Glumæ 2, exterior lata, membranacea,  $\infty$ -nervis, mutica, vacua, interiorem florentem includens; hæc rigidior, obscure venosa, in parte inferiore marginibus arcte appressis clausa, compressiuscula, quam gluma exterior paullo brevior, apice in appendiculam linearem canaliculatam exsertam producta; palea 0. Lodiculæ 0, sed discus circa genitalia pilis rufis fimbriatus. Stamina 4, filamentis primum brevibus crassis demum tenuissimis exsertis. Stylus filiformis, indivisus, longissime exsertus longaque papillis brevibus stigmatosus. Caryopsis oblonga, gluma indurata arcte inclusa, libera. — Gramen humile (vix pedale), foliorum vaginis distichis, lamina longe petiolata ovato-lanceolata prominule multinervi. Inflorescentiæ bracteæ spathiformes rigidule multinerves, magnæ, in spica terminali plures, intima interdum a cæteris distans, lamina foliacea terminata, omnes spiculas inclusas superantes. Bracteolæ intra spatham sub quoque pedicello breves, latæ, membranaceæ, additis sæpius nonnullis minoribus vacuis v. spicularum rudimenta fœventibus.

Species 1, Brasiliensis, adhuc nota tantum e speciminibus hortensibus, seminibus olim e provincia Bahiensi acceptis. Döll in *Mart. Fl. Bras.* ii. ii. 24, t. 7. *Bot. Mag. t.* 5331.

## TRIBUS II. MAYDEÆ.

31. *Pariana*, *Aubl. Pl. Gui.* 876, t. 337.—Spiculæ unisexuales, monoicæ, 1-floræ, ad quemque nodum rhacheos spicæ articulatae, masculæ  $\infty$  cum foemineis 1-2. Spiculæ  $\sigma$  ad nodum 5-6, verticillatae, pedicello complanato erecto fultæ. Glumæ 3, 2 exteriores sublaterales, vacuæ, breves, lanceolatae v. subsetaceæ, rigidae, acutæ; tertia florens oblonga, coriacea, erecto-patens, 3-nervis; palea vix brevior, concava, 4-nervis. Lodiculæ longiusculæ. Stamina  $\infty$  (10-20, v. fide Neesii usque ad 40) exserta. Pistilli rudimentum 0. Spiculæ  $\varphi$  intra masculos sessiles 1-2. Glumæ 3, 2 exteriores vacuæ, membranaceæ, fere hyalinæ, subæquales, 1-nerves; tertia florens vacuis subæquilonga, rigidior, mox indurata, 1-3-nervis; palea vix brevior, concava. Staminodia 0? Styli liberi v. basi in membranam connati, stigmatibus plumosis. Caryopsis oblonga, gluma paleaque plus minus induratis inclusa, libera.—Gramina valida, perennia, caule simplici v. rarius diviso. Folia latiuscula, subplicata, vaginis nunc ad os longe rigideque ciliatis nunc nudis; lamina brevissime petiolata, interdum deest in caule florido. Spica terminalis, simplex, densa, verticillis masculis cum spicula foeminea rhacheosque articulo inclusis facillime secedentibus.

Species ad 10, Americæ tropicæ incolæ. *Beauv. Agrostogr.* 121, t. 22, f. 2. *Steud. Syn. Pl. Glum.* i. 113. *Dell in Mart. Fl. Bras.* ii. ii. 331, t. 47.

Lodiculæ floræ  $\varphi$  ex *Dell* 5, in floribus a nobis examinatis 3 vidimus majusculas quarum 2 plus minus connatæ; adsunt tamen interdum squamellæ nonnullæ interiores minutæ, quæ forte pro staminum rudimentis habendæ.

*Eremitis*, *Dell in Mart. Fl. Bras.* ii. ii. 338, t. 48, quæ *Pariana parviflora*, Trin., nobis videtur potius *Parianæ* ejusdam forma depauperata, quam genus proprium. In spica unica a nobis visa verticillum unicum adest perfectum, et stamen in floribus masculis unicum. Cætera omnino *Parianæ*.

32. *Coix*, *Linn. Gen. n.* 1043. (*Lithagrostis*, *Gærtn. Fruct.* i. 7, t. 1.)—Spiculæ unisexuales, monoicæ, spicatae, superiores plures masculæ, foemineæ 1-2 ad basin spicæ, rhachi tenui supra spiculas  $\varphi$  articulata. Spiculæ  $\sigma$  ad dentes rhacheos 2-3-næ, una pedicellata, 1-2-floræ. Glumæ 4, 2 exteriores rigidulæ v. herbaceæ, parum inæquales, vacuæ, 2 interiores cum paleis inclusis hyalinæ, utraq. florens, v. tertia præter paleam vacua. Stamina 3. Pistilli rudimentum 0. Spiculæ  $\varphi$  in articulationibus 1 v. 2 inferioribus spicæ singulæ, cum spiculis 1-2 sterilibus e glumis 1-2 linearibus constantibus, cum rhacheos internodio tenui, intra vaginam clausam globosam v. oblongam lapideam apice poro parvo perforatam inclusæ, 1-2-floræ. Glumæ 4, omnes tenues, plus minus hyalinæ, 2 exteriores vacuæ latæ acuminatæ, 2 interiores paleam hyalinam floremque  $\varphi$  includentes, v. tertia præter paleam vacua. Staminodia rarissime adsunt 3. Styli fere a basi liberi, longissimi, filiformes, pilis brevibus papilloso-villosis stigmatosi. Caryopsis globosa v. oblonga, cum glumis emarcidis intra bracteam globosam v. oblongam lapideam arcte inclusa.—Gramina elata, foliosa, ramosa. Spicæ sæpius plures in vaginis foliorum superiorum pedunculatæ, interdum dense fasciculatæ, parte mascula tardius decidua, internodiis seu articulis foemineis globosis v. oblongis sæpius solitariis rarius 2 superpositis diu persistentibus demum articulatim solvendis.

Species 3 v. 4, quarum una per regiones calidiores utriusque orbis late dispersa indigena v. inquilina, cæteræ Indiæ Orientalis incolæ a specie typica tamen parum diversæ. *Beauv. Agrostogr.* 137, t. 24, f. 5. *Steud. Syn. Pl. Glum.* i. 9, excl. *sp. plur.* *Jacq. Ecl. Gram.* t. 40. *Parlat. in Webb. Phytogr. Canar.* t. 242, 243. *Dell in Mart. Fl. Bras.* ii. ii. t. 10.

33. *Polytoca*, *R. Br. in Benn. Pl. Jav. Rar.* 20, t. 5. (*Cyathorhachis*, *Nees ex Steud. Syn. Pl. Glum.* i. 403.)—Spiculæ unisexuales, monoicæ, ad dentes alternos spicæ sessiles, masculæ in eadem v. in distincta spica superiores, foeminei inferiores, rhachi inter spiculas  $\varphi$  articulata. Spiculæ  $\sigma$  secus rhachin geminæ, erecto-patentes, angustæ, 2-floræ. Glumæ 4, 2 exteriores vacuæ, extima acuta v. in setam longam producta, secunda brevior, minus rigida, 2 interiores tenuiores, muticæ, cum paleis inclusis hyalinæ, flores foventes. Stamina 3. Pistilli rudimentum 0. In spicæ parte inferiore foemineæ spiculæ geminæ, altera stipitata angusta sterilis, glumis sæpius 4 angustis inæqualibus vacuis, altera

fœminea in excavatione rhacheos sessilis, arcte appressa. Glumæ 4, extima lata, cartilaginea mox indurata ad latera utrinque sæpius lobulo v. fasciculo pilorum aucta; secunda angustior acuminata, duriuscula, tertia tenuior, pariter vacua; terminalis florens cum palea angusta fere hyalina. Staminodia 0. Styli vix basi connati, longissime filiformes, stigmatibus pilis brevibus papilloso-villosis. Caryopsis gluma exteriore indurata cum rhacheos internodio angusto involuta.—Gramina elata, quam in *Tripsaco* ramosiora, foliis planis inferioribus longissimis latiusculis, superioribus angustis in vaginas sessilibus. Pedunculus terminalis spicas 3-∞ masculas subdigitatas ferens, inferiores breves, ad axillas plus minus fasciculati, singuli basi vagina spathiformi inclusi spicam androgynam superne breviter masculam inferne fœmineam ferentes; rhachis partis masculæ continuus, partis fœminei articulatus, articulis cum spicula fructifera solvendis.

Species nobis notæ 4, quarum 3 Indiæ orientalis incolæ: *P. bracteata*, Br. (*Coix heteroclita*, Roxb.). *P. Wallichiana*, Benth. (*Cyathorhachis Wallichiana*, Nees), et *P. semiteres*, Benth. (*Tripsacus semiteres*, Wall. Cat. Herb. Ind. n. 8628); quarta *P. macrophylla*, Benth., a M<sup>c</sup>Gillivrayio in Archipelago Louisiade lecta. Benth. in Journ. Linn. Soc. xix. 52.

34. *Chionachne*, R. Br. in Benn. Pl. Jav. Rar. 15.—Spiculæ unisexuales, monoicæ, ad dentes alternos spicæ sessiles, masculæ superiores, 2-floræ, fœmineæ inferiores, 1-floræ, rhachi inter spiculas ♀ articulata. Spiculæ ♂ secus rhachin geminæ. Glumæ 4, extima cæteris major, membranacea, ∞-nervis, secunda tenuior, nervis paucioribus, pariter vacua, 2 interiores tenues, hyalinæ, paleam hyalinam floremque foventes. Stamina 0. Pistilli rudimentum 0. Spiculæ ♀ ad excavationes rhacheos sessiles, sigillatim superpositæ v. solitariæ. Glumæ 4, extima lata, crassa, lævis, dura demum lapidea, interiores includens, marginibus crassis rhachin tenuem amplexentibus nec includentibus; secunda tertiaque vacuæ, tenues; intima cum palea angusta inclusa hyalina. Staminodia 0. Stylus intra spiculam simplex, filiformis, apice in stigmata 2 longe filiformia brevissime papilloso-pilosa divisus. Caryopsis intra glumam lapideam ovoideo-oblongam v. subglobosam inclusa, libera.—Gramina valida, sæpe elata, ramosa, foliis planis, vaginis haud raro scabro-pilosis. Pedunculi in axillis superioribus solitarii v. fasciculati, singuli bractea vaginante stipati, spicam unicam ferentes.

Species 3, Indiæ orientalis, Archipelagi Malayani et Australiæ tropicæ incolæ. Benth. Fl. Austral. vii. 515.

In specie typica *C. barbata*, Br., articulus fructifer spicæ unicus primo aspectu ei *Coicis* similis, sed facile distinguitur rhachi in sulco glumæ lapideæ immersa nec intra bracteam clausam inclusa. In *C. cyathopode*, F. Muell., et in *C. Wightii*, Munro, articuli fructiferi plures fere *Tripsaci*, sed rhachis immersa tenuis nec lapideo-incrassata glumæ subæquilata.

35. *Sclerachne*, R. Br. in Benn. Pl. Jav. Rar. 15, t. 4.—Spiculæ unisexuales, monoicæ, in spica brevi 2-3, summa mascula 2-flora, inferiores 1-2, fœmineæ, 1-floræ. Spicula ♂ supra fœmineam rhachi producta pedicellata. Glumæ 4, 2 exteriores membranaceæ, æquales, ∞-nerves, 2 interiores tenues, 3-nerves, paleam floremque masculam foventes. Stamina 3. Pistilli rudimentum 0. Spiculæ ♀ infra masculam ad excavationes rhacheos sessiles, 2 superpositæ v. unica. Glumæ 4, extima quoad dimidium inferius lata, cartilaginea, marginibus rhachin tenuem amplexentibus, in parte superiore membranaceo-herbacea, aperta; secunda tertiaque vacuæ, subcartilagineæ, ∞-nerves; intima florens cum palea angusta hyalina. Staminodia 0. Stylus intra spiculam simplex, filiformis, apice in stigmata 2 filiformia brevissime papilloso-pilosa divisus. Caryopsis gluma indurata inclusa, libera.—Gramen elatiusculum, ramosum, basi decumbens, foliis planis angustis. Spicæ ad axillas foliorum superiorum 2-3, longiuscule pedunculatæ, singulæ intra vaginam bracteæ foliaceæ sessiles semi-inclusæ.

Species 1, in Java legit Horsfield. Specimina Horsfieldiana examinare nequivimus, et char. noster imprimis ex it. et descr. Brownii sumptus.

36. *Tripsacum*, Linn. Gen. n. 1044.—Spiculæ unisexuales, monoicæ, ad dentes alternos spicæ sessiles, masculæ superiores 2-floræ, fœmineæ inferiores 1-floræ, rhachi inter spiculas

♀ *articulata*. Spiculæ ♂ secus rhachin geminae, subpatentes. Glumæ 4, 2 exteriores tenuiter coriaceæ v. rigidulæ vacuæ, 2 interiores paullo breviores, tenuiores, sæpius hyalinae, paleam hyalinam floremque foventes. Stamina 3. Pistilli rudimentum 0. Spiculæ ♀ in excavationibus rhacheos crassæ solitariae, sessiles, arcte appressæ. Glumæ 4, latæ, concavæ, exterior coriacea denuum indurata, secunda tenuior, rigidula, pariter vacua, 2 interiores cum paleis inclusis tenuiter hyalinae, tertia cæterum vacua; terminalis florem ♀ fovens. Staminodia 0. Styli basi brevissime connati, longissime exserti, filiformes, pilis brevibus dense papilloso-pubescentibus. Caryopsis intra glumam anteriorem induratum lapideam et rhacheos internodium crassum arcte inclusa, libera. Gramina valida, elatiuscula, foliis longe subulato-acuminatis. Pedunculi in axillis superioribus solitarii v. gemini, apice spicas sæpius 2-3 rarius 4  $\infty$  v. unam solam, erectas strictas sibimet arcte applicitas ferentes, spicæ parte superiore mascula floribunda rhachi inarticulata, parte inferiore foeminea demum in articulos monospermos solvenda.

Species 3, quarum 2 ab auctoribus nonnullis pro unius varietatibus habitæ, in America calidiora a Brasilia usque ad Mexicum et Texas extensæ, tertia (*T. fasciculata*, Trin.) differt spici in panicula terminali numerosis, plerisque masculis paucis basi tantum breviter foemineis. Beauv. *Agr.-stogr.* 118, t. 22, f. 1. Kunth, *Enum. Pl.* i. 468. Steud. *Syn. Pl. Glum.* i. 362. Lam. *Illustr.* t. 750, f. 1. Willd. *Hort. Berol.* t. 1. Fourn. *Gram. Mex.* 68.

37. *Euchlæna*, Schrad. *Ind. Sem. Hort. Gutt.* 1832, ex Linnaea, viii. Littbl. 25. (Reana, Brign. *Ind. Sem. Hort. Modena*, 1850, ex *Flora*, 1850, 400.)—Spiculæ unisexuales, monoicæ, masculæ in panicula terminali ad dentes alternos spicarum geminae, 2-floræ, foemineæ in spicis axillaribus fasciculatis foliaceo-bracteatis 1-seriatæ, 1-floræ. Spiculæ ♂ in quoque pari inæqualiter pedicellatæ. Glumæ 4, acutæ, 2 exteriores majores, membranaceæ, vacuæ, 2 interiores florentes cum paleis inclusis hyalinae. Stamina 3. Pistilli rudimentum 0. Spiculæ ♀ ad dentes alternos rhacheos sessiles, solitariae, ob rhachin flexuosam quasi superpositæ. Glumæ 4, extima latissima, fere cymbiformis, levis, mox indurata, interiores et rhachin angustam amplexens, secunda pariter vacua, coriacea at minus dura, tertia hyalina, paleam fovens, cæterum vacua; terminalis sola florens cum palea inclusa hyalina. Staminodia 0. Stylus longissime filiformis, apice breviter 2-fidus, papillis stigmatosis parum prominulis. Caryopsis intra glumam cum internodio rhacheos lapideam arcte inclusa, libera.—Gramina elata, foliis elongatis. Panicula terminalis ♂ dense floribunda *Maydis*, spicarum seu ramulorum simplicium rhachi inarticulata. Spicæ ♀ intra vaginas foliorum fasciculatæ, singulæ bractea paleacea ampla semi-incluse more *Polytoce* et *Chinachnis*, rhachi cujusve articuli angustissima, cum marginibus glumæ mox connata, supra glumam abrupte uncinato-refracta, articulum superiorem specie dorsalem ferens.

Species 2, Mexicanæ, quarum *E. luxurians* sola nobis nota. Fournier in *Bull. Soc. Bot. Belg.* xv. 467. *Gram. Mex.* 69. *Bot. Mag.* t. 6414. *E. Bourgei*, Fourn. *l. c.* 468, ad specimen masculum a nobis non visum descripta adhuc quodammodo dubia est. Reana Giovaninni, Brign., est evidenter eadem ac *E. mexicana*, spiculis pro floribus descriptis.

38. *Zea*, Linn. *Gen.* n. 1042. (Mays, *Gartn. Fruct.* i. 6, t. 1.)—Spiculæ unisexuales, monoicæ, masculæ in panicula terminali ad dentes alternos spicarum geminae, 2-floræ, foemineæ in spica axillari maxima vaginis paleaceis amplis involuta densissime confertæ, longitudinaliter  $\infty$ -seriatæ, 1-floræ. Spiculæ ♂ in quoque pari breviter inæqualiterque pedicellatæ v. una sessilis. Glumæ 4, acutæ, 2 exteriores majores, membranaceæ, vacuæ, 2 interiores florentes cum paleis inclusis hyalinae. Stamina 3. Pistilli rudimentum 0. Spiculæ ♀ arcte sessiles, in seriebus longitudinalibus densissime imbricatæ, rhachi crassa subspongiosa inarticulata. Glumæ 4, omnes membranaceæ, hyalinae v. rarius subherbaceæ, breves, latissimæ, obtusæ v. emarginato-2-lobæ; 2 exteriores vacuæ interdum crassiores, tertia hyalina paleam brevem saepe fovens, terminalis florens hyalina, saepe 2-fida, palea pariter lata sed indivisa. Staminodia 0. Stylus longissime filiformis, apice breviter 2-fidus, papillis stigmatosis brevissimis. Caryopsis subglobosa, dura, glumis paleisque emarcidis semitecta v. basi stipata, cæterum nuda v. in una varietate glumis acutis subherbaceis

obtecta.—Gramen elatum, foliis amplis. Panícula terminalis ♂ longe pedunculata, speciosa, in speciminibus nonnullis in India orientali cultis spiculas nonnullas fœmineas abnormales cum masculis intermixtas fert. Spica ♀ in axillis foliorum solitaria, florens stylis numerosis longissime exsertis pendulis insignis, fructifera longa crassa vaginis paleaceis imbricatis omnino oclusa.

Species 1, originis verisimiliter Americanæ, jam diu in regionibus calidioribus temperatisque utriusque orbis latissime culta; stirps indigena tamen ignota, verisimiliter cultura valde mutata. Beauv. *Agrostogr.* 136, t. 24, f. 3. Kunth, *Enum. Pl.* i. 19. Bonafous, *Hist. Nat. Maïs, Paris*, 1836, folio cum tabb. 19. Döll in *Mart. Fl. Bras.* ii. ii. 30, t. 11. Nees, *Gen. Fl. Germ. Monocot.* i. n. 3, 4.

### TRIBUS III. ORYZÆ.

39. **Hydrochloa**, Beauv. *Agrostogr.* 135, t. 24, f. 4. Spiculæ parvæ, unisexuales, monoicæ, spicatæ, spica mascula terminali, fœmineis axillaribus. Glumæ 2, parum inæquales, membranacæ, concavæ, muticæ, inferiore parum majore; palea 0. Stamina 6. Styli breves, distincti, ad apicem ovarii sublaterales, stigmatibus elongatis breviter plumosis. Caryopsis glumis inclusa, libera.—Gramen tenue, ramosum, fluitans v. reptans, foliis angustis planis. Pedunculus terminalis, tenuis, spiculis ♂ paucis (3–5) apicem versus subsessilibus. Spiculæ ♀ in axillis superioribus subsessiles, paucifloræ, e vagina folii parum exsertæ, stigmatibus e glumis longiuscule exsertis.

Species 1, in aquis Carolinæ et Floridæ ut videtur haud frequens. Chapm. *Fl. S. U. St.* 549.

40. **Zizania**, Linn. *Gen. n.* 1062, excl. *Z. terrestri*. (*Hydropyrum*, Link, *Hort. Berol.* i. 252. Melinum, Link, *Handb. Nutz. Gew.* i. 96.)—Spiculæ angustæ, unisexuales, monoicæ, 1-floræ, secus ramos inarticulatos paniculæ articulatæ sessiles v. breviter pedicellatæ. Glumæ 2, annulo cartilagineo plus minus prominentem cinctæ, parum inæquales, membranacæ convolutæ concavæ v. subcomplicatæ, exterior latior acuta v. in spicula ♀ aristata, vacua, interior florens vix brevior, mutica; palea 0. Stamina 6. Styli breviter v. longe connati, stigmatibus pilis simplicibus plumosis. Caryopsis glumis membranaceis laxè inclusa v. involuta, libera.—Gramina aquatica, elata, foliis longis planis. Panícula terminalis, ampla, laxè floribunda, ramis numerosis tenuibus elongatis.

Species bene notæ 2, boreali-Americanæ, quarum una etiam in Japonia et Rossia orientali invenitur. Ab auctoribus pluribus pro generibus distinctis habentur. In specie typica Linnæi, *Z. aquatica*, Lamb. in *Trans. Linn. Soc.* vii. 264, t. 13, Beauv. *Agrostogr.* t. 22, f. 6, Schreb. *Beschr. Gräs.* t. 29, quæ *Hydropyrum*, Link., Kunth, *Enum. Pl.* i. 9, paniculæ pars inferior mascula patens, pars superior fœminea stricta, spiculæ ♀ subteretes, glumis convolutis, exteriore longe aristata, styli basi breviter connati, stigmatibus pilis longis plumosis, caryopsis linearis. In *Z. miliacea*, Mich., Kunth, *Enum. Pl.* i. 10, quæ *ZIZANIOPSIS*, Döll in *Mart. Fl. Bras.* ii. ii. 12, t. 3, spiculæ ♂ et ♀ in panicula plus minus effusa mixtæ, fœmineæ subcompressæ, gluma exteriore brevius aristata, styli longe connati stigmatibus pilis brevibus plumosis et caryopsis ovata, sed genus in integrum servatum naturale evadit. *Z. latifolia*, Turcz., e Japonia et Rossia orientali a speciminibus Americanis *Z. aquatica*, Linn., non differt. *Z. microstachys*, Nees, a Trinio descripta et a Döllio l. c. delineata fuit ad exemplar Sellowianum (an revera Brasilianum?) a nobis non visum, sed ex icone et descr. a *Z. miliacea* distinguere nequimus.

41. **Luziola**, Juss. *Gen. Pl.* 33.—Spiculæ ovatæ, parvæ, unisexuales, monoicæ, 1-floræ, secus ramos inarticulatos paniculæ articulatæ subsessiles v. pedicellatæ. Spiculæ ♂ : Glumæ 2, tenuiter membranacæ, muticæ, exterior latior vacua, interior florens angustior vix brevior; palea 0. Stamina 6 v. ∞ (usque ad 18). Pistilli rudimentum 0. Spiculæ ♀ quam masculæ minores, gluma exteriore latiore striato-multinervi. Staminodia 0. Styli breves, distincti, stigmatibus pilis simplicibus plumosis. Caryopsis ovata, glumis membranaceis laxè inclusa, libera.—Gramina basi repentia v. natantia, humilia v. elata, foliis planis. Paniculæ terminales v. axillares, effusæ, ramis filiformibus ramulosis.

Species ad 6, Americæ calidioris a Brasilia usque ad Mexicum et Americæ borealis civitates australiores incolæ.

In specie typica *L. peruviana*, Juss.; Beauv. Agrostogr. 136, t. 24, f. 1; Döll in Mart. Fl. Bras. t. 5 (*L. brasiliensis*, Moric. Pl. Nouv. Amer. 94, t. 60), ut in *L. alabamense*, Chapm. Fl. S. Un. Stat. 584, et in specie inedita Guianensi, paniculæ ♂ et ♀ in caulibus seu ramis distinctis omnes terminales. In *L. Spruceana*, Benth., Döll in Mart. Fl. Bras. ii. ii. 18, cui referenda videtur *L. peruviana*, Mey., Prim. Fl. Esseq. 269, t. 2, non Juss., ut in speciminibus nonnullis a Selloio in Brasilia australi lectis ex Herb. Reg. Berol. sub nomine *L. peruviana* distributis, paniculæ ♂ terminales, ♀ axillares in eodem caule seu ramo, quales etiam dicuntur in *L. longivalvi*, Döll, l. c., a nobis non visa. In *CARYOCHLOA*, Trin. Gram. Panic. Diss. ii. 54 et 248, Döll l. c. t. 4 (*ARROZIA*, Schrad.; Kunth, Enum. Pl. i. 11), specie brasiliensi, spiculæ ♂ et ♀ in eadem panicula mixtæ, ♂ tamen in ramulis seu in panicula terminalibus, ♀ inferioribus. Characteres cæteri omnino *Luziolæ*. Stamina semper 6 videntur, quod sæpe in aliis speciebus *Luziolæ* observatur.

42. *Potamophila*, R. Br. Prod. 211. (*Maltebrunia*, Kunth, Rev. Gram. i. 183, t. 3.)—Spiculæ angustæ, subteretes, 1-floræ, secus ramos inarticulatos paniculæ articulatae breviter pedicellatæ, flore hermaphrodito v. abortu unisexuali. Glumæ 4, 2 exteriores minimæ setiformes v. acuminatæ, 2 interiores subæquales, membranaceæ, concavæ v. convolutæ, muticæ, quarum exterior vacua, interior florens angustior vix brevior; palea 0. Stamina 6. Styli breves, a basi distincti, stigmatibus plumosis. Caryopsis angusta, glumis rigidule membranaceis nec induratis arcte inclusa.—Gramina aquatica, elata, foliis planis v. siccitate convolutis. Panicula terminalis, nunc longissima stricta, nunc brevior effusa, ramis filiformibus ramulosis.

Species 3, una Australiæ, altera Madagascariæ, tertia Africæ australis, incolæ.

In specie typica Brownii, Benth. Fl. Austral. vii. 550, Kunth, Rev. Gram. t. 5, Trin. Spec. Gram. t. 249, spiculæ pleræque nec omnes unisexuales sed pistillum sterile in masculis, staminodia in fœmineis semper adesse videntur, nisi hinc inde spiculæ omnino vacuæ, folia longa siccitate convoluta et panicula longissima spiculis parvulis. In *P. leersioide* (*Maltebrunia*, Kunth), e Madagascaria, a nobis non visa, spiculæ ex ic. et descr. omnes hermaphroditæ, folia plana, supra vaginam petiolata, panicula cæterique characteres omnino *P. parvifloræ*, Br. In specie Capensi *P. prehensili* (*Maltebrunia*, Nees, Gram. Fl. Afr. Austr. 194) spiculæ majores compressiusculæ, pleræque perfecte hermaphroditæ, folia plana in vagina sessilia et panicula brevior laxè effusa. Genus tamen in integrum servatum naturale est *Oryzam* cum *Zizania* connectens. Kunth præterea *Potamophilam* a *Maltebrunia* distinxit spiculis 2-floris, florem alterum tamen in speciminibus a nobis visis frustra quæsimus, nec a Brownio commemoratur, et spiculæ quales in icone Kunthii l. c. t. 5, f. 1, 2 et 5 delineantur verisimiliter raræ et abnormes erant, nos nunquam invenimus.

43. *Hygroryza*, Nees in Edinb. N. Phil. Journ. xv. 380. (*Potamochloa*, Griff. in Journ. Asiat. Soc. Beng. v. 571, t. 22; Ic. Pl. As. t. 140.)—Spiculæ angustæ, vix compressæ, 1-floræ, secus ramos inarticulatos paniculæ subsessilis articulatae, flore hermaphrodito. Glumæ 2, basi nudæ, membranaceæ, exterior latior, in aristam tenuam producta, marginibus carinaque ciliatis interiorem florentem parum breviorē exaristatam amplectens; palea 0. Stamina 6. Styli in ovarii apice contracto distincti, breves, stigmatibus pilis ramosis plumosis. Caryopsis anguste oblonga, glumis membranaceis inclusa, libera.—Gramen aquaticum, natans v. repens, ramosum, foliis brevibus latiusculis planis obtusis. Panicula terminalis, brevis, ramulis brevibus fasciculatis. Spiculæ paucæ, ratione inflorescentiæ magnæ.

Species 1, Indiæ orientalis incolæ.

44. *Oryza*, Linn. Gen. n. 448. (*Padia*, Zoll. et Mor. Verz. Pl. Zoll. 103.)—Spiculæ plano-compressæ, 1-floræ, secus ramos inarticulatos paniculæ articulatae, sessiles v. breviter pedicellatæ, flore hermaphrodito. Glumæ 4, 2 exteriores minimæ, squamiformes v. setiformes, 2 superiores complicato-carinatæ, rigidulæ, exterior paullo major, vacua, aristata v. mutica, carina sæpius anguste alata v. muricata, interior florens vix brevior, angustior, arista brevior v. 0, carina nuda; palea 0. Stamina 6. Styli breves, vix basi connati, stigmatibus pilis ramosis plumosis. Caryopsis oblonga v. angusta, glumis parum induratis basi que sæpe subconnatis arcte inclusa, libera.—Gramina paludosa, elatiuscula, foliis

longis planis. Panicula terminalis, angusta, ramis tenuibus erectis subflexuosis sæpe longis parum ramosis; spiculæ sigillatim dissitæ, gluma majore prominenter 3-5-nervi.

Species editæ fere 20, sed vix 5 bene distinguendæ, omnes Indiæ Orientalis incolæ, et fere omnes haud male ad varietates *O. sativæ*, Linn., reducendæ. Hæc species, etiam in Australia indigena, jam diu per regiones calidiores utriusque orbis late culta, in pluribus locis Americæ et Africæ inquilina dicitur et quam maxime variabilis est. *O. coarctata*, Griff., tamen, species Himalaica, bene distincta videtur. *O. subulata*, Nees, a Trinio descripta et in Kunth, Rev. Gram. sub t. 101 delineata ad specimen Selloanum Brasiliæ australis, est forte forma abnormis *O. sativæ* glumis more *Poa* v. *Festuca viviparæ* elongato-acuminatis. Beauv. Agrostogr. 27, t. 7, f. 7. Steud. Syn. Pl. Glum. i. 2. Döll in Mart. Fl. Bras. ii. ii. 5, t. 1 (excl. sect. 2). Host, Gram. Austr. iv. t. 25. Griff. Ic. Pl. As. t. 142. Kunth, Rev. Gram. t. 4. Nees, Gen. Fl. Germ. Monocot. i. n. 2.

45. *Leersia*, Swartz, Nov. Gen. et Sp. Pl. 21. (Homalocenchrus, Mieg ex Hall. Stirp. Helv. ii. 201. Ehrhartia, Wigg. Prim. Fl. Holsat. 63. Asprella, Schreb. Gen. Pl. 45. Blepharochloa, Endl. Gen. Pl. 1352).—Spiculæ compressæ, 1-floræ, secus ramos tenues inarticulatos paniculæ sessiles v. breviter pedicellatæ, cum pedicello articulatae, flore hermaphrodito. Glumæ 2, basi annulo cartilagineo sæpe vix prominulo cinctæ, complicato-carinatae, rigidae, muticæ, exterior latior exalata carina v. marginibus sæpe ciliatis, vacua, interior florens paullo minor; palea 0. Stamina 6, 3 v. pauciora. Styli breves v. tenues, distincti, stigmatibus pilis ramosis plumosis. Caryopsis ovata v. anguste oblonga, glumis rigidulis laxè inclusa, libera.—Gramina paludosa, elatiuscula, foliis angustis. Panicula terminalis, gracilis, ramis filiformibus erectis v. patentibus parum ramulosis. Spiculæ quam in *Oryza* minores, tenuiores, magis approximate et in *L. lenticulari* fere imbricatæ, glumarum nervi parum prominentes.

Species 5, omnes Americanæ, boreales v. tropicæ, quarum tamen *L. oryzoides*, Sw., etiam in Europa et Asia temperata frequens, et *L. hexandra*, Sw., per regiones tropicas orbis veteris latissime dispersa. Beauv. Agrostogr. 2, t. 4, f. 2 (*Asprella*). Steud. Syn. Pl. Glum. i. 1. Döll in Mart. Fl. Bras. ii. ii. 9, t. 2 (*Oryzæ* sect.). Schreb. Besch. Gräs. t. 22 (*Phalaris*). Nees, Gen. Fl. Germ. Monocot. i. n. 1. Host, Gram. Austr. i. t. 35. Reichb. Ic. Fl. Germ. t. 52. Griff. in Journ. Asiat. Soc. Beng. v. 570. t. 22 (*Zizania*). Kunth, Rev. Gram. t. 1, 2, 201. Fourn. Gram. Mex. 1.

46. *Achleena*, Griseb. Cat. Pl. Cub. 228.—Spiculæ 1-floræ, secus ramos inarticulatos paniculæ cum pedicello brevissimo articulatae, rhachilla supra articulationem sub glumis barbellata, flore hermaphrodito. Glumæ 4 (v. 3 cum palea), infima longe aristiformis, secunda coriacea, convoluta, lanceolato-linearis, 7-nervis, in aristam longam abiens, tertia lanceolata, convoluta, acuminata, 3-nervis, quarta sub flore (palea?) paullo brevior angustiorque, hyalina, acuta, carinata, 1-nervis v. tenuissime 3-nervis. Stamen (fide Griseb.) 1. Styli breves, distincti, stigmatibus simpliciter plumosis. Caryopsis linearis.—Gramen pluripedale, perenne, glabrum, foliis planis. Panicula terminalis, ramis semiverticillatis patentissimis simpliciter racemiformibus.

Species 1, Cubensis, Grisebach cum genere Australiana *Microlæna* comparat, sed ob glumarum infra articulationem deficientia ad *Oryzæas* nec ad *Phalarideas* referenda. Stamina a spiculis examinatis jam delapsa fuerunt.

47. *Beckera*, Fresen. in Mus. Senckenb. ii. 132, t. 8.—Spiculæ 1-floræ, secus rhachin simplicem inarticulatam spicæ quaquaversæ, in pedicello brevissimo articulatae, flore hermaphrodito. Glumæ 2 v. 4, 2 exteriores si adsint minute squamiformes vix prominulæ, 2 superiorum exterior vacua, membranacea, 3-5-nervis, in aristam rectam tenuem producta, interior florens paullo brevior, tenuior fere hyalina, breviter mucronato-aristata v. mutica; palea 0. Stamina 3. Styli distincti, stigmatibus (pilis simplicibus?) plumosis. Caryopsis oblonga, glumis vix rigidulis inclusa, libera.—Gramina basi decumbentia, ramosa, foliis planis flaccidis. Spicæ tenues, singulæ longe pedunculatæ, pedunculis tenuibus in axillis superioribus sæpius geminis inæqualibus, sæpeque pluribus ad apicem caulis laxissime subpaniculatis.

Species 2 v. 3, Abyssinicae. A. Rich. Fl. Abyss. ii. 358. Steud. Syn. Pl. Glum. i. 117, quoad ser. a; species sub ser. b enumeratæ ad *Penniseti* sect. *Beckeropsin* pertinent.

Genus *Leersia* proxime affine, inflorescentia aliisque notis paucis facile distinctum. De stigmatum pilis incerti sumus, ex Fresenio simplices sunt, nobis videbantur hinc inde ramosi, stigmata tamen tenuissima fugacissimaque in speciminibus siccis haud facile rite observantur.

#### TRIBUS IV. TRISTEGINEÆ.

48. *Thurberia*, Benth. in Journ. Linn. Soc. xix. 58. (*Greenia*, Nutt. in Trans. Amer. Phil. Soc. v. 142, non W. et Arn. Sclerachne, Torr. ex Trin. in Mem. Acad. Petersb. ser. 6, vi. 273, non R. Br.)—Spiculæ 1-floræ, angustæ, secus ramulos continuos paniculæ dissitæ, cum pedicello articulatæ, flore hermaphrodito. Glumæ 3, 2 exteriores vacuæ, subæquales, muticæ, nervis inconspicuis; terminalis florens vix brevior, tenuis, apice breviter 2-fidus v. 2-dentatus, arista inter lobos tenui elongata geniculata v. flexuosa basi suborta; palea paullo brevior, angusta, hyalina, 2-carinata. Stamina 3. Styli breves, distincti, stigmatibus breviter pilosis. Caryopsis anguste oblonga, glumis rigidule membranaceis inclusa, libera.—Gramina basi decumbentia, multicaulia v. ramosa, caulibus tenuibus adscendentibus v. erectis, foliis angustis planis. Panicula terminalis, angusta, elongata, gracilis, ramis filiformibus erectis breviter ramulosis. Spiculæ paucae v. numerosæ, glabræ v. pubescentes nec ciliis cinctæ.

Species 2, Americæ borealis (Texas et Arkansas) incolæ.

Genus quodammodo *Polypogoni* accedit, differt inflorescentia laxa et glumis vacuis muticis nec aristatis. A Steudelio cum *Limnæ* jungitur, a quo tamen arista glumæ fertilis terminali, styliis distinctis, aliisque notis abunde discrepat.

49. *Limnas*, Trin. Fundam. Agrostogr. 116, t. 6; Spec. Gram. t. 18.—Spiculæ 1-floræ, secus ramulos continuos paniculæ paucae, cum pedicello articulatæ, flore hermaphrodito. Glumæ 3, 2 exteriores vacuæ, subæquales, acutæ, muticæ, prominenter 3-nerves; terminalis florens paullo latior, tenuiter 3-5-nervis, dorso prope basin arista exserta tenui geniculata v. flexuosa basi torta instructa, demum rigescens; palea angusta, hyalina, 2-carinata. Stamina 3. Styli fere ad medium connati, stigmatibus tenuibus plumosis, Caryopsis (adhuc immatura) gluma rigidula inclusa, libera.—Gramen caespitosum, foliis basi confertis angustis subfiliformibus. Panicula brevis, angusta, laxiuscula, longe pedunculata, glabra, ramulis breviter filiformibus paucis.

Species 1, Asiæ Rossicæ orientalis incolæ. Kunth, Enum. Pl. i. 520.

50. *Garnotia*, Brongn. in Duperr. Voy. Coq. Bot. 132, t. 21. (*Miquelia*, Nees, in Pl. Meyen. 177. *Berghausia*, Endl. Gen. Suppl. iii. 57.)—Spiculæ 1-floræ, secus ramulos inarticulatos paniculæ geminæ, inæqualiter pedicellatæ, cum pedicello articulatæ, flore hermaphrodito. Glumæ 3, 2 exteriores vacuæ 5-nerves subæquilongæ, extima latior rigidiorque, muticæ v. secunda arista brevi recta terminata; tertia terminalis florens tenuior, sæpe hyalina, mutica v. arista tenui brevi v. longiore subgeniculata terminata; palea hyalina. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, glumis parum rigescentibus inclusa, libera.—Gramina sæpius elata, foliis planis. Panicula terminalis, pedunculata, sæpe valde elongata, nunc angusta stricta, nunc effusa, ramis filiformibus ramulosis. Spiculæ more *Miscanthi* regulariter geminæ sed nudæ, nec pilis cinctæ, paribus interdum cum ramulo sæpius tamen singulis cum pedicello articulatæ.

Species ad 8, Indiæ orientalis, Chinæ et Japoniæ incolæ.

51. *Arundinella*, Raddi, Agrostogr. Bras. 36, t. 1, f. 3. (*Goldbachia*, Trin. in Spreng. N. Entd. ii. 81. *Acratherum*, Link. Hort. Berol. i. 230. *Thysanachne*, Presl, Rel. Hænk. i. 252. *Brandtia*, Kunth, Rev. Gram. ii. 511, t. 170.)—Spiculæ acutæ v. acuminatæ, secus ramulos inarticulatos paniculæ polymorphæ geminæ, inæqualiter pedicellatæ, cum pedicello articulatæ, flore terminali unico hermaphrodito, addito interdum inferiore masculo. Glumæ 4, extima spicula brevior, mutica, secunda pariter vacua, cæteris longior, acuminata v. in aristam brevem rectam producta, tertia brevior, tenuior, mutica, paleam hyalinam interdumque florem masculam fovens; terminalis florens membranacea,

hyalina v. opaca, apice integra v. ad latera aristæ utrinque in dentem producta, aristâ terminali tenui basi sæpe geniculata instructa v. rarius mutica; palea membranacea. Stamina 3. Styli a basi distincti, stigmatibus plumosis. Caryopsis oblonga, sæpe angusta, gluma paleaque arcte inclusa, libera.—Gramina nunc pumila nunc elata, foliis planis flaccidis. Panicula terminalis, variat nunc elongata ramosissima angusta densaque, v. effusa spiculis numerosissimis secus ramulos confertis, nunc gracilis laxè effusa spiculis minimis, nunc brevis densa ovata, spiculis majoribus confertissimis.

Species ad 24, per regiones tropicas utriusque orbis diffusæ, in Asia tamen numerosæ s. *Steud. Syn. Pl. Glum.* i. 114. *Trin. Spec. Gram.* t. 265, 266, 268. *Dall in Mart. Fl. Bras.* i. 297, t. 38. *Kunth. Rev. Gram.* t. 100 (*Ischæmum*). *Fourn. Gram. Mex.* 53.

Sectiones a Neesio propositæ: *Meliosaccharum* gluma florente ad latera aristæ indentes producta, et *Aoratherum* gluma florente integra, nec bene definitæ nec habitu satis distinctæ videntur. *A. flammida*, *Trin. Spec. Gram.* t. 267. glumis vacuis sub articulatione persistentibus aliisque notis ad *Trichopterygem* transferenda est.

52. **Phænosperma**, Munro; *Benth. in Journ. Linn. Soc.* xix. 59.—Spiculæ 1-floræ, secus ramulos inarticulatos paniculæ sparsæ, cum pedicello articulatæ, flore hermaphrodito. Glumæ 4, membranacæ, acutiusculæ, muticæ, extima cæteris brevior, 1-nervis, cæteræ parum inæquales, 3-nerves, secunda tertiæque vacuæ; terminalis florens paullo latior, florem involvens; palea 0. Lodiculæ 3 (v. palea lodiculis 2 non longior?). Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblique obovoidea, e gluma florente semi-exserta, cum glumis tamen stipantibus decidua.—Gramen elatum, glabrum, foliis planis. Panicula maxima, ramis tenuibus rigidulis vix ramulosis, secus axin paniculæ fasciculatis subverticillatis verticillis distantibus.

Species 1, Chinensis, in horto Parisiense e seminibus Davidianis educta, nuperque a Shearero ad Kiu Kiang lecta.

53. **Melinis**, Beauv. *Agrostogr.* 54, t. 11, f. 4. (*Tristegis*, Nees, *Hor. Phys. Berol.* 47 et 54, t. 7, et, eo teste, Suardia, *Schrank, Pl. Rar. Hort. Monac.* t. 58.)—Spiculæ 1-floræ, secus ramulos inarticulatos paniculæ solitariæ, cum pedicello articulatæ, flore terminali hermaphrodito. Glumæ 4, extima minuta squamiformis, secunda tertiæque inæquales, vacuæ, membranacæ, emarginatæ v. 2-fidæ, tertiæ costa plus minus in aristam rectam tenuem producta; terminalis florens brevis, mutica, cum palea minore hyalina. Stamina 3. Styli a basi distincti, stigmatibus plumosis. Caryopsis oblonga, glumis majoribus paullo rigescentibus inclusa, libera.—Gramen basi ramosum sæpeque reptans, foliis planis vaginis villosis sæpe glutinosis. Panicula terminalis, angusta, densa, ramis filiformibus ramulosis, spiculis minimis numerosis confertis.

Species 1, Brasiliensis, nuper etiam in collibus Natalensibus Africæ australis detecta. *Dall in Mart. Fl. Bras.* ii. ii. t. 33 (*Panicum*).

54. ? **Trisacnia**, Griseb. in *Mem. Amer. Acad. ser.* 2, viii. 534.—Spiculæ 1-floræ, secus ramos inarticulatos paniculæ paucæ, cum pedicello articulatæ, flore hermaphrodito. Glumæ 4, muticæ, 3 inferiores vacuæ, membranacæ, infima duplo minor, secunda tertiæque subæquales, 3-nerves; florens brevior, membranacea; palea glumæ subæqualis, 2-nervis. Stamina 3. Styli distincti. Caryopsis oblonga, libera, embryo minuto.—Gramen cæspitosum, habitu *Festucæ ovine*, foliis setaceis recurvis caulem sæpe æquantibus. Spiculæ racemosæ, raræ, racemique breves in panicula distantes. (*Char. ex Griseb.*)

Species 1, Cubensis, a nobis non visa. Genus ex caractere dato videtur *Arthropogoni* affine sed aristæ desunt.

55. **Arthropogon**, Nees, *Agrostol. Bras.* 319.—Spiculæ secus ramos inarticulatos paniculæ solitariæ, cum pedicello articulatæ, flore terminali unico hermaphrodito, addito interdum masculo inferiore. Glumæ 4, extima angusta, in acumen seu aristam angustata, secunda pariter vacua, paullo longior latiorque, rigidior, obtusa v. sub-2-dentata, costa in

aristam brevem producta, tertia secundæ similis nisi mutica, sæpiusque paleam v. florem ♂ fovens; terminalis florens brevior, mutica, tenuis, cum palea inclusa hyalina. Stamina 3. Styli a basi distincti, stigmatibus plumosis. Caryopsis oblonga, glumis rigidulis laxè inclusa, libera.—Gramina rigidula, foliis ad basin caulis confertis secus caulem paucis planis sæpe pilosis. Panicula terminalis, longe pedunculata, patens, ramis filiformibus parce ramulosis. Spiculæ pilorum fasciculo cinctæ.

Species 2, Brasilienses (altera adhuc inedita). *Kunth, Enum. i. 519; Rev. Gram. t. 200.*

56. **Reynaudia**, *Kunth, Rev. Gram. 195, t. 9.*—Spiculæ 1-floræ, secus ramos inarticulatos paniculæ tenuis thyrsoidæ solitariæ, cum pedicello articulatæ, flore hermaphrodito. Glumæ 4, 3 exteriores vacuæ, subsimiles, carinatæ, apice 2-fidæ, intra lobos arista recta instructæ, infima paullo minor longiusque aristata, 3-5-nervis, secunda paullo major, 5-7-nervis, tertia sub-5-nervis lobis aristaeque brevioribus; terminalis florens angusta, hyalina, acuta, præter carinam enervis, vacuis paullo brevior; palea 0. Lodiculæ 4, quarum 2 exteriores (potius paleam nuncupandæ?) acuminatæ, 2 interiores latæ truncatæ. Stamina 2. Styli distincti, stigmatibus plumosis. Caryopsis . . .—Gramen cæspitosum, foliis ad basin caulis confertis filiformi-teretibus. Panicula longe pedunculata, brevis, angusta, gracilis, laxiuscula, ramis filiformibus brevibus paucispiculatis.

Species 1, ins. San Domingo et Cubæ incolæ. *Kunth, Enum. Pl. i. 39.*

57. **Rhynchelytrum**, *Hochst. in Flora, 1844, 249, non Nees.*—Spiculæ secus ramos inarticulatos paniculæ solitariæ, cum pedicello articulatæ, flore terminali unico hermaphrodito, addito interdum masculo inferiore. Glumæ 4, extima a cæteris distans, brevis, angusta, mutica, fasciculo pilorum cincta, secunda pariter vacua, concava, carinata, 3-5-nervis, dorso pilis longis ciliata, 2-dentata et inter dentes longe tenuiterque aristata, tertia secundæ similis æqualisque nisi sæpius paleam tenuem et interdum florem ♂ fovens; terminalis florens multo brevior, cum palea subhyalina glabra, mutica. Stamina 3. Styli a basi distincti, stigmatibus plumosis elongatis. Caryopsis (in speciminibus immatura) glumis induratis inclusa, libera.—Gramina (annua?) elatiuscula, foliis siccitate convolutis complicatisve. Panicula terminalis, laxè thyrsoidæ, ramulis pedicellisque tenuissimis sparsis v. subfasciculatis.

Species 2 v. 3, Africæ tropicæ incolæ. *Steud. Syn. Pl. Glum. i. 119*, quoad species Abyssinicas. Specimina Abyssinica Schimperii n. 2310, a typicis Kotschyani n. 370, spiculis minoribus minus pilosis aristis brevioribus etc. paululum differre videntur. *R. ruficomum*, *Hochst. in Steud. l.c.* nobis ignotum est. Genus *Rhynchelytrum* ad plantam Drogeanam a Neesio in *Pl. Afr. Austr. Gram. 64*, constitutum valde diversum est, et evidenter *Panicum (Tricholænam) roseum* refert.

58. **Thysanolaena**, *Nees in Pl. Meyen. 180. (Myriachæta, Zoll. et Mor. Verz. Pl. Zoll. 101, ex descr.)*—Spiculæ 1-floræ, minimæ, secus ramulos filiformes paniculæ subfasciculatæ, cum pedicello articulatæ, flore hermaphrodito. Glumæ 4, 2 exteriores multo breviores inæquales latæ muticæ, tertia pariter vacua, longior, membranacea, acutè acuminata; terminalis florens brevior tenuiorque latior, obtusa, longe ciliata; palea angusta, hyalina. Stamina 2-3. Styli a basi distincti, stigmatibus plumosis. Caryopsis minima, glumis inclusa quarum tertia rigescit.—Gramen elatum, foliis longis latisque. Panicula terminalis, maxima, ramis numerosissimis longe ramulosis primum strictis demum sæpe effusis, undique fasciculis subsecundis spicularum dense obtectis; spiculæ ipsæ breviter pedicellatæ.

Species 1, per Asiam tropicam late dispersa, in Mauritio inquilina. *Steud. Syn. Pl. Glum. i. 119. Trin. Spec. Gram. t. 87 (Panicum).*

Setæ longæ, tenuissimæ, glumæ florenti in secco appressæ, a glumis exterioribus fore obtectæ, oculo nudo non apparent, et a Stendelio prætermisso, qui speciem alteram falsam setis destitutam distinxit.

59. **Cleistachne**, *Benth. in Hook. Ic. Pl. xiv. 60, t. 1379.*—Spiculæ 1-floræ, oblongæ, secus paniculæ ramos capillares inarticulatos solitariæ, dissitæ, cum pedicello ciliato articulatæ, flore hermaphrodito. Glumæ 4, 2 inferiores vacuæ, subæquales, latæ, rigidæ,

acutiusculæ, muticæ, plurinerves, circa florem convolutæ, clausæ, tertia vacua subbrevis, angusta, hyalina v. superne breviter membranacea villosaque; quarta sub flore a basi minima tenuissime hyalina in aristam longam rigidam tortam producta; palea minima, hyalina, truncata, ciliolata. Lodiculæ majusculæ. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, glumis inferioribus rigide coriaceis arcte inclusa.—Gramina elatiuscula, foliis longis planis. Panicula longa, anguste thyrsioidea, floribunda, pilosa, ramulis erectis flexuosis.

Species v. potius varietates 2, altera Peninsulæ Indiæ orientalis, altera Africæ tropicæ incola.

Genus primo aspectu *Sorgho* subsimile, sed spiculæ omnes hermaphroditæ nec unquam geminæ.

#### TRIBUS V. ZOYSIÆ.

60. *Hilaria*, H. B. et K. Nov. Gen. et Sp. i. 116, t. 37. (Pleuraphis, Torr. in Ann. Lyc. N. York, i. 148, t. 10.)—Spiculæ ternæ, in fasciculum ebracteatum articulatum deciduum congestæ, centralis flore unico fœmineo v. hermaphrodito, laterales floribus 2 masculis, fasciculis secus rhachin spicæ simplicis fere sessilibus. Glumæ 4, 2 exteriores vacuæ, rigidulæ, tenues v. induratae, involucrum simulantes, extima major, polymorpha, sæpius  $\infty$ -nervis, indivisa v. bifida, apice dentata v. lacera, dorso inter lobos aristata v. mutica, secunda angustior, sæpius carinata, integra v. 2-dentata, mucronata subaristata v. mutica, tertia et quarta membranaceo-hyalinæ integræ v. apice dentatæ, utraque in spiculis masculis florem paleamque angustam involvens, tertia in spicula fertili vacua (v. interdum deficiens?); terminalis spiculæ fertilis nunc a basi lata longe lineari-acuminata, nunc gradatim angustata v. undique æquilata, florem  $\sigma$  v.  $\rho$  paleamque angustam includens. Stamina 3. Styli basi breviter connati (v. distincti?), stigmatibus breviter plumosis. Caryopsis ovata v. breviter oblonga, glumis involucrantibus inclusa, libera.—Gramina basi decumbentia, ramosa v. caespitosa, stolones repentes sæpius emittentia, foliis angustis planis v. convolutis teretibus. Spicæ in pedunculo terminali solitariæ, breves v. longiusculæ, fasciculis approximatis quaquaversis basi sæpius annulo pilorum cinctis a rhachi articulatum secedentibus. Spiculæ in fasciculo sessiles.

Species 5 v. 6, Mexicanæ, ab America centrali usque ad Texas et Californiam extensæ. Fourn. Gram. Mex. 72. Thurb. in Wats. Calif. Bot. ii. 293 (Pleuraphis). Benth. in Journ. Linn. Soc. xix. 61.

Genus naturale et spicularum dispositione facile dignoscendum, etsi glumarum forma de specie in speciem magnopere variat, nec semper in eadem specie constans. In specie typica, *H. cenchroide*, H. B. et K., glumæ exteriores quam in cæteris magis induratae et gluma florens spiculæ fertilis basi breviter dilatata, in acumen longum producta insignitum et florem  $\rho$  includit. In *Pleuraphis mutica*, Buckl., glumæ exteriores latae, integerrimæ, exaristatæ, et in hac flos spiculæ fertilis  $\rho$  videtur. In *P. Jamesii*, Torr., flos spiculæ fertilis  $\sigma$  est.

HEXARRHENA, Presl, Rel. Hænk. i. 326, t. 45, a nobis non visa, ex icone et descriptione est plane *Hilaria* species.

61. *Ægopogon*, Humb. et Bonpl. in Willd. Spec. Pl. iv. 899. (Schellingia, Steud. in Flora, 1850, 231, t. 1. Hymenothecium, Lag. Elench. Hort. Matr. Gen. et Sp. Nov. 4.)—Spiculæ 1-floræ, per 2-6 fasciculatæ, fasciculis secus pedunculum seu rhachin continuum spicæ simplicis secundæ fere sessilibus dissitis, rhachilla ultra florem non producta, flore hermaphrodito. Glumæ 3, apice plus minus 3-dentatæ, dentibus lateralibus abbreviatis, medio aristiformi v. in aristam producta, 2 exteriores vacuæ, subbreviores, tertia florens, variant tamen exteriores v. una sola integerrima acuta, v. omnes apice latiusculæ emarginatæ muticæ, florens sæpius vacuis major, et evidentiùs 3-cuspidata; palea gluma paullo brevior, angustior, 2-nervis, 2-cuspidata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, glumis inclusa, fasciculo toto spicularum demum articulatum deciduo.—Gramina diffusa v. caespitosa, tenuia, foliis angustis planis. Spicularum fasciculi secus pedunculum secundi, demum penduli, haud raro spiculas 1-3 tenues steriles v. ananthas cum fertilibus mixtas continent.

Species 2, Americæ tropicæ occidentalis a Bolivia usque ad Mexicum incolæ. *Kunth, Enum. Pl. i. 235. Beauv. Agrostogr. t. 22, f. 3, 4. H. B. et K. Nov. Gen. et Sp. t. 42, 43. Fourn. in Bull. Soc. Bot. Belg. xv. 461; Gram. Mex. 71. Dell in Mart. Fl. Bras. ii. iii. 45, t. 12.*

Genus habitu *Melanocenchrum* refert, characteribus potius *Hilaricæ* affine.

62. ? *Cathestechum*, Presl, *Rel. Hænk. i. 294, t. 42.*—Spiculæ 2-floræ, ternatim fasciculatæ, fasciculis secus rhachin continuum spicæ simplicis secundæ fere sessilibus, floribus (omnibus ?) hermaphroditis. Glumæ 2 inferiores vacuæ, inæquales, mucronatæ v. breviter aristatæ, secunda spiculæ centralis breviter 2-loba, inter lobos breviter aristata; florentes longiores, breviter 4-fidæ, inter lobos aristatæ, aristis breviter plumosis: palea gluma brevior, apice breviter 2-3-dentata. Stamina 3. Styli distincti, longiusculi, stigmatibus plumosis. Caryopsis . . .—Gramen diffuse cespitosum, ramis prostratis, foliis brevibus planis. Pedunculi ad apices ramorum plures, breves, spicularum fasciculis paucis parvulis approximatis (*char. ex Presl*).

Species 1, Mexicana, a nobis non visa.

Spicula centralis cujusve fasciculi ex descr. auctoris 4-flora, ex icone 2-flora, et descriptio nonnullis aliis notis vix cum icone convenit. Genus cæterum ex Preslio *Egopogoni* affine, differre videtur imprimis floribus in spicula 2, utroque hermaphrodito.

63. *Anthephora*, Schreb. *Beschr. Gräs. ii. 105, t. 44.*—Spiculæ 1-floræ, plures (ad 4) in fasciculum ebracteatum demum induratum articulatim deciduum congestæ, in quoque fasciculo sæpius 1-2 florem perfectum includentes, 2-3 steriles, fasciculis secus rhachin spicæ simplicis fere sessilibus. Glumæ 3 v. 4, extima dum adsit minima, secunda vacua, maxima, rigida, acuta v. in aristam brevem producta, tertia pariter vacua, sed brevis tenuisque; quarta florens tertiæ subæquilonga, sed cum palea inclusa tenuior. Stamina 3. Styli basi breviter connati, stigmatibus plumosis. Caryopsis ovata v. oblonga, compressa, glumis paleaque inclusa, libera.—Gramina ramosa v. cespitosa, interdum elata, foliis planis mollibus v. elongatis angustisque. Spica terminalis, elongata, cylindracea, spicularum fasciculis quaquaversis v. secundis, rhachi flexuosæ arcte appressis.

Species nobis notæ 5, quarum una Americæ tropicæ, 4 Africæ tropicæ v. australis incolæ. *Beauv. Agrostogr. 58, t. 13, f. 8. Steud. Syn. Pl. Glum. i. 111 (excl. sp. 5 et 6 ad Hilariam referendis). Dell in Mart. Fl. Bras. ii. ii. 312, t. 44.*

*HYPODÆRUS*, Hochst., genus ab A. Braunio in Flora 1841, 275, aliisque citatum, est *Anthephora abyssinica*, A. Rich. Fl. Abyss. ii. 389.

64. *Trachys*, Pers. *Syn. Pl. i. 85.* (*Trachyzus*, Reichb. *Consp. 48. Trachystachys*, A. Dietr. *Spec. Pl. ii. 16.*)—Spiculæ 1-floræ, plures in fasciculum 1-bracteatum demum induratum articulatim deciduum congestæ, in quoque fasciculo sæpius 1-3 florem perfectum includentes, cæteræ (3-6) steriles v. florem ♂ includentes, fasciculis secus rhachin spicæ subsessilibus. Glumæ 3-4, muticæ, 1-2 exteriores breves, tenues, inæquales, vacuæ, tertia maxima, rigidula,  $\infty$ -nervis, vacua; terminalis florens brevior, cum palea inclusa tenuis, subhyalina. Stamina 3. Styli basi brevissime connati, stigmatibus plumosis. Caryopsis oblonga, gluma paleaque tenuibus rigidulis inclusa, libera.—Gramen annuum, ramosum, foliis planis mollibus. Spicæ ad apicem pedunculi terminalis geminæ, rhachi flexuosa leviter dilatata. Spicularum fasciculi in facie inferiore rhacheos alterni, subsessiles, receptaculo pedicellisque spicularum post anthesin induratis, glumis majoribus rigidis post anthesin muricati.

Species 1, Peninsulæ Indiæ orientalis incola. *Beauv. Agrostogr. 107, t. 21, f. 7. Kunth, Enum. Pl. i. 168. Schreb. Beschr. Gräs. t. 34 (Cenchrus). Retz, Obs. v. t. 1 (Panicum). Roxb. Corom. Pl. t. 206 (Panicum).*

65. *Tragus*, Hall. *Stirp. Helv. ii. 203.* (Lappago, Schreb. *Gen. Pl. 55.*)—Spiculæ 1-floræ, plures (3-5) in fasciculum laxum demum articulatim deciduum confertæ, terminalis cujusve fasciculi sæpius sterilis, cæteræ florem hermaphroditum includentes, fasciculis

**seculus rhachin** spicæ brevissime pedicellatis quaquaversis. Glumæ 2 v. 3, infima minima sæpe deest, secunda vacua, rigida, costis aculeis glochidiatis echinatis; terminalis florens brevior, cum palea inclusa tenuis, hyalina. Stamina 3. Styli breves, distincti, stigmatibus longiusculis plumosis. Caryopsis oblonga, glumis inclusa, libera.—Gramen annuum, diffuse ramosum, foliis planis flaccidis. Spica terminalis, simplex, laxiuscula, fasciculis spicularum lappaceis facile secedentibus.

Species 1, per regiones tropicas temperatasque utriusque orbis latissime diffusa. *Beauv. Agrostogr.* 23, t. 6, f. 13. *Kunth, Enum. Pl.* i. 169. *Rev. Gram.* t. 120 (*Lappago*). *Schreb. Besch. Gräs.* 45, t. 4 (*Cenchrus*). *Host, Gram. Austr.* i. t. 36 (*Lappago*). *Nies. Gen. Fl. Germ. Monocot.* i. n. 23. *Reichb. Ic. Fl. Germ.* t. 30 (*Lappago*). *Sibth. Fl. Græc.* t. 101 (*Lappago*). *Pall in Mart. Fl. Bras.* ii. ii. t. 18.

66. **Zatipes**, *Kunth, Rev. Gram.* i. 261, t. 42.—Spiculæ 1-floræ, in pedicello basi articulatæ solitariae v. geminae, secus rhachin racemi quaquaversæ, flore hermaphrodito, rarius in spicula una deficiente. Glumæ 3, infima angusta, rigida, valde concava, dorso muricata, secunda pariter vacua, infima subæquilonga, angustior, sæpe recurvo-patens, margine v. dorso muricata; terminalis florens multo brevior, cum palea inclusa, hyalina, lævis. Stamina 3. Styli distincti, breves, stigmatibus plumosis. Caryopsis oblonga, gluma exteriori indurata muricata arcte inclusa, libera, gluma intima paleaque emarcidis sub fructu sæpius evanescentibus.—Gramen annuum, tenue, multicaule, rigidum, subramosum, foliis angustis. Racemus terminalis, simplex, laxis, elongatus, rhachi demum flexuosa. Spiculæ parvæ, in pedicello superne compresso dilatato sessiles.

Species 1, Africæ tropicæ et Asiæ occidentalis incolæ a Senegambia usque ad Scinde. Genus a Steudelio cum *Trago* junctum.

67. **Lopholepis**, *Dene. in Archiv. Mus. Par.* i. 147. (*Holboellia*, *Wall. in Hook. Bot. Misc.* ii. 144, t. 76, non ejusd. *Tent. Fl. Nepal.*)—Spiculæ 1-floræ, minimæ, pedicellis basi articulatis, in racemo simplici quaquaversæ, flore hermaphrodito. Glumæ 3, extima vacua, incumbens, basi dorso in gibbum compressum ciliato-cristatum producta, et supra gibbum iterum in cristam ciliatam dilatata, secunda pariter vacua, a prima semitecta, qua subbrevior, recta, carina dorso ciliato-cristata; terminalis florens hyalina, vacuis 3-4-plo brevior, ovata, acuta; palea hyalina, inclusa. Stamina 2. Styli distincti, breves, stigmatibus plumosis. Caryopsis a basi gibboso-incurva oblonga, glumis rigidulis inclusa, libera.—Gramen annuum, gracile, elegans, multicaule, foliis planis. Racemus terminalis, simplex, spiculis numerosissimis breviter pedicellatis. Flores minutissimi, intra spiculas mox emarceidi, in speciminibus siccis rari, spiculis fere omnibus jam fructiferis.

Species 1, Peninsulæ Indiæ Orientalis incola.

68. **Neurachne**, *R. Br. Prod.* 196.—Spiculæ secus rhachin continuam spicæ densæ ovoidæ v. cylindricæ sessiles, articulatae, quaquaversæ, flore hermaphrodito unico terminali, addito rarissime altero inferiore masculino. Glumæ 4, 2 exteriores vacuæ, quarum secunda cæteris major, utro latere pilis intramarginalibus ciliata, tertia minor tenuiorque, sæpius paleam parvam rarissime florem masculum fovens; terminalis minor paleaque subæquilonga tenuiter hyalinæ. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis gluma paleaque tenuibus inclusa, libera.—Gramina perennia, basi cæspitosa subramosa, caulibus sæpius strictis rigidulis, foliis planis v. convolutis subteretibus. Spicæ terminales, pedunculatae, in una specie spiculis inferioribus sterilibus quasi involucrie, in cæteris anguste cylindricæ.

Species 3, Australianæ. *Benth. Fl. Austral.* vii. 507, et in *Hook. Ic. Pl.* t. 1239 ad 1241.

69. **Perotis**, *Ait. Hort. Kew.* i. 85. (*Xystidium*, *Trin. Fund. Agrost.* 102.)—Spiculæ 1-floræ, angustæ, secus rhachin continuam spicæ v. racemi laxi tenuis sessiles v. breviter pedicellatae, cum pedicello articulatae, flore hermaphrodito. Glumæ 3, 2 exteriores vacuæ, lineares, rigidae, in aristas longas rectas productæ, extima longiore; terminalis florens,

multo minor, cum palea adhuc minore tenuiter hyalina. Stamina 3. Styli basi breviter connati, stigmatibus plumosis brevibus. Caryopsis linearis, glumam intimam palcamque superans, glumis exterioribus inclusa, libera.—Gramina annua v. perennia, multicaulia v. basi ramosa, foliis sæpius brevibus. Spica terminalis, longa, rhachi tenui, spiculis nunc minimis densissime confertis, nunc longioribus sparsis.

Species apud auctores nonnullos 7, sed ad 2 v. 3 inter se ægre distinguendas reducendæ, Asiæ, Africæ et Australiæ inter tropicos incolæ. Beauv. *Agrostogr.* 5, t. 4, f. 9. Steud. *Syn. Pl. Glum.* i. 185. Kunth, *Rev. Gram.* t. 92.

*P. rara*, Br., species Australiana, a speciminibus Asiaticis Africanisve *P. latifoliæ*, Ait., primo aspectu distinctissima apparet, quæcum tamen intermediis numerosis connectitur.

70. *Leptothrium*, Kunth, *Enum. Pl.* i. 470, t. 38, f. 2.—Spiculæ 1-floræ, secus rhachin continuam spicæ breviter pedicellatæ, flore hermaphrodito. Glumæ 3, 2 inferiores vacuæ, subcoriaceæ, acutato-subulatæ, infima brevior, subcarinata, inæquilateralis, secunda involuta, a latere compressiuscula; florens hyalina, ovata, subcarinata, 1-nervis; palea triplo brevior. Stamina 3. Styli distincti, stigmatibus penicilliformibus. Caryopsis . . .—Gramen cæspitosum, glabrum, rigidum, caulibus simplicibus, foliis margine involutis rigidis. Spica simplex, rhachi triangulari subflexuosa; spiculæ alternæ, pedicello cum rhachi articulo (*char. ex Kunth*).

Species 1, Americæ calidioris incola, a nobis non visa, a Kunthio ad specimen Humboldtianum descripta.

Genus evidenter *Zoysia* quam maxime affine, nec diversum nisi glumis vacuis 2, et patria.

71. *Zoysia*, Willd. in *Gesellsch. Nat. Fr. Berlin N. Schr.* iii. 440. (Matrella, *Pers. Syn. Pl.* i. 73. Osterdamia, Neck. *Elem.* iii. 218.)—Spiculæ 1-floræ, secus rhachin continuam spicæ subsessiles v. breviter pedicellatæ, appressæ, flore hermaphrodito. Glumæ 2, exterior vacua, lata, complicato-carinata, acutiuscula, mutica, interior florens multo minor, cum palea inclusa tenuis, hyalina. Stamina 3. Styli distincti, longiusculi, stigmatibus plumosis. Caryopsis gluma exteriore leviter indurata inclusa, libera.—Gramina repentia, caulibus e basi ramosa breviter erectis rigidulis, foliis distichis rigidis sæpe pungentibus. Spica terminalis, pedunculata, simplex, tenuis, spiculis arcte appressis nec unilateralibus.

Species 2 v. 3 in maritimis Asiæ australis et orientalis, ins. Mascarensum, Australiæ et Novæ Zelandiæ late dispersæ. Beauv. *Agrostogr.* i. t. 4, f. 1. Kunth, *Enum. Pl.* i. 471. Benth. *Fl. Hongk.* 418. Hance in *Seem. Journ. Bot.* vii. 168. Franch. et Savat. *Enum. Pl. Jap.* ii. 186, 609. Buchan. *Grass. N. Zeal.* t. 13 A.

72. *Schaffnera*, Benth. in *Hook. Ic. Pl.* xiv. 59, t. 1378.—Spiculæ 1-floræ, in pedunculis axillaribus brevissimis 1-3 subsessiles, articulatæ, rhachilla brevissima ultra florem non producta, flore hermaphrodito interdum sterili. Glumæ 2, inferior vacua, spiculam æquans, ∞-nervis, 3-5-aristata, aristis lateralibus basi sæpe hyalino-appendiculatis; superior florens membranacea, fere hyalina, brevissime 2-loba, arista inter lobos fere dorsali longiuscula patente; palea gluma paullo brevior, tenuiter hyalina, 2-nervis, apice 2-dentata v. obtusa. Stamina 3, antheris longis angustis. Styli 2, distincti, elongati, tenuissimi, stigmatibus breviter plumosis. Caryopsis . . .—Gramen annuum, humile, diffuse ramosum, foliis brevibus setaceis, caulinis longe vaginatis. Pedunculi intra vaginas foliorum floralium subinclusi, inferior interdum solitarius elongatus, 3-spiculatus, superiores in vagina fasciculati, breves, inæquales. Spiculæ in quoque pedunculo 1 v. 2, aliæ perfectæ fertilesque, aliæ steriles v. vacuæ.

Species 1, Mexicana.

Genus affinitatis valde dubiæ. Primo aspectu iconem *Cathestechi* refert, spicularum structura *Zoysia* accedit, folia floralia *Andropogonis* (*Cymbopogonis*) v. *Apludæ*.

## TRIBUS VI. ANDROPOGONEÆ.

73. *Imperata*, Cyr. *Pl. Rar. Ic.* ii. 26, t. 11, fide *Parlat. Fl. Ital.* i. 136.—Spiculæ secus ramulos continuos paniculæ angustæ densæ geminæ, inæqualiter pedicellatæ, cum pedicello articulatæ, flore unico hermaphrodito terminali, addito rarius altero inferiore sterili. Glumæ 4, omnes tenues, hyalinæ, muticæ, 2 exteriores vacuæ, pilosæ, tertia glabra, vacua v. rarius paleam floremque masculum v. sterilem fovens; terminalis florens, adhuc minor, glabra; palea apice truncata dentataque. Stamina 1-2. Styli distincti, stigmatibus plumosis. Caryopsis parva, glumis inclusa, libera.—Gramina perennia, erecta, sæpe elata, foliis longis. Panicula spiciformis, terminalis, longa, dense cylindræa, pilis longis spiculis involventibus pulchre argenteo-sericea.

Species 3 v. 4, per regiones tropicas et subtropicas utriusque orbis late dispersæ, in orbe vetere usque ad Europam australem Chinam et Japoniam extensæ. *Beauv. Agrostogr.* 7, t. 5, f. 1. *Steud. Syn. Pl. Glum.* i. 405. *Anders. in Ofvers. K. Vet. Akad. Stockh* 1855, 157. *Cav. Ic. t.* 292 (*Saccharum*). *Reichb. Ic. Fl. Germ.* t. 55. *Sibth. Fl. Græc.* t. 54 (*Saccharum*). *Host, Gram. Austr.* iv. t. 40. *Ten. Fl. Neap.* t. 211 (*Saccharum*).

*I. sacchariflora*, Maxim. *Prim. Fl. Amur.* 331, e China boreali et regione Amurense, paniculæ ramis elongatis patentibus et staminibus 3, melius sub *Miscantho* militare videtur, etsi glumæ exaristatæ. *I. ramosa*, Anders., species gerontogea, est, docente Munroio, omnino eadem ac *I. caudata*, Anders., ex America. Hæc species cum speciminibus Americanis *I. arundinaceæ*, genus SYLLEPIS, *Fourn. Gram. Mex.* 52, format ab auctore distinctum lodiculis connatis, quas tamen frustra quasi-vimus. An Fournier paleam latam hyalinam truncato-4-dentatam pro lodiculis connatis habet?

74. *Miscanthus*, Anders. in *Ofvers. K. Vet. Akad. Stockh.* 1855, 165. (*Eulalia*, Trin. pro parte, Munro in *Benth. Fl. Hongk.* 420, non Kunth.)—Spiculæ secus ramulos continuos paniculæ patentis geminæ, inæqualiter pedicellatæ, cum pedicello articulatæ, flore unico hermaphrodito. Glumæ 4, 2 exteriores majores vacuæ, membranaceæ, 3-7-nerves v. extima rarius parinervi, muticæ, tertia pariter vacua, sed tenuior, interdum tenuissime hyalina, mutica; terminalis florens tenuiter hyalina, breviter v. alte 2-fida, arista inter lobos sæpius tenuissima subgeniculata basi torta, rarius brevissima v. omnino deficiens; palea tenuiter hyalina. Stamina 3. Styli distincti, stigmatibus plumosis.—Gramina elata, foliis angustis sæpius planis. Panicula terminalis, ampla, pilis longis sericea v. rarius fere glabra, ramis patentibus simplicibus v. vix divisis.

Species 8, quarum una Africæ australis, cæteræ Asiæ orientalis ab Archipelago Malayano usque ad Japoniam incolæ. *Labill. Sert. Austr. Calid.* t. 18 (*Saccharum*). *Benth. in Journ. Linn. Soc.* xix. 64.

Præter species ab Andersonio l.c. enumeratas ad *Miscanthum* pertinent *Eriochrysis fusca*, Trin. (*E. attenuata*, Nees in *Steud. Syn. Glum.* i. 411), ex India orientali, *Imperata sacchariflora*, Maxim., e China boreali, gluma florente mutica, et *Eulalia cotulifera*, Munro (ECCOLOPUS, *Steud. Syn. Pl. Glum.* i. 123), species Japonica, panicula pilis sericeis orbata insignis; glumæ ipsæ parciissime tantum pubescentes.

Genera *Imperata* et *Miscanthus* quoad paniculæ ramos inarticulatos *Tristegineis* imprimis *Garnotia* et *Arundinella* prope accedunt, ob habitum tamen et glumæ florentis tenuitatem a vicinitate *Erianthi* et *Sacchari* non removenda.

75. *Saccharum*, Linn. *Gen.* n. 73.—Spiculæ secus ramulos articulatos paniculæ densæ v. amplæ geminæ, altera sessili, altera pedicellata, utraque fertili, flore unico hermaphrodito v. rarius in spicula pedicellata foemineo. Glumæ 4, 3 vacuæ, acutæ v. subsetoso-acuminatæ, hyalinæ v. basi membranaceæ v. leviter induratæ, ab extima majore ad tertiam minorem gradatim tenuiores; terminalis florens brevior, mutica, cum palea brevi tenuiter hyalina. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, glumis inclusa, libera.—Gramina elata, foliis planis v. angustis siccitateque convolutis. Panicula terminalis, pilis longis sericeis undique dense oblecta, nunc ampla densæ floribunda, ramulis numerosissimis tenuibus spiciformibus ad quodque par spicularum articu-

latis, nunc contracta dense spiciformis, articulis minus caducis. Spiculæ minimæ, pilis longis involutæ, terminales cujusve ramuli nunc ternæ, centrali sessili, lateralibus pedicellatis, nunc ut ad nodos inferiores geminæ.

Species ad 12, nonnullæ tamen inter se parum distinctæ, genuinæ orbis veteris regionum tropicarum et subtropicarum incolæ, quarum una etiam in America calidiore diu culta. Beauv. *Agrostogr.* 6, t. 4, f. 10. Kunth, *Enum. Pl.* i. 474. Steud. *Syn. Pl. Glum.* i. 405. Hook. *Bot. Misc.* t. 26. Hayne, *Arzneigew.* ix. t. 30, 31. Roxb. *Corom. Pl.* t. 232. Beauv. *Fl. Ov. et Ben.* t. 103.

ERIOCHRYSIS, Beauv. *Agrostogr.* 8, t. 4, f. 11, Lam. *Illustr.* t. 908, est species Americana tropica a *Saccharo* non distinguenda nisi panicula contracta densissima spiciformi continua v. interrupta spiculis rufo-villosis. Glumæ exteriores membranaceæ demum rigidulæ, non tamen magis induratae quam in *Saccharis* nonnullis genuinis, nec basi incrassatis ut in *Saccharo spontaneo*. In speciebus gerontogeis a Neesio et Munroio *Eriochrysi* additis e.g. in *Eriochryse pallida*, Munro in *Harv. Gen. S. Afr. Pl.* ed. 2, 440, ex Africa australi et præsertim in *E. Narenga*, Nees in Steud. *Syn. Pl. Glum.* i. 411, et in *E. longifolia*, Munro, ex India orientali, spicæ v. paniculæ ramuli longiores et habitus fere specierum genuinarum, in his glumæ non rigidiores quam in *S. officinarum*. *Eriochrysis fusca*, Trin. (*E. attenuata*, Nees), ex India orientali, est *Miscanthi* species.

Hackel in litteris monet genus *Eriochrysin* retinendum esse ad *E. cayennensem* speciesque 2 austro-Americanas ei affines (incluso *Anathero holcoide*, Nees, *Agrostol. Bras.* 324, *Andropogone holcoide*, Kunth, *Rev. Gram.* t. 160) quas distinxit imprimis spicula pedicellata cujusve paria florem femineum nec hermaphroditum fovens. In *E. Narenga* et in *E. longifolia* stamina certe perfecte in utraque spicula. In *E. pallida*, spicula pedicellata sessili simillima est, pistillum perfectum fovens sed stamina in utraque frustra quævivimus, omnibus verisimiliter jam delapsis. In *E. cayennense* et in *E. holcoide*, spicula pedicellata etsi fertilis et cæterum sessili simillima, sæpius nec semper minor est, et stamina omnino deesse videntur v. ad staminodia breviter reducta. In spicula sessili stamina caducissima, pauca tamen in speciminibus supersunt. Cæterum differentia inter flores ♀ et ♂, si pariter fertiles, multo minoris momenti videtur quam inter flores ♂ steriles et ♀ v. ♂ fertilesque et Hackel in litteris ultimis de genere suo dubius videtur. Habitus *E. holcoidis* potius speciebus gerontogeis quam *E. cayennensi* accedit.

76. *Erianthus*, Mich. *Fl. Bor. Amer.* i. 54. (Ripidium, Trin. *Fundam. Agrostogr.* 169.) —Spiculæ secus ramulos articulatos paniculæ densæ longæ v. amplæ geminæ, homogamæ, altera sessili altera pedicellata, flore unico hermaphrodito. Glumæ 4, 2 exteriores membranaceæ, sæpe rigidulæ, subæquales, vacuæ, extima 4-5-nervis sæpe 2-dentata, secunda tenuior ∞-nervis, tertia brevior, hyalina, vacua; terminalis florens hyalina, nunc setaceo-acuminata, nunc in aristam rectam v. vix subgeniculatam producta; palea hyalina, parva v. rarius longiuscula. Stamina 3. Styli distincti, elongati, stigmatibus plumosis. Caryopsis oblonga, glumis inclusa, libera. —Gramina sæpius elata, foliis planis v. angustis siccitateque convolutis. Panicula terminalis, nunc angusta densissima, nunc laxius patens v. interdum unilateralis, pilis longis sericeis sæpius densissime oblecta, ramis primariis sæpius ramosis ultimis seu spicis ad quodque par spicularum articulatis. Spiculæ pubescentes v. sæpius sericeo-pilosæ, terminales cujusve ramuli sæpius terni.

Species ad 12, per regiones calidiores utriusque orbis dispersæ, usque ad Europam australem Chinam Japoniam et civitates australiores Americæ borealis extensæ. Beauv. *Agrostogr.* 14, t. 5, f. 2. Anders. in *Ofvers. K. Nat. Akad. Stock.* 1856, 160 (excl. sp. nonnullis ad *Polliniam* referendis). Jacq. *Eol. Gram.* t. 5 (*Saccharum*). Host, *Gram. Austr.* ii. t. 3, iii. t. 1 (*Andropogon*). Nees, *Gen. Fl. Germ. Monocot.* i. n. 90. Reichb.  *Ic. Fl. Germ.* t. 55 (*Saccharum*). Sibth. *Fl. Gr.* t. 52 (*Saccharum*).

Genus quoad species typicas, *E. saccharoidem*, Mich., et *E. Ravennæ*, Beauv., affinesque facillime distinctum; species tamen paucae Austro-Americanæ gluma fertili apice ad latera aristæ sæpe 2-fida genus cum *Polliniæ* sect. *Eulalia* arcte connectunt. *E. stricta*, Nees, ex America boreali insignis est glumis pubescentibus quidem, sed panicula pilis sericeis cæterum specierum omnino orбата.

77. *Spodiopogon*, Trin. *Fundam. Agrostogr.* 192, t. 17. —Spiculæ ad apices ramulorum articulatarum paniculæ ternæ, una sessili inter 2 stipitatas, interdumque adsunt paria 1-2 inferiora, altera in pari sessili altera stipitata, flore in omnibus unico hermaphrodito

v. abortu foemineo terminali, addito interdum inferiore masculo. Glumæ 4, 2 exteriores vacuæ, tenuiter membranaceæ, longe ciliatæ, subæquales, muticæ, tertia minor, hyalina, paleam sæpeque in spicula sessili florem ♂ fovens; terminalis florens hyalina, alte 2-fida, arista inter lobos longa geniculata, basi torta, palea tenuissima brevi, flore ♂ v. abortu ♀. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis ovoideo-oblonga, glumis exterioribus inclusa, libera.—Gramina elata, foliis latiusculis planis. Panicula longe pedunculata, anguste thyrsoides, laxa v. densa, molliter sericeo-ciliata ramulis pedunculisque breviter filiformibus.

Species 3, Asiæ temperatæ et Indiæ orientalis incolæ. *Benth. in Journ. Linn. Soc.* xix. 66.

Genus a *Pollinia*, uti *Chrysopogon* ab *Andropogone*, differt inflorescentiâ et includit præter *S. sibiricum*, Turcz., *S. pogonanthum*, Boiss., et *S. albidum*, Benth. (*Andropogon albidum*, Wall. Cat. Herb. Ind. n. 8821).

*Spodiopogones* Mexicanæ, Fourn. Gram. Mex. 52, 53, nobis videntur omnino *Eriantho* conformes. Specimina Bourgeana n. 2970, *S. foliati*, Fourn., a typico *Eriantho saccharoidi*, Mich., distinguere nequimus. *S. angustifolius*, Trin., est *Polliniæ* species, aliæ nonnullæ in *Ischamo* quærendæ.

78. *Pollinia*, Trin. in Mem. Acad. Petersb. ser. 6, ii. 304, non Spreng.—Spiculæ secus ramulos simplices articulatos paniculæ geminæ, homogamæ, altera sessili altera pedicellata, flore unico hermaphrodito. Glumæ 4 v. rarius 3, extima major, vacua, membranacea, mutica, sæpius truncata, dentata v. ciliata, secunda pariter vacua, sæpius tenuior, acuta v. in aristam tenuem rectam producta, tertia tenuiter hyalina, vacua v. deficiens; terminalis florens, hyalina, nunc apice 2-fida sæpiusque inter lobos tenuiter v. valide aristata, nunc ad basin hyalinam stipitiformem aristæ validæ reducta, arista geniculata basi plus minus torta; palea parva hyalina v. 0. Stamina (an semper?) 3. Styli distincti, stigmatibus plumosis. Caryopsis glumis exterioribus inclusa, libera.—Gramina nunc tenuia basi decumbentia ramosaque, nunc elatiora, foliis sæpius angustis interdum longe subulato-acuminatis. Panicula terminalis, ramis simplicibus spiciformibus ad apicem pedunculi subdigitato-approximatis, v. secus pedunculum numerosioribus inferioribus interdum basi geminatim v. subfasciculatim conjunctis, nec ut in *Eriantho* ulterius ramulosi.

Species ad 25, Asiæ, Africæ et Australiæ tropicæ incolæ, in Asia orientali extra tropicos parce extense. *Benth. in Journ. Linn. Soc.* xix. 66.

Genus inflorescentia *Andropogoni* sect. *Gymnandropogoni* accedit, spiculis cujusve paris homogamis potius *Eriantho* affine, in sectiones 2 sequentes facile dividitur:—

1. *Eulalia*. Spicæ densifloræ, rhachi pedicellisque plus minus pilis sericeis sæpe fulvis more *Erianthi* obtectis. *Benth. Fl. Austral.* vii. 524. *Brongn. in Duperr. Voy. Cog. Bot.* t. 17 (*Pogonatherum*). *Bory, Voy. Afr.* t. 21 (*Andropogon*). *EULALIA*, Kunth, *Rev. Gram.* i. 359, t. 93. *Trin. Spec. Gram.* t. 332. *P. eriopoda*, Hance (*Spodiopogon angustifolius*, Trin. *Spec. Gram.* t. 336), ex India et China, insignis est caule basi incrassato dense lanato. Ad sect. *Eulaliæ* etiam referendæ videntur *Erianthus longisetus*, Anders., *E. versicolor*, Nees, *E. filifolius*, Nees, aliæque nonnullæ, spicis numerosis in paniculam longam amplam dense confertis longe sericeo-pilosis, inferioribus basi sæpe fasciculatim conjunctis.

2. *Leptatherum*. Spicæ sæpius tenues iis *Arthraxi* accedentes, rhachi præter annulum pilorum brevium ad basin spicularum nuda. *Brongn. in Duperr. Voy. Cog. Bot.* t. 19 (*Eulalia*).

In *P. nuda*, Trin. (*P. imberbi*, Nees), spicæ undique glabræ, ciliis ad basin spicularum deficientibus, arista glumæ fertilis tenuissime capillacea e spicula exseritur. *MICROSTEGIUM*, Nees in *Steud. Syn. Pl. Glum.* i. 411, est species *P. nudæ* valde affinis, *P. Willdenowianum*, Benth., rhachi spicarum pariter nuda, sed arista glumæ fertilis deest. *LEPTATHERUM*, Nees in *Proc. Linn. Soc.* i. (1841) 92, est *P. lancea*, Nees in *Steud. Syn. Pl. Glum.* i. 410, *P. nudæ* affinis, sed spiculæ annulo ciliarum nunc brevissimarum nunc longiuscularum cinctæ sunt. *NEMASTACHYS*, *Steud. Syn. Pl. Glum.* i. 357, ex ins. Taiti, ex char. dato videtur *Polliniæ* (*Leptatheri*) species.

*POLLINIA*, Spreng. *Pl. Min. Cogn. Pug.* ii. 10, genus fictum fuit ad species varias *Andropogonis* *Chrysopogonis* et *Polliniæ*, caractere manco junctas, et a Trinio rite deletum fuit et de novo constitutum.

79. *Pogonatherum*, Beauv. *Agrostogr.* 56, t. 11, f. 7. (*Homoplitis*, Trin. *Fundam. Agrostogr.* 166).—Spiculæ secus rhachin articulatas spicæ simplicis secundæ geminæ,

altera sessili altera stipitata, flore in utraque unico fertili, addito interdum altero infero masculo. Glumæ 4 v. rarius 3, tenues, extima vacua, spicula paullo brevior, mutica, secunda pariter vacua, cæteris paullo longior, latiuscula, membranacea, subhyalina, dorso sub apice longe aristata, tertia hyalina, mutica, in spicula sessili vacua v. florem ♂ rariissime ♂ sterilemque fovens, in spicula pedicellata vacua v. deficiens; terminalis florens brevis, hyalina, 2-fida, inter lobos longe tenuiterque aristata, flore in utraque spicula ♀ v. in sessili ♂; palea brevis, nunc minima. Stamina 1 v. 2. Styli distincti, stigmatibus plumosis. Caryopsis glumis membranaceis inclusa, libera.—Gramen tenue, sæpe ramosissimum. Pedunculi filiformes, basi vagina stipati; spica unica, obliqua, tenuis sed densa, aristis longis tenuibus insignis.

Species 1, Indiæ orientalis, Archipelagi Malayani, Chinæ et Japoniæ incolæ. *Kunth, Enum. Pl. i. 477. Rev. Gram. t. 161, 162. Thunb. Fl. Jap. t. 7 (Andropogon).*

80. **Apocopsis**, *Nees in Proc. Linn. Soc. i. (1841) 93. (Amblyachyrum, Hochst. in Steud. Syn. Pl. Glum. i. 413, et in Flora, 1856, 25.)*—Spiculæ perfectæ secus rhachin articulatae spicæ sessiles, cum rudimento stipitiformi ciliato spiculæ alterius, flore fertili unico terminali addito sæpissime altero masculo infero. Glumæ 4, extima vacua latissima, membranacea, multinervis, truncata, denticulata, cæteras involvens, secunda pariter vacua, angustior, tenuior v. subhyalina, truncato-dentata, mutica v. arista recta instructa, tertia angusta, hyalina, paleam angustam sæpissimeque florem ♂ fovens; terminalis tenuissima, hyalina, angusta, in aristam exsertam geniculatam basi tortam nunc longam nunc minimam producta v. rarius mutica, paleam angustam hyalinam floremque ♀ v. rarius ♂ fovens. Stamina 2. Styli distincti. Caryopsis oblonga, gluma extima involuta, libera.—Gramina perennia, basi sæpe diffuse pilosa, glabra v. molliter pilosa, foliis planis angustis non cordatis. Spicæ ad apicem pedunculi sæpe tenues, solitariae v. geminae, densæ, erectæ, rhachi ad nodos annulo pilorum ciliata, et gluma extima ipsa interdum fasciculo pilorum instructa. Spiculæ inferiores spicæ interdum tenuiores, exaristatæ, florem unicum ♂ includentes.

Species 5 v. 6, Indiæ orientalis, Chinæ et Archipelagi Malayani incolæ. *Benth. in Journ. Linn. Soc. xix. 67. Huc pertinent A. Royleana, Nees (Ischæum paleaceum, Trin. Spec. Gram. t. 333, Andropogon paleaceus et A. himalayensis, Steud.), arista sæpius brevissima v. evanida rarius spicula longiore, et A. tridentata, Benth., Andropogon tridentatus, Roxb., species insignis arista longa, et spicis junioribus sæpius bractea ampla spathiformi caduca inclusis. Dentes laterales glumæ extimæ cæteris sæpius distincte longiores.*

81. **Dimeria**, *R. Br. Prod. 204. (Haplachne, Presl, Rel. Hænk. i. 234, t. 38. Didactylon, Zoll. et Mor. Verz. Pfl. Zoll. 99. Psilostachys, Steud. Syn. Pl. Glum. i. 413. Pterygostachyum, Nees ex Steud. Syn. Pl. Glum. 413.)*—Spiculæ 1-floræ, angustæ, secus rhachin tenuem continuum spicæ unilateralis solitaria, sessiles, cum rhachi articulata, flore hermaphrodito. Glumæ 4, 2 exteriores vacuæ, lineares, rigidulæ, carinatae, muticæ, tertia pariter vacua sed minor, tenuis, hyalina; florens tenuiter hyalina, integra v. 2-loba, arista terminali v. inter lobos tenui basi torta geniculata; palea minuta v. 0. Stamina (an semper?) 2. Styli distincti, stigmatibus plumosis. Caryopsis glumis exterioribus inclusa, libera.—Gramina tenuia, annua, cæspitosa v. rarius elatiora et forte perennia, glabra v. patentim pilosa. Spicæ tenues, ad apicem pedunculi terminalis elongati solitariae geminae v. plures confertæ.

Species ad 10, Asiæ tropicæ et orientalis, Archipelagi Malayani et Australiæ tropicæ incolæ. *Steud. Syn. Pl. Glum. i. 412. Benth. Fl. Austral. vii. 522.*

82. **Arthraxon**, *Beauv. Agrostogr. 111, t. 11, f. 6. (Pleuroplitis, Trin. Fundam. Agrostogr. 174. Batratherum, Nees in Edinb. N. Phil. Journ. xviii. 180. Lucæa, Kunth, Rev. Gram. ii. 489, t. 159. Lasiolytrum, Steud. in Flora, 1846, 18. Alektoridia, A. Rich. Fl. Abyss. ii. 447, t. 99. Psilopogon, Hochst. in A. Rich. Fl. Abyss. ii. 447.)*—Spiculæ perfectæ 1-floræ, secus rhachin articulatae spicæ sessiles, cum rudimento stipitiformi brevi rarius glumifero v. deficiente, flore hermaphrodito. Glumæ 4, extima cæteris major,

vacua, membranacea, multinervis, sæpius acuta, secunda pariter vacua, angustior, carinata, acuta, tertia parva, hyalina, vacua; terminalis florens quam exteriores brevior, hyalina sed carinata, dorso prope basin arista tenui geniculata basi torta instructa; palea minima, hyalina. Stamina (an semper?) 3. Styli distincti, stigmatibus plumosis. Caryopsis glumis exterioribus inclusa, libera.—Gramina tenera, sæpius diffusa, ramosa, rarius elatiora. Folia plana, vagina appressa, lamina in caule sessili plana, plus minus cordato-lanceolata. Spicæ tenues, laxæ, sæpius plures ad apicem pedunculi irregulariter subdigitatæ. Spiculæ secundæ rudimentum valde variabile, in specie Japonica (*Pleuroplitis*, Trin.) nonnullisque aliis sæpius nec semper deest, in plerisque setiforme, in aliis apice in glumam expansum.

Species ad 10, plures tamen inter se ægre distinguendæ, pro maxima parte Asiæ tropicæ incolæ, sed usque ad Chinam, Japoniam, Australiam tropicam, Africam tropicam et Orientem extensæ.

83. *Elionurus*, Humb. et Bonpl. in Willd. Spec. Pl. iv. 941.—Spiculæ secus spicæ rhachin articulata ad nodos excavatam geminæ, altera sessili fertili, altera pedicellata sterili, flore in sessili unico hermaphrodito addito rarius altero infero masculo, in pedicellata unico masculo v. sæpius 0. Glumæ 4, omnes muticæ, extima cæteris major, membranacea, sæpiissime apice 2-fida, secunda pariter vacua brevior tenuior rigidula acuta, tertia sæpius vacua et terminalis florens tenuissime hyalinæ; palea minuta v. 0. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis glumis exterioribus rigidulis inclusa, libera.—Gramina nunc elatiuscula ramosa, nunc humilia cæspitosa, foliis sæpius rigidulis v. elongatis siccitate convolutis. Spicæ terminales, simplices, pilis longis sericeis dense obtectæ, spiculis fertilibus rhachi appressis, sterilium gluma extima sæpe patens.

Species ad 12, pro maxima parte Americæ tropicæ et Africæ tropicæ et extratropicæ incolæ, una in Oriente obvia, una in Australia tropica. Kunth, Enum. Pl. i. 480; Rev. Gram. t. 94. J. A. Schmidt, Fl. Cap. Verd. Ins. 154. Benth. Fl. Austral. vii. 509. Delile, Fl. Eg. t. 14, f. 1. (*Rottboellia*). H. B. et K. Nov. Gen. et Sp. t. 62, 63.

Genus a *Rottboellia* differt imprimis pilis longis sericeis rhachin spicæ et pedicellos obtegentibus, a Steud. Syn. Pl. Glum. 364, aliisque ad *Andropogonem* relatum, sed spiculæ nunquam aristatæ.

Lasiurus, Boiss. Diagn. ser. 2, iv. 145, est *Rottboellia hirsuta*, Vahl, a Munroio bene ad *Elionurum* relata, a Boissiero distinguitur imprimis spiculis ad nodos rhacheos ternis, 2 sessilibus, tertia pedicellata, quod tamen certe non constans est etsi sæpe in parte inferiore spicæ densæ spiculas ternas v. quaternas vidimus, in aliis speciebus omnes ad normam geminæ sunt.

84. *Rottboellia*, Linn. f. Nov. Gram. Gen. in Aman. Acad. x. 22, pro parte. (Stegosauria, Lour. Fl. Cochinch. 51).—Spiculæ secus spicæ cylindraceæ rhachin articulata ad nodos excavatam geminæ, altera sessili fertili, altera pedicellata sterili v. vacua, flore in perfecta unico hermaphrodito, addito interdum inferiore masculo. Glumæ spiculæ perfectæ 4, obtusæ, muticæ, extima ovata, coriacea, cavum rhacheos obtegens, secunda pariter vacua rigidula at tenuior, tertia vacua v. florem ♂ fovens, et terminalis florens cum palea tenuiter hyalinæ. Stamina 3. Styli distincti. Caryopsis glumis exterioribus inclusa, libera.—Gramina sæpe elata, hispida v. glabra, foliis planis. Pedunculi in vaginis superioribus solitarii v. fasciculati, spicam simplicem v. rarissime basi in ramos 2-3 divisam ferentes. Rhachis glabra v. rarius ad nodos ciliata. Spicula perfecta arcte appressa, pedicellata, gluma exteriore sæpe patente, variat flore specie hermaphrodito sed sterili v. masculo, v. ad glumas 1-2 vacuas reducta.

Species ad 18, per regiones calidiores utriusque orbis dispersæ, una in Oriente obvia. Steud. Syn. Pl. Glum. i. 360. Benth. Fl. Austral. vii. 512. Kunth, Rev. Gram. t. 91. Roxb. Corom. Pl. t. 157. Labill. Sert. Austr. Caled. t. 20.

In *R. muricata*, Retz (*R. glandulosa*, Trin.), quæ Cælorhachis, Brongn. in Duperr. Voy. Coq. Bot. 64, t. 14, et in *R. myuro*, Benth. (quæ Peltophora, Desv. Journ. Bot. i. (1813) 73, Beauv. Agrostogr. 119, t. 21, f. 11, *Manisuris* sp. Roxb. Corom. Pl. t. 117, Schreb. Besch. Gräs. t. 43), gluma exterior spiculæ perfectæ rigida, apice utrinque ala membranacea aucta, tamen etsi minus distincte observatur in *R. rugosa*, Nutt. Hæ species omnes nobis vocæ *Rottboellia* videntur, nec cum *Hemarthria* nec cum *Manisuri* associandæ.

*PHACELURUS*, *Griseb. Spicil. Pl. Ruem.* ii. 423 (*PHOLIURUS*, *Trin. in Spreng. N. Erid.* ii. 67, non *ejusd. Fundam. Agrost.*), est *R. digitata*, Sibth. Fl. Gr. t. 92 (*R. Sandorii*, Friwaldsky in A. Magyar Tudós Társaság Evkönyvei, v. Hungariæ Sc. Soc. Annal. iv. 206, t. 12, v. 2), species orientalis insignis spica elongata interdum at rarius basi ramis paucis brevibus instructa, spicularum paribus dissitis, gluma exteriori longe acuminata, et spicula utraque sæpe florem hermaphroditum cum masculo fovente. Rhachillæ continuationem inter glumas florentes a Grisebachio indicatam frustra quæsimus. Species sectionem distinctissimam potius quam genus proprium offert.

*CYMRACHNE*, *Retz, Obs.* vi. 36, gramen Bengalense, nobis ignotum a Willdenowio ad *Rottboelliam* refertur. Descriptio Retzii potius *Hemarthriam* refert, sed ab omnibus speciebus utriusque generis discrepat foliis supra vaginam longe ciliatis et glumis vacuis dorso longe ciliatis, genus igitur dubium remanet.

*APOGONIA*, *Fourn. Gram. Mex.* 63, species 2 continet Mexicanas quas a genere *Rottboellia* distinguere nequimus. Sectio *Apogonia*, Nutt. Gen. N. Amer. Pl. i. 83 (*Rottboellia ciliaris*), est *Elinorus* species, seu varietas *E. ciliaris*, H. B. et K., a forma typica parum distincta spiculis brevibus ciliatis; gluma exterior variat in speciminibus Austro-Americanis dorso plus minus pilosa v. glabrata.

85. *Ophiurus*, *R. Br. Prod.* 206.—Spiculæ perfectæ 1-floræ, secus spicæ cylindræ rhachin articulata ad nodos excavatam solitariæ v. geminæ, sessiles, absque spicula pedicellata, flore hermaphrodito. Glumæ 4, obtusæ v. acutæ, muticæ, extima dura, cavum rhacheos obtegens, secunda pariter vacua, rigidula at tenuior, concava v. carinata, tertia vacua v. florem ♂ fovens et terminalis florens cum palea tenuiter hyalinæ. Stamina 3. Styli distincti. Caryopsis glumis exterioribus inclusa, libera.—Gramina sæpius ramosa, foliis planis. Pedunculi in vaginis superioribus solitarii v. fasciculati, singuli basi vagina stipati, spicam simplicem ferentes. Rhachis glabra.

Species nobis notæ 4, Asiæ, Africæ et Australiæ incolæ. *Beauv. Agrostogr.* 116, t. 21, f. 3. *Kunth, Enum. Pl.* i. 464. *Benth. in Journ. Linn. Soc.* xix. 69.

Genus *Ophiurus* primum a Gærtnerio fil. *Fruct.* iii. 3, t. 181, includit *Lepturum*, Br., et *Ophiurum*, Br., caractere imprimis ad priorem instructo. Quale a Brownio reformatum constat e *O. corymbosa*, Gærtn. (*Rottboellia*, Linn., Roxb. *Corom. Pl.* t. 181; *O. æthiopica*, Steud. *Syn. Pl. Glum.* i. 360), et *O. monostachya*, Presl (*O. undulata*, Nees), quæ omnes a *Rottboellia* differunt spicularum sterilitate stipitatarum absentia. His addenda est *O. laevis*, Benth. (*MNESITHRA*, *Kunth, Enum. Pl.* i. 465; *TRYRIDOSTACHYUM*, *Nees in Lindl. Introd. Nat. Syst. ed.* 2. 379. *Rottboellia laevis*, Retz, *Obs.* iii. 11, *R. perforata*, Roxb. *Corom. Pl.* t. 182), species Indica spiculis in parte inferiore spicæ v. interdum in tota spica ad quemque nodum rhacheos geminis, cavo rhacheos inter spiculas septo longitudinali interdum perforato diviso. Pars superior spicarum plurimarum omnino *Ophiuri*, spiculis ad nodos singulis, sed facile decidua, parte inferiore spiculis geminis diutius persistente. Interdum vero spica junior usque ad apicem spiculas geminas ferre videtur.

86. *Ratzburgia*, *Kunth, Rev. Gram.* ii. 487, t. 158.—Spiculæ perfectæ 1-floræ, ad quemque nodum spicæ geminæ, complanatæ, erectæ, faciebus sibimet applicitis, in flexuris alternis rhacheos sessiles, inter rhachim et stipitem spiculæ sterilis quibus cinctæ, paribus alternatim 2-seriatis sed specie 1-seriatim superpositis, flore hermaphrodito. Glumæ 3, muticæ, extima coriacea margine tuberculata dorso scrobiculata, secunda pariter vacua paullo brevior fere hyalina at rigidula; terminalis florens, cum palea minore tenuissime hyalina. Stamina 3. Styli distincti stigmatibus plumosis. Caryopsis compressa, gluma extima indurata inclusa, libera.—Gramen humile, cæspitosum, decumbens, foliis brevibus planis. Spica in pedunculo terminali elegantissima, complanata, undique equilata et continua apparet spiculis superpositis, sed rhachis marginibus spicularum alternatim a dextro et a sinistro accumbit, stipite spiculæ sterilis ad marginem oppositam sita; hujus glumæ sæpius 1-2 minimæ vacuæ.

Species, 1, ad ripas fluminis Irawaddi Burma a Wallichio detecta. *Wall. Pl. As. Rar.* iii. 46, t. 273 (*AIKINIA in tabula*).

87. *Manisuris*, *Linn. Mant.* 164, n. 1334.—Spiculæ secus spicæ rhachin articulata ad nodos excavatam geminæ, altera sessili flore unico hermaphrodito, altera pedicellata

*anantha*. Glumæ spiculæ perfectæ 4, muticæ, extima vacua, dura, globosa, cavum rhacheos obtegens, secunda pariter vacua, minor, concava, tenuis at rigidula, tertia vacua et terminalis florens parvæ, tenues, hyalinæ; palea minuta v. 0. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis gluma extima globosa inclusa, libera.—Gramen annuum, ramosum, sæpius patentim pilosum, foliis planis. Pedunculi singuli vagina folii floralis stipati, spicam unicam ferentes, inflorescentia tota sæpe paniculam irregularem foliatam formante, spiculis parvis graniformibus foveolatis insignem.

Species 1, per regiones calidiores utriusque orbis late dispersa. Beauv. *Agrostogr.* 119, t. 21, f. 10; Kunth, *Enum. Pl.* i. 469. Roxb. *Corom. Pl.* t. 118. Beauv. *Fl. Ow. et Ben.* t. 14. Dall in Mart. *Fl. Bras.* ii. ii. t. 46.

88. *Hemarthria*, R. Br. *Prod.* 207.—Spiculæ secus spicæ rhachin subarticulatam ad nodos excavatam geminæ, altera sessilis, flore unico hermaphrodito; altera pedicellata, *anantha* v. flore unico sterili, pedicello sæpe rhachi adnato. Glumæ spiculæ perfectæ 4, extima vacua, acuta v. acuminata, arcte appressa, cavum rhacheos obtegens, secunda pariter vacua, tenuior, concava v. carinata, tertia vacua et terminalis florens cum palea parva tenuiter hyalinæ. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis glumis exterioribus inclusa, libera.—Gramina basi sæpius decumbentia ramosaque, foliis planis. Pedunculi terminales v. in axillis superioribus subfasciculati vaginaque stipati, spica simplici sæpius plus minus compressa. Spiculæ pedicellatæ e glumis 2-3 vacuis v. rarius florem sterilem foveantibus, pedicello sæpe usque ad nodum superiorem rhacheos adnato, quo spicula sessilis apparet perfectæ nodi superioris subopposita.

Species vix 3, bene distinctæ, per regiones calidiores utriusque orbis late dispersæ, in maritimis orbis veteris frequentiores, ubi usque ad regionem Mediterraneam extensæ; in America rariores. Steud. *Syn. Pl. Glum.* i. 358. Benth. *Fl. Austral.* vii. 510. Desf. *Fl. Atl.* t. 36 (*Rotiboellia*). Beauv. *Agrostogr.* t. 21, f. 8 (*Rotiboellia*). Roxb. *Corom. Pl.* t. 156 (*Rotiboellia*). Brongn. in Duperr. *Voy. Cog. Bot.* t. 15.

Lodicularia, Beauv. *Agrostogr.* 108, t. 21, f. 6, ob synonymon ab auctore citatum ad *Hemarthriam* refertur, sed nec character nec icon Beauvoisii conveniunt, et genus omnino dubium remanet.

89. *Vossia*, Wall. et Griff. in *Journ. Asiat. Soc. Beng.* v. 572, t. 23.—Spiculæ secus rhachin flexuosam subarticulatam ad nodos excavatam spicæ cylindraceæ v. subunilateralis geminæ, altera sessilis flore terminali hermaphrodito inferiore masculo, altera pedicellata floribus 1-2 masculis. Glumæ 4, 2 exteriores vacuæ, rigide, extima major, sæpe muricata, acute acuminata v. in spicula pedicellata in aristam longam producta, tertia et quarta florentes breviores, cum paleis tenuissime hyalinæ, muticæ. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis glumis exterioribus inclusa, libera.—Gramina sæpe aquatica, procera, foliis planis. Spicæ (paniculæ rami simplices) secus pedunculi apicem sæpius plures, dissitæ, rarius ad unam elongatam reductæ.

Species nobis notæ 5, Africanæ, tropicæ v. australes, quarum una etiam in India orientali late dispersa. Munro in Harv. *Gen. S. Afr. Pl.* cd. 2, 441. Grant in *Trans. Linn. Soc.* xxix. t. 116.

Genus *Ischæmo* affine, differt spicis sæpissime pluribus et glumis florentibus ut in *Rotiboellieis* constanter exaristatis. *Ischæmum speciosum*, Nees, ex India orientali, forte *Vossia* Africanis addendum est.

EREMOCHLOA, Buse in *Pl. Jungh.* 357, species Sumatrae nec a Miquelio nec a nobis visa, ex characterē dato ad *Vossiam* referenda videtur, glumarum acumine (si verba auctoris recte intellegimus) rigidiorē spinescēte.

90. *Thelepogon*, Roth, *Nov. Pl. Spec.* 62. (*Jardinia*, Steud. in *Flora*, 1850, 229; *Syn. Pl. Glum.* i. 360.)—Spiculæ perfectæ secus rhachin flexuosam subarticulatam ad nodos excavatam spicæ unilateralis sessilis, cum pedicello anguste glumiformi spiculæ alterius abortivæ, flore hermaphrodito unico terminali cum inferiore masculo. Glumæ 4, 2 exteriores vacuæ, rigide, acutæ, exaristatæ, dorso tuberculato-rugosæ, extima rhachi arcte

applicita, tertia brevior, hyalina, mutica, paleam brevem floremque ♂ fovens; terminalis hyalina, 2-fida, inter lobos arista longa rigida superne torta instructa, paleam parvam floremque ♀ fovens. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, glumis exterioribus rigidis inclusa, libera.—Gramina decumbentia v. erecta, foliis planis. Spicæ 2-∞, ad apicem pedunculi fasciculatæ, erectæ, glabræ, rhachi rigida flexuosa; spiculæ in facie inferiore alternæ, rhachi applicitæ, pedicello nudo sæpius spiculam perfectam paullo superante.

Species editæ 3, Indiæ orientalis et Africæ tropicæ incolæ, vix tamen inter se distinctæ. *A. Rich. Fl. Abyss. t. 102 (Andropogon).*

Synonymon Rothii a Neesio in Pl. Wight. distrib. perperam ad *Ischæmum semisagittatum* relatum est. Descriptio Rothii cum planta vera optime convenit.

91. *Ischæmum*, Linn. Gen. n. 1148.—Spiculæ secus spicæ rhachin articulata ad nodos geminæ, altera sessilis flore terminali hermaphrodito cum inferiore masculo, altera pedicellata, nunc sessili conformis, nunc flore unico hermaphrodito v. masculo v. floribus 2 masculis v. ad glumas vacuas reducto. Glumæ spiculæ sessilis 4, extima vacua, cæteris major, truncata v. 2-dentata, mutica, secunda pariter vacua, carinata, interdum in aristam brevem producta, tertia paullo minor, hyalina v. rigidula, paleam floremque masculum fovens; terminalis sub flore hermaphrodito (v. foemineo?) basi hyalina, integra v. 2-fida, sæpe vix arista lator, in aristam longam basi tortam superne geniculatam v. rarius ad setam parvam reductam producta, rarissime omnino mutica; palea parva, tenuiter hyalina v. 0. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis glumis exterioribus rigidulis inclusa, libera.—Gramina annua v. perennia, foliis planis nunc angustis nunc latoribus brevibusque. Spicæ ad apicem pedunculi terminalis solitariae v. sæpius 2-∞, confertæ, sessiles, rhachi ad nodos sæpius leviter excavata.

Species ad 30, per regiones calidiores utriusque orbis late dispersæ. *Beauv. Agrostogr. 107, t. 21, f. 5. Kunth, Enum. Pl. i. 511; Rev. Gram. t. 98, 99. Steud. Syn. Pl. Glum. i. 368 et 374 (Andropogonis sect. 6 et 14). Benth. Fl. Austral. vii. 518. Salisb. Ic. Stirp. Rar. t. 1. Brongn. in Duperr. Voy. Coq. Bot. t. 12, 13.*

Genus ab *Andropogone* differt spiculis sessilibus 2-floris, spicis sæpius rigidioribus v. crassioribus glabrioribusque etc.; cæterum quoad spiculæ pedicellatæ indolem, rhacheos articularum formam, aliasque notas sat polymorphum, sed genera plura monotypica ab auctoribus proposita melius pro speciebus distinctis habenda videntur.

*ISCHÆMUM*, *Beauv. Agrostogr. 107, t. 21, f. 5*, est *I. muticum*, Linn., gluma sub flore hermaphrodito hyalina arista minute setiformi v. omnino deficiente. *MEOSCHIUM*, *Beauv. l.c. 111, t. 21, f. 4*, includit species cæteras arista glumæ fertilis sæpissime exserta.

*Ischæmum* a Trinio limitatum fuit ad species quibus spicula pedicellata exaristata florem masculinum solum includit, v. ad glumas vacuas reducit. Species spicula utraque 2-flora ad genus suum *Spodiopogon* adjunxit.

*I. semisagittatum*, Roxb., a Neesio perperam ad *Thelepogonem*, Roth., refertur, ex icone et descr. Roxburghii videtur *I. rugosi*, Salisb., var.

*COLLADOA*, Cav. Ic. v. 37, t. 460. *Beauv. Agrostogr. 112, t. 21, f. 9*, ex ins. Mindanao, ex icone videtur *Ischæmi* species *I. barbato*, Retz, valde affinis, nisi eadem. Icon Beauvoisii potius *I. rugosum* refert.

*ISCHÆMOPOGON*, *Grisb. Fl. Brit. W. Ind. 560*, est *I. latifolium*, Kunth, Rev. Gram. t. 99, spicis pluribus fasciculatis, spicula utraque cujusve paris 2-flora.

*HOLOGAMUM*, *Nees in Edinb. N. Phil. Journ. xviii. 185*, est *I. laxum*, R. Br. (*Andropogon nervosus*, Roth.), spica unica longa, spiculis pedicellatis flores 2 masculos continentibus. In eadem sectione (v. specie?) includendæ sunt *I. insculptum*, Hochst., et *I. macrostachyum*, A. Rich., ex Africa tropica, et, ex descr., *SEHIMA*, Forsk. Fl. Æg. Arab. 178.

*I. pectinatum*, Trin., *I. leersioides*, Munro, *I. ophiuroides*, Munro, cum specie quarta inedita, sectionem formant valde distinctam (*Pectinariam*), spica simplici tenui recta v. falcata, spiculis approximatis secundis, gluma majore spiculæ sessilis margine eleganter pectinata, spicula pedicellata sterili valde imperfecta v. fere rudimentaria.

92. **Trachypogon**, Nees, *Agrostol. Bras.* 341, *pro parte*.—Spiculæ 1-floræ, secus spicæ rhachin subarticulatam ad nodos geminæ, altera subsessilis, flore masculo v. si hermaphrodito sterili, altera pedicellata, flore hermaphrodito. Glumæ sæpius 4, extima vacua, rigida, mutica, cæteras amplexens, secunda subsimilis nisi paullo minor tenuiorque, tertia tenuissima, hyalina, vacua, nunc angustissima v. evanida; terminalis florens in spicula sessili tenuissime hyalina, mutica, in spicula pedicellata basi angustissime (in *T. capensi* brevissime) hyalina, in aristam longissimam tortam superne geniculatam producta; palea minima v. 0. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, glumis exterioribus inclusa, libera.—Gramina elata, perennia, foliis longis angustis planis v. siccitate convolutis. Spicæ ad apicem pedunculi solitariae v. 2-3-næ, sessiles, erectæ, longiusculæ, simplices, aristis longis rigidis iis *Heteropogonis* subsimiles. Spiculæ subimbricatæ, rhachi appressæ.

Species 11 enumerat Anderson in *Ofvers. K. Vet. Akad. Stockh.* 1857, 46, quarum una Africæ australis, cæteræ Americæ tropicæ et subtropicæ a Brasilia usque ad Mexicum incolæ; plures tamen vix inter se distinguendæ et a Hackelio (in litt.) omnes in unam junguntur. *Kunth, Rev. Gram.* ii. 561, t. 195 (*Andropogon*). *Fourn. Gram. Mex.* 65.

Flos spiculæ sessilis, ut rite observavit Kunth, saltem in *T. Montufati* (*T. molli*) hermaphroditus apparet, ovarium tamen semper macrum vidimus, stigmatibus imperfectis v. 0, nec unquam post anthesin auctum.

93. **Heteropogon**, *Pers. Syn. Pl.* ii. 533.—Spiculæ 1-floræ, secus spicæ rhachin articulatam ad nodos geminæ, altera sessilis, flore fœmineo (v. hermaphrodito ?) fertili, altera pedicellata, flore masculo v. anantha. Glumæ spiculæ sessilis 4, extima vacua, dura, convoluta, mutica, secunda pariter vacua, tenuior, carinata, tertia tenuissime hyalina, vacua; florens ad aristam longam rigidam tortam geniculatamque imā basi attenuatam hyalinamque reducta; palea parva hyalina v. 0; in spicula pedicellata exaristata gluma extima quam in sessili tenuior. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis angusta, glumis exterioribus induratis inclusa, libera.—Gramina annua (v. perennia ?) erecta, interdum elata, foliis angustis vaginis compressis. Spicæ in pedunculo terminali solitariae, erectæ, densæ, spiculis sessilibus ad unum latus subpatentibus, aristis longis tortis insignes; spiculæ pedicellatæ muticæ ad alterum latus appressæ, 2-seriatim imbricatæ.

Species 5 v. 6, regionum calidiorum Europæ, Asiæ, Africæ et Australiæ incolæ, quarum 2 genuinæ: *H. contortus*, Rœm. et Sch. (*H. hirtus*, Pers.), et *H. melanocarpus*, Ell. (*H. Roylei*, Nees, *H. acuminatus*, Trin., *Trachypogon scrobiculatus*, Nees), etiam in America tropica et boreali late dispersæ, et prior in Europa præsertim Mediterranea invenitur. Adsunt præterea 3 v. 4 Africanæ tropicæ adhuc minus certæ. *Kunth, Enum. Pl.* i. 486. *All. Fl. Ped.* iii. t. 91. *Mogg. Fl. Ment.* t. 48 (omnes sub *Andropogone*). *Beauv. Agrostogr.* 134, t. 23, f. 8. *Benth. Fl. Austral.* vii. 516. et in *Journ. Linn. Soc.* xix. 71. *Nees, Gen. Fl. Germ. Monocot.* i. n. 94. *Reichb. Ic. Fl. Germ.* t. 53. *Fourn. Gram. Mex.* 64.

94. **Andropogon**, *Linn. Gen. n.* 1145.—Spiculæ secus spicæ rhachin articulatam ad nodos geminæ, altera sessilis, flore unico hermaphrodito (v. rarius abortu fœmineo ?), altera pedicellata, exaristata, flore masculo v. rarius hermaphrodito sterili, v. ad glumas vacuas reducta. Glumæ spiculæ sessilis 4, extima ceteris major, vacua, mutica, 3-œnervis, nervo medio interdum tenuiore v. evanido, secunda vacua, carinata, acuta v. rarius in aristam rectam producta, tertia multo minor, tenuiter hyalina, vacua; terminalis florens basi hyalina, angustissime stipitifomis v. parum dilatata, integra v. 2-fida, arista sæpius rigida torta superne geniculata terminali v. inter lobos instructa; palea parva hyalina v. 0. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis glumis exterioribus inclusa, libera.—Gramina habitu vario, sæpe elata, ramosa, foliis sæpius angustis planis. Spicæ quam in *Ischemo* sæpius tenuiores, pilis rhacheos et pedicellorum sæpius hirtæ subsericeæ v. fere lanatæ, in pedunculo solitariae geminæ v. plurimæ confertæ, simplices v. rarius imā basi divisæ, spicularum paribus secus rhachin semper pluribus; spiculæ terminales cujusve spicæ sæpe ternæ, centralis sessilis cum 2 pedicellatis.

Species vix 100 bene distinctas agnoscimus, etsi ab auctoribus nonnullis permultæ sub diversis nominibus repetitæ, per regiones calidiores utriusque orbis late dispersæ, speciebus paucis usque ad Europam australem Asiam orientalem temperatam et Americam borealem extensis. Beauv. *Agrostogr.* 130, t. 23, f. 2, 3, 4. Kunth, *Enum. Pl.* i. 485 (excl. spp. plur., 501). Steud. *Syn. Pl. Glum.* i. 363 (excl. sp. numerosis). Benth. *Fl. Austral.* vii. 527, et in *Journ. Linn. Soc.* xix. 71. Fourn. *Gram. Mex.* 55 (excl. sect. *Sorghastrum*).

Genus quoad spiculam pedicellatam floriferam v. ad glumas vacuas interdum minutas reductam, spiculam sessilem aristatam v. submuticam, aliasque notas variabile, et præsertim a Neesio v. ab Andersonio in genera plura divisum, a Steudelio aliisque ad *Ischæmum*, *Polliniam* aliaque includenda extensum, a Munroio inter limites supra datos reductum, in sectiones infra enumeratas ad inflorescentiam dividitur. Dolemus nobis nondum pervenisse fasciculum novissimum Floræ Brasiliensis, *Andropogoneas* a Hackelio elaboratas continentem, ubi verisimiliter auctor sectiones quoad species austro-Americanas accuratius definivit.

1. *Schizachyrium* (*Acropogon*, Fourn.). Spicæ in pedunculo solitariae, sæpius tenues, glabræ v. breviter rarius longius pilosæ. Species ad 12, Asiaticæ Africanæ v. Americanæ. Kunth, *Rev. Gram.* t. 196 ad 199. Delile, *Fl. Eg.* t. 8. SCHIZACHYRIUM, Nees, *Agrostol. Bras.* 331.

DICTOMIS, H. B. et K. *Nov. Gen. et Sp.* i. 193, t. 64; non Beauv., est *A. fastigiatus*, Sw., species Americæ tropicæ, etiam in Africa tropica obvia, spica solitaria, rhachi pedicellisque incrassatis, spiculæ sessilis glumis exterioribus rigidis, secunda aristata, spicula pedicellata ad glumas vacuas reducta. HOMOEATHERUM, Nees in Hook. et Arn. *Bot. Beech. Voy.* 239, est species Asiatica vix ac ne vix ab *A. fastigiato* distincta. Hæ species habitu *Ischæmo laxo*, Br., accedunt, sed spiculæ sessiles flore masculo carent. Hackel *Dictomen* pro sectione a *Schizachyrio* bene distincta habet.

2. *Cymbopogon*. Spicæ geminæ, sæpius breves, haud raro longe pilosæ v. lanatæ, pedunculo intra vaginam spathiformem bractæ seu folii floralis incluso v. breviter exserto. Species ad 40, habitu vario, nonnullæ tamen in regionibus calidioribus orbis veteris latissime dispersæ sæpe odoratæ, insignes sunt caule elato ramoso paniculam amplam foliatam formante. Trin. *Spec. Gram.* t. 326, 327, 330. Reichb.  *Ic. Fl. Germ.* t. 53. Host, *Gram. Austr.* iv. t. 1. Vent. *Jard. Cels.* t. 89. Moggr. *Fl. Ment.* t. 73, f. C, D. Wall. *Pl. As. Rar.* t. 280. CYMBOPOGON, Spreng. *Pl. Min. Cogn. Pug.* ii. 14. HYPOGYNIUM, Nees, *Agrostol. Bras.* 364 (species Brasiliensis).

GYMNANTHELIA et HYPARRHENIA, Anders., genera in variis scriptis auctoris indicata absque characterē generico, ex specierum enumeratione in Schweinf. *Beitr. Fl. Æthiop.* 299, 300, ad sectionem *Cymbopogonem* referenda videntur, *Gymnanthelia* ad *A. Schananthum* affinesque, *Hyparrhenia* ad *A. hirtum* affinesque. Fournier, *Gram. Mex.* 51, 67, genus *Hyparrheniam* admisit, characterē 'spiculis numerosis polygamis fasciculatis;' Munro tamen species utrasque Mexicanas in *Cymbopogone* includit.

3. *Gymnandropogon*. Spicæ geminæ v. plures, ad apicem pedunculi elongati sessiles, fasciculatæ v. approximatae, simplices, interdum longiusculæ, glabræ v. pilosæ. Species ad 36, pleraque gerontogæ. Trin. *Spec. Gram.* t. 325, 328, 329. Kunth, *Rev. Gram.* t. 96. Schreb. *Beschr. Gräs.* t. 28, f. 1 (sp. dubia), t. 33, 48. Jacq.  *Ic. Rar.* t. 630; *Fl. Austr.* t. 384. Host, *Gram. Austr.* ii. t. 2, iii. t. 2. Reichb.  *Ic. Fl. Germ.* t. 54, f. 1500 et 1501 (*Pollinia*). Nees, *Gen. Fl. Germ. Monocol.* i. n. 92. Moggr. *Fl. Ment.* t. 73, f. A, E. Vis. *Fl. Dalm.* t. 2. Sibth. *Fl. Græc.* t. 69. Delile, *Fl. Eg.* t. 7.

DICHANTHIUM, Willem. *Herb. Maurit. in Ust. Ann. Bot.* xviii. 11, est *A. annulatus*, Forsk., species *A. Ischæmo*, Linn., valde affinis, sed ab auctoribus plerisque distincta servata.

LEPOCERCIS, Trin. *Fundam. Agrostogr.* 203, genus ad *A. serratum*, Retz, propositum, ab auctore ipso serius ad *Andropogonem* (*Gymnandropogonem*) reductum, insigne est gluma extima latissima fere herbacea multinervi, secunda duplo angustiore fere hyalina, tertia tenuissime hyalina. Cæterum prope accedit ad *A. mollicomum*, *A. annulatum* aliosque, etsi spicæ haud raro ut in *Schizachyrio* solitariae.

EUKLASTAXON, Steud. *Syn. Pl. Glum.* i. 412, e Brasilia, est verisimiliter e characterē dato *Andropogon virginicus*, Linn.

4. *Amphilophis*, Trin. Spicæ quam in *Gymnandropogone* sæpius numerosiores, in pedunculo elongato sæpe pedicellatæ, et interdum basi divisæ sed elongatæ, multispiculatæ, nec ut in *Chrysopogone* ad spicularum paria 1-2 reductæ. Huc pertinent *A. laguroides*, DC., *A. argenteus*, DC., ex America tropica, *A. scandens*, Roxb., *A. Vachellii*, Nees, ex Asia tropica, affinesque paucae. Jacq. *Ecl. Gram.* t. 5 (*Saccharum*). Colla, *Pl. Rar. Chil.* t. 60.

5. *Petiveria*. Spicæ secus axin paniculæ simplicis longæ, amplæ, verticillatæ, in quoque verticillo numerosæ, glabræ v. sub spiculis minute pilosæ, glumis exterioribus sæpe pilis minutis rigidis

quasi muricatis. Huc pertinent *A. muricata*, Retz, *A. nigritana*, Benth. in Hook. Fl. Nig. 573, *Vetiveria arundinacea*, Griseb. Fl. Brit. W. Ind. 559, omnes, sententia Munroi, varietates speciei unice in Africa tropica et India orientali frequentis, in America inquilinæ tantum, quæ tamen variat gluma floris hermaphroditi integerrima v. apice 2-fida, arista nunc minima, nunc spiculam fere duplo superante. *VETIVERIA*, Thou. ex Virey in Journ. Pharm. ser. 1, xiii. 499 (characterè manco). *MANDELORNA*, Steud. Syn. Pl. Glum. i. 359.

*ANATHERUM*, Beauv. Agrostogr. 128, t. 22, f. 10, 11, genus propositum fuit ad species nonnullas *Cymbopogonis*, *Gymnandropogonis* et *Vetiveriæ*, arista glumæ florentis minuta v. obsoleta, ab auctoribus nonnullis pro synonymo *Vetiveriæ* habetur. *AGENIUM*, Nees in Lindl. Introd. Nat. Syst. ed. ii. 447, species (Brasiliensis?) nobis ignota, ex characterè dato videtur species *Andropogonis* e sectione *Gymnandropogone*, glumis exaristatis, spicula pedicellata interdum florem hermaphroditum sed sterilem includente.

95. **Chrysopogon**, Trin. Fundam. Agrostogr. 187. (Rhaphis, Lour. Fl. Cochinch. 552, non Linn. Centrophorum, Trin. Fundam. Agrostogr. 106, t. 5, male. Holcus, R. Br. Prod. 198, pro maxima parte.)—Spiculæ in ramulis articulatis paniculæ ternæ, centrali sessili flore unico hermaphrodito, lateralibus pedicellatis flore masculino v. ananthis v. ad stipitem reductis, additis interdum paribus spicularum 1-3 ad nodos inferiores ramuli. Glumæ spiculæ sessilis 4, extima cæteris major, vacua, mutica, 3-∞-nervis, secunda vacua, angusta, carinata, acuta v. in aristam rectam producta, tertia multo minor, tenuiter hyalina, vacua; terminalis florens basi hyalina, nunc angustissima stipitiformis, nunc dilatata 2-fida, arista cum stipite continua v. inter lobos terminalis tenuis v. rigida torta superne geniculata; palea parva hyalina v. 0. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis glumis exterioribus inclusa, libera.—Gramina annua v. perennia, nunc elatiuscula foliata, nunc humilia cæspitosa, foliis planis. Panicula terminalis, stricta v. effusa, sæpius laxa, ramis ramulosis v. rarius simplicibus glabris v. sub spicula sessili pilosis.

Species vix 20, per regiones calidiores utriusque orbis dispersæ, usque ad Europam australem et Americam borealem extensæ. Kunth, Enum. Pl. i. 503 (*Andropogonis* sp. ∞). Steud. Syn. Pl. Glum. i. 395 (*Andropogonis* § 27). Benth. in Journ. Linn. Soc. xix. 73. Fourn. Gram. Mex. 55 (*Andropogonis* sect. *Sorghastrum*). Trin. Spec. Gram. t. 8, 9 (*Rhaphis* et t. 331. Nees, Gen. Fl. Germ. Monocot. i. n. 93. Reichb. Ic. Fl. Germ. t. 54, f. 1502 (*Pollinia*). Moggr. Fl. Ment. t. 73, f. B. Host, Gram. Austr. ii. t. 1. Sibth. Fl. Gr. t. 67 (omnes sub *Andropogone*).

In speciebus typicis gerontogeis cum paucis Americanis spiculæ pedicellatæ florem masculum v. rarius glumas vacuas tantum continent; in Americanis plerisque (*C. nutans*, *C. avenaceus*, *C. stipoides*, *C. Minarum*, etc.), spiculæ pedicellatæ reducuntur ad stipitem pilis longis ciliatum apice nudum v. glumæ rudimentum minutum ferentem. Hæ sectionem *Stipoidem* formant. Hackel genus totum ad *Sorgh* sectiones refert.

96. **Sorghum**, Pers. Syn. Pl. i. 101. (Blumenbachia, Koel. Gram. Gall. et Germ. 28.)—Spiculæ in ramulis vix articulatis paniculæ ternæ, centrali sessili flore unico hermaphrodito, lateralibus pedicellatis flore masculino v. sterili, additis interdum paribus spicularum 1-3 ad nodos inferiores. Glumæ spiculæ sessilis 4, extima cæteris major, vacua, mutica, lanceolata v. ovata, dura nitidaque, obscure venosa, secunda vacua, angustior, carinata, duriuscula, acuta, tertia multo minor, tenuiter hyalina, vacua; terminalis florens basi tenuissime hyalina, 2-loba, arista inter lobos terminali tenui v. rigida torta superne geniculata; palea parva hyalina v. 0. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis glumis exterioribus induratis inclusa, libera.—Gramina annua v. perennia, sæpius elata, foliis planis sæpe longis latisque. Panicula terminalis ampla densa v. effusa, spiculis numerosis diu persistentibus.

Species paucae a nonnullis ad 2 reductæ (*S. halepense* et *S. vulgare*), ab aliis inordinate multiplicatæ, per regiones calidiores utriusque orbis latissime dispersæ, plus minus in temperatis extensæ, quarum una fere cosmopolitana, alteraque in orbe vetere diu culta et in America sæpe inquilina, varietates numerosas præbent sæpe species distinctas nuncupatas. Kunth, Enum. Pl. i. 501, et Rev. G. an. 97 (*Andropogon*). Benth. Fl. Austral. vii. 539. Schreb. Besch. Gräs. t. 18 (*Holcus*). Reichb.

*Is.* Fl. Germ. t. 54. Nees, *Gen. Fl. Germ. Monocot.* i. n. 91. *Host, Gram. Austr.* i. t. 1 (*Holcus*) et iv. t. 2 ad 4. *Sidh. Fl. Græc.* t. 68 (*Andropogon*). *Jacq. Ecl. Gram.* t. 18.

Genus *Chrysopogoni* valde affine, vix nisi habitu et paniculæ ramulis subcontinuis, spiculis latioribus induratis differt.

97. *Anthistiria*, Linn. f. *Nov. Gram. Gen. in Amer. Acad.* x. 38, et *Suppl. Pl.* 13. (Themeda, *Forsk. Fl. Æg. Arab.* 178. Anthistirieæ, *Anders. in Nov. Act. R. Soc. Upsal.* ii. 229, t. 3.)—Spiculæ in spica fasciculiformi 7, rarius 6, 9 v. 11, quarum 4 ad basin rhacheos quasi verticillatæ involucentesque florem unicum masculum continentibus v. vacuæ, 3 rarius 2 ad apicem rhacheos, centrali sessili flore unico hermaphrodito, lateralibus pedicellatis florem masculum continentibus v. vacuis, additis rarius secus rhachin paribus spicularum 1-2 intermediis. Glumæ spiculæ vacuæ sæpius 2, exterior rigidule membranacea v. subherbacea  $\infty$ -nervis, interior tenuior hyalina, in spicula mascula additur tertia hyalina, parva, florem fovens; spiculæ perfectæ glumæ 4, 2 exteriores vacuæ, parum inæquales, sæpius rigidulæ, extima obscure 5-7-nervis, interior nervis 2 prominentibus cum centrali tenuissima, tertia multo minor hyalina vacua; terminalis florens, a basi angustissima tenuique in aristam longam sæpius basi tortam superne geniculatam producta; palea parva v. inconspicua. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis glumis inclusa, libera.—Gramina paniculato-ramosa, foliis planis. Spicæ fasciculiformes, sæpius numerosæ, singulæ pedunculo intra vaginam bractearum foliacearum inclusio v. rarius exserto fultæ. Aristæ nunc longæ validæ tortæ, nunc tenues breves v. omnino nullæ.

Species vix 10 bene distinctæ, apud auctores nonnullos plus duplo plures, per regiones calidiores orbis veteris late dispersæ. *Beauv. Agrostogr.* 133, t. 23, f. 7. *Kunth, Enum. Pl.* i. 481. *Benth. Fl. Austral.* vii. 541, et in *Journ. Linn. Soc.* xix. 73.

Genus in integrum servatum naturale et spiculis 4 involucrentibus facillime distinctum, ab auctoribus variis in genera v. sectiones characteribus parvi valoris distinctis separatur:—

ANTHISTIRIA, *Anders.*, ad species limitatur spiculis involucrentibus sessilibus, intermediis nullis. Inter has ARISTARIA, *Jungh. in Hæv. et De Vr. Tijdschr.* vii. 296, est *A. frondosa*, R. Br. (*A. Jungkuhi*ana, Nees; sect. *Heterelytron*, *Anders.*, non *Jungh.*), species insignis bracteis sub fasciculo longe foliaceis basi margine pilis longis ciliato-hispidis, spiculis involucrentibus e glumis 2 vacuis. *PEROBACHNE*, *Presl, Rel. Hænk.* i. 348, t. 48, est *A. arundinacea*, *Roxb.* (subsect. *Chrysanthistiria*, *Anders.*), species elata, glumis exterioribus pilis longis fulvis dense hirsutis, spiculis involucrentibus florem  $\sigma$  includentibus. *Lam. Illustr.* t. 841. *Kunth, Rev. Gram.* t. 95. Subsectio *Evanthistiria*, *Anders.*, constat ex *A. ciliata*, Linn., affinisque, *Cav. Ic.* t. 459, *Desf. Fl. Atl.* t. 254, *Hook. f. Fl. Tasm.* t. 156, quarum species seu formæ 12 ab *Andersonio* enumeratæ, 'facile ad unam tantum per terras calidas late dispersam speciem reducuntur.'

ANDROSCEDIA, *Brongn. in Duperr. Voy. Coq. Bot.* 77 (*Heterelytron*, *Jungh. in Hæv. et De Vr. Tijdschr.* vii. 294), continet species 2 v. 3, inclusa *A. gigantea*, *Cav. Ic.* t. 458, spicularum paribus 1-2 secus rhachin fasciculi inter inferiores involucrentes et terminales ternas additis. Sectio tamen minime naturalis nam *Anthistiria minuta*, *Anders.*, cæterum simillima est *Androscedia anatheræ*, *Anders.*; et *Androscedia gigantea*, var. *armata*, *Anders.*, pariter *Anthistiriam arundinaceam*, *Roxb.*, simulat.

ISEILEMA, *Anders. in Nov. Act. R. Soc. Upsal.* ii. 250, species continet 2 Indicas, inter se valde affines, cum tertia Australiana ratione generis humiles, subdiffusæ, quodammodo ad *Apludum* accedentes. Spicularum fasciculi parvuli, glabri, spiculis etiam involucrentibus plus minus stipitatis.

EXOtheCA, *Anders. l. c.* 253, est *A. abyssinica*, *Hochst.*, spicularum fasciculis seu spicis e bractea foliacea longe exsertis, in pedunculo longo tenui interdum geminis. Huc pertinet etiam *A. fasciculata*, *Thw. Enum. Pl. Zeyl.* 366.

GERMAINEA, *Balanse et Poitrasson in Bull. Soc. Hist. Nat. Toulouse*, vii. 344, cum tab., species v. formas 2 continet, quarum altera e Saigou nobis e sola icone et descriptione auctorum nota, alteram legit *Clarke* in *Khasiya* et *Sampson* et *Hance* prope Canton Chinæ australis (*Anthistiria caudata*, *Nees* ex *Hance* in *Trim. Journ. Bot.* 1878, 234, cui tamen char. *Neesii* in *Steud. Syn. Pl. Glum.* i. 402, vix convenit). Habitus *Exothece* pedunculo elongato, inflorescentia fere *Androscediæ*. Spiculæ exteriores involucrentes vacuæ in specimenibus *Clarkianis* et *Chinensibus* 4, in *G. capitata*, *Bal.* 6; intermediæ masculæ v. steriles in prioribus 4, in *G. capitata* 6-9; centrales 3 in utraque forma

omnes fœminæ dum in *Anthistiriis* cæteris sæpissime 1 ♀ 2 ♂. In *A. fasciculata* tamen haud raro spiculæ ♀ adsunt 2, quod etiam rarius in *A. gigantea* observavimus.

98. **Apluda**, Linn. Gen. n. 1147, pro parte.—Spiculæ intra bracteam concavam v. complicatam 3, una sessilis flore terminali hermaphrodito cum inferiore masculo, altera pedicello brevi lato fulta flore unico masculo v. anantha, v. ad pedicellum fere glumiformem reducta, tertia nunc secundæ similis, sæpius tamen in pedicello longiore latioreque articulata, floribus 1 v. 2 masculis v. uno rarius hermaphrodito sterilique. Glumæ spiculæ perfectæ 4, extima striato-venosa interdum subherbacea, secunda pariter vacua, sæpe paullo major, tenuior at rigidior, tertia tenuiter hyalina, florem ♂ fovens v. rarius vacua; terminalis sub flore fertili tenuissime hyalina, apice 2-fida, mutica v. arista tenui tortili geniculata inter lobos instructa; palea hyalina parva v. 0. Stamina 3 v. rarius 2. Styli distincti, stigmatibus plumosis. Caryopsis ovato-oblonga, glumis exterioribus (præsertim secunda) rigidulis inclusa, libera.—Gramina ramosissima, diffusa v. elata, foliis angustis planis. Spicularum ternationes intra bracteam latam fere glumiformem sessiles, complures in fasciculo bractea majore foliacea stipato subsessiles v. pedicellatæ, fasciculis numerosis in paniculam amplam foliatam sæpe ramosissimam dispositis.

Species editæ plures, pleræque tamen ad duas typicas Linnæi. *A. muticam* et *A. aristatam* reducentæ, per Asiam tropicam late disperse, etiam in China, Nova Caledonia et in insulis maris Pacifici australis repertæ; in Africa deesse videntur. Kunth, Enum. Pl. i. 516 (excl. sp. 5 et 6). Steud. Syn. Pl. Glum. i. 403 (excl. sp. 8 ad 10). Lam. Illustr. Gen. t. 841. Schreb. Besch. Gräs. t. 42.

Linnæus primum has duas species solas in genere uno inclusit, caractere tamen valde imperfecto designavit, postea plantam Americanam diversissimam (*Zeugitem*) addidit, caractere male e duabus formis composito. Schreber, Gen. Pl. 810, rite *Zeugitem* pro genere proprio restituit.

DICTOMIS, Beauv. Agrostogr. 132, t. 23, f. 5, non H. B. et K., est, ex icone, *Apluda aristata*, Linn., caractere tamen haud perfecto. CALAMINA, Beauv. l. c. 128, t. 23, f. 1, est evidenter *A. mutica*, Linn., sed character ibid. 129 minime convenit, et partim ad species quasdam *Anthistiriæ* confectus est. APLUDA, qualis a Beauv. l. c. t. 23, f. 6 delineatur, est certe generis alieni, et forte *Chrysopogonis* species.

#### TRIBUS VII. PHALARIDEÆ.

99. **Ehrharta**, Thunb. in K. Vetensk. Akad. Stock. Handl. 1779, 216, t. 8, et Nov. Gen. Pl. 16. (Trochera, L. C. Rich. in Journ. Phys. xiii. 225, t. 3 ex Kunth.)—Spiculæ 1-floræ, in panicula rarius ad racemum reducta pedicellatæ, rhachilla supra glumas inferiores articulata, flore hermaphrodito terminali. Glumæ 6, 2 inferiores infra articulationem persistentes sæpius parvæ, tertia varia et quarta sæpius cæteris major basi callosæ v. fasciculo pilorum instructæ sæpeque aristatæ, quinta paullo minor et sexta (v. palea?) angustior tenuiorque carinatæ muticæ; palea cæterum 0. Lodiculæ valde variabiles, liberæ ciliatæque v. in annulum connatæ v. minimæ v. 0. Stamina 6, rarius 3. Styli breves v. longiusculi, distincti, stigmatibus plumosis. Caryopsis ovoidea v. oblonga, glumis majoribus inclusa, libera.—Gramina perennia, v. rarius annua, basi interdum bulbosa, foliis planis. Panicula terminalis, laxa, nunc effusa, nunc angusta v. fere ad racemum reducta, spiculis sæpe majusculis, glumis interdum fere paleaceis.

Species ad 24, quarum 2 Novæ Zelandiæ, 2 ins. Mascarensium, cæteræ omnes Africæ australis incolæ, harum tamen 2 in Australia australiore v. in ins. Stæ Helenæ inquilinæ, nam *E. Urvilleana*, Kunth, omnino eadem videtur ac *E. longiflora*, Sm., Swartz in Trans. Linn. Soc. vi. 40, t. 3, 4. Beauv. Agrostogr. 60, 61, t. 12, f. 2 ad 4 (Ehrharta et Trochera). Nees, Gram. Fl. Afr. Austr. 196. Sm. Ic. Ined. t. 9, 32, 33. Kunth, Enum. Pl. i. 11; Rev. Gram. t. 6. Brongn. in Duperr. Voy. Coq. Bot. t. 24. Hook. f. Fl. Nov. Zel. t. 65. Buchan. N. Zeal. Grasses, t. 1. Petrie in Trans. N. Zeal. Inst. xii. 356, t. 10.

100. **Microlaena**, R. Br. Prod. 210. (Diplax, Hook. f. Fl. Tasm. ii. 105.)—Spiculæ 1-floræ, in panicula laxa pedicellatæ, rhachilla supra glumas inferiores articulata, flore hermaphrodito terminali. Glumæ 6, 2 inferiores infra articulationem breves, persistentes, tertia quartæque longæ, angustæ, in aristam productæ, quinta sextæque (an palea?) breviores, acutæ, muticæ, omnes carinatæ; palea cæterum 0. Lodiculæ majusculæ.

Stamina 4 v. 2. Styli distincti, stigmatibus plumosis. Caryopsis glumis majoribus inclusa, libera.—Gramina perennia, foliis sæpius brevibus planis v. siccitate convolutis. Panicula terminalis, anguste laxa, pedicellis filiformibus.

Species 5, Australiæ et Novæ Zelandiæ incolæ. *Benth. Fl. Austral.* vii. 552. *Hook. f. Handb. N. Zeal. Fl.* 320. *Labill. Pl. Nov. Holl.* t. 118 (*Ehrharta*). *Hook. f. Fl. Tasm.* t. 155 (*Microlena* et *Diplax*). *Raoul, Choix Pl. Nouv. Zel.* t. 4. *Buchan. N. Zeal. Grasses*, t. 2 ad 4.

101. *Tetrarrhena*, R. Br. *Prod.* 210.—Spiculæ 1-floræ, in spica simplici v. vix ramosa subsessiles, rhachilla supra glumas inferiores articulata, floræ terminali hermaphrodito. Glumæ 6, 2 inferiores infra articulationem persistentes, parvæ, tertia varia, quarta cæteris sæpius major, rigida, quinta ei similis nisi minor, terminalis (v. palea ?) angustior, omnes carinatæ, muticæ; palea cæterum 0. Lodiculæ majusculæ. Stamina 4. Styli breves, distincti, stigmatibus plumosis. Caryopsis glumis majoribus inclusa, libera.—Gramina perennia, foliis planis. Spicæ v. paniculæ spiciformes terminales, pedunculatæ, sæpius simplices, interdum ramulis paucis brevibus instructæ.

Species 4, Australianæ. *Benth. Fl. Austral.* vii. 553. *Labill. Pl. Nov. Holl.* t. 117 (*Ehrharta*). *Hook. f. Fl. Tasm.* t. 154.

102. *Phalaris*, Linn. *Gen. n.* 74.—Spiculæ 1-floræ, compressæ, in panicula spiciformi dense confertæ, rhachilla supra glumas inferiores articulata, floræ terminali hermaphrodito. Glumæ sæpius 6, 2 inferiores infra articulationem persistentes, cæteris majores, tenuiter paleaceæ, carinato-complicatæ, muticæ, carina interdum alata, 2 intermediæ cæteris breviores tenuissimæ, anguste lanceolatæ v. ad setas reductæ v. rarius una deficiente, 2 superiores tenues v. hyalinæ carinatæ muticæ, quarum quinta latior tenuiter 3–5-nervis nervo medio interdum obsoleto, sexta (v. palea ?) ob nervum medium sæpius obsoletum tenuiter 2-nervis; palea cæterum 0. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, glumis superioribus inclusa, libera.—Gramina annua v. perennia, foliis planis. Panicula in pedunculo terminali nunc stricte spiciformis v. capituliformis, nunc subinterrupta dense thyrsoidæa, spiculis in ramulis brevissimis subsessilibus.

Species 9 v. 10, regionis Mediterraneæ ab ins. Canariensibus usque ad Afghanistan et Americæ extratropicæ tam borealis quam australis incolæ, duæ ex Europæis in Africa, Australia aliisque regionibus inquilinæ. *Beauv. Agrostogr.* 36, t. 7, f. 1. *Kunth, Enum. Pl.* i. 31. *Schreb. Besch. Gräs.* 83, t. 10, 12. *Trin. Spec. Gram.* t. 74 ad 82. *Cav. Ic.* t. 64. *Host, Gram. Austr.* ii. t. 38 ad 40. *Nees, Gen. Fl. Germ. Monocot.* i. n. 12. *Reichb. Ic. Fl. Germ.* t. 52. *Sibth. Fl. Græc.* t. 55 ad 58. *Webb, Phytogr. Canar.* t. 241. *Dall in Mart. Fl. Bras.* ii. ii. 28, t. 9.

Alæ glumarum inferiorum valde variabiles sunt. In *P. canariensi* latissimæ; in *P. paradoxa* aliisque angustissimæ; in *P. intermedia*, Bosc. (*P. americana*, Ell.), omnino desunt.

DIGRAPHIS, *Trin. Fundam. Agrostogr.* 127 (BALDINGERA, *Gærtn. Mey. et Schreb. Fl. Wetter. ex Schrad. Fl. Germ.* 181, t. 6, f. 5. *Reichb. Ic. Fl. Germ.* t. 52. *Nees, Gen. Fl. Germ. Monocot.* i. n. 13. TYPHOIDES, *Mönch, Meth.* 201), est *P. arundinacea*, Linn.; Host, *Gram. Austr.* ii. 25, t. 33, a speciebus carina exalata parum diversa, caule elato arundinaceo, et panicula distincte ramosa, dense thyrsoidæa, ramuli tamen breves densissimeque spiciformes, et characteres alii ad genus distinguendum desunt.

103. *Anthoxanthum*, Linn. *Gen. n.* 42.—Spiculæ 1-floræ, angustæ, parum compressæ, in panicula spiciformi cylindracea confertæ, rhachilla supra glumas inferiores articulata sæpius pilosa, floræ terminali hermaphrodito. Glumæ 6, 2 inferiores infra articulationem persistentes, acutæ mucronatæ v. in aristam brevissimam productæ, secunda cæteris longior, 2 intermediæ multo breviores vacuæ angustæ carinatæ medio dorso v. prope basin aristatæ, 2 superiores multo breviores hyalinæ obtusæ muticæ, quarum quinta latissima sextam (v. paleam ?) angustam 1-nervem florumque includens; palea cæterum 0. Stamina 2. Styli distincti, stigmatibus elongatis plumosis. Caryopsis oblonga, glumis inferioribus non in lursis inclusa, libera.—Gramina aromatica, erecta, annua v. perennia, foliis planis. Panicula spiciformis terminalis, pedunculata, densa v. laxi scula, ramulis brevissimis dense plurispiculatis.

Species 4 v. 5, Europææ, quarum una per Asiam temperatam et borealem late dispersa et in America boreali, Australia aliisque regionibus temperatis verisimiliter inquilina. *Beauv. Agrostogr.* 64, t. 12, f. 8. *Kunth, Enum. Pl.* i. 37. *Steud. Syn. Pl. Glum.* i. 12. *Schreb. Besch. Gräs.* 49, t. 5. *Trin. Spec. Gram.* t. 13 ad 16. *Host, Gram. Austr.* i. t. 5. *Nees, Gen. Fl. Germ. Monocot.* i. n. 16. *Reichb. Ic. Fl. Germ.* t. 106. *Brot. Phytogr. Lusit.* t. 4. *Towns. in Trin. Journ. Bot.* 1875, t. 157.

104. *Hierochloa*, *Gmel. Fl. Sibir.* i. 100. (Savastana, *Schrank, Baier. Fl.* i. 100, 337. *Disarrenum*, *Labill. Pl. Nov. Holl.* ii. 82, t. 232. *Torresia*, *Ruiz et Pav. Prod. Fl. Per. et Chil.* 125, *Syst. Veg.* 251.)—Spiculæ flore unico fertili, parum compressæ, paniculatæ, rhachilla supra glumas inferiores articulata, flore terminali hermaphrodito, inferioribus 2 dum adsint masculis. Glumæ 6, 2 inferiores infra articulationem persistentes, carinatæ, acutæ, sub-3-nerves, glabræ, 2 intermediæ vix breviores, obtusæ emarginatæ v. 2-fidæ, carinatæ, costa sæpe in aristam brevem producta, villosæ, paleam angustam sæpiusque stamina 3 foventes, 2 superiores sub flore paullo breviores, carinatæ, quarum quinta lata 5-nervis obtusa, carina sæpe in mucronem brevem producta, sexta (an palea?) angustior 3-nervis v. præter carinam enervis; palea cæterum 0. Stamina in flore fertili sæpe 2. Styli distincti, longiusculi, stigmatibus plumosis. Caryopsis oblonga, glumis superioribus inclusa, libera.—Gramina odorata, perennia, foliis planis sæpe subulato-acuminatis. Panicula pyramidalis, effusa v. contracta, spiculis sæpe nitentibus subscariosis.

Species ad 8, regionum montanarum v. frigidarum hemisphærii borealis, Australiæ, Novæ Zelandiæ, Americæ antarcticæ et Africæ australis incolæ. *Beauv. Agrostogr.* 62, t. 12, f. 5 et 7 (*Torresia*). *Kunth, Enum. Pl.* i. 35; *Rev. Gram.* t. 8, 203. *Host, Gram. Austr.* i. t. 4 et iii. t. 3 (*Holcus*). *Nees, Gen. Fl. Germ. Monocot.* i. n. 15. *Reichb. Ic. Fl. Germ.* t. 107. *Brongn. in Duperr. Voy. Coq. Bot.* t. 23. *Hook. f. Fl. Antarct.* t. 52; *Fl. Tasm.* t. 157. *Buchan. N. Zeal. Grass.* t. 6, 7.

ATAXIA, *R. Br. Chlor. Melv. in App. Parr. Voy.* 292, species continet 1 v. 2 Asiaticas, cum 2 Africæ australis, et quinta Mexicana, sectionem formantes *Hierochlois*, a genuinis parum distinctas glumis cujusve paris magis inæqualibus, superiore intermediarum (v. quarta) vacua v. paleam tenuissimam absque staminibus fovente, profunde 2-fida longeque aristata. *Benth. Pl. Jav. Rar.* 8, t. 3. *Nees, Fl. Afr. Austr. Gram.* 7. *Griseb. in Nachr. Götting.* 1868, 77. In specie Mexicana, *Ataxia mexicana*, *Rupr.*; *Fourn. Gram. Mex.* 71, glumas vidimus cujusve paris minus inæquales et in una spicula quartam florem ♂ foventem.

105. *Crypsis*, *Ait. Hort. Kew.* i. 48. (*Antitragus*, *Gærtn. Fruct.* ii. 7, t. 80. *Pallasia*, *Scop. Introd. fide Beauv.*)—Spiculæ 1-floræ, capitatæ, bracteis 2-3 basi dilatatis involucreatæ, in receptaculo convexiusculo pedicellis brevissimis articulatæ, flore hermaphrodito. Glumæ 4, tenuiter membranaceæ, obtusiusculæ, muticæ, complicato-carinatæ, 3 exteriores vacuæ ab extimo minore ad tertiam gradatim auctæ, terminalis florens (v. palea?) vacuis similis nisi paullo minor tenuiorque; palea cæterum 0. Stamina 2 (rarius 3?). Styli distincti, stigmatibus plumosis. Caryopsis oblonga, glumis tenuibus inclusa, libera; pericarpium laxum, tenuissime membranaceum.—Gramen humile v. diffusum, ramosum, foliis brevibus rigidulis. Capitula terminalia intra vaginas latas concavas bractearum v. foliorum floralium semi-immersa, lamina bractearum patente rigida interdum subspinescente. Spiculæ in receptaculo numerosæ, pedicellis brevibus prope basin callosio-articulatis.

Species 1, regionis Mediterraneæ incola. *Beauv. Agrostogr.* 22, t. 6, f. 12. *Cav. Ic.* t. 52, excl. f. v. (*Phleum*). *Schreb. Besch. Gräs.* t. 32 (*Schenus*). *Host, Gram. Austr.* i. t. 31. *Reichb. Ic. Fl. Germ.* t. 48, f. 1469. *Nees, Gen. Fl. Germ. Monocot.* i. n. 5, quoad fig. 17, 18.

Species cæteræ ab auctoribus sub *Crypsi* editæ ad *Heleochloam*, *Host*, referendæ sunt. Specimina nonnulla *Heleochloæ schæmoidis*, spicis abbreviatis intra bracteam sessilibus, sæpe cum *Crypsi aculeata* in herbariis confusa, facile distinguuntur spicæ rhachi cylindricæ, pedicellis inarticulatis palea 2-nervi plus minus 2-carinata 2-dentatæque et staminibus 3.

106. *Cornucopis*, *Linn. Gen.* n. 72.—Spiculæ 1-floræ, capitatæ, intra involucreum tubuloso-campanulatum ∞-dentatum in receptaculo subplano sessiles articulatæ, flore hermaphrodito. Glumæ 3, 2 exteriores vacuæ, membranaceæ, complicato-carinatæ, subæquales, muticæ, 3 5-nerves, carina ciliolata v. subalata, terminalis (v. palea) florens,

vacuis sublongior, latissima, hyalina, tenuissime 4-5-nervis, florem involvens, marginibus basi plus minus in tubum connatis, dorso infra medium arista brevi v. mucrone instructa; palea cæterum 0. Stamina 3. Styli a basi distincti, stigmatibus elongatis pilis brevibus subplumosis. Caryopsis ovato-oblonga, glumis tenuibus inclusa, libera.—Gramen annuum, caulibus cæspitosis, foliis angustis. Pedunculi in axillis superioribus gemini, inæquales v. ad apices ramorum fasciculati, 1-cephali, demum sub involucrio incrassato rigidi recurvi.

Species 1, Orientalis. Schreb. *Beschr. Gräs.* t. 41. Beauv. *Agrostogr.* 3, t. 4, f. 3, 4. Kunth, *Enum. Pl.* i. 21. Sm. *Spicileg. Bot.* t. 14. Sibth. *Fl. Græc.* t. 51.

107. *Alopecurus*, Linn. *Gen. n.* 78.—Spiculæ 1-floræ, complanatæ, in spica seu panicula spiciformi cylindracea confertæ, cum pedicello apice calloso articulatæ, flore hermaphrodito. Glumæ 3 v. 4, 2 exteriores vacuæ acutæ muticæ v. breviter aristatæ, basi interdum in tubum connatæ complicato-carinatæ, carina ciliolata v. subalata, tertia lata, obtusa, hyalina, 3-nervis, dorso arista brevi v. mucrone instructa, marginibus basi interdum in tubum connatis, florem involvens; quarta (v. palea) dum adsit sub flore angusta, hyalina, carinata, acuta, intra tertiam semi-inclusa; palea cæterum 0. Stamina 3. Styli distincti v. basi rarius ad medium connati, stigmatibus elongatis pilis brevibus subplumosis.—Gramina annua v. perennia, erecta v. basi decumbentia, foliis nunc planis flaccidis, nunc rigidulis tereti-convolutis. Spicæ v. paniculæ spiciformes, terminales, supra vaginam folii superioris longe pedunculatæ.

Species vix 20 (ultra 40 in operibus variis enumeratæ), Europæ et Asiæ temperatæ incolæ, quarum 2 v. 3, per alias regiones utriusque orbis latissime dispersæ sæpe tamen inquilinæ. Beauv. *Agrostogr.* 4, t. 4, f. 5, 6. Schreb. *Beschr. Gräs.* t. 19, f. 1, 2. Steud. *Syn. Pl. Glum.* i. 147. Trin. *Spec. Gram.* t. 1, 2, 37 ad 46, 241. Kunth, *Rev. Gram.* t. 7. Jacq. *Ecl. Gram.* t. 13;  *Ic. Rar.* t. 301 (*Phleum*). Host, *Gram. Austr.* ii. t. 31, 32, iii. t. 12. Nees, *Gen. Fl. Germ. Monocot.* i. n. 7. Reichb.  *Ic. Fl. Germ.* t. 49. Sibth. *Fl. Græc.* t. 63, 64. Hook. *f. Fl. Antarct.* t. 130. Buchan. *N. Zeal. Grass.* t. 5.

COLORACHNE, Beauv. *Agrostogr.* 22, t. 6, f. 9, Nees, *Gen. Fl. Germ. Monocot.* i. n. 8, Reichb.  *Ic. Fl. Germ.* t. 50, f. 1480, species continet paucas spica sæpius brevi densa, glumis exterioribus aristatis, quarta lineari v. lanceolata plus minus evoluta, hæc tamen etiam sæpe apparet in *A. pratensi*, et semper distincte 1-nervis.

TOZZETTIA, Savi in *Mem. Soc. Ital. Sc.* viii. 477, est *A. utriculatus*, Pers., Host, *Gram. Austr.* iii. t. 7 (*Phalaris*), glumis inferioribus vacuis basi in tubum connatis.

#### TRIBUS VIII. AGROSTIDÆ.

108. *Aristida*, Linn. *Gen. n.* 94.—Spiculæ 1-floræ, angustæ, paniculatæ, rhachilla supra glumas inferiores articulata, sub flore anguste obconica v. vix incrassata, ultra florem non producta, flore hermaphrodito terminali. Glumæ 3, 2 inferiores vacuæ sub articulatione sæpius persistentes, angustæ, carinatæ, muticæ, tertia florens angusta, rigidula, circa florem arcte convoluta, acumine in aristam trifidam v. 3-partitam producta, sub divisione recta v. torta, ramis setaceis v. centrali flexuoso v. centrali v. omnibus plumosis, lateralibus rarius abbreviatis erectis rarissime obsoletis; palea 2-nervis, gluma arcte inclusa, interdum lodiculis subsimilis v. brevior, nunc minima v. obsoleta. Lodiculæ 2. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis angusta, gluma arcte involuta, libera.—Gramina cæspitosa, humilia v. elatiuscula, foliis angustis sæpe convoluta-setaceis. Panicula variat effusa ramis patulis, v. angusta, interdum fere ad racemum reducta.

Species editæ numerosæ et fere 100 bene distinguendæ videntur, per regiones calidiores utriusque orbis latissime dispersæ, in Europa tamen et Asia extratropica pauciores; in America boreali plures. Kunth, *Enum. Pl.* i. 187. Trin. in *Mem. Acad. Sc. Petersb.* ser. 6, v. 99. Steud. *Syn. Pl. Glum.* i. 132. Döll in *Mart. Fl. Bras.* ii. iii. 11, t. 3 ad 6. Fourn. *Gram. Mex.* 76. Benth. *Fl. Austral.* vii. 560, et in *Journ. Linn. Soc.* xix. 79.

Lodiculas descripsit 3 Nees in *Fl. Afr. Austr. Gram.* quoad sect. *Chatarium*; Döll l. c., quoad genus totum. Ex Kunthio Trinio aliisque 2 tantum adsunt quod ex observationibus nostris con-

firmatur. Nees et Doell verisimiliter paleam sæpe minimam pro lodicula tertia habuerunt; in iconibus Doellianis lodiculæ non delineatæ sunt.

Genus in sectiones sequentes dividitur:—

1. *Chætaria*. Arista cum gluma continua, a basi 3-partita, i.e. infra ramos potius glumæ acumen nuncupanda rectum v. leviter tortum, glumis exterioribus longius. *Cav. Ic. t. 468, 469, 470, f. 2, 471, 589. Jacq. Ecl. Gram. t. 6. Kunth, Rev. Gram. t. 44, 172, 173. Trin. Spec. Gram. t. 313 ad 316. Desf. Fl. Atl. t. 21. Labill. Sert. Austr. Caled. t. 17. Rudge, Pl. Gui. t. 30. CHÆTARIA, Beauv. Agrostogr. 30, t. 8, f. 5, 6.*

CURTOPOGON, *Beauv. Agrostogr. 32, t. 8, f. 7*, est *A. dichotoma*, species boreali-Americana e sectione *Chætaria*, aristæ ramis lateralibus brevibus erectis evidenter e nervis lateralibus glumæ productis, medio longiore reflexo v. torto. *Kunth, Rev. Gram. t. 174. Torr. Fl. N. York, t. 149*. In toto tamen genere rami laterales aristæ a nervis lateralibus proveniunt etsi in speciebus plerisque in acumine jam sub ramificatione aristiformi haud distinguendæ sint

STREPTACHNE, *H. B. et K. Nov. Gen. et Sp. i. 124, t. 40, non Br. (ORTACHNE, Nees in Seem. Bot. Her. 225, absque char.; Fourn. Gram. Mex. 80)*, species includit 2 v. 3 Mexicanas v. Colombianas, aristæ ramis lateralibus brevissimis inæqualibus v. uno v. utroque omnino evanido, rami tamen interdum adsunt v. desunt in diversis spiculis ejusdem speciminis. *ORTACHNE, Steud. Syn. Pl. Glum. i. 121, e Patagonia, est verisimiliter Stipæ species.*

2. *Arthratherum*. Arista cum gluma articulata jam infra ramos tenuis tortaque, gluma ipsa vacuis multo brevior. *Cav. Ic. t. 470, f. 1. Grant in Trans. Linn. Soc. xxix. t. 114. ARTHRATHERUM, Beauv. Agrostogr. 32, t. 8, f. 8.*

3. *Stipagrostis*. Arista cum gluma articulata, infra ramos vix torta, plumosa supra ramificationem. *STIPAGROSTIS, Nees in Linnæa, vii. 290*. Huc referendæ ic. sequentes (1) ramis omnibus plumosis *Desf. Fl. Atl. t. 35. Kunth, Rev. Gram. t. 171*, (2) ramo centrali plumoso lateralibus brevioribus nudis. *Beauv. Agrostogr. t. 8, f. 10. Vahl, Symb. t. 3. Delile, Fl. Eg. t. 13. Jaub. et Spach, Ill. Pl. Or. t. 334 ad 338. Welw. in Trans. Linn. Soc. xxvii. t. 25. SCHISTACHNE, Fig. et Notar. in Mem. Acad. Turin. ser. 2, xii. 252.*

109. *Stipa*, *Linn. Gen. n. 90*.—Spiculæ 1-floræ, angustæ, paniculatæ, rhachilla supra glumas inferiores articulata, sub flore longiuscule obconica v. breviter nunc brevissime callosa, ultra florem non producta, flore hermaphrodito terminali. Glumæ 3, 2 inferiores vacuæ sub articulatione persistentes, angustæ, carinatæ, acutæ v. rarius in aristam tenuem productæ, tertia florens angusta, rigidula, circa florem arcte convoluta, apice in aristam attenuata v. rarius emarginata 2-dentata v. breviter 2-fida; arista terminalis v. in emarginatura rigida, indivisa, plus minus geniculata, basi sæpe torta a gluma articulatim secedens v. rarius continua persistensque; palea 2-nervis v. 2-carinata, tenuis, gluma florente inclusa. Lodiculæ sæpissime 3, æquales v. una minore (interdum deficiente?). Stamina 3, v. rarius pauciora, antheris sæpissime apice barbellatis. Styli breves, distincti, stigmatibus plumosis. Caryopsis angusta, subteres, gluma arcte involuta, libera.—Gramina cæspitosa, elata v. rarius humilia, foliis convolutis teretibus v. rarius planis. Panicula terminalis, sæpius tenuis, parum ramosa, spiculis longiusculis sparsis erectis arista longa nunc longissima, rarius effusa spiculis numerosis minoribus, v. interdum longe denseque subspiciformis.

Species vix 100, per regiones tropicas temperatasque utriusque orbis latissime dispersæ. *Beauv. Agrostogr. 18, t. 6, f. 2, 3, 4. Kunth, Enum. Pl. i. 179; Rev. Gram. t. 43, 121. Steud. Syn. Pl. Glum. i. 124. Benth. Fl. Austral. vii. 564, et in Journ. Linn. Soc. xix. 80. Cav. Ic. t. 467. Host, Gram. Austr. iii. t. 5. Nees, Gen. Fl. Germ. Monocol. i. n. 26. Reichb. Ic. Fl. Germ. t. 46. Brot. Phytogr. Lusit. t. 9. Desf. Fl. Atl. t. 27 ad 29, 31. Jaub. et Spach, Ill. Pl. Or. t. 339. Sibth. Fl. Græc. t. 85, 86. Ledeb. Ic. Pl. Ross. t. 98, 99, 222, 223. Labill. Pl. Nov. Holl. t. 29, 30. Hook. f. Fl. Tasm. t. 157; Fl. Nov. Zel. t. 66 (Dichelachne). Buchan. N. Zeal. Grass. t. 14 ad 16 (Dichelachne) et t. 17, 2. H. B. et K. Nov. Gen. et Sp. t. 680. Deell in Mart. Fl. Bras. ii. iii. 6, t. 1, f. 2. C. Gay, Fl. Chil. t. 76. Fourn. Gram. Mex. 73.*

Genus quoad paniculæ evolutionem, rhachillæ internodium (sic dictum callum inter glumas inferiores et florentem), aristæ indolem, sat polymorphum, sectiones tamen adhuc vix limitibus certis definitæ, etsi formæ sequentes insigniores a variis auctoribus pro generibus propriis habitæ.

*MACROCHLOA, Kunth, Rev. Gram. i. 58*, includit *S. tenacissimam*, *Linn.*; *Desf. Fl. Atl. t. 30*, et

*S. arenariam*, Brot. Phytogr. Lusit. t. 7, 8, species spiculis magnis membranaceis insignes, gluma florente apice membranaceo-2-fida, quod tamen plus minus in aliis speciebus observatur.

*ARISTELLA*, Bertol. *Fl. Ital.* i. 690, est *S. aristella*, Linn., *Subth. Fl. Græc.* t. 87. *Host, Gram. Austr.* iv. t. 34, a speciebus typicis distincta rhachillæ internodio seu callo non evoluto, gluma florente ad latera aristæ breviter 2-fida, antheris imberbibus et lodiculis 2 nec 3. Rhachillæ internodium tamen etsi abbreviatum distincte obconicum est et vix brevius quam in *S. sibirica*, Lam., *S. Redowskii*, Trin., *S. altaica*, Ledeb., speciebus cæterum *S. aristellæ* plus minus affinis; gluma florens in speciebus pluribus præsertim Australianis apice 2-dentata v. 2-fida, antherarum barba in genere inconstans, et lodicula tertia etsi sæpius lateralibus æqualis, in speciebus nonnullis minima v. deficiens dicitur.

*STREPTACHNE*, R. Br. *Prod.* 174; *Benth. Fl. Austral.* vii. 571 (ORTHORAPHIUM, Nees in *Proc. Linn. Soc.* i. (1841), 94), species paucæ Indicæ v. Australianæ, vix ab *Aristella* differunt. Arista in his ut in *Aristella* cum gluma sæpissime (an semper?) continua nec articulata.

*JARAVA*, Ruiz et Pav. *Prod. Fl. Per.* 2, t. 1; *Fl. Per. et Chil.* i. 5, t. 6, est *S. Jarava*, Kunth, (*S. eriostachys*, H. B. et K. Nov. Gen. et Sp. t. 41, *S. papposa*, Nees), spiculis in ramulis densis paniculæ elongatæ parvis, gluma florente ad originem aristæ pilis longis coronata quasi papposa. Glumæ similes observantur in speciebus 5 v. 6 austro-Americanis habitu vario. *Cav. Ic.* t. 466. *Dall in Mart. Fl. Bras.* ii. iii. t. 2.

*S. pennata*, Linn., cum speciebus paucis tam gerontogeis quam Americanis insignes sunt glumæ florentis arista supra basin plus minus pilis longis patentibus plumosa. *Host, Gram. Austr.* iv. t. 33.

*LASIAGROSTIS*, Link. *Hort. Berol.* i. 99, Nees, *Gen. Fl. Germ. Monocot.* i. n. 25 (ACHNATHERUM, Beauv. *Agrostogr.* 19, t. 6, f. 7), genus primum ad *S. calamagrostem*, Wahlenb., *Reichb. Ic. Fl. Germ.* t. 46, propositum, a Neesio v. Trinio ad species plures Africanas v. Asiaticas extensum, a *Stipis* pluribus parvifloris non differt nisi gluma fertili infra medium v. totum pilis subpatentibus plumosa. Inter illas *PTILAGROSTIS*, Griseb. in *Ledeb. Fl. Ross.* iv. 447, est *S. mongholica*, Trin., cui pili glumæ usque ad dimidium aristæ extensi sunt.

*Stipa verticillata*, Nees, a Benth. in *Fl. Austral.* dubie sed ut videtur errore ad *S. micrantham*, Cav., relata, et *Apera arundinacea*, Hook. f. *Fl. N. Zel.* i. 295, t. 67; Buchan. *N. Zeal. Grass.* t. 17, species inter se simillimæ at bene distinctæ quasi medium tenent inter *Stipam* et *Muehlenbergiam*. Inflorescentiæ et spiculæ parvæ *Muehlenbergiæ*; arista in *S. verticillata* sæpius persistens, sed articulo in spicula florente ut in *Stipa* distincta, et in *S. (Apera, Hook. f.) arundinacea*, arista caducissima. Stamina in *S. verticillata* 3, in *S. arundinacea* sæpius 1. His valde affinis est *S. rariflora* (*Muehlenbergia rariflora*, Hook. f. *Fl. Ant.* t. 131) ex America antarctica. De planta Cavanillesii confer F. Muell. in *Trim. Journ. Bot.* 1878, 327.

110. *Oryzopsis*, Mich. *Fl. Bor. Amer.* i. 51, t. 9. (*Urachne*, Trin. *Fundam. Agrostogr.* 109. *Dilepyrum*, Rafn. ex Endl. *Gen. Pl.* 87.)—Spiculæ 1-floræ, sæpius ovatæ v. acuminatæ, paniculatæ, rhachilla supra glumas inferiores articulata, sub flore brevissime late sæpiusque oblique callosa, ultra florem non producta, flore hermaphrodito terminali. Glumæ 3, 2 inferiores sub articulatione persistentes, vacuæ, æquales v. extima parum brevior, obtusæ v. acuminatæ; tertia florens brevior v. paullo longior, lata, sub anthesi hyalina v. tenuiter membranacea, florem paleamque 2-carinatum arcte involvens, apice obtusa v. truncata, arista terminali sæpius excentrica geniculata basique torta, cum gluma articulata sæpiusque caducissima. Lodiculæ (an semper?) 2. Stamina 3. Styli breves v. longiusculi, distincti, stigmatibus plumosis. Caryopsis oblonga, gluma plus minus indurata oblique ovata v. angustiore arcte involuta, libera.—Gramina cæspitosa, interdum elata, foliis nunc planis mollibus, nunc convoluto-teretibus. Panicula terminalis, laxa, nunc angusta ramulis strictis paucispiculatis nunc effusa floribunda.

Species ad 24, regionum temperatarum et subtropicarum hemisphærii borealis et Americæ australis incolæ, vix intra tropicos extensæ. *Kunth, Enum. Pl.* i. 175 (*Oryzopsis*) et 176 (*Piptatherum*). *Steud. Syn. Pl. Glum.* i. 121 (*Urachne*). *Benth. in Journ. Linn. Soc.* xix. 81.

Genus olim pro sectione aristata *Milii* habitum, revera *Stipæ* affine, et vix nisi gluma fructifera latiore sæpius obliqua distinctum, genera plura a variis auctoribus proposita includit et bene in sectiones 3 sequentes dividitur:—

1. *Piptatherum*. Rhachilla sub flore nuda. Gluma fructifera parum obliqua, glabra v. villosa, arista subcentrali. Species omnes gerontogææ. *Schreb. Besch. Gräs.* t. 28, f. 2 (*Milium*). *Host,*

*Gram. Austr.* iii. t. 23 (*Milium*) et t. 45 (*Agrostis*). *Reichb. Ic. Fl. Germ.* t. 45, f. 1459, 1460 (*Milium*). *Desf. Fl. Atl.* t. 12 (*Milium*). *Sibth. Fl. Gr.* t. 66 (*Milium*). *Brot. Phyt. Lusit.* t. 102, 103 (*Agrostis*). *Ledeb. Ic. Fl. Ross.* t. 221. *PIPTATHERUM*, *Beauv. Agrostogr.* 17, t. 5, f. 10, 11. *Nees, Gen. Fl. Germ. Monocot.* i. n. 24.

2. *Euoryzopsis*. Rhachilla sub flore annulo pilorum instructa. Gluma fructifera inæquilatera, glabra v. pilis brevibus villosa, lævis v. striata, arista excentrica. Species omnes Americanæ. *Beauv. Agrostogr.* 19, t. 6, f. 5. *Döll in Mart. Fl. Bras.* ii. iii. t. 1, f. 1 (*Urachne*). *Kunth, Rev. Gram.* t. 122 (*Stipa*). *CARYOCHLOA*, *Spreng. Syst. Cur. Post.* 22, 30, non *Trin.* *PIPTOCHÆTIUM*, *Presl, Rel. Hænk.* i. 222, t. 37. *E. Desv. in C. Gay, Fl. Chil.* t. 75, f. 2. *NASSELLA*, *E. Desv. in C. Gay, Fl. Chil.* vi. 263, t. 75, f. 1 (a *Trinio* primum pro sectione *Stipæ*, serius *i. rachnitis*, proposita).

3. *Eriocoma*. Omnia *Euoryzopseos* nisi gluma fructifera pilis longis sericeis dense oblecta. Species Americanæ. *ERIOCOMA*, *Nutt. Gen. N. Amer. Pl.* i. 40. *FENDERIA*, *Steud. Syn. Pl. Glum.* i. 419.

111. *Milium*, *Linn. Gen.* n. 79, pro parte. (*Miliarium*, *Mœnch, Meth.* 204.)—Spiculæ 1-floræ, laxè paniculatæ, rhachilla supra glumas inferiores articulata, ultra florem non producta, glabra, flore hermaphrodito. Glumæ 3, tenues, obtusæ, muticæ, 2 inferiores vacuæ sub articulatione persistentes, subæquales; terminalis florens inter illas subsessilis, sub anthesi tenuiter membranacea, demum rigescens, glabra v. pubescens, sub-3-nervis; palea vix brevior, 2-nervis. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis ovoidea v. oblonga, gluma paleaque nitidulis rigescentibus arcte inclusa, libera. —Gramina annua v. perennia, foliis planis. Panicula composita, laxè thyrsoidæa v. effusa, rarius stricta, spiculis parvulis, interdum minimis.

Species 5 v. 6, Europæ et Asiæ temperatæ incolæ, quarum una etiam in America boreali late dispersa. *Kunth, Enum. Pl.* i. 65, quoad species n. 1 et 2. *Host, Gram. Austr.* iii. t. 22. *Nees, Gen. Fl. Germ. Monocot.* i. n. 17. *Reichb. Ic. Fl. Germ.* t. 45, f. 1456 ad 1458.

112. *Actiachne*, *Benth. in Hook. Ic. Pl.* t. 1362.—Spiculæ unisexuales, ♂ ignotæ; ♀ 1-flora, in pedunculo terminali unica, erecta, rhachilla brevissima supra glumas inferiores articulata, ultra florem non producta. Glumæ 3, 2 inferiores vacuæ, latæ, tenuiter membranacæ subhyalinæ at rigidæ, obtusæ, muticæ, parum inæquales, sub articulatione persistentes; terminalis florens multo longior, rigida, basi lata circa florem convoluta, superne in acumen longum teres rigidum producta; palea brevior, inclusa, hyalina, latiuscula, circa florem convoluta, tenuiter 2-nervis. Lodicule parvæ. Stamina 0. Styli distincti, stigmatibus plumosis. Caryopsis (immatura) oblonga, gluma rigida subindurata inclusa, libera.—Gramen nanum, perenne, dense caespitosum, caulibus brevibus foliorum vaginis latis distichis obtectis, laminis brevibus patentibus rigidis. Pedunculus terminalis, brevis, folia rarius superans.

Species 1, Andium Americæ australis a Bolivia usque ad Novam Granadam lecta a collectoribus pluribus recepta, specimina florida numerosa nobis adsunt omnia tamen fœminea, nisi huic congenera (vix conspecifica) sint specimina Peruviana *Lechler n.* 2599, foliis pariter rigidis sed erectis longioribusque panicula terminali laxè thyrsoidæa rigida 1-1½-pollicari; glumæ omnino *A. pulvinatæ*, sed stamina 3 perfecta et ovarii rudimentum tantum obovoideum 2-mucronatum, stylis 0.

113. *Muehlenbergia*, *Schreb. Gen. Pl.* 44.—Spiculæ 1-floræ, parvæ, paniculatæ, rhachilla supra glumas inferiores articulata, sub gluma florentè brevissime subcallosa sæpius pilosa, ultra florem non producta, flore hermaphrodito. Glumæ 3, 2 inferiores vacuæ, sub articulatione persistentes, membranacæ v. hyalinæ, æquales v. sæpius inæquales, nunc minutæ v. una omnino deficiens, nunc florenti subæquales, carinatæ, acutæ mucronatæ v. rarius in aristam brevissimam productæ; terminalis florens 3-5-nervis, rigidula v. tenuiter membranacea, obtusa acuta mucronata v. sæpissime capillaceo-aristata, ad latera aristæ interdum utrinque in dentem brevem producta, circa florem arcte convoluta; palea hyalina, inclusa, 2-carinata. Stamina sæpius 3. Styli distincti, stigmatibus plumosis. Caryopsis angusta, subteres, gluma arcte involuta, libera.—Gramina nunc elatiuscula v. tenuia, erecta v. laxè adscendentia v. diffusa, nunc caespitosa, rarius annua, foliis planis v.

sæpe convoluta-teretibus. Panícula terminalis, sæpius floribunda, nunc angusta tenuissima, nunc densa thyrsoides v. fere spiciformis, nunc laxa effusa ramulis capillaceis. Spiculæ parvæ, tenues, interdum minimæ; gluma florens dorso glabra v. rarius parce pilosa; arista sæpius longiuscula, tenuissima, interdum curva at non torta.

Species fere 60, pro maxima parte Americanæ boreales v. Andinæ, paucae Asiæ mediæ v. orientalis incolæ. *Beauv. Agrostogr.* 27, t. 7, f. 9. *Schreb. Besch. Gräs.* t. 51. *Kunth, Enum. Pl.* i. 198. *Steud. Syn. Pl. Glum.* i. 177 (excl. sp. plur.). *Fourn. Gram. Mex.* 81. *Benth. in Journ. Linn. Soc.* xix. 82. *Dall in Mart. Fl. Bras.* ii. iii. 40, t. 9. *Willd. Hort. Berol.* t. 12 (*Agrostis*).

Genus quoad species plerasque sat naturale, sed male definitum; species aliæ vix a *Stipa* differunt spiculis parvis gluma fructifera minus rigida, aliæ ab *Epicampe* gluma fructifera circa caryopsin arcuatus convoluta. Magnopere variat, panícula densa stricta v. laxa effusa, glumarum vacuarum ratione etc., sed difficile in sectiones dividitur, etsi species nonnullæ ab auctoribus variis generice separantur. In generis typo *M. diffusa*, Schreb., aliisque nonnullis, glumæ vacuæ minutæ, infima haud raro ad callum vix prominulum reducta v. omnino deficiente; in sectione *Acroxi*, Trin., glumæ vacuæ æquales v. inæquales, quarum secunda dimidium spiculæ v. interdum glumam ipsam florentem superat.

VASEYA, *Thurb. in Proc. Acad. Nat. Sc. Philad.* 1863, 79, est species Californica (*M. comata*, *Thurb.*), speciminibus Canadensibus *M. sylvaticæ* in omnibus simillima, nisi pilis rhachilla sub gluma florente duplo longioribus et gluma ipsa paullo tenuiore.

PODOSÆMUM, *Desv. in Nuov. Bull. Soc. Philom.* ii. 188, et in *Journ. Bot.* i. (1813) 67 (*TRICHOCHLOA*, *Beauv. Agrostogr.* 29, t. 8, f. 2), distinguitur imprimis panícula laxa effusa, ramulis pedicellisque elongatis capillaribus. *H. B. et K. Nov. Gen. et Sp.* t. 681 ad 683.

TOSAGRIS, *Beauv. Agrostogr.* 29, t. 8, f. 3, ab auctore ipso ad *Podosæmum* relata, prius separata fuit ob glumam florentem dorso longe pilosam. Specimina non vidimus.

CLOMENA, *Beauv. Agrostogr.* 28, t. 7, f. 10, est *M. Clomena*, Trin. (*M. nana*, *Benth.*), species Andina, nana, gluma vacua secunda cæteris majore apice latiuscule 3-dentata, character pariter observatus in *M. gracili*, Trin. (*CALYCODONE*, *Nutt. in Journ. Acad. Philad. ser.* 2, i. 186), aliisque paucis.

114. **Brachyelytrum**, *Beauv. Agrostogr.* 39, t. 9, f. 2.—Spiculæ 1-floræ, angustæ, in panícula tenui paucae, rhachilla supra glumas inferiores articulata, sub flore subglabra, ultra florem in stipitem nudum v. minute gluniferum producta, flore hermaphrodito. Glumæ 2 inferiores minimæ, vacuæ, sub articulatione persistentes, extima minuta interdum vix conspicua; tertia florens elongata, 5-nervis, rigidula, acuminata, in aristam longam rectam producta; palea paullo brevior, rigidula, dorso sulcata, tenuiter 2-nervis. Stamina 2 (v. 3?). Styli breves, distincti, stigmatibus elongatis plumosis. Caryopsis oblonga, gluma paleaque involuta, libera.—Gramen elatum, foliis planis. Panícula terminalis, angusta, ramis paucis filiformibus erectis. Spiculæ in subtribus longiusculæ, iis *Stipæ* subsimiles, rhachilla sub flore leviter callosa vix pilis paucis brevibus ciliolata.

Species 1, Americæ borealis incola. *A. Gray, Man. Bot. N. U. St. ed.* 5, 614, t. 8. *Schreb. Besch. Gräs.* t. 50 (*Muehlenbergia*).

115. **Periella**, *Presl, Rel. Hænk.* i. 233, t. 37, f. a.—Spiculæ 1-floræ, in fasciculos seu spica breves secus axin paniculæ sessiles subsecundas densissime confertæ, rhachilla supra glumas inferiores articulata, ultra florem non producta, flore hermaphrodito, spiculis tamen numerosis intermixtis sterilibus v. ananthis. Glumæ 3, tenuiter hyalinæ, carinatæ, costa omnium in aristam longam rectam producta, 2 inferiores vacuæ, ad basin aristæ breves nunc brevissimæ; tertia florens arista neglecta duplo longior, apice integra v. ad latera aristæ utrinque breviter producta; palea hyalina, 2-carinata. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis ovoidea v. oblonga, gluma vix rigescente inclusa.—Gramina annua, cæspitosa v. diffusa, foliis angustis planis. Panícula terminalis, spiciformis, continua v. interrupta, fasciculis spicularum minimarum seu spicis secus axin simplicem paniculæ subsecundis sessilibus densissimis, ob glumarum præsertim vacuarum aristas numerosas quasi crinitis, glumis fertilibus cum caryopsi inclusa caducis.

Species 3 v. 4, Americæ tropicæ a Brasilia et Colombia usque ad Mexicum incolæ. *Steud. Syn.*

*Pl. Glum.* i. 185. *Dall in Mart. Fl. Bras.* ii. iii. 41, t. 10. *Trin. Spec. Gram.* t. 358. *Kunth, Rev. Gram.* t. 213 (*Muehlenbergia*). *Fourn. Gram. Mex.* 92.

Genus characteribus plerisque *Muehlenbergia* affine, et etiam habitu ab *M. diffusa* non longe recedit.

116. **Lycurus**, *H. B. et K. Nov. Gen. et Sp.* i. 141, t. 45. (Pleopogon, *Nutt. in Journ. Acad. Philad. ser.* 2, i. 189.)—Spiculæ 1-floræ, angustæ, secus rhachin spicæ densæ cylindraceæ v. racemi spiciformis sparsæ, sæpius geminæ, sessiles v. breviter pedicellatæ, rhachilla brevissima supra glumas inferiores subarticulata, ultra florem non producta, flore hermaphrodito, spiculis tamen sterilibus sæpe intermixtis. Glumæ 3, extima vacua nervis 2 rarius 3 in aristas productis, secunda pariter vacua minor, angustior, 1-aristata; tertia florens cæteris major longiusque aristata, 3-nervis; palea paullo minor, tenuior, 2-nervis v. 2-carinata, brevissime 2-dentata. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis gluma vix indurata inclusa, libera.—Gramina basi cæspitosa, adscendentia v. erecta, foliis angustis siccitate sæpius convolutis. Spica e vagina folii supremi breviter pedunculata, angusta, cylindracea, spiculis numerosis inæqualiter pedicellatis v. subsessilibus, irregulariter solitariis geminis v. fasciculatis; steriles masculæ v. ananthæ præsertim in parte superiore spicæ plures, ex Kunthio in utroque pari altera perfecta altera sterilis, sæpe tamen, si geminæ, utramque perfectam v. utramque sterilem invenimus.

Species editæ 2, inter se vix distinguendæ, Americæ incolæ. *Kunth, Enum. Pl.* i. 203.

117. **Echinopogon**, *Beauv. Agrostogr.* 42, t. 9, f. 5. (Hystericina, *Steud. Syn. Pl. Glum.* i. 35.)—Spiculæ 1-floræ, in paniculam dense capituliformem v. spiciformem confertæ, rhachilla supra glumas inferiores articulata, ultra florem in stipitem brevem producta, flore (in plerisque) hermaphrodito. Glumæ 3, 2 exteriores sub articulatione persistentes, vacuæ, subæquales, carinatæ, acutæ; tertia florens tenuis, lata, 5-nervis, apice 3-loba, lobis lateralibus brevibus acutis, medio in aristam tenuem rectam producta; palea brevior, angusta, 2-nervis. Stamina 3. Styli distincti, stigmatibus brevissime plumosis. Caryopsis gluma inclusa, libera.—Gramen adscendens v. elatiusculum, glabrum, foliis planis scabris. Panicula spiciformis, ovoidea v. cylindracea, longe pedunculata, aristis numerosis echinata. Spiculæ irregulariter fasciculatæ, nonnullæ minores flores masculos foventes v. interdum ananthæ.

Species 1, Australiæ et Novæ Zelandiæ incola. *Benth. Fl. Austral.* vii. 599. *Labill. Pl. Nov. Holl.* t. 21 (*Agrostis*). *Buchan. N. Zeal. Grass.* t. 13 B.

118. **Diplopogon**, *R. Br. Prod.* 176. (Dipogonia, *Beauv. Agrostogr.* 125.)—Spiculæ 1-floræ, in panicula capituliformi ovoideo-globosa dense confertæ, rhachilla supra glumas inferiores articulata, ultra florem non producta, flore hermaphrodito. Glumæ 3, 2 inferiores sub articulatione persistentes, angustæ, carinatæ, in aristam brevem tenuem rectam productæ; tertia florens angusta, circa florem convoluta, nervis lateralibus in aristas breves rectas productis, arista centrali terminali longiuscula rigida basi incrassata torta v. refracta; palea angusta, hyalina, prominenter 2-nervis, breviter 2-aristata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis. . . —Gramen perenne, tenue at rigidiusculum, foliis convolutis teretibus. Panicula capituliformis, terminalis, pedunculata, aristis supra glumas purpurascens sæpius tortis insignis.

Species unica, Australiæ austro-occidentalis incola. *Benth. Fl. Austral.* vii. 573.

119. **Amphipogon**, *R. Br. Prod.* 175. (Ægopogon, *Beauv. Agrostogr.* 122, t. 22, f. 4, non *Willd.* *Pentacraspedon*, *Steud. Syn. Pl. Glum.* i. 151.)—Spiculæ 1-floræ, in panicula densa capituliformi v. spiciformi confertæ, rhachilla supra glumas inferiores articulata, ultra florem non producta, flore hermaphrodito. Glumæ 3, 2 inferiores vacuæ, sub articulatione persistentes, membranaceæ, 3-nerves, acutæ v. in aristam brevem productæ, v. rarius apice 3-fidæ, lobis acutis; tertia florens circa florem involuta, alte 3-fida, lobis acutis v. in aristas rectas productis; palea glumam subæquans, apice in lobos 2 rigidos v. aristi-

formes divisa. Stamina 3. Styli basi plus minus connati, stigmatibus plumosis. Caryopsis gluma nonnihil indurata inclusa, libera.—Gramina perennia, cæspitosa, rigidula, foliis convoluta-teretibus v. rarius planis angustis rigidisque. Panícula spiciformis, densa, parum divisa, pedunculata, nunc in capitulum globosum v. ovoideum contracta, nunc longior cylindracea.

Species 5, Australianæ. *Benth. Fl. Austral.* vii. 597.

**GAMELYTHERUM**, *Nees in Pl. Preiss.* ii. 101, est *A. turbinatus*, Br., species a cæteris parum distincta, rhachilla sub flore magis evoluta stipitiformi.

120. **HELEOCHLOA**, *Host, Gram. Austr.* i. 23, t. 29, 30. (*Pechea*, *Pour. Chlor. Narb. ex Kunth. Crypsis, sp. Auct.*)—Spiculæ 1-floræ, in spica v. panícula densa spiciformi confertæ, rhachilla brevissima supra glumas inferiores subarticulata, ultra florem non producta, flore hermaphrodito. Glumæ 3, 2 exteriores vacuæ, persistentes, parum inæquales, membranaceæ, acutæ, complicato-carinatæ, exaristatæ, carina plus minus ciliata; tertia florens subsimilis nisi paullo longior; palea brevior, hyalina, emarginata v. 2-loba, tenuissime 2-nervis v. 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, gluma laxè inclusa, libera.—Gramina perennia, cæspitosa, sæpius humilia, basi diffusa, caulibus adscendentibus, nunc nana, dense cæspitosa, foliis planis. Spica v. panícula spiciformis, cylindracea oblonga v. rarius ovoidea, rhachi lineari, intra vaginam folii floralis sessilis v. longiuscule pedunculata.

Species 7 v. 8. regionis M-diterraneæ incolæ, quarum 1 v. 2 per Europam et Asiam mediam latissime disperse. *Kunth, Enum. Pl.* i. 21 (*Crypsis sect. 1*). *Benth. in Journ. Linn. Soc.* xix. 84. *Jacq. Ic. Rar.* t. 15 (*Phleum*). *Cav. Ic.* t. 52, f. v. *Nees, Gen. Fl. Germ. Monocot.* i. n. 5, f. 1, 16. *Reichb. Ic. Fl. Germ.* t. 48, f. 1470, 1471. *Delile, Fl. Eg.* t. 9 (omnes sub *Crypsi*).

Genus a Hostio bene distinctum, etsi serius auctor ipse cum *Crypsi*, Ait., junxit; differt inflorescentia, rhachi lineari nec disciformi, pedicellis inarticulatis, aliisque notis.

**RHIZOCEPHALUS**, *Boiss. Diagn.* v. 68, xiii. 43, genus ad *Crypsim pygmaeam*, Jaub. et Spach. Ill. Pl. Or. t. 307, propositum, cum *C. ambigua*, Balansa, et *C. crucianelloide*, Balansa, sectionem format *Heleochoe* parum distinctam, habitu nano dense cæspitosa, spiculis quasi echinatis, glumis nempe exterioribus angustis 3-nervibus rigide acuminatis. Characteres essentialia tamen nobis omnino *Heleochoe* videntur.

**HELEOCHLOA**, *Beauv. Agrostogr.* 23, t. 7, f. 3, genus compositum videtur e specie *Sporoboli*, cum specie *Phlei* (*Chilochoe*).

121. **MAILLEA**, *Parlat. Pl. Nov.* 31.—Spiculæ 1-floræ, plano-compressæ, dense subcapitato-spicatæ, rhachilla supra glumas inferiores articulata, supra florem interdum in stipitem brevem producta, flore hermaphrodito. Glumæ 3, 2 exteriores vacuæ, persistentes, subæquales, rigidulæ, complicatæ, exaristatæ, carina alata; tertia florens, paullo minor, complicato-carinata exalata; palea linearis. Stamina 2 v. 3. Styli breves, distincti, stigmatibus elongatis pilis brevibus plumosis. Caryopsis parva, ovoidea, intra basin glumæ laxè inclusa, libera.—Gramen annuum, nanum, cæspitosum, foliis brevibus rigidulis. Spicæ ovoideæ, intra vaginas foliorum floralium sessiles, spiculis undique arcte imbricatis.

Species 1, maritima, insularum Archipelagi Græci incola, nuper etiam in insula Sardinia a Reverchonio detecta. *Steud. Syn. Pl. Glum.* i. 152. *Jaub. et Spach. Illustr. Pl. Or.* t. 308 (*Phalaris*). *Kunth, Rev. Gram.* t. 202 (*Phalaris*).

Planta ab auctoribus citatis ad *Phalaridem* relata, verisimiliter ob spiculas compressas glumis exterioribus alatis, qui character tamen in *Phalaride* non constans, et cætera omnia affinitatem potius cum *Phleo* v. *Heleochoa* indicant.

122. **PHLEUM**, *Linn. Gen.* n. 77. (*Stelephuros*, *Adans. Fam.* ii. 31.)—Spiculæ 1-floræ, in panícula dense spiciformi confertæ, rhachilla brevissima supra glumas inferiores articulata, ultra florem interdum in stipitem brevem producta, flore hermaphrodito. Glumæ 3, 2 inferiores vacuæ, persistentes, parum inæquales, membranaceæ, complicato-carinatæ, subtruncatæ, carina in mucronem seu aristam brevem producta, tertia florens multo

brevior, latior, hyalina, truncata v. denticulata, paleam angustiore hyalinam floremque involvens. Stamina 3. Styli distincti, longiusculi, stigmatibus plumosis. Caryopsis ovoidea, gluma paleaque tenuissime hyalinis involuta, libera.—Gramina annua v. perennia, erecta, foliis planis. Panicula longiuscule pedunculata, semper dense spiciformis, nunc elongata anguste cylindracea, nunc brevior oblonga v. fere ovoidea, sæpe pubescens.

Species ad 10, Europæ, Asiæ mediæ et borealis, Africæ borealis et Americæ borealis et antarcticæ incolæ. *Kunth, Enum. Pl. i. 28. Steud. Syn. Pl. Glum. i. 150. Schreb. Besch. Gräs. t. 14. Jacq. Ic. Rar. t. 14. Trin. Spec. Gram. t. 5 ad 7, 21, 22. Host. Gram. Austr. ii. t. 34 ad 37 (Phalaris), iii. t. 9 ad 11, iv. t. 21. Nees, Gen. Fl. Germ. Monocot. i. n. 10. Reichb. Ic. Fl. Germ. t. 50. Ten. Fl. Nap. t. 103.*

*CHILOCHLOA*, Beauv. *Agrostogr.* 37, t. 7, f. 2. *Nees, Gen. Fl. Germ. Monocot. i. n. 9. Reichb. Ic. Fl. Germ. t. 51 (ACHNODON, Link. Hort. Berol. i. 65. Nees, l. c. n. 11)*, species includit plures quibus rhachilla ultra florem plus minus in stipitem producta. *ACHNODONTON*, Beauv. l. c. 24, t. 7, f. 5, est *P. tenue*, Schrad., caractere nullo a cæteris *Chilochlois* separandum. *Phalaris trigyna*, Host, Gram. Austr. iv. t. 20, videtur *P. Michellii*, All., forma abnormis stylis 3.

123. *Mibora*, Adans. *Fum. ii. 495.* (*Chamagrostis*, Borkh. *Fl. Oberkatzenellenbogen, ex Kunth. Sturmia*, Pers. *Syn. Pl. i. 76. Knappia*, Sm. *Fl. Brit. iii. 1387.*)—Spiculæ 1-floræ, minimæ, in spica simplici alternæ, subsessiles, rhachilla supra glumas inferiores articulata, ultra florem non producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, subæquales, tenuiter membranaceæ, concavæ, subcarinatæ, obtusæ, muticæ; tertia florens parum brevior, tenuior, fere hyalina, lata, 5-nervis, dorso pilosa, obtusa, mutica; palea multo angustior, hyalina, 2-nervis, pilosa. Stamina 3. Styli distincti, stigmatibus longis pilosulis. Caryopsis elliptica, compressa, gluma paleaque oblecta, libera.—Gramen annuum, nanum, tenue, cæspitosum, foliis brevibus angustis fere filiformibus. Pedunculi tenues, foliis longiores, spica tenui glabra.

Species 1, Europæ præsertim occidentalis incola. *Beauv. Agrostogr.* 29, t. 8, f. 4. *Kunth, Enum. Pl. i. 23. Trin. Spec. Gram. t. 17 (Knappia). Nees, Gen. Fl. Germ. Monocot. i. n. 6 (Chamagrostis). Reichb. Ic. Fl. Germ. t. 26.*

124. *Coleanthus*, Seid. in Rœm. et Schult. *Syst. ii. 11, 276.* (*Schmidtia*, Tratt. ex Rœm. et Schult. l. c.)—Spiculæ 1-floræ, minimæ, secus paniculæ axin parum divisum fasciculatæ, pedicellatæ, rhachilla vix evoluta cum pedicello continua, flore hermaphrodito. Gluma sub flore 1, persistens, hyalina, ovata, carinata, in aristam brevem rectam producta; palea pariter persistens, brevior, latior, 2-carinata, 2-fida v. 2-4-dentata. Lodiculæ 0 (v. minutissimæ?). Stamina 2. Styli distincti, stigmatibus tenuiter plumosis. Caryopsis angusta, oblonga, compressiuscula, libera, nuda, cum toro staminifero e gluma paleaque persistentibus articulatim decidua.—Gramen annuum, nanum, pusillum, subramosum, foliis brevibus planis. Panicula e vagina folii supremi breviter exserta, axi simplici v. ramulum proferente, spicularum fasciculis paucis dissitis. Spiculæ in quoque fasciculo numerosæ, breviter pedicellatæ.

Species 1, Bohemiæ et Norwegiæ incola, et recentius etiam in insula Sauvies ad ostium fluminis Oregon Americæ boreali-occidentalis detecta. *Reichb. Ic. Fl. Germ. t. 48. Nees, Gen. Fl. Germ. Monocot. i. n. 27 (Schmidtia).* Genus a *Phippsia* vix differt glumis vacuis omnino abortivis.

Planta primum a Seidelio detecta et nomine *Coleanthi subtilis* signata, a Trattinickio ex Rœm. et Schult. sub nomine *Schmidtia subtilis* edita, a Rœmerio et Schulteso tamen sub nomine Seideliano in Systemate recepta, a Sternbergio serius in Flora 1819, 6, cum tab. in Sturm, Deutschl. Fl. repetita, nomine novo *Schmidtia urticulosa* fusius descripta. Nomen Seidelianum hodie ab omnibus botanicis adoptatur.

125. *Phippsia*, R. Br. *Chlor. Melv. in App. Parr. Voy. 285.*—Spiculæ 1-floræ, minimæ, secus paniculæ rhachin parum divisam fasciculatæ, pedicellatæ, rhachilla supra glumas inferiores articulata, ultra florem non producta, flore hermaphrodito. Glumæ vacuæ sub articulatione persistentes, 2 minutæ inæquales v. una sola; tertia florens tenuiter membranacea, carinata, apice subdentata oxaristata; palea vix brevior, 2-carinata. Stamina 1,

v. *rarius* 2-3. Styli breves, distincti, stigmatibus tenuiter plumosis. Caryopsis oblonga, a glumis paleaque libera, facile exserta v. decidua.—Gramen annuum, nanum, cæspitosum, foliis angustis planis. Panicula folia vix superans, angusta, tenuis, spiciformis v. laxiuscula, ramulis nonnullis brevibus erectis. Pedicelli ut in *Coleantho* fasciculati, plerique spiculam unicam, nonnulli spicula 2-3 ferentes.

Species 1, regionum arcticarum hemisphærii borealis incola. *Kunth, Enum. Pl. i. 204. Trin. Spec. Gram., t. 83, 84 (Vilfa)*. Genus *Coleantho* et *Sporobolo* valde affine.

126. *Sporobolus*, *R. Br. Prod.* 169. (*Vilfa, Beauv. Agrostogr.* 16, t. 5, f. 8, non *Adans. Agrosticula, Raddi, Agrostogr. Bras.* 33, t. 1, f. 2. *Triachyrum, Hochst. in Steud. Syn. Pl. Glum. i. 176. Cryptostachys, Steud. Syn. Pl. Glum. i. 181.*)—Spiculæ parvæ, 1-floræ, v. rarissime 2-floræ, varie paniculatæ, rhachilla brevissima vix articulata, cum pedicello continua, ultra florem non producta, flore hermaphrodito. Glumæ 3, membranacæ, 1-3-nerves, sæpius acutæ, exaristatæ, persistentes v. sigillatim caducæ, 2 inferiores vacuæ extima brevior; tertia florens vacuis longior v. subæqualis; palea glumæ florenti æquilonga v. brevior, prominenter 2-costata, sæpeque alte 2-fida v. 2-partita. Stamina 2-3. Styli brevissimi, distincti, stigmatibus plumosis. Caryopsis a palea glumisque libera sæpeque facile decidua, pericarpio tenuissimo nunc laxo nunc vix distinguendo.—Gramina perennia v. rarius annua habitu vario, sæpe tenuia, foliis planis v. convoluto-teretibus. Panicula nunc dense spiciformis anguste cylindracea, nunc elongata angusta stricta, v. laxè effusa et gracillima, spiculis interdum minutis.

Species ad 80, per regiones temperatas calidioresque utriusque orbis late dispersæ, in America numerosæ, in Europa et Asia Rossica perpaucæ. *Beauv. Agrostogr.* 26, t. 6, f. 11. *Kunth, Enum. Pl. i. 209; Rev. Gram. t. 45, 46, 123 ad 127. Benth. Fl. Austral. vii. 620, et in Journ. Linn. Soc. xix. 86. Jacq. Ecl. Gram. t. 28. Trin. Spec. Gram. t. 10 ad 12, 23, 24, 47, 48, 56 ad 60, 250 ad 252, 348. Brongn. in Duperr. Voy. Coq. Bot. t. 4. Beauv. Fl. Ov. et Ben. t. 80. Rothr. Bot. Wheel. Exped. t. 27. H. B. et K. Nov. Gen. et Sp. t. 684, 685. Dollé in Mart. Fl. Bras. ii. iii. 29, t. 8. Fourn. Gram. Mex. 97 (omnes sub *Sporobolo* v. *Vilfa*). AGROSTIS species, *Can. Ic. t. 111. Jacq. Ic. Rar. t. 16. Tchikatch. As. Min. Bot. t. 43. Ditleb. Fl. Fj. t. 10. Labill. Pl. Nor. Holl. t. 23. Buchan. N. Zeal. Grass. t. 18. C. Gay, Fl. Chil. t. 76.**

DIACHYRIUM, *Grisb. Pl. Lorentz.* 209, t. 2, f. 8, c Catamarca reipublicæ Argentinæ, ab auctore a *Sporobolo* separatur ob paleam ad basin 2-partitam, quod haud raro in aliis speciebus *Sporoboli* observatur, et interdum (e.g. in *Nees, Gen. Fl. Germ. Monocot. i. n. 28, f. 18, 19*) paleæ segmenta pro pericarpii valvulis descripta v. delineata.

SPERMACHITON, *Llanos, Fragm. Pl. Filip.* 25, species Philippinensis a nobis non visa, ex auctoris descriptione ad *Sporobolum* referenda videtur.

In *S. compresso*, *Trin.*, et *S. serotino*, *A. Gray*, ex America boreali, spiculæ interdum etsi rarius 2-floræ, flore utroque ut in *Isachne* perfecto sed terminalis ab inferiore subdistans. Habitus tamen, spiculæ minimæ, caryopsis brevis ovoidea demum intra glumam vix inclusa, cæteraque omnino *Sporoboli*, nec *Isachnis* nec *Colpodii*.

127. *Epicampes, Presl. Rel. Henk. i. 235, t. 39.*—Spiculæ parvæ, 1-floræ, anguste paniculatæ, rhachilla supra glumas inferiores articulata, sub gluma florente brevissima, ultra florem non producta, flore hermaphrodito. Glumæ 3, 2 inferiores vacuæ, sub articulatione persistentes, parum (v. conspicue?) inæquales, membranacæ, dorso convexæ vix carinatæ, tenuissime 3-nerves; florens vacuis æqualis v. paullo brevior rarius longior, tenuiter 3-nervis, obtusa v. emarginata, arista terminali v. paullo infra apicem affixa, nunc minuta v. obsoleta, nunc longiuscula, tenuis, caducissima; palea hyalina, gluma vix brevior, 2-carinata v. 2-nervis. Stamina 3. Styli distincti, breves, stigmatibus plumosis. Caryopsis angusta, glumis membranaceis inclusa, libera.—Gramina elata, foliis planis. Panicula dense floribunda, nunc longissima fere spiciformis, nunc thyrsioidea laxior vix tamen effusa.

Species ad 16, plures tamen nobis vix notæ forte reducendæ, Mexicanæ Californicæ v. Andinæ. *Fourn. Gram. Mex. 87.*

Genus hinc *Muehlenbergia*, hinc *Sporobolo* arcte connatum, nec limitibus certis definiendum,

*Agrosti* etiam pluribus notis accedit. Arista glumæ florentis sæpius quam in *Muehlenbergia* minor, nec strictè terminalis, et gluma circa caryopsin laxior. Panicula longa dense floribunda *Epicampis* in *Sporobolo* rara, in *Muehlenbergia* non observatur.

**CHRYPSINNA**, *Fourn. Gram. Mex.* 90, est *Cinna macroura*, Kunth (*Epicampes macroura*, Benth.), a qua *C. strictam*, Kunth, distinguere nequimus nec ab *Epicampi* generice separanda videtur. A cæteris speciebus paullulum differt panicula dense spiciformi, glumis paullo longioribus rigidioribusque, florentis nervo medio apice in mucronem producto v. mutico. Panicula in speciminibus nostris sat numerosis variat 4 ad 9 poll. longa, nec unquam pedalem vidimus. *Cinna macroura*, Thurb. in S. Wats. Calif. Bot. ii. 276, e California, est species a Mexicana bene distincta (*Epicampes rigens*, Benth.), panicula quam in *E. macroura* multo longiore tenuiore basi sæpe interrupta spiculis parvis, glumis membranaceis *E. strictæ*, Presl, nisi muticis v. obscure mucronatis.

128. **Bauchea**, *Fourn. Gram. Mex.* 87.—Spiculæ 1-floræ anguste paniculatæ. Glumæ 3, 2 exteriores vacuæ valde inæquales, hyalinæ, infima linearis, secunda navicularis, florens longior, virescens, dorso convexa, mutica, ampla, paleam subæqualem approximate 2-nervem 2-dentatam involvens. Stamina 3. Styli breves, stigmatibus plumosis. Caryopsis pericarpium non solubile.—Gramen elatum, panicula longa composita caudiformi, ramulis subfasciculatis erecto-patentibus spiculis densis. (*Char. ex Fourn.*)

Species 1, Mexicana, a nobis non visa. Genus ex auctore ab *Epicampi* differt glumis vacuis valde inæqualibus, et verisimiliter ei referendum.

129. **Agrostis**, *Linn. Gen. n.* 80, *pro parte*. (Vilfa, *Adans. Fam.* ii. *ex syn. allat.* p. 495.)—Spiculæ parvæ, 1-floræ, paniculatæ, rhachilla supra glumas vacuas articulata, ultra florem non producta, glabra v. vix pilosa, flore hermaphrodito. Glumæ 3, 2 inferiores vacuæ, sub articulatione persistentes, carinatæ, acutæ, exaristatæ; tertia florens brevior, lata, tenuiter hyalina, mutica v. sæpius infra medium arista tenui dorsali instructa; palea tenuissime hyalina, brevis, rarius dimidium glumæ superans, nunc minuta v. obsoleta. Stamina sæpius 3. Styli distincti, brevissimi, stigmatibus plumosis. Caryopsis gluma membranacea involuta, libera.—Gramina annua v. perennia, cæspitosa, humilia v. elongata, foliis planis v. setaceis. Panicula terminalis, sæpius gracilis, ramosissima, saltem sub fructu effusa, ramulis filiformibus, spiculis numerosissimis, rarius erecta, stricta, dense conferta, continua v. interrupta.

Species fere 100, per orbem terrarum latissime dispersæ, præsertim in regionibus temperatis hemisphærii borealis, nonnullæ fere cosmopolitanæ. *Kunth, Enum. Pl.* i. 217, *excl. sect. 2.* *Steud. Syn. Pl. Glum.* i. 162, *excl. spec. ∞.* *Beauv. Agrostogr.* 21, t. 6, f. 10. *Trin. Spec. Gram.* t. 25 ad 32, 34 ad 36. *Kunth, Rev. Gram.* t. 128 ad 130, 169. *Host, Gram. Austr.* iii. t. 49, 50, iv. t. 52 ad 59. *Reichb. Ic. Fl. Germ.* t. 33 ad 36. *Nees, Gen. Fl. Germ. Monocot.* i. n. 29. *Desv. Journ. Bot.* ii. (1809) t. 8. *Guss. Pl. Rar. Ic.* t. 5. *Ten. Fl. Nap.* t. 102. *Beauv. Fl. Ow. et Ben.* t. 80. *Hook. f. Fl. Ant.* t. 53, 132. *Hook. f. Fl. Tasm.* t. 158, 159. *Benth. Fl. Austral.* vii. 525. *A. Rich. Fl. N. Zel.* t. 23. *Buchan. N. Zeal. Grass.* t. 19, 20. *Döll in Mart. Fl. Bras.* ii. iii. 27, t. 7. *Fourn. Gram. Mex.* 94.

**TRICHODIUM**, *Mich. Fl. Bor. Amer.* i. 41, t. 8, includit species plures palea minuta v. obsoleta, nec aliter a cæteris separandas. *Beauv. Agrostogr.* 5, t. 4, genus ad species Americanas limitavit, et species Europæas palea minima (*A. caninam* affinesque) pro genere proprio distinxit sub nomine **AGRAULI**.

130. **Chaeturus**, *Link in Schrad. Journ. Bot.* 1799, ii. 313.—Spiculæ 1-floræ, angustæ, in ramulis paniculæ 2-3-natis fasciculatæ, rhachilla supra glumas inferiores articulata, ultra florem non producta, flore hermaphrodito. Glumæ 3, 2 inferiores vacuæ, sub articulatione persistentes, angustæ, carinatæ, infima majore in aristam longam producta, secunda tenuior, mutica v. breviter mucronata; tertia florens paullo brevior, tenuiter hyalina, mutica, apice subdenticulata; palea parva, hyalina, gluma inclusa. Stamina 3. Styli distincti, breves, stigmatibus plumosis. Caryopsis angusta, gluma inclusa, libera.—Gramen annuum, humile, tenue, multicaule, foliis brevibus angustis. Panicula terminalis, thyrsoidæa, laxiuscula; ramuli breves, sæpius spiculis 3 brevissime pedicellatis

terminati, additis interdum spicularum paribus v. spiculis singulis inferioribus secus ramulum dissitis.

Species 1, peninsulæ Hispanicæ incolæ. *Beauv. Agrostogr.* 15, t. 5, f. 7. *Kunth, Rev. Gram.* t. 214.

131. **Polypogon**, Desf. *Fl. Atl.* i. 66. (Santia, *Savi in Mem. Soc. Ital. Sc.* viii. ii. 479. *Raspailia*, Presl, *Rel. Hænk.* i. 238, t. 40, nomen *ibid.* 351 in *Nowodworskyam mutatum*.) —Spiculæ 1-floræ, secus ramulos inarticulatos paniculæ densæ spicæformis v. vix effusæ confertæ, in pedicello articulatæ, flore hermaphrodito. Glumæ 3, 2 exteriores vacuæ, subæquales, integræ, in aristam tenuem rectam productæ; terminalis florens minor, tenuior, sæpius hyalina, integra emarginata v. 2-fida, apice in emarginatura v. dorso sub apice arista tenui nunc longa basi torta medio geniculata nunc abbreviata recta v. ad mucronem reducta instructa; palea gluma minor. Stamina 1-3. Styli breves, distincti, stigmatibus plumosis. Caryopsis gluma paleaque tenuibus hyalinis vix rigescentibus inclusa, libera. —Gramina sæpius annua, caulibus decumbentibus v. rarius erectis, foliis planis. Paniculæ terminales, nunc densissimæ spiciformes cylindricæ spiculis sub aristis numerosis fere occultis, nunc majores irregulares laxioresque. Spiculæ sæpius annulo pilorum brevium cinctæ.

Species ad 10 per regiones temperatas subtropicasque utriusque orbis latissime dispersæ, inter tropicos rariores. *Kunth, Enum. Pl.* i. 232. *Steud. Syn. Pl. Glum.* i. 183. *Benth. Fl. Austral.* vii. 546. *Reichb. Ic. Fl. Germ.* t. 31. *Schreb. Besch. Gräs.* t. 20, f. 3 (*Phleum*). *Nees, Gen. Fl. Germ. Monocot.* i. n. 32. *Host, Gram. Austr.* iii. t. 46 (*Agrostis*). *Guss. Pl. Rar. Ic.* t. 5. *Sibth. Fl. Græc.* t. 62 (*Phleum*). *H. B. et K. Nov. Gen. et Sp.* t. 44. *Dall in Mart. Fl. Bras.* ii. iii. 43, t. 11, 12. *C. Gay, Fl. Chil.* t. 77.

Genus prius a Benthamo, ob pedicelli in speciebus typicis articulationem, inter *Tristegineas* locatum; in *P. elongato*, H. B. et K. (*Nowodworsky*, Presl), tamen pedicelli sub spicula more generis incrassato-clavellati sed articulatio indistincta, et hæc species *Tristegineas* quodammodo cum *Agrostideis* connectit et generis affinitatem cum his naturalem vindicat.

132. ? **Arctagrostis**, Griseb. in *Ledeb. Fl. Ross.* iv. 434. —Spiculæ 1-floræ, anguste paniculatæ, rhachilla supra glumas inferiores articulata, glabra, ultra florem non producta v. rarissime minute setifera, flore hermaphrodito. Glumæ 2 vacuæ, sub articulatione persistentes, parum inæquales, acutiusculæ; membranaceæ; tertia florens subæqualis v. paullo longior, obtusa v. 3-dentata, sub 5-nervis, nervis lateralibus tamen obscuris, exaristata; palea glumæ æqualis v. sublongior, 2-nervis, obtusa v. obtuse 2-dentata. Stamina 2 v. 3. Styli distincti, brevissimi, stigmatibus plumosis. Caryopsis oblonga, gluma paleaque membranaceis inclusa, libera. —Gramen perenne, cæspitosum, foliis planis. Panicula angusta, parum ramosa, sæpius densa, spiculis quam in *Agrosti* majoribus.

Species 1 per regiones arcticas v. subarcticas Europæ, Asiæ et Americæ late dispersa. *Trin. Spec. Gram.* t. 55 (*Vilfa*).

Genus a Brownio olim dubie ad *Colpodium* relatum nobis *Deyeuxiæ* affinius videtur, *Agrostideas* tamen cum *Festuceis* bene connectit.

133. **Calamagrostis**, Adans. et Auct. recent. (genus ex auctoris char. et syn., *Fam. Nat.* ii. nequaquam dignoscendum). —Spiculæ 1-floræ, paniculatæ, rhachilla supra glumas inferiores articulata, sub gluma florente annulo pilorum glumam superante instructa, ultra florem non producta v. rarissime minute setifera, flore hermaphrodito. Glumæ 2 vacuæ, sub articulatione persistentes, angustæ, carinatæ, acutissimæ, parum inæquales; florens multo brevior, tenuissime hyalina, 3-nervis, arista tenui dorsali interdum ad mucronem parvum reducta; palea parva, angusta, tenuissime hyalina. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis obovata, gluma inclusa, libera. —Gramina erecta, interdum elata, panicula nunc densa stricta, nunc sæpius laxè thyrsoidæa multispiculata, spiculis quam in *Agrosti* longioribus.

Species ad 5, inter se non semper facile dignoscendæ, per Europam et Asiam borealem et mediam late dispersæ, quarum una etiam in Africa australi Natalensi reperta, forte inquilina. *Beauv. Agrostogr.* 15, t. 5, f. 9. *Kunth, Enum. Pl.* i. 236 (excl. sp. n. 5, et 10 ad 12). *Host, Gram. Austr.*

iv. t. 42 ad 47, 50, 51. Reichb. Ic. Fl. Germ. t. 40 ad 43. Nees, Gen. Fl. Germ. Monocot. i. n. 33. Parlat. Fl. Ital. i. 205.

Genus *Agrosti* arcte affine, et species nonnullæ, e.g. *C. tenella*, Kunth, et *C. olympica*, Boiss., omnino intermediæ videntur.

134. *Cinna*, Linn. Gen. n. 15. (Abola, Adans. Fam. ii. 31. Blyttia, Fries, Novit. Fl. Suec. Mant. ii. 2.)—Spiculæ 1-floræ, paniculatæ, rhachilla supra glumas inferiores articulata, sub flore vix incrassata glabra, ultra florem non v. in stipitem minimum producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, carinatæ, acutæ, præter carinam subnerves; tertia florens simillima nisi sub apice obtusiusculo arista brevissima v. mucrone dorsali instructa; palea paullo minor sed pariter carinata (nervis 2 in unum coalitis?), carinis omnibus pilis minimis ciliatis. Stamen 1. Styli breves, distincti, stigmatibus plumosis. Caryopsis lineari-oblonga, gluma paleaque inclusa, libera.—Gramina elata, foliis planis. Panicula longa, ramulis filiformibus fasciculatis ramulosis confertis v. sub anthesi expansis, dense v. laxiuscule multispiculiferis.

Species 2, Americæ et Europæ regionum borealium incolæ, ab auctoribus nonnullis pro unius varietatibus habitæ, nobis tamen ex speciminibus siccis satis distinctæ videntur. Schreb. Besch. Gräs. t. 49. In *C. pendula*, Trin. (*C. expansa*, Link., *C. latifolia*, Griseb.), rhachillæ continuationem ultra florem frustra quæsimus, quæ tamen sæpissime observatur in *C. arundinacea*, Linn.; Beauv. Agrostogr. 31, t. 7, f. 12. Ex Behrenso in Bot. Zeit. 1877, 431, paleæ carina in *C. latifolia*, Griseb., e nervis 2 consistit arcte approximatis sed parenchymate distincto separatim, quod tamen ex observatione repetita speciminum nostrorum confirmare nequimus. An revera in utraque specie nervi 2 nunc arcte coaliti nunc subdistincti?

135. *Gastridium*, Beauv. Agrostogr. 21, t. 6, f. 6.—Spiculæ 1-floræ, parvæ, in panicula densa spiciformi cylindracea confertæ, rhachilla supra glumas inferiores articulata, ultra florem in stipitem brevem producta, flore hermaphrodito. Glumæ 3, 2 inferiores infra articulationem persistentes, vacuæ, angustæ, basi concavæ, superne carinatæ, acutæ v. in aristam brevem productæ, parum inæquales; tertia florens subtriplo brevior, tenuiter hyalina, lata, truncato-dentata, mutica v. sub apice arista dorsali instructa; palea angusta, gluma vix brevior. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis subglobosa, nitida, glumis basi ventricosus inclusa, libera.—Gramina annua, cæspitosa, foliis planis. Panicula spiciformis, longiuscule pedunculata, nitidula, rarius prope basin subramosa. Gluma florens pubescens.

Species 2, regionis Mediterraneæ, Europæ occidentalis et ins. Canariensium incolæ, una etiam in Africa tropica et America australi extratropica obvia, forte inquilina. Kunth, Enum. Pl. i. 220. Schreb. Besch. Gräs. t. 23, f. 3 (*Milium*). Host. Gram. Austr. iii. t. 24 (*Milium*). Nees, Gen. Fl. Germ. Monocot. i. n. 31. Reichb. Ic. Fl. Germ. t. 32. Sibth. Fl. Græc. t. 65 (*Milium*). Coss. et Dur. Expl. Alg. t. 40, f. 2, 3.

136. *Cœtotropis*, Kunth, Rev. Gram. i. 271, t. 47.—Spiculæ parvæ, 1-floræ, in panicula densa interrupte spiciformi numerosæ, rhachilla supra glumas inferiores articulata glabra, ultra florem sæpius in aristam capillarem producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, angustæ, carinatæ, acutæ v. breviter mucronatæ, parum inæquales; tertia florens multo brevior, lata, hyalina, truncato-dentata, mutica v. sub apice setula minuta aristata; palea parva, hyalina. Stamina 3. Styli distincti, breves, stigmatibus plumosis. Caryopsis parva, gluma inclusa, libera.—Gramen perenne?, elatiusculum, foliis planis. Panicula coarctata, densissima, ramulis breviter spiciformibus sessilibus ovoideis v. cylindraceis densissime multispiculatis. Glumarum inferiorum carinæ ciliatæ.

Species 1, Chilensis. Genus *Agrosti* arcte affine, differt inflorescentia et rhachillæ continuatione setacea.

137. *Triplacœne*, Link, Hort. Berol. ii. 241.—Spiculæ 1-floræ, parvæ, in panicula densa spiciformi confertæ, rhachilla supra glumas inferiores articulata, ultra florem in stipitem

brevem sæpius producta, flore hermaphrodito. Glumæ 3, 2 inferiores sub articulatione persistentes, vacuæ, angustæ, a basi carinatæ, acutæ, muticæ, parum inæquales; tertia florens subtriplo brevior, tenuiter hyalina, lata, apice truncato-dentata et in setas 2 ad latera aristæ producta, arista prope basin dorsalis, subtorta, e spicula exserta v. abbreviata; palea angusta, gluma vix brevior. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis ovoidea, glumis non ventricosis inclusa, libera.—Gramen annuum, cæspitosum, foliis planis. Panicula spiciformis, longiuscule pedunculata, nitidula. Gluma florens pubescens.

Species 1, regionis Mediterraneæ occidentalis incola. *Coss. et Dur. Expl. Alg. t. 40. f. 1 (Gastridium)*. Habitu quidem *Gastridio* accedit sed characteribus *Agrosti* affinium.

138. **Apera**, *Adans. Fam. Nat. ii. 495.* (*Anemagrostis*, *Trin. Fund. Agrostogr. 128.*)—Spiculæ 1-floræ, parvæ, laxè paniculatæ, rhachilla supra glumas inferiores articulata, sub gluma florente brevissima glabra, ultra florem in setam brevem producta, flore hermaphrodito. Glumæ 3, 2 inferiores vacuæ, sub articulatione persistentes, inæquales, tenuiter membranaceæ, carinatæ, acutæ, exaristatæ, secunda cæteris major, 3-nervis; tertia florens paullo brevior, membranacea, subhyalina, apice breviter 2-fida, arista sub apice dorsali tenui flexuosa instructa; palea tenuis, gluma parum brevior, 2-carinata, 2-dentata. Stamina 3. Styli distincti, breves, stigmatibus plumosis. Caryopsis angusta, gluma inclusa, libera.—Gramina annua, elatiuscula, foliis angustis planis. Panicula terminalis, elegantissima, ampla diffusa v. contracta, ramis numerosis filiformibus ramulosis, inferioribus fasciculatis subverticillatis, spiculis numerosissimis nitidulis.

Species v. varietates insignes 2, Europæ et Asiæ occidentalis incolæ. *Beauv. Agrostogr. 31, t. 7, f. 11.* *Kunth, Enum. Pl. i. 225 (Agrostis)*. *Steud. Syn. Pl. Glum. i. 177 (Muehlenbergiæ spec. n. 5 f. 6)*. *Host, Gram. Austr. iii. t. 47, 48.* *Reichb. Ic. Fl. Germ. t. 32.* *Nees, Gen. Fl. Germ. Monocot. i. n. 30.*

139. **Cinnagrostis**, *Griseb. Pl. Lorentz. 208, t. 2, f. 7.*—Spiculæ 1-floræ, parvulæ, in panicula androgyna unisexuales, rhachilla supra glumas inferiores articulata glabra, ultra florem in setam longè pilosam producta. Glumæ 3, 2 inferiores vacuæ, sub articulatione persistentes, membranaceæ, 1-nerves, acutæ; tertia florens vix longior, 5-nervis, denticulata, arista setiformi medio dorso instructa; palea glumæ subæqualis, in flore ♂ 2-nervis, in flore ♀ 1-nervis.—Gramen elatum, perenne, foliis planis. Paniculæ rami patentes, semi-verticillati, flexuosi. (*Char. ex Griseb.*)

Species 1, provinciæ Tucuman Americæ australis incola, a nobis non visa. Genus verisimiliter ad *Deyeuxiam* reducendum.

140. **Deyeuxia**, *Clarion in Beauv. Agrostogr. 43, t. 9, f. 9, 10.* (*Lachnagrostis*, *Trin. Fund. Agrostogr. 128; Spec. Gram. t. 242, 243.*)—Spiculæ 1-floræ, varie paniculatæ, sæpius densæ, rhachilla supra glumas inferiores articulata, sub gluma florente annulo pilorum instructa v. rarius glabra, ultra florem in setam pilosam v. apice penicillatam rarius glabram sæpissime producta, flore hermaphrodito. Glumæ 3, 2 inferiores vacuæ, sub articulatione persistentes, parum inæquales, carinatæ, muticæ, membranaceæ v. scariosæ; tertia florens nunc brevior fere hyalina, nunc secundæ æqualis v. vix longior rigidiorque, lata, 5-nervis, integra v. 2-4-dentata, arista tenui torta infra v. supra medium dorsali, rarius brevissima recta v. obsoleta; palea tenuis, glumæ æqualis v. subdimidio brevior, 2-nervis v. 2-carinata. Stamina 3. Styli distincti, breves, stigmatibus plumosis. Caryopsis obovoidea v. oblonga, sæpe obliqua, gluma paleaque tenuibus inclusa, libera v. iis siccitate partim adhærens.—Gramina habitu vario, sæpius perennia foliis planis. Panicula terminalis, nunc stricta densa spiciformis subcylindracea v. oblonga, nunc sæpius thyrsioidea, interdum effusa fere *Agrostis*, spiculis tamen sæpissime majoribus.

Species fere 120, per regiones temperatas montanasque utriusque orbis late dispersæ, in Andibus Americanis numerose, usque ad terras frigidas tam hemisphærii australis quam borealis extensæ.

*Kunth, Enum. Pl.* i. 239. *Parlat. Fl. Ital.* i. 210. *Nees, Gen. Fl. Germ. Monocot.* i. n. 34. *Jacc. Ecl. Gram.* t. 30 (*Agrostis*). *Munro in Henders. Yark.* 339, cum *ic.* *Benth. Fl. Austral.* vii. 577. *Labill. Pl. Nov. Holl.* t. 31, 32 (*Avena*). *Trin. Spec. Gram.* t. 33 (*Agrostis*). *Hook. f. Fl. Tasm.* t. 159 ad 161 (*Agrostis*); *Fl. N. Zel.* t. 65. *Buchan. N. Zeal. Grass.* t. 21 ad 26 (*Agrostis*), et t. 26, 2. *H. B. et K. Nov. Gen. et Sp.* t. 46, 686. *C. Gay, Fl. Chil.* t. 78. *Wedd. in Bull. Soc. Bot. Fr.* xxii. 153 (173). **CALAMAGROSTIS** sect., *Reichb. Ic. Fl. Germ.* t. 37 ad 39, f. 1439 ad 1443. *Host, Gram. Austr.* iv. t. 48, 49. *Trin. Spec. Gram.* t. 354. *Jard. et Spach. Ill. Pl. Or.* t. 340. *A. Gray, Man. Fl. N. U. St. ed.* 5, 615. *Torr. Fl. N. York.* t. 150 ad 152. *P. Schmidt Reise Amur.* 202, t. 8.

Genus quoad species plerasque bene distinctum, sed intermediis nonnullis hinc *Calamagrosti* hinc *Agrosti* arete annexum, nam pili rhachillæ v. arista dorsalis glumæ interdum desunt, et rhachillæ continuatio in speciebus paucis minima est v. omnino obsoleta. Si enim quam in *Agrosti* majores, palea ratione glumæ florentis longior, pili rhachillæ glumam florentem circumdantes semper multo breviores quam in *Calamagrosti*. Species rhachilla glabra vix ab *Apera* differunt, habitu, spiculis majoribus et arista dorsali nec fere apicali.

**BROMIDIUM**, *Nees in Pl. Meyen.* 154, species continet plures Andinas, Chilenses, v. Australianas, fere æquo jure ad *Deyeuxiam* et ad *Agrostium* referendas. Panicula angusta, densa, rhachillæ continuatio brevissima sæpe omnino deest, gluma florens apice 2-4-seta v. dentata, palea brevis. Huc pertinent *DIDYMOCHLOA*, *Steud. Syn. Pl. Glum.* i. 185, quoad *D. australem* et fide *Neesii CHAM. CALAMUS*, *Meyen, Reise*, i. 456, nomen tertium, et *Bromidium anomalum*, *Döll in Mart. Fl. Bras.* ii. iii. 103, t. 30 (*Agrostis halterioides*, *E. Desv. in C. Gay, Fl. Chil.* vi. 317, t. 77, f. 2).

**ACHILTA**, *Fourn. Gram. Mex.* 109, species continet 2 Mexicanas a nobis non visas. Ex caractere dato a *Deyeuxii* typicis rhachillæ continuatio pilosa non differunt nisi aristæ deficientia, quod in aliis paucis speciebus *Deyeuxiæ* observatur.

In **RELCHIELA**, *Steud. Syn. Pl. Glum.* i. 101 (que *Agrostis sesquiflora*, *E. Desv. in C. Gay, Fl. Chil.* vi. 318, t. 77, f. 3), in **CYNASTRO**, *Fourn. Gram. Mex.* 90, saltem quoad *D. poaeformem*, *Kunth, in D. mutica*, *Wedd.*, in *D. breviglumi*, *Benth.*, paucisque aliis, rhachillæ continuatio glabra, et gluma florens mutica v. mucrone minimo instructa. *Apera Liebmanni*, *Fourn.*, species Mexicana a nobis non visa, est forte melius *Deyeuxiæ* species.

*Agrostis æquivalvis*, *Trin.*, seu sectio *Palagrostis*, *Griseb. in Ledeb. Fl. Ross.* iv. 436, nobis omnino *Deyeuxiæ* species videtur, rhachilla brevissime pilosa, ultra florem in setam apice brevissime penicillatam producit.

141. **AMMOPHILA**, *Host, Gram. Austr.* iv. 24, t. 41. (*Psauma*, *Beauv. Agrostogr.* 143, t. 6, f. 1).—Spiculæ 1-floræ, in panicula longa stricta confertæ, rhachilla supra glumas inferiores articulata, sub gluma florente annulo pilorum instructa, ultra florem in tuberculum v. in stipitem filiformem producta, flore hermaphrodito. Glumæ rigide paleaceæ, exaristatæ, 2 inferiores vacuæ, sub articulatione persistentes, acutæ, carinatæ, tenuiter 5-nerves, parum inequales; tertia florens vacuis subæqualis v. paullo longior similisque nisi apice subdentata, dente medio interdum in mucronem minutum producto; palea glumis æquilonga, paleacea, 2-dentata, 2-carinata, dorso inter carinas profunde sulcata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis obovoidea, gluma paleaque laxè inclusa, libera. —Gramina elata, stolonifera, foliis angustis rigidis superne convolutotetretibus. Panicula longa, ramulis brevibus dense spiciformibus, v. laxior ramulis tenuibus elongatis. Spiculæ quam in *Deyeuxia* majores.

Species 4, quarum 2 typicæ, littoræ, per hemispheriam borealem late dispersæ, panicula densa spiciformi rhachilla setifera; 2 boreali-Americane (sect. *Calamovilfa*, *A. Gray*), panicula laxiore rhachilla non producta. *Kunth, Enum. Pl.* i. 245. *A. Gray, Man. Bot. N. U. St. ed.* 5, 616. *Reichb. Ic. Fl. Germ.* t. 44. *Nees, Gen. Fl. Germ. Monocot.* i. n. 35. *Trin. Journ. Bot.* 1872, t. 127 (*Psauma*).

*Beauvois* stylos 3 descripsit, verisimiliter ex specimine abnormali. Nos semper 2 tantum invenimus.

142. **DICHELACHNE**, *Endl. Prod. Fl. Norf.* 20.—Spiculæ 1-floræ, angustæ, in panicula angusta densa v. laxiore dispositæ, rhachilla supra glumas inferiores articulata, sub flore obconica v. breviter cylindracea, ultra florem interdum in stipitem minutum producta, flore hermaphrodito. Glumæ 3, 2 inferiores vacuæ, persistentes, angustæ, membranaceæ, acute acuminate, carinatæ, parum inequales; tertia florens vix brevior, carinata, integra

v. breviter 2-fida, dorso sub apice arista tenui flexuosa instructa; palea paullo brevior, dorso sulcata v. 2-carinata. Stamina 3 v. pauciora. Styli breves, distincti, stigmatibus plumosis. Caryopsis angusta, gluma vix rigescente inclusa, libera.—Gramina cespitosa, interdum elata, foliis angustis planis v. setaceo-convolutis. Panicula terminalis, nunc longa angusta densissime cylindracea aristis numerosissimis crinita, nunc laxior subsecunda.

Species 2, Australiæ et Novæ Zelandiæ incolæ. *Benth. Fl. Austral.* vii. 573. *Hook. f. Handb. N. Zeal. Fl.* 325 (excl. *D. stipoides*); *Fl. Tasm.* t. 158 A. *Labill. Pl. Nov. Holl.* t. 263 (*Anthoxanthum*). *Buchan. N. Zeal. Grass.* t. 15, 16.

Rhachillæ continuationem in *D. sciurea*, Hook. f., observavimus, in *D. crinita*, Hook. f., deesse videcur. *Stipa micrantha*, Cav. Ic. v. 42, t. 467, in *Fl. Austral.* vii. 566, dubie ad *S. verticillatam*, Nees, relata, est *D. sciurca*, Hook. f., ex F. Muell. in *Trim. Journ. Bot.* 1878, 327, qui specimen authenticum vidit. Spicula a Cavanillesio fig. B delineata minime convenit, et forte ad stipem quandam alienam pertinet.

143. **Trisetaria**, Forsk. *Fl. Æg. Arab.* 27. (*Anomalotis*, Steud. *Syn. Pl. Glum.* i. 198.)—Spiculæ 1-floræ (v. interdum 2-floræ?), angustæ, in panicula densa angusta confertæ, rhachilla supra glumas inferiores articulata, sub flore lineari obconica ultra florem in stipitem producta, flore hermaphrodito. Glumæ sæpius 3, 2 inferiores vacuæ, persistentes, angustæ, tenuiter membranaceæ, carinatæ, acuminatæ; tertia florens parum brevior, fere hyalina, carinata, apice 2-fida, lobis in aristas tenues rectas productis, arista dorsali longiore flexuosa; palea paullo brevior, angusta, 2-carinata. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis angusta, gluma non indurata inclusa, libera.—Gramen annuum, cespitosum, foliis planis. Panicula longa, angusta, aristis numerosis eam *Dichelachnis crinitæ* similans.

Species 2, quarum 1 in maritimis Egypti et Syriæ crescens. *Kunth, Enum. Pl.* i. 294. *Labill. Dec. Pl. Syr.* v. t. 7 (*Trisetum*). *Delile, Fl. Eg.* t. 12, f. 3; altera Abyssinica, nobis ignota, a *Horchst. in Flora*, 1855, 282, fusius descripta.

Forskahl, Labillardière et Delile flores in spicula 2 perfectos descripserunt, Kunth florem unicum tantum vidit (præter rhacheos continuationem quam florem imperfectum v. neutrum nuncupat), et nos in speciminibus pluribus prope Alexandriam lectis florem secundum frustra quesivimus. Genus cæterum potius *Dichelachni* quam *Triseti* affine videtur, differt imprimis aristis lateralibus glumæ florentis, et rhachillæ continuatione magis evoluta.

144. **Pentapogon**, R. Br. *Prod.* 173.—Spiculæ 1-floræ, angustæ, paniculatæ, rhachilla supra glumas inferiores articulata, sub flore annulo pilorum instructa, ultra florem in stipitem producta, flore hermaphrodito. Glumæ 3, 2 inferiores vacuæ, persistentes, membranaceæ, angustæ, carinatæ, acutæ v. in aristan brevem productæ, parum inæquales; tertia florens membranacea, 5-nervis, circa florem convoluta, nervis 4 lateralibus in lobos v. aristas breves rectas productis, arista dorsali longa rigida demum geniculata basi torta; palea gluma brevior, anguste hyalina. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis angusta, gluma vix rigescente involuta, libera.—Gramen annuum, cespitosum, interdum elatiusculum, foliis angustis planis v. siccitate convolutis. Panicula terminalis, angusta, sæpius densa, ramulis brevibus fasciculatis erectis v. subpatentibus.

Species 1, Australianæ, Victoriæ et Tasmaniæ incolæ. *Beauv. Agrostogr.* 34, t. 8, f. 11. *Benth. Fl. Austral.* vii. 572. *Labill. Pl. Nov. Holl.* t. 22 (*Agrostis*).

145. **Zagurus**, Linn. *Gen. n.* 92.—Spiculæ 1-floræ, in panicula densissima capituli-formi v. oblonga molliissimo villosa confertæ, rhachilla supra glumas inferiores articulata, sub flore pilosula, ultra florem in stipitem producta, flore hermaphrodito. Glumæ 3, 2 inferiores vacuæ, lineares, longe plumoso-ciliatæ; tertia florens angusta, glabra, tenuiter membranacea, in aristas 2 tenues erectas producta, dorsoque supra medium arista rigidior longiore subgeniculata instructa; palea angusta, hyalina, 2-carinata. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis angusta, gluma vix rigescente inclusa, libera.—Gramen annuum, molle, foliis planis. Panicula spiciformis, longe pedunculata,

nunc breviter ovoidea, nunc oblongo-cylindracea, pilis mollissimis glumarum vacuarum insignis.

Species 1, per regionem Mediterraneam ab insulis Canariensibus usque ad Orientem latissime dispersa, præsertim in maritimis, et secus Oceanum usque ad ins. Sarnienses extensa. *Beauv. Agrostogr.* 34, t. 8, f. 12. *Kunth, Enum. Pl.* i. 294. *Schreb. Besch. Gräs.* t. 19, f. 3. *Host, Gram. Austr.* ii. t. 46. *Nees, Gen. Fl. Germ. Monocot.* i. n. 45. *Reichb. Ic. Fl. Germ.* t. 31. *Sibth. Fl. Græc.* t. 90.

#### TRIBUS IX. AVENÆÆ.

146. **Eriachne**, *R. Br. Prod.* 183. (*Achmeria*, *Beauv. Agrostogr.* 72.)—Spiculae æqualiter 2-floræ, laxæ v. dense paniculatæ, rhachilla brevissima supra glumas inferiores articulata, ultra flores non producta, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, sub articulatione persistentes,  $\propto$ -nerves, carinatæ, acutæ, muticæ, subæquales; 2 florentes æquales, nervis paucioribus, dorso v. ad margines longe ciliatæ, muticæ v. in aristam tenuem rectam productæ, mox cum palea inclusa rigescentes, angustæ sed facie plana sibimet applicitæ; palea plana, nervis 2 fere marginalibus, apice 2-dentata v. 2-aristata. Stamina 3. Styli breves v. elongati, distincti, stigmatibus plumosis. Caryopsis a dorso compressa, gluma paleaque sæpe induratis inclusa, libera.—Gramina perennia v. rarius annua, caespitosa, foliis angustis convolutis teretibus v. rarius planis. Panicula terminalis, nunc densa thyrsoidæa v. elongata angustaque, nunc laxæ effusa, spiculis quam in *Isachne* sæpissime majoribus.

Species ad 22, quarum 2 Asiæ tropicæ incolæ, ceteræ omnes Australiæ et ex his una etiam in Asia tropica obvia. *Benth. Fl. Austral.* vii. 626. *Kunth, Rev. Gram.* t. 63, 64. *Brongn. in Duperr. Voy. Cog. Bot.* t. 3.

**MEGALACHNE**, *Thw. Enum. Pl. Zeyl.* 372, non *Steud.*, est *Eriachne trisetæ*, *Nees*, species Zeylanica, ob paleas dentes in aristas longas productos insignis. *Eriachnis* species Africanæ a *Neesio* descriptæ ad *Achneriam*, *Munro*, pertinent.

147. **Prionachne**, *Nees in Lindl. Introd. Nat. Syst. ed.* 2, 447. (*Chondrolæna*, *Nees, Fl. Afr. Austr. Gram.* 133.)—Spiculæ æqualiter 2-floræ, secus rhachin continuum spicæ v. paniculæ spiciformis subsessiles, rhachilla continua vix evoluta ultra flores non producta, floribus hermaphroditis v. uno abortu sterili. Glumæ 2 inferiores vacuæ, persistentes, carinato-complicatæ, dorso cartilagineæ et pectinato-dentatæ, marginibus late membranaceis, parum inæquales; 2 florentes singulæ vacuis subincluse iisque paullo breviores, hyalinae, carinatæ, acutæ, muticæ; paleæ paullo minores, hyalinae, 2-nerves, 2-dentatæ. Stamina 3. Styli breves, distincti, stigmatibus breviter plumosis. Caryopsis anguste oblonga, gluma inclusa, libera.—Gramen annuum, caespitosum, erectum, basi subramosum, foliis angustis planis v. siccitate convolutis. Spica in pedunculo terminali simplex v. ramulis paucis brevissimis strictis aucta; spiculæ secus rhachin geminae v. rarius solitariae, v. in ramulis brevissimis 3-4-nae, omnes erectæ, rigida.

Species 1 v. 2, austro-Africanæ. *Steud. Syn. Pl. Glum.* i. 430. *Trin. Spec. Gram.* t. 73 (*Chilochloa*, in corrigend. *Lasiachlois* sect. *Ctenachne*).

Specimina *Dregeana* longiora tenuioraque quam *Thunbergiana* in herb. Gouan, foliis multo tenuioribus, spica simpliciore tenuiore. An species 2 distinctæ?

Huc forte pertinet **KTENOSACHNE**, *Steud. Syn. Pl. Glum.* i. 150, gramen a nobis non visum, patria ignota, a *Steudelio* ex herb. *Lenormandi* descriptum.

148. **Zenkeria**, *Trin. in Linnaea*, xi. 150, t. 3. (*Amphidonax*, *Nees ex Steud. Syn. Pl. Glum.* i. 197, pro parte, non *Nees in Lindl. Introd.*)—Spiculæ æqualiter 2-floræ, paniculatæ, rhachilla brevissima supra glumas inferiores articulata pilosa, ultra flores non producta, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, persistentes, membranaceæ, carinatæ, acutæ, muticæ, parum inæquales; florentes nunc paullo longiores acuminatæ subaristatæ, nunc parum breviores obtusæ, præter carinam utrinque tenuissime v. obscure 2-3-nerves; palea lata, glumam subæquans, carinis 2 prominentibus ciliatis. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis . . .—Gramina

perennia, elatiuscula, foliis longis planis v. convoluto-teretibus. Panícula floribunda, oblonga thyrsoidæa v. demum effusa, ramulis filiformibus ramulosis, spiculis parvulis.

Species 2, Peninsulæ Indiæ orientalis et Zeylanicæ incolæ. *Benth. in Journ. Linn. Soc.* xix. 93.

*Amphidonax Heynei* et *A. tenella*, Nees et Steud. l. c., a specie typica *Z. elegante*, Trin., non differunt, glumis florentibus acuminatis subaristatis vacuas superantibus. *Amphidonax obtusiflora*, Thw. Enum. Pl. Zeyl. 370, est species altera, *Z. obtusiflora*, Benth., glumis florentibus obtusis quam vacuæ brevioribus. Genus cæterum *Isachni* affine.

149. *Micraira*, *F. Muell. Fragm. Phyt. Austral.* v. 208.—Spiculæ æqualiter 2-floræ, paniculatæ, rhachilla supra glumas inferiores articulata, brevissima, ultra flores non producta, floribus hermaphroditis v. uno abortu sterili. Glumæ 2 inferiores vacuæ, sub articulatione persistentes v. sigillatim caduæ, membranaceæ, acutiusculæ, tenuissimo nervosæ, muticæ, subæquales; 2 florentes subbreves, membranaceæ, lata, truncate,  $\infty$ -nerves, fructiferæ cum palea inclusa non indurata subhemisphericæ; palea 2-nervis, nervis 2 cæteris evidentioribus. Stamina 3? Styli breves, distincti, stigmatibus plumosis. Caryopsis gluma paleaque inclusa, libera.—Gramen humile, perenne, prostratum v. repens, basi ramosum, vaginis foliorum emaroidorum obtectum, foliis brevibus lineari-subulatis dense cæspitosis. Pedunculi breves, filiformes; panícula parva, effusa, gracilis, spiculis minimis.

Species 1, Australiæ orientalis subtropicæ incola. *Benth. Fl. Austral.* vii. 624, et in *Hook. Ic. Pl.* t. 1361.

150. *Cœlachne*, *R. Br. Prod.* 187.—Spiculæ 2-floræ, parvæ, paniculatæ, rhachilla sub floribus articulata, inter flores nec ultra producta, flore utroque fertili, inferiore hermaphrodito superiore fœmineo. Glumæ membranaceæ, obtusæ v. acutiusculæ, muticæ, subnerves, 2 inferiores vacuæ, minores, parum inæquales, sub articulatione persistentes; tertia florem  $\sigma$  fovens cæteris major, quarta florem  $\sigma$  fovens iterum minor; palea latiuscula glumam subæquans, carinis 2 parum prominentibus. Stamina 2 v. 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis ovoideo-oblonga, gluma paleaque laxè inclusa, libera.—Gramina debilia, tenuia, decumbentia v. cæspitosa, foliis planis v. angustissimis subconvolutis. Panícula laxa, angusta v. thyrsoidæa effusaque, ramulis tamen brevibus sæpius paucis. Spiculæ glabræ v. pubescentes.

Species 3, Indiæ orientalis, Chinæ australis et Australiæ orientalis tropicæ incolæ. *Benth. Fl. Austral.* vii. 625. *Thw. Enum. Pl. Zeyl.* 373. *Endl. Iconogr.* t. 2. *Kunth, Rev. Gram.* t. 143.

151. *Airopsis*, *Desv. Journ. Bot.* i. (1808) 200, *pro parte*.—Spiculæ subæqualiter 2-floræ, subglobosæ, angustè paniculatæ, rhachilla brevissima cum pedunculo continua, ultra flores non producta, floribus hermaphroditis v. uno abortu sterili. Glumæ 2 inferiores vacuæ, semiglobosæ, obtusæ, muticæ, nitidulæ, subæquales, persistentes; 2 florentes exterioribus inclusæ, parum breviores, cum palea inclusa hemisphærica, facie plana sibimet applicitæ, fructiferæ rigidulæ deciduæ; palea hyalina, 2-nervis. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis gluma paleaque nitidulis inclusa, libera.—Gramen annuum, humile, pulchellum, foliis angustis fere subulatis. Panícula densa, irregulariter subcylindracea, spiculis parvis confertis nitidulis.

Species 1, Europæ occidentalis et Africæ borealis occidentalis incola. *Beauv. Agrostogr.* 71, t. 14, f. 8. *Kunth, Enum. Pl.* i. 293. *Cav. Ic.* t. 274 (*Milium*). *Thore in Desv. Journ. Bot.* i. (1808), t. 7 (*Aira*).

*A. millegrana*, Griseb., ex America australi extratropica, non differre videtur ab *Eragrosti airoidi*, Nees, et certe nequaquam cum *Airopsi* convenit.

152. *Aira*, *Linn. Gen.* n. 81, *pro parte*. (*Fussia*, *Schur, Enum. Pl. Transsylv.* 754.)—Spiculæ 2-floræ, parvæ, laxè paniculatæ, rhachilla sub glumis florentibus articulata, ultra flores non (v. vix?) producta, floribus hermaphroditis. Glumæ tenuiter membranaceæ, subscariosæ, 2 inferiores sub articulatione persistentes, vacuæ, acutæ, muticæ, subæquales;

florentes iis contiguae v. una parum distante, hyalinae, mucronatae v. saepius 2-dentatae, arista infra medium dorsali tenui basi saepius torta rarius deficiente; palea gluma parum brevior, hyalina, 2-nervis. Caryopsis gluma paleaque non induratis inclusa iisque saepe adherens.—Gramina elegantia, saepius annua, tenuia, foliis angustis. Paniculae ramuli capillares, ramulosi, effusi v. rarius conferti stricti.

Species 4 v. 5, omnes Europae, quarum una hodie per regiones temperatas utriusque orbis tam australes quam boreales late dispersa, et altera hinc inde in variis locis observata. *Beauv. Agrostogr.* 89, t. 18, f. 4. *Kunth, Enum.* i. 288, pro parte. *Div. Jouv. in Bull. Bot. Soc. Fr.* xii. 6, 50, 83, t. 1, 2. *Guss. Pl. Inarim.* t. 20. *Benth. in Journ. Linn. Soc.* xix. 94. *Trin. Spec. Gram.* t. 260. *Reichb. Ic. Fl. Germ.* t. 94. *Nees, Gen. Fl. Germ. Monocot.* i. n. 44. *Host, Gram. Austr.* ii. t. 44, iv. t. 35 ad 37.

Species a variis auctoribus in genera diversa separatae ob glumas florentes aristatas v. muticas, inter se contiguas v. parum distantes. Omnes tamen variare videntur aristatae v. exaristatae, et rhachilla inter flores evolutio parum constans. Parlatores, *Fl. Ital.* i. 250, auctoresque nonnulli alii *Airam* limitant ad *A. caryophyllaceam*, Linn., et *A. praecocem*, Linn., glumis florentibus saepissime nec semper dorso aristatis inter se contiguis, quae genus *Fussiam*, Schur, formant.

*FIORINIA*, *Parlat. Fl. Ital.* i. 232, est *A. Tenorii*, Guss., *Ten. Fl. Nap.* t. 102, f. 2, glumis florentibus integris, ut in *A. caryophyllacea* approximatis sed exaristatis. Variat tamen fide *Gussonii* glumis ad normam aristatis.

*MOLINERIA*, *Parlat. Fl. Ital.* i. 236, est *A. minuta*, Læfl., *Schreb. Besch. Gräs.* t. 21, f. 2, glumis florentibus vacuas paullo superantibus exaristatis v. rarius aristatis.

*ANTINORIA*, *Parl. Fl. Palermo.* i. 92; *Fl. Ital.* i. 234, est *A. agrostidea*, Lois., spiculæ rhachilla inter flores evidentiùs producta, glumis florentibus 2-3-dentatis exaristatis. Ab illa tamen parum distincta videtur, *A. pulchella*, Willd. (*Bourgeau, Pl. Hisp. n.* 2572), glumis florentibus aristatis.

*PERIBALLIA*, *Trin. Fundam. Agrostogr.* 133, est *A. involucrata*, Cav. *Ic.* t. 44, spiculæ rhachilla inter flores ut in *Antinoria* producta, gluma florente inferiore exaristata, superiore prope basin arista dorsali instructa. Habitus saepe (nec semper) peculiaris ob paniculae ramos inferiores subverticillatos sterilesque involucrum sic dictum formantes. Interdum vero rami omnes spiculiferi sunt.

*A. sabulonum*, Labill. *Sert. Austr. Caled.* t. 21, nobis ignota est. Ex icone omnino *Sporobolus virginicum* refert exceptis spiculis 2-floris. Specimina nomine Labillardieri signata a Vieillardio et a Panchoro lecta, ad *Sporobolus virginicum* verum spiculis 1-floris pertinent.

153. **Corynephorus**, *Beauv. Agrostogr.* 90, t. 18, f. 2. (*Weingertneria*, *Bernh. Fl. Erf.* 51, ex *Kunth*.)—Spiculæ 2-floræ, laxè paniculatae, rhachilla sub glumis florentibus articulata, ultra flores in stipitem parvum penicillatum producta, floribus hermaphroditis. Glumæ tenuiter membranaceae, subscariosae, 2 inferiores vacuae, sub articulatione persistentes, acutae, muticae, subaequales; florentes breviores, hyalinae, integrae, arista infra medium dorsali, medio articulata, infra articulationem rigidula torta, ad articulationem breviter barbata, superne tenuissima, apice clavata; palea gluma parum brevior, angusta, 2-dentata. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis gluma tenuissima hyalina involuta eique plus minus adherens.—Gramina elegantia, annua, habitu *Aire*, foliis caespitosis angustis v. filiformibus. Panicula gracilis, contracta v. effusa, ramulis capillaribus ramulosis.

Species 2, Europae et per totam fere regionem Mediterraneam dispersae, in Oriente tamen rariores. *Kunth, Enum. Pl.* i. 286. *Nees, Gen. Fl. Germ. Monocot.* i. n. 42. *Reichb. Ic. Fl. Germ.* t. 94.

154. **Deschampsia**, *Beauv. Agrostogr.* 91, t. 18, f. 3. (*Campelia*, *Link, Hort. Berol.* i. 122.)—Spiculæ paniculatae, floribus 2 hermaphroditis, rhachilla sub glumis fertilibus articulata, ultra flores in stipitem nudum penicillatum v. glumam vacuum rarius florem ♂ ferentem producta. Glumæ 2 inferiores vacuae, sub articulatione persistentes, carinatae, acutae, membranaceae, subscariosae, nitidulae, rarius puberulae, parum inaequales; florentes membranaceae, fere hyalinae, apice 2-∞-dentatae, arista dorsali tenui, basi torta; palea angusta, 2-nervis. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, gluma inclusa, libera.—Gramina perennia, foliis angustis convuluto-teretibus v. planis.

Panicula terminalis, nunc angusta densa, nunc sæpius laxa effusa, spiculis quam in *Aira* sæpius majoribus.

Species ad 20, regionum temperatarum frigidarumque utriusque orbis incolæ, una (*D. cæspitosa*), fere per totam aream extensa, inter tropicos perpaucae adsunt montanæ. Kunth, *Enum. Pl.* i. 286. Schreb. *Beschr. Gräs.* t. 30. Steud. *Syn. Pl. Glum.* i. 219 et 222 (*Airæ* sect. 2 et 4). Benth. in *Journ. Linn. Soc.* xix. 95. Host, *Gram. Austr.* ii. t. 42, 43. Reichb. *lc. Fl. Germ.* t. 95, 96. Nees, *Gen. Fl. Germ. Monocot.* i. n. 43. Desf. *Fl. Atl.* t. 13. Trin. *Spec. Gram.* t. 253 ad 259. Hook. *lc. Pl.* t. 150; *Fl. Bor. Amer.* t. 227, 228. Hook. *f. Fl. Antarct.* t. 133 ad 135 (*ic. pleræque sub Aira*). Buchan. *N. Zeal. Grass.* t. 37.

VAHLODEA, Fries in *Bot. Notiz.* 1842, ex ejusd. *Summ. Veg. Scand.* 242, est *D. atropurpurea* (*Aira*, Wahlenb.), species borealis, dentibus glumæ fertilis minutis v. vix distinctis. Cætera omnia *Deschampsia*.

AVENELLA, Parlat. *Fl. Ital.* i. 244 (LERCHENFELDIA, Schur, *Enum. Pl. Transylv.* 753), est *D. flexuosa* (*Aira*, Linn.), glumis florentibus basi pilis stipatis apice truncato-denticulatis. Caryopsis ex Parlatoreo palæe inferne adhæret, quod tamen ex speciminibus nostris confirmare nequimus.

MONANDRAIRA, Em. Desv. in C. Gay, *Fl. Chil.* vi. 341, t. 79, species includit 2 Chilenses (*Trisetum Berteroanum*, Kunth, *Rev. Gram.* t. 142, et *T. airæforme*, Steud. *Syn. Pl. Glum.* i. 229) a *Deschampsia* separatas ob stamen in flore unicum tantum. In *M. Berteroana*, tamen interdum stamina 2 invenimus, et in specie affini *D. antarctica*, Hook. f., stamina haud raro ad 2 reducta etsi sæpius 3. Forma antherarum eadem videtur in *Monandraira* ut in speciebus aliis nonnullis parvifloris *Deschampsia*.

AIRIDIUM, Steud. *Syn. Pl. Glum.* i. 423, est species Magellanica, quam a *Deschampsia antarctica*, Hook. f., distinguere nequimus.

RYTIDOSPERMA, Steud. *l. c.* i. 425, est *D. cæspitosa* v. species ei valde affinis statu morbidio, ovario a larva quadam destructo quam auctor pro caryopsi descripsit.

PEYRITSCHIA, Fourn. *Gram. Mex.* 109, est *Aira kalerioides*, Peyr. in Linnæa, xxx. 5 (*Deschampsia kalerioides*, nob.) species Mexicana diandra, a nobis non visa, sed ex descriptione fusiore Peyritschii et notis Fournieri evidenter *D. antarcticae* affinis, nec longe a *D. nitida* et *D. holeiformi*, Presl, distare videtur.

155. *Achneria*, Munro in *Harv. Gen. Pl. Cap. ed. 2*, 449, non Beauv.—Spiculæ 2-floræ, laxæ v. densiuscule paniculatæ, rachilla supra glumas inferiores articulata, ultra flores sæpe in stipitem glabrum productæ, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, rigidulæ, carinatæ, læves, vix venosæ, subæquales; florentes 2 inter se parum distantes, vacuis paullo breviores, membranaceæ, glabræ v. puberulæ, obtusæ, integræ v. vix obtusissime denticulatæ, exaristatæ; palea angusta, hyalina, gluma involuta. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis angusta, gluma membranacea inclusa, libera.—Gramina perennia, cæspitosa, foliis angustis sæpius convoluto-teretibus. Panicula terminalis, nunc brevis densa subcylindracea v. angusta paucispiculata, nunc sæpius effusa pyramidata v. laxissima.

Species ad 8, Africæ australis incolæ, cum una ex Africa tropica orientali. Nees, *Fl. Afr. Austr. Gram.* 273 (*Eriachne*). Kunth, *Rev. Gram.* t. 216, 217 (*Airopsis*).

Genus *Achneria* a Beauvoisio propositum fuit ad species Australianas *Eriachnis*, quarum glumæ florentes vix v. non in aristam producuntur. His addidit Nees species Africanas a Munroio primum pro genere proprio acceptas, quæ affinitatem potius cum *Deschampsia*, quam cum *Eriachni* exhibent.

156. *Monachyron*, Parlat. in Hook. *Nig. Fl.* 190.—Spiculæ 2-floræ, paniculatæ, rachilla brevi, flore inferiore hermaphrodito, superiore masculo. Glumæ 2 inferiores vacuæ, infima ad basin rachillæ, secunda altius affixa, concava, carinata, 5-nervis, apice acute 2-fida, arista in sinu setacea flexuosa; florentes membranaceæ, muticæ, concavo-carinatæ, apice obtuso 2-fidæ; palea sub flore ♂ glumam subæquans, sub flore ♂ brevior, linearis, 2-carinata. Stamina in flore ♂ 3, in flore ♂ 1 v. 2. Styli breves. Caryopsis . . .—Gramen gracile, foliis anguste linearibus. Panicula ramosa, ramulis subgeminis capillaribus flexuosis. Spiculæ solitariae, pedicellis apice incrassatis villosisque. (*Char. ex Parlat.*)

Species 1, ins. S. Jacobi Capitis Viridis incola, a nobis non visa, specimine descripto verisimiliter in herb. Webbiano hodie Florentino servato.

157. *Holcus*, Linn. Gen. n. 1146, pro parte.—Spiculæ 2-floræ, in panicula sæpius densa oblonga v. interrupta confertæ, rhachilla supra glumas inferiores articulata, ultra flores in stipitem parvum producta, flore inferiore hermaphrodito, superiore masculo. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, carinatæ, extima 1-nervis, acuta v. breviter acuminata, secunda latior, 3-nervis, acuta v. in aristam producta; florentes vacuis subbreviores, membranaceæ, quarum inferior florem ♂ fovens exaristata, demum rigidula, superior subsimilis sed florem ♂ v. sterilem fovens, et dorso arista tenui suborta instructa; palea angusta, 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, gluma rigidula inclusa, libera.—Gramina annua v. perennia, mollia, foliis planis v. rarius rigidioribus siccitate convolutis. Panicula pedunculata, nunc fere spiciformis, sæpius laxior, interrupta v. pyramidata, rarius effusa.

Species ad 8, Europææ v. Africanæ, imprimis occidentales, quarum una et interdum altera per varias orbis utriusque regiones temperatæ dispersæ, sæpius inquilinæ. Beauv. Agrostogr. 87, t. 17, f. 10. Kunth, Enum. Pl. i. 34. Steud. Syn. Pl. Glum. i. 14. Schreb. Besch. Gräs. t. 20. Host, Gram. Austr. i. t. 2, 3. Nees, Gen. Fl. Germ. Monocot. i. n. 14. Reichb. Ic. Fl. Germ. t. 105. Boiss. Voy. Hisp. t. 173 b. Seub. Fl. Azor. t. 1, f. 2.

*H. grandiflorus*, Boiss. et Reut. et *H. cæspitosus*, Boiss. Voy. Hisp. t. 173 a, sectionem formant *Homalachen*, flore utroque hermaphrodito, gluma subtendente aristata, et forte melius ad *Deschampsiam* transferenda, etsi aspectu molli *Holco* accedant.

158. *Trisetum*, Pers. Syn. Pl. i. 97.—Spiculæ 2-floræ, rarius 3-6-floræ, laxæ v. dense paniculatæ, rhachilla inter flores articulata, pilosa v. nuda, ultra flores in stipitem producta, floribus hermaphroditis v. summo masculo. Glumæ membranaceæ, subscariosæ v. florentes hyalinae, carinatæ, 2 inferiores vacuæ sub articulatione persistentes acutæ, exaristatæ, inæquales; florentes vacuis breviores v. rarius longiores, apice 2-dentatæ, dentibus sæpius in setas v. aristas tenues productis, arista inter dentes sub apice dorsali exserta sæpius tortilis; palea angusta, hyalina, 2-dentata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, sæpe longiuscula, exsulca, glabra v. apice pubescens, gluma inclusa, libera.—Gramina perennia v. rarius annua, cæspitosa, foliis planis. Panicula nunc dense spiciformis ovata v. oblonga, nunc laxa v. effusa, spiculis sæpius nitidulis.

Species fere 50, per regiones temperatas montanasve utriusque orbis late dispersæ. Beauv. Agrostogr. 88, t. 18, f. 1. Kunth, Enum. Pl. i. 295; Rev. Gram. t. 60, 142, 175. Steud. Syn. Pl. Glum. i. 224, excl. sect. 2 et 3. Host, Gram. Austr. ii. t. 45 (*Aira*) et t. 53 (*Avena*), iii. t. 38 ad 40. Reichb. Ic. Fl. Germ. t. 97 ad 99, f. 1687 ad 1696. Nees, Gen. Fl. Germ. Monocot. i. n. 46. Boiss. Voy. Hisp. t. 174, 175. Lange, Pl. Nov. Hisp. t. 35. Ten. Fl. Nap. t. 107. Guss. Ic. Pl. Rar. t. 9 et 10, f. 2. Desf. Fl. Atl. t. 31, 32. Hook. f. Fl. Nov. Zel. t. 68. Buchan. N. Zeal. Grass. t. 39, 40. Torr. Fl. N. York, t. 154. Rothr. in Bot. Wheeler Exped. t. 27. Cav. Ic. t. 591, f. 2 (*Bromus*). H. B. et K. Nov. Gen. et Sp. t. 687. Fourn. Gram. Mex. 107. Dall in Mart. Fl. Bras. ii. iii. t. 29, f. 2 (ic. plures sub *Avena*).

Species nonnullæ Africanæ v. austro-Americanæ e.g. *T. hirtum*, Nees, *T. antarcticum*, Nees (inclusis *Bromo antarctico*, Hook. f. Fl. Ant. t. 54, et *B. bicuspidæ*, Nees), *Trisetum* cum *Avena* (*Avenastro*) arete connectunt. Glumæ inferiores inæquales, carinatæ, 1-3-nerves, florentes quam in *Trisetis* typicis rigidiores, 5-7-nerves, vix carinatæ. Ovarium apice villosum; caryopsis apice solo parce pubescens, nec ut in *Avena* sulcatum.

TRICHÆTA, Beauv. Agrostogr. 86, t. 17, f. 8, est *Trisetum ovatum*, Pers. (*Bromus ovatus*, Cav. Ic. t. 501), species *T. subspicato* affinis, differt panicula dense spiciformi ovoidea v. interdum subglobosa.

ACROSPELION seu ACROPSYLION, Bess. ex Trin. in Mem. Acad. Petersb. ser. 6, i. 59, et Spach, Suites Buff. xiii. 163, est *Trisetum distichophyllum*, Beauv., nec *Ventenata*, Kæhl., cui in Lindl. Veg. Kingd. refertur.

ROSTRARIA, Trin., Fundam. Agrostogr. 149, genus compositum fuit e *Trisetis neglecto*, R. et Sch., et *Kæleria phleoides*, Pers.

159. *Ventenata*, Kæhl. Gram. Gall. et Germ. 272.—Spiculæ 2-∞-floræ, paniculatæ, rhachilla inter flores articulata, ultra flores in stipitem producta, floribus hermaphroditis.

Glumæ 2 inferiores vacuæ, sub articulatione persistentes, inæquales, rigidulæ, 3-5-nerves, acutæ, muticæ v. in aristam brevissimam productæ, tertia florens vacuis contigua, 5-7-nervis, mutica v. in aristam brevissimam producta, dorso exaristata, superiores 1-3 pariter florentes sed apice 2-fidæ, arista dorsali tenui torta geniculataque; palea glumis brevior, 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, glaberrima, exsulca, gluma inclusa, libera.—Gramina annua, foliis angustis sæpius convolutis teretibus. Panicula gracilis, in *V. avenacea*, Koel. (*Avena tenui*, Moench), angusta, ramulis filiformibus erectis v. demum effusa, in *V. macrochaeta*, Balansa, stricta, simplex, fere *Gaudiniae*, sed rhachis inarticulata, et spiculæ pedicellatæ. Spiculæ in utraque angustæ longiusculæ.

Species 2, altera per regionem Mediterraneam late dispersa et in Europa centrali extensa, altera Orientalis. *Parlat. Fl. Ital.* i. 271. *Host, Gram. Austr.* ii. t. 55 (*Avena*). *Reichb. Ic. Fl. Germ.* t. 97, f. 1690. *Nees, Gen. Fl. Germ. Monocot.* i. n. 47.

Genus *Trisetum* valde affine, quocum junxerunt Kunth, Trinius alique, differt glumis rigide plurinerviis et inferiore florentium arista dorsali carente.

160. *Avena*, Linn. *Gen.* n. 91.—Spiculæ 2-∞-floræ, rarissime 1-floræ, paniculatæ, rhachilla inter flores fertiles articulata, floribus saltem inferioribus hermaphroditis, superioribus sæpe masculis v. imperfectis. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, membranaceæ, parum inæquales; florentes dorso rotundatæ, acutæ, 5-9-nerves, apice sæpe breviter 2-fidæ, inferiores florem ♂ florentes, dorso arista torta geniculata instructæ, superiores florem ♂ florentes v. ananthæ, exaristatæ; palea angusta, 2-dentata v. 2-fida. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis oblonga v. elongato-fusiformis, pubescens v. rarius glabra, hinc profunde sulcata, gluma paleaque inclusa, libera v. paleæ plus minus adhaerens.—Gramina annua v. perennia, sectionis diversæ habitu diversa.

Species ad 40, per regiones temperatas orbis veteris dispersæ, cum paucis Americanis borealibus v. australibus, una alterave ex annuis in variis locis inquilina. *Kunth, Enum. Pl.* i. 299. *Steud. Syn. Pl. Glum.* 229.

Genus in sectiones 2 sequentes habitu distinctas, facile pro generibus propriis habendus dividitur:—

1. *Crithe*, Griseb. Gramina annua, sæpe elata, foliis planis, panicula laxa, spiculis pendulis, floribus fertilibus 1-2. Glumæ inferiores vacuæ, dorso rotundatæ, membranaceæ, 7-9-nerves, sub floribus fertilibus rigidiores 5-7-nerves, arista dorsali sæpius longa valida. *Schreb. Besch. Gräs.* t. 15, 45, 46. *Beauv. Agrostogr.* t. 18, f. 5. *Host, Gram. Austr.* ii. t. 56 ad 59; iii. t. 42 ad 44. *Nees, Gen. Fl. Germ. Monocot.* i. n. 48. *Jacq. Ic. Rar.* t. 23. *Reichb. Ic. Fl. Germ.* t. 103. *Parlat. in Webb, Phytogr. Canar.* t. 247, 248. *Coss. et Dur. Explor. Alger. Bot.* t. 41. *Dall in Mart. Fl. Bras.* ii. iii. t. 29, f. 1.

2. *Avenastrum*, Koch. Gramina perennia, foliis angustis interdum setaceis, panicula angusta stricta v. rarius laxa, spiculis erectis v. rarius patentibus sæpius flores fertiles plus quam 2 continentibus. Glumæ inferiores vacuæ 1-3-nerves v. secunda rarius sub-5-nervis, florentes post anthesin rigescentes, 5-7-nerves. *Schreb. Besch. Gräs.* 76, t. 9. *Host, Gram. Austr.* ii. t. 50 ad 52; iii. t. 41, iv. t. 31, 32. *Reichb. Ic. Fl. Germ.* t. 99 ad 102, f. 1697 ad 1707. *Guss. Pl. Rar. Ic.* t. 9. *Sibth. Fl. Græc.* t. 89. *Boiss. Voy. Hisp.* t. 176. *C. Gay, Fl. Chil.* t. 79. *Ten. Fl. Nap.* t. 104, f. 1 (*Bromus*). HEUFFELIA, *Schur, Enum. Pl. Transsylv.* 760. HELICOTRICHUM, *Bess. in Reichb. Fl. Germ. Exc.* 140<sup>b</sup>.

161. *Gaudinia*, Beauv. *Agrostogr.* 95, pro parte, char. manco, t. 19, f. 5.—Spiculæ ∞-floræ, spicatæ, ad excavationes rhacheos sessiles, rhachilla inter flores articulata et ultra flores sæpe producta, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, herbaceæ, acutæ, muticæ, inæquales, extima 3-5-nervis, secunda 5-9-nervis; florentes 5-9-nerves, apice 2-dentatæ v. breviter 2-fidæ, arista dorsali tenui sæpius geniculata basi torta; palea gluma brevior, angusta, 2-carinata, 2-dentata. Stamina 3. Styli brevissimi, distincti, stigmatibus plumosis. Caryopsis oblonga, exsulca, appendice parva villosa coronata cæterum glabra, gluma paleaque inclusa, libera v. vix adhaerens.—Gramina annua, cæspitosa, basi sæpius ramosa, molliter pubescentia v. glabra,

foliis planis. Spica terminalis, elongata, rhachi demum articulata. Spiculæ erectæ, dissitæ, quaquaversæ, sæpius appressæ. Lodiculæ (an semper ?) 2-fidæ.

Species 2, quarum una per regionem Mediterraneam late diffusa, altera Azorica. *Kunth, Enum. Pl.* i. 303 (*Avenæ sect.*). *Schreb. Besch. Græs. t.* 24, f. 3 (*Avena*). *Host, Gram. Austr.* ii. t. 54 (*Avena*). *Reichb. Ic. Fl. Germ. t.* 13. *Nees, Gen. Fl. Germ. Monocot. i. n.* 84. *Sibth, Fl. Gr. t.* 82 (*Avena*).

Genus a Parlatores ob inflorescentiam ad *Hordeas* transfertur, characteres cæteri tamen omnino *Avenæ* quibuscum ab auctoribus plerisque associatur.

*ARTHROSTACHYA*, *Link. Hort. Berol. i.* 151, est *G. geminiflora*, *Gay, Kunth, Rev. Gram. t.* 61 (*Avena*), species olim ad specimina hortensia originis ignote descripta, nuperius a Seubertio aliisque in ins. Azoricis detecta.

162. **Amphibromus**, *Nees in Hook. Lond. Journ. ii.* 420.—Spiculæ  $\infty$ -floræ, laxè paniculatæ, rhachilla inter flores articulata pilosa, floribus hermaphroditis v. summo imperfecto. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, acutæ, carinatæ, margine scariosæ, prope basin 5-nerves, exaristatæ; florentes rigidiores, dorso rotundatæ, prominulæ 5-nerves, apice demum sæpe fissæ, lobis interdum brevissime 2-aristatis, medio dorso arista torta geniculataque tenui instructæ; palea tenuis, 2-dentata. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis oblonga, glabra, late profundeque sulcata, gluma parum rigescente inclusa, libera.—Gramen (perenne ?) elatiusculum, foliis planis. Paniculæ ramuli capillares, spiculis longiusculis, glumis florentibus imbricatis usque ad 10.

Species 1, Australiæ extratropicæ incolæ. *Benth. Fl. Austral. vii.* 589. *Hook. f. Fl. Tasm. t.* 163 (*Danthonia*).

163. **Arrhenatherum**, *Beaur. Agrostogr. 55, t.* 11, f. 5.—Spiculæ 2-floræ, paniculatæ, rhachilla supra glumas inferiores articulata inter flores evoluta pilosa, ultra florem superiorem in stipitem producta, flore inferiore masculo, superiore hermaphrodito v. femineo. Glumæ 2 inferiores vacuæ, persistentes, tenuiter membranaceæ, subscariosæ, carinatæ, breviter mucronato-acuminatæ, inæquales; florentes rigidiores, 5-7-nerves, apice subdentatæ, inferior florem ♂ fovens, dorso prope basin arista longa torta geniculataque instructa, superior florem ♀ v. ♂ includens, sub apice arista dorsali brevi instructa v. exaristata; palea angusta, fere hyalina, 2-carinata. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis ovoidea, haud sulcata, gluma vix rigescente inclusa, libera.—Gramina elata, perennia, foliis planis v. siccitate convolutis. Panicula ramosa, stricta v. sæpius laxa effusa subsecunda.

Species 3, Europæ, Africæ borealis et Asiæ occidentalis incolæ. *Kunth, Enum. Pl.* i. 307. *Schreb. Besch. Græs. 25, t.* 1 (*Avena*). *Host, Gram. Austr. ii. t.* 49, iv. t. 30 (*Avena*). *Reichb. Ic. Fl. Germ. t.* 104. *Nees, Gen. Fl. Germ. Monocot. i. n.* 49. *Jaub. et Spach. Ill. Pl. Or. t.* 198.

164. **Tristachya**, *Nees, Agrostol. Bras. 458.* (Monopogon, *Presl, Rel. Hænk. i.* 324, t. 44.)—Spiculæ 2-floræ, ad apices ramulorum paniculæ ternatim sessiles v. equaliter breviterque pedicellatæ, rhachilla inter flores evoluta pilosa ultra florem superiorem non producta, flore inferiore masculo, superiore hermaphrodito v. femineo. Glumæ 2 inferiores vacuæ, persistentes, membranaceæ, muticæ, parum inæquales, glabræ v. exteriore latiore validiore tuberculata ciliataque, tertia florem ♂ fovens, membranacea, mutica; terminalis florem fertilem fovens, apice 2-fida v. 2-aristata, inter lobos v. aristas rectas in aristam centalem longam rigidam geniculatam tortamque producta; palea gluma florente inclusa, membranacea, hyalina, 2-carinata. Lodiculæ 2. Stamina 2 v. 3. Styli distincti, tenuissimi, stigmatibus plumosis. Caryopsis oblonga v. fere linearis, gluma plus minus indurata involuta, libera.—Gramina perennia (v. rarius annua ?) sæpe rigidula, foliis planis v. convolutis-teretibus. Panicula laxa, spiculis nunc magnis ternationibus paucis erectis v. subpendulis, nunc minoribus numerosis.

Species ad 8, quarum 2 per Americam tropicam dispersæ a Brasilia usque ad Mexicum, cæteræ

Africæ tropicæ v. australis v. Asiæ occidentalis incolæ. Nees, *Fl. Afr. Austr. Gram.* 266. Grant in *Trans. Linn. Soc.* xxix. t. 115. Kunth, *Rev. Gram.* t. 140, 141. Dall in *Mart. Fl. Bras.* ii. iii. t. 31.

*T. simplex*, Nees, ex Africa australi, est *Trichopteris* species.

165. **Trichopteryx**, Nees in *Lindl. Introd. Nat. Syst. ed. 2*, 449, et *Fl. Afr. Austr. Gram.* 339. (Loudetia, Hochst. in *Steud. Syn. Pl. Glum.* i. 238.)—Spiculæ 2-floræ, secus ramulos paniculæ sparse, rhachilla supra glumas inferiores articulata, inter flores evoluta, annulo pilorum instructa, ultra florem superiorem non producta, flore inferiore masculo superiore hermaphrodito v. fœmineo. Glumæ 2 inferiores vacuæ, persistentes, membranaceæ, muticæ, sæpius inæquales glabræque v. extima tuberculata ciliataque; tertia florem ♂ fovens vacuis sæpius longior, 3-5-nervis, glabra, mutica; terminalis florem ♀ v. ♀ involvens, sæpe longe pilosa, apice 2-fida v. tenuiter 2-aristata, inter lobos v. aristas rectas in aristam centralem longam rigidam geniculatam tortamque producta; palea gluma florente inclusa, membranaceo-hyalina, 2-carinata. Lodicule 2. Stamina 3 rarius 2. Styli distincti, tenuissimi, stigmatibus plumosis. Caryopsis oblonga v. fere linearis, gluma rigescente v. indurata involuta, libera.—Gramina perennia, sæpe elata, foliis planis v. rarius convuluto-teretibus. Panicula sæpius virgata, ramulis numerosis tenuibus erectis, rarius effusa.

Species ad 10, Africæ tropicæ et australis incola, una etiam in Brasilia obvia.

Huc pertinent, præter species a Steudelio enumeratas, *Tristachya simplex*, Nees ex Africa australi, *Arundinella flammea*, Trin. *Spec. Gram.* t. 267, ex Africa tropica et Brasilia, et species nonnullæ Africanæ adhuc ineditæ. In specie typica gluma sub flore fertili utrinque fasciculo pilorum longorum instructa, in *T. flammea* pili longi magis sparsi, in speciebus nonnullis multo breviores parumque conspicui.

166. **Anisopogon**, R. Br. *Prod.* 176.—Spiculæ 1-floræ, longæ, laxè paniculatæ, rhachilla supra glumas inferiores articulata, sub flore elongata, ultra florem in stipitem haud raro glumam vacuam v. floris rudimentum foveitem producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ, longæ, angustæ, acutæ v. acuminatæ, subcarinatæ, ∞-nerves, rigida, subæquales; tertia florens dorso convexa, circa paleam floremque convoluta, apice 5-fida, lobis lateralibus breviter setaceis, intermediis in aristas longas setaceas rectas productis, arista centrali longiore rigida basi torta geniculata; palea gluma inclusa, circa florem convoluta, 2-nervis. Lodiculæ longæ. Stamina 3. Styli distincti, stigmatibus plumosis. Ovarium stipitatum, apice pilosulum. Caryopsis . . . —Gramen (annuum?) elatum, foliis longis angustis scititate sæpius convolutis longe subulato-acuminatis. Panicula laxa, subsecunda, e spiculis paucis maximis longe pedicellatis composita. Glumæ vacuæ glabræ, florens pubescens v. villosa.

Species 1, Australiæ austro-occidentalis incola. Beauv. *Agrostogr.* 43, t. 9, f. 8. Benth. *Fl. Austral.* vii. 589. Kunth, *Rev. Gram.* t. 62. Trin. *Spec. Gram.* t. 61 (*Danthonia*). Species altera Africæ australis, a Nees, *Fl. Afr. Austr. Gram.* 265, descripta, nobis ignota est et ex descriptione pluribus notis imprimis habitu a typica Australiana discrepat. Fructus speciei hujus typicæ nobis deest nec ab auctoribus descriptus. Lodiculæ a Kunthio delineantur 3, in floribus pluribus quos examinavimus semper 2 longas lanceolatas vidimus.

167. **Danthonia**, DC. *Fl. Fr.* iii. 32, *pro parte*.—Spiculæ 3-∞-floræ, paniculatæ, rhachilla inter flores articulata pilosa, ultra flores in stipitem producta, floribus hermaphroditis v. summo masculo. Glumæ 2 inferiores vacuæ, persistentes, 5-7-nerves v. rarius præter carinam enerves, carinatæ, acutæ, parum inæquales, spiculam æquantes v. rarius breviores; florentes dorso rotundatæ, nervis 7-9 parum prominentibus (rarius 3-5?), margine sæpe ciliatæ, apice 2-fidæ, lobis ad latera aristæ nunc minimis hyalinis v. vix prominulis nunc lanceolatis acutis muticis v. aristiformibus v. ipsis 2-fidis lobulo utroque v. inferiore solo aristato; arista centralis inter lobos terminalis, rigida, basi plus minus complanata, sæpiissime torta geniculataque; gluma summa sæpius minor, florem masculum v. paleam solam fovens v. vacua; palea intra glumas lata, hyalina, prope margines

2-carinata, obtusa v. 2-dentata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis ovoidea v. oblonga, nunc a dorso compressa facieque interiore cava, nunc subteres, gluma rigescens v. membranacea inclusa, libera.—Gramina perennia v. rarius annua, habitu vario, foliis planis v. convolutis. Panicula terminalis, nunc effusa spiculis parvis fere *Aire* v. numerosis in panicula ampla, nunc densa, spiculis paucis maximis fere *Anisopogonis* nisi erectioribus, nunc angusta stricta spiculis paucis erectis, v. dense pyramidata spiculis confertis subsessilibus. Spiculæ in omnibus sæpissime erectæ.

Species fere 100, per regiones calidiores temperatasque utriusque orbis latissime dispersæ, maxima tamen copia in Africa australi crescentes. *Beauv. Agrostogr.* 92, t. 18, f. 7. *Kunth, Enum. Pl.* i. 311, excl. sp. n. 1 et 2. *Steud. Syn. Pl. Glum.* i. 238. *Benth. Fl. Austral.* vii. 590, et in *Journ. Linn. Soc.* xix. 99. *Nees, Fl. Afr. Austr. Gram.* 280.

Genus aspectu polymorphum, etsi characteribus sat definitis limitatum, adhuc in sectiones naturales nondum divisum, duæ sequentes a Neesio ad species Africanas propositæ distinctæ videntur sed nimis artificiales, cæteræ infra memoratæ a variis auctoribus pro generibus propriis editæ, pleræque monotypicæ, characteres potius específicos tantum exhibent.

1. *Himantochete*, Nees. Glumæ florentis lobi ad latera aristæ centralis integri, acuti v. aristati, interdum minimi. Species includit omnes extra-Africanas cum pluribus Africanis. *Reichb. Ic. Fl. Germ.* t. 103. *Nees, Gen. Fl. Germ. Monocot.* i. n. 50. *Trin. Spec. Gram.* t. 49, 51 ad 54, 62, 65, 67. *Kunth, Rev. Gram.* t. 65, 177. *Delile, Fl. Eg.* t. 12 (*Avena*). *Jaub. et Spach, Ill. Pl. Or.* t. 331. *Hook. f. Fl. Tasm.* t. 161, 162; *Fl. Nov. Zel.* t. 68, 69. *Racoul, Choix Pl. Nouv. Zel.* t. 3. *Buchan. Grass. N. Zeal.* t. 29 ad 36 et t. 36, 2. *Em. Desv. in C. Gay, Fl. Chil.* t. 80. *Dall in Mart. Fl. Bras.* ii. iii. 100, t. 30. STREILOCHYTA, *Hochst. Pl. Schimp. Abyssin. exs.* n. 412, 683.

2. *Pentaschista*, Nees. Glumæ florentis lobi ad latera aristæ centralis 2-fidi, lobulo interiore v. rarius utroque in aristam rectum producto, exteriori sæpius membranaceo dentato v. acuto interdum tenuissimo v. fere evanescente. Species omnes austro-Africanæ. *Trin. Spec. Gram.* t. 50, 63, 64, 66, 68. *Kunth, Rev. Gram.* t. 176, et t. 218 (*Pentameris*).

PENTAMERIS, *Beauv. Agrostogr.* 92, t. 18, f. 8. *Kunth, Rev. Gram.* t. 66, genus a Neesio ad sectionem *Danthoniæ* reductum, est *D. Thouarsii*, Nees, species austro-Africana habitu et inflorescentia *D. pallescenti*, Nees, accedens, sed gluma fructifera tenuiore, caryopsi brevi crassa apice complanato-truncata insignis.

THIRAPHIS, *Nees, Fl. Afr. Austr. Gram.* 270, non *R. Br.*, est *D. radicans*, *Steud.*, species austro-Africana ad *Pentaschistas* pertinens, *D. crispæ*, Nees, affinis.

CHÆTOBROMUS, *Nees in Lindl. Introd. Nat. Syst. ed.* 2, 449; *Fl. Afr. Austr. Gram.* 340, species continet paucas austro-Africanas, a *Danthonia* separatas ob florem unum alterumve in spicula imperfectum.

MONACHATHER, *Steud. Syn. Pl. Glum.* i. 247, est *D. bipartita*, *F. Muell.*, species Australiana, glumis fructiferis basi obliquis induratis sub lobis annulo pilorum cinctis, et arista centrali lobos laterales rigidos vix superante.

PLINTHANTHESIS, *Steud. Syn. Pl. Glum.* i. 14, species 2 Australianæ forte ad *Danthoniam* pertinentes, caractere dato evidenter falso, nam arista torta in toto ordine nunquam ad latera palæ (valvulæ superioris, *Steud.*) affixa est.

CRINIPES, *Hochst. in Flora*, 1855, 279, est *D. abyssinica*, *Hochst. in Rich. Fl. Abyss.* ii. 419, species ad *Himantocheten* pertinens, glumis vacuis tamen spicula parum brevioribus setaceo-acuminatis v. subaristatis; et glumarum florentium arista centralis tenuissima, basi rigidior sed parum dilatata et vix torta.

#### TRIBUS X. CHLORIDÆ.

168. *Microchloa*, *R. Br. Prod.* 208.—Spiculæ 1-floræ, parvæ, secus rhachin continuum apice unilaterialis sessiles, alternatim 2-seriatæ, rhachilla supra glumas inferiores articulata, ultra florem non producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ, infra articulationem persistentes, membranaceæ, carinatae, acutiusculæ v. obtusæ, parum inæquales; florens multo brevior, hyalina, mutica, carina ciliata; palea vix brevior, angustior, carinis 2 approximatis sæpius ciliatis. Stamina 3 (v. 2?). Styli distincti, stigmatibus plumosis. Caryopsis oblongo-fusiformis, glabra, gluma paleaque tenuissimis arcte involuta, libera.—

*Gramina tenuia, cæspitosa, foliis convoluto-teretibus filiformibus v. rigidulis. Spica in pedunculo terminalis, unica, tenuis, sæpe elongata, recta v. curvula, spiculis distincte 2-seriatis, omnibus tamen secundis.*

Species nobis notæ 3, quarum una per regiones calidiores utriusque orbis lato dispersa, 2 Africa tropicæ v. australis propriæ. *Beauv. Agrostogr.* 115, t. 20, f. 8. *Steud. Syn. Pl. Glum.* i. 202. *Roxb. Corom. Pl.* t. 132 (*Rottboellia*). *H. B. et K. Nov. Gen. et. Sp.* t. 22. *Dall in Mart. Fl. Bras.* ii. iii. t. 21.

169. **Schoenefeldia**, *Kunth, Rev. Gram.* 283, t. 53.—Spiculæ 1-floræ, secus rhachin continuam spicarum unilaterialium sessiles, alternæ, 2-seriatim confertæ, rhachilla supra glumas inferiores articulata pilosa, ultra florem non producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, tenues, subhyalinae, costa valida in mucronem brevem producta, plus minus inæquales; florens multo brevior, lata, hyalina, tenuiter 1-nervis, apice breviter 2-fida, costa inter lobos in aristam capillarem longissimam producta; palea minor, angustior, tenuissime 2-nervis. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, glabra, gluma tenuissima involuta, libera.—Gramen (annuum?) multicaule, erectum, foliis angustis planis subulato-acuminatis. Spicæ ad apicem pedunculi erectæ, sessiles, 2-4-næ v. solitariae, eleganter unilaterales, subpectinatae, ante fructus delapsos aristis capillaribus numerosissimis insignes.

Species 1, Africa tropicæ incola. *Kunth, Enum. Pl.* i. 258. *Trin. Spec. Gram.* t. 359.

170. **Cynodon**, *Pers. Syn. Pl.* i. 85. (*Capriola*, *Adans. Fam.* ii. 31. *Fibichia*, *Kat. Gram. Gall. et Germ.* 308).—Spiculæ 1-floræ, parvæ, secus rhachin continuam spicarum unilaterialium sessiles, alternatim 2-seriatæ, rhachilla supra glumas inferiores articulata, ultra florem non v. in stipitem parvum producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ, infra articulationem persistentes v. sigillatim deciduæ, tenues, carinatae, acutæ v. obtusæ, muticæ; florens vacuis brevior v. longior, latior, membranacea, carina ciliata, interdum prope apicem transverse pilosa, exaristata; palea vix gluma brevior, hyalina, carinis 2 approximatis distantibusve sæpiusque ciliolatis. Stamina 3. Styli distincti, stigmatibus brevibus plumosis. Caryopsis oblonga, glabra, exsulca, gluma paleaque inclusa, libera.—Gramina perennia, cæspitosa reptantia v. stolonifera, foliis angustis planis brevibus v. rarius longiusculis. Spicæ tenues, ad apicem pedunculi per 3-6 digitatæ v. rarius geminæ, rectæ erectæ v. radiatim patentes. Spiculæ parvæ, secus rhachin secundæ, nunc approximatae distincte 2-seriatæ, nunc subdissitæ specie 1-seriatæ.

Species 4, quarum typica per regiones calidiores utriusque orbis latissime dispersa et interdum in temperatas extensa, sæpe tamen inquilina, ab auctoribus variis in species usque ad 10 divisa, cæteræ Australiæ propriæ. *Kunth, Enum. Pl.* i. 259. *Steud. Syn. Pl. Glum.* i. 212.

Sectiones 2 sequentes vix non pro generibus propriis habenda:

1. *Fibichia*. Gluma florens vacuas sæpius superans. Rhachilla ultra florem sapissime in stipitem parvum tenuem producta. Species 1, cosmopolitana. *Beauv. Agrostogr.* 37, t. 9, f. 1. *Host, Gram. Austr.* ii. t. 18 (*Panicum*). *Reichb. Ic. Fl. Germ.* t. 26. *Nees, Gen. Fl. Germ. Monocot.* i. n. 39. *Sibth. Fl. Gr.* t. 60 (*Panicum*). *Dall in Mart. Fl. Bras.* ii. iii. t. 21.

2. *Brachyachne*. Gluma florens vacuis brevior. Rhachilla ultra florem non producta. Sectio a *Microchloa* vix nisi habitu et inflorescentia differt. Species 3 Australiæ. *Benth. Fl. Austral.* vii. 609. *Kunth, Rev. Gram.* 439, cum analysi in t. 133. Leon princeps hujus tabula *Pennisetum cenchroidem* refert.

Nomen genericum Kœlerianum jure prioritatis gaudet sed jam diu ab omnibus botanicis prætermisum nunc futile restitueretur. *Dactylon*, *Vill. Pl. Dauph.* ii. 69, adhuc antiquius est, sed *Panicum sanguinale* cum *Cynodonte Dactylon* includit.

171. **Harpechloa**, *Kunth, Rev. Gram.* i. 92; *Enum. Pl.* i. 274.—Spiculæ 1-3-floræ, secus rhachin continuam spicarum unilaterales sessiles, 2-seriatim confertæ, rhachilla brevis-sima supra glumas inferiores articulata, inter flores continua, flore infimo hermaphrodito, cæteris dum adsint masculis. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, membranaceæ, complicatæ, carinatae, acutiusculæ, secunda paullo major 3-nervis; tertia

florens lata, complicato-carinata, obtusissima, exaristata, margine longe ciliata, 1-3 superiores minores, tenuiores, hyalinae, truncatae, florem ♂ includentes v. summa vacua; palea angusta, hyalina, 2-carinata, gluma inclusa. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis gluma paleaque tenuibus inclusa, libera.—Gramina perennia, foliis siccitate convolutis crassiusculis. Spica in pedunculo elongato terminalis, unica, densa, saepius colorata, interdum falcata, spiculis confertis subpectinatis secundis.

Species 2, Africa australis incolæ. Nees, *Fl. Afr. Austr. Gram.* 238. Swartz in *Gesellsch. Naturf. Fr. Berl. Mag.* iii. t. 1 (*Chloris*). Trin. *Spec. Gram.* t. 310 (*Chloris*).

172. **Ctenium**, Panz. in *Denkschr. Acad. Sc. Munch.* 1813, 288, t. 13. (Campulosus, Desv. in *Nouv. Bull. Soc. Philom.* ii. 189. Campulosa, *EjUSD. Journ. Bot.* i. (1813) 69. Monocera, *Ell. Bot. S. Carol. and Georg.* i. 176.)—Spiculæ 1-2-floræ, tenues, secus rhachin continuam spicarum unilaterialium sessiles, 2-seriatim confertæ, rhachilla supra glumas inferiores articulata, flore unico v. inferiore hermaphrodito, superiore dum adsit masculo. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, extima parva, tenuis, fere hyalina, carinata, mutica, secunda ceteris major, membranacea v. rigidula, 2-3-nervis, acuta v. breviter 2-fida, medio dorso arista saepius horizontaliter divaricata tenuiter aculeiformi v. ad tuberculum reducta instructa, glumæ tertia quartaque vacuæ v. paleam angustam foventes, quam secunda breviores tenuioresque saepe longe ciliata, sub apice arista dorsali erecta instructa; quinta florens vacuis brevior tenuiorque, arista sub apice tenui interdum longe capillari; superiores 1-2 angustæ, vacuæ v. paleam angustam foventes. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, exsulca, gluma laxè inclusa, libera.—Gramina saepe elatiuscula, foliis angustis planis v. convolutis. Spicæ in pedunculo terminali solitariae v. rarius 2-3, erectæ, sessiles, saepe incurvæ; spiculæ secundæ, densissime approximate, eleganter pectinatæ, medio quasi armatæ.

Species nobis notæ 7, quarum 4 Americanae, boreales v. australes, 3 Africanae v. Mascarenenses. Beauv. *Agrostogr.* 63, t. 13, f. 1 (*Campulosus*). Kunth, *Enum. Pl.* i. 274. Steud. *Syn. Pl. Glum.* i. 202. Trin. *Spec. Gram.* t. 301 ad 304 (*Campulosus*). Kunth, *Rev. Gram.* t. 59, 136, 137. Munby, *Fl. Alg.* t. 1. Doll in *Mart. Fl. Bras.* ii. iii. 71, t. 20.

Nomen *Campulosus*, Desv., vitiose confectum, ab auctore postea in *Campulosa* mutatum genus designavit *Harpechloam*, Kunth, *Monoceram*, Ell., includens, qua ratione a botanicis recentioribus rejicitur, etsi prius quam *Ctenium* editum.

173. **Enteropogon**, Nees in *Linnd. Introd. Nat. Syst. ed. 2*, 448.—Spiculæ 1-2-floræ, sublancoelatae, secus rhachin continuam spicæ longæ unilaterialis sessiles, 2-seriatim confertæ, appressæ, rhachilla supra glumas inferiores articulata, flore unico v. inferiore hermaphrodito, superiore dum adsit masculo v. sterili. Glumæ 2, vacuæ, sub articulatione persistentes, hyalinae, carinatae, acutæ, plus minus inaequales; tertia florens longior, rigidula, dorso rotundata, 3-nervis, arista sub apice integro v. breviter 2-fido subdorsali tenui recta; superiores 1-2 minores, florem ♂ v. paleam solam foventes; palea gluma paullo brevior, 2-nervis, 2-cuspidata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis anguste oblonga, a dorso compressa v. antice late sulcata, gluma paleaque rigescentibus inclusa, libera.—Gramina (perennia?) caespitosa, elatiuscula, foliis longis angustis planis v. angustissimis convolutisque. Spica terminalis, unica, elongata, saepe curvula, spiculis secundis imbricatis.

Species 3 v. 4, Indiae orientalis Africae tropicæ et ins. Mascarenensium incolæ. Benth. in *Journ. Linn. Soc.* xix. 101.

Huc pertinent, præter *E. melicoides*, Nees, *Ctenium Seychellarum*, Baker, *Fl. Maurit.* 452, species vix a typica Indica distincta, *E. macrostachya*, Munro (*Chloris macrostachya*, Hochst.), ex Abyssinia, et *E. leptophylla*, Benth., e Madagascaria, Boivin, n. 3019.

174. **Chloris**, Swartz, *Prod.* 25; *Fl. Ind. Occid.* 189, t. 3.—Spiculæ 1-floræ, secus rhachin continuam spicarum unilaterialium sessiles, 2-seriatim confertæ, rhachilla supra glumas inferiores articulata, ultra flores producta, apice glumifera, flore hermaphrodito.

Glumæ 2 inferiores vacuæ, sub articulatione persistentes, inæquales, carinatæ, angustæ nunc angustissimæ, acutæ, mucronatæ, rarius obtusæ v. secunda breviter aristata; florens angusta v. latiuscula, 1-3-nervis, acuta obtusa emarginata v. breviter 2-fida, costa in aristam tenuem producta v. rarius mutica, vacuæ ad apicem rhachillæ plures conniventes, v. unica, breves, latæ truncatæque v. angustæ, sæpius aristatæ v. ad aristam reductæ, rarius muticæ; palea gluma vix brevior, complicato-2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis gluma involuta v. inclusa, libera, oblongo-fusiformis v. fere linearis, subteres v. fere 3-quetra, rarius sulcata.—Gramina sæpius perennia, foliis planis. Spicæ ad apicem pedunculi terminalis interdum solitariae v. geminae, erectæ, sæpius plures, digitatæ verticillatæ v. approximatae erectæ v. demum stellato-patentissimæ. Gluma florens sæpe longe ciliata.

Species ad 40, per regiones calidiores utriusque orbis late dispersæ. *Beauv. Agrostogr.* 79, t. 16, f. 6. *Kunth, Enum. Pl.* i. 263. *Steud. Syn. Pl. Glum.* i. 203. *Dall in Mart. Fl. Bras.* ii. iii. 61. *Benth. Fl. Austral.* vii. 610, et in *Journ. Linn. Soc.* xix. 102.

Genus in sectiones 2 sequentes dividitur, a nonnullis pro generibus propriis habitas: --

1. *Euchloris*. Glumæ exteriores vacuæ acutæ v. rarius obtusæ, exaristatæ, florens et superiores vacuæ sæpius nec semper aristatæ. *Jacq. Fragm.* t. 121; *Ecl. Gram.* t. 8 ad 10. *Kunth, Rev. Gram.* t. 55 ad 58, 134, 178 ad 180. *Trin. Spec. Gram.* t. 305 ad 308, 311, 312. *Dall in Mart. Fl. Bras.* ii. iii. t. 18 et t. 23 (*Gymnopogon*).

Species quoad glumarum formam et aristas polymorphæ, *C. monostachya*, Poir., ex ins. Mascarensibus et *C. unispica*, F. Muell., ex Australia, insignes sunt habitu gracili spicis tenuibus solitariis v. rarius geminis erectis, gluma florente angusta terminalique vacua angusta aristatis. In *C. aciculari*, Br., et *C. Roxburghiana*, Edgew., ex Australia et India orientali, et in *C. radiata*, Sw., ex America et Africa, gluma florens pariter angusta, terminalis vacua vix arista latior, sed spicæ plures digitatæ v. fasciculatim approximatae. In *C. foliosa*, Willd., sp. Americana a Döllio ad *Gymnopogonem* relata, glumæ pariter angustæ, sed spicæ minus confertæ et gluma vacua ad stipitem 2-aristatum (an glumæ 2 aristiformes?) reducta. In *C. pumilion*, Br., *C. pectinata*, Benth., et *C. divaricata*, Br., ex Australia, gluma florens distincte 2-loba. arista inter lobos instructa. In speciebus pluribus Asiaticis v. Australiensibus glumæ terminales vacuæ plures, latæ, truncatæ; in pluribus Americanis gluma terminalis vacua pariter truncata sed unica; in *C. submutica*, Kunth, glumæ omnes obtusæ v. obtusiusculæ muticæ; in his plerisque spicæ digitatæ v. verticillatæ additis rarius una alterave inferiore v. superiore.

2. *Eustachys*. Gluma vacua secunda mucronata v. breviter aristata, florens et vacua terminalis obtusæ v. truncatæ, muticæ v. brevissime mucronato-aristatæ. Spicæ digitatæ. Species 5 v. 6, Americanæ. *Jacq. Ecl. Gram.* t. 11. *Trin. Spec. Gram.* t. 309. *H. B. et K. Nov. Gen. et Sp.* t. 49, 50. *EUSTACHYS*, Desv. in *Nouv. Bull. Soc. Philom.* ii. 188, et in *Journ. Bot.* i. (1813), 69. *Kunth, Enum. Pl.* i. 262; *Rev. Gram.* t. 54. *Dall in Mart. Fl. Bras.* ii. iii. t. 19. *SCHULTESIA*, *Spreng. Pl. Pugill.* ii. 17.

175. *Cryptochloris*, Benth. in *Hook. Ic. Pl.* t. 1376.—Spiculæ 2-floræ (rarius 1-floræ?), secus rhachin continuam spicæ subsecundæ sessiles, 2-seriatim confertæ. Glumæ 2 inferiores vacuæ, persistentes, angustissime lineares, complicatæ, glabræ, parum inæquales, spiculam subæquantes, acute, muticæ; florentes membranaceæ, late ovate, 1-nerves, extus longe ciliatæ, apice minute 2-dentatæ, sub apice dorso arista rigida instructæ; superiores plures vacuæ, obovatæ v. subglobosæ, gradatim minores glabrioresque, omnes aristatæ; palea gluma florente paullo minor, 2-dentata, pilosula, mutica. Stamina . . . Stylus . . . Caryopsis gluma inclusa, obovoidea, libera.—Gramen annuum, nanum, spica simpliciter densa intra bracteam spathiformem semi-inclusa.

Species unica, olim a Capt. Middleton verisimiliter in Patagonia lecta.

176. *Trichloris*, Fourn. *Gram. Mex.* 142.—Spiculæ 1- rarius 2-floræ v. fide Fournieri interdum plurifloræ, secus rhachin continuam spicarum unilateralium sessiles, 2-seriatim confertæ, rhachilla supra glumas inferiores articulata, ultra florem producta glumifera, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, parvæ, membranaceæ, subhyalinæ, extima sæpius angustissima, acuta, mutica, secunda breviter 1-aristata; florens membranacea, sub-3-nervis, 3-aristata, aristis longis rectis subæqualibus v. lateralibus

multo brevioribus; superiores vacuæ, nunc 2-3 quarum infima florenti subsimilis nisi angustior et superiores minores 1-aristatæ v. muticæ, nunc unica ad aristas 3 v. 6 (glumia 2 contiguæ?) reducta; palea gluma inclusa, hyalina, prope margines 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis anguste oblonga, subteres, gluma inclusa, libera.—Gramina (perennia?) elatiuscula, foliis planis. Spicæ plures, tenues, in pedunculo sessiles, erectæ, arcte approximatae, subverticillatæ, paniculam formantes densam, oblongam, aristis longis numerosissimis molliter echinatum, spiculis tenuibus erectis.

Species nobis notæ 4 v. 5, quarum 2 regionis Mexicano-Texanæ, 2 v. 3 Americæ australis extratropicæ incolæ. Genus jam diu a J. Gayio et a Munroio ad species australes agnotum et nominibus in herbariis signatum, nec tamen foris editum. *Benth. in Journ. Linn. Soc. xix. 102.*

177. **Gymnopogon**, Beauv. *Agrostogr. 41, t. 9, f. 3.* (*Anthopogon, Nutt. Gen. N. Am. Pl. i. 81.*)—Spiculæ 1-floræ, secus rhachin continuum tenuem spicarum unilaterialium dissitæ, subsessiles, rhachilla supra glumas inferiores articulata, ultra florem producta glumifera, flore hermaphrodito. Glumæ 2 inferiores vacuæ, sub articulatione persistentes v. sigillatim deciduæ, plus minus inæquales, angustæ, 1-3-nerves, acutæ v. secunda breviter aristata; florens paullo latior, 3-nervis, florem paleamque involvens, apice breviter 2-fida, costa in aristam rectam producta; terminalis vacua longè aristiformis basi sæpe vix dilatata; palea gluma inclusa, angusta, 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis linearis, subteres, gluma rigidula involuta, libera.—Gramina elatiuscula, foliis planis brevibus rigidulisque v. elongatis flaccidis. Spicæ tenues, interdum filiformes, secus pedunculum plures, dissitæ sparsæ v. inferiores subverticillatæ, primum erectæ, demum sæpe divaricato-patentes.

Species 5 v. 6, quarum una Zeylanica cæteræ Americanæ boreales v. australes. *Kunth, Enum. Pl. i. 284; Rev. Gram. t. 139. Dæll in Mart. Fl. Bras. ii. iii. 79, excl. G. foliosa et G. pullulante ad Chloridem restituendis.*

Genus speciebus *Chloridis C. aciculari*, Br., affinis prope accedit, imprimis inflorescentia differt. *DICHÆTARIA, Nees in Steud. Syn. Pl. Glum. 145*, est fide Munroi *G. rigidus*, Thw., species Zeylanica ab Americanis paululum longis foliis longis flaccidis, spicis in pedunculo paucis distantibus, spiculis majoribus longius aristatis, structura cæterum omnino eadem.

178. ? **Monochaete**, Dæll in *Mart. Fl. Bras. ii. iii. 78, t. 22.*—Spiculæ 1-floræ, secus rhachin continuum tenuem spicarum subunilaterialium sessiles, approximatae, rhachilla supra glumas inferiores articulata, ultra florem non producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, angustæ, carinatae, setaceo-acuminatae; tertia florens paullo latior, carinata, subteres, in aristam tenuem producta; palea gluma inclusa, angusta, 2-carinata. Stamina 3. Styli distincti, stigmatibus villosulis. Caryopsis linearis, glabra, subteres, antice canaliculata, gluma involuta, libera.—Gramen herbaceum, foliis angustis convolutis. Spicæ plures ad apicem pedunculi, tenues, erectæ, inter se parum distantes. (*Char. ex Dæll.*)

Species 1, Brasiliana, a nobis non visa. Genus ex Dællio a *Gymnopogone*, cui adscripsit Martius, differt spiculæ rhachilla ultra florem non producta. Nees tamen, *Agrostogr. Bras. 430*, continuationem descripsit setiformem absque gluma.

179. **Schedonnardus**, Steud. *Syn. Pl. Glum. i. 146.*—Spiculæ 1-floræ, acuminatae, in rhachi spicarum unilaterialium sessiles et alternatim dissitæ, rhachilla brevissima supra glumam inferiores articulata, ultra florem non producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ parum inæquales, infra articulationem persistentes, angustæ, membranaceæ, acuminatae; florens longior, membranacea, demum rigidula, mucronulata, paleam angustam breviorē floremque amplectens. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis linearis, gluma paleaque rigidule membranaceis inclusa, libera.—Gramen annuum, multicaule, basi ramosum, foliis angustis fere subulatis. Spicæ v. paniculæ simplicis ramuli plures, indivisi, tenuissimi, secus pedunculum elongatum gracilem dissiti, patentes, uno pedunculum terminante. Spiculæ secus rhachin tenuem longè dissitæ, arcte appressæ, exaristatæ.

Species 1, Americæ borealis incola. *Nutt. Gen. N. Amer. Pl. i. 81* (*Lepturus paniculatus*). *Benth. in Hook. Ic. Pl. t. 1360*. Genus nobis *Gymnopogoni* potius quam *Lepturo* affine videtur. Ex caractere Steudeliano gluma florens exterioribus brevior, nos tamen semper in speciminibus ipsis Drummondianis longiorem vidimus. *Lepturus Bolanderi*, Thurb. in S. Wats. Bot. Calif. ii. 322, e California, a nobis non visa; auctoris descriptio nec cum *Schedonnardo* nec cum *Lepturo* bene convenit.

180. **Craspedorhachis**, *Benth. in Hook. Ic. Pl. t. 1377*.—Spiculæ 1-floræ, secus rhachin flexuosam marginatam spicarum unilaterialium subsessiles, rhachilla supra glumas inferiores subarticulata brevissima, ultra florem non producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ, persistentes, carinatae, acutæ, 1-nerves, rigidule membranaceæ, subæquales, infima rhachi contigua, secunda per anthesin patens; tertia florens pluries brevior, lata, subtruncata, tenuissime hyalina, ciliata; palea gluma vix brevior, angustior, tenuissime hyalina, apice breviter 2-fida v. 2-dentata. Stamina 3. Styli sub anthesi breves, distincti, stigmatibus plumosis. Caryopsis . . .—Gramen elatiusculum, foliis paucis angustissimis a basi subplana convoluto-subulatis. Spicæ secus pedunculum sparsæ, rigidulæ, erectiusculæ v. subpatentes, paniculam angustam simplicem formantes; rhachis spicarum utrinque membrana angusta marginata, spiculis secus costam alternatim affixis appressis.

Species 1 Africæ tropicæ austro-orientalis incola.

Genus evidenter *Schedonnardo* affine, differt imprimis gluma florente paleaque minimis hyalinis lodiculas simulantibus.

181. **Bouteloua**, *Lag. Varied. Cienc. y Litter. 1805, 141, ex eod. Flench. Hort. Matr. Gen. et Sp. Nov. 5*. (*Eutriana, Trin. Fund. Agrost. 161*. *Actinochloa, Willd. in Rom. et Schult. Syst. ii. 22, 417*).—Spiculæ 1-2-floræ, secus rhachin continuam spicarum unilaterialium sessiles, 2-seriatim confertæ, rarissime solitariae, rhachilla continua v. supra glumas inferiores articulata, ultra flores producta glumifera v. stipitiformi, flore inferiore v. unico hermaphrodito, superiore dum adsit masculo v. sterili. Glumæ 2 inferiores vacuæ, angustæ, acutæ, carinatae, æquales v. inæquales; florens sæpius tenuior, latior, florem involvens, apice 3-dentata v. 3-5-fida, lobis 1 v. 3 mucroniformibus v. aristiformibus, intermediis dum adsint brevioribus planis; glumæ vacuæ 1-3 ad apicem rhachillæ, varie 3-5-aristatæ, v. usque ad basin in aristas 3 divisæ; palea gluma florente inclusa, angusta, hyalina, integra v. 2-cuspidata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, gluma inclusa, libera.—Gramina annua v. perennia, humilia v. elatiuscula, foliis angustis planis v. convoluto-teretibus. Spicæ secus pedunculum elongatum terminalem simplicem plures, sessiles, secundæ, dissimilæ, remotæ, rarius ad unam terminalem reductæ, primum erectæ, demum sæpe pendulæ. Spiculæ unilaterales, secus rhachin tenuem v. anguste complanatam alternæ, numerosæ paucæ v. rarissime solitariae, rhachi ultra spiculam superiorem sæpiissime plus minus in cuspidem continuata.

Species ad 25, Americæ tam borealis quam australis imprimis occidentalis incolæ. *Benth. in Journ. Linn. Soc. xix. 104*.

Glumæ tam florentes quam vacuæ terminales variant sæpe de specie in speciem quoad aristas v. lobos, et haud raro in eadem spica polymorphæ, et species plures characteribus certis ægre definiendæ. Sectiones tres sequentes potius inflorescentia quam spicularum structura separantur:—

1. *Chondrosium*. Spicæ in pedunculo sæpius paucæ, interdum solitariae, rarius numerosiores, longiusculæ, plus minus falcatæ, spiculis numerosis (rarissime infra 12) pectinatim confertis, gluma vacua terminali sæpius 3-aristata. Species ad 15. *Jacq. Ecl. Gram. t. 12* (*Atheropogon*). *Torr. in Williams. Exped. Bot. t. 10*. *CHONDROSIMUM, Desv. in Nouv. Bull. Soc. Philom. ii. 188, et in Journ. Bot. i. (1813), 68*. *Beauv. Agrostogr. 41, t. 9, f. 7*. *H. B. et K. Nov. Gen. et Sp. t. 56 ad 59*. *Fourn. Gram. Mex. 136*. *Torr. in Emory. Notes, t. 12*.

2. *Atheropogon*. Spicæ in pedunculo sæpius plures nunc numerosæ, breves sæpe fere fasciculi-formes, rectæ, spiculis paucis rarius ultra 12, secundis at vix pectinatis, gluma vacua terminali in eodem specimine sæpe variabili nunc 3-aristata lobis intermediis 2 v. 0, nunc integra lineari v. in

stipite tenui obsoleta. Species ad 12. *Beauv. Agrostogr.* 40, t. 9, f. 6. *ATHEROPOGON*, *Muehl. in Willd. Spec. Pl.* iv. 937. *Jacq. Ecl. Gram.* t. 7. *Fourn. Gram. Mex.* 138. *DINEBRA*, *DC. Cat. Hort. Monsp.* 104, pro parte, non *Jacq.* *Beauv. Agrostogr.* t. 16, f. 1, 3. *H. B. et K. Nov. Gen. et Sp.* t. 51 ad 54. *HETEROSTEGA* (*Heterosteca*), *Desv. in Nouv. Bull. Soc. Philom.* ii. 188, et in *Journ. Bot.* i. (1813) 68.

3. *Triathera*. Spicæ in pedunculo plures, breves, cænes, sæpe spiculas singulas simulantes, spiculis 1-3 tenuibus appressis, gluma vacua terminali ad aristas 3 reducta. *ARISTIDIUM*, *Endl. Gen.* 94, sect. pro genere admissa, *Lindl. Veg. Kingd.* 116. Huc *B. aristoides* (*Dinebra aristoides*, *H. B. et K. Nov. Gen. et Sp.* t. 695), spiculis in quaque spica 2-4, et *B. triathera*, *Benth. (TRIATHERA, Desv. in Nouv. Bull. Soc. Philom.* ii. 188, et in *Journ. Bot.* i. (1813) 67, *Beauv. Agrostogr.* 39, t. 9, f. 4. *TRIÆNA*, *H. B. et K. Nov. Gen. et Sp.* i. 178, t. 61). In hac specie spicæ variant in eadem panicula 1-, 2- v. 3-spiculatæ, et spiculæ quodammodo polymorphæ; in spicis 3-spiculatis glumam infimam spiculæ infimæ aristiformem vidimus, qualem in icone *Kunthiana*, t. 61, f. 1 delineatam, et pro arista ad basin glumæ describitur, in spicula terminali gluma infima secundæ subsimilis, spicula intermedia nunc infimæ nunc terminali similis est; gluma florens variat integra 3-dentata v. 3-aristata.

4. *Polyodon*. Spicæ in pedunculo paucae, breves, fere spiculiformes, spiculis paucis, gluma florente 3-aristata, terminalibus vacuis 2-3 confertis 3-5-aristatis glumam unicam multiaristatam simulantibus. *POLYODON*, *H. B. et K. Nov. Gen. et Sp.* i. 174, t. 55. *TRIPLATHERA*, *Endl. Gen.* 94, sect. pro genere admissa in *Lindl. Veg. Kingd.* 116. Huc pertinent *B. disticha*, *Benth. (Polyodon distichum*, *H. B. et K. l. c.*), a qua *Atheropogon affinis*, *Fourn.* (non *Eutriana affinis*, *Hook. f.*), vix distincta videtur, spiculis cum aristis infra semipollicaribus, et *B. multisetæ*, *Benth. (Eutriana multisetæ*, *Nees, Kunth, Rev. Gram.* t. 138, *Trin. Spec. Gram.* t. 295, *Döll in Mart. Fl. Bras.* ii. iii. t. 21), spiculis cum aristis ultrapollicaribus et habitu fere *Boissieræ*, cui ex descriptione referendum videtur *CORETHRUM*, *Vahl in Skrivt. Naturk. Selsk. Kiøbenh.* vi. 85, cujus specimen accepit *Vahl* a *Thouinio* cum plantis *Syriacis*, sed verisimiliter in *America australi extratropica* lectum.

182. *Melanocenchris*, *Nees in Proc. Linn. Soc.* i. 94. (*Ptiloneilema*, *Steud. Syn. Pl. Glum.* i. 201.)—Spiculæ 1-floræ, secus rhachin continuam spicarum unilaterialium sessiles, paucae, 2-seriatim confertæ, rhachilla continua v. supra glumas inferiores articulata, ultra florem producta glumifera, flore hermaphrodito. Glumæ 2 inferiores vacuæ, lineares, pilis longis plumoso-ciliatæ, in aristam rectam productæ, parum inæquales v. in spiculis superioribus una interdum deficiens; florens latior, glabra v. vix dorso ciliata, membranacea, 3-fida, lobis aristiformibus, lateralibus intermedio brevioribus basi que parum dilatatis; superiores plures vacuæ, confertæ, quarum infima florenti subsimilis, cæteræ gradatim minores; palea lata, membranacea, 2-carinata, gluma vix brevior. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, a dorso leviter compressa, gluma paleaque inclusa, libera.—Gramina annua, humilia, multicaulia v. decumbentia, foliis brevibus angustis planis v. siccitate convolutis. Spicæ parvæ, fasciculiformes, sub-turbinatæ, secus pedunculum terminalem dissitæ, secundæ, articulatim deciduæ, iis *Ægopogonis* primo aspectu similes; spiculæ tamen ut in *Bonteloua* omnes sessiles secundæque, sæpius 4-6-fertiles, 1-3 superiores angustiores sterilesque.

Species 3, inter se valde affines. Indię orientalis *Arabia* et *Africæ tropicæ orientalis* incolæ. *Steud. Syn. Pl. Glum.* i. 218. *Jaub. et Spach, Ill. Pl. Or.* t. 325, 326.

183. *Tripogon*, *Roth, Nov. Pl. Spec.* 79. (*Plagiolytrum*, *Nees in Proc. Linn. Soc.* i. 95.)—Spiculæ ∞-floræ, secus rhachin continuam spicæ longæ unilaterialis sessiles, 2-seriatim subdissitæ, appressæ, rhachilla supra glumas inferiores sæpeque inter flores articulata, floribus hermaphroditis v. summo masculo. Glumæ 2 vacuæ, sub articulatione persistentes, hyalinae, carinatæ, acutæ, plus minus inæquales; florentes paullo longiores, hyalinae, 3-nerves, 3-aristatæ v. inter aristas integræ v. in lobos breves hyalinos productæ, aristis tenuibus rectis lateralibus intermedia brevioribus rarius ad mucrones brevissimos reductis; glumæ superiores sæpe 1-2, minores, florem ♂ foventes v. vacuæ; palea angusta, hyalina, 2-carinata, 2-dentata v. 2-mucronata. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis anguste oblonga, teres v. subtriquetra, glabra, gluma paleaque

inclusa, libera.—Gramina annua v. perennia, cæspitosa, humilia v. elatiuscula, foliis planis v. convolutis interdum setaceis. Spica terminalis, unica, elongata, tenuis, sæpe curvula, spiculis alternis secundis haud imbricatis, floribus in spicula subdissitis.

Species ad 8, Indiæ orientalis et Africæ tropicæ incolæ. *Steud. Syn. Pl. Glum.* i. 301. *Hook. f. in Journ. Linn. Soc.* vii. 230. *Jaub. et Spach, Ill. Pl. Or.* t. 332, 333.

Genus *Enteropogoni* affine, differt spicis spiculisque laxis, his multifloris glumis florentibus 3-aristatis. Hac nota *Triraphi* convenit sed inflorescentia *Chloridearum*.

184. **Lepidopironia**, *A. Rich. Fl. Abyss.* ii. 442, t. 101.—Spiculæ  $\infty$ -floræ, secus rhachin continuum spicæ simplicis unilateralis sessiles, 2-seriatæ, dissitæ, patentes, rhachilla . . . , floribus inferioribus hermaphroditis superioribus sterilibus. Glumæ inferiores vacuæ 2, carinatæ, acutæ, parum inæquales; florentes imbricatæ, subovatae, acuminatæ, dorso dense pilosæ, sub apice aristatæ; palea brevior, plana, ovata, 2-carinata. Stamina 3. Styli . . . Caryopsis ovoidea, sublenticularis.—Gramen annuum, erectum, foliis planis. Spica solitaria, terminalis, laxiuscula. (*Char. ex A. Rich.*)

Species 1, Abyssinica, a nobis non visa. Planta ex auctoris descr. *Tripogoni abyssinico* affinis videtur, differt tamen generice, si rite observata, glumis florentibus brevibus latis dorso villosissimis, arista dorsali nec inter lobos terminali. Specimina tamen ab auctore descripta quoad flores imperfecta erant.

185. **Tetrapogon**, *Desf. Fl. Atl.* ii. 388, t. 255.—Spiculæ 2-3-floræ, secus rhachin continuum spicarum unilaterialium sessiles, 2-seriatim confertæ, rhachilla supra glumas inferiores articulata, ultra flores producta glumifera, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, hyalinæ, carinatæ, inæquales, muticæ v. secunda in aristam producta; florentes latæ, concavæ v. complicatæ, dorso longe pilosæ, apice truncatæ v. emarginato-sub-2-fidæ, arista centrali longiuscula recta; superiores plures vacuæ, latæ, concavæ v. truncatæ, quarum extima sæpius aristata, cæteræ gradatim minores, arista reducta v. evanida; palea latiuscula, juxta margines 2-carinata, carinis breviter ciliatis. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, gluma inclusa, libera.—Gramina cæspitosa, sæpe stolonifera, foliis planis. Spicæ ad apicem pedunculi solitariæ geminæ v. rarius ternæ, sessiles, erectæ, pilis sericeis glumarum *Elionurum* referentes; spiculæ confertæ, secundæ v. fere distichæ.

Species 4, Africæ borealis, Abyssiniæ et Asiæ occidentalis incolæ. *Jaub. et Spach, Ill. Pl. Or.* t. 327, 328 (*Chloris*).

186. **Astrebla**, *F. Muell. in Benth. Fl. Austral.* vii. 602.—Spiculæ 3-4-floræ, secus rhachin continuum spicarum unilaterialium sessiles, 2-seriatim alternæ, rhachilla supra glumas inferiores articulata, villosa, ultra flores producta glumifera, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, acutæ,  $\infty$ -nerves, exaristatæ, parum v. valde inæquales, extima interdum angustissima v. rarius omnino evanida; florentes sericeo-pilosæ, multinervæ, 3-lobæ, lobo medio a basi lata in aristam rectam v. curvam nec tortam producta, lateralibus erectis rigidis 2-3-nervibus exaristatis; superiores 1-2, minores, vacuæ v. floris rudimentum foveantes; palea 2-carinata, carinis ciliolatis. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis late ovata, compressa, glabra, gluma paleaque laxa inclusa, libera.—Gramina (perennia?) erecta, glauca, foliis planis. Spicæ ad apicem pedunculi solitariæ v. geminæ, erectæ, spiculis crassiusculis majusculis.

Species 2 v. 3, Australianæ. Genus olim *Danthoniæ* adscriptum, a qua differt habitu, inflorescentia et arista nequaquam torta. Glumæ multinerves *Pappophoreas* referunt, sed inflorescentia omnino *Chloridearum*.

187. **Wangenheimia**, *Muench, Meth.* 200.—Spiculæ  $\infty$ -floræ, in rhachi continua spicæ unilaterialis sessiles, 2-seriatim confertæ, rhachilla continua, floribus hermaphroditis v. subdioicis v. summo imperfecto. Glumæ 2 inferiores vacuæ, angustæ, rigidulæ, spiculum

æquantes v. subsuperantes, parum inæquales, extima 1-nervi, secunda parum latiore sub-3-nervi, acuta v. mucronulata; florentes paullo breviores latioresque, cæterum similes v. evidentius mucronatæ, summa sæpius vacua; palea gluma paullo brevior, rigidula, 2-carinata. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis ovali-oblonga, antice leviter sulcata, gluma paleaque arcte inclusa, libera.—Gramen annuum, humile, multicaule, foliis angustissimis convolutis. Spica terminalis, erecta, sæpe leviter falcata, quam in *Otenopsi* crassior, pariter tamen eleganter pectinata, spiculis confertim secundis.

Species 1, Hispaniæ australis et Africæ borealis occidentalis incola. *Coss. et Dur. Fl. Alg. Glum.* 153. *Cav. Ic. t. 91 (Cynosurus)*. *Desf. Fl. Atl. t. 19 (Cynosurus)*.

188. **Otenopsis**, *De Notar. Ind. Sem. Hort. Gen.* 1847, ex *Ann. Sc. Nat. ser. 3, ix. 324*.—Spiculæ 2-5-floræ, in rhachi continua spicæ unilateralis sessiles v. callo brevissimo impositæ, 2-seriatim confertæ, rhachilla sub floribus tardius articulata, ultra flores stipitiformis, floribus hermaphroditis v. summo imperfecto. Glumæ 1-2 inferiores vacuæ, persistentes, extima dum adsit minima squamiformis, secunda angusta, rigida, dorso rotundata, subnervis, acutissima, spiculam æquans; florentes parum breviores, carinatæ, rigidulæ, obscure 3-nerves, acutissimæ v. brevissime mucronato-aristatæ, summa interdum vacua; palea paullo brevior, 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis anguste oblonga fere linearis, subteres, antice sulcata, gluma paleaque inclusa, libera.—Gramen annuum, humile, tenellum, multicaule, foliis angustissimis plerisque filiformibus. Spica terminalis, erecta, sæpe leviter falcata, in pedunculo unica v. rarius addita altera inferiore minore. Spiculæ more *Chloridearum* eleganter pectinatum secundæ, 1-2 ad apicem spicæ et interdum etiam ad basin spicæ parvæ ananthæ.

Species 1, Africæ borealis incola. *Steud. Syn. Pl. Glum.* 210. *Coss. et Dur. Expl. Alg. t. 41 bis v. 42 (Festuca)*. Icon Delilei ab auctoribus citata nunquam edita fuit.

189. **Tetrachne**, *Nees, Fl. Afr. Austr. Gram.* 375.—Spiculæ paucifloræ, complanatæ, secus rhachin continuam spicæ unilateralis sessiles, 2-seriatim confertæ, rhachilla supra glumas inferiores articulata, floribus hermaphroditis. Glumæ carinatæ, acutæ, exaristatæ, rigidulæ, præter carinam enerves v. majores utrinque apice 1-2-nerves, 4 inferiores vacuæ a superiore gradatim minores, sequentes 2-4 florentes, summa sæpius minor vacua v. ad stipitem reducta; palea cum gluma æquilonga, complicato-2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis elliptico-oblonga, compressiuscula, gluma laxè inclusa, seorsum decidua.—Gramen perenne, erectum, foliis angustissimis siccitate convolutis teretibus. Spicæ secus pedunculum elongatum plures, dissitæ, sessiles, terminalis sæpe falcata, spiculis confertissime 2-seriatis imbricatis.

Species 1, Austro-Africana. Genus cum binis præcedentibus sæpius *Festuccis* adscriptum, sed inflorescentia omnino *Chloridearum* quibus a Munroio translatum.

190. **Dinebra**, *Jacq. Fragm.* 77, t. 121.—Spiculæ 2-3-floræ, secus rhachin continuam spicæ unilateralis sessiles, 2-seriatim confertæ, rhachilla supra glumas inferiores subarticulata, inter flores tenui, ultra flores in stipitem interdum glumiferum producta, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, persistentes, angustæ, carinatæ, acuminato-subaristatæ, spiculum superantes; florentes multo breviores, hyalinæ, obtusiusculæ, 1-nerves, muticæ; palea hyalina, gluma inclusa. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis ovoidea, subtriquetra, lævis, gluma paleaque tenuibus inclusa, libera.—Gramen (annuum?) multicaule, basi decumbens, foliis planis. Spicæ secus pedunculum elongatum more *Boutelouæ* numerosæ, breves, primum erectæ, demum reflexæ.

Species 1, Africæ borealis et tropicæ et Indiæ orientalis incola. *Beauv. Agrostogr. t. 16, f. 2. Kunth, Enum. Pl. i. 271 (Leptochloa)*. *Delile, Fl. Eg. t. 11. Panz. in Denkschr. Acad. Münch.* 1813, t. 12.

Genus *Boutelouæ* quacum junxit De Candolle affinius quam *Leptochloæ*. Inflorescentia omnino prioris a qua differt floribus in spicula 2 fertilibus et glumis vacuis spiculam æquantibus v. superantibus.

191. *Eleusine*, Gærtn. *Fruct.* i. 7, t. 1.—Spiculæ  $\infty$ -floræ, secus rhachin continuam spicæ unilateralis alternæ, sessiles, rhachilla continua v. sub floribus fertilibus articulata, floribus hermaphroditis v. summo masculo. Glumæ imbricato-patentes, complicatæ, carinatæ, tenues, rigidulæ, 2 exteriores vacuæ cæteris paullo breviores inæqualesque, obtusæ acutæ v. mucronatæ; florentes sæpius obtusiores v. mucrone brevior, terminalis sæpius vacua v. floris rudimentum fovens; palea gluma vix brevior, complicato-2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis gluma paleaque laxè inclusa, pericarpio tenuissime membranaceo nunc circa semen laxo persistente, nunc demum rupto exsiccatum v. omnino evanido. Semen crassum, varie rugosum v. a dorso compressiusculum. —Gramina annua cæspitosa, v. perennia reptantiaque, foliis planis. Spicæ ad apicem pedunculi plures, digitatæ, additis interdum secus pedunculum inferioribus 1-2 dissitis v. pluribus sparsis v. subverticillatis. Spiculæ secundæ, arcte confertæ, sæpius numerosæ.

Species editæ plures, vix 7 bene distinguendæ, regionum tropicarum et subtropicarum orbis veteris incolæ, quarum 2 etiam per Americam calidiorem latè dispersæ, sæpe tamen inquilinæ. *Schreb. Besch. Gräs.* t. 35 (*Cynosurus*). *Beauv. Agrostogr.* 72, t. 15, f. 3. *Kunth, Enum. Pl.* i. 261 (*Dactyloctenium*) et 272. *Trin. Spec. Gram.* t. 70 ad 72. *Dall in Mart. Fl. Bras.* ii. iii. t. 24. *Courb. in Ann. Sc. Nat. ser. 4*, xviii. 133. *Benth. in Journ. Linn. Soc.* xix. 106.

Genus ab auctoribus in tria dividitur, quoad species typicas sat distincta, sed speciebus v. varietatibus intermediis connexa. In *E. coracana*, Gærtn., spicæ digitatæ, glumæ omnes obtusæ, pericarpium laxum circa semen persistens; in *E. indica*, Gærtn., inflorescentia eadem v. adduntur spicæ inferiores 1-2, glumæ variant obtusæ v. breviter mucronatæ, pericarpium sæpius ut in *E. coracana* laxum. In *E. ægyptiaca*, Pers., quæ *DACTYLOCTENIUM*, Willd. *Enum. Hort. Berol.* 1029; *Beauv. Agrostogr.* 72, t. 15, f. 2; *Trin. Spec. Gram.* t. 69; *Dall in Mart. Fl. Bras.* ii. iii. t. 25, spicæ digitatæ, breves, densissimæ, glumæ bene mucronatæ, pericarpium evanescens, semine maturo omnino nudo apparente; in specie ei affini, *E. brevifolia*, Wall. Cat. Herb. Ind. n. 3815, non Hochst., et in *E. glaucophylla*, Munro (*Dactyloctenio*, Courb.), spicæ digitatæ, glumæ bene mucronatæ *Dactyloctenii* sed pericarpii vestigia plus minus perfecta circa semen persistunt. In *E. verticillata*, Roxb., quæ *ACHACHNE*, W. et Arn. in *Lindl. Introd. Nat. Syst. ed. 2*, 381 (nomen tantum), spicæ numerosæ, secus pedunculum sparsæ v. verticillatæ, summæ digitatæ, spiculæ tenues, floribus quam in cæteris numerosioribus, glumæ mucronatæ sæpeque ad latera mucronis denticulatæ, semen maturum ut in *Dactyloctenio* nudum apparet. *Arthroclena*, Boiv. in Herb. J. Gay, est *Eleusini* species insignis Madagascariensis, spiculis numerosis majusculis, floribus sæpe ultra 20, glumis rigide coriaceis, more *Eragrostis* distiche imbricatis.

192. *Leptochloa*, Beauv. *Agrostogr.* 71, t. 15, f. 1. (*Oxydenia*, Nutt. *Gen. N. Amer. Pl.* i. 76).—Spiculæ 2- $\infty$ -floræ, rarius 1-floræ, complanatæ, secus rhachin continuam spicarum unilaterialium alternæ v. subdistichæ, sessiles, rhachilla sub floribus sæpius articulata et ultra flores haud raro in stipitem parvum producta, floribus hermaphroditis. Glumæ 2 inferiores vacuæ carinatæ, obtusæ acutæ v. brevissime aristatæ, parum inæquales, spicula breviores, v. in speciebus 1-floris florentem superantibus; florentes vacuæ similes v. obtusiores v. interdum arista tenui instructæ; palea gluma subinclusa, prominenter 2-nervis. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis gluma paleaque arcte inclusa, libera. —Gramina sæpius elatiuscula, foliis planis v. siccitate convolutis. Spicæ numerosæ, secus pedunculum elongatum sparsæ, patentes, paniculam longam simplicem formantes, rarius ad apicem pedunculi approximatae, tenues, rhachi sæpe filiformi, spiculis parvis approximatis v. rarius dissitis.

Species ad 12, per regiones calidiores utriusque orbis latè dispersæ, usque ad Americam borealem et Australiam extratropicam extensæ. *Kunth, Enum. Pl.* i. 269. *Jacq. Ecl. Gram.* t. 4 (*Eleusine*). *Jacq. Ic. Rar.* t. 22 (*Cynosurus*). *Dall in Mart. Fl. Bras.* ii. iii. 88, t. 26. *Benth. Fl. Austral.* vii. 616, et in *Journ. Linn. Soc.* xix. 107. *Thurb. in S. Wats. Bot. Calif.* ii. 292.

Genus *Eleusini* præ aliis affine, nunc tamen *Cynodonti* nunc *Diplachni* v. *Poe* accedit, in sectiones 2 dividitur:—

1. *Pseudocynodon*. Spiculæ 1-floræ, rarissime 2-floræ, glumis vacuis florente sæpius longioribus. Huc pertinent *L. uniflora*, Hochst. (*Cynodon gracilis*, Nees), *L. Neesii*, nob. (*Cynodon Neesii*, Thw.) et *L. polystachya*, Benth. (*Cynodon polystachyus*, Br.), duæ ultimæ forte unius varietates.

2. *Euleptochloa*. Spiculæ 2- $\infty$ -floræ, glumis vacuis spicula brevioribus. Huc referendæ icones supra citatæ.

*RABDOCHLOA*, Beauv. *Agrostogr.* 84, t. 17, f. 3, includit species *Leptochloæ*, quibus glumæ breviter aristatæ.

*L. dubia*, Nees (*Chloris dubia*, H. B. et K.), est nobis *Diplachnis* species. Planta Lorentziana a Grisebachio sub nomine *Leptochloæ fascicularis*, A. Gr., distributa, est *Panicum sanguinale* var.; *L. (Diplachne) fascicularis*, A. Gr., est vera *Diplachnis* species, ad Americam borealem limitata.

193. *Buchloë*, Engelm. in *Trans. Acad. Sc. St. Louis*, 1859, 432, t. 12, 14. (Sesleria, Nutt. *Gen. N. Am. Pl.* i. 64, non Linn. Bulbilis, Rafin. in *Journ. Phys.* lxxxix. 262. Calanthera, Nutt. (nec Kunth) MS.; Hook. *Kew Journ.* viii. 18.)—Spiculæ dioicæ, valde dissimiles, ♂ 2-3-floræ, secus rhachin continuum spicæ brevis complanatæ unilateralis sessilis, 2-seriatim confertæ, rhachilla continua. Glumæ 2 inferiores vacuæ membranaceæ, muticæ, 1-nerves, valde inæquales; florentes longiores, latiores, 3-nerves; palea gluma paullo brevior, 2-nervis. Stamina 3. Pistilli rudimentum 0. Spiculæ ♀ 1-floræ, in spica unilaterali in capitulum cenchroideum contracta sessiles, glumis majoribus induratis basi connatis involucrium simulantibus. Gluma infima, quoad spicam interior, parva, membranacea (interdum deficiens ?) v. in infima spicæ spicula secundæ subsimilis; secunda vacua, maxima, dura, basi concava, apice 3-loba, lobis angustis medio lateralibus longiore; florens angusta, fere hyalina et rigidula, apice breviter 2-fida v. subintegra, paleam latam convolutam 2-nervem floremque involvens. Staminodia 0. Styli distincti, longi, stigmatibus elongatis breviter plumosis. Caryopsis ovata, a dorso compressiuscula, antice interdum concava, glumis inclusa, libera.—Gramen perenne, reptans v. stoloniferum, ramis foliatis breviter adscendentibus, foliis angustis planis. Spicæ ♂ ad apicem pedunculi 2-3, breviter pedicellatæ, confertæ, secundæ, ♀ sæpius 2, vix e vaginis foliorum superiorum exsertæ.

Species 1, Americæ borealis præsertim regionis Mexicano-Texanæ incolæ. Torr. *Bot. Emory Exped.* t. 10 (Sesleria). *Fourn. in Bull. Soc. Bot. Belg.* xv. 471.

194. ? *Jouvea*, Fourn. in *Bull. Soc. Bot. Belg.* xv. 475.—Spiculæ unisexuales, ♂ ignotæ. Spiculæ ♀ 1-floræ, in spica cylindracea rhachi immersæ et in dimidia parte inferiore adnatæ. Glumæ 3, exterior cartilaginea et secunda interior vacuæ, rhachi ad medium adnatæ; florens minor angusta; palea angusta. Lodiculæ triangulares. Stylus elongatus, stigmatibus exsertis. Caryopsis . . .—Gramen littoreum, junciforme, 1-1½-pedale, foliis brevibus acutis pungentibus. Spicæ fœminæ 1-2 terminales, spiculis in quaque spica 1-3 alternis immersis. (*Char. ex Fourn.*)

Species 1, Mexicana, a nobis non visa. Genus ex Fourniero *Buchloi* affine.

195. *Opizia*, Presl, *Rel. Hænk.* i. 293, t. 41, f. 1 ad 11.—Spiculæ unisexuales, monoicæ v. sæpius dioicæ, 1-floræ, ♂ in spicas graciles alternas dispositæ. Glumæ integræ, 2 inferiores vacuæ, infima dimidio minor, secunda spiculam non æquans, tertia florens obtusa, 1-nervis; palea 2-nervis. Lodiculæ elongatæ, obtusæ. Spiculæ ♀ secus rhachin elongatam spicæ unicæ unilateralis discretæ. Gluma infima vacua brevis, obtusa, pilosa, cum lateribus secundæ adnexa, secunda vacua, coriacea, involucriformis, longe 3-aristata, involuta, lateribus antice coadunatis; tertia florens ampla, compressa, superne marginata, apice 2-loba, superiores 2-3 vacuæ longe aristatæ; palea gluma minor, obtusa, 2-carinata, caryopsin subcordiformem compressam stylo persistente mucronatam involvens. Lodiculæ longe lanceolatæ.—Gramen late repens, foliis (ex Presl) brevibus rigidulis planis. (*Char. ex Fourn.*)

Species 1, Mexicana, a nobis non visa. *Fourn. Gram. Mex.* 134. Genus fide Fournieri quoad plantam ♂ a *Buchloë* vix distinguendum, planta ♀ valde diversa; character Preslii non in omnibus cum Fournieriano convenit.

## TRIBUS XI. FESTUCEÆ.

196. **Pommereulla**, Linn. f. *Gen. Nov. Gram.* 33, in *Amæn. Acad.* x.—Spiculæ 2-5-floræ, turbinatæ, in spica densa subsessiles, rhachilla supra glumas 2 inferiores articulata breviterque producta, inter cæteras brevissima, continua, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, fere hyalinæ, carinatæ, spicula paullo breviores, extima 1-nervis, secunda longior 3-nervis, 2 sequentes supra articulationem vacuæ, florentibus appressæ easque involucrant, 4-fidæ, lobis hyalinis lanceolatis acutis v. seta brevi acuminatis; 2-5 florentes involucrantibus similes nisi paullo minores, summa minor vacua v. floris rudimentum fovens; palea intra glumas florentes latiuscula, juxta margines 2-carinata. Stamina 2 v. 3, antheris parvis. Styli distincti, brevissimi, tenuiter penicillato-stigmatosi. Caryopsis intra glumas involucrantibus parum induratas subconatasque inclusa, ovata v. obovato-oblonga, exsulca, libera, pericarpio tenuissimo sæpe laxo.—Gramen pumilum (annuum?) cæspitosum v. stoloniferum, caulibus brevissimis vaginis foliorum imbricatis obtectis, laminis brevibus planis. Spica brevis, intra vaginam folii supremi semi-inclusa.

Species 1, Indiæ orientalis incola. Beauv. *Agrostogr.* 91, t. 18, f. 6. Kunth in *Ann. Sc. Nat. ser.* 1, xxiii. t. 7; *Enum. Pl.* i. 320, excl. *P. monoica*. Roxb. *Corom. Pl.* t. 131.

197. **Pappophorum**, Schreb. *Gen. Pl.* 787.—Spiculæ 1-2- rarius 3-floræ, angustæ, rhachilla supra glumas inferiores articulata, floribus 1-2 hermaphroditis, summo sæpe masculo. Glumæ 2 inferiores vacuæ, persistentes, membranaceæ, acutæ, carinatæ, lateribus enervibus v. utrinque 1-3-nervibus; florentes basi latæ subcoriaceæ, obscure  $\infty$ -nerves, in lobos plus minus aristiformes 9-23 sæpe inæquales divisæ; superiores 2-3 angustiores, vacuæ v. una alterave paleam v. floris rudimentum foventes; palea gluma florente inclusa, latiuscula, juxta margines 2-carinata, interdum glumæ partem integram excedens. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis ovoidea v. oblonga, a dorso leviter compressa, glabra, gluma paleaque inclusa, libera.—Gramina perennia (v. rarius annua?) cæspitosa, humilia v. elata, foliis angustis scititate sæpius convolutis. Panícula dense spiciformis, simplex v. rarius ramosa v. subinterrupta, nunc longissima nunc fere in capitulum contracta, aristis numerosis sæpe subsericeo-plumosa.

Species vix 20, per regiones calidiores utriusque orbis late dispersæ. Kunth, *Enum. Pl.* i. 254. Steud. *Syn. Pl. Glum.* i. 199. Benth. *Fl. Austral.* vii. 600. Fourn. *Gram. Mex.* 133.

Genus in sectiones 2 sequentes, facile pro generibus propriis habendas dividitur:—

1. **Polytraphis**, Trin. Glumæ inferiores vacuæ, præter carinam enerves; glumæ florentis aristæ 13-23, inæquales, nonnullæ basi membranaceæ v. planæ, aliæ a basi tenues, brevissime barbellatæ v. serrulatæ nec plumosæ. Species paucæ, Americanæ tropicæ, inter se parum distinctæ. Beauv. *Agrostogr.* 82, t. 17, f. 1. Vahl, *Symb.* t. 51. Kunth, *Rev. Gram.* t. 131, 132. Dall in *Mart. Fl. Bras.* ii. iii. t. 17. **POLYTRAPHIS** (pro genere admissa), Lindl. *Veg. Kingd.* 115.

2. **Enneapogon**. Gluma vacua infima 3-5-nervis, secunda 5-7-nervis; glumæ florentis aristæ 9, parum inæquales, alternæ interdum basi latiores v. exteriores paullo breviores, omnes (nisi in *P. scabro*, Kunth) plus minus plumosæ. Species ad 16, pleræque gerontogæ, 1 v. 2 Americanæ boreales. Kunth, *Rev. Gram.* t. 51. Jaub. et Spach, *Ill. Pl. Or.* t. 323, 324. Wawra in *Maxim. Reise, Bot.* t. 94. **ENNEAPOGON**, Desv. *Journ. Bot.* i. (1813) 70. Beauv. *Agrostogr.* 81, t. 16, f. 11.

Sect **EURHAPHIS**, Trin., pro genere proprio recepta in Lindl. *Veg. Kingd.* 115, excluso tamen synonymo *Corethrum*, Vahl, est Boissiera, Hochst. *Corethrum* potius ad *Boutelouam multisetam* referimus.

198. **Cottea**, Kunth, *Rev. Gram.* i. 84, 281, t. 52; *Enum. Pl.* i. 256.—Spiculæ  $\infty$ -(2-6)-floræ, laxiuscule paniculatæ, rhachilla sub floribus fertilibus articulata; floribus hermaphroditis v. summo masculo. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, membranaceæ, acutæ v. 3-dentatæ, 7-9-nerves; florentes 9-11-nerves, valde oblique et irregulariter 9-11-lobæ, lobis erectis plerisque aristiformibus, nonnullis (3-5) hyalino

dilatatis mucronatis v. 1-2-aristatis; palea latiuscula, juxta margines 2-carinata, glumæ partem integram subsuperans. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis ovata v. oblonga, a dorso leviter compressa, glabra, gluma paleaque parum rigescentibus inclusa, libera.—Gramen erectum, ramosum, foliis anguste linearibus planis. Panicula laxè oblonga, ramis vix ramulosis, spiculis omnibus pedicellatis erectis.

Species 1, in America calidiore a Brasilia usque ad Mexicum extensa, ad oras siccas maris Pacifici copiose crescens (*Spruce*). Genus vix non *Pappophori* sectio.

199. **Bolssiera**, *Hochst. in Steud. Syn. Pl. Glum. i.* 200.—Spiculæ 2-3-floræ, lineares, in panicula brevi densa confertæ, rhachilla sub floribus articulata glabra, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, persistentes, tenues, acutæ, spicula breviores, extima sæpius 3-nervis, secunda major, 5-nervis; florentes circa florem convolutæ, apice hyalinæ lobatæque, nervis 5-9 validis pone lobos in aristas longas rectas productis; glumæ superiores  $\infty$  vacuæ, imbricatæ, 5-9-nerves aristatæque v. summæ depauperatæ; palea gluma florenti inclusa, hyalina, juxta margines 2-carinata. Stamina 3, filamentis abbreviatis, antheris ovatis v. breviter oblongis. Stylus brevissimus, membranaceo-dilatatus, sub-2-fidus, breviter penicillatus. Caryopsis linearis, antice sulcata, gluma inclusa, libera.—Gramen pumilum, annuum, basi ramosum, foliis planis.—Panicula densa, ovoidea, interdum dimidium plantæ efficiens, aristis numerosis longis erectis *Bromum* simulans.

Species 1, Orientalis. *Jaub. et Spach, Ill. Pl. Or. t.* 197.

In floribus e speciminibus variis examinatis stylum semper invenimus qualis in icone citata delineatur, ab omnibus Gramineis nobis notis diversum.

200. **Schmidtia**, *Steud. in J. A. Schmidt, Fl. Cap. Virid. Ins.* 144.—Spiculæ  $\infty$ - (4-6-) floræ, paniculatæ, rhachilla inter flores articulata, floribus hermaphroditis v. summo masculo, ultra flores glumam vacuum ferens. Glumæ 2 inferiores vacuæ, persistentes, carinatæ, acutæ, exaristatæ, 5-7-nerves, parum inæquales, spicula denum breviores; florentes 5-nerves, apice 2-seriatim 9-lobæ, lobis 4 interioribus hyalinis oblongis lanceolatisve mucronulatis, 5 exterioribus alternis longioribus aristiformibus rectis; palea lata, juxta margines 2-carinata. Stamina 3, antheris longiusculis. Styli 2, distincti, tenuissime capillacei, stigmatibus plumosis. Caryopsis a dorso leviter compressa, exsulca, glabra, gluma paleaque inclusa, libera.—Gramina (perennia?) multicaulia, adscendentia, pubescentia, foliis planis v. siccitate convolutis. Panicula pedunculata, angusta, laxior tamen quam in *Pappophoro*, spiculis multo longioribus.

Species 2, inter se valde affines, altera insularum Capitis Viridis incola, altera per Africam tropicam et australem late dispersa.

201. **Tridodia**, *R. Br. Prod.* 182. (*Uralepis*, *Nutt. Gen. N. Amer. Pl. i.* 62, *err. typ. Uralepsis*.)—Spiculæ  $\infty$ -floræ, stricte v. laxè paniculatæ, rhachilla inter flores articulata pilosa v. glabra, floribus hermaphroditis v. summo masculo. Glumæ rigidulæ, 1-3-nerves, 2 inferiores vacuæ, carinatæ, acutæ, muticæ, cæteris longiores v. breviores; florentes imbricatæ, basi dorso rotundatæ, variegatæ pilosæ v. glabræ, apice 3-lobæ v. 3-dentatæ, lobis æqualibus v. intermedio mucroniformi v. breviter aristiformi, lateralibus membranaceis v. breviter mucronatis nunc minimis; gluma summa interdum vacua v. paleam solam fovens; palea lata, tenuis, concava, carinis 2 fere marginalibus. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis glabra, a dorso compressa facieque sæpe concava, rarius subteres, gluma paleaque inclusa, libera.—Gramina perennia, sæpe dura, basi ramosa v. stolonifera, foliis angustis sæpius rigidis v. convolutis teretibus interdum infauste pungentibus, rarius mollibus planis. Panicula terminalis, nunc angusta, sub-simplex, paucispiculata, nunc ampla fere *Eragrostis* floribunda, v. tenuis laxissime effusa ramulis filiformibus. Spiculæ sæpissime erectæ.

Species ultra 20, Europæ, Americæ borealis et australis extratropicæ, Africæ australis et subtropicæ, Australiæ et Novæ Zelandiæ incolæ, in America tropica perpaucae. *Beauv. Agrostogr.* 76, t. 15, f. 9. *Kunth, Enum. Pl. i.* 319. *Benth. Fl. Austral. vii.* 605.

Genus imprimis ad glumarum florentium formam in sectiones sequentes dividitur :—

1. *Isotria*. Glumæ florentes fere ad medium in lobos 3 anguste lanceolatas subæquales divisæ. Species 3 Australianæ: *T. Mitchellii*, Benth., *T. pungens*, R. Br., et *T. Cunninghamii*, Benth.

2. *Uralepis*. Glumarum florentium lobi v. dentes laterales sæpius membranacei latiusculi mutici, interdum minimi, medius mucroniformis v. breviter aristiformis. Species ad 16, Americanæ et Australasiæ cum una Europæa. *Host, Gram. Austr.* ii. t. 72 (*Poa*). *Reichb. Ic. Fl. Germ.* t. 71. *Nees, Gen. Fl. Germ. Monocot.* i. n. 51. *H. B. et K. Nov. Gen. et Sp.* t. 47, 48. *Kunth, Rev. Gram.* t. 67, 68 (*Uralepis*), et t. 135, 215 (*Leptochloa*). *Dall in Mart. Fl. Bras.* ii. iii. t. 27 (*Uralepis*). *Fourn. Gram. Mex.* 110 (*Uralepis*). *SIEGLINGIA*, Bernh. *Verz. Pfl. Erf.* 44, ex *Kunthio*. *MERISACHNE*, Steud. *Syn. Pl. Glum.* 117.

3. *Tricuspis*. Glumarum florentium lobus medius mucroniformis, laterales latiusculi ut in *Uralepide*, sed nervi laterales plus minus ad margines loborum lateralium in mucrones breves excurrentes. Species 3, boreali-Americanae. *Jacq. Ecl. Gram.* t. 16. *TRICUSPIS*, Beauv. *Agrostogr.* 77, t. 15, f. 10. *Torr. Fl. N. York*, t. 156. *TRIDENS*, Ram. et *Schult. Syst.* ii. 34. *WINDSORIA*, Nutt. *Gen. Pl. N. Amer.* i. 70.

*LEPTOCARYDION*, *Hochst. in Pl. Schimp. exs. n.* 2308, est *T. plumosa*, Benth. (*Leptochloa plumosa*, Anders. in *Peters Reise Mozamb. Bot.* 557), species insignis panicula densa angusta fere spiciformi more *Trichloridis* mollissima, sed structura spicularum omnino *Triodia*. Folia sessilia, plana, lanceolata, mollia. *Leptochloa mollis*, Kunth, *Rev. Gram.* t. 135, huic affinis, a nobis non visa, ex icone differt inflorescentia laxiore fere *L. Lindleyana*.

*TRICHONEURA*, Anders. in *K. Vetensk. Akad. Stockh. Handl.* 1853, 148, est *Leptochloa Lindleyana*, Kunth, *Rev. Gram.* t. 215, species Galapagensis, *Diplachni fusciculari*, Beauv., habitu subsimilis, sed characteres potius *Triodiae* ostendit.

*RHOMBOLYTRUM*, Link. *Hort. Berol.* ii. 296; *E. Desv. in C. Gay. Fl. Chil.* vi. 385, t. 81, est *T. filiformis*, Nees in Steud. *Syn. Pl. Glum.* i. 249, species Chilensis, duabus ex America boreali (*T. albescens* et *T. trinervi-glumi*, Munro) valde affinis, glumarum florentium lobis lateralibus minimis vix v. non mucronatis, intermedio brevissime mucroniformi. Illi etiam affinis videtur *Catabrosa antarctica*, Hook. f. *Fl. Ant.* i. 102, t. 56. *T. kerguelensis*, Hook. f. *Fl. Ant.* ii. 379, t. 138 (*Poa in tab.*), ab auctore in *Bot. Kerg. Isl. in Phil. Trans.* clxviii. 22, ad *Festucam* refertur.

202. **Diplachne**, Beauv. *Agrostogr.* 80, t. 16, f. 9.—Spiculæ  $\infty$ -floræ, angustæ, secus rhachin continuam spicarum seu ramorum paniculae sessiles v. breviter pedicellatae, erectæ, rhachilla supra glumas inferiores sæpeque inter flores articulata, floribus hermaphroditis v. summo masculino. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, membranaceæ, carinatae, acutæ, muticæ, inaequales; florentes paullo majores, 1-nerves, apice sæpius 2-dentatae et inter dentes mucronatae v. breviter aristatae; palea parum brevior, hyalina, 2-nervis v. 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblongo-ovoides, sub-3-quetra v. compressiuscula, gluma paleaque laxè inclusa, libera.—Gramina caespitosa, sæpe elatiuscula, foliis angustis planis. Spicæ secus pedunculum elongatum plures, elongatae, tenues, erectiusculæ, v. rarius spica unica terminalis, spiculis fere linearibus secus rhachin sparsis sæpe dissitis erectis subsecundis.

Species ad 14, per regiones calidiores utriusque orbis dispersæ, *Kunth, Enum. Pl.* i. 380 (*Molinia* sp. n. 2 et 3). *Reichb. Ic. Fl. Germ.* t. 71. *Nees, Gen. Fl. Germ. Monocot.* i. n. 74. *Ledeb. Ic. Fl. Ross.* t. 227 (*Molinia*). *Benth. Fl. Austral.* vii. 618. *Dall in Mart. Fl. Bras.* ii. iii. t. 28 (*Uralepis* et *Diplachne*).

Genus cum *Triodia* v. cum *Leptochloa* sæpe confusum, et priori certe valde affine, nec semper facile distinguendum, a *Leptochloa* longius differt spicularum forma, glumis florentibus plus minus distinctè dentatis habituque. *D. alopecuroides*, *Hochst. ex Schweinf. Beitr. Pl. Æth.* 299 (nomen tantum), est *Triodia plumosa*, Benth.

203. **Triplasis**, Beauv. *Agrostogr.* 81, t. 16, f. 10. (*Diplocea*, *Rafn. in Sillim. Journ.* i. 252.)—Spiculæ  $\infty$ -floræ, paniculatae, rhachilla inter flores articulata, glabra, floribus hermaphroditis v. summo masculino. Glumæ 1-3-nerves, 2 inferiores vacuæ, carinatae, acutæ, muticæ, cæteris breviores; florentes secus rhachillam dissitæ, basi dorso rotundatae, profunde 3-lobæ, lobis glabris ciliatisve, lateralibus angustis acutissimis fere in aristas productis, intermedio longiore aristiformi sæpe subflexuoso-patente; palea brevior, lata, compressa, 2-carinata, carinis longe ciliatis. Stamina 3. Styli breves, distincti,

stigmatibus plumosis. Caryopsis . . .—Gramina perennia, foliis angustissimis convolutotereetibus v. basi planis. Panicula tenuis, parum ramosa, spiculis breviter pedicellatis erectiusculis.

Species 2, boreali-Americanæ (*Uralepis cornuta*, Ell., et *U. purpurea*, Nutt.).

*Triplasis setacea*, Griseb. Pl. Lorentz, est *Diplachne spicata*, Döhl.

204. **Scleropogon**, Philippi, Sert. Mendoc. ii. 47. (Lesourdia, Fourn. in Bull. Soc. Bot. Fr. xxvii. 102, t. 3, 4.)—Spiculæ unisexuales, 2- $\infty$ -floræ, in panicula angusta paucæ, rhachilla utriusque sexus elongata. Spiculæ  $\sigma$   $\infty$ -floræ, rhachilla inarticulata glabra. Glumæ paleaceæ, angustæ, acutæ, exaristatæ, 3-nerves, 2 inferiores vacuæ paullo minores inæqualesque; florentes interdum apice minute 3-dentatæ, dente medio mucroniformi; palea angusta, rigida, glumæ subæqualis, 2-carinata, 2-dentata. Stamina 3. Ovarii rudimentum 0. Spiculæ  $\varphi$  basi 1- $\infty$ -floræ, superne steriles, rhachilla sub floribus articulata stipitiformi pubescente, inter glumas steriles continua. Glumæ 2 inferiores vacuæ, persistentes, valde inæquales, quam in spiculis  $\sigma$  majores; florentes  $\infty$ , rigidæ, angustæ, circa florem convolutæ, costis 3 in aristas longissimas tenues rigidas sæpe subtortas productis, additis lobis brevibus lanceolatis hyalinis ad latera aristarum lateralium v. inter aristas; summæ steriles florentibus similes nisi tenuiores v. ad aristas tenues reductæ; palea rigidula, angustissima, gluma florente inclusa. Staminodia 0. Styli distincti, elongati, stigmatibus pilis brevibus subplumosis. Caryopsis angusta, elongata, gluma inclusa, libera.—Gramina perennia, cæspitosa v. repentia, basi ramosa v. stolonifera. Panicula stricta, parum breviterque ramulosa. Spiculæ paucæ, erectæ, masculæ et fœminæ aspectu diversissimæ, in caulibus v. in plantis diversis v. in eodem pedunculo mixtæ dissitæque fere alternæ.

Species 4, quarum una Chilensis, cæteræ regionis Mexicano-Texanæ incolæ.

205. **Eremochloe**, S. Wats. Bot. King Exped. 382, t. 40.—Spiculæ 1-floræ, in panicula brevi densa confertæ, rhachilla supra glumas inferiores articulata longe pilosa ultra florem in stipitem glumiferum producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ, sub articulatione persistentes v. sigillatim deciduæ, carinatæ, acutæ, membranaceæ, subscariosæ, præter carinam enerves, subæquales, 2 sequentes vacuæ, fertili arcte appressæ, 3-nerves, 3-fidæ, lobo medio aristiformi v. basi parum dilatato, lateralibus hyalinis denticulatis mucronatis v. breviter aristatis; florens inter illas sessilis, basi longe pilosa, carinata, fere hyalina, lobis 3 subæqualibus in aristas desinentibus; gluma summa vacua, anguste 3-partita, quasi ex aristis 3 constans; palea compressa, complicato-2-carinata, sæpe 2-partita. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis teres v. a dorso leviter compressa, palea glumisque inclusa, libera.—Gramina humilia, perennia, ramosa, foliis confertis brevibus rigidis convolutis, superioribus in caule brevi 2-3 longe vaginatis. Panicula paucispiculata, e vagina folii summi vix exserta, pilis mollibus nitens.

Species 2, Novo-Mexicanæ, et Californicæ.

206. **Triraphis**, R. Br. Prod. 185.—Spiculæ  $\infty$ -floræ, secus ramulos paniculæ angustæ subfasciculatæ, rhachilla inter flores articulata, floribus hermaphroditis v. summo masculo v. rudimentario. Glumæ 2 inferiores vacuæ, persistentes, angustæ, 1-3-nerves, acutæ v. mucronatæ, extima integerrima, secunda paullo longior, interdum ad latera mucronis minute dentata; florentes 3- $\infty$ -nerves, apice 3-lobæ, lobis a basi plana in aristas rectas rigidas productis, intermedia longiore, additis interdum lobis membranaceis brevibus inter aristas v. ad latera exteriorum; palea brevior, inclusa, juxta margines 2-carinata, sæpius 2-dentata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, gluma indurata v. membranacea inclusa, libera.—Gramina perennia, foliis angustis subulato-acuminatis v. a basi convolutotereetibus. Panicula angusta, nunc densissima mollisque, nunc laxior sæpe valde elongata, spiculis erectis.

Species 5 v. 6, quarum una adhuc inedita Africæ australis incolæ, cæteræ omnes Australianæ. Benth. Pl. Austral. vii. 603.

Genus quoddam paniculam et glumarum lobos polymorphia. In *T. apiculata* R. Br. panicula mollissima.

dense multispiculata, glumæ florentes 3-nerves, lobis breviter membranaceis ad latera aristæ centralis; in specie Capensi panicula mollis sed laxior, glumæ lobi membranacei ad latera exteriora aristarum lateralium; in *T. pungente*, Br., et in *T. bromoide*, F. Muell., panicula laxa, glumæ florentes coriaceæ, basi vix nervosæ, superne plus minus distincte  $\infty$ -nerves, 3-aristatæ, absque lobis membranaceis; in *T. danthonioides*, F. Muell., panicula longa laxa, glumæ florentes coriaceæ,  $\infty$ -nerves, lobis membranaceis ut in specie Capensi ad latera exteriora aristarum exteriorum.

*T. microdon*, Benth. Fl. Austral., e genere forte removenda sed affinitas adhuc incerta. *T. capensis*, Nees, ad *Danthoniam* referenda, est eadem ac *D. radicans*, Steud.

207. ? *Gouinia*, Fourn. Gram. Mex. 103.—Spiculæ 4-floræ, paniculatæ, rhachilla inter flores articulata pilosa, ultra flores producta glumifera, floribus aliis hermaphroditis aliis unisexualibus. Glumæ 2 inferiores vacuæ, inæquales, spicula multo breviores, multinerves, setigeræ; florentes inter se distantes, 3-5-nerves, membranaceæ, dorso pilosæ, apice 2-dentatæ, inter dentes aristatæ; summa vacua; palea 2-carinata, acuta, integra v. 2-dentata. Stamina 3. Styli brevissimi, stigmatibus subsessilibus plumosis. Caryopsis ovata, pubescens, sulcata, libera.—Gramen cæspitosum (2-6-pedale), foliis planis. Spiculæ secus paniculæ radios alternos longos remotos primum erectos demum divaricatos appressæ, alternæ, breviter pedicillatæ, imæ et summæ femineæ, mediæ masculæ, v. fere omnes hermaphroditæ. (Char. ex Fourn.)

Species 1, Mexicana et Floridana, a nobis non visa.

Genus ex caractere dato potius *Triodia* quam *Arundini* affine videtur.

208. ? *Calamochloa*, Fourn. in Bull. Soc. Bot. Fr. xxiv. 178.—Spiculæ 2-floræ, spicatæ, spicis paniculatis, rhachilla sub floribus pilifera, ultra flores producta glumifera. Glumæ 2 inferiores vacuæ subæquales; florentes 5-lobæ, lobis 3 (lateralibus et centrali) subulatis; palea gluma brevior, truncata, plicata, obscure 2-dentata, basi et margine villosa.—Gramen strictum, foliis convolutis. Panicula apicalis, ovata, spiculis 3-4 spicatis, spicis strictis aggregatis. (Char. ex Fourn.)

Species 1, Mexicana, a nobis non visa. Genus quoad affinitates dubium, an ad *Pappophoreas* referendum?

209. *Gynerium*, Humb. et Bonpl. Pl. Æquin. ii. 112, t. 115.—Spiculæ dioicæ, laxæ 2- $\infty$ -floræ, rhachilla inter flores sæpius elongata, in utroque sexu articulata, sæpe pilosa, pilis longis tamen flores  $\varphi$  cingentibus plerisque a glumis oriundis. Glumæ membranaceo-scariosæ v. hyalinae, angustæ, 2 inferiores vacuæ spiculam sæpe æquantes, parum inæquales, 1-3-nerves v. fere enerves, acute acuminatæ; florentes 3-nerves, acumine plus minus in aristam producto, sub flore  $\sigma$  sæpius glabræ, sub flore  $\varphi$  basi dorso et margine pilis longis ciliatæ; palea in flore  $\sigma$  gluma parum brevior, in  $\varphi$  multo brevior, hyalina, 2-nervis v. 2-carinata, integra v. 2-dentata. Stamina in flore  $\sigma$  3. Styli in flore  $\varphi$  breves, distincti, stigmatibus plumosis. Caryopsis anguste oblonga, gluma paleaque tenuibus arcte inclusa, libera, subteres, exsulca.—Gramina perennia, elata, basi sæpe sublignosa; foliis longissimis angustis ad basin caulis confertis. Panicula magna, densa v. demum laxior nutansque, argentea v. fuscescens, sæpe plucherrima.

Species 3, Americæ tropicæ et subtropicæ incolæ. Beauv. Agrostogr. 138, t. 24, f. 6. Steud. Syn. Pl. Glum. i. 197 (excl. sp. 5 et 6). Dall in Mart. Fl. Bras. ii. iii. 49, t. 14, 15. Cfr. etiam ic. plures in diariis recentibus hortulanorum.

210. *Ampelodesma*, Beauv. Agrostogr. 78, t. 15, f. 11. (Ampelodesmos, Link, Hort. Berol. i. 136.)—Spiculæ 2- $\infty$ -floræ, ample paniculatæ, rhachilla supra glumas inferiores et inter flores articulata penicilloque pilorum instructa, floribus hermaphroditis v. summo masculo. Glumæ subcoriaceæ, 2 inferiores vacuæ, angustæ, parum inæquales, glabræ, acute v. acuminatæ, 3-5-nerves; florentes latiores, 5-nerves, apice breviter 2-fide, inter lobos mucronatæ, dorso pilosæ; palea gluma parum brevior, 2-carinata, apice 2-dentata v. 2-mucronata. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis

oblonga, apice villosa, gluma paleaque inclusa, libera.—Gramen perenne, elatum, foliis angustis longis plus minus convolutis et acumine longo tereti-subulato terminatis. Panicula longa, densa, secunda, subnutans.

Species 1 (v. 2?), regionis Mediterraneæ incola. *Kunth, Enum. Pl. i. 249. Desf. Fl. Atl. t. 33, 34 (Arundo).*

Genus *Arundini* quam maxime affine, differt glumis rigidioribus 5-nerviis, et ovario caryopsique apice hirsutis. Rhachilla inter flores penicillo pilorum instructa et styli breves etiam in *Arundine madagascariensi* observantur.

**211. Arundo, Linn. Gen. n. 93, pro parte.** (*Donax, Beauv. Agrost. 77, pro parte, t. 16, f. 4, 5, t. 19, f. 1. Scolochloa, Mert. et Koch, Deutschl. Fl. i. 528. Amphidonax, Nees in Lindl. Introd. Nat. Syst. ed. 2, 449.*)—Spiculæ 2-∞-floræ, ample paniculatæ, rhachilla supra glumas inferiores et inter flores articulata glabra v. penicillo brevi instructa, pilis longioribus e glumis ipsis oriundis, floribus hermaphroditis v. summo v. spicularum inferiorum masculis. Glumæ 2 inferiores vacuæ, angustæ, parum inæquales, glabræ, spiculæ vix v. non breviores, tenuiter v. interdum rigidule membranaceæ, acutæ v. acuminatæ, 3-nerves; florentes latiores, 3-nerves (v. rarius additis nervis tenuibus brevibus intermediis sub-5-nervis?), dorso pilosæ, plerumque apice plus minus 2-fidæ cum mucrone v. arista brevi inter lobos, infima tamen sæpe vacuis similior integraque; palea gluma brevior, hyalina, 2-carinata. Stamina 3. Styli distincti, elongati v. breves, stigmatibus plumosis. Caryopsis oblonga, gluma paleaque inclusa, libera, glabra.—Gramina perennia, elata, caule interdum basi subligioso, foliis planis. Panicula densa, nunc longissima stricta, v. demum effusa.

Species nobis notæ 6 v. 7, quarum 1 v. 2 inter se valde affines per regionem Mediterraneam Indiam orientalem et Americam calidiorem latissime diffusæ in aliis terris interdum inquilinæ, tertia regioni Mediterraneæ propria, quarta Indiæ orientalis Archipelagi Malayani et Madagascariæ incola, 2 (v. unius varietates?) Novo-Zelandicæ, 2 v. 3 Americanæ andinæ v. antarcticæ. *Kunth, Enum. Pl. i. 246; Rev. Gram. t. 48, 49. Host, Gram. Austr. iv. t. 38. Reichb. Ic. Fl. Germ. t. 109. Nees, Gen. Fl. Germ. Monocot. i. n. 36. Ten. Fl. Nap. t. 108. Buchan. N. Zeal. Grass. t. 27, 28. H. B. et K. Nov. Gen. et Sp. t. 688. Brongn. in Duperr. Voy. Coq. Bot. t. 6 (Ampelesmos). Dall in Mart. Fl. Bras. ii. iii. t. 13.*

*A. Gayana*, E. Desv. in C. Gay, Fl. Chil. vi. 326, species nobis ignota, ex descr. auctoris ob aristam tortam e genere excludenda est. *A. Reynaudiana*, Kunth, e Pegu, gluma tertia vacua, est ex Munroio eadem ac *A. madagascariensis*, Kunth, cui tamen etiam in speciminibus Indicis florem plus minus perfectum in gluma tertia invenimus.

**212. Phragmites, Trin. Fundam. Agrostogr. 134, pro parte.** (*Arundo, Beauv. Agrostogr. 60, t. 13, f. 2. Czernya, Presl, Cyp. et Gram. Sicul. 22, ex Kunth.*)—Spiculæ 2-∞-floræ, ample paniculatæ, rhachilla inter flores articulata et pilis longis sericeis glumas fertiles circumdantibus instructa, flore infimo abortu masculino, cæteris hermaphroditis. Glumæ tenues, angustæ, carinatæ, infima brevis, vacua, sæpius 1-nervis, secunda pariter vacua, spicula vix brevior, 3- v. rarissime sub-5-nervis, acuta v. acute acuminata, tertia secundæ similis nisi longius acuminata florem masculum v. sterilem fovens, cæteræ florentes angustiores, acumine longiore tenuioreque sepe aristiformi, summa interdum vacua v. abortiva, omnes glabræ nec ciliatæ; palea gluma multo brevior, hyalina, 2-carinata. Stamina 3. Styli distincti, breves nunc brevissimi, stigmatibus plumosis. Caryopsis oblonga, exsulca, gluma paleaque laxè inclusa, libera.—Gramina perennia, elata, foliis planis. Panicula ampla, pilis longis spicularum insignis, variat densissima erecta, v. laxè nutansque.

Species v. varietates insignes 2, per regiones temperatas et subtropicas utriusque orbis latissime dispersæ, inter tropicos rariores. *Kunth, Enum. Pl. i. 250; Rev. Gram. 277, t. 50. Host, Gram. Austr. iv. t. 39. Reichb. Ic. Fl. Germ. t. 108. Nees, Gen. Fl. Germ. Monocot. i. n. 37.*

Species communis magnopere variat statura 4-20-pedali, spicularum glumarumque magnitudine etc., et ab auctoribus in plures dividitur, omnes tamen unius varietates videntur. Kunth, Enum. l. c., et auctores plerique stylos *Phragmitidis* uti omnium *Arundinearum* elongatos dicunt, quod tamen in sola *Arundine Donacæ* observatur. Kunth ipse in Rev. Gram. l. c. stylos breves descripsit et addidit.

*P. macer*, Munro in Trim. Journ. Bot. 1877, 350. species Japonica habitu tenui ab *Arundineis* discrepans, potius *Arundini* ipsi quam *Phragmili* referenda videtur, nam gluma florens infima a vacuis distans florem hermaphroditum fovet; species etiam quodammodo *Ampelodesmo* affinis videtur. Genera hæc tria inter se valde affinia, facile in unum conjungenda.

TRICHOO. Roth in Rœm. Arch. i. iii. 37, est *Arundo Karka*, Retz, Obs. iv. 21, Roxb. Fl. Ind. i. 347, gramen in India orientali frequentissimum a *Phragmite communi* non distinguendum. Genus Rothii propositum fuit ad descriptionem Retzii, qui evidenter errorem commisit a Rothio l. c. Leersio attributum, 'corollam' nempe sive glumam florentem ob angustiam suam et lanuginis densitatem in qua residet prætermisit.

213. *Monanthochloe*, Engelm. in Trans. Acad. Sc. St. Louis, 1859, 436, t. 13, 14.—Spiculæ unisexuales, parum dissimiles, 2- rarius 3-floræ, in fasciculo foliorum sæpius geminæ sessiles occultæque, singulæ foliis nonnullis stipatæ, rhachilla brevi continua præsertim in ♂ ultra flores in stipitem interdum breviter glumiferum producta. Glumæ exteriores vacuæ, foliis floralibus subsimiles, gradatim minores, distichæ, basi membranaceæ vaginantes, superne lineares, patentes, rigidæ, ∞-nerves; florentes membranaceæ, rigide hyalinæ, obtusæ v. denticulatæ, paleam 2-nervem convolutam floremque involventes. Stamina in ♂ 3. Styli in ♀ distincti, longi, stigmatibus elongatis breviter barbellato-subplumosis. Caryopsis anguste oblonga, subtriquetra, gluma paleaque inclusa, libera.—Gramen repens v. stoloniferum, foliis ad nodos distiche confertis lamina brevi rigida convoluta. Spiculæ inter folia occultæ, utriusque sexus aspectu similes, sæpissime 2-floræ, sed in ♀ flos superior solus fertilis videtur.

Species 1, Texana, in Mexico nondum reperta.

214. *Munroa*, Torr. Bot. Whipple Exped. 102 (158), errore Monroa.—Spiculæ pauci- (3-) floræ, ad axillas foliorum floralium paucae, subsessiles, rhachilla supra glumas inferiores articulata, floribus hermaphroditis, omnibus v. tertio solo fertilibus. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, lanceolatæ, acutæ, hyalinæ, enerves; florentes 3 majores, 3-nerves, integræ retusæ v. 3-fidæ, nervo centrali v. omnibus in mucronem excurrentibus; superiores vacuæ 1-2, florentibus similes nisi minores angustioresque, v. unica ad aristas 3 reducta; palea hyalina, complicata, anguste 2-carinata, florem amplectens. Stamina 3. Styli distincti, elongati, stigmatibus laxè breviterque plumosis. Caryopsis ovata v. oblonga, a latere compressa, palea glumaque inclusa, libera.—Gramina annua, humilia, multicaulia, reptantia v. diffusa, rigidula, caulibus dichotomis v. fasciculato-v. subumbellato-ramosis, foliis ad basin v. ad ramificationes confertis brevibus rigidis interdum pungentibus, vaginis insigniter striatis. Spiculæ 2-4, inter foliorum fasciculos subsessiles et fere occultæ, glumis florentibus longe ciliatis v. in eodem fasciculo glabris.

Species 3 v. 4, quarum una regionis Mexicano-Texanæ, cæteræ Americæ australis extratropice incolæ. Benth. in Hook. Ic. Pl. t. 1372.

In specie typica Texana, flores in spicula 3 fertiles, rhachilla sub quoque flore plus minus elongata, ultra florem glumas 1-2 vacuas ferente, glumæ florentes angustæ 3-nerves, apice integræ v. parum dilatatæ, nervo medio solo in mucronem producto v. rarius lateralibus brevissime excurrentibus. Caryopsis in his anguste oblonga, palea tamen multo brevior. In *M. mendocina*, Philippi, a nobis non visa, structura ex descr. auctoris Sert. Mendoc. ii. 52, ei speciei typicæ bene conformis. In specimine tamen ad Cordovam Americæ meridionalis lecto et a Grisebachio sub nomine *M. mendocina* accepto, habitu simillimo, spiculas valde diversas vidimus. Omnes jam fructiforæ sunt staminibus stylisque delapsis, glumæ 2 inferiores vacuæ iis *M. squarrosa*, Torr., similes, 2 sequentes quintæ arcte approximate, latissimæ, carinatæ, ultra medium 3-lobæ, lobis lateralibus erectis oblongo-ovatis nervo excentrico, intermedio angusto carinato mucronato, paleam angustam 2-nervem et ovarium sterile foventes; quinta fertilis inter illas sessilis, pariter 3-loba sed carina infra lobos late alata, lobis angustioribus, intermedio fere ad aristam reducto, rhachilla ultra flores producta aristis 3 terminata; palea floris fertilis gluma multo brevior lata, hyalina, anguste 2-carinata, caryopsin latiusculam arcte amplectens. Grisebach, Symb. Fl. Argent. 300, speciem alteram Argentinam a nobis non visam notis pluribus valde diversam descripsit. Genus tamen habitu ab omnibus distinctum videtur nulli nisi *Monanthochloæ* accedens.

215. **Echinaria**, Desf. *Fl. Atl.* ii. 385. (*Panicastrella*, Moench, *Meth.* 205.)—Spiculæ 2-3-floræ, globoso-capitatæ, rhachilla brevissima supra glumas inferiores et inter flores articulata, ultra flores sæpius in stipitem interdum glumiferum producta, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, parum inæquales, hyalinæ, costa valida v. interdum in gluma secunda nervis 2 in mucronem v. aristam brevem productis; florentes basi turbinatæ, 5-fidæ, lobis aristato-acuminatis demum rigidis pungentibus patentibus, medio lateralibus majore; palea rigida, 2-carinata, lobis 2 iis glumæ similibus patentibusque v. paullo minoribus. Stamina 3. Styli distincti, filiformes, a basi papilloso-stigmatosi. Caryopsis ovoidea, subteres, exsulca, gluma paleaque basi induratis inclusa, libera.—Gramen humile, annuum, foliis angustis planis. Capitulum globosum, sæpius longe pedunculatum, glumarum lobis spinescentibus echinatum. Spiculæ nonnullæ ad basin capituli sæpius parvæ, steriles, glumis paucis parvis vacuis, v. ad glumam unicam reductæ.

Species 1 per regionem Mediterraneam late dispersa. Beauv. *Agrostogr.* 83, t. 17, f. 2. Kunth, *Enum. Pl.* i. 256. Host, *Gram. Austr.* iii. t. 8 (*Sesleria*). Nees, *Gen. Fl. Germ. Monocot.* i. n. 38. Reichh.  *Ic. Fl. Germ.* t. 56. Sibth. *Fl. Græc.* t. 100 (*Cenchrus*).

216. **Ammochloa**, Boiss. *Diagn. Pl. Or.* xiii. 51. (*Cephalochloa*, Coss. et Dur. in *Ann. Sc. Nat. ser. 4*, i. 229.)—Spiculæ  $\infty$ -floræ, globoso-capitatæ, rhachilla supra glumas inferiores et inter flores articulata, ultra flores sæpius glumifera, floribus hermaphroditis v. summo masculo. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, parum inæquales, latæ, glabræ, 1-nerves, mucronulatæ v. obtusæ, carina præsertim in spiculis inferioribus plus minus lata; florentes alatæ, rigidulæ herbacææ v. membranacææ, nervis 3 apice in acumen seu mucronem unicum productæ, sæpeque ad latera acuminis hyalino-marginatæ subdenticulatæ; palea hyalina, gluma multo angustior, 2-nervis, 2-dentata. Stamina 3. Styli contigui v. basi subconnati, stigmatibus elongatis breviter barbellatis. Caryopsis ovata v. oblonga, a dorso compressa, pericarpio tenui ultra semen producto lanceolato (v. styli basi dilatata) rostrata.—Gramina annua, humilia v. nana, cæspitosa, foliis brevibus planis. Capitulum nunc pedunculo longiusculo fultum, nunc inter folia sessile, spiculis paucis numerosive 9-15-floris. Spiculæ nonnullæ ad basin capituli steriles, glumis paucis vacuis v. ad glumam unicam reductæ, capitulum quasi involucrantes.

Species 2, Orientis et Africæ borealis incolæ. Coss. et Dur. *Fl. Alg. Glum.* 91. Schreb. *Beschr. Græs. t.* 27, f. 1 (*Dactylis*). Desf. *Fl. Atl.* t. 16 (*Dactylis*).

Genus (præsertim *A. pungens*, Boiss.) habitu tam *Echinariam capitatum* quam *Sesleriam sphaerocephalam* refert, characteribus tamen ab utraque bene distinctum.

217. **Urochloa**, Nees, *Fl. Afr. Austr. Gram.* 437.—Spiculæ paucifloræ, in panicula capituliformi secunda densissima fasciculatæ, rhachilla abbreviata inter flores continua v. tardius articulata, floribus hermaphroditis v. summo masculo. Glumæ ovatæ, concavæ, membranacææ, 5-7-nerves, acuminatæ, acumine in aristam patentem producta, 2 infimæ vacuæ; florentes subsimiles nisi paullo majores, superiores paullo minores, brevius aristatæ; palea glumis paullo brevior, hyalina, 2-carinata. Stamina . . . Styli distincti, stigmatibus longiusculis laxè subplumosis. Caryopsis breviter oblonga, glabra, palea glumaque laxè inclusa, libera.—Gramen humile, annuum, foliis setaceis, caulibus floriferis (seu pedunculis apice 1-foliatis) folia vix excedentibus. Spicularum capitulum unilaterale, intra vaginam folii floralis sessile, fructiferum cum folio florali a geniculo supremo articulatum deciduum. Spiculæ nonnullæ ad basin capituli et intra capitulum ad basin ramulorum brevissimorum steriles, glumis paucis vacuis angustis breviter acuminato-aristatis, spiculas fertiles quasi involucrantes.

Species 1, Africæ australis incolæ. Specimina nostra (Dregeana) jam fructifera staminibus delapsis orbata. Benth. in Hook.  *Ic. Pl.* t. 1363.

218. **Sesleria**, Scop. *Fl. Carn. ex ejusd. ed.* 2, i. 63.—Spiculæ 2-6-floræ, in panicula spiciformi rarius interrupta cylindracea ovoidea v. globosa densissime confertæ, subsessiles

v. brevissime pedicellatæ, rhachilla supra glumas inferiores v. supra florem inferiorem articulata, floribus plerisque hermaphroditis. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, membranaceæ interdum hyalinæ, latæ, carinatæ, subæquales, acutæ v. secunda brevissime mucronato-aristata; florentes secundæ subsimiles v. sæpius 3-5-nerves, apice 3-5-dentatæ v. irregulariter denticulatæ, dente centrali v. etiam lateralibus plus minus in mucrones v. in aristas breves productis; summa sæpe vacua parva; palea membranacea, lata, 2-carinata, 2-dentata, carinis sæpe ciliatis. Stamina 3. Styli basi v. alte connati, rarius a basi distincti, stigmatibus elongatis breviter barbellatis. Caryopsis ovata v. oblonga, glabra v. apice pubescens, erostris, gluma paleaque laxè inclusa, libera. —Gramina perennia, cæspitosa, foliis planis v. convolutis teretibus. Panicula spiciformis, sæpius brevis cærulescens v. subargenteo-nitidula, interdum elongata, rarius spiculis dissitis v. fasciculatis interrupta, basi sæpissime bractea glumiformi v. spicula sterili ad glumam reducta stipata.

Species ad 8, Europæ et Asiæ occidentalis incolæ. *Beauv. Agrostogr.* 78, t. 16, f. 7. *Kunth, Enum. Pl.* i. 321. *Host, Gram. Austr.* ii. t. 97 ad 99, iv. t. 22. *Nees, Gen. Fl. Germ. Monocot.* i. n. 53. *Reichb. Ic. Fl. Germ.* t. 56, 57. *Jacq. Ic. Rar.* t. 20, 21 (*Cynosurus*). *Ten. Fl. Nap.* t. 103. *Vis. Fl. Dalm.* t. 2. *Sibth. Fl. Græc.* t. 72.

*PSILATHERA*, *Link, Hort. Berol.* i. 121, *Nees, Gen. Fl. Germ. Monocot.* i. n. 54, est *S. tenella*, *Host, Gram. Austr.* ii. t. 100, cui spiculæ parvæ in capitulo parvo ovoideo-globoso, glumarum florentium dentibus 5 mucronato-aristatis.

219. **Elytrophorus**, *Beauv. Agrostogr.* 67, t. 14, f. 2. (*Echinalysium*, *Trin. Fundam. Agrost.* 142).—Spiculæ  $\infty$ -floræ, parvæ, planæ, in fasciculis compositis subglobosis numerosæ, subsessiles, rhachilla glabra inter flores articulata, floribus hermaphroditis v. summo masculo. Glumæ 2 inferiores vacuæ, membranaceæ, carinatæ, breviter mucronato-acuminatæ, subæquales v. secunda paullo major; florentes paullo latiores, sub-3-nerves, evidentius mucronato-aristatæ; summæ 1-2 minores, vacuæ; palea gluma brevior, hyalina, lata, 2-dentata, complicato-2-carinata, carina utraque v. rarius una sola late alata. Stamen 1, anthera parva. Styli distincti v. basi subconnati, stigmatibus elongatis tenuissimis fugacissimis breviter barbellato-plumosis. Caryopsis ovoideo-oblonga, pericarpium apice membranaceo (v. styli basi dilatato) ultra semen breviter rostrata, gluma paleaque inclusa, libera.—Gramen annuum, erectum, strictum, foliis angustis longiusculis planis. Spicularum minimarum capitula aristis brevibus subechinata, secus pedunculum sessilia, spicam longam densam v. interruptam formant; spiculæ nonnullæ ad basin capituli cujusve minores ananthæ v. ad glumas 1-2 reductæ.

Species 1, inter tropicos Asiæ, Africæ et Australiæ lato dispersa. *Kunth, Enum. Pl.* i. 391; *Rev. Gram. t.* 154. *Benth. Fl. Austral.* vii. 638.

220. ? **Fingerhuthia**, *Nees MS. ex Lehm. Cat. Sem. Hort. Hamb.* 1834.—Spiculæ 1-rarius 2-floræ, compressæ, in spica cylindracea confertæ, cum pedicello brevi articulatæ, rhachilla ultra florem producta stipitiformi v. glumifera, flore unico v. infero hermaphroditico, superiore dum adsit masculo. Glumæ 2 inferiores vacuæ, complicato-carinatæ, breviter aristatæ, parum inæquales; tertia florens vacuis similis nisi paullo latior rigidiorque, arista brevi nunc ad mucronem reducta; terminalis minor, vacua v. paleam solam rarius florem  $\sigma$  fovens; palea gluma paullo brevior, subhyalina, 2-carinata. Stamina 3. Styli distincti, elongati, stigmatibus filiformibus pilis brevibus papilloso-villosis. Caryopsis oblonga, lævis, gluma paleaque laxè inclusa, libera.—Gramen cæspitosum, erectum, rigidulum, foliis angustis planis v. convolutis teretibus. Spica terminalis, longe pedunculata, ei *Phlei* subsimilis, spiculis infimis summisque diminutis vacuis v. ad glumas vacuas lineari-subulatas reductis.

Species 1, in Africa australi frequens, nuperque ab Aitchisono in Afghanistan lecta. *Benth. in Hook. Ic. Pl.* t. 1373.

Genus ab omnibus fere *Poaceis* differt pedicello sub spicula articulo, a *Paniceis* tamen bene distinguatur flore infero hermaphrodito supero masculo v. rudimentario. Species 2 a Neesio r. l. Afr. Austr. Gram. 136, 138, distinctæ vix pro varietatibus separandæ, glumis longius breviusve ciliatis.

221. *Lamarckia*, *Mœnch*, *Meth.* 201. (*Chrysurus*, *Pers. Syn. Pl.* i. 80. *Pterium*, *Desv. in Journ. Bot.* i. (1813) 75. *Tinæa*, *Garzia* in *Rel. Accad. Zelant. Ac. Reale*, ann. 3-4, 24, ex *Parlat. Fl. Ital.* i. 332.)—Spiculæ dimorphæ, in panicula densa unilaterali fasciculatæ, terminalis cujusve ramuli 1-flora, inferiores 1-3 elongatæ, multiglumes, ananthæ. Spiculæ fertilis rhachilla vix articulata, ultra florem producta sæpe glumifera. Glumæ 2 inferiores vacuæ, angustæ, præter carinam enerves, acuminatæ v. breviter aristatæ, parum inæquales; florens lator, præter carinam enervis, arista sub apice dorsali recta; terminalis parva, vacua, longiuscule aristata v. ad aristam solam reducta; spiculæ steriles lineares, glumis vacuis brevibus complicatis muticis eleganter distiche imbricatis; palea floris perfecti angusta, 2-carinata. Stamina 3. Styli breves, distincti, stigmatibus elongatis barbellatis. Caryopsis oblongo-elliptica, leviter compressa, gluma paleaque arcte inclusa, palææ æquilonga, libera.—Gramen annuum, humile, multicaule, foliis planis. Panicula elegantissima, breviter pedunculata; spiculæ secundæ, confertæ, nutantes, fertiles a sterilibus fere occultæ, aristis solis prominentibus.

Species 1, in regione Mediterranea ab ins. Canariensibus usque ad Affghanistan frequens, in aliis terris interdum inquilina. *Beauv. Agrostogr.* t. 22, f. 5 (*Chrysurus*). *Kunth, Enum. Pl.* i. 389. *Host, Gram. Austr.* iii. t. 4 (*Cynosurus*). *Sibth. Fl. Gr.* t. 79 (*Cynosurus*). *Reichb. Ic. Fl. Germ.* t. 58 (*Chrysurus*). *Nees, Gen. Fl. Germ. Monocot.* i. n. 77.

Genus *Cynosuro* arcte affine cui olim adscriptum nuperque a Willk. et Langeo *Prod. Fl. Hisp.* i. 90, aliisque restitutum, habitu tamen, spicularum steriliū forma, spiculis fertilibus 1-floris aliisque notis satis distinctum videtur.

222. *Cynosurus*, *Linn. Gen.* n. 87, *pro parte*.—Spiculæ dimorphæ, in panicula dense spiciformi unilaterali fasciculatæ, terminalis cujusve fasciculi 2-3-flora, floribus hermaphroditis, inferiores 1-2 multiglumes ananthæ. Spiculæ fertilis rhachilla supra glumas inferiores sæpius articulata, glumæ 2 inferiores vacuæ, lineares v. sublancoolatæ, acutæ v. vix aristatæ, præter carinam enerves; florentes latiores membranaceæ, 1-3-nerves (rarius 5-nerves?), apice v. dorso sub apice mucronatæ v. aristatæ; terminalis angustior, vacua v. florem ♂ imperfectum fovens v. fere ad aristam reducta; spicularum steriliū glumæ eleganter distichæ, pectinatim patentēs, omnes vacuæ, subæquales, lineari-subulatæ, 1-nerves, rhachilla continua; palea floris fertilis angusta, 2-carinata, 2-dentata. Stamina 3. Styli distincti, breves, stigmatibus barbellatis v. laxè plumosis. Caryopsis oblonga v. elliptica, gluma paleaque arcte inclusa, matura palææ adnata.—Gramina annua v. perennia, cæspitosa, foliis planis. Panicula pedunculata, semper densissima secundaque, cæterum in diversis speciebus heteromorpha. Spiculæ fertiles sterilibus quasi involucrate at perfecte distinctæ, rarius glumis nonnullis iis spicularum steriliū similibus in pedicello additis.

Species 3 v. 4, in Europa, Asia occidentali, Africa boreali v. ins. Canariensibus indigenæ, quarum una etiam in aliis regionibus reperta, verisimiliter inquilina. *Kunth, Enum. Pl.* i. 388. *Nees, Gen. Fl. Germ. Monocot.* i. n. 76.

Genus cum *Lamarckia* spicularum dimorpharum indole facillime dignoscendum, in sectiones 2 bene distinctas apud auctores nonnullos genera distincta dividitur:—

1. *Cynosurus*. Gramina perennia, panicula angusta spiciformi spicam *Chloridearum* simulante. Spicularum steriliū glumæ lineares, rigidæ, distichæ, pectinatim patentēs. Spiculæ fertiles 2-3-floræ, glumis mucronato-acuminatis. Species v. varietates insignes 2. *Schreb. Besch. Gräs.* 69, t. 8. *Beauv. Agrostogr.* 66, t. 14, f. 1. *Host, Gram. Austr.* ii. t. 96. *Reichb. Ic. Fl. Germ.* t. 7, f. 1351, 1352. *Munby, Fl. Alg.* t. 2.

2. *Phalona*. Gramina annua, panicula fasciculato-capituliformis v. longiuscula aristis echinata. Spicularum steriliū glumæ lineares, rigidæ, distichæ, pectinatim patentēs, subaristatæ. Spiculæ fertiles 2-3-floræ glumis aristatis. Species 2 v. 3. *Host, Gram. Austr.* ii. t. 95. *Reichb. Ic. Fl. Germ.* t. 7, f. 1349, 1350. *Desf. Fl. Atl.* t. 17. *Sibth. Fl. Græc.* t. 78. *Dall in Mart. Fl. Bras.* ii. iii. t. 37. *FALONA*, *Adans. Fam.* ii. 496. *PHALONA*, *Dumort. Agrost. Belg.* 86, 114.

223. *Exseria*, *Pers. Syn. Pl.* i. 97. (*Collinaria*, *Ehrh. Beitr.* iv. 147, *absque char.*)—Spiculæ 2-5-floræ rarius 1-floræ, in panicula spiciformi cylindracea v. subinterrupta

confertæ, rhachilla supra glumas inferiores et inter flores articulata glabra v. vix minute pilosa, floribus hermaphroditis v. summo masculo. Glumæ 2 inferiores vacuæ, angustæ, acutiusculæ v. mucronatæ, parum inæquales, extima præter carinam enervis, margine scariosa, secunda paullo longior, florentibus similior, sæpe 3-nervis; florentes secundæ, paullo longiores v. breviores, plus minus hyalino-scariosæ, tenuiter 3-rarius 5-nerves, obtusiusculæ v. acutiusculæ, muticæ v. apice v. dorso sub apice mucronatæ v. breviter aristatæ; superiores gradatim minores, 1-2 sæpe vacuæ, v. rhachilla ultra florem summum producta stipitiformis; palea hyalina, acute 2-carinata, glumæ subæqualis v. sæpius brevior angustiorque, 2-dentata v. 2-mucronata. Stamina 3. Styli brevissimi, stigmatibus plumosis. Caryopsis oblonga v. fere linearis, gluma paleaque inclusa, libera. —Gramina annua v. perennia, caespitosa, foliis angustis planis v. fere setaceis. Panicula sæpiissime dense cylindracea, rarius elongata subinterrupta, glabra subnitens, v. glumarum pilis marginalibus v. dorsalibus hirsuta.

Species ad 12, pleræque Europæ, Asiæ temperatæ et Africæ borealis incolæ, quarum una etiam in America boreali v. australi extratropica et Africa australi frequens, et in aliis regionibus inquilina, quibus addantur 2 bene distinctæ, altera ex Africa australi, altera ex ins. Sandwicensibus. *Beauv. Agrostogr.* 84, t. 17, f. 4. *Kunth, Enum. Pl.* i. 380. *Brot. Phytogr. Lusit.* t. 98, 99 (*Bromus*). *Perlat. Fl. Ital.* i. 322. *Coss. et Dur. Fl. Alg. Glum.* 119. *Döll in Mart. Fl. Bras.* ii. iii. 125. *Buchan. N. Zeal. Grass.* t. 38.

Genus sat naturale, haud tamen facile definitum, in sectiones 2 ab auctoribus nonnullis pro generibus propriis habitas dividitur:—

1. *Airochloa* (*Koeleria*, Reichb.). Glumæ acutæ v. obtusiusculæ, muticæ, florentes vix carinatæ, tenuissime 3-nerves. *Host, Gram. Austr.* ii. t. 75 (*Poa*). *Reichb. Ic. Fl. Germ.* t. 93. *Nees, Gen. Fl. Germ. Monocot.* i. n. 64. *AIROCHLOA*, *Link, Hort. Berol.* i. 126, ii. 276.

2. *Lophochloa* (*Koeleria*, Link). Glumæ florentes apice v. sub apice mucronatæ v. breviter aristatæ, tenuiter 3-5-nerves. *Host, Gram. Austr.* iii. t. 21 (*Festuca*). *Ten. Fl. Nap.* t. 201. *Desf. Fl. Atl.* t. 18 (*Cynosurus*) et t. 23 (*Festuca*). *LOPHOCHLOA*, *Reichb. Fl. Germ. Excurs.* 42; *Ic. Fl. Germ.* t. 73. *Nees, Gen. Fl. Germ. Monocot.* i. n. 63. *ÆGIALITIS*, *Trin. Fundam. Agrostogr.* 127, t. 9. *ÆGIALINA*, *Schult. Syst. Mant.* ii. 13, 222. Huc pertinent, præter species a *Coss. et Dur.* enumeratas, *K. Gerardi*, Munro, ex Africa australi, species primo aspectu præsertim colore inflorescentiæ *Lasiochloæ* accedens, sed inflorescentia characteresque *Lophochloæ*, et *K. glomerata*, *Kunth, Rev. Gram.* t. 219 (*K. vestita*, *Nees in Steud. Syn. Pl. Glum.* i. 294), ex ins. Sandwicensibus, species inflorescentia longa laxa insignis, in nostris tamen speciminibus densior est quam in icone delineatur.

WILHELMSSIA, *C. Koch in Linnæa*, xxi. 400, est, fide *Griseb.*, *K. phleoidis*, Pers., forma macra panicula depauperata.

224. *Avellinia*, *Parlat. Pl. Nor.* 59; *Fl. Ital.* i. 415.—Spiculæ plurifloræ, anguste paniculatæ, rhachilla inter flores longiuscula tardius articulata, glabra, ultra flores in stipitem interdum glumiferum producta, floribus hermaphroditis v. summo masculo. Glumæ 2 inferiores vacuæ, extima brevis, angustissima, fere setiformis, secunda cæteris multo major latiorque, membranacea, 3-nervis, mucrone brevi terminata; florentes (sæpius 2-4) multo angustiores, circa flores convolutæ, tenuissime 1-3-nerves, dorso sub apice breviter aristatæ; palea multo brevior, angusta, 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis angusta, subteres, gluma inclusa, libera.—Gramen annuum, humile, habitu fere *Schismi*, foliis angustissimis. Panicula angusta, laxiuscula, ramulis erectis.

Species 1, regionis Mediterraneæ occidentalis incola. *Guss. Pl. Rar.* t. 10, f. 1 (*Avena*).

Planta a variis auctoribus ad genera diversa relata a *Candolle* et nuper a *Coss. et Dur. Fl. Alg. Glum.* 120, sub *Koeleria* descripta, a qua nobis bene distincta videtur, tam inflorescentia quam glumarum indole nullique nisi *Eatonie* comparanda, et rite a *Parlatoreo* pro genere proprio accepta.

225. *Eatonia*, *Rafin. in Journ. Phys.* lxxxix. 104. (*Reboulæa*, *Kunth, Rev. Gram.* 341, t. 84. *Colobanthus*, *Trin. in Mem. Acad. Petersb. ser.* 6, i. 66, *Triseti* sect. pro genere admissa a *Spach, Suites Buff.* xiii. 163, non *Bartl.*)—Spiculæ parvæ, sæpius 2-floræ, paniculatæ, rhachilla sub floribus articulata glabra, ultra flores in stipitem nudum producta,

floribus hermaphroditis. Glumæ 2 inferiores vacuæ, persistentes, membranaceæ, subscariosæ, extima angusta, 1-nervis, secunda omnibus multo latior, 3-nervis; florentes angustiores, sub-3-nerves, omnes obtusæ v. acutiusculæ, muticæ; palea angusta, prominule 2-nervis. Stamina 3. Styli distincti, breves, stigmatibus plumosis. Caryopsis anguste oblonga fere linearis, exsulca, gluma paleaque laxè inclusa, libera.—Gramina elatiuscula, foliis planis. Panicula densa v. laxiuscula, spiculis numerosis parvis nitentibus.

Species 2 v. 3, inter se valde affines, et in herbariis sæpe commixtæ, Americæ borealis incolæ. *Kunth, Enum. Pl. i. 368 (Reboulea). Torr. Fl. N. York, t. 150 (Kæleria). A. Gray, Man. Bot. N. U. St. ed. 5, 625. Fourn. Gram. Mex. 111.*

226. **Dissanthellium**, *Trin. in Linnaea*, x. 305. (Phalaridium, *Nees in Pl. Meyen.* 161. *Stenochloa*, *Nutt. in Journ. Acad. Philad. ser. 2, i. 189.*)—Spiculæ 2-4-floræ, anguste paniculatæ, rhachilla inter flores articulata glabra, ultra flores in stipitem minutum producta, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, persistentes, angustæ, carinatæ, 1-3-nerves, acute acuminatæ, parum inæquales, spiculam æquantes v. superantes; florentes multo breviores, latiores, obtusiusculæ, obtuse carinatæ, 3-nerves, nervis lateralibus marginalibus, v. interdum obscuris, muticæ; palea gluma paullo brevior, 2-carinata, 2-dentata. Stamina 3. Styli brevissimi, distincti, stigmatibus sæpe longiusculis plumosis. Caryopsis oblonga, subtriquetra, antice vix v. non sulcata, gluma paleaque caducissimis inclusa, libera.—Gramina annua v. perennia, humilia v. tenuia, caespitosa, foliis angustis planis. Panicula breviter pedunculata, laxiuscula v. densa, ramulis brevibus erectis, spiculis parvis.

Species 2 v. 3, Americæ andinæ a Bolivia usque ad Californiam incolæ. *Thurb. in S. Wats. Bot. Calif. ii. 315 (Stenochloa). Fourn. Gram. Mex. 112. Benth. in Hook. Ic. Pl. t. 1374, 1375.*

Genus pluribus notis *Schismo* affine, nec habitu longe diversum, sed glumæ florentes semper 3-nerves invenimus, etsi a Trinio 1-nerves, a Neesio 5-nerves dicuntur. Stamen unicum tantum vidit Fournier, verisimiliter in specie Mexicana a nobis non visa. In speciminibus Lechlerianis n. 1832 a Fourniero citatis 3 adsunt, uti in Bolivianis Mandonianis n. 1345 et 1346, et in Californicis.

227. **Molinia**, *Schrank, Baier. Fl. i. 100, 334.* (Enodium, *Gaud. Agrostogr. Helv. i. 145.*)—Spiculæ 2-4-floræ, anguste paniculatæ, rhachilla inter flores longiuscula articulata glabra, ultra flores sæpe producta, floribus hermaphroditis v. summo masculo. Glumæ 2 inferiores vacuæ, persistentes, obtusiusculæ v. acute, muticæ, præter carinam enerves, inæquales, spicula breviores; florentes paullo majores, rigidule membranaceæ, muticæ, dorso convexæ, 3-nerves, summa minor, florem ♂ fovens v. vacua, v. rhachilla supra florem stipitiformis nudaque; palea gluma vix brevior, obtusa, 2-carinata. Stamina 3. Styli breves, stigmatibus brevibus plumosis. Caryopsis oblonga, teretiuscula, facie (saltem immatura) late sulcata, gluma paleaque inclusa, libera.—Gramen perenne, caespitosum, elatiusculum, nodis in caule prope basin paucis, foliis angustis planis. Panicula elongata, laxiuscula, ramulis strictis, spiculis parvulis sæpius numerosis erectis angustis laxè conicis.

Species 1, Europæ præsertim occidentalis et borealis incola. *Beauv. Agrostogr. 68, t. 14, f. 6. Kunth, Enum. Pl. i. 379. Coss. et Dur. Fl. Alg. Glum. 136. Host, Gram. Austr. ii. t. 8 (Melica) et t. 92 (Festuca). Reichb. Ic. Pl. Germ. t. 78. Nees, Gen. Fl. Germ. Monocot. i. n. 61.*

228. **Sphenopus**, *Trin. Fundam. Agrostogr. 135.*—Spiculæ 2-4-floræ, minimæ, cymoso-paniculatæ, rhachilla inter flores articulata glabra, ultra flores in stipitem parvum producta, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, persistentes, hyalinae, extima minuta, secunda lata rotundata v. truncata; florentes 2-3-plo longiores, latiusculæ, hyalinae, integræ, muticæ, 3-nerves v. nervis lateralibus evanidis sub-1-nerves; palea gluma paullo brevior, 2-dentata, 2-carinata, carinis ciliolatis. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis oblongo-linearis, antice sulcata v. demum subteres, gluma paleaque inclusa, libera.—Gramen tenellum, annuum, foliis angustis sæpe filiformibus. Panicula gracillima, ramulis setaceis divaricatis ultimis subcymosis, pedicellis anguste clavatis spiculis ipsis fere æquilongis. Spiculæ nitidulæ.

Species 1, regionis Mediterraneæ incola, præsertim in maritimis salsisque frequens. *Coss. et Dur. Fl. Alg. Glum.* 144. *Reichb. Ic. Fl. Germ.* t. 81. *Nees, Gen. Fl. Germ. Monocot.* i. n. 68. *Gou. Ill. et Obs. Bot.* t. 2, f. 1 (Poa).

229. **Catabrosa**, Beauv. *Agrostogr.* 97, t. 19, f. 8.—Spiculæ 2- rarius 3-4-floræ, laxè paniculatæ, rhachilla inter flores articulata glabra. Glumæ 2 inferiores vacuæ, hyalino-membranaceæ, latæ rotundatæ v. obtusissimæ, vix venosæ, inæquales, florentibus multo breviores; florentes rigidule membranaceæ, obtusæ v. sub-3-dentatæ, prominenter 3-nerves, summa interdum minor, vacua v. florem imperfectum fovens; palea gluma vix brevior, prominenter 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis obovoideo-oblonga, subteres, exsulca v. antice angustissime sulcata.—Gramen perenne, a basi reptante v. subnatante erectum, foliis planis. Panicula effusa, pyramidata, ramis capillaribus ramulosis in fasciculis dissitis pseudoverticillatis. Spiculæ parvulæ, numerosæ, pedicellatæ.

Species 1, per Europam, Asiam temperatam et Americam borealem late dispersa. *Kunth, Enum. Pl.* i. 369. *Reichb. Ic. Fl. Germ.* t. 78 (*Glyceria*). *Nees, Gen. Fl. Germ. Monocot.* i. n. 58. *Host, Gram. Austr.* ii. t. 41 (*Aira*).

Genus, ad speciem typicam (cum varietatibus ab auctoribus nonnullis speciatim distinctis) restrictum, vonatione glumarum facile distinctum. Species plures Orientales a Trinio aliisque additæ ad *Colpodium* referendæ sunt, *C. antarctica* Hook. f., ad *Triodiam*? *C. magellanica*, Hook. f., et *C. glaucescens*, Philippi, ad *Glyceriam* (*Atropem*).

230. **Eragrostis**, Beauv. *Agrostogr.* 70, t. 14, f. 11.—Spiculæ  $\alpha$ -floræ, sæpius paniculatæ, rhachilla inter flores continua v. tardius articulata, articulis rarius cito solvendis, glabra v. rarissime pilosula, floribus hermaphroditis v. varie unisexualibus, summo sæpe et interdum infimo plus minus abortiente. Glumæ 2 inferiores vacuæ, inæquales, florentibus breviores, carinatæ, 1-nerves v. secunda 3-nervis; florentes membranaceæ v. rarius rigidulæ, carinatæ, 3-nerves, obtusæ acutæ v. rarius mucronato-acuminatæ, muticæ, integræ v. vix emarginatæ; palea gluma brevior, prominenter 2-nervis v. 2-carinata, sæpe incurva et post glumam delapsam in rhachilla persistens. Stamina 2-3. Styli distincti, breves, stigmatibus plumosis. Caryopsis globosa ovoidea v. oblonga, sæpe parvula, exsulca v. rarius antice late concava, gluma paleaque laxè inclusa, libera, sæpeque cum gluma a palea decidua.—Gramina annua v. perennia, humilia cæspitosa v. elata, interdum prostrata v. reptantia. Panicula sæpius laxa, stricta v. effusa, variat tamen capituliformis v. spiciformis. Spiculæ varie pedicellatæ v. subsessiles, sparsæ v. fasciculatæ, nunc minimæ numerosissimæ paucifloræ imo 1-2-floræ, nunc longæ angustæ floribus 20-30, nunc latæ planæque.

Species ad 100, per regiones calidiores temperatasque utriusque orbis latissimo dispersæ, quarum 2 v. 3 fere cosmopolitanæ. *Kunth, Enum. Pl.* i. 327; *Rev. Gram.* t. 145 ad 149, 183 ad 189 (omn. sub Poa). *Schreb. Besch. Gräs.* t. 38 (Poa) et 29 (Briza). *Host, Gram. Austr.* ii. t. 68, 69 (Poa), iv. t. 24. *Jacq. Ecl. Gram.* t. 3. *Cav. Ic.* t. 92, 93 (Poa). *Desf. Fl. Atl.* t. 14 (Poa). *Reichb. Ic. Fl. Germ.* t. 91. *Nees, Gen. Fl. Germ. Monocot.* i. n. 55. *Sibth. Fl. Gr.* t. 73 (Poa). *Grant in Trans. Linn. Soc.* xxix. t. 113. *Benth. Fl. Austral.* vii. 641, et in *Journ. Linn. Soc.* xix. 116. *Döll in Mart. Fl. Bras.* ii. iii. 136, t. 41 ad 43. *Fourn. Gram. Mex.* 114. *Torr. Bot. Marc. Exped.* t. 19.

Genus quoad species plerasque naturale, a Poa cui olim adscriptum facile differt glumis florentibus 3-nervibus, formas tamen nonnullas præbet primo aspectu bene diversas; in sectiones sequentes dividitur:—

1. **Cataclastos**, Döll. Spiculæ sæpius numerosissimæ, minimæ, paucifloræ, rhachilla more Poæ articulata, in *E. ciliata*, *E. peruviana* affinibusque in panicula spiciformi cylindracea v. interrupta densissima confertæ, in cæteris speciebus panicula longa laxa, angusta v. thyrsoidæa, ramulis sæpius numerosissimis tenuibus ramulosis secus rhachin plus minus fasciculatis v. subverticillatis. Sectio a Fourniero ad Poam restituta. *Jacq. Ic. Rar.* t. 18, 304 (Poa).

**MACROBLEPHARUS**, Philippi in *Linnaea*, xxix. 100, ex descr. auctoris videtur *Eragrostis ciliaris*, Link, v. species quam maxime affinis.

2. **Plagiostachya**. Spiculæ  $\infty$ -floræ, planæ, angustæ v. latiusculæ, secus rhachin spicæ breviter

pedicellatæ more *Chloridearum* 2-seriatim subsessiles, rhachilla continua v. tardius subarticulata. Species sequentes inter se sat dissimiles: *E. bifaria*, Steud. (*Poa bifaria*, Kunth, Rev. Gram. t. 80), spica terminali longa simplici *Tripogonis*, glumis florentibus obtusis; *E. Schimper*, Benth. (HARPACHNE Hochst.; *A. Rich. Fl. Abyss.* ii. 431), spica terminali simplici, glumis florentibus subdissitis acuminatis; *E. brevifolia*, Benth. in Hook. Ic. Pl. sub t. 1368 (*Dactylis*, Roxb., *Æluropus*, Trin., *Eleusine*, Jir.), et *E. calachyrum*, Benth. l. c. (CÆLACHYRUM, Nees in Linnæa, xvi. 221), spicis paucis paucispiculatis in capitulum v. fasciculum terminale confertis, caule humili prostrato ramoso; *E. congesta*, Oliv. in Trans. Linn. Soc. xxix. 175, t. 115, spicis brevibus sessilibus secus rhachin terminalem dissite fasciculatis; *E. cynosuroides*, Rœm. et Schult., spicis brevibus sessilibus fasciculatis secus rhachin elongatam confertis numerosissimis.

3. *Myriostachya*. Paniculæ rami breves, dense spiciformes unilaterales, secus rhachin numerosissimi, paniculam longam angustam densam more *E. cynosuroidis* formantes, sed ipsi brevissime ramulosi. Spiculæ 3-6-floræ, omnes brevissime pedicellatæ, rhachilla ut in *Pteroëssa* continua, glumis inferioribus vacuis setaceo-acuminatis, florentibus acutissimis, palea sæpius persistente. Caryopsis immatura brevis, maturam non vidimus. Species unica, Indica. Wall. Cat. Herb. Ind. n. 3823 (*Leptochloa Wightiana*, Nees in Steud. Syn. Pl. Glum. i. 209). Benth. in Hook. Ic. Pl. t. 1381.

4. *Pteroëssa*, Döll (*Eragrostes genuinæ*). Panicula varia laxissime effusa v. contracta. Spiculæ sæpius multifloræ, pedicellatæ v. sessiles fasciculatæque, rhachilla continua v. tardius subarticulata. Species numerosæ in series sequentes distribuendæ:—

a. *Cylindrostachya*. Spiculæ angustæ lineares, subteretes, glumis arcte appressis, sessiles v. brevissime pedicellatæ, fasciculatæ. Species 3 v. 4, Australianæ v. insularum maris Pacifici incolæ. Gaudich. in Freyc. Voy. Bot. t. 25.

b. *Leptostachya*. Spiculæ lineares, planæ at angustæ tenuisque, pedicellatæ, panicula effusa, ramis pedicellisque capillaribus, glumis sæpe laxè imbricatis. Hue *E. pilosa*, Beauv., species fere cosmopolitana affinesque.

c. *Megastachya*. Spiculæ planæ, angustæ v. latæ, sessiles v. pedicellatæ, panicula varia, glumis sæpius distiche imbricatis, sulcum longitudinalem in utraque facie spiculæ sæpe relinquentibus, interdum vero spicula planissima. Species in utroque orbe imprimis in America numerosæ, ipsa *E. megastachya*, Link. et forte *E. Brownii*, Nees, sub variis nominibus fere cosmopolitane.

MEGASTACHYA, Beauv. *Agrostogr.* 74, t. 15, f. 5, genus propositum fuit imprimis ad *Poa mucronatam*, ejusd. Fl. Ow. et Ben. i. 5, t. 4, quæ potius ad *Cenothecam* referenda videtur, cui addidit species plures *Eragrostis* (*Pteroëssa*) glumis plus minus acutis v. mucronulatis. Fournier, Mex. Gram. 118, genus MEGASTACHYAM condidit ad species plures e sectionibus *Pteroëssa* v. *Platystachya* spiculis plus minus dioicis, quod in *E. reptante*, Mich., fere constans est, character tamen in aliis speciebus valde variabilis videtur.

5. *Platystachya*. Spiculæ ∞-floræ, planæ, ovate v. rotundatæ, rhachilla inter flores articulata. Glumæ florentes rigide paleaceæ, distiche imbricatæ. Species paucæ Africanæ v. Asiaticæ hinc *E. (Pteroëssa) unioides*, hinc *Demazarii* nonnullis subsimiles. Benth. in Hook. Ic. Pl. t. 1370. *Briza geniculata*, Thunb., a Munroio ad *Eragrostin* transfertur ob glumas 3-nerves, etsi a cæteris *Platystachyis* paulum differt glumarum carinis obtusis, spicula ipsa minus complanata, et fere medium tenet inter *Eragrostin* et *Brizam*.

6. *Sclerostachya*. Spiculæ ∞ floræ, planæ, lanceolatæ v. angustæ, rhachilla inter flores articulata. Glumæ florentes rigide paleaceæ. Species 3, Africanæ v. Asiaticæ, perennes, rigide, foliis nunc longis junciformibus nunc brevibus divaricatis rigidis pungentibusque. Vahl, *Symb.* i. t. 2 (*Festuca*). Kunth, Rev. Gram. t. 190 (*Poa*). Wall. Cat. Herb. Ind. n. 8898 (*Brizopyrum mucronatum*, Nees).

231. ? *Ipnum*, Philippi, Sert. Mendoc. ii. 53.—Spiculæ ∞-floræ, cylindraceæ, secus paniculæ ramos simplices distichæ, rhachilla inter flores articulata. Glumæ 2 vacuæ, membranaceæ, 1-nerves, infima lanceolata, secunda ovata major; florentes a dorso compressæ, 3-nerves, breviter mucronatæ, apice et margine superiore scariosæ hyalinæ; palea ovata, glumæ æquilonga, 2-carinata. Stamina . . . Stylus . . . Caryopsis obovata, a dorso valde compressa.—Gramen cespitosum, foliis planis. Panicula seu spica composita, ramulis pluribus angulo aperto patentibus plurispiculatis. (Char. ex Philippi.)

Species 1, e Mendoza Americæ australis extratropicæ, a nobis non visa. Ex auctoris descriptione ab *Eragrostis* sect. *Pteroëssa* speciebus cylindrostachyis differt imprimis rhachilla fragili et inflorescentia.

232. *Cutandia*, Willk. in Bot. Zeit. 1860, 130.—Spiculæ ∞ (3-13-) floræ, paniculatæ, rhachilla inter flores articulata, glabra, floribus hermaphroditis. Glumæ angustæ, rigide,

2 inferiores vacuæ, inæquales, 1-3-nerves, muticæ, florentibus breviores; florentes prominenter 3-nerves, carinate, integræ v. 2-dentatæ, muticæ v. inter dentes mucronulatæ v. rarius aristatæ; palea gluma brevior, angusta, 2-carinata. Stamina 3. Styli breves, stigmatibus plumosis. Caryopsis oblonga, subteres v. a dorso compressa, antice late sulcata, gluma paleaque inclusa, libera (v. palea leviter adherens?).—Gramina annua, erecta v. decumbenti-multicaulia, foliis angustis planis v. setaceo-convolutis. Panicula densa, plus minus secunda, primum erecta densaque, ramulis brevissimis paucispiculatis demum sæpe divaricatissimis sub spiculis incrassatis. Spiculæ angustæ, glumis laxè imbricatis, v. planæ glumis dissitis.

Species 6, Europæ et totius regionis Mediterraneæ incolæ, præsertim in maritimis obviæ. Huc pertinent præter *Festucam memphiticam*, Boiss., quæ species typica: *C. scleropoides*, Willk.; *F. divaricata*, Desf. Fl. Atl. t. 22; *F. maritima*, DC., Reichb. Ic. Fl. Germ. t. 58, f. 1519; *F. lanceolata*, Forsk.; *F. philistæa*, Boiss., omnes glumis exaristatis. *F. incrassata*, Salz., a cæteris distinguitur glumis florentibus aristatis et *Festucæ* (*Vulpie*) quacum jungunt auctores plures accedit, sed habitu et præsertim glumis insigniter carinatis affinitatem maximam cum *Cutandia* offert.

Genus certe *Sclerochloæ*, Beauv., et *Festucæ* sect. *Scleropoe* proxime affine, et huic iterum jungit Boissier, nobis tamen bene distinctum videtur glumis florentibus a basi prominenter carinatis 3-nervibus. Caryopsin etiam in speciminibus examinatis a palea liberam invenimus.

233. *Oreochloa*, Link, Hort. Berol. i. 44.—Spiculæ paucifloræ, secus rhachin simplicem inflorescentiæ spiciformis breviter pedicellatæ, distichæ, rhachilla supra glumas inferiores et inter flores articulata, floribus hermaphroditis. Glumæ membranaceæ, latiusculæ, præter carinam subnerves, muticæ, 2 inferiores vacuæ, glabriæ; florentes subsimiles nisi paullo majores pubescentesque; summæ 1-3 minores paleam solam foventes v. vacuæ; palea latiuscula, 2-carinata, carinis ciliatis. Stamina 3. Styli distincti, stigmatibus longiusculis barbellatis vix plumosis. Caryopsis oblonga, a dorso compressiuscula, gluma paleaque inclusa, libera.—Gramen perenne, humile, cæspitosum, foliis angustissimis planis v. convolutis. Inflorescentia spiciformis ovata v. oblonga, pedunculo terminali longiusculo; spiculæ steriles v. bractea glumiformis *Seslerie* omnino desunt.

Species 1, montium Pyrenæorum et Alpium Europæ incolæ. Kunth, Enum. i. 323 (*Sesleria*). Jacq. Ic. Rar. t. 19 (*Poa*). Host, Gram. Austr. ii. t. 76 (*Poa*). Reichb. Ic. Fl. Germ. t. 12. Nees, Gen. Fl. Germ. Monocot. i. n. 52. In iconibus nonnullis glumæ  $\infty$ -nerves delineatæ, sed in speciminibus examinatis carinam solam conspicuam vidimus, nervis lateralibus, si adsint, tenuissimis v. obscuris.

234. *Ectrosia*, R. Br. Prod. 185.—Spiculæ paucifloræ, angustè paniculatæ, rhachilla supra glumas inferiores articulata, floribus 1 rarius 2 inferioribus hermaphroditis, 2- $\infty$  superioribus masculis v. rudimentariis. Glumæ angustæ, 2 inferiores vacuæ, persistentes, acutæ, breves, parum inæquales; florentes rigidulæ, 1-3-nerves, acutæ mucronatæ v. in aristam tenuem productæ; superiores flores  $\sigma$  foventes v. vacuæ, sæpius minores haud raro tamen longius tenuiusque aristatæ; palea gluma brevior, angusta, 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis angustè oblonga v. fere linearis, subteres, gluma paleaque inclusa, libera.—Gramina cæspitosa, annua v. perennia, foliis angustis interdum setaceis. Panicula terminalis, nunc longa angusta dense floribunda, ramulis numerosis erecto-appressis, nunc laxior, interrupta, ramulis brevibus patentibus. Spiculæ nunc angustæ tenuesque, nunc parvæ agrostoidæ, aristis tenuibus semper numerosis.

Species 1, Australiæ. Benth, Fl. Austral. vii. 633. Kunth, Rev. Gram. t. 69.

235. *Heterachne*, Benth. Fl. Austral. vii. 634.—Spiculæ planæ, paucifloræ, in panicula angustè spiciformi densa v. subinterrupta fasciculatæ, rhachilla supra glumas inferiores articulata, inter superiores valde flexuosa continua, floribus 1 rarissime 2 inferioribus (hermaphroditis?) fertilibus, 1-2 superioribus (masculis?) sterilibus. Glumæ 2 inferiores vacuæ, persistentes, complicato-cymbiformes, parum inæquales, præter carinam enerves v. utrinque 1-nerves; tertia et interdum quarta florem fertilem foventes, late complicato-cymbiformes, incurvæ, apice obtusè subdentatæ, muticæ, præter carinam utrinque

2-nerves; superiores 2- $\infty$  gradatim minores angustioresque, quarum 1-2 verisimiliter florem ♂, cætera paleam solam foventes v. omnino vacuæ; palea floris fertilis incurva, 2-carinata, carinis late alatis. Stamina . . . Styli breves, distincti, stigmatibus plumosis. Caryopsis incurva v. oblique obtuseque acuminata, gluma paleaque inclusa, libera.—Gramina (annua?) humilia, multicaulia, erecta, cæspitosa, foliis angustis convolutis. Spiculæ parvæ, molles, ovatæ v. orbiculatæ, nunc in panicula terminali anguste spiciformi densa v. interrupta fasciculatæ, nunc (interdum in eodem specimine) in capitulum ovoideum crassum intra folii vaginam subsessile confertæ.

Species 2, Australianæ. *Benth. in Hook. Ic. Pl. t. 1250.*

236. *Anthochloa*, Nees in *Lindl. Introd. Nat. Syst. ed. 2, 450, et in Pl. Meyen. 164* (Antochloa).—Spiculæ paucifloræ, secus rhachin simplicem inflorescentiæ brevis subcapituliformis singulæ v. inferiores 2-3-næ, breviter pedicellatæ, rhachilla inter flores articulata, floribus hermaphroditis. Glumæ latæ, hyalino-scariosæ, albæ, muticæ, 2 inferiores vacuæ, inæquales; florentes majores, a basi brevissime cucullata latissime expansæ, fere flabellatæ, breviter sub-5-nerves; superiores 1-2 minores vacuæ, sub-3-nerves; palea angusta, hyalina, alte 2-4-fida. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis (immatura) ovoidea, intra basin glumæ paleæque inclusa, libera.—Gramina humilia, cæspitosa, foliis angustis planis. Paniculæ laxè capituliformes, inter folia sessiles v. pedunculo brevi exsertæ, glumis scarioso-petaloideis albis insignes, *Helichrysi* cujusdam capitula v. corollas plenas simulant.

Species editæ 2, forte ad unam reducendæ, Andium Peruvicæ et Bolivicæ incolæ. *Steud. Syn. Pl. Glum. i. 292. Benth. in Hook. Ic. Pl. t. 1363.*

237. *Melica*, *Linu. Gen. n. 82.*—Spiculæ 1-2- rarius  $\infty$ -floræ, anguste v. laxè paniculatæ, rhachilla continua v. tardius supra glumas inferiores articulata, ultra flores producta, glumifera, floribus hermaphroditis v. summo masculo. Glumæ 2 inferiores vacuæ, membranaceæ sæpe hyalinæ, obtusæ v. acutæ, muticæ, parum inæquales, 3-5-nerves v. secunda rarius 7-nervis, florentes majores, tenuous v. rigidiores 5- $\infty$ - (sæpius 7-9-) nerves, nervis lateralibus sæpius infra apicem evanidis, carina interdum in mucronem v. aristam excurrente; superiores 2- $\infty$  vacuæ, gradatim minores semetque involventes, massam clavatam oblongam v. obovoideam interdum demum induratum formantes v. rarius laxiusculæ; palea lata, gluma brevior, 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblongo-fusiformis, a dorso compressiuscula, lævis, gluma paleaque inclusa, libera.—Gramina perennia, erecta, interdum elatiuscula, foliis planis v. convolutis. Panicula nunc angusta coarctata longe floribunda v. subsimplex oligostachya fere racemiformis, nunc effusa ramulis filiformibus paucispiculatis. Spiculæ sæpe majusculæ, coloratæ v. subscariosæ, demum sæpe nutantes; in *M. imperfecta*, Trin. (*M. pavoide* et *M. panicoide*, Nutt.), parvæ numerosæ fere *Poa*. Glumæ florentes nunc margine longe denseque ciliatæ nunc brevissime ciliatæ v. omnino nudæ. Lodiculæ variant connatæ v. liberæ.

Species fere 30, Europæ, Asiæ temperatæ, Africæ extratropicæ et Americæ borealis andinæ v. australis extratropicæ incolæ. *Beauv. Agrostogr. 68, t. 14, f. 4, 5. Kunth, Enum. Pl. i. 375; Rev. Gram. t. 89. Schreb. Besch. Gräs. t. 6, 54. Trin. Spec. Gram. t. 355. Cav. Ic. t. 472, 473. Host, Gram. Austr. ii. t. 9 ad 12, iv. t. 23. Nees, Gen. Fl. Germ. Monocot. i. n. 60. Reichb. Ic. Fl. Germ. t. 72. Boiss. Voy. Hisp. t. 177. Sibth. Fl. Græc. t. 70, 71. Viv. Fl. Lib. Spec. t. 25, f. 1. Dene. in Jacquem. Voy. Bot. t. 175. H. B. et K. Nov. Gen. et Sp. t. 693. Dell in Mart. Fl. Bras. ii. iii. 126, t. 38.*

In speciebus typicis *Melica*, spiculæ sæpius nutantes v. pendulæ, floribus rarius plus quam 2, glumæ florentes margine plus minus scariosæ nec unquam aristatæ, et glumæ superiores vacuæ in massam clavatam v. obovoideam confertæ. Sectio *Bromelica*, Thurb. in S. Wats. Bot. Calif. ii. 304, species 4 continet ex America boreali-occidentali, spiculis erectis 3-8-floris, glumis florentibus rigidioribus interdum mucronatis v. aristatis, summis vacuis angustioribus minus confertis. Sectio tam habitu quam characteribus quodammodo *Diarrhenæ* accedit, sed mediante *M. stricta*, Boland., arcte cum *Melica* typicis connectitur.

*CHONDRACHYRUM*, Nees in *Lindl. Introd. Nat. Syst. ed. 2*, 449, species *Brasiliensis* a nobis non visa, ex descriptione characteres omnino *Melice* ostendit, et nescimus qua ratione auctor dicit 'vera indole proprius accedere videtur *Paniceis*,' a quibus floribus 2 perfectis cum gluma summa vacua claviformi longissime recedit.

238. *Diarrhena* (Diarina), Rafin. in *Journ. Phys.* lxxxix. 104. (Korycarpus, Zea in *Act. Matr.* 1806, ex *Lag. Elench. Hort. Matr. Nov. Gen. et Sp.* 4. Korycarpus, Zea, ex *Kunth. Roemeria*, Zea in *Ram. et Schult. Syst.* i. 61, 287.)—Spiculæ  $\infty$ - (3-5)-floræ, paniculatæ, rhachilla inter flores articulata fragillima, ultra flores producta glumifera, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, infima angusta, acuta, sæpius 1-nervis, secunda major, latior, carinata, 5-nervis, acuminata v. mucronata; florentes latiores, acuminatæ v. mucronatæ, dorso rotundatæ, demum coriaceæ nitidæque, 3-nerves; summæ 2-4 gradatim angustiores, vacuæ, semet involventes; palea tenuis, latiuscula, 2-carinata. Stamina 2, rarius 1. Styli breves, distincti, stigmatibus plumosis. Caryopsis oblique ovoidea, crassa, a latere compressiuscula, paleam glumamque sæpe superans, pericarpio membranaceo apice supra semen incrassato.—Gramen erectum, elatiusculum, foliis longis planis. Panicula elongata, angusta, stricta, ramulis paucis distantibus erectis paucispiculatis v. spiculæ singulæ secus axin sparsæ. Spiculæ florentes angustæ fere lineares, glumis imbricatis, fructiferæ quasi interruptæ, caryopsibus prominentibus insignes.

Species 2, una boreali-Americana, altera Japonica. Beauv. *Agrostogr.* 142, t. 25, f. 2. Kunth, *Enum. Pl.* i. 425. Mich. *Fl. Bor. Amer.* t. 10 (*Festuca*). Jacq. *Ecl. Gram.* t. 29.

ONCEA, Fr. et Sabat. *Enum. Pl. Jap.* ii. 178, species a nobis non visa, ab auctoribus ipsis ibid. 603 ad *Diarrhenam* refertur.

239. *Centotheca*, Desv. in *Nouv. Bull. Soc. Philom.* ii. (1810), 189, et in *Journ. Bot.* i. (1813), 70.—Spiculæ  $\infty$ -floræ, ample paniculatæ, rhachilla supra glumas inferiores tardius articulata longiuscula glabra, supra flores stipitiformis, floribus hermaphroditis. Glumæ membranaceo-herbacææ, 2 inferiores vacuæ, carinatæ, acutæ, 3-5-nerves, parum inæquales; florentes paullo majores, dorso rotundatæ, 5-7-nerves, acutæ v. mucronatæ, exaristatæ, superne dorso setis reversis e tuberculo oriundis echinatæ v. nudæ, summa interdum ad apicem stipitis parva vacua; palea gluma vix brevior, prominenter 2-nervis v. 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, crassiuscula, subteres, gluma paleaque laxè inclusa, libera.—Gramina elata, erecta, foliis planis lanceolatis inter venas transverse venulosis. Panicula terminalis, ramis longiusculis parum ramulosis erectis v. demum patentibus, spiculis breviter pedicellatis.

Species 2 v. 3, Africæ et Asiæ tropicæ et insularum maris Pacifici incolæ. Kunth, *Enum. Pl.* i. 366; *Rev. Gram.* t. 70. Beauv. *Agrostogr.* 69, t. 14, f. 7. Trin. *Spec. Gram.* t. 298 (*Uniola*). Griff.  *Ic. Pl. Asiat.* t. 152.

Icones supra citatæ speciem referunt typicam spiculis 2-4-floris, glumis nonnullis sæpissime setis reversis echinatis. Illi tamen congener videtur *Poa mucronata*, Beauv. *Fl. Ow. et Ben.* i. 5, t. 4, spiculis  $\infty$ -floris, glumis nudis, quæ species typica MEGASTACHYÆ, Beauv. *Agrostogr.* t. 15, f. 5, a cæteris speciebus ei adjunctis pluribus notis discrepans.

240. *Orthopladia*, Beauv. *Agrostogr.* 69, t. 14, f. 9.—Spiculæ 1-2-floræ, laxè paniculatæ, rhachilla continua inter flores longiuscula, floribus hermaphroditis v. unisexualibus. Glumæ carinatæ, rigidule membranaceæ, 2 inferiores vacuæ, acutæ, extima sæpius 3-nervis, secunda paullo major 5-nervis; florentes paullo majores, acutæ v. mucronulatæ, 5-7-nerves, v. summa minor vacua; palea gluma vix brevior, prominenter 2-nervis v. 2-carinata. Stamina 2-3. Styli distincti, stigmatibus longiusculis plumosis. Caryopsis oblique oblonga, crassa, a latere compressiuscula, gluma paleaque arcte inclusa, libera.—Gramen erectum, validum, foliis planis petiolatis ample lanceolatis inter venas transverse venulosis. Panicula ampla, ramis numerosis longis tenuibus secus rhachin fasciculatis ramulosis, primum erectis confertis demum late patentibus. Spiculæ in quoque ramulo paucæ, pedicellis capillaribus.

Species 1, Americæ tropicæ a Brasilia usque ad Indiam occidentalem et Mexicum incola. *Kunth, Enum. Pl. i. 423; Rev. Gram. t. 71. Döll in Mart. Fl. Bras. ii. iii. t. 35.*

Genus *Cenotheca* et *Lophathera* affine. Florem in spicula sæpe unicum fertilem invenimus, gluma superiore vacua v. paleam solam fovente, interdum tamen flores 2 fertiles adsunt, gluma vacua ad apicem rhachillæ minuta v. 0. Stamina 2 dicuntur sed certe interdum adsunt 3. Spiculæ in aliis speciminibus fæminæ videntur, in aliis hermaphroditæ v. interdum mascule.

241. *Lophatherum*, Brongn. in Duperr. Voy. Coq. Bot. 49, t. 8. (Acroelytrum, Steud. in Flora, 1846, 20. Alletotheca, Steud. Syn. Pl. Glum. i. 117.)—Spiculæ 1-floræ, secus paniculæ ramulos simplices sparsæ, rhachilla supra glumam infimam subarticulata ultra florem producta apice  $\infty$ -glumifera, flore hermaphrodito. Glumæ 2 inferiores vacuæ, latiusculæ, obtusæ, membranacæ, 5-nerves, extima sæpe persistens, secunda similis nisi major; tertia florens adhuc major, 5-7-nervis, haud raro arista brevi terminata; plures ad apicem rhachillæ vacuæ v. paleam parvam foventes, gradatim minores et semet involventes, paucinerves, breviter aristatæ, cristam unilateralem parvam e spicula exsertam formantes; palea glumæ subæqualis, angusta, hyalina, 2-carinata, carinis plus minus alatis. Stamina 3. Styli basi brevissime connati, stigmatibus elongatis tenuiter plumosis. Caryopsis oblonga, gluma inclusa, libera.—Gramen elatiusculum, erectum, habitu *Cenotheca*, foliis planis lanceolatis inter venas transversim venulosum. Panicula longa, ramis sparsis dissitis, nunc elongatis spiculis distichis, nunc abbreviatis spiculis confertis. Spiculæ subteretes, lineares v. rarius latiusculæ crassioresque, subsessiles.

Species 1 v. 2, inter se valde affines, Indiæ orientalis, Archipelagi Malayani, Chinæ et Japoniæ incolæ. *Kunth, Enum. Pl. i. 390. Steud. Syn. Pl. Glum. i. 300.*

242. *Streptogyne*, Beauv. Agrostogr. 80, t. 16, f. 8.—Spiculæ pauci- (1-4)-floræ, lineariteretes, in spica unilaterali subsessiles, rhachilla inter flores sæpius longiusculæ articulata, floribus saltem inferioribus hermaphroditis. Glumæ 2 inferiores vacuæ, extima parva, secunda longior, latiuscula, convoluta,  $\infty$ -nervis, acuta, mutica; florentes longiores, rigidiores, arcte convolutæ,  $\infty$ -nerves, in aristam tenuem rectam productæ, summæ 1-3 vacuæ, gradatim minores; palea gluma arcte inclusa, angusta, membranacea, breviter 2-fida, 2-carinata, genitalia involvens. Lodiculæ angustæ 2 (v. 3?). Stamina 2-3. Styli 2-3, basi breviter connati, stigmatibus longissime filiformibus breviter papillosis demum spiralliter tortis. Caryopsis linearis, teres, exsulca, gluma paleaque leviter induratis arcte inclusa, libera.—Gramen erectum elatiusculum, foliis longis planis in vaginam longe angustatis, venulis transversis tessellatis. Spica terminalis, longa, rigida. Spiculæ longæ, nunc dissitæ rhachi adpressæ, nunc numerosæ, confertæ, semper secundæ.

Species 1, Indiæ orientalis, Africæ tropicæ, Americæ tropicæ et civitatum australium Americæ borealis incolæ. *Kunth, Enum. Pl. i. 427. Döll in Mart. Fl. Bras. ii. iii. 171, t. 46.*

Specimina Americana, Africana et Indica, inter se simillima, omnia variare videntur florum numero in spicula, stylis staminibus 2 v. 3. Genus pluribus notis *Lophathera* affine, abunde differt inflorescentia, spiculis longis, stigmatibus longissimis tortis, etc.

243. *Zeugites*, Schreb. Gen. Pl. 810. (Senites, Adans. Fam. ii. 39, char. manco. Despretzia, Kunth, Rev. Gram. ii. 485, t. 157. Krombolzia, Fourn. in Bull. Soc. Bot. Belg. xv. 463.)—Spiculæ  $\infty$ -floræ, paniculatæ, rhachilla continua v. vix sub flore fertili articulata supra florem fertilem sæpe elongata, flore inferiore fæmineo superioribus masculis. Glumæ tenuiter membranacæ, multinerves, 2 inferiores vacuæ, latissimæ, parum inæquales, apice rotundatæ v. truncatæ, sæpe subdentatæ, muticæ, inter nervos sæpius transversim venulosæ: tertia florem  $\varphi$  fovens vacuis similis nisi paullo major, interdum mucronulata; superiores 2-5 flores  $\sigma$  foventes angustiores sæpeque mucronulatæ, venulis transversis raris; palea angusta, hyalina, 2-carinata. Stamina in flore  $\sigma$  3. Styli in flore  $\varphi$  distincti, stigmatibus longiusculis laxè plumosis. Caryopsis oblonga, gluma paleaque inclusa, libera.—Gramina nunc debilia basi decumbentia ramosa, nunc elatiora valida, foliis planis petiolatis v. sessilibus ovatis v. ovato-lanceolatis, inter venas transverse

venulosus. Panicula terminalis, nunc laxa effusa spiculis paucis nutantibus, nunc dense floribunda.

Species 5 v. 6, Americæ tropicæ a Columbia usque ad Indiam occidentalem et Mexicum dispersæ. Beauv. *Agrostogr.* 110, t. 12, f. 9. *Fourn. Gram. Mex.* 121. *P. Br. Hist. Jam. t. 4, f. 3 (Apluda)*.

244. **Pleuropogon**, *R. Br. in App. Parr. Voy. Suppl.* 289, t. D. (Lophochlæna, *Nees in Ann. Nat. Hist. ser. 1, i.* 283.)—Spiculæ  $\infty$ - (8-14-)floræ, secus rhachin simplicem racemosæ, rhachilla supra glumas inferiores et inter flores articulata, floribus hermaphroditis v. summo masculo. Glumæ 2 inferiores vacuæ, membranaceæ, subhyalinæ, 1-nerves v. secunda sub-3-nervis, muticæ, inæquales; florentes longiores, membranaceæ v. rigidulæ, 7-nerves, apice breviter hyalinæ, integræ v. emarginato-bifidæ, nervo medio in mucronem v. aristam excurrente, lateralibus gluma brevioribus; palea gluma vix brevior, hyalina, 2-carinata, carinis elevatis cristatis v. appendice lineari instructis ciliatisque. Stamina 3. Styli breves, stigmatibus plumosis. Caryopsis oblonga, crassiuscula, gluma paleaque inclusa, libera.—Gramina erecta, mollia, foliis planis. Racemus simplex, breviter pedunculatus, laxis, interdum elongatus. Spiculæ majusculæ, dissitæ, breviter pedicellatæ, erectiusculæ v. pendulæ.

Species 3, quarum una Arctica, 2 Californicæ. *Kunth, Enum. Pl. i.* 368. *Thurb. in S. Wats. Bot. Calif. ii.* 306 (*Lophochlæna*). *Hook. et Arn. Bot. Beech. Voy. t.* 95 (*Lophochlæna*).

245. **Brylkinia**, *F. Schmidt, Reise Amurl. Bot.* 199, t. 8.—Spiculæ 1-floræ, secus pedunculum simplicem racemosæ, secundæ, rhachilla sub flore demum articulata glabra, ultra florem in stipitem producta, flore hermaphrodito. Glumæ 4 inferiores vacuæ, extima angusta, 1-3-nervis, acutissima, sequentes gradatim majores, 5-nerves, mucronato-acuminatæ v. aristatæ; quinta sola florens, cæteris longior longiusque aristata, 5-7-nervis; palea angusta, 2-carinata, gluma inclusa. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis longe oblonga, crassiuscula, exsulca.—Gramen perenne, flaccidum, longe ascendens, foliis planis. Racemus simplex, ei *Pleuropogonis* subsimilis, spiculis majusculis breviter pedicellatis pendulis.

Species 1, Japoniæ et ins. Sachalin incolæ.

246. **Uniola**, *Linn. Gen. n.* 85. (*Trisiola*, *Rafin. in Journ. Phys.* lxxxix. 104. Chasmanthium, *Link. Hort. Berol. i.* 159.)—Spiculæ  $\infty$ - (3-20-)floræ, planæ, paniculatæ, rhachilla inter flores demum articulata, floribus hermaphroditis v. summo masculo. Glumæ complicato-carinatæ, rigidæ, multinerves, acutæ v. rarius obtusiusculæ, muticæ, carina interdum anguste alata, 3-6 inferiores vacuæ, gradatim auctæ; florentes vacuis similes nisi paullo majores, summa sæpius iterum minor florem ♂ fovens v. vacua; palea rigidula, 2-carinata, carinis anguste alatis. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, crassiuscula, a latere compressa, gluma paleaque laxè inclusa, libera.—Gramina erecta, sæpe elata, foliis planis v. convolutis. Panicula nunc elongata, stricta, subsimplex, spiculis secus axin fasciculatis v. sparsis, nunc ampla, laxa v. densa. Spiculæ in ordine insigniter latæ planæque interdum inagnæ; glumæ rigidæ, herbacææ v. coriaceæ, nervis interdum tenuissimis 1-2 utrinque evidentioribus semper tamen revera numerosis, in *U. paniculata* glumæ 6 inferiores, in cæteris speciebus 4 v. interdum 3 vacuæ.

Species nobis notæ genuinæ boreali-Americanae 4, quarum una etiam in America centrali et australi andina v. extratropica invenitur. Beauv. *Agrostogr.* 74, t. 15, f. 6. *Kunth, Enum. Pl. i.* 424; *Rev. Gram. t.* 72. *Linn. Amæn. Acad. vii. t. 3, f. 40 (spicula U. paniculatæ)*. *Benth. in Journ. Linn. Soc. xix.* 122. His dubie additur *U. racemiflora*, Trin. (*U. virgata*, Griseb. Fl. Brit. W. Ind. 531), ex India occidentali, inflorescentia fere *Leptochloæ*; spicæ numerosæ breves omnino *Chloridearum* secus pedunculum longum densissime confertæ secundæ, sed spiculæ, etsi minimæ, omnino *Uniolæ*.

Species 3, Mexicanae, a Fourniero editæ, nobis ignotæ, ex caractere dato a genere differunt glumis vacuis 2 tantum et caryopsi lineari-elongata.

247. **Distichlis**, Rafin. in *Journ. Phys.* lxxxix. 104. (*Brizopyrum*, Presl, *Rel. Hœnk.* 280, non Link.)—Spiculæ  $\infty$ -floræ, stricte v. abortu dioicæ, in panicula contracta spiciformi v. oblonga subsessiles, rhachilla in ♂ continua in ♀ inter flores articulata. Glumæ 2 inferiores vacuæ, angustæ, carinatæ, acutæ, florentibus breviores; florentes latiores, carinatæ, multinerves, acutæ, exaristatæ, rigidule membranaceæ v. subcoriaceæ; palea complicato-2-carinata, carinis interdum anguste alatis. Stamina in fl. ♂ 3, ovarii rudimento raro; staminodia in fl. ♀ rara, parva. Styli in fl. ♀ ima basi incrassati contigui at distincti (ovarium apice 2-fidum apud auct. nonnull.) longiusculi, stigmatibus plumosis. Caryopsis obovoidea v. elliptica, gluma paleaque inclusa, libera, pericarpio (an semper?) superne incrassato subspongioso.—Gramina rigida, repentia v. basi decumbentia, caulibus adscendentibus vaginis foliorum obtectis, foliis rigidis planis v. convolutis superne sæpe subulatis interdum pungentibus. Spicæ densæ paucispiculatæ, breviter v. longiuscule pedunculatæ, utriusque sexus parum dissimiles, spiculæ tamen in planta ♂ plures quam in ♀, rigidulæ, compressæ, faciebus præsertim in ♀ medio longitudinaliter sulcatis, floribus 8–16, glumis paleaceis arcte imbricatis.

Species v. varietates insigniores 4 v. 5, Americæ borealis et Australis andinæ v. extratropicæ incolæ, præsertim maritimæ, quarum una etiam in maritimis Australiæ obvia. *E. Desv. in C. Gay, Fl. Chil.* vi. 395. *Benth. Fl. Austral.* vii. 637. *E. Fourn. Gram. Mex.* 120 (*Brizopyrum*). *Labill. Pl. Nov. Holl.* t. 24 (*Uniola*). *Kunth, Rev. Gram.* t. 81, 82, 144, 181, 182 (*Poa*). *Trin. Spec. Gram.* t. 299, 300 (*Uniola*). *Torr. Bot. Marc. Exped.* t. 20 (*Uniola*).

248. **Æluropus**, Trin. *Fundam. Agrostogr.* 143. (*Calotheca*, Spreng. *Syst.* i. 347, pro maxima parte non Desr. *Chamædactylis*, Nees, *Gen. Fl. Germ. Monocot.* i. n. 66.)—Spiculæ  $\infty$ -floræ, secus rhachin spicæ v. paniculæ spiciformis brevis v. interruptæ subsessiles, dense confertæ, rhachilla sub floribus articulata, floribus hermaphroditis v. summo masculino. Glumæ 2 inferiores vacuæ, membranaceæ, 1–3-nerves, parum inæquales: florentes paullo longiores, latiores, 7–9-nerves, apice latiusculæ, interdum denticulatæ, mucronatæ; palea gluma sublongior, hyalina, lata, 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis ovata, a dorso compressiuscula, gluma paleaque inclusa, libera.—Gramina perennia, repentia v. prostrata, rigida, ramosissima, caulibus foliatis abbreviatis v. elongato-ascendentibus, foliis brevibus patentibus rigidis interdum pungentibus. Spicæ breves, densæ, nunc solitariae, nunc sæpius capitato-glomeratæ v. secus rhachin sessiles sparsæ v. fasciculatæ, spicam compositam seu paniculam spiciformem continuam v. interruptam formantes.

Species bene distinctæ 3, ab auctoribus varie multiplicatæ, regionis Mediterraneæ, Asiæ mediæ et Indiæ orientalis incolæ, sæpius maritimæ. *Parlat. Fl. Ital.* i. 460. *Host, Gram. Austr.* iv. t. 28 (*Dactylis*). *Reichb. Ic. Fl. Germ.* t. 59, f. 1520 (*Dactylis*). *Desf. Fl. Atl.* t. 15 (*Dactylis*). *Sibth. Fl. Græc.* t. 80, 81 (*Festuca*).

249. **Dactylis**, Linn. *Gen. n.* 86.—Spiculæ paucifloræ, in fasciculis densis compositis secundis brevissime pedicellatæ, rhachilla inter flores continua v. vix demum articulata glabra, floribus hermaphroditis v. summo masculino. Glumæ 2 inferiores vacuæ, rigidulæ, hyalinæ, carinatæ, mucronatæ, inæquales, secunda majore interdum 3-nervi; florentes vacuis majores, rigidiores, 5-nerves, carina ciliolata in mucronem v. aristam brevem producta; palea gluma vix brevior, 2-carinata. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis a dorso compressa, antice cava v. late sulcata, gluma paleaque inclusa, libera.—Gramen perenne, interdum elatum, foliis planis. Spicularum fasciculi capituliformes, secundi, nunc ad apicem pedunculi confertissimi, nunc secus rhachin subsessiles, spicam interruptam formantes v. ad apices ramorum paniculæ conferti.

Species 1, per Europam, Asiam temperatam et Africam borealem late dispersa et in aliis regionibus inquilina. *Beauv. Agrostogr.* 85. t. 17, f. 5. *Kunth, Enum. Pl.* i. 385. *Host, Gram. Austr.* ii. t. 94. *Reichb. Ic. Fl. Germ.* t. 59 (excl. f. 1520). *Nees, Gen. Fl. Germ. Monocot.* i. n. 65. *Parlat. in Webb, Phytogr. Canar.* t. 249.

*D. cæspitosa*, Hook. f., ex insulis Falklandicis infra sub *Poa* citatur.

250. *Lasiochloa*, Kunth, *Rev. Gram.* ii. 555, t. 192 ad 194.—Spiculæ 2-3-floræ, in panícula densa spiciformi cylindracea v. interrupte subramosa fasciculatæ, rhachilla brevissima supra glumas inferiores et inter flores demum articulata, glabra, floribus hermaphroditis v. summo masculo. Glumæ 2 inferiores vacuæ spiculam subequantes, 5-7-nerves, acutæ v. breviter mucronatæ, sæpissime e tuberculis hispidæ; florentes breviores, tenuiores, interdum scarioso-subhyalinæ, 7-9-nerves, muticæ; palea 2-carinata. Stamina 3. Styli breves, stigmatibus pilis brevibus plumosis. Caryopsis oblonga, gluma paleaque inclusa, libera.—Gramina cæspitosa, annua (v. perennia?), foliis angustis planis v. sæpius convolutis teretibus setaceisve. Spiculæ parvæ, pilis rigidis glumarum inferiorum conspicuarum hispidæ, paniculis sæpius fusciscentibus irregulariter ovatis v. subramosis, interdum dense cylindraceis.

Species 3 v. 4, Africæ australis incolæ. *Nees, Fl. Afr. Austr. Gram.* 430.

Genus *Kæleria* (*Lophochloa*) quodammodo accedit quacum mediante *K. Gerrardi*, Munro, connectitur sed inflorescentia et glumæ  $\infty$ -nerves potius eum *Dactylo* comparanda. Spiculæ etiam sæpe æqualiter 2-floræ *Aireas* referunt.

251. *Demazeria*, Dumort. *Comment. Bot.* 26. (*Brizopyrum*, Link, *Hort. Berol.* i. 159.)—Spiculæ  $\infty$ -floræ, compressæ, distiche spicatæ v. inferiores subfasciculatæ, rhachilla inter flores articulata, floribus hermaphroditis v. summo imperfecto. Glumæ coriaceæ, carinatæ, obtusæ v. mucronato-acutæ, muticæ, 2 inferiores vacuæ, persistentes, 3-5-nerves, florentibus minores; florentes imbricatæ, 7-nerves; palea rigidula, gluma vix brevior v. sublongior, juxta margines 2-carinata. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis oblonga, a dorso compressiuscula, antice concava, gluma paleaque inclusa, libera.—Gramina annua v. perennia, foliis angustis sæpius convolutis. Spiculæ nunc majusculæ, secus pedunculum dissite, regulariter distichæ, nunc minores secus rhachin confertæ, bifariam imbricatæ, spica unica terminali v. rarius 2-3 in axillis superioribus additæ. Glumæ florentes basi dorso v. ad margines pubescentes v. ciliato-pilosæ.

Species nobis notæ 4, quarum 1 regionis Mediterraneæ ceteræ Africæ australis incolæ. *Jacq. Ic. Rar.* t. 303 (*Poa*). *Nees, Fl. Afr. Austr. Gram.* 369 (*Brizopyrum*, excl. *B. cyperoides*).

Character Linkianus imprimis ad *D. siculam*, regionis Mediterraneæ eductus fuit. *Brizopyrum americanum*, Link, spiculis dioicis, est typus generis *Distichlis*, Rafin. (*Brizopyri*, Presl).

252. *Sclerochloa*, Beauv. *Agrostogr.* 97, *pro parte*, t. 19, f. 4.—Spiculæ  $\infty$ - (3 6-) floræ compressæ, in panícula secunda confertæ, rhachilla sub floribus articulata incrassataque, floribus hermaphroditis v. summo imperfecto. Glumæ 2 inferiores vacuæ, extima brevis acutiuscula, secunda major, latior, obtusissima, 3-5-nervis; florentes longiores, complicato-carinatæ, rigide sub-5-nerves, apice membranaceæ, truncatæ v. emarginatæ, costa rarius in mucronulam excurrente, nervis lateralibus minoribus; palea gluma paullo brevior, 2-carinata. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis oblonga, subteres v. a latere compressiuscula, exsulca, gluma paleaque inclusa, libera.—Gramen annuum, humile, foliis planis. Panícula brevis, unilateralis, spiculis breviter pedicellatis, superioribus solitariis, inferioribus in ramulis brevissimis 2-3-nis.

Species 1, Europæ australis et Asiæ occidentalis et mediæ incolæ. *Host, Gram. Austr.* ii. t. 73 (*Poa*). *Reichb. Ic. Pl. Germ.* t. 58, f. 1516.

Genus a *Festuca* (*Scleropoa*) glumis florentibus a basi carinatis facile distinctum, ad *S. durum*, Beauv., limitatur; *S. philistæa*, Boiss., potius ad *Cutandiam* referenda est.

253. *Briza*, Linn. *Gen. n.* 84.—Spiculæ  $\infty$ -floræ, paniculatæ, rhachilla inter flores articulata glabra, floribus hermaphroditis v. summo imperfecto. Glumæ scarioso-membranaceæ, valde concavæ v. vesiculosæ, 2 inferiores vacuæ, persistentes, 3-5-nerves, parum inæquales; florentes imbricatæ, appressæ v. patentes, vacuis latiores, obtusæ acutæ v. breviter aristatæ, 5- $\infty$ -nerves, nervo medio interdum evanescente, summa sæpe multo angustior vacua v. floris rudimentum fovens; palea lata et sæpe gluma multo minor, hyalina, plana, prope margines 2-carinata v. 2-nervis. Stamina 3. Styli distincti, stig.

matibus plumosis. Caryopsis ovata, a dorso compressa, gluma paleaque inclusa, paleæ marginibus inflexis amplexa sed libera, v. rarius siccitate leviter adhærens.—Gramina annua v. perennia, foliis planis v. anguste convolutis interdum setaceis. Panicula nunc effusa ramulis capillaceis, nunc angusta stricta fere spiciformis.

Species ad 10, Europæ, Africæ borealis, Asiæ temperatæ et Americæ australis incolæ. Beauv. *Agrostogr.* 67, t. 14, f. 3. Kunth, *Enum. Pl.* i. 371. Döll in Mart. *Fl. Bras.* ii. iii. 129.

Sectiones sequentes ab auctoribus nonnullis pro generibus propriis habentur:—

1. *Eubrizia*. Spiculæ latæ, in panicula laxa a ramulis pedicellisque capillaribus nutantes v. pendulæ. Glumæ florentes obtusæ v. obtusiusculæ, muticæ, nervis lateralibus a medio distantibus distinctis v. in unum latum obscurum confluentibus marginibus scariosis et rubis. Species Europææ, quarum una in aliis regionibus inquilina nunc late dispersa. Trin. *Spec. Gram.* t. 290 ad 292. Host, *Gram. Austr.* ii. t. 23 ad 30. Nees, *Gen. Fl. Germ. Monocot.* n. 59. Reichb.  *Ic. Fl. Germ.* t. 92. Sibth. *Fl. Gr.* t. 74 ad 77. Bot. Mag. t. 357.

*B. spicata*, Sibth. *Fl. Gr.* t. 77, Trin. *Spec. Gram.* t. 293, species orientalis ab *Eubrizia* parum differt spiculis ovatis in panicula angusta brevissime pedicellatis erectis

2. *Chascolytrum*. Panicula densiuscula, glumarum florentium nervi 5-7 prominuli, ad apicem glumæ conniventes, et interdum in mucronem brevem producti, marginibus glumæ anguste scariosis; paleæ carinæ sæpe ciliatæ. Species 2 v. 3, austro-Americanae, ab auctoribus varie multiplicatæ, quarum una a Chile et Bonaria usque ad Mexicum extensa. Beauv. *Agrostogr.* t. 17, f. 6 (*Calotheca*). Trin. *Spec. Gram.* t. 294. Döll in Mart. *Fl. Bras.* ii. iii. t. 39. CHASCOLYTRUM, Desv. in *Nouv. Bull. Soc. Philom.* ii. (1810) 190, et in *Journ. Bot.* i. (1813) 72. Kunth, *Rev. Gram.* t. 86, 87.

3. *Calotheca*. Panicula laxa, patens. Glumarum florentium nervi 5-7 prominentes, ad apicem glumæ conniventes, plus minus in aristam producti, marginibus scariosis latissimis apice intra aristam subdorsalem plus minus productis. Trin. *Spec. Gram.* t. 289. Döll in Mart. *Fl. Bras.* ii. iii. t. 40. CALOTHECA, Desv. in *Nouv. Bull. Soc. Philom.* ii. (1810) 190, et in *Journ. Bot.* i. (1813) 71. Kunth, *Rev. Gram.* t. 88. Beauv. *Agrostogr.* t. 17, f. 7.

*B. geniculata*, Thunb., ex Africa australi, a Munroio ob glumas florentes distincte 3-nerves ad *Eragrostim* (*Platystachyam*) refertur.

254. *Schismus*, Beauv. *Agrostogr.* 73, t. 15, f. 4. (Electra, Panz in *Denkschr. K. Acad. Wiss. Münch.* 1813, 299. Hemisacris, Steud. in *Flora*, 1829, 490.)—Spiculæ ∞-floræ, anguste paniculatæ, rhachilla inter flores articulata fragillima, floribus hermaphroditis v. summo imperfecto. Glumæ 2 inferiores vacuæ, persistentes, membranaceæ, acutæ, 3-5-nerves, parum inæquales, spiculam æquantes v. vix breviores; florentes multo breviores, imbricatæ, latæ, hyalinæ, tenuissime 5-9-nerves, apice 2-fidæ, muticæ v. inter lobos minute mucronatæ; palea paullo brevior, hyalina, superne dilatata, carinis 2 basi subcontiguis superne late divergentibus. Stamina 3, antheris brevibus. Styli distincti, stigmatibus plumosis. Caryopsis obovoidea, gluma paleaque laxè inclusa, libera.—Gramina annua, cæspitosa, sæpius humilia, foliis angustis interdum setaceis. Panicula angusta, densa v. laxiuscula, ramulis erectis. Spiculæ ob glumarum margines subscariosos sæpe nitidulæ.

Species 3 v. 4, quarum una per regionem Mediterraneam ab ins. Canariensibus usque ad Affghanistan et Arabiam latissime dispersa, 2 v. 3 Africæ australi propriæ. Kunth, *Enum. Pl.* i. 384. Coss. et Dur. *Fl. Alg. Glum.* 137. Nees, *Fl. Afr. Austr. Gram.* 420. Cav.  *Ic. t.* 44 (*Festuca*).

255. *Xephelochloa*, Boiss. *Diagn.* v. 72, non Griseb.—Spiculæ ∞-floræ, parvæ, paniculatæ, rhachilla inter flores articulata glabra, floribus hermaphroditis. Glumæ 2 inferiores vacuæ, persistentes, membranaceo-hyalinæ, vix venosæ, obtusæ, muticæ, inæquales; florentes longiores, vix carinatæ, basi 5- rarius 7-nerves, apice scariosæ 2-fidæ, arista inter lobos tenui recta lobis longiore; palea hyalina, 2-dentata, 2-carinata. Stamina 3. Styli brevissimi, stigmatibus brevibus plumosis. Caryopsis (vix matura) ovoidea, exsulca, glabra, gluma paleaque inclusa, libera.—Gramen annuum, erectum, gracile, sæpius simplex, foliis paucis brevibus setaceo-convolutis. Panicula elegantissima, oblongo-thyrsoidea, ramulis more *Aire involucriatæ*, Cav., verticillatis pedicellisque capillaribus, spiculis parvis nitidulis.

Species 1, Orientalis. *Benth. in Hook. Ic. Pl. t. 1369.* Species a Grisebachio in Ledeb. Fl. Ross. *Nephelochœ* additæ 'characterè reformato,' nobis omnino ad *Poa* restituendæ videntur.

256. *Poa*, Linn. Gen. n. 83.—Spiculæ pauci- ( sæpius 2-6-) floræ, in panicula laxa v. rarius spiciformi pedicellatæ, rhachilla inter flores articulata glabra v. rarius pilosula, floribus hermaphroditis, v. præsertim in speciebus austro-Americanis polygammis summo sæpe imperfecto. Glumæ membranacæ, carinatæ, acutæ v. obtusæ, exaristatæ, 2 inferiores vacuæ, persistentes, 1-3-nerves, florentibus vulgo breviores; florentes obtusæ v. rarius acutæ, 5- rarius 7-nerves, nervis sæpius apice conniventibus; palea gluma parum brevior, prominenter 2-nervis v. 2-carinata. Stamina 3. Styli breves, nunc brevissimi, distincti, stigmatibus plumosis. Caryopsis ovoidea oblonga v. fere linearis, compressiuscula, exsulca v. rarius late sulcata, glabra, gluma paleaque inclusa, libera v. siccitate paleæ plus minus adhærens.—Gramina nunc humilia, annua, nunc elatiora perennia, foliis planis v. convolutis. Panicula sæpius effusa, spiculis parvis v. mediocribus, floribus in paucis speciebus ad 1-2 reductis, rarissime usque ad 7 v. 8.

Species ad 80, apud auctores nonnullos ultra 200, per orbem terrarum latissime dispersæ, in temperatis præsertim hemisphæri borealis frequentissimæ, inter tropicos paucae. *Beauv. Agrostogr. 70, t. 14, f. 10. Kunth, Rev. Gram. t. 83, 150 ad 153; Enum. Pl. i. 324 (quoad sect. a). Steud. Syn. Pl. Glum. i. 249. Host, Gram. Austr. ii. t. 61 ad 67, 70, 71; iii. t. 13 ad 16; iv. t. 26, 27. Jacq. Ecl. Gram. t. 36. Reichb. Ic. Fl. Germ. t. 81 ad 90. Nees, Gen. Fl. Germ. Monocot. i. n. 56. Coss. et Dur. Expl. Alg. t. 40. Labill. Pl. Nov. Holl. t. 35 (Arundo). Hook. f. Fl. Tasman. t. 164. Benth. Fl. Austral. vii. 650. Buchan. N. Zeal. Grass. t. 42 ad 53. Torr. Fl. N. York, t. 155. Fourn. Gram. Mex. 112 (excl. sp. n. 6). Dæll in Mart. Fl. Bras. ii. iii. 118, t. 36.*

Genus quoad species plerasque naturale et glumis florentibus a basi carinatis 5-nerviis, nervis conniventibus ab *Eragrosti*, *Glyceria* et *Festuca* bene distinctum, species tamen nonnullæ quasi intermedie limites incertos reddunt, nec adhuc in sectiones naturales divisum, sequentes a variis auctoribus propositæ v. pro generibus distinctis habitæ male definite evadunt.

*Pseudopoa*, C. Koch in Linnæa, xxi. 409, includit *P. persicam*, Poir., cum speciebus 2 Asiaticis ei affinis. Annuæ sunt, habitu gracili *Nephelochœ*, cui adjunctis Grisebach etsi characteribus minime conveniant. C. Koch sectionem in *Festuca* includit ob caryopsin paleæ adhærentem, quod tamen observatur in *Pois* pluribus genuinis e.g. in *P. Billardieri*, Steud., sæpeque in ipsa *P. pratensi*; characteres cæteri *Pseudopœ* omnino *Pœ*.

*Leucopoa*, Griseb. in Ledeb. Fl. Ross. iv. 383, est *P. albida*, Turcz., species spiculis solito majoribus, glumis subscarioso-nitentibus, quod tamen plus minus observatur in aliis speciebus, e.g. in *P. chilensis* affinisque ex America australi extratropica.

*Dioicopoa*, E. Desv. in C. Gay, Fl. Chil. vi. 413 (*Dispar*, Dæll), continet *P. chilensem*, Trin., *P. lanuginosam*, Poir., affinesque ex America australi extratropica, spiculis sæpius abortu dioicis. Paniculæ tamen ♂ et ♀ inter se vix aliter differunt, et certe in speciminibus nonnullis *P. chilensi* valde affinis flores hermaphroditos invenimus. His affines sunt *Dactylis cæspitosa*, Hook. f. Fl. Ant. t. 136, Hook. Lond. Journ. ii. t. 9, *Festuca foliosa*, Hook. f. Fl. Ant. t. 55, et *F. Cookii*, Hook. f. l.c. t. 139, species antarcticæ ad *Poa* translata ab Hook. f. in Bot. Kerg. Isl. 22, in Phil. Trans. clxviii.

*Poidium*, Nees in Lindl. Introd. Nat. Syst. ed. 2, 450, species Brasiliensis, est fide Dællii *Pœ* species vera, floribus sæpe nec semper in quaque spicula ad 2 v. 1 reductis.

257. *Colpodium*, Trin. Fund. Agrost. 119.—Spiculæ 1-2-floræ, rarissime 3-floræ, laxè paniculatæ, rhachilla supra glumas inferiores et inter flores articulata, floribus hermaphroditis. Glumæ muticæ, 2 inferiores vacuæ, tenuiter membranacæ, interdum hyalinæ, enerves v. 1-nerves, obtusæ v. acutiusculæ, parum inæquales; florentes tenuiter membranacæ, apice saltem sæpius hyalinæ, interdum latissimæ, obtusæ, plus minus 5-nerves, nervis lateralibus tamen brevibus v. fere obsoletis; palea gluma vix brevior, hyalina, 2-nervis. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis oblonga, exsulca, gluma inclusa a palea libera.—Gramina annua v. perennia, tenella v. rarius elatiora debiliacque, foliis angustis planis v. fere setaceis. Panicula gracilis, effusa, pyramidalis, ramulis capillaribus subfasciculatis. Spiculæ sæpius parvulæ, haud raro coloratæ.

Species ad 10, Orientis et Asiæ centralis et montanæ incolæ. *Griseb. in Ledeb. Fl. Ross. iv. 384 (quoad sect. Eucolpodium). Ledeb. Ic. Fl. Ross. t. 226.*

Genus vix a *Poa* distinguendum. *C. latifolium*, Br., est *Arctagrostis*, Griseb., ad *Agrostideas* relatum.

258. **Graphophorum**, Desv. in *Nouv. Bull. Soc. Philom.* ii. (1810) 189, et in *Journ. Bot.* i. (1813), 71.—Spiculæ  $\infty$ - (3-5-) floræ, angustæ v. ample paniculatæ, rhachilla sub floribus articulata pilosa, ultra flores in stipitem nudum v. minute glumiferum producta; floribus hermaphroditis. Glumæ membranaceæ v. subscariosæ, muticæ, 2 inferiores vacuæ, plus minus distincte carinatæ, parum inæquales, florentibus æquilongæ v. vix breviores, basi saltem 3-5-nerves v. extima præter carinam subnervis; florentes dorso rotundatæ, apice denticulatæ v. laceræ, 5-7-nerves, nervis præsertim lateralibus apicem non attingentibus; palea glumam æquans v. interdum superans, angusta, juxta margines 2-carinata, carinis ciliolatis. Stamina 3. Styli distincti, stigmatibus plumosis. Caryopsis oblonga, a dorso compressiuscula, antice concava, appendicula brevī subspongiosa sæpe coronata, cæterum glabra, gluma paleaque inclusa, libera.—Gramina erecta, sæpe elata, rarius humilia, foliis planis. Panicula junior sæpe angusta, erecta, stricta, demum effusa, ramulis brevibus v. elongatis patentibus v. pendulis, interdum secundis.

Species ad 8, boreales, Americane Europææ v. Asiaticæ. *A. Gray* in *Ann. Bot. Soc. Canada*, 1861, 55. *Pourn. Gram. Mex.* 111.

Genus a *Glyceria* imprimis rhachilla evidentius pilosa differt, quare interdum *Arundineis* associatur, in sectiones sequentes ab *A. Gray* dividitur:—

1. *Scolochloa*. Gramina elata, panicula ampla laxa. Glumæ rigidulæ. Ovarii callus terminalis villosus, stigmatibus subsessilibus. Species 2. *Hook. Fl. Bor. Amer. t.* 231 (*Festuca*). *Scolochloa*, *Link. Hort. Berol.* i. 136. *Nees, Gen. Fl. Germ. Monocot. i. n.* 62. *Reichb. Ic. Fl. Germ. t.* 71. *F. Schmidt, Reise Amurl. Bot. t.* 8. *F. LUMINIA, Fries, Summ. Veg. Scand.* 247.

2. *Eugraphophorum*. Gramen elatum, panicula demum ampla laxa. Spicularum rhachilla undique ciliata. Glumæ tenues, subscariosæ. Ovarii callus terminalis glaber, stigmatibus subsessilibus. *Beauv. Agrostogr.* 76, t. 15, f. 8.

3. *Dupontia*. Gramina humilia, panicula angusta rarius demum effusa. Spicularum rhachilla præter pilos sub floribus glabra. Glumæ membranaceæ, sæpe coloratæ. Ovarium glabrum. *DUPONTIA, R. Br. App. Parr. Voy.* 190.

4. *Arctophila*. Gramina elatiuscula, debilia, panicula laxa, spiculis parvis. Rhachillæ pili sub floribus breves. Glumæ latæ, venis præter centralem fere obsolete. Ovarium glabrum, stylis brevibus. Caryopsis subtiles, fere acuminata, exsulca. Species 3, *Glyceriæ* valde affines.

259. **Glyceria**, *R. Br. Prod.* 179.—Spiculæ  $\infty$ -floræ, in panicula angusta v. effusa pedicellatæ, rhachilla inter flores articulata glabra v. rarissime pilosula, floribus hermaphroditis v. summo imperfecto. Glumæ 2 inferiores vacuæ, obtusæ v. acutæ, muticæ, florentibus breviores, parum inæquales, nunc enerves v. 1-nerves, nunc 3-5-nerves; florentes obtusæ, muticæ, apice plus minus hyalinæ, rotundatæ v. denticulatæ, dorso convexæ nec carinatæ, 5-9-nerves, nervis omnibus ante apicem evanescentibus interdum brevissimis et ad 3 reductis; palea gluma vix brevior, 2-carinata. Stamina 3. Styli brevissimi, distincti, stigmatibus vario plumosis. Caryopsis glabra, ovoidea v. oblonga, teres v. a dorso compressiuscula, antice angustæ v. late sulcata v. exsulca, gluma paleaque inclusa, libera v. siccitate palææ leviter adhærens.—Gramina perennia v. rarius annua, sæpe elata, haud raro aquatica, foliis sæpius planis angustis rarius rigidis convolutisque. Panicula nunc longa, angusta, ramulis brevibus erectis paucispiculatis, nunc effusa floribunda. Spiculæ nunc longæ, angustæ, multifloræ, nunc parvulæ.

Species ad 30, per regiones temperatas utriusque orbis tam australes quam boreales late dispersæ, inter tropicos paucæ. *Kunth. Enum. Pl.* i. 366. *Benth. Fl. Austral.* vii. 656.

Genus habitu polymorphum, a *Poa* differt glumis florentibus minime carinatis, a *Festuca* glumis obtusioribus latoribus, caryopsi latiore sæpiissime libera, ab utroque genere glumarum nervis abbreviatis; in sectiones 2 dividitur, ab auctoribus nonnullis pro generibus propriis habitas:—

1. *Hydrochloa*. Lodiculæ subcarnosæ truncatæ sæpius connatæ sæpe tamen facile separabiles v. demum sponte solutæ nunc brevissimæ v. obsolete. Caryopsis crassa, vix compressa, obtusissima, sulco angustissimo v. obsolete. Huc pertinent *G. Auitans*, Br., species typica fere cosmopolitana, panicula longa angusta, spiculis angustis multifloris; *G. aquatica*, Sm., species Europææ et Asiaticæ,

a priori habitu dissimilis, panicula effusa, spiculis numerosis brevibus; *G. nervata*, Trin., et *G. pallida*, Trin., species boreali-Americanae, *G. aquaticæ* affines, quibus lodiculæ sæpe vix conspicuæ. *Beauv. Agrostogr.* 96, t. 19, f. 7. *Host, Gram. Austr.* ii. t. 60 (*Poa*), et t. 77 (*Festuca*). *Kunth, Rev. Gram.* t. 85. *Reichb. Ic. Fl. Germ.* t. 80, f. 1614, 1615. *Nees, Gen. Fl. Germ. Monocot.* i. n. 57, f. 1-19. *HYDROCHLOA, Hartm. Gram. Skand.* 8, ex *Endl. PORROTERANTHE, Steud. Syn. Pl. Glum.* i. 287. *EXYDRA, Endl. Fl. Poson.* 119.

2. *Atropis*. Lodiculæ tenues, distinctæ. Caryopsis crassa v. a dorso compressa, facie cava v. late, interdum obscure sulcata, siccitate rarius paleæ subadhærens. Species utriusque orbis boreales v. australes, extratropicæ, habitu vario. Panicula sæpius angusta, interdum fere spiciformis, rarius effusa, spiculis angustis multifloris v. minoribus paucifloris. *Reichb. Ic. Fl. Germ.* t. 79, 80, f. 1613. *Host, Gram. Austr.* iii. t. 17 (*Poa*). *Hook. f. Fl. Tasm.* t. 162. *ATROPIS, Rupr. Fl. Samoied.* 61 (*Poa* sect.). *Grisb. in Ledeb. Fl. Ross.* iv. 388 (*gen. propr.*). *PUCCINELLIA, Parlat. Fl. Ital.* i. 366. Huc etiam pertinet (ex ic. et descr.) *Catabrosa tenuifolia*, Presl; C. Gay, *Fl. Chil.* t. 81.

*G. ramigera*, F. Muell., et *G. australasica*, Steud., species Australianæ, insignes sunt caulibus elatis more fere *Bambusearum* fasciculato-ramosis.

260. **Festuca**, Linn. *Gen.* n. 88.—Spiculæ  $\infty$ -floræ, varie paniculatæ, rhachilla supra glumas inferiores et inter flores articulata, floribus hermaphroditis v. summo rarius pluribus masculis. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, parum v. valde inæquales, acutæ, carinatae, extima 1-nervis, secunda sæpius 3-nervis; florentes angustæ, membranaceæ v. paleaceæ, acutæ v. in aristam productæ rarius obtusæ, dorso rotundatæ, nervis sæpius 5 tenuibus interdum vix conspicuis, costa parum prominula v. superne tantum cariniformi; superiores rarius vacuæ; palea gluma parum brevior, 2-carinata. Stamina 1-3. Ovarium glabrum v. apice pilosulum; styli brevissimi, distincti, stigmatibus plumosis. Caryopsis oblonga v. linearis, glabra, antice sæpius late sulcata, palea arcte amplexa eique siccitate sæpius plus minus adhærens, aqua macerata tamen facillime solvenda, rarius omnino libera, v. more *Bromi* arcte adnata.—Gramina sæpissime perennia, cæspitosa, humilia v. elata, foliis planis v. convolutis interdum setaceis. Panicula nunc angusta stricta v. secunda spiculis erectis, non vero spiciformis, sæpe laxa, interdum ampla effusa spiculis longe pedicellatis pendulis. Glumæ spicularum juniorum interdum imbricato-appressæ, demum sæpius distiche patentes.

Species bene distinctæ vix 80, apud auctores nonnullos ultra 230 per orbem terrarum latissime dispersæ, in regionibus temperatis tamen quam inter tropicos copiosiores. *Kunth, Enum. Pl.* i. 391. *Steud. Syn. Pl. Glum.* i. 301. *Beauv. Agrostogr.* 99, t. 19, f. 9, 10. *Dall in Mart. Fl. Bras.* ii. iii. 111. *Fourn. Gram. Mex.* 123. *Hackel, Monographia Festucarum Europæarum*, 8vo, cum tabb. 4, Kassel, 1882.

Genus a variis botanicis ad limites valde diversos circumscriptum, a *Poa* potius glumarum venatione quam caryopsi paleæ adnata distinctum, nam caryopsis certe libera in *F. pratensi* affinisque et in *Pois* haud paucis paleæ plus minus adhæret. In sectiones a Coss. et Dur. bene dividitur, a quibus tamen *F. lanceolatum*, *F. incrassatum* affinesque genus *Cutandiam*, Willk., formantes excludimus ob glumas a basi carinatas prominenter 3-nervibus; sectiones sequentes admittendæ videntur:—

1. *Vulpia*. Panicula secunda, sæpius angusta densa. Spiculæ perfectæ sæpius superne latiores. Glumæ inferiores vacuæ sæpius valde inæquales, infima parva 1-nervis interdum minuta v. vix conspicua, secunda 3-nervis, florentes 5-nervis aristatæ. Stamen interdum unicum. *Schreb. Besch. Gräs.* t. 31 (*Bromus*). *Host, Gram. Austr.* ii. t. 93; iv. t. 64, 65. *H. B. et K. Nov. Gen. et Sp.* t. 691. *VULPIA, Gmel. Fl. Bad.* i. 8. *Reichb. Ic. Fl. Germ.* t. 60. *Nees, Gen. Fl. Germ. Monocot.* i. n. 71. *Hackel in Flora*, 1880, 467. *MYGALURUS, Link, Enum. Hort. Berol.* i. 92.

*F. inops*, Delile, species humilis, ægyptiaca, insignis est flore infimo solo cujusve spiculæ fertili, glumis cæteris vacuis v. paleam solum foventibus; a Hackelio in *Flora*, 1880, 467, 475, pro sub-sectione (*Spirachne*) *Vulpia* distinguitur.

*F. ulochæta*, Döll in *Mart. Fl. Bras.* ii. iii. 115, t. 33 (*Vulpia ulochæta*, Nees), et *F. leptothrix*, Trin. ex Döllio a *Vulpis* cæteris different panicula laxa.

*LORETIA, Duv. Jouv. in Rev. Sc. Nat. ser. 2, ii. 38*, est genus propositum ad *F. setaceam*, Guss., *F. ligusticam*, Bertol., aliasque paucas quas a *Vulpia* distinguit auctor imprimis antheris magnis post anthesin expulsis nec ut in *Vulpis* veris post anthesin retentis, character valde incertus nec, ut

jam monet Hackel, in eadem specie constans. Hackel *Loretiam* pro subsectione *Vulpia* admittit. Uterque auctor in *Loretiis* includit *F. incrassatam*, Salzm., speciem habitu alieno quam ad *Cutandiam* referimus. Spiculæ a basi latæ nec more *Vulpia* superne latiores; et venatio glumarum omnino *Cutandia*.

2. *Eufestuca*. Panicula stricta v. laxa, sæpe subsecunda. Glumæ inferiores vacuæ parum inæquales, florentes acutæ mucronatæ v. rarius aristatæ. Stamina 3. Host, *Gram. Austr.* ii. t. 26 (*Triticum*), ii. t. 78, 80 ad 91; iii. t. 18 ad 20; iv. t. 60 ad 63. Reichb. Ic. Fl. Germ. t. 61 ad 69. Nees, *Gen. Fl. Germ. Monocot.* i. n. 72. Brot. *Phyt. Lusit.* t. 100 (*Bromus*), 101. Boiss. *Voy. Hisp.* t. 179. Guss. *Pl. Rar. Ic.* t. 6. Desf. *Fl. Atl.* t. 20, 24. Hook. *Fl. Bor. Amer.* t. 230, 232, 233. Buchan. *N. Zeal. Grass.* t. 55. Hook. f. *Fl. Ant.* ii. 379, t. 138 (*Triodiu* v. *Poa*); *Bot. Kerg. Isl.* in *Phil. Trans.* clxviii. t. 22.

Ovarium in plerisque speciebus glaberrimum in nonnullis tamen a Grisebachio pro sectione distinctis sub nomine *Phæochloæ* ovarium apice pilosulum, character in *F. sylvatica*, *F. varia* affinisque valde variabilis. *F. ampliflora*, Døell in Mart. Fl. Bras. ii. iii. t. 34, e Brasilia (quæ eadem videtur ac *F. amplissima*, Rupr. e Mexico) ab auctore pro sectione sub nomine *Mallopetali* distinguitur ob lodiculas apice villosas, sed lodiculas apice pariter pilis longis fimbriatas invenimus in *F. fimbriata*, Nees, quam Døell in *Festucis* legitimis lodiculis glabris collocat.

HALLERIA, *Fourn. Gram. Mex.* 128, est *Bromus lividus*, H. B. et K. Nov. Gen. et Sp. vii. t. 689, rite a Sprengelio et a Kunthio ipso Enum. i. 399. ad *Festucam* translata, Caryopsis in speciminibus nostris anguste oblonga, a dorso compressiuscula, antice lata leviterque sulcata paleæ subadhærens et apice glabra omnino *Festucæ*, etsi habitu varietatibus nonnullis *Bromi tectorum* potius quam *Festucis* typicis accedat. Spiculæ demum sæpe insigniter divaricato-subnutantes.

3. *Schedonorus*. Gramina sæpius elata, panicula stricta v. laxa. Glumæ inferiores vacuæ parum inæquales, florentes more generis basi rotundatæ, 5-nerves, superne tamen distincte carinatæ, muticæ v. breviter mucronatæ. Stamina 3. Caryopsis sæpius (nec semper) a palea libera, obtusissima. Schreb. *Beschr. Gräs.* 34, t. 2. Host, *Gram. Austr.* ii. t. 79. Reichb. Ic. Fl. Germ. t. 70, f. 1565 ad 1568. Trin. *Spec. Gram.* t. 351 (*Arundo*). Labill. *Pl. Nov. Holl.* t. 27. Hook. f. *Fl. Tasm.* t. 165. Buchan. *N. Zeal. Grass.* t. 54. *Festucæ Bovinæ, Frics.* SCHEDONORUS, Beauv. *Agrostogr.* 99, t. 19, f. 2. Nees, *Gen. Fl. Germ. Monocot.* i. n. 73, non *Fricks.* Benth. *Fl. Austral.* vii. 654. Sectio mediante *F. sylvatica*, Vill., cum *Eufestuca* arcte connectitur.

AMPHIGENES, Janka in *Linnaea*, xxx. 619, est *Festuca (Schedonorus) nutans*, Wahlenb. (non Spreng.) quam Kunth a *F. nutante*, Host, distinguit. Wahlenberg tamen synonymon Hostii citat.

Accuratissimus Hackel, in Monographia fusiore *Festucarum* Europeanum supra citata, genus limitat ad sectiones nostras *Eufestucam* et *Schedonorum*, et a *Poa* alisque distinguit imprimis macula hili fere totam v. saltem dimidium caryopsidis æquante nec punctiformi. Character in variis generibus in speciebus constans, nobis tamen pro generibus separandis rarius sufficere videtur. *Festuca rhætica*, Sut. (*Poa variegata*, Lam., ex herb. J. Gay. *Poa violacea*, Bell.) a Hackelio ob maculam hili parvam ad *Poam* relata, species inter hæc genera quasi medium tenens, nobis tamen quoad habitum spiculas glumasque melius sub *Festuca* militare videtur.

Hackel *Festucas* Europæas suas in sectiones 6 satis naturales distribuit quæ tamen cum speciebus exoticis ulterius comparandæ.

4. *Catapodium*. Spiculæ subsessiles v. superiores sessiles, secus rhachin simplicem alternæ solitariæ v. inferiores in ramulo brevissimo 2-3-næ, rhachi spicæ tamen non excavata. Glumæ florentes muticæ v. brevissimæ aristatæ, inferiores vacuæ nunc breves nunc spiculam subæquantes. Host, *Gram. Austr.* ii. t. 27 (*Triticum*). Jacq. *Ecl. Gram.* t. 35 (*Triticum*). Boiss. *Voy. Hisp.* t. 178, f. b (*Nardurus*). CATAPODIUM, Link, *Hort. Berol.* i. 44. Coss. et Dur. *Expl. Alg. Bot.* t. 41 bis (v. 42). Nees, *Gen. Fl. Germ. Monocot.* i. n. 69. Reichb. Ic. Fl. Germ. t. 15. MICROPHYTRUM, Link in *Linnaea*, xvii. 397.

NARDURUS, Reichb. ex Godr. *Fl. Lorr.* ed. 2. ii. 458 (*FESTUCARIA*, Link in *Linnaea*, xvii. 398) est *F. unilateralis*, Schrad., Reichb. Ic. Fl. Germ. t. 15 (*Brachypodium*), a sect. *Catapodio* parum distincta glumis florentibus mucronato-acutis v. breviter aristatis.

CASTELLIA, Tin. *Pl. Rar. Sic.* 17, est *F. (Catapodium) tuberculata*, Coss. et Dur. Fl. Alg. Glum. 189, a *Catapodiis* typicis (*F. Poa* et *F. loliacea*) parum diversa statura majore, inflorescentia sæpius breviter ramosa et glumis florentibus extus minute tuberculosus.

*Nardurus montanus*, Boiss. et Reut. Pug. Pl. Nov. 129, vix a *F. (Vulpia) delicatula*, Lag., differre videtur. *F. cynosuroides*, Desf., potius ad *Vulpiam* quam ad *Catapodium* referimus. *F. Lolium*, Balansa in Coss. et Dur. Fl. Alg. Glum. 187, spicu tenui tereti rhachi ad nodos leviter excavata fere medium tenet inter *Festucam (Catapodium)* et *Lolium*; glumæ vacuæ 2 laterales omnino

*Catapodii*. *F. unioloides*, Kunth, a Coss. et Dur. inter *Catapodia* enumerata, est *Demazeria sicula*, Dumort., a nobis pro genere proprio accepta. *Catapodium filiforme*, Nees, ex India orientali, est eadem ac *Tripogon bromioides*, Nees, characteres veros *Tripogonis* præbens.

5. *Scleropoa*. Gramina annua sæpe humilia, panicula secunda, ramulis brevibus rigidulis paucispiculatis. Glumæ florentes superne subcarinatae muticæ. Macula hili (ex Hack.) punctiformis. Host, *Gram. Austr.* ii. t. 74 (Poa). *SCLEROCHLOA*, Reichb.  *Ic. Fl. Germ. t.* 58, f. 1517, 1518. Nees, *Gen. Fl. Germ. Monocot.* i. n. 67, non Beauv. *SCLEROPOA*, Griseb. *Spicil. Fl. Rum.* ii. 431.

261. ? *Pantathera*, Philippi in *Bot. Zeit.* 1856, 649.—Spiculæ  $\infty$ -floræ, paniculatæ, planæ, rhachilla supra glumas inferiores et inter flores articulata, floribus hermaphroditis v. summo imperfecto. Glumæ 2 inferiores vacuæ, lineares, complicato-carinatae, 3-nerves, in aristam longam productæ; florentes latiores, complicato-carinatae, rigidulæ, sub-5-nerves, nervis tamen lateralibus sæpe tenuissimis v. vix conspicuis, apice integerrimæ, in aristam demum divaricato-patentem desinentes; palea gluma vix brevior, 2-carinata, carinis ciliatis. Stamina 3, antheris longis. Ovarium (an semper?) glabrum. Caryopsis . . .—Gramen (perenne?), laxè adscendens, elatiusculum, ramosum, foliis planis. Panicula laxiuscula, subsecunda, spiculis majusculis.

Species 1, ins. Juan Fernandez incolæ.

Genus *Bromo* (*Ceratochloæ*) affine, sed glumarum forma et venatione distinctum videtur et verisimiliter etiam ovario caryopsique glabris. Specimen unicum vidimus staminibus perfectis et ovario adhuc minimo forteque abortiente, in aliis pluribus speciminibus a Philippo, Berteroio aliisque collectis flores omnes intra glumas a larva quadam comesi omnino destructi, uti jam observavit ipse Philippus.

262. *Podophorus*, Philippi in *Bot. Zeit.* 1856, 648.—Spiculæ angustæ, 1-floræ, paniculatæ, rhachilla sub flore brevissima articulata pilosa, ultra florem in stipitem longum cum gluma vacua aristiformi continuum producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ, persistentes, angustè lineares, acute acuminatæ, sub-3-nerves, parum inæquales; florens longior, rigidula, linearis, subteres, ecarinata, tenuiter 5-nervis, in aristam longam divergentem desinens; palea parum brevior, angusta, obtusa v. brevissime 2-dentata, 2-carinata, carinis puberulis. Stamina 3. Ovarium glabrum; styli breves, distincti, stigmatibus tenuiter plumosis. Caryopsis . . .—Gramen (perenne?) laxè adscendens, pubescens, habitu fere *Bromi*. Panicula laxiuscula, subsecunda, spiculis majusculis.

Species 1, ins. Juan Fernandez incolæ.

Genus quoad glumas floresque *Festucæ* potius quam *Bromo* affine, ab utroque uti ab omnibus affinis differt flore unico in spicula, et rhachilla ultra florem longe stipitiforini ut in *Gymnopogone*.

263. *Bromus*, Linn. *Gen. n.* 89.—Spiculæ  $\infty$ -floræ, varicè paniculatæ, rhachilla supra glumas inferiores et inter flores articulata glabra, floribus hermaphroditis v. summo imperfecto. Glumæ 2 inferiores vacuæ, sub articulatione persistentes, angustæ, acute v. secunda breviter mucronato-aristata, 1-5-nerves, plus minus inæquales; florentes longiores, 5-9-nerves, carinatæ v. dorso rotundatæ, apice sæpius breviter 2-fidæ v. 2-dentatæ, sub apice dorso 1-3-aristatæ v. rarius muticæ, arista sæpe recurvo-divaricata et interdum leviter torta; palea gluma parum brevior, 2-carinata, carinis rigide v. longiuscule v. brevissime ciliatis. Stamina 3, v. rarius pauciora. Ovarium appendiculæ distincti, brevissimi, stigmatibus brevibus plumosis. Caryopsis oblonga v. linearis, a dorso sæpius compressiuscula, antice late sulcata v. subplana, appendicula villosa persistente v. evanida, palææ saltem siccitate arcte adhærens.—Herbæ annuæ v. perennes interdum elatæ, foliis planis. Panicula nunc densa oblonga fere spiciformis, nunc laxa interdum laxissima ramulis elongatis nutantibus. Spiculæ sæpius in ordine magnæ v. majusculæ, erectæ v. pendulæ, lineares lanceolatæ v. fere ovatæ, aristis sæpe longissimis interdum brevibus v. ad setas minutas reductis.

Species ad 40, per regiones temperatas hemisphærii borealis late dispersæ, nonnullæ Americæ australis extratropicæ incolæ, inter tropicos pauca præsertim montanæ. Beauv. *Agrostogr.* 86, t. 17, f. 9. Kunth, *Enum. Pl.* i. 412. Reichb.  *Ic. Fl. Germ.* t. 73 ad 77. Nees, *Gen. Fl. Germ. Monocot.* i. n. 75. Dæll in *Mart. Fl. Bras.* ii. iii. 107, t. 32. Fourn. *Gram. Mex.* 126.

Genus *Festucæ* valde affine, differt sæpius habitu, spiculis majoribus, glumis florentibus apice evidenti 2-fidis et ovario apice villosa-appendiculato, sed character nullus in omnibus speciebus constans. Sectiones sequentes, a nonnullis genera propria nuncupatæ, quoad species plerasque inter se bene distinctæ, omnes tamen speciebus intermediis connexæ.

1. *Festucoides*, Coss. et Dur. (*Schænodorus*, Griseb. *Spicil. Fl. Rum.* ii. 247). Gramina perennia sæpius elata, panicula laxa spiculis erectis v. nutantibus. Glumæ laxè imbricatæ v. dissitæ, extima angusta 1-nervis, secunda sæpius 3-nervis, florentes 5-7-nerves, arista sæpius brevi nunc brevissima. Caryopsis quam in *Stenobromo* brevior, appendicula terminali interdum brevissima v. evanida. Schreb. *Beschr. Gräs.* t. 11, 13. Host, *Gram. Austr.* i. t. 6 ad 10. C. Gay, *Fl. Chil.* t. 82.

SCHEDONORUS, Beauv. *Agrostogr.* 99, t. 19, f. 2, species plures includit glumis florentibus minute 2-dentatis quarum pauca ad *Bromum* (*Festucoidem*), plerique (an omnes?) ad *Festucam* ipsam pertinent. SCHEDONORUS, Fries et Anderson, includit *Festucoidem* et *Stenobromum*.

2. *Stenobromus*, Griseb. Gramina annua v. rarius perennia, panicula densa v. laxiuscula, spiculis angustis sæpius longis erectis v. vix demum nutantibus. Glumæ imbricatæ, angustæ, extima angustissima 1-3-nervis, secunda 3-5-nervis, florentes sæpius 7-nerves, aristis longis nunc longissimis. Caryopsis linearis, appendice terminali villosa integra v. 2-dentata. Host, *Gram. Austr.* i. t. 15 ad 18. Jacq. *Ecl. Gram.* t. 14. Desf. *Fl. Atl.* t. 26. Guss. *Pl. Rar. Ic.* t. 8, f. 2. Sibth. *Fl. Gr.* t. 82, 83. Ten. *Fl. Nap.* t. 105, 106. Delile. *Fl. Eg.* t. 11. Cav.  *Ic.* t. 45.

ANISANTHA, C. Koch in *Linnaea*, xxi. 394, est ex Griseb. *Bromi tectorum* forma flore infimo solo fertili, cæteris sterilibus.

*B. scoparius*, Linn. (*B. confertus*, Bieb.), et *B. alopecurus*, Poir., Bory, *Exped. Morée*, t. 5, spiculis angustis erectis in panicula oblonga dense confertis fero medium tenent inter *Stenobromum* et *Zoobromum*.

3. *Zoobromus*, Griseb. Gramina annua v. perennia. Spiculæ lanceolatæ ovato-lanceolatæ v. oblongæ, crassiusculæ. Glumæ quam in *Stenobromo* latiores, extima 3-5-nervis, secunda 5-7-nervis, florentes 7-9-nerves, imbricatæ, dorso obtusè v. vix carinatæ, arista sub apice integro v. 2-fido demum sæpius recurvo-divaricata, interdum siccitate leviter torta, longa v. brevis, in *B. briziformi*, Fisch. et Moy. Sert. *Petrop.* t. 10, ad setam minutam reducta. Schreb. *Beschr. Gräs.* 60, t. 6. Host, *Gram. Austr.* i. t. 11 ad 14, 19. Jacq. *Ecl. Gram.* t. 15. Desf. *Fl. Atl.* t. 19, 25. Guss. *Pl. Rar. Ic.* t. 8, f. 1. Torr. *Fl. N. York.* t. 157. Cav.  *Ic.* t. 589, 590, 591, f. 1. Buchan. *N. Zeal. Grass.* t. 56. Bory, *Exped. Morée*, t. 4. SERIHALCUS, Parlat. *Pl. Nov.* 75; *Fl. Ital.* i. 387.

LIBERTIA, Lejeune, in *Nov. Act. Nat. Cur.* xii. 755, t. 65 (MICHELARIA, Dumort. *Agrostogr. Belg.* 77, t. 16), est *B. (Zoobromus) arduennensis*, Kunth, species *B. secalino* affinis, glumarum florentium lobis lateralibus in aristas tenues breves abeuntibus.

TRINUSA, Steud. *Syn. Pl. Glum.* i. 328, est *B. Danthonia*, Trin. *Spec. Gram.* t. 353, species *B. (Zoobromo) macrostachyo*, Desf., affinis, glumis florentibus præsertim superioribus sub apice aristis 3 contiguis demum recurvo-divaricatis instructis.

4. *Ceratochloa*. Gramina sæpius perennia, elata. Spiculæ lanceolatæ, planæ v. demum medio incrassatæ. Glumæ complicato-carinatæ, rigidulæ,  $\infty$ -nerves, vacuæ florentibus paullo minores cæterum similes, florentes imbricatæ, apice interdum vix dentatæ, arista brevi tenui. Species 3 v. 4, Americana, extratropica boreales v. australes v. andinæ. Willd. *Hort. Berol.* t. 3 (*Festuca*). CERATOCHLOA, Beauv. *Agrostogr.* 75, t. 15, f. 7, simulque DC. *Cut. Hort. Monsp.* 92. Hook. *Fl. Bor. Amer.* t. 234, 235.

Fournier, *Gram. Mex.* 127, *B. (Ceratochloam) purgantem*, Linn. (*B. Hookeri*, Fourn.) in *Bromo* retinuit, et *Ceratochloam unioidem*, DC. (*C. festucoidem*, Beauv.) genericè distinxit imprimis ob lodiculas lateraliter connatas. In speciminibus tamen pluribus tam indigenis quam cultis lodiculas vidimus lata basi affixas sed inter se liberas v. vix ima basi brevissime connatas.

264. *Brachypodium*, Beauv. *Agrostogr.* 100, pro parte, t. 19, f. 3. (Hemibromus, Steud. *Syn. Pl. Glum.* i. 317).—Spiculæ  $\infty$ -floræ, compressæ v. subteretes, in spica simplici pauca, subsessiles v. brevissime pedicellatæ, rhachilla inter flores articulata glabra, floribus hermaphroditis v. superioribus imperfectis. Glumæ 2 inferiores vacuæ, floren-

tibus minores et brevius aristatæ v. muticæ, cæterum similes; florentes rigidulæ, angustæ, dorso rotundatæ, 7-9-nerves, integræ, in aristam rectam interdum longam v. in mucronem brevem desinentes; palea gluma vix brevior, latiuscula, 2-carinata, carinis ciliatis. Stamina 3, rarius 2. Ovarium apice ciliato-villosum v. appendicula brevi villosa coronatum; styli brevissimi, stigmatibus plumosis. Caryopsis linearis v. anguste oblonga, a dorso compressa, antice late sulcata v. concava, siccitate paleæ plus minus adhærens. — Gramina perennia v. annua, erecta, foliis planis v. convoluto-teretibus. Spica terminalis, rhachi non articulata et vix ad nodos excavata. Spiculæ paucæ, sæpius distantes suberectæ, interdum ad unam terminalem reductæ, sæpius majusculæ, floribus sat numerosis.

Species 5 v. 6, Europæ et Asiæ temperatæ v. montanæ incolæ, quarum 1 v. 2 etiam in Africa tropica et australi Colombia et Mexico obviæ. *Kunth, Enum. Pl. i. 445 (Tritici sect.). Coss. et Dur. Fl. Alg. Glum. 189. Reichb. Ic. Fl. Germ. t. 16 ad 18. Nees, Gen. Fl. Germ. Monocot. i. n. 70. Host, Gram. Austr. i. t. 20 ad 22, iv. t. 17 ad 19 (Bromus). Sibth. Fl. Gr. t. 84 (Bromus). Guss. Pl. Rar. Ic. t. 7 (Festuca). Boiss. Voy. Hisp. t. 180. Ten. Fl. Nap. t. 104, f. 2.*

Genus *Festucam* cum *Agropyro* arcte connectit.

TRACHYNIA, *Link, Hort. Berol. i. 42, Reichb. Ic. Fl. Germ. t. 14*, est *B. distachyum*, *Rœm. et Schult.*, species a cæteris parum diversa caule annuo, spiculis sæpius 1-2, glumis minus imbricatis fere pectinatis.

## TRIBUS XII. HORDEÆ.

265. *Lolium*, *Linn. Gen. n. 95*.—Spiculæ  $\infty$ -floræ, in spica simplici (v. abnorme ramosa) ad excavationes rhacheos solitariae, sessiles, alternæ, distichæ, compressæ, margine (glumarum dorso) rhachin spectantes, rhachilla inter flores articulata, floribus hermaphroditis v. summo imperfecto. Glumæ rigidæ, 5-7-nerves, dorso rotundatæ, ecarinatæ, obtusæ acutæ acuminatæ v. aristatæ, nervis superne conniventibus v. in aristam confluentibus, infima spicularum lateralium et 2 inferiores spiculæ terminalis vacuæ, florentibus longiores, angustæ; florentes breves, latiusculæ, imbricatæ; palea gluma parum brevior, angusta, 2-carinata. Stamina 3. Styli distincti, brevissimi, stigmatibus plumosis. Caryopsis oblonga, glabra, paleæ siccitate adhærens.—Gramina annua v. perennia, foliis planis. Spica terminalis, sæpius elongata, spiculis alternatim dissitis erectis, rhachi ad nodos interdum articulata.

Species apud auctores nonnullos ultra 20, ab aliis melius ad 2 v. 3 reductæ, in Europa, Africa boreali et Asia temperata indigenæ, in variis regionibus Americæ, Africæ et Australiæ inquilinæ. *Beauv. Agrostogr. 102, t. 20, f. 3. Kunth, Enum. Pl. i. 435; Rev. Gram. t. 220. Schreb. Besch. Gräs. t. 36, 37. Host, Gram. Austr. i. t. 25, 26, iii. t. 25. Reichb. Ic. Fl. Germ. t. 4 ad 6. Nees, Gen. Fl. Germ. Monocot. i. n. 78. Vis. Fl. Dalmat. t. 3. Dæll in Mart. Fl. Bras. ii. iii. t. 58.*

Genus *Festuca* (*Catapodium*) potius quam *Agropyro* affine, ab omnibus spicularum quoad rhachin directione facile differt. De Rouville (Monogr. Lol., Montpellier, 1853, cum tabb. 3) species auctorum priorum rejecit et stirpes primarias 3 agnovit characteribus novis definitas et nominibus novis signatas.

CRÆPALIA, *Schrank, Bair. Fl. i. 102, 382*, est *L. temulentum*, *Linn.*, cui gluma secunda etiam in spiculis lateralibus sæpe vacua cæteris minor.

ARTHROCHORTUS, *Lowe in Hook. Kew Journ. viii. 301*, est *Lolii* species v. varietas insignis, *L. rigido*, *Gaud. (L. stricto, Presl)*, et varietatibus nonnullis *L. temulentum*, *Linn.*, valde affinis.

266. *Agropyrum*, *J. Gærtn. ex Beauv. Agrostogr. 101, t. 20, f. 1, 2. (Elytrigia, Desv. in Nouv. Bull. Soc. Philom. ii. (1810) 190; et in Journ. Bot. i. (1813), 74.)*.—Spiculæ  $\infty$ -floræ, compressæ, in spica simplici ad excavationes rhacheos sessiles, alternæ, distichæ, compressæ, facie (glumarum latere) rhachin spectantes v. obliquæ, rhachilla inter flores sæpius articulata, floribus hermaphroditis v. summo imperfecto. Glumæ 2 inferiores vacuæ, florentibus angustiores, nervis paucioribus; florentes rigidæ, dorso rotundatæ, vix v. non carinatæ, 5-7-nerves, obtusæ acuminatæ v. in aristam productæ, nervis apice conniventibus v. in aristam confluentibus, summa minor sæpe vacua v. florem imperfectum fovens; palea gluma parum brevior, 2-carinata, carinis sæpius ciliatis. Stamina 3.

*Styli brevissimi, distincti, stigmatibus plumosis. Caryopsis anguste oblonga, a dorso compressiuscula, antice sæpe concava, apice plus minus villosa, siccitate paleæ adhærens v. libera.*—Gramina perennia v. annua, foliis planis v. convoluto-teretibus. Spica terminalis, sæpius rigidula, spiculis majusculis.

Species ad 20, per regiones temperatas utriusque orbis late dispersæ, Americanæ ab Europæis vulgationibus vix v. non distinctæ sæpeque evidenter inquilinæ. *Kunth, Enum. i. 440, et Steud. Syn. Pl. Glum. i. 342, utraque pro sectione Tritici. Benth. Fl. Austral. vii. 664.*

Genus a nonnullis cum *Tritico* jungitur, ab aliis in genera 3 v. 4 dividitur. Sectiones sequentes bene distinctæ videntur:—

1. *Agropyrum*. Gramina sæpius perennia rhizomate haud raro longe repente. Spica elongata spiculis erecto-appressis dissitis v. rariis approximatis. Glumæ rigide, vacuæ sæpe inæquilateræ, a basi arcte appressæ, nec carinatae. Species paucæ, quarum 2 fere cosmopolitanæ. *Host, Gram. Austr. ii. t. 21 ad 23, 25, iii. t. 33. Kunth, Rev. Gram. t. 90. Nees, Gen. Pl. Germ. Monocot. i. n. 80. Reichb. Ic. Fl. Germ. t. 19 ad 23. Schreb. Besch. Gräs. t. 26 (Triticum). Per. in Bull. Soc. Bot. Fr. xviii. t. 3. Brot. Phytogr. Lusit. t. 97. Boiss. Voy. Hisp. t. 181. Sibth. Fl. Gr. t. 99. Jaub. et Spach, Ill. Pl. Or. t. 199. Ledeb. Ic. Fl. Ross. t. 245 ad 248. Buchan. N. Zeal. Grass. t. 56 B, 57 (ic. plures sub Tritico).*

*ROGNERIA, C. Koch in Linnaea, xxi. 413, est ex Griseb. Agropyri species A. canino affinis.*

*A. scabrum*, Beauv. (*Festuca scabra*, Labill. Pl. Nov. Holl. t. 26; *ANTHOSACHNE, Steud. Syn. Pl. Glum. i. 237*), ex Australia, *A. semicostatum*, Nees, ex India orientali et *A. longearistatum*, Boiss., ex Oriente, species inter se valde affines, insignis sunt spicis densiusculis, glumis angustis in aristas longas demum divergentes desinentibus.

*A. pectinatum*, Beauv. (*Festuca pectinata*, Labill. Pl. Nov. Holl. t. 25), ex Australia, quoad inflorescentiam inter *Agropyrum* et *Eremopyrum* subintermedia, insignis est spiculis demum reflexis.

2. *Eremopyrum*. Gramina sæpius annua. Spicæ breves, densæ, spiculis arcte approximatis distichis. Glumæ inferiores vacuæ, angustissimæ, subæquilaterales, carinatae, v. lanceolatae evidentiusque inæquilaterales, basi sæpius curvulæ subangustatae. Spiculæ nonnullæ ad basin v. ad apicem spicæ interdum steriles ad glumas 1-2 reductæ. *Jacq. Hort. Vind. iii. t. 44 (Secale). Reichb. Ic. Fl. Germ. t. 19, f. 1382. Schreb. Besch. Gräs. t. 23, f. 2. Host, Gram. Austr. ii. t. 24. EREMOPYRUM, Ledeb. Fl. Alt. i. 112 (Tritici sect.), gen. propr. Jaub. et Spach, Ill. Pl. Or. iv. 26, t. 319, 320. COSTIA, Willk. in Bot. Zeit. 1858, 377. CREMOPYRUM, Schur, Enum. Pl. Transsylv. 807.*

*Secale villosum*, Linn. (*HAYNALDIA, Schur, Enum. Pl. Transsylv. 807*), et *Agropyrum hordeaceum*, Boiss., sectionem *Dasyphyrum*, Coss. et Dur., seu *Pseudosecale*, Gren. et Godr., formantes, et ab auctoribus ad *Triticum* relatæ, nobis tamen potius ad *Agropyri* sect. *Eremopyrum* pertinere videntur, ubi *A. orientali*, Koch, prope accedunt, differunt glumis vacuis magis inæqualibus, nervo uno præter carinam prominente ciliatoque, glumam æqualiter v. inæqualiter 2-carinatum efficientibus. *Host, Gram. Austr. ii. t. 47, iv. t. 9, 10. Reichb. Ic. Fl. Germ. t. 24 (Triticum). Sibth. Fl. Gr. t. 97 (Secale).*

*HYTERANTHELIUM, Hochst.; Jaub. et Spach, Ill. Pl. Or. iv. 24, t. 318*, ex Oriente, est species ab *A. (Eremopyro) orientali* parum diversa, glumis inferioribus vacuis adhuc angustioribus, florentibus post anthesin insigniter papilloso-scabris v. verrucosis; spica densa, villosa, spiculis sterilibus imperfectis ad basin et apicem pluribus interdumque inter fertiles mixtis.

267. *Secale, Linn. Gen. n. 97.*—Spiculæ sæpiissime 2-floræ, in spicam cylindraceam confertæ, ad excavationes alternas rhacheos solitariae, sessiles, compressæ, facie interiore plana rhachi adpressa, exteriori convexa, rhachilla sub floribus brevissima ultra flores in stipitem tenuem producta. Glumæ rigidulæ, 2 inferiores vacuæ, anguste lineares, complicato-carinatae, acute acuminatae v. subaristatae; florentes latiores, absque aristis vix longiores, complicato-carinatae, in aristam desinentes, 5-nerves, nervis in aristam conniventibus, faciei interioris spiculæ tenuibus, exterioribus prominentibus; palea gluma paullo brevior, angusta, 2-carinata. Stamina 3. Styli brevissimi, distincti, stigmatibus plumosis. Caryopsis oblonga, subteres, antice sulcata, apice pilosa, gluma paleaque inclusa, libera v. vix paleæ adhærens.—Gramina annua, erecta, foliis planis. Spica terminalis, densa, rhachi fragili ad nodos articulata, articulis sub spiculis complanatis sæpius pilosis.

Species (v. unius varietates?) 2, spontaneæ per regionem Mediterraneam late dispersæ, formæ cereales in regionibus temperatis hemisphærii borealis jam diu cultæ. *Beauv. Agrostogr. 105, t. 20,*

f. 6. *Host, Gram. Austr.* ii. t. 48, iv. t. 11. *Reichb. Ic. Fl. Germ.* t. 24. *Nees, Gen. Fl. Germ. Monocot.* i. n. 81. *Vis. Fl. Dalm. Suppl.* t. 1.

Genus *Agropyri* sect. *Eremopyro* quam maxime affine.

268 **Triticum**, Linn. *Gen.* n. 99.—Spiculæ pauci- (2-5-)floræ, distiche spicatæ, ad excavationes rhacheos solitariae, sessiles, compressiusculæ, a latere rhachin spectantes, rhachilla inter flores sæpe articulata, floribus 1-2 inferioribus hermaphroditis, superioribus sæpius masculis v. imperfectis. Glumæ rigidæ, 2 inferiores vacuæ, florentibus breviores sæpeque angustiores, haud raro inæquilaterales, paucinerves, breviter aristatæ v. muticæ; florentes ventricosæ v. oblongæ, dorso rotundatæ v. superne carinatæ, apice sæpius dentatæ, muticæ v. dente centrali v. omnibus in aristas productis, 5-9-nerves, nervis lateralibus cum centrali non confluentibus, ad apicem glumæ non attingentibus v. ad dentes laterales extensis; palea gluma brevior, 2-carinata, carinis ciliatis. Stamina 3. Styli brevissimi, stigmatibus plumosis. Caryopsis ovoidea v. oblonga, apice sæpius villosa, antice anguste sulcata, gluma paleaque inclusa, libera v. paleæ siccitate adhærens. —Herbæ annuæ v. biennes, erectæ, foliis planis. Spica terminalis, cylindracea v. elongata, rhachi flexuosa alternatim excavata continua v. rarius articulata.

Species silvestres vix 10, regionis Mediterraneæ et Asiæ occidentalis incolæ, formæ cultæ jam diu per regiones temperatas utriusque orbis latissime extensæ. Genera sequentia auctorum pro sectionibus parum distinctis habenda videntur:—

**Triticæ** cerealia jam a temporibus antiquissimis culta, statu sylvestri ignota sunt, distinguuntur imprimis glumis vacuis sæpius valde inæquilateralibus, florentibus superne v. a basi carinatis, apice sæpius obliquis muticis v. 1-aristatis. *Beauv. Agr. stoogr.* 1803 pro parte, t. 20, f. 4. *Kunth, Enum. Pl.* i. 438 (*T. legitima*). *Delile, Fl. Eg.* t. 14. *Nees, Gen. Fl. Germ. Monocot.* i. n. 79. *Host, Gram. Austr.* iii. t. 26 ad 31, iv. t. 5 ad 8.

**CRITHODIUM**, Link in *Linnaea*, ix. 132, t. 3, est *T. monococcum*, Linn.; *Host, Gram. Austr.* iii. t. 32 (*T. baoticum*, Boiss.), species Orientalis interdum culta, flore unico perfecto, glumis vacuis parum inæquilateralibus, florentibus rigidis carinatis non ventricosis 1-aristatis. Ad eandem sectionem referendum videtur *T. bicornæ*, Forsk., *Delile, Fl. Eg.* t. 15, f. 1.

**ÆGILOPS**, Linn. *Gen.* n. 1150, species silvestres includit glumis dorso rotundatis ventricosis v. oblongis nunquam carinatis, vacuis parum inæquilateralibus, florentibus apice truncato-dentatis dentibus nonnullis spicularum superiorum v. omnium in aristas longas productis v. rarius omnibus muticis. Species editæ ultra 40 quas Munro ad 7 v. 8 reduxit, quarum 2 v. 3 facile formas hybridas gignunt cum *Triticis* cultis et a nonnullis pro typis primordialibus *Triticorum* habentur. *Beauv. Agrostogr.* 104, t. 20, f. 5. *Kunth, Enum. Pl.* i. 457. *Schreb. Besch. Gräs.* 80, t. 10, t. 27, f. 2. *Reichb. Ic. Fl. Germ.* t. 8. *Nees, Gen. Fl. Germ. Monocot.* i. n. 85. *Host, Gram. Austr.* ii. t. 5 ad 7. *Cav. Ic.* t. 90. *Sibth. Fl. Græc.* t. 93 ad 95. *Vis. Fl. Dalm.* t. 1, et *Suppl.* t. 1. *Jaub. et Spach, Ill. Pl. Or.* t. 200, 309 ad 317.

In *Æ. loliacea*, Jaub. et Spach, et *Æ. mutica*, Boiss. (*Æ. tripsacoides*, Jaub. et Spach), glumæ muticæ obtuse dentatæ, vacuæ in priore glabræ, in illa dorso dense pilosæ.

269. **Lepturus**, R. Br. *Prod.* 207.—Spiculæ 1-2-floræ, in spica simplici ad excavationes rhacheos solitariae, sessiles, alternæ, angustæ, rhachilla brevissima supra glumas inferiores articulata, ultra flores in stipitem brevem producta, floribus hermaphroditis v. superiore dum adsit sæpe imperfecto. Glumæ 1 2 inferiores vacuæ, persistentes, angustæ, rigidæ, acutæ, 5-nerves; florentes multo breviores, tenues, hyalinae; palea hyalina, 2-nervis. Stamina 3 v. pauciora. Styli breves, distincti, stigmatibus plumosis. Caryopsis angusta, glabra, glumis inclusa, libera.—Gramina annua humilia v. rarius elatiora et forte perennia, basi ramosa v. multicaulia, foliis angustis. Spica terminalis, elongata, rigida at tenuis, recta v. incurva, primum cylindracea, spiculis alternis dissitis in rhachi excavata quasi inclusis, gluma una e vacuis per anthesin sæpe patente.

Species nobis notæ 6, 5 Europæ, Africae borealis et Asiæ temperatæ incolæ, quarum una etiam in Australia aliisque regionibus hinc inde in maritimis occurrit, sexta in maritimis Australiae, Novæ Zelandiæ et ins. maris Pacifici indigena.

In *L. cylindrico*, Trin. (*L. subulato*, Kunth, *Ophiuro subulato*, Link, *Nees, Gen. Fl. Germ.*,

Monocot. i. n. 88 (*Monerma*), Reichb. Ic. Fl. Germ. t. 3) gluma vacua 1, flos 1, stipite rhachillæ brevi nudo. In *L. repente*, Br.; Brongn. in Duperr. Voy. Coq. t. 16, gluma vacua 1, flos perfectus 1, stipite rhachillæ glumam paleamque vacuas ferente. In *L. persico*, *L. incurvato* et *L. filiformi*, Trin. Reichb. Ic. Fl. Germ. t. 2, Host, Gram. Austr. i. t. 23 (*Rottboellia*), *Subth.*, Fl. Gr. t. 91 (*Rottboellia*), glumæ vacuæ 2, flos 1, stipite rhachillæ brevi nudo. In *L. pannonicum*, Kunth (PHOLIURUM, Trin. *Fundam. Agrostogr.* 131, Reichb. Ic. Fl. Germ. t. 3; ROTTBOELLIA, Host, Gram. Austr. i. t. 24, *Ophiuro pannonicum*, Nees, Gen. Fl. Germ. Monocot. i. n. 89), glumæ vacuæ 2, flores perfecti 2.

Genus *Hordeaceas* cum *Rottboellieis* connectit. De speciebus boreali-Americanis ad *Lepturum* relatas, cfr. supra sub *Schedonnardo*, p. 1168.

270. *Pailurus*, Trin. *Fundam. Agrost.* 93. (*Monerma*, Beauv. *Agrostogr.* 116, *pro parte*, t. 20, f. 10. Asprella, Host. Gram. Austr. iv. 17, t. 29, non Willd.)—Spiculæ angustæ, 1-floræ v. rarissime 2-floræ, secus rhachin inarticulatam spicæ tenuis solitariæ sessiles, rhachilla basi articulata sub gluma florente brevissima, ultra florem in stipitem nudum v. rarius glumiferum producta, flore hermaphrodito. Glumæ 2, rarissime 3, inferior vacua, minima, squamiformis, sub articulatione persistens; florens angusta, in aristam rectam desinens, summa dum adsit minor, vacua v. paleam rarissime florem ♂ fovens; palea linearis, 2-nervis. Stamen 1. Styli brevissimi, stigmatibus plumosis. Caryopsis linearis, gluma rigescente inclusa, libera.—Gramen annuum, tenue, multicaule, foliis breviter subulatis. Spica elongata, tenuissima, sæpe incurva, rhachi ad quamque nodum leviter excavata, gluma persistente sæpe ad dentem brevem reducta. Spiculæ adpressæ, non secundæ; rhachillæ continuatio semper adesse videtur, sæpius setiformis, in spiculis paucis apice glumifera v. rarissime florens.

Species 1, Europæ australis incola, in Oriente usque ad Afghanistan extensa. Kunth, *Enum. Pl.* i. 461. Reichb. Ic. Fl. Germ. t. 1. Nees, Gen. Fl. Germ. Monocot. i. n. 87. Cav. Ic. t. 39 (*Rottboellia*).

271. *Wardus*, Linn. Gen. n. 69.—Spiculæ 1-floræ, angustæ, ad dentes rhacheos spicæ unilateralis sessiles, solitariæ, rhachilla brevissima intra dentem articulata, ultra florem non producta, flore hermaphrodito. Gluma (præter dentem rhacheos) nulla vacua, florens angusta, acuminata v. breviter aristata, rigidula, marginibus hyalinis involutis; palea angusta, inclusa, 2-nervis. Stamina 3. Stylus elongatus, indivisus, stigmatibus elongato breviter papilloso. Caryopsis linearis, glabra, apice in styli basin attenuata, gluma inclusa, libera (v. ex auct. nonnullis palæe adhærens).—Gramen perenne, humile, dense cæspitosum, foliis setaceis rigidulis. Spica tenuis, simplex, longè pedunculata, rhachi inarticulata. Spiculæ 2-seriatim alternæ sed dissitæ secundæque uniseriatæ apparent, erectæ v. subpatentes.

Species 1, Europæ imprimis occidentalis a terris Arcticis usque ad regionem Mediterraneam incola, in Asia temperata rarior videtur. Beauv. *Agrostogr.* 117, t. 20, f. 11. Kunth, *Enum. Pl.* i. 460. Schreb. *Beschr. Gräs.* 65, t. 7. Host, Gram. Austr. ii. t. 4. Nees, Gen. Fl. Germ. Monocot. i. n. 86. Reichb. Ic. Fl. Germ. t. 110. Cav. Ic. t. 204.

Genus quoad affinitates valde dubium. Ob glumarum vacuarum defectum situs articulationis rhachillæ v. pedicelli incertum est, nisi pro glumæ rudimento dentem persistentem rhacheos spicæ haberes. Stylus *Sesleriearum*; inflorescentia fere *Chloridearum* v. potius *Hordecarum*.

272. *Kralikia*, Coss. et Dur. in Bull. Soc. Bot. Fr. xiv. 89.—Spiculæ 2-floræ, in spica simplici ad excavationes rhacheos solitariæ, rhachilla brevi sub floribus villosa, ultra flores in stipitem brevem producta, floribus hermaphroditis. Glumæ inferiores vacuæ 2, acuminatæ, muticæ, inæquales, lanceolatæ, carinatæ; florentes paullo longiores, membraceæ, carinatæ, 3-nerves, nervo medio in aristam brevem mucroniformem producta, lateralibus brevius mucronatis; palea glumæ subæqualis, 2-carinata. Stamina 3. Ovarium glabrum, stipitatum. Styli elongati, filiformes, stigmatibus plumosis. Caryopsis . . . —Gramen perenne, cæspitosum, caulibus gracilibus, foliis filiformibus fasciculatis dense pulvinatis. Spica subfiliformis, rigidula, recta v. subincurva, spiculis minimis dissitis. Glumæ glabræ v. scabræ. (*Char. ex Coss. et Dur.*)

Species 1, Algeriensis, a nobis non visa.

**273. Oropetium, Trin. Fundam. Agrostogr.** 98, t. 3.—Spiculæ 1-floræ, in spica simplici ad excavationes rhacheos solitariae, sessiles, rhachilla brevissima supra glumas inferiores articulata, sub flore longe pilosa, ultra florem in stipitem minutum producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ, extima rhachin versus parva membranacea, secunda rigida, lineari-lanceolata, acuta; florens paullo brevior, membranaceo-hyalina, latiuscula, carinata; palea angusta, 2-nervis. Stamina 3. Styli distincti, stigmatibus brevibus plumosis. Caryopsis oblonga, gluma paleaque inclusa, libera.—Gramen nanum, dense multicaule, foliis brevibus subulatis. Spica tenuis, spiculis parvis distiche immersis subteres, rhachi sub-4-gona leviter flexuosa.

Species 1, Indiæ orientalis incolæ. *Kunth, Enum.* i. 463. *Roxb. Corom. Pl.* t. 132 (*Rottboellia*).

**274. Hordeum, Linn. Gen. n.** 98.—Spiculæ 1-floræ, in spica simplici ad nodos v. excavationes rhacheos 2-3-næ, collateraliter sessiles v. brevissime stipitatae, rhachilla brevi supra glumas inferiores articulata, ultra florem in setam longam tenuem v. superne in glumam angustissimam dilatatam producta, floribus hermaphroditis v. spicularum lateralium imperfectis. Glumæ 2 inferiores vacuæ, subulatæ v. angustissime lineares, rigidæ, persistentes, spicularum omnium cujusve nodi subexternæ involucrium similes; florens lanceolata, dorso rotundata, ecarinata, superne 5-nervis, in aristam rectam v. divergentem desinens; palea gluma parum brevior, 2-carinata. Stamina 3. Styli brevissimi, distincti. Caryopsis ovoideo-oblonga v. angusta, apice breviter villosa, antice sulcata, paleæ siccitate adhærens v. rarius libera.—Gramina erecta, annua v. rarius perennia, foliis planis. Spica cylindracea, sæpius densa, glumarum aristis elongatis oblecta, v. rarius tenuior aristis ad setas breves reductis.

Species spontaneæ ad 12, Europæ, Africæ borealis, Asiæ temperatæ et Americæ extratropicæ tam australis quam borealis incolæ.

*Beauv. (Agrostogr.* 114, t. 21, f. 1) genus HORDEUM restrinxit ad *H. vulgare*, Linn., formasque affines diu cultas quibus spiculæ laterales haud raro fertiles evadunt. *Host, Gram. Austr.* iii. t. 34 ad 37. Inter illas *CRITHO, E. Mey. Ind. Sem. Hort. Regiomont.* 1848, ex *Ann. Sc. Nat. ser.* 3, xi. 253, et *Linnaea*, xxiv. 195 (*H. agiceras*, Royle, *Illustr. Fl. Himal.* t. 97, Hensl. in *Hook. Kew Journ.* i. t. 2, 3), insignis est glumis florentibus latis apice 3-fidis lobis lateralibus divaricato-reversis, intermedio majore apice cucullato. Species spontaneæ in sectiones sequentes distribuuntur:—

1. *Zoocriton*. Spiculæ sæpissime ternæ, centrali sola perfecte fertili, lateralibus (sæpius breviter stipitatis) sterilibus v. ad glumas vacuas reductis. *Schreb. Besch. Gräs.* t. 17. *Host, Gram. Austr.* i. t. 32 ad 34; iii. t. 31 ad 33; iv. t. 12. *Reichb. Ic. Fl. Germ.* t. 11, 12. *Nees, Gen. Fl. Germ. Monocot.* i. n. 83. *Trin. Spec. Gram.* t. 3, 4. *Desf. Fl. Atl.* t. 37. *Sibth. Fl. Græc.* t. 98. *Guss. Ic. Pl. Rar.* t. 11. *Willk. Ill. Fl. Hisp.* t. 1. *Dall in Mart. Fl. Bras.* ii. iii. 228, t. 57. *ZEOCRITON, Beauv. Agrostogr.* 114, t. 21, f. 2. *CRITESION, Raf. in Journ. Phys.* lxxxix. 103.

2. *Erithopsis*. Spiculæ sæpissime geminæ, utraque fertili, centrali deficiente v. rarius e glumis vacuis constante. *ELYMI* species (sect. *Medusather*, Griseb.), *Schreb. Besch. Gräs.* t. 24, f. 1, 2. *Host, Gram. Austr.* i. t. 27. *Reichb. Ic. Fl. Germ.* t. 9. *Sibth. Fl. Græc.* t. 96. *Delile, Fl. Eg.* t. 13. *CRITHOPSIS, Jaub. et Spach, Ill. Pl. Or.* iv. 30, t. 321.

3. *Cuviera*. Spiculæ sæpissime ternæ, omnes fertiles. Species unica, *H. sylvaticum*, Huds. (*Elymus europæus*, Linn.; *Host, Gram. Austr.* i. t. 28; *Reichb. Ic. Fl. Germ.* t. 9; *Nees, Gen. Fl. Germ. Monocot.* i. n. 82). *CUVIERA, Kæl. Gram. Gall. et Germ.* 328.

**275. Elymus, Linn. Gen. n.** 96.—Spiculæ 2-6-floræ, in spica simplici ad nodos plus minus excavatos rhacheos 2-6-næ, collateraliter sessiles, rhachilla sub floribus articulata, floribus hermaphroditis v. summo sæpius imperfecto v. ad glumam vacuam reducto. Glumæ 2 inferiores vacuæ, rigidæ, anguste lineares, 1-3-nerves, in aristam brevem productæ v. sæpius aristiformes, persistentes, spicularum omnium cujusve nodi subexterni involucrium similes, rarius in aristas plures divisæ; florentes breviores, oblongæ v. lanceolatæ, dorso rotundatæ, ecarinatæ, 5-nerves, obtusæ v. acutæ, muticæ v. in aristam desinentes; palea gluma parum brevior, 2-carinata. Stamina 3. Styli brevissimi, distincti, stigmatibus plumosis. Caryopsis oblonga, apice parce villosa, antice sulcata

paleæ siccitate adhærens.—Gramina elata, foliis planis v. rigide convolutis. Spicæ terminales, nunc more *Hordei* cylindricæ, densæ, aristis numerosis obtectæ, rhachi fragili v. continua, nunc elongatæ, floribundæ, densæ v. subinterruptæ.

Species ad 20, regionum temperatarum Europæ, Asiæ et Americæ borealis incolæ. *Kunth, Enum. Pl.* i. 449. *Steud. Syn. Pl. Glum.* i. 348. *Griseb. in Ledeb. Fl. Ross.* iv. 329.

Genus *Hordeo* valde affine, vix differt nisi spiculis 2–8-floris, v. si rarissime florem unicum tantum fertilem continet rhachilla gluma vacua v. flore imperfecte terminatur. In sectiones sequentes dividitur:—

1. *Sitanion*. Glumæ vacuæ longe aristiformes sæpius in aristas 2– $\infty$  fere ad basin divisæ et glumæ florentes sæpe 2–3-aristatæ, aristis omnibus longissimis haud raro divergentibus v. intricatis. Spicæ rhachis fragillima. Habitus cæterum ei *Hordei jubati* similis. Species 1, Americæ borealis occidentalis incola. *SITANION, Rafin. in Journ. Phys.* lxxxix. 103. *POLYANTHERIX, Nees in Ann. Nat. Hist. ser.* 1, i. 284.

2. *Clinelyna*, Griseb. Spiculæ sæpissime geminæ. Glumæ integræ, vacuæ breviter, florentes sæpius longe, aristatæ. Species Asiaticæ v. Americanæ. *Schreb. Besch. Gräs.* t. 21, f. 1.

3. *Psammeleyna*, Griseb. Spiculæ 2–6-næ. Glumæ omnes muticæ v. vix brevissime mucronato-aristatæ. Gramina sæpe elata rigida spica longa, rarius habitu *Clinelynis* similia. Species Asiaticæ, quarum una etiam Europæa et Americana, et forte una Americæ propria. *Schreb. Besch. Gräs.* t. 40. *Beauv. Agrostogr.* 106, pro parte, t. 20, f. 7. *Jacq. Ecl. Gram.* t. 19, 37 ad 39. *Host, Gram. Austr.* iv. t. 12. *Ledeb. Ic. Fl. Ross.* t. 229, 249 ad 251. *Reichb. Ic. Fl. Germ.* t. 10.

276. *Asprella*, Willd. *Enum. Hort. Berol.* 132. (*Hystrix, Mærch, Meth.* 294. *Gymnostichum, Schreb. Besch. Gräs.* ii. 127, t. 47.)—Spiculæ 2– $\infty$ -floræ, in spica simplici ad nodos excavatos rhacheos geminæ rarius ternæ, collateraliter sessiles, rhachilla sub floribus articulata, floribus hermaphroditis v. summo imperfecto. Glumæ vacuæ 0 v. in spiculis infimis 1–2 parvæ subulatæ; florentes anguste lanceolatæ, convolute, rigidæ, dorso rotundatæ, superne 5-nerves, in aristam desinentes; palea gluma parum brevior, 2-carinata. Stamina 3. Styli brevissimi, distincti, stigmatibus plumosis. Caryopsis anguste oblonga, apice parce villosa, antice sulcata, paleæ siccitate adhærens.—Gramina elatiuscula, foliis planis. Spicæ terminales, quam in *Elyno* longiores laxiores tenuioresque.

Species 3, quarum 2 Americæ borealis, tertia Novæ Zelandiæ, incolæ. *Beauv. Agrostogr.* t. 20, f. 9 (*Elymus*). *Kunth, Enum. Pl.* i. 454. *Jacq. Ic. Rar.* t. 305 (*Elymus*). *Hook. f. Fl. Nov. Zel.* t. 70 (*Gymnostichum*). *Buchan. N. Zeal. Grass.* t. 58 (*Gymnostichum*).

Opus Schreberi in titulo annum fert 1769, sed pars iii. *Gymnostichum* continens, anno 1810 edita fuit. Nomen Mœnchianum in Zoologia nimis familiare, a botaniciis rite prætermisum est.

### TRIBUS XIII. BAMBUSÆ.

277. *Arundinaria*, Mich. *Fl. Bor. Amer.* i. 73. (*Miegia, Pers. Syn. Pl.* i. 101. *Ludolfia, Willd. in Gesellsch. Nat. Fr. Berlin Mag.* ii. 320. *Triglossum, Fisch, Cat. Javd. Pl. Gorenki*, 1812, cum ic. ex *Ram. et Schult.* *Macronax, Raf. in N. York Med. Rep.* v. 350, ex *Munroio*.)—Spiculæ  $\infty$ -floræ, sæpe longæ, compressæ, varie racemosæ v. paniculatæ, rhachilla sub floribus tardius articulata, floribus hermaphroditis v. summis imperfectis (inferiore rarius masculo?). Glumæ inferiores vacuæ 1–2, inæquales, extima minore interdum deficiente; florentes longiores, membranaceo-herbacæ, ecarinatæ, multinerves, obtusiusculæ acuminate v. brevissime mucronato-aristatæ; palea gluma vix brevior, prominenter 2-carinata. Lodicule 3. Stamina 3. Ovarium apice sæpe pilosum; styli 2 v. 3, basi breviter connati, stigmatibus longiusculis laxè plumosis. Caryopsis ovali v. anguste oblonga, antice sulcata, gluma paleaque inclusa, libera.—Gramina elata, suffruticosa raro arborescentia, ramis interdum ad nodos fasciculatis subverticillatis, foliis breviter petiolatis cum vagina articulatis planis, venulis transversis obscuris v. conspicuis. Inflorescentia plerumque terminalis, nunc simplex racemo 1–4-spiculato, nunc laxè paniculata v. e racemis fasciculatis v. subverticillatis composita. Spiculæ majusculæ, virides v. coloratæ, interdum glumis dissitis elongatis.

Species ad 24, Asiæ et Americæ inter tropicos incolæ v. in America boreali Himalaya et Japonia ultra

tropicos extensæ. *Beauv. Agrostogr.* 144, t. 25, f. 7. *Munro in Trans. Linn. Soc.* xxvi. 13. *Rupr. in Mem. Acad. Sc. Petersb. ser.* 6, v. t. 1 ad 3. *Kunth, Rev. Gram.* t. 155, 156. *Trin. Spec. Gram.* t. 349, 350. *Kurz, For. Fl. Brit. Burm.* ii. 549, et in *Journ. Asiat. Soc. Beng.* xlii. 249. *Dall in Mart. Fl. Bras.* ii. iii. 163, t. 44, 45.

*A. acuminata*, Munro, species Mexicana, insignis est spiculis tenuibus glumis membranaceis fere hyalinis, vacuis in aristam tenuem productis.

*THAMNOCALAMUS*, *Munro in Trans. Linn. Soc.* xxvi. 33, genus propositum fuit imprimis ad *A. spathifloram*, Rupr., speciem Himalayensem bracteis spathaceis demum caducis spiculas plerasque subtendentibus. Huic addita fuit *T. Falconeri*, Munro, species pariter Himalayana *A. falcata*, Nees, valde affinis, bracteis quam in *A. spathiflora* minoribus caducissimis. Genus *Thamnocalamus*, Falcon. mss., est ipsa *A. falcata*, ubi interdum bracteæ nonnullæ observantur. Species omnes nostro sensu rite a Ruprechtio in *Arundinaria* inclusæ.

278. *Arthrostylidium*, *Rupr. in Mem. Acad. Sc. Petersb. ser.* 6, v. 117, t. 3-5.—Spiculæ ∞-(2-7)-floræ, in spicis racemisve secundæ, rhachilla sub floribus articulata, floribus hermaphroditis v. summo imperfecto. Glumæ inferiores 3-4 vacuæ, extima parva interdum setiformis, sequentes gradatim florentibus similiore; florentes membranaceæ v. coriaceæ, sæpe acuminatæ, exaristatæ, ecarinatæ, multinerves; palea gluma vix brevior, angusta, 2-carinata. Lodiculæ 3. Stamina 3. Ovarium glabrum; styli 2, distincti, stigmatibus breviter pilosis v. distincte plumosis. Caryopsis ubi nota oblonga, gluma paleaque inclusa, libera.—Gramina arborescentia v. suffruticosa, interdum scandentia, foliis vix petiolatis cum vagina articulatis planis, venulis transversis inconspicuis. Racemi v. potius ramuli racemiferi basi interdum foliati, ad nodos sæpius densissime fasciculati, simplices v. rarius parce ramosi. Spiculæ angustæ, interdum elongatæ, nunc subsessiles unilateraliter confertæ, nunc dissitæ v. longiuscule pedicellatæ.

Species ad 12, Americæ tropicæ incolæ. *Munro in Trans. Linn. Soc.* xxvi. 39, t. 1. *Dall in Mart. Fl. Bras.* ii. iii. 172, t. 47.

*A. racemiflorum*, Steud., e Mexico, a Fourniero, *Gram. Mex.* 131, ad *Merostachym* transfertur, ob florem in spicula sæpe unum tantum fertilem. Specimina nostra (Liebmanniana) spiculas juniores tantum exhibent, sed interdum flores 2 perfectos invenimus. In *A. pubescente*, Rupr., racemi rhachis insigniter flexuosa est. In *A. longifloro*, a Munroio l. c. t. 1, optime illustrata (*Guadua exalata*, Dall in *Mart. Fl. Bras.* ii. iii. 181) spiculæ valde elongatæ, glumis dissitis subcoriaceis, sed stamina certe 3 *Arthrostylidii*, nec 6 *Guadue*.

*AULONEMIA*, *Goudot in Ann. Sc. Nat. ser.* 3, v. 75, t. 5, species Colombiana, characteres omnino *Arthrostylidii* præbet, nec nisi inflorescentia laxiore a speciebus typicis distincta. Paniculæ rami tenues, apice spiculas 2-6 longas fere *A. longiflori* ferentes, glumis tamen densius imbricatis. Inflorescentia pariter laxa occurrere videtur in *A. Hænkei*, Rupr., specie nobis non nisi ex icone descriptioneque auctoris nota.

279. *Phyllostachys*, *Sieb. et Zucc. in Abhandl. Akad. Wiss. Münch.* iii. 745, t. 5.—Spiculæ pauci-(1-4)-floræ, breviter subspicatæ, singulæ v. geminæ bractea spathacea involutæ, rhachilla inter flores articulata, ultra flores in stipitem sæpius glumiferum producta, floribus hermaphroditis. Glumæ inferiores 2 v. interdum 3 vacuæ, extima parva 3-5-nervis, secunda et tertia dum adsit florentibus similes nisi minores; florentes membranaceæ, acuminatæ, exaristatæ, ecarinatæ, 7-∞-nerves; palea gluma inclusa qua vix brevior, angusta, 2-carinata, tenuiter ∞-nervis. Lodiculæ 3. Stamina 3. Ovarium glabrum, longe stipitatum; styli 3, basi longiuscule connati, stigmatibus elongatis serrulato-subplumosis. Caryopsis . . .—Gramina arborescentia, caule semitereti, nodis prominentibus, ramulis foliiferis fasciculatis subverticillatis, foliis breviter petiolatis cum vagina articulatis planis venulis transversis tessellatis. Spicæ densæ v. laxæ, in panicula laxa sæpius numerosæ. Bracteæ sub ramulis paniculæ sæpius breves v. caducæ, intra spicas spiculas involuentes majores sæpe imbricatæ.

Species 4 v. 5, Japoniæ et Chinæ incolæ. *Munro in Trans. Linn. Soc.* xxvi. 35. *Hance in Trin. Journ. Bot.* 1876, 295.

280. *Athroostachys*, *Benth. in Journ. Linn. Soc.* xix. 134 (err. typ. Achroostachys).—Spiculæ 1-floræ, in capitulum globosum densissime confertæ, rhachilla supra glumam

infirmam articulata pubescente, ultra florem producta glumifera, flore hermaphrodito. Gluma infima vacua ad basin rhachillæ persistens (an bractea glumiformis?), angusta, acuminata, 2 sequentes vacuæ ab infima distantes florenti appressæ, breves, setaceo-acuminatæ; florens multo longior, latiuscula, rigidule membranacea, complicata, multinervis, rostrato-acuminata v. mutica, margine ciliata; terminalis multo angustior, plurinervis, vacua v. floris rudimentum fovens; palea glumæ æquilonga, lata, carinis 2 ciliatis valde prominentibus. Lodiculæ 3. Stamina 3. Ovarium glabrum; styli 2, basi connati, stigmatibus breviter plumosis. Caryopsis . . .—Gramen suffruticosum, scandens, ramis floridis fasciculatis foliatis, foliis cum vagina articulatis planis, venulis transversis obsoletis, vagina apice setis longis numerosis fimbriata. Capitulum globosum, intra folia summa sessile, spiculis majusculis densissime confertis, revera sessilibus, sed ob rhachillam supra glumam infimam productam pedicellatæ apparent.

Species 1, Brasiliensis, *A. capitata*, Benth. (*Merostachys capitata*, Hook. Ic. Pl. t. 273, Munro in Trans. Linn. Soc. xxvi. 50).

281. *Merostachys*, Spreng. *Syst. Veg.* i. 132.—Spiculæ 1-floræ, in spica unilateralis sessiles, rhachilla infra florem brevissima tardius articulata, supra florem longe stipitiformi v. lineari, nuda v. minute glumifera. Glumæ inferiores 3–4 vacuæ, ab extima minima ad superiorem florenti subsimilem gradatim auctæ; florens membranacea, latiuscula, ecarinata, mutica, tenuiter multinervis, costa interdum superne prominente; palea ampla, gluma fere latior, 2-carinata, ∞-nervis. Lodiculæ 3. Stamina 3. Ovarium glabrum; styli distincti, longiusculi, stigmatibus tenuissime plumosis. Caryopsis . . .—Gramina arborescentia, ramis fasciculatis, foliis planis cum vagina articulatis, venulis transversis obscuris. Spicæ simplices, ad apices ramorum longæ densæ v. in ramulis fasciculatis minores. Spiculæ confertæ, stricte secundæ.

Species 8 v. 9, Brasiliæ, Paraguay et Peruviae incolæ. Munro in Trans. Linn. Soc. xxvi. 46 (excl. *M. capitata*). Kunth, *Rev. Gram.* t. 79. Rupr. in *Mem. Acad. Sc. Petersb.* ser. 6, v. 126, t. 10 (cujus sp. 2 a Munroio casu omisæ). Döll in *Mart. Fl. Bras.* ii. iii. 207, t. 55.

282. *Chusquea*, Kunth, *Syn. Pl. Æquin.* i. 254. (*Rettbergia*, Radde, *Agrostogr. Bras.* 17. *Dendragrostis*, Nees in *Linnaea*, ix. 487.)—Spiculæ 1-floræ, varie paniculatæ, rhachilla brevissima supra glumas inferiores articulata, ultra florem non producta, flore hermaphrodito. Glumæ 2 inferiores vacuæ persistentes parvæ v. angustæ, 2 sequentes pariter vacuæ florenti similiores eique appressæ, sæpe acuminatæ; florens membranacea, lata, 5–∞-nervis, obtusa v. acuta, mutica; palea glumæ æquilonga, lata, membranacea, superne plus minus distincte 2-carinata. Lodiculæ 3. Stamina 3. Ovarium glabrum, sæpius acuminatum; styli 2, a basi distincti, v. rarius stylus indivisus, stigmatibus tenuibus laxè plumosis. Caryopsis oblonga, sæpe angusta, a dorso compressa v. subteres, gluma paleaque inclusa, libera.—Gramina suffruticosa v. arborescentia, interdum scandentia, foliis in tribu sæpe parvulis, planis, cum vagina articulatis, venulis transversis obscuris v. rarius conspicuis. Panicula terminalis, nunc longe denseque spiciformis v. in capitulum globosum v. oblongum contracta, nunc thyrsoidæa v. pyramidalis, floribunda v. laxè effusa, v. in ramulis brevibus numerosæ racemiformes paniculam foliatam densam secundam formantes.

Species ad 30, omnes Americanæ. Munro in Trans. Linn. Soc. xxvi. 52, t. 2. Ernst in *Trim. Journ. Bot.* 1872, 262. Kunth, *Rev. Gram.* t. 77, 78, 191. Trin. *Spec. Gram.* t. 339, 340. E. Desv. in *C. Gay, Fl. Chil.* t. 83. Döll in *Mart. Fl. Bras.* ii. iii. 194, t. 54. *Fourn. Gram. Mex.* 131.

Spicularum rhachilla in *C. tenella* aliisque ex Döllio ultra florem producta quod tamen in specimenibus nostris non vidimus.

283. *Planotia*, Munro in Trans. Linn. Soc. xxvi. 70. (*Platonía*, Kunth, *Rev. Gram.* i. 139, 327, t. 76, non *Mart.*)—Spiculæ 1-floræ, paniculatæ, rhachilla brevissima continua ultra florem non producta, flore hermaphrodito. Glumæ inferiores vacuæ 4, sæpius mucronato-acuminatæ v. subaristatæ, ab infima parva v. longa angustaque gradatim mutatæ, superiore interdum florenti subsimili; florens ovata, dorso rotundata v. sub-

ventricosa, ecarinata, rigidule membranacea v. subcoriacea, obtusa v. vix mucronata, exaristata, tenuiter multinervis; palea glumæ subæqualis, obtusa, apicem versus obscure 2-carinata. Lodiculæ 3. Stamina 3. Styli breves, distincti, stigmatibus plumosis. Caryopsis ubi nota ovoidea v. oblonga (interdum rostrata?), gluma paleaque inclusa, libera. —Gramina herbacea, elata, foliis longis sæpe multipedalibus in vaginam longe angustatis nec articulatis planis, venulis transversis obscuris v. conspicuis. Panicula sæpius longissima, dense floribunda, anguste thyrsoidæa v. pyramidata, rarius brevior laxior ramulis elongatis effusis. Spiculæ parvæ, subsessiles, sæpius numerosissimæ.

Species 5, montium Americæ australis tropicæ incolæ.

Genus a *Bambuseis* cæteris recedit caule non lignoso et foliis cum vagina continuis, characteribus nonnullis quodammodo *Panicæis* anomalis accedit, spicularum tamen structura, glumæ palea et lodiculæ omnino *Bambuscarum*.

284. *Nastus*, Juss. *Gen. Pl.* 34. (Stemmatospermum, Beauv. *Agrostogr.* 144, t. 25, f. 5.)—Spiculæ 1-floræ, anguste paniculatæ v. subcapitatæ, rhachilla sub flore brevi vix articulata ultra florem in stipitem longum apice nudum v. glumæ rudimentum ferentem producta, flore hermaphrodito. Glumæ rigide membranacæe v. coriaceæ, muticæ, multinerves, inferiores vacuæ  $\infty$  (sæpius 6–10) ab extima minima in summam florenti simillimam gradatim auctæ; palea glumæ æquilonga, lata, 2-dentata, 2-carinata. Lodiculæ 3, longæ. Stamina 6. Ovarium glabrum; styli 2–3, basi connati v. stylus elongatus apice 2–3-fidus, stigmatibus tenuiter plumosis. Caryopsis ‘ovato-conica basi indurata’ v. oblonga, pericarpio membranaceo.—Gramina arborescentia, ramulis floriferis foliatis ad nodos fasciculato-verticillatis, foliis *Bambusæ*. Panicula nunc stricta breviter parceque ramosa at laxiuscula, nunc densa fere in capitulum contracta. Spiculæ erectæ.

Species 2 v. 3, ins. Mascarensium incolæ, typica Borbonica; altera Madagascariensis *N. capitatus*, Kunth, *Rev. Gram.* 325, t. 75, a Munroio ad *Becsham* refertur. Spiculæ in speciminibus nostris omnes juniores v. vacuæ, sed Kunthii icon et descr. nobis potius *Nastum* quam *Ochlandram* referre videntur. *N. barbatus*, Rupr., ex obs. recentioribus Munroi est *Guadua* species.

285. *Guadua*, Kunth, *Syn. Pl. Æquin.* i. 252.—Spiculæ 2– $\infty$ -floræ, rarius 1-floræ, varie capitatæ glomeratæ v. subspicatæ, parum v. vix compressæ, rhachilla sub floribus sæpius articulata, floribus hermaphroditis v. varie polygamis. Glumæ rigide membranacæe v. subcoriaceæ, muticæ v. rarius breviter mucronatæ, multinerves, inferiores vacuæ 2–6 ab extima parva in superiorem florentibus similem gradatim auctæ; palea glumæ subæqualis, sæpius tenuior carinis 2 valde prominentibus sæpissimeque membranaceo-alatis. Lodiculæ 3. Stamina 6. Ovarium apice villosum; styli 2–3, basi subconnati, stigmatibus varie plumosis. Caryopsis ovali-oblonga v. fere linearis, apice pubescens v. hirsuta, gluma paleaque inclusa, libera, pericarpio semini adhærente.—Gramina arborescentia, sæpe aculeata v. spinifera, foliis brevissime petiolatis cum vagina articulatis planis, venulis transversis obsoletis. Spiculæ nunc magnæ, elongatæ, in apicibus ramulorum paucae subspicatæ v. glomeratæ, erectæ v. reversæ, nunc minores v. angustæ, secus ramos paniculæ amplæ capitatæ v. glomeratæ.

Species ad 15, Americæ tropicæ incolæ. Munro in *Trans. Linn. Soc.* xxvi. 76. *Rupr. in Mem. Acad. Sc. Petersb.* ser. 6, v. t. 14 ad 16. Humb. et Bonpl. *Pl. Æquin.* t. 20, 21 (*Bambusa*). Trin. *Spec. Gram.* t. 337 (*Bambusa*). Döll in *Mart. Fl. Eras.* ii. iii. t. 48, 49 et t. 52 (*Bambusa*) et t. 53 (*Nastus*). Fourn. *Gram. Mex.* 129.

Döll *G. capitatum*, Munro, ad *Bambusam* transfert, sed paleæ carinæ in speciminibus nostris certe latiusculæ alatæ omnino *Guadua*. *G. exalata*, Döll, est *Arthrostyidium longiflorum*, Munro, staminibus 3 nec 6. *G. pallescens*, Döll l. c. 186, t. 50, e ‘Rio Janeiro Glaziov n. 2832’ verisimiliter in horto botanico culta, est *Bambusa pallida*, Munro, species Indica haud raro culta, characteres omnino *Bambusæ* ostendens. Genera ceterum *Bambusa* et *Guadua* inter se valde affinia sunt.

286. *Bambusa*, Schreb. *Gen. Pl.* 236. (Bambos, Rietz, *Obs.* v. 24. Ischurochloa, Büse in *Pl. Jungh.* 389.)—Spiculæ 2– $\infty$ -floræ, secus ramos paniculæ dissite glomeratæ, rhachilla

sub floribus articulata, floribus hermaphroditis v. superiore masculo, inferioribus interdum sterilibus. Glumæ rigide membranaceæ v. subcoriaceæ, muticæ v. breviter mucronato-acuminatæ, tenuiter multinerves, inferiores 3-4 vacuæ ab extima parva in superiorem florentibus subsimilem gradatim auctæ; florentes longiores, summa sæpius angusta vacua; palea glumæ subæqualis, sæpe angusta, carinis 2 acutis ciliatis valde prominentibus vix tamen vere alatis. Lodiculæ 3. Stamina 6, filamentis liberis. Ovarium apice hirsutum; stylus elongatus, indivisus v. varie 2-3-fidus, stigmatibus breviter plumosis. Caryopsis oblonga, facie plana v. leviter sulcata, gluma paleaque inclusa, libera, pericarpio tenui semini adhærente, humectato tamen facile solubili.—Gramina arborescentia v. rarius suffruticosa v. scandentia, interdum spinifera, foliis breviter petiolatis cum vagina articulatis planis venulis transversis obscuris v. conspicuis. Panicula in caule inferne foliis denudato interdum quam maxime decomposita, rarius simplex. Spiculæ quam in *Guadua* sæpius minores, secus ramos elongatos sæpissime fasciculatæ semi-verticillatæ sessilesque.

Species bene notæ ad 24, Asiæ tropicæ v. subtropicæ incolæ, quarum una etiam in America tropica late dispersa, sæpissime tamen culta. His a variis auctoribus adduntur ultra 50 quarum flores fructusque adhuc ignoti et ideo valde dubiæ remanent. *Munro in Trans. Linn. Soc. xxvi. 87. Rupr. in Mem. Acad. Sc. Petersb. ser. 6, v. 137, t. 11 ad 13. Kurz, Bamb. 54; For. Fl. Brit. Burm. ii. 550. Beauv. Agrostogr. t. 25, f. 3 (Nastus). Wendl. Collect. t. 47, male. Kunth, Rev. Gram. t. 73, 74. Roxb. Corom. Pl. t. 79. Bedd. Fl. Sylv. t. 321.*

*B. nana*, Roxb., a cæteris speciebus differt inflorescentia multo simpliciore, panicula brevi, spiculis paucis vix fasciculatis. *B. pubescens*, Døell in Mart. Fl. Bras. ii. iii. 189, t. 51, ex ins. Santa Catherina Brasiliæ, nobis ignota est. *B. capitata*, Trin.; Døell l. c. 190, t. 52, ex obs. recentioribus Munroi, et ex speciminibus nostris, certe *Guadua* nec *Bambusa* species.

287. *Gigantochloa*, Kurz MS.; *Munro in Trans. Linn. Soc. xxvi. 123.*—Spiculæ oblongæ, superne parum attenuatæ, ∞-floræ, secus ramos elongatos paniculæ dissite glomeratæ, rhachilla demum sæpius articulata, floribus hermaphroditis v. abortu unisexualibus. Glumæ rigidule membranaceæ, multinerves, muticæ v. mucronato-acuminatæ, inferiores 3-5 vacuæ ab extima parva in superiorem florentibus subsimilem gradatim auctæ; florentes longiores, summa sæpius angusta vacua; palea glumis subæqualis, angusta, carinis 2 superne prominulis ciliatis. Lodiculæ 3 v. pauciores (rarius 0?). Stamina 6, filamentis in tubum primum ovarium vix superantem demum longum tenuem connatis. Ovarium apice hirsutum; stylus elongatus, indivisus v. superne breviter 2-3-fidus, stigmatibus tenuibus breviter pilosis. Caryopsis (ubi nota) oblonga v. angusta, antice sæpius sulcata, gluma paleaque inclusa, libera, pericarpio membranaceo.—Gramina arborescentia, habitu *Bambuseæ*. Paniculæ rami sæpe longissimi, spicularum glomerulis densis subglobosis numerosis.

Species 4 v. 5, Indiæ orientalis et Archipelagi Malayani incolæ. *Kurz, For. Fl. Brit. Burm. ii. 555 (excl. G. albociliata); Bamb. 58.*

288. *Oxytenanthera*, *Munro in Trans. Linn. Soc. xxvi. 126.*—Spiculæ elongato-conicæ densissime capitatæ v. glomeratæ (rhachilla vix articulata?) flore unico terminali hermaphrodito additis interdum 1-3 inferioribus (masculis v. sterilibus?). Glumæ ∞ (6-10) ab infima brevi lata ad superiores longas semet arcte involventes gradatim auctæ, rigide membranaceæ, acutæ v. mucronulatæ, multinerves, omnes præter summam vacuæ v. 1-3 superiores florentes; in flore terminali palea 0, nisi pro palea glumam intimam sequenti simillimam haberes. Lodiculæ 0. Stamina 6, filamentis in tubum primum ovarium vix excedentem demum longum tenuem connatis. Stylus elongatus, apice 2-3-fidus, stigmatibus brevissime pilosis. Flores inferiores dum adsint omnino *Gigantochloæ*, palea normali 2-carinata. Caryopsis floris terminalis ubi nota lineari-oblonga, glumis laxè inclusa, libera, pericarpio membranaceo, florum lateralium non vidimus.—Gramina arborescentia habitu *Gigantochloæ*.

Species ad 6, quarum 5 Indiæ orientalis v. Archipelagi Malayani incolæ, *Bedd. Ic. Pl. Ind. Or. t. 234, Fl. Sylv. t. 322*, habitu et inflorescentia *Gigantochloam* referunt, quæcum junxit Kurz; ab illa differunt et *Schizostachyo* accedunt spiculis superne attenuatis flore terminali (solo fertili?) epaleaceo.

*Species sexta*, per Africam tropicam late dispersa, sectionem format *Scirpobambos*, A. Rich. Fl. Abyss. ii. 439, sub *Bambusa*; insignis est capitulo magno globoso inter folia summa sessili solitario v. pluribus in spica simplici interrupta, spiculis maximis glumis sæpissime omnibus præter terminalem vacuis alternatim imbricatis sed potius spiraliter dispositis quam distichis. Harum flores laterales non vidimus. In speciminibus Abyssinicus Schimper, et in Æthiopicis Schweinfurthii, spiculæ sæpe undique ananthæ. Caryopsis vidimus inter fragmenta in herb. Munro servata e specimine Welwitschiano. Specimina occidentalia Barteri et Vogelii folia sola præbent et ideo incerta remanent.

289. *Dendrocalamus*, Nees in *Linnaea*, ix. 476.—Spiculæ 2-∞-floræ, secus ramos elongatos paniculatæ dissite glomeratæ, rhachilla vix articulata ultra flores sæpe producta in stipitem nudum v. glumiferum, floribus plerisque hermaphroditis, uno solo tamen sæpius fertili. Glumæ membranaceæ v. rigidulæ, multinerves, muticæ v. breviter aristato-mucronatæ, inferiores vacuæ 2-∞, ab extima brevi in superiorem florentibus similem gradatim auctæ; palea gluma vix brevior, angusta, 2-carinata, carinis sæpius ciliatis. Lodiculæ 0 v. rarius rudimenta 1-2. Stamina 6, filamentis liberis. Ovarium apice hirsutum; stylus elongatus (indivisus?) v. apice breviter 2-3-fidus. Caryopsis parvula, ovoidea v. subglobosa, styli basi sæpius acuminata v. rostrata, glumis inclusa, libera, pericarpio crustaceo v. indurato a semine libero.—Gramina fruticosa v. arborescentia, foliis *Bambusæ*. Paniculæ rami valde elongati, glomerulis seu capitulis numerosis dissitis multispiculis dense globosis v. minoribus.

*Species 9*, Indiæ orientalis Archipelagi Malayani et Chinæ incolæ. Munro in *Trans. Linn. Soc.* xxvi. 146, t. 6. Kurz *For. Fl. Brit. Burm.* ii. 558, et in *Journ. Asiatic Soc. Beng.* xlii. 250. Bedd. *Fl. Sylv.* t. 325.

*Species typica* est *Bambusa stricta*, Roxb., in India frequens, icon tamen, Roxb. Corom. Pl. t. 80, ex Munro *Oxytenantheram Thwaitesii*, Munro, refert, etsi in analysi filamenta libera delineantur.

290. *Melocalamus*, Benth. in *Journ. Linn. Soc.* xix. 134.—Spiculæ parvæ, 2-floræ, secus ramos elongatos paniculæ dissite glomeratæ, rhachilla inter flores brevi continua, ultra flores in stipitem glumiferum producta, floribus hermaphroditis, infimo solo fertili. Glumæ inferiores vacuæ 2, membranaceæ, latæ, muticæ, multinerves; florentes similes vix v. non majores, terminalis vacua parva, ovoideo-globosa; palea glumæ æquilonga, latissima, membranacea, prominenter 2-carinata. Lodiculæ 3, magnæ. Stamina 6. Ovarium glabrum, acuminatum; styli 3, breves, basi connati, stigmatibus plumosis, Caryopsis mox exserta, demum fide Kurzii valde aucta, subglobosa, basi glumis stipata, pericarpio haud crasso rigide coriaceo, semine magno carnoso intra pericarpium libero.—Gramen arborescens, foliis *Bambusæ*. Inflorescentia *Dendrocalami flagelliferi*, Munro, spiculis adhuc minoribus. Fructum juniorem tantum vidimus, maturus a Kurzio pollicem diametro excedens dicitur.

*Species 1*, Martabanica (*M. compactiflorus*, Benth.). Kurz, *For. Fl. Brit. Burm.* ii. 567; *Bamb.* t. 2, f. 13 (*Pseudostachyum compactiflorum*).

Genus pluribus notis *Dendrocalamo* affinius videtur quam *Pseudostachyo*, ab utroque differt fructu magno fere *Melocannæ*, semine ipso tamen nec pericarpio carnoso-incrassato.

291. *Pseudostachyum*, Munro in *Trans. Linn. Soc.* xxvi. 141, t. 4.—Spiculæ parvulæ, 1-floræ, secus ramos paniculæ laxè spicatæ, variè bracteatæ, rhachilla sub flore brevi ultra florem producta sæpe glumifera, flore hermaphrodito. Gluma inferior vacua florenti similis nisi minor; florens lata, membranacea, convoluta, multinervis, mutica v. mucronulata; terminalis parva, globosa v. oblonga, vacua v. floris rudimentum includens; palea glumæ æquilonga, lata, convoluta, carinis 2 superne prominentibus. Lodiculæ 3 (v. 4?) majusculæ. Stamina 6. Ovarium glabrum; stylo rigidulo complanato rostrata. Caryopsis depressa-globosa, glabra, glumas paleamque persistentes non v. vix excedens, pericarpio crustaceo a semine libero.—Gramen subarborescens, foliis *Bambusæ*. Paniculæ rami nunc breves incurvi densissime fasciculati, spiculis florentibus parum distantibus.

nunc elongati incurvi v. flexuosi spiculis nunc dissitis angustis sterilibus glabris, nunc ut videtur morboris sterilibusque valde incrassatis villosis irregulariter globosis v. e glumis numerosis imbricatis elongatis v. falcatis.

Species 1, Himalayensis, altera a Kurzio addita genus nostrum *Melocalanum* format.

292. *Greslania*, *Balansa* in *Bull. Soc. Bot. Fr.* xix. 319.—Spiculæ 1-floræ, in ramulis paniculæ spicatæ v. subcymoso-confertæ, rhachilla sub flore brevi, ultra florem in stipitem sæpe glumiferum producta, flore hermaphrodito. Glumæ rigide membranaceæ v. coriaceæ, latæ, muticæ, multinerves, 2 inferiores vacuæ, infima parva; florens vacuis longior, summa vacua angusta tenuisque v. ad rudimentum reducta; palea glumæ æquilonga, multinervis, apice obscure 2-carinata. Lodiculæ 3. Stamina 6. Styli 3, distincti, stigmatibus plumosis. Caryopsis fide Balansæ tereti-oblonga, pericarpio crasso celluloso, semine libero.—Gramina elata, foliis *Bambusæ* v. rigidis brevibusque. Panicula terminalis, ampla, ramulis sæpe foliatis. Spiculæ nunc angustæ secus ramulos ultimos paucae subspicatæ, nunc parvæ rigidæ ad apices ramulorum numerosæ, fere in cymulas densas confertæ. Bracteæ sub ramulis spiculisque parvæ.

Species 3, Novo-Caledonicæ. Genus *Pseudostachyo* et *Teinostachyo* valde affine, quæ omnia forte in unum jungenda.

293. *Teinostachyum*, *Munro* in *Trans. Linn. Soc.* xxvi. 142, t. 3.—Spiculæ 1-floræ, secus ramulos paniculæ irregulariter subspicatæ bracteate, rhachilla sub flore brevi subarticulata ultra florem in stipitem glumiferum producta, flore hermaphrodito. Glumæ membranaceæ, sæpe mucronatæ, multinerves, inferiores 1-2 vacuæ, florens subsimilis nisi longior, lata, arcte convoluta, terminalis vacua, angusta; palea glumæ æquilonga, lata, multinervis, arcte convoluta, carinis 2 apicem versus valde prominentibus ciliatis. Lodiculæ 2-3, majusculæ. Stamina 6. Ovarium glabrum; stylus elongatus, rigidus, apice breviter 2-3-fidus, stigmatibus . . . Caryopsis (immatura) ovoidea, acuminato-rostrata, haud magna, pericarpio crassiusculo a semine soluto.—Gramina fruticosa arborescentia v. subscandentia foliis *Bambusæ*. Paniculæ rami spiciformes, nunc breves paucispiculati (errore pro spiculis  $\infty$ -floris descripti), nunc longiores multispiculati plus minus compositi sed ob ramulos virgatos angusti. Bracteæ spathaceæ fere glumiformes sub spicarum ramulis et spiculis ipsis interdum glumæ gemmiparæ dicuntur.

Species 3, Indiæ orientalis incolæ. *Bedd. Fl. Sylv.* t. 323.

Genus a Kurzio, *For. Fl. Brit. Burm.* ii. 566, cum *Cephalostachyo* jungitur, a quo differt tamen inflorescentia notisque nonnullis spicularum structuræ.

294. *Cephalostachyum*, *Munro* in *Trans. Linn. Soc.* xxvi. 138.—Spiculæ 1-floræ, in capitulo globoso terminali numerosæ v. in glomerulis capituliformibus secus rachin dissitis bracteis glumiformibus spiculisque imperfectis intermixtæ, rhachilla brevissima, basi articulata, ultra florem in stipitem nudum interdum longum producta, flore hermaphrodito. Glumæ præter bracteas glumiformes 2-3, membranaceæ, latæ, convolutæ, multinerves, muticæ, 1-2 inferiores vacuæ, superior florens longior; palea glumæ æquilonga, lata, convoluta, multinervis, apice prominule 2-carinata, 2-dentata v. 2-mucronata. Lodiculæ 2-3, magnæ. Stamina 6. Stylus elongatus, apice breviter 2-3-fidus, stigmatibus plumosis. Caryopsis (adhuc immatura haud magna) glabra, oblonga, rostrata, pericarpio crassiusculo a semine libero.—Gramina fruticosa v. arborescentia, foliis *Bambusæ*. Capitula ad apices ramulorum fasciculorum sæpius solitaria, dense globosa, in speciebus paucis secus rachin seu paniculæ ramum elongatum inter se distantia et minus densa. Spiculæ in capitulis ad 3-5 fasciculatæ; bracteæ sub fasciculis fere spathaceæ, sub spiculis minores, interdum plures vacuæ v. spicularum rudimenta fovescentes (glumæ gemmiparæ dictæ), interdum omnes setaceo-acuminatæ capitulo subechinato.

Species 5 v. 6, Indiæ orientalis et Madagascariæ incolæ. *Kurz, For. Fl. Brit. Burm.* ii. 563, excl. sp. n. 5 et 6. *Griff. Ic. Pl. Ind. Or.* t. 151 (*Schizostachyum*).

*Bambusa virgata*, Trin. Spec. Gram. t. 338, a Munroio ad *Melocannam* relata, a Kurzio rectius ad

*Cephalostachyum* transfertur. *C. Griffithii*, Kurz, ad *Teinostachyum* restituendum. *Bambusa schizostachyoides*, Kurz, a Munroio dubie inter *Melocannas* recensita, a Kurzio primum ad *Teinostachyum* et serius ad *Cephalostachyum* relata, est ex speciminibus Kurzianis e Horto Calcuttensi acceptis vera species *Bambusæ*.

295. **Schizostachyum**, Nees, *Agrostogr. Bras.* 535.—Spiculæ 1-floræ, secus rhachin seu ramos paniculæ dissite glomeratæ, rhachilla vix articulata ultra florem in stipitem capillarem nudum v. minute glumiferum producta, flore hermaphrodito. Glumæ  $\infty$  (6–10) inferiores vacuæ, ab infima parva ad superiores longiores convolutas gradatim auctæ, ecarinatæ, muticæ, multinerves, summa sub flore terminali (v. palea?) vix minor, pariter multinervis, ecarinata; palea cæterum 0. Lodiculæ 2–3, angustæ. Stamina 6, filamentis liberis. Stylus elongatus, apice 2–3-fidus, stigmatibus breviter pilosis. Caryopsis ubi nota parvula, ovoidea v. subglobosa, glumis persistentibus stipata v. inclusa, libera, pericarpio crustaceo v. indurato haud crasso a semine libero.—Gramina fructuosa v. arborescentia, foliis *Bambusæ*. Paniculæ parum ramosæ v. pedunculus simplex, spicularum glomerulis paucis v. numerosis non secundis. Spiculæ nunc parvulæ nunc longiusculæ, sæpius tenues.

Species ad 8, Archipelagi Malayani, Chinæ et ins. maris Pacifici incolæ. *Munro in Trans. Linn. Soc.* xxvi. 135. *Kurz in Journ. Asiat. Soc. Beng.* xxxix. 88; *Bamb.* 63.

*S. parvifolium*, Munro, e Madagascaria, a genere recedit inflorescentia subunilateralis, spiculis tenuissimis, glumis virentibus membranaceis prominenter 7–9-nerviis, florente fere carinata, palea 2-carinata. Fructus ignotus, genus igitur incertum nobis tamen *Nastu* affinius quam *Schistostachyo* apparet.

CHLOOTHAMNUS, Büse in *Pl. Jungh.* 386, species Javensis nobis ignota, a Munroio dubie ad *Nastum* relata, a Kurzio a *Schizostachyum* absque dubio transfertur. A priori pluribus notis recedit et etiam a *Schizostachyo* ex descriptione Bûsei differre videtur spiculis secundis cernuis.

296. **Dinochloa**, Büse in *Pl. Jungh.* 387.—Spiculæ 1-floræ, minimæ, secus ramos elongatos paniculæ dissite glomeratæ, rhachilla brevi inarticulata ultra florem non producta, flore hermaphrodito. Glumæ inferiores vacuæ 3–4, latæ, obtusissimæ, multinerves, ecarinatæ, muticæ, ab infima brevi in summam florentem gradatim auctæ; florens vacuis subsimilis, latissima, valde convoluta, apice margine ciliata; paleam nullam vidimus. Lodiculæ 0. Stamina 6. Ovarium glabrum; styli breves. Caryopsis, a nobis non visa, bacciformis intus carnosa dicitur.—Gramina frutescentia altissime scandentia, foliis *Bambusæ*, panicula supra-decomposita, ramis tenuibus elongatis. Spiculæ in tribu minimæ, numerosissimæ, fasciculis seu glomerulis sessilibus subglobosis, interdum in ramulos breves excrescentibus.

Species nobis nota 1, Archipelagi Malayani incola. *Munro in Trans. Linn. Soc.* 153, t. 5 (quoad analysin f. 4 et 5 erronea). Huic addidit Kurz (For. Fl. Brit. Burm. ii. 570) 2, quarum una Andamanica ex descr. evidenter congener, altera floribus fructuque ignotis affinitatis dubiæ.

297. **Melocanna**, Trin. in *Spreng. Neue Entd.* ii. 43.—Spiculæ 1-floræ, in spicis unilaterialibus dense confertæ, 2–3-natis fasciculatæ bracteateque, rhachilla inarticulata ultra florem non producta, flore hermaphrodito. Glumæ  $\infty$  (6–10) membranaceæ, mucronato-acuminatæ, ecarinatæ, multinerves, ab infima brevi in superiorem convolutam gradatim auctæ; summa sub flore (v. palea?) ceteris similis nisi paullo minor, pariter  $\infty$ -nervis, ecarinata; palea cæterum 0. Lodiculæ 2, angustæ. Stamina 6, filamentis liberis v. irregulariter coherentibus. Ovarium glabrum; stylus elongatus, apice 2–4-fidus, stigmatibus breviter pilosis. Caryopsis maxima, globosa v. ovoidea, basi glumis persistentibus stipata, acumine crasso recurvo sæpius rostrata, pericarpio crassissimo carnoso a semine libero.—Gramen arboreum, foliis *Bambusæ*. Panicula longa, angusta, virgata, ramulis seu spicis numerosis brevibus sessilibus secundis; spicularum fasciculi sessilis, secundi, secus ramulos conferti. Bractee glumaceæ numerosæ, subimbricatæ, ramulorum bases et spicularum fasciculos amplectentes.

Species 1, Indiæ orientalis incola, in Mauritio culta. *Munro in Trans. Linn. Soc.* xxvi. 131 (excl. sp. omnibus præter *M. bambusoideam*). *Roxb. Corom. Pl. t.* 243 (*Bambusa*).

Kurz in *For. Fl. Brit. Burm.* ii. 569, speciem novam addidit, quæ tamen floribus fructuque ignotis valde dubia remanet.

298. *Ochlandra*, *Thw. Enum. Pl. Zeyl.* 376. (Beesha, *Munro in Trans. Linn. Soc.* xxvi. 144.)—Spiculæ 1-floræ, secus pedunculum simplicem cum sterilibus minoribus glomeratæ v. in capitulum unicum terminale confertæ, rhachilla inarticulata ultra florem sæpius in stipitem brevem nudum v. minute glumiferum producta, flore hermaphrodito. Glumæ vacuæ  $\infty$  (3–7), subcoriaceæ, mucronulatæ v. muticæ, ecarinatæ, multinerves, ab infima brevi lata in supremam elongatam convolutam gradatim auctæ; summa florens (v. palea?) vacuis similis nisi paullo minor florem involvens; palea cæterum 0. Lodiculæ? irregulares inæquales, interdum fere glumiformes, ima basi v. altius cum filamentis plus minus coalitæ. Stamina  $\infty$  (6–30), filamentis nunc in tubum primum brevissimum demum glumas superantem sed facillime fissum coalitis, nunc subliberis v. irregulariter hinc inde glumaceo-dilatatis. Ovarium longe acuminatum, glabrum; stylus elongatus, breviter 4–6-fidus, stigmatibus serrulato-pilosis. Caryopsis maxima (sæpe  $\infty$ -pollicaris), ovoideo-conica, acuminato-rostrata, glumis persistentibus stipata, pericarpio crassissimo carnosio a semine subgloboso libero.—Gramina arborea v. fruticosa, foliis *Bambusæ*. Spicularum capitula v. glomeruli nunc spicam densam subinterruptam formant nunc capitulum magnum terminale. Spiculæ ipsæ longiusculæ, antheris exsertis sæpius numerosis insignes.

Species 3, Indiæ orientalis peninsulæ et Zeylanicæ incolæ. *Bedd. For. Man. Bot.* 234; *Fl. Sylv.* t. 324.

*Beesha*, *Rheede, Hort. Malab.* v. t. 60, speciem refert pro genere non definitam. БЕЕША, *Kunth in Journ. Phys.* xcv. 151, est genus spurium imprimis ad *Bambusam bacciferam*, *Roxb. (Melocannam)* descriptum, quacum junxit plantam *Rheedii* ad quam *Munro* genus *Beesham* limitavit, quod tamen *Thwaites* jam prius sub nomine *Ochlandri* bene descripsit.

## ORDO CXL. **CHLORANTHACEÆ.**

#### 134 1. **Chloranthus**; sect. 2, *Tricreandra*. lin. 1, loco *Androcium* 2-lobum, lege *Androcium* 3-lobum. post 1. **Chloranthum**, insere:.

1a. **Circæaster**, *Marim. in Bull. Acad. Imp. Sc. Petersb.* xxvii. 556; *Mel. Biol.* xi. 345.—Flores hermaphroditi (an more *Chloranthi* pseudo-hermaphroditi, masculo cum femineo in receptaculo contiguis at liberis?). Sepala (an bractæe?) 2, rarius 3, minuta, squamiformia, membranacea, persistentia. Petala 0. Stamina 1-2, sepalis alterna, filamentum lineari anguste complanato; anthera terminalis, minima, subglobosa, loculis 2 oblique divergentibus. Ovarium lineare, basi attenuatum, nudum; stigma sessile, oblique oblongum; ovulum ordinis. Fructus parvus, oblongus, apice v. fere a medio pilis rigidulis uncinatis quasi glochidiatus, pericarpio membranaceo. Semen in speciminibus nostris immaturum, ex *Maximowiczio* fructum arcte explens, testa tenui a pericarpio vix separabili; albumen copiosum, extus corneum, intus carnosum; embryo axillis, majusculus, teres, radícula infera; cotyledones lineares, arcte parallelæ, radiculæ acqui-

Pag.

longæ et vix latiores.—Herba annua, humilis, tenerrima, caule simplice filiformi, fasciculo foliorum coronato. Folia revera subopposita, sed paribus pluribus arcte approximatis quasi verticillata, petiolata, membranacea, spathulata, tenuia, margine mucronato-serrata. Flores minuti, in axillis pedicellati, pedicellis brevissimis mox parum elongandis (1-2 lin. longis) in racemulum dispositis, rhachi communi tamen haud v. vix evoluta racemulus ad fasciculum reducitur. Bracteæ ad basin pedicellorum minimæ squamiformes. Fructus infra 2 lin. longi, pro flore tamen majusculi.

Species 1, Asiæ montanæ incola. Specimina nostra a Przewalskio in regione Kansu Chinæ borealis lecta communicavit Maximowicz cum notis fusioribus, et speciem eandem v. ei valde affinem olim legerunt Strachey et Winterbottom in montibus Himalayæ et descripsit delineavitque J. D. Hooker, specimina tamen cum notis iconæque e collectione Kewensi hodie amissa. Genus distinctissimum, sed nobis characteribus essentialibus *Chlorantho* affine videtur et etiam habitu speciminibus nonnullis *C. japonici*, Sieb., quodammodo accedit; differt caule annuo tenerrimo, racemulis ad fasciculum reductis, floribus (an revera?) hermaphroditis, pericarpio haud drupaceo, et embryone longiore cotyledonibus linearibus parallelis. Cotyledones in cæteris generibus sæpius divaricatæ, interdum minimæ vix prominentes.

ORDO CL. **BALANOPHOREÆ.**

- 233 post **CONSPECTUM GENERUM**, adde:

GENUS NON SATIS NOTUM.

HACHETTEA, *Baill. in Bull. Soc. Linn. Par.* 1879, 229. Flores dioici, Fl. ♂: Perianthii segmenta

3, concava, valvata. Stamina 2, filamentis liberis brevibus crassis; antheræ terminales, reniformes, 1-loculares, rima superne dehiscentes. Fl. ♀: Perianthium crassum, tubulosum, 3-lobum, lobis valvatis. Ovarium inferum; stylus elongatus, clavatus, papillosus; ovula . . . Fructus . . .—Herba carnosa, rubra. Caulis squamosus. Flores ♂ racemosi ♀ spicati, bracteati, racemis spicisque ad axillas squamarum sessilibus. (*Char. ex descr. auctoris.*)

Species 1, Novæ Caledoniæ incolæ, a nobis non visa. Genus verisimiliter ad *Eubalanophoræ* referendum, etsi differat filamentis liberis et antheris 1-locularibus.

## ORDO CLI. EUPHORBIACEÆ.

244 in *Conspectu*, ante 18. *SARCOCOCCAM*, *insere* :

17a. *NOTOBUXUS*. Fl. ♂. Sepala 4. Stamina 6, filamentis brevissimis. Ovarii rudimentum 0. Frutex foliis oppositis integerrimis. Flores ad axillas ternatim fasciculati, ♀ unicus inter 2 ♂.—*Afr. austr.*

245 in *Conspectu*, post 33, *CLUYTIANDRAM*, *insere* :

33a. *REVERCHONIA*. Sepala basi nuda. Stamina in fl. ♂ 2, ovarii rudimentum 0. Fl. ♀: Pistillum 3-merum; styli breves stigmatibus emarginato-2-lobis; ovula amphitropa. Semina adscendentia, cotyledonibus vix radícula latioribus. Herba annua, parva.—*Texas.*

245 in *Conspectu*, post 44. *HEMICYCLIAM*, *insere* :

44a. *SIBANGÆA*. Stamina 3, circa discum latum concavum affixa. Ovarium 1-loculare; stigma crassum, peltatum, stylo brevi fultum. Arbor dioica.—*Afr. trop.*

253 in *Conspectu*, dele 161. *PHYLLOBOTRYUM*, genus ad *Bixaceas* referendum.

262 6. *FORANTHERA*,

*habitationi adde Nova Zelandia ubi species 2 nuper detectæ. Hook. Ic. Pl. t. 1366 B.*

266 ante 18. *SARCOCOCCAM*, *insere* :

17a. *NOTOBUXUS*, Oliv. in *Hook. Ic. Pl. xiv. 78, t. 1400.*—Flores monoici, apetalî. Discus 0. Sepala in utroque sexu 4, 2-seriatim imbricata. Fl. ♂: Stamina 6, quorum 2 sepalis exterioribus opposita, 4 per paria sepalis interioribus anteposita, filamentis brevissimis; antheræ juxta basin dorsifixæ, oblongæ, loculis introrsum longitudinaliter dehiscentibus. Ovarii rudimentum 0, toro inter stamina plano. Fl. ♀: Ovarium 3-loculare; styli 3, breves, crassi, divergentes, introrsum fere a basi stigmatosi; ovula in loculis gemina, ab apice pendula. Capsula oblonga, triquetra, stylis persistentibus 3-cornuta, loculicide 3-valvis, valvis (ob stylos dehiscentia 2-partitos) 2-cornutis. Semina oblonga, testa crustacea nigra nitida, strophiole minimo v. obsoleto.—Frutex glaberrimus. Folia opposita, brevissime petiolata, elliptica, integerrima, tenuiter coriacea. Flores ad axillas fasciculati, fasciculis subsessilibus v. brevissime pedicellatis, 3-floris, flore centrali ♀, lateralibus ♂. Bractæ sub fasciculo 2, basi brevissime connatæ, flores æquantes v. breviter superantes.

Species 1, Natalensis. Genus *Buxo* affine sed imprimis flore ♂ bene distinctum. Florum structura in fasciculo unico scrutata, quoad notas nonnullas minores ulterius confirmanda.

272 ante 34. *PHYLLANTHUM*, *insere* :

33a. *REVERCHONIA*, A. Gray in *Proc. Amer. Acad. xvi. 107.*—Flores monoici v. dioici, apetalî. Fl. ♂: Sepala 4, distincta, spathulato-oblonga, subherbacea, leviter imbricata. Discus obscurus. Stamina in centro floris 2, filamentis brevibus distinctis; antherarum loculi distincti, paralleli, introrsum in longitudinem dehiscentes. Ovarii rudimentum 0. Fl. ♀: Sepala 6, iis marium similia. Discus pateriformis, 6-crenatus. Ovarium 3-loculare; styli breves, discreti; stigmatibus brevibus crassis emarginato-2-lobis; ovula in

loculis gemina, amphitropa, medio affixa. Capsula 3-locularis, globosa, primum subcarnosa, demum in cocos 2-valves dissiliens. Semina in loculis 2, supra basin hilo parvo affixa, adscendenti-erecta, sectione transversa 3-gona, dorso convexa, estrophiolata, testa crustacea; embryo in albumine carnosio parum incurvus, teres, radícula supera gracili quam cotyledones parum latiores longior.—Herba annua, tenuis at rigidula, glabra, patentim ramosa. Folia alterna, brevi-petiolata, oblonga v. angustiora, integerrima, crassiuscula; stipulae minimae, lato-subulatæ, scariosæ. Flores parvi, ♀ breviter pedicellati, in axillis solitarii v. cum masculis paucis fasciculati.

Species 1, Texana. Genus quoad embryonem ad *Stenolobias* accedit, sed habitus et characteres ceteri affinitatem maximam cum *Phyllantho* indicant.

279 ante 45. **Cyclostemon**, *insere*:

44a. **Sibangea**, *Oliv. in Hook. Ic. Pl. xv. t. 1411.*—Flores dioici, apetalii. Fl. ♂: Sepala 4-5, imbricata, inæqualia. Stamina 3, circa discum centalem latum carnosum concavum margine leviter undulatum affixa, filamentis liberis; antheræ ovatæ, loculis parallelis longitudinaliter dehiscentibus. Ovarii rudimentum 0. Fl. ♀: Calyx maris. Discus hypogynus planus, annularis. Ovarium ovoideum, 1-loculare, in stylum brevem crassum attenuatum; stigma crassum, obliquum, late peltatum; ovula in loculo gemina. Fructus (immaturus) parvus, globosus, stylo brevi stigmatæque coronatus, abortu 1-spermus, maturus ignotus.—Arbor parva. Folia alterna, breviter petiolata, integerrima, chartacea. Flores parvi, ad nodos defoliatos ramorum annuinorum dense fasciculati, fasciculis breviter pedunculatis v. sessilibus, floribus in fasciculo sessilibus.

Species 1, ad fl. Gaboon Africæ occidentalis a Soyauxio lecta. Genus *Hemicycliæ* valde affine, differt staminum numero, fructibus in fasciculo ♀ numerosis parvis, stylo breviter evoluto.

283 58. **Baccaurea**,

*ad calcem generis adde*:

*Coccomelia*, *Reinw. in Syll. Pl. Soc. Ratisb. ii. 5*, e Java, genus ab auctoribus recentioribus prætermisum, est, ex caractere dato, *Baccaureæ* species.

*habitationi generis adde*: Africa tropica.

295 84. **Croton**,

*lin. 15, adde*: *COMATOCROTON*, *Karst. in Koch, Wochenschr. 1859, 6*, species Colombiana, ab auctore a *Barhamia* distinguitur imprimis petalorum fl. ♀ absentia, quod tamen in speciebus perplurimis *Crotonis* observatur.

299 92. **Trigonostemon**,

*lin. 1, synonymis sectionis Tylogyne, adde*: *ENCHIDIUM*, *Jack in Mal. Misc. ii. vii. 89.*

325 genus 161. **Phyllobotryum**, ex Euphorbiaceis deleatur, ad **Sixaceas** translatum; confer *Oliv. in Hook. Ic. Pl. xiv. 38, t. 1353.*

336 188. **Sebastiania**,

sect. 2, *Microstachys*, *adde ad calcem*: *TRAGIOPSIS*, *Karst. in Koch, Wochenschr. 1859, 5*, species Colombiana, ex caractere dato verisimiliter ad hanc sectionem *Sebastianiæ* pertinet.

## ORDO CLII. **BALANOPSEÆ.**

341 1. **Balanops**,

*ad calcem generis adde*:

*Balanopsis* speciem novam ex Australia tropica descripsit F. Mueller in *Fragm. Phytogr. Austral. x. 114.*

ORDO CLIII. **URTICACEÆ.**

Pag.

347 in *Conspectu*, post 47. *Pseudolmediam*, *insere* :

47a. *Olmediella*. Stamina numerosa, squamis glanduliformibus intermixta, filamentis filiformibus antheris parvis. Florum capitula pauca in racemum disposita (in *Pseudolmedia* filamenta antheris breviora, capitula solitaria v. gemina, sessilia). Fl. ♀ ignoti.—*Brasilia*.

368 39. *Ficus*, *sect. 3. Eusyce*, *lin. 10, ante CAPRIFICUS*, *insere* :

*PLAGIOSTIGMA*, *Zucc. in Fl. Jap. Fam. Nat. ii. 98, in adnot.*, nomen tantum; genus nunquam in *Verhandl. Acad. Wiss. Baier.* ulterius definitum ut in animo auctoris fuit et ab ipso aliisque incaute citatum.

*et citatis adde*: *Bot. Mag. t. 6675.*

372 post 47. *Pseudolmediam*, *insere* :

47a. *Olmediella*, *Baill. in Bull. Soc. Linn. Par. 252.*—Flores dioici; ♂ globoso-capitati, receptaculo bracteis minimis 1- v. pauci-seriatis basi connatis involucrato. Stamina (flores singuli v. in flore quoque 2-3 ?) numerosa, receptaculo subplano imposita, squamellis nonnullis glanduliformibus v. virescentibus intermixta, filamentis longe exsertis rigide filiformibus; antheræ parvæ, ovatæ, juxta basin dorsifixæ. Fl. ♀ et fructus ignoti.—Frutices v. arbores iliciformes, glabri, succo non lacteo. Folia alterna, breviter petiolata, oblongo-ovata v. elliptica, coriacea, nitidula, spinoso-serrata, pennivenia et reticulato-venulosa; stipulæ minimæ v. obsoletæ. Florum ♂ capitula in racemis axillaribus pauca, breviter pedicellata.

Species 2 (*Brasilianæ*?) quarum una in horto botanico Napolitano culta, altera, a nobis non visa, in horto Parisiensi. Genus, planta ♀ ignota, adhuc valde incertum remanet.

377 59. *Clarisia*,

*ad calcem adde*: in fructibus *Soaresiæ ilicifoliæ*, *Glaz.*, semen invenimus a basi loculi erectum nec ab apice pendulum ut in *Clarisia* et in *Soaresia* delineatur. Folia iis *Olmediellæ Cesatiæ*, *Baill.*, simillima. Affinitates speciei, floribus ♂ ignotis, dubiæ remanent.

379 64. *Musanga*, *lin. 2, loco ♂ lege ♀* (in massam conferti).ORDO CLIX. **CUPULIFERÆ.**408 7. *Quercus*,

*sect. 3 Pasania*, citatis adde, *Hance in Trim. Journ. Bot. 1875, 136.*
